<sup>\*</sup> Lions L. Forft, now a town, is at a short distance from Ronen, and is approached through the remuns of a forest, 50 which it owes and is approached through the remains of a forest, do which it owes its sumain. To this forest, one of great strent, the Norman pances eagedly resorted for the diversion of the chase. So only as 1929, Witham I, diske of Normandy, built a hunting box there, which afterwards became a castle important from its strength. The forest was the scene of many of the adventures recorded in the old chor-nicles and romances.—Tour in Normandy, by Gally Kinght, Eq.

RULES OF READING AND A the Royal Place of Henry Lass they uppeared in 1721,

be was commendable for the three glorious qualities of wisdom, valour, and wealth; according to the latter, he was to be condemned for the three e-pecial vices of covetousness, cruelty, and last. If we mute the good and the evil, and add the qualities of craft, frenchery, and an nuplacable revenge, we shall come to a prefty just estimate of his moral worth.

Some minor details may be added, partly from the insight they afford into character, and in part for the nativeté with which they are recorded by the old writers. He was proud of his learning, and in the liabit of saying that he considered an unlearned king as nothing better than a crowned ass. He was very fond of men of letters, and of wild beasts; and, to enjoy both, he often fixed his residence between them; or, in the words of one of the chromelers, "He took chief pleasure to reside in his new palace, which himself built at Oxford, both for the delight he had in learned men—linnself being very learned—and for the vicinity of his new park at Woodstock, which he had fraught with all kinds of strange beasts, wherem he much delighted, as lions, leopards, lynxes, camels, porcupines, and the like."\* His love of letters, however, did not interfere with his revenge. In the last war in which he was personally engaged on the continent, Luke de Barré, a kinghtly poet, who had fought against him, was made prisoner, and barbarously sentenced to lose his eyes. Charles the Good, earl of Flanders, who was present, remonstrated

against the panishment, urging, among other things, that it was not the custom to inflict bodily pumsliment on men of the rank of knights, who had done battle in the service of their immediate Henry replied, "This is not the first time that Luke de Bairé has borne arms against me; but he has been guilty of still worse thingsfor he has saturzed me in his poems, and made nie a laughing-stock to mine enemies. example, let other verse-makers learn what they have to expect when they offend the king of England." The cruel sentence was wholly or partly executed, and the poet, in a paroxysm of agony, burst from the savage hands of the executioners, and dashed out his brains against the wall.\* next anecdote is of a pleasanter kind, but it will not give an advantageous idea of the devotion of which Henry was accustomed to make frequent profession Early in life, he chose his chaplain by the rapidity with which he got through a mass, saying, that no man could be so fit a mass-priest for soldiers as one who did his work with such dispatch. While serving under his brother Wilham in Normandy, Henry chanced to enter this priest's church, as it lay on his road, near Caen. "And when the royal youth," says William of Newbury, "said, follow me, he adhered as closely to him as Peter did to his heavenly Lord, uttering a similar command; for Peter, leaving his vessel, followed the King of kings—he, leaving his church, followed the prince, and being appointed

[Воок III.

chaplam to him and his troops, became a blind leader of the blind." In some worldly respects, at least, the censure was too severe. The speedy chaplam, who will re-appear under the reign of Stephen, and whose achievements in architecture will be noticed in the proper place, was Roger, afterwards the famous bishop of Sarum, and treasurer and favourite minister to Henry, who myariably made such elections from among the most able and quick-sighted of men.\* Another anecdote which is told of him, displays at once Henry's \* During Henry's frequent and long absences from Lugland, ! Rocci seems almost invariably to have been loud henremant of a

regent of the kingdom

malignity of disposition and his profound dissimulation. When Bloct, Jushop of Lincoln, one of his principal judges, his steady friend for many years, and who was supposed to be at the moment in the greatest favour, was told that the king had spoken of lum in terms of the warmest praise, he exclaimed, "Then I am a lost man—for I never knew him praise any one whom he had not resolved to 1mm." The bishop was runned very soon after, for having said that the monastery which he was building at Eynsham should be as fine an edifice as the abbey which Henry had built at

Reading.

GREAT SPAN OF STITLEN.

when events proved how fruitless were all his pains and precautions to recure the succession to his daughter, and how atterly valueless were uncommons oaths which were rather the off-pring of fear than of inward conviction and good-will. Passing over the always questionable obligation of oaths of this nature, there were several capital obstacles to bar the avenues of the throne to Matilda - The first among these was her sex. Since the time of the ancient Britons England had never obeyed a female sovereign, and the Saxons for a long time had even a marked aversion to the name and dignity of queen when applied only to the reigning king's In the same manner the Normans had never known a female reign, the notion of which was most repugnant to the whole course of their habits and feelings. To hold their fiefs "under the distaff" (as it was called) was considered humiliating to a nobility whose business was war, and whose king, according to the feudal system, was little else than the first of many warriors, -- a chief expected to be in the saddle and at the head of his chivalry

\* See ante, pp. 150, 153,

whenever occasion demanded. We accordingly find that a loud and general cry was raised by the Angle-Norman and Norman barons, that it would be most disgraceful for so many noble knights to obey the orders of a woman. In certain stages of society, and in all the earliest, the Salie law, or that portion of it excluding females from the throne, to which we have limited its name and meaning, is a natural law. These all but insurmountable objections would not hold good against her son Henry, but that prince was an infant not yet four years old, and regencies under a long minority were as incompatible with the spirit and condition of the times as a female reign. Queens governing in their own right and by themselves, and faithfully gnarded minorities, are both the product of an age much more civilized and settled than the twelfth century, and the approach to them was slow and gradual. It was something, however, to have confined the right of succession to the legitimately born; for if the case had occurred a little earlier in England, the grawn-up and experienced natural son of the king, standing in the position of Robert Earl of Gloucester, might possibly have been elected withChap. 1] CIVIL AND MILITARY TRANSACTIONS.

421

side, Athelstane, and others of the Saxon line. This was a great step made by the clergy (through their enforcing the canons of the church) towards the establishment of that royal legitimacy which has been the idol of more modern times; but still it was only a step, and the system to which it tended was not completed and thoroughly established until long after.

No one was better acquainted with the spirit of the clarge and the object of the state of the s

out scruple, as had happened to Edmund Iron-

No one was better acquainted with the spirit of the times and the obstacles raised against Matikla and Earl Robert than the ambitions Stephen, who lad taken many measures beforehand, who was encouraged by the irregularity of the succession ever since the Conquest, and who would no doubt give the widest interpretation to whatever of elective character was held to belong to the English crown. His perjury, his ingratitude for the benefits recerved from Henry, belong to quite another view of the subject, and were precisely such as might be expected from his circumstances and the time in which he lived. Hemy had indeed been musually bountiful to this nephew. He married him to Maud, daughter and beir of Eustace Count of Boulogne, who brought him, in addition to the fendal sovereignty of Boulogue, immense estates in England, which had been conferred by the Conqueror, on the family of the Count. By this mairiage Stephen also acquired another close connexion with the royal family of England and a new hold upon the sympathics of the English, as his wife Maud was of the old Saxon stock, being the only child of

Mary of Scotland, sister to David the reigning

Enlarged from a unique Silver Com in the Collection of Sir Henry Elits.

wife of Henry, and mother of the Empress Matilda. Still further to aggrandize this favourite nephew, Henry conferred upon him the great estate forfeited by Robert Mallet in England, and that forfeited by the Earl of Mortaigne in Normandy. He also brought over Stephen's younger brother Henry, who, being a churchman, was created Abbot of Glastonbury and Bishop of Winchester. Stephen had resided much in England, and had rendered himself exceedingly popular both to the Normans and the people of Saxon race. The barons and knights admired him for his undoubted bravery and activity,—the people for his generosity, the beauty of his person, and his affable, familiar manners. The king might not know it, but he was the popular favourite in the already important and fastrising city of London before Henry's death. When that event happened, he was nearer England than Matilda, whose rights he had long determined to dispute. Taking advantage of his situation, be crossed the Channel immediately, and though the gates of Dover and Canterbury were shut against. bun, he was received in London with enthusiastic joy, the populace saluting lum as king without waiting for the formalities of the election and consecration. The first step to the English throne in those days, as we have seen in the cases of Rufus and Henry, was to get possession of the royal treasury at Winchester. Stephen's own brother was Bishon of Winchester, and by his assistance he got the keys into his hands, but whether before or mmediately after the election is not quite clear. The treasure consisted of 100,000% in money, besides plate and jewels of great value. This episcopal brother was otherwise of the greatest use, being mainly instrumental in winning over Roger, Bishop of Samm, then chief justiciary and regent of the kingdom, and William Corboil, Archbishop of Canterbury, without whose consent the coronation would have been informal. Bishop Roger, he who had been the speedy mass-priest of King Henry, was easily gained through his constant eraving after money; but the primate was not assailable on that side, being a very conscientious though weak man; it was therefore thought necessary to practise a deception upon him, and Hugh Bigod, steward of the late household, made outh before him and other lords of the land, that the king on his death-bed had adopted and chosen his nephew Stephen to be his heir and successor, because his daughter the empress had grievously offended him by her recent conduct. This was a most disgraceful measure; and those men were more honest, and in every sense occupied better ground, who maintained that the great kingdom of England was not a descendible property, or a thing to be willed away by a dying king, without the consent and against the customs of the people. After hearing Bigod's oath, the Archbishop seems to have floated quietly with the current without offering either resistance or remonstrance. But there were other oaths to be considered, for the whole body of the clergy and nobility had repeatedly

sworn fealty to Matilda. We have already shown

how the oaths were considered by the mass; and

than it had been under Henry or even under Rufus. A concession which he made to the lay barons contributed largely to the frightful anarchy which ensued. To secure their affections and to strengthen lumself, as he thought, against the empress, he granted them all permission to fortify their eastles and build new ones; and these, almost without an

now the all-prevalent Bishop of Sarum openly de-English people became infantely worse under him Some scruples may have remained, but no apposition was offered to his election, and on the 26th exception, became dens of thieves and cut-throats of December, being St. Stephen's day, Stephen At the same time he made large promises to the was hallowed and crowned at Westminster by the venal and rapacious nobles, to engage them the more in support of his title to the crown, and cave primate, William Corboil. Immediately after his coronation he went to Reading to attend the birrial of the body of his micle, and from Reading Abbey he proceeded to Oxford, where he summoned a great council of the prelates, abbots, and lay-barons of the kingdom, that he might receive their oaths of allegrance and consult with them on the atlans of the state. When the assembly met he allowed the clergy to annex a condition, which, as they were sure to assume the right of interpretation, rendered their oaths less landing even than usual. They swore to obey him as then king so long as he should preserve their church liberties, and the vigour of discribine, and no longer. This large concession, however, had the effect of contillating the bishops and abbots, and the confirmation of the Pope soon followed. The letter of Innocent II., king held in London during the festival of Easter, which ratified Stephen's title, was brief and clear: in the first year of his reign, was more spleadid, "We have learnt," said the pontiff, "that thou and better attended in every respect, than any that hast been elected by the common voice and unammous consent as well of the lords as the people,

HISTORY OF ENGLAND

the kingdom. Considering that the suffrages of so great a number of men cannot have met in thy person without a special co-operation of the divine grace, and that thou, besides, art a near relation of the deceased king, we are well pleased with all that hath been done in thy favour, and adopt thee with paternal affection a son of the blessed apostle Peter and of the holy Roman church "1 Stephen weakened his right instead of strengthening it, by introducing a variety of titles into his charter, which, in mutation of his predecessor Henry, he issued at this time; but particular stress seems to have been laid on his election as king, "with the consent of the clergy and people," and on the confirmation granted him by the Pope. this same charter he promised, as his uncle had done before him, to rediess all grievances, and grant to the people all the good laws and good customs of Edward the Confessor. Whatever were his natural inclinations, (and we are inclined to believe they were not bad or ungenerous,) the circumstances in which he was placed, and the villanous instruments with which he had to work, from the beginning to the end of his troubled Matt Par—Gesta Steph.
 † Scrip Rer. Franc. The tetter of the Popu has been preserved by Rehard of Hexham. It may be possible, though it appears scarcely probable, that the Pope knew nothing of the outlist previously taken to Matilda and her children.

and that thou hast been hallowed by the prelates of

hereditary ammosity between the nobles and people of Normandy and those of Anjou, so that when Geoffrey Plantagenet, Earl of Amou, marched into the duchy to assert the rights of his wife Matilda, he and his Angevins met with a determined opposition, and he was, soon after, glad to conclude a peace or truce for two years with Stephen on condition of receiving during that time au annual pension of 5000 marks. When Stephen appeared on the continent he met with nothing to indicate that he was considered as an unlawful usurper: the Normans swore allegrance, and the French king (Louis VII.), with whom he had an interview, formed an alliance by contracting his young sister Constance with Eustace, Stephen's young son, and, as suzeram, granted the investiture of Normandy to Enstace, who was then a mere child. During the first year of Stephen's reign England was disturbed only by the revolt of the Earl of Exeter, who was discontented with his share in the new king's liberalities; and by a Scottish incursion made \* Henry Hunting.

them strong assurances that they should enjoy more privileges and offices under him than they had possessed in the reagns of his Norman predecessors. The keeping of these engagements with the borons would of it eltrender migatory his promises to the English people, whose greatest huidships arese out

reign, put it wholly out of his power to keep the

promises he had made, and the condition of the

of the aheady extensive privileges of the nobles; and the non-perbamance of them was sure to bring down on Stephen's head the vengeance of a warlike body of men, who were almost everything in the nation, and far too much, when united, for any royal authority, however legitimately founded. At first, and probably on account of the large sum of money be had in hand to meet demands, all went on in great peace and harmony; and the court the new

and induced the Scottish king to promise another

which the vindictive spirit of his Norman predecessors had indulged. The earl of Gloucester having settled with his friends the plan of a most extensive insurrection,

invasion of England, withdrew beyond sea, and sent a letter of defiance to Stephen, in which he formally renounced his homage. Other great barons—all pleading that Stephen had not given them enough, nor extended their privileges as he had promised—fell from his side, and withdrew to their eastles, which, by his perimssion, they had already strongly fortified. He was abandoned, like Shakspeare's Macbeth, but his soul was as high as that usurper's. "The traitors!" he cried, " they themselves made me a king, and now they fall from me; but, by God's birth, they shall never call me a deposed kmg!"\* At this custs of his fortunes he displayed extraordinary activity and vidour; but having no other politic means of any efficacy with such men, who were all grasping for estates, honours, and employments, he trenched on the domains of the crown, and besides had again recourse to his old system of promising more than he could possibly perform to the nobles who remained faithful, or who came over to him withant putting him to the trouble of besieging them in then eastles. The Instory of those petty sieges, wherein Stephen was almost invariably successful, is singularly manteresting; but the campaign against the Scots has some remarkable features. While he was engaged with the revolted barons in the south, King David, true to his promise, but hadly supported by the earl of Glouce-ter and Matilda, who did not surve in England to put themselves at the head of their party till a year later, gathered his forces together from every part of his dominions - from the Lowlands, the Highlands, and the Isles-from the great promontory of Galloway, the Cheviot Hills, and from that ransingplace of hardy, lawless men, the border-land between the two kacadoms—and crossing the Tweed (March, 1138), advanced boldly into Northimberland, riding with Prince Henry, his son and hen, at the head of as numerous, as moved, and, in the main, as wild a host as ever trode this ground. These "Scottish ants," as an old writer calls them,† overran the whole of the country that hes between the **Tweed** and the Tees. " As for the king of Scots himself," says the anonymous anthor of Gesta Stephani, "he was a prince of a mild and merciful disposition; but the Scots were a barbarous and impine nation, and their king, leading hordes of them from the remotest parts of that land, was unable to re-

late king's natural son, who had so vehemently disputed the question of precedence with Stephen, merged his own pretensions to the crown in those of his half-sister Matilda, whose cause he resolved to promote in England conjointly with his own immediate advantages. He was a soldier of good repute, though by no means so brilliant a one as Stephen; he was also a man of political ability and of consummate craft. Pretending to be reconciled to his rule, be came over from the continent (A.D. 1137) and took the oaths of fealty and homage to Stephen, by the performance of which ceremony he obcurred instant possession of his vast estates in Faghaid, together with none power and opportunity of promoting the cause he had embraced than a more straightforward line of conduct or a consescutious exile would ever have afforded him as said that, in initiation of the elergy, he made his allegance conditional, stating, when he took his oath, that they were to be binding only as long as the king kept his engagements with him; but this, if true, will buildly excuse his conduct, the the fast use be imade of the advantages the oaths procured lum, and before Stephes, had time to Freak any part of lus contract, was to narrgue with the nobles in favour of his half-seter, and lay the groundwork of plots against the king de factor. The happy calm in which Englan I lay dol not last long after the Earl of Gloncester's arrival – Several of the barons, alleging their service; had not met with meet reward, began to be ze, by force of mans, difterest jours of the royal demonse, which they said Stephen had promised them in fier, either at his coronation or at the conneil held at Oxford. Hugh Breed, who had sworn that Kine Henry had appointed Stephen his successor, and who probably put a high price on his perjury, was foremost among the disaffected, and seized Norwich Castle. Other royal castles were besieged and taken, or were treacherously surrendered. They were nearly all soon retaken by the king, but the purit of revolt was rife among the nobles, and the redution, suppressed on one spot, barst forth on others. Stephen was lement and increiful beyond all precedent to the varquished; and if, on one occasion, in a moment of passion he ordered a baron who had instigated several revolts to be funged, with a number of his associates, as felons (which they were), the sentence was only in part executed, and he repented of his purpose. It is some relief to humanity to find, amidst all the horrors perpetrated by others during his reign, no torturing and mutilating of prisoners performed by royal command; no tearing out of eyes, no lopping off. of hands and feet, and none of those atrocities in \* The Scottish king was equally uncle to Stephen's wife, but he probably remembered the oatles he had taken to the mother of

womb. We fear there is much truth in this frightful picture; but the national prejudices and animosity between the Scots and the English were old Malmsb, † Matt, Par,

strain their wickedness." Another contemporary,

Orderic Vital, whose powerful descriptions we have so often quoted, says, they exercised their

barbarity in the manner of wild beasts, sparing

neither age nor sex, nor so much as the child in the

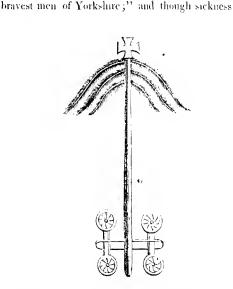

and confirmed feelings; and the chroniclers we refer to were Englishmen, not likely to give the most favourable account, while it seems certain that the Normans of the time purposely exaggerated the barbarous excesses, committed chiefly by the Gallowegians, the Highlanders, and the men of the Isles, in order to make the English fight more desperately on their side; for had they relied solely on their chivalry and the men-at-arms and mercenaries in the service of their northern barons, their case would have been hopeless. At the same time, they conciliated the Euglish people of the north by a strong appeal to the local superstitions -they myoked the names of the saints of Saxon race whom they had been wont to treat with little respect; and the popular banners of St Cathbert of Durham (or, according to some, of St Peter of York), St. John of Beverley, and St. Wilfird of Ripon, which had long lain dust-covered in the churches, were reproduced in the army, as the pledges and means of victory. So rapid was the advance of King David, that Stephen had not time to reach the scene of hostifities; and the defence of the north was, in a great measure, left to Toustain, or Thurstan, archbishop of York, an infirm, decrepit old man, but whose warhke energies, address, and cunning were not affected by age and disease. It was he who mainly organized the army of defence which was got together in a hirry. He eloquently exhorted the men to fight to the last, for God and their country, telling them victory was certain, and Paradise the meed of all who should fall in battle against the Scots: he made them swear never to desert each other; he gave them his blessing and the remission of their sms; h

prevented him from putting on his own cont of mail, he sent Raoul, or Ranulf, the bishop of Durham, to represent him on the field of battle. Each lay baron of the north headed his own vassals; but a more extensive command of divisions was entrusted by the archbishop to William Piperel, or Peverel, and Walter Espec of Nottinghamshire, and Gilbert de Lacy and his brother Walter, of Yorkshire. As the Scots were already upon the Tees, the Anglo-Norman army drew up between that river and the Humber, choosing their own battle-field at Elfer-tun, now Northallerton, about equidistant from York and Durham. This was the spot where the soldiers of the Conqueron, marching to avenge the catastrophe of Durham, were samt-struck or panie-seized; but now Si, Cuthbert was on the Norman side. Here they erected a remarkable standard, from which the battle has taken its name  $-\Lambda$  car upon four wheel , which will remind the reader of Itahan history of the carroccio of the people of Lombardy,\* was drawn to the centre of the position; the mast of a vessel was strongly fastened in the car; at the top of the mast a large crucifix was displayed, having m its centre a silver box containing the consecrated water or sacrament; and, lower down, the mast was decorated with the banners of the three Eug-

\* The carroccia, or great standard car, is said to have been invented or first used by Lubert, architectured in Main, in the year 10.55. It was a can upon from wheels, pointed tred, and so heavy that it was drawn by four pair of oxen. In the reintic of the car was fixed a most, which supported a golden ball, an image of our Saxiour, and the baunce of the republe. In front of the most were placed a lew of the most valuant warners—in the rear of it a band of warlike masse. Feelings of religiou, of anthray glory, of local atto himent, of patriotism, were all, associated with the caroccio, the idea of which is supposed to have been derived from the Lewish aid of the cavinant. It was from the platform of the car that the purest administered the offices of religion to the army. No disgrace was so into lerable among the free citizens of Lombardy as that colarled by the suffering an enemy to take the caroccio.

lish saints. Around this sacred standard many of

the English yeomanry and peasants from the plants,

sent forth all his clergy, bishops, and chaplains,

and the curates, who led their parishioners "the

CIVIL AND MILITARY TRANSACTIONS. CHAP. I] good time to tell that the Scots were coming. At

wolds, and woodlands of Yorkshire, Nottingham, and Lincolnshire, gathered of their own accord. These men were all armed with large bows and arrows two cubits long; they had the fame of being excellent archers, and the Normans gladly assigned them posts in the foremost and most exposed ranks of the army. The Scots, whose standard was a simple lance, with a sprig of the "blooming heather" wreathed round it, crossed the Tees in several divisions. Prince Henry commanded the first corps, which consisted of men from the Lowlands of Scotland, armed with chirasses and long pikes; of archers from Teviotdale and Liddesdale, and all the valleys of the rivers that empty their waters into the Tweed or the Solway Frith; of troopers from the mountains of Cumberland and Westmoreland, mounted on small but strong and active horses; and of the herce men of Galloway, who wore no defensive armour, and carried long thin pikes as then elnefif not sole weapon of war. A body-guard of knights and men-at-arms under the command of Enstace Fitz-John, a nobleman of Norman deecent, rode round the prince. The Highland claus and men of the Isles came next, carrying a small

round shield, made of light wood covered with leather, as then only defensive armour, and the claymore or broad-sword as their only weapon; some of the island tribes, however, wielded the old Danish battle-axe instead of the claymore these marched the king, with a strong body of knights, who were all either of English or Norman extraction; and a mixed corps of men from the Moray Frith and various other parts of the land, brought up the rear. With the exception of the knights and men-at-arms who were clad in complete mail, and armed uniformly, the host of the Scottish king presented a disordered variety of weapons and dresses. The hulf-maked claus were, however, as forward to fight as the warrons clad in steel; and a hot dispute arose for the honour of beginning the action between the natives of Galloway and the well-appointed men-at-mms. " Why should we trust so much to these foreigners?" said Malise, carl of Strathern. "I wear no armour, but there is not one among them that will advance so far as I will do this day." The king was obliged to decide the dispute in favour of the men of Galloway, who accordingly had the post of honour, and led the van, when they came in presence of the enemy. The rapid advance of the Scottish forces was covered and concealed by a dense fog, and they would have taken the Anglo-Norman army by surprise, had it not been for Robert de Bruce and Bernard de Baliol, two barons of Norman descent, who held lands both in Scotland and England, and who were anxious for the conclusion of an immeliate peace. Having in vain argued with David,

and hearing themselves called traitors by William,

the king's repliew, they renomiced the Scottish

part of their allegiance, bade defiance to the king,

and putting spurs to their horses, galloped off to the camp at Northallerton, which they reached in ,

VOL. 1,

land," said the bishop, " by blood and race Normans, before whom bold France trembles,—to whom herce England has submitted, - under whom Appha has been restored to her station,—and whose names are famous at Antioch and Jernsalem,here are the Scots, who have done homage to you, undertaking to drive you from your estates "\* The Scots came on with the simple war-cry of " Alban! Alban!" t which was shouted at once by all the Celtic tribes from the Highlands. The desperate charge of the mea of Galloway drove in the English intantity, and broke, for a monicut, the Norman centre. " They burst the enemy's ranks," says old Brompton, "as if they had been but spiders' wels" Almost animediately after, both fanks of the Anglo-Normans were assailed by the mountaineers and the men of Tevaotdale and Lids desdale; but these charges were not supported in tane, and the Norman horse formed in an ampenetrable mass round the standard-car, and repulsed the Scots in a figree charge they made to penetrate there. During this fruitless effort of the cuciny, the English bowmen rallied, and took up good positions on the two wings of the Anglo-Norman army; and when the Scots renewed their attack on the centre, they harassed them with a doubleflank flight of arrows, while the Norman knights and men-at-arms received them in front on the points of their couched lances. The long thin pikes of the men of Galloway were shavered against the armour of the Normans, or broken by their heavy swords and battle-axes. The Highland claus, still shouting "Alban! Alban!" wielded their claymores, and fighting hand to hand, tried to cut their way through the mass of non-cased chivalry It was the first time these Normans of England had come in contact with the claymore of the North, and they had good reason to bless the protection of then well-bound shields, then hauberks of mail, and their cosses of steel plate. For full two hours shd the Scots maintain the fight in front of the Norman host; and at one moment the gallant Prince Henry had nearly penetrated to the elevated standard; but, at last, with broken spears and swords, they ceased to attack-pan-ed, retreated, and then fled in confusion. The king, however, retained near his person, and in good

order, his guards and some other troops, which

covered the retreat, and gave several bloody checks

to the Anglo-Normans who pursued. Three day-

the sight and sound of their headlong and turnal-

tuous approach, the hishop of Durham read the

prayer of absolution from the standard-car, the

Normans and the English kickling on the ground

the while, and rising to their feet and shouting

" Amen," when it was finished. The representa-

tive of the energetic old Thurstain then delivered a

speech for the further encouragement of the army:

it was long, and seems to have been interrupted by

the onslaught of the Scots; but the opening of it

ought to be preserved: "Hlustrious chiefs of Eng-

after, he rallied within the walls of Carlisle, and employed himself in collecting his scattered troops, and organizing a new army. He is said to have lost 12,000 men at Northallerton. The Normans were not left in a situation in which they could pursue their advantages to any extent; and the Scots soon re-assumed the offensive, by laying stege

were not left in a situation in which they could pursue their advantages to any extent; and the Scots soon re-assumed the offensive, by laying siege to Wark Castle, which they reduced by famme The famous battle of the Standard, which was fought on the 22nd of August, A.D 1138, was, however, the great event of this Scottish war, which was concluded in the following year by a treaty of peace, brought about by the intercessions and prayers of Alberic, bishop of Ostin, the pope's legate in England, and Stephen's wife, Maud, who had an interview with her fincle King David at Durham. Though he left the Scots in possession of Cumberland and Westmoreland, and invested Prince Henry with the earldom of Northumberland, the issue of the war disputed the malcontents all over England, and might have given some stability to Stephen's throne, bad he not, in an evil moment, roused the powerful hostility of the church. Roger, bishop of Sarum, though no longer treasurer and justiciary, as in the former and at the beginning of the present reign, still possessed great influence in the nation, both among clergy and laity,

-an influence not wholly arising out of his great wealth and political abilities, but in partowing to the noble use he made of his money, to his taste and mumficence, and the superior learning of his family and adherents. Among other works of the same kind he rebuilt the cathedral at Samm. which had been injured by fire, and the storms to which its elevated position exposed it, and he beautified it so greatly that it yielded to none in England at that time; and some respect is still due to the memory of a man who greatly raised the architectural taste of this country, and whose genius affected the age in which he lived "He erected splendid mausions on all his estates," says William of Malmsbury, "with unrivalled magnificence, in merely maintaining which his successors His cathedral he dignified to will toil in vain. the utmost with matchless adornments, and buildings in which no expense was spared. It was wonderful to behold in this man what abundant authority attended, and flowed, as it were, to his He was sensible of his power, and somewhat more harshly than beseemed such a character

abused the favour of Heaven." He was indeed

little scrupulous about the manner in which he

obtained his resources; and we learn from the

same contemporary that, while he was in power, his hand was as grasping in one direction as it was

open and liberal in another. "Was there anything

adjacent to his possessions which he desired, he

would obtain it either by treaty or purchase; and if that failed, by force." But other powerful barons,

both ecclesiastical and lay, equalled his rapacity without having any of his taste and elevation of spirit; for he was in all things a most magni-

" By God's birth, I would give him half England it be asked for it: till the time be ripe, he shall tire of asking before I tire of giving." Roger was one of the castle-builders of that turbulent period, being, as he thought, becased therein by the permission granted by Stephen at his coronation: all his stately mansions were in fact strongly fortified places, well garrisoned, and provided with warlike stores. Besides Newark Castle, Alexander had built other houses, which were also fortified; and, when abroad, uncle and nephews were accustomed to make a great display of military force. The pomp and power of this family had long excited the envy of Stephen's favourites, who had no great difficulty in persuading their master that Bishop Roger was on the point of betraying him, and espousing the interests of Matilda. Stephen was threatened by an invasion from without, and no longer knew how to distinguish his friends from his foes within: his want of money, to pay the foreign mercenary troops he had engaged, and to

satisfy his selfish nobles, now drove him into all

kinds of irregular courses, and he probably consi-

dered that the bishop's time was ripe. The king

was holding his court at Oxford; the town was

crowded with prelates and barons, with their nume-

rous and disorderly attendants; a quarrel, either

accidental or preconcerted, arose between the

bishop's retainers and those of the Earl of Brittany

concerning quarters, and swords being drawn on both sides, many men were wounded, and one

knight was killed. \* Stephen took advantage of the

circumstance, and ordered the arrest of the bishop

and his nephews. Roger was seized in the king's

own hall, and Alexander, the Bishop of Lincoln,

at his lodging in the town; but Nigel, the Bishop

ficent person, and one who extended his patromage-

to men of learning as well as to architects and

other artists. He obtained the sees of Lincoln and

Ely for his two nephews, Alexander and Nigel,

who were men of noted learning and industry, and

were said at the time to merit their promotion by

virtue of the education which he had given them.

Alexander, the bishop of Lincoln, who, though

called his nephew, is significantly said to have been something nearer and dearer, had the same

taste for raising splendid buildings; he nearly

rebuilt the cathedial of Lincoln, and built the

castle of Newark: but Nigel, on the contrary, is

said to have wasted his wealth on hawks and hounds. Bishop Roger, next to his own brother,

the bishop of Winchester, had contributed more

than any churchman to his elevation, and Stepheu's

consequent liberality for a long time knew no stat. It should appear, however, that his gifts were not

the free-offerings of gratitude, and that he treated

the bishop as one does a sponge which is permuted

to fill before it is squeezed. He is reported to have

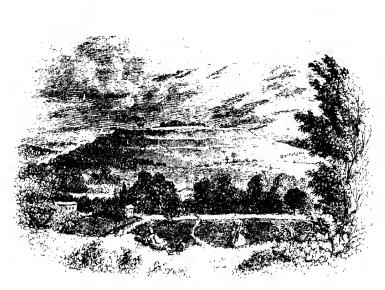

said more than once to his familiar companions,-

BOOK III.

It appears that Bishop Roger set out on his journey to Oxford with rehicitance. "For," says William of Malmsbury." I heard him speaking to the following purpose: "By my lady St. Mary, I know not wherefore, but my heart revolts at this journey: this I am sure of, that I shall be of much the same service at court as a fool in battle!""

of Ely, who had taken up his quarters in a house outside the town, escaped, and threw himself into Devizes, the strongest of all his uncle's castles. The two captives were confined in separate dungeons:—the first charge laid against them was a flagrant violation of the king's peace within the preemets of his court; and for this they were assured that Stephen would accept of no atone-

ment less than the unconditional surrender to him of all their eastles. They at first refused to part with their houses, and offered "a reasonable compensation" in money; but moved by the dreadile threats of their enemies and the entreaties of their friends, they at length surrendered the eastles which Roger had built at Malmsbury and Sherborne, and that which he had enlarged and

RUMAINS OF OLD SARIEW. The site of the Castle is marked by the Rushes to the Central Mound

strengthened at Sarum. Newark Castle, the work of the Bishop of Lincoln, seems also to have been given up. But the Castle of Devizes, the most important of them all, remained; and, relying on its strength, the warlike Bishop of Ely was prepared to bid defiance to the king. To overcome this opposition Stephen had recourse to a measure which was not at all inconsistent with the spirit of the times—he ordered Roger and the Bishop of Lincoln to be kept without food till the castle should be given up. In case of a less direct appeal the defenders of Devizes might have been obstuate, or incredulous of the fact that Stephen was starving two bishops; but Roger lumself, already pale and emaciated, was made to state his own hard fate, in front of his own castle, to his own nephew, whom he implored to surrender, as the king had sworn most solemuly to keep his purpose of famishing him and the Bishop of Lincoln to death unless he submitted. though far less cruel by nature than most of his contemporaries, was yet thought to be a man to keep his word in such a case as the present: this was felt by the Bishop of Ely, who, overcoming his own haughty spirit out of affection to his uncle, surrendered to save the lives of the captives, after

they had been three whole days in a "fearful fast."

At these violent proceedings, the whole body of the dignified clergy, including even his own brother Henry, the Bishop of Winchester, who was now armed with the high powers and jurisdiction of Papal Legate for all England, turned against Stephen, accusing him of sacrilege in laying violent hands on prelates, whose persons were held to be holy, no matter what the tenor of their lives, and whose deeds were not to be subjected to a lay tribunal or the operations of kingly or civil law. The Legate Henry summoned his brother, the king, to appear and answer for his conduct before a synod of bishops assembled at Winchester. Stephen would not attend in person, but finding it absolutely necessary so to do, he sent Aubrey or Alberic de Vere as his counsel to plead for him. Alberic exaggerated the circumstances of the riot at Oxford, and laid all the blame of that disgraceful bloodshedding upon Roger and his insolent nephews, whom, moreover, he directly charged with a treasonable correspondence with the Empress Matilda. The legate auswered that the three bishops, uncle and nephews,

\* Malmsb.-Orderic.-Gesta Steph.

ວ້າ ດ

were ready to alide their trial before a proper trihunal; but demanded, as of right, and according to usage, that then houses and property should be previously restored to them. Alberic said that they

had voluntarily surrendered their castles and treasures as an atoucment for their offences; and it was insisted, moreover, on the same side, that the king had a right to take possession of all fortified places in his dominions whenever he considered, his enemistances now obliged him to do, that his throne was in danger. On the second day of the debate the Archbishop of Ronen, the only prelate that still adhered to the king, took a more apostolic and simple view of the case, and boldly affirmed that the three bishops were bound by then yows at consecration to live lumbly and quietly according to the emons of the church, which prohibited them from all kinds of inflitary pursuits whitsoever; that they could not claim the restitution of eastles and places of war, which it was most unlawful for them, as churchmen, to land or to hold; and that, consequently, they had merited the greatest part of the punishment they had suftered. The points of canonical law thus laid down were underiable; but the bishops there assembled

were not accustomed to their practice, and every one of them might baye said that, without making his house a easile, there was no living in it nothose lawle's times. As then temper was stern and uncompromising, Alberte de Vere appended to the pope in the name of the king, and dissolved the council, the knights with Lan drawing then swinds to enforce his orders it necessary.\* The assembly broke up in wrath and cantusion, and the effects of this roafuncel rupture were soon made visible. But Bishop Roger did not live to see the lumnhatton of Stephen; he was heart-broken; and when, in the following month of December, as the horrors of a civil war were commencency, he died at an advanced age, his fate was ascribed, not to the fever and ague, from which, in Malmsbury's words, he escaped by the kindness of death, but to grief and indignation for the injuries he had suffered. The plate and money which had been saved from the king's rapacity he devoted to the completion of his church at Sarom, and he laid them upon the legh altar, in the hope that Stephen nught be restrained, by fear of sacrilege, from seizing them. But these were not times for delacate scruples, and they were carried off, by the orders of Stephen, even before the old man's death. Their value was estimated at forty thousand marks. Bishop Roger was the Cardnal Wolsey of the twelfth century, and his fate, not less tragic than the cardnial's, made a deep impression on the mands of his contemporaries, even in the mulst of the many tragedics, domestic as well as public, by which they were constantly surrounded. me," says William of Malmsbury, "it seems that

God exhibited him to the rich as an example of the instability of fortime, in order that men should not trust in uncertain riches. . . . . But the height \* Malmsh.-William of Malmsbury was present at this conneil,

HISTORY OF ENGLAND.

Book III.

of his calamity even I cannot help commiserating,

that, wretched as he appeared to many men, there

were very few who pitied him, -so much envy and

hatred had his excessive power drawn on him, and undeservedly, too, from some of the very persons

whom he had advanced to honour." It has been

hinted that he must have regretted in his last hours that irreligious baste in saying mass, which

gained him the favour of Henry Beanclerk: this

is very probable even in a worldly view, and in

his season of sickness and fallen greatness he may

have thought that his life would have been, in all

scuses, a happier one, had he remained a quiet, devont curate in his little eliirch near Caen

His nephew, or son, Alexander, Bushop of Lancoln,

and his nephew Nigel, Bishop of Ely, having the

advantage of a younger age, did not resign them-

selves to despan, but, intent on taking vengeance,

they openly joined Matilda, and were soon up in

dissolved on the first day of September (A D. 1139), and towards the end of the same month Matilda

landed in England with her half-brother Robert,

Earl of Gloucester, and one hundred and forty

knights. Some Normans who went out to meet

her, on finding she came with so insignificant a

force, and brought no money, returned to the other

side; and Stephen, by a rapid movement, pre-

sently surprised her in Arindel Castle, where

Alice, or Adelais, the queen-widow of Hemy I,

had both these dames absolutely in his power, but

refining on the cluvalrous notions which were

becoming more and more in vogue, and to which

gave ber shelter and enconragement.

The synod of bishops held at Winchester was

arms against Stephen.

he was inclined by nature more perhaps than sinted good policy, he left Queen Alice undistribed in lici castle, and gave Matilda permission to go free and join her half-brother Robert, who immediately after their landing had repaired by byeroad, and with only twelve followers, to the west country, where, at the very moment of these generous concessions, he was collecting his friends to make war upon Stephen. The king's brother, Henry, Bishop of Winchester, escorted Matilda from Arundel Castle to Bristol, and delivered her safely to Earl Robert. It was soon seen that those who had declined joining Matilda on her first landing had taken a narrow view of the resources of her party, for most of the chiefs m the north and the west renounced their allegrance to Stephen, and took fresh oaths to the empress. There was a moment of wavering and hesitation, during which many of the barons in other parts of the kingdom weighed the chances of success, or tried both parties, to ascertain which would grant the more ample recompense to their venal swords. While this state of indecision lasted nien knew not who were to be their friends or who their foes in the coming struggle; -- "the neighbour could put no faith in his nearest neighbour, nor the friend in his friend, nor the brother in his own brother; "\* · Gervase of Canterbury,

ALEXDU CAMP

but at last the more active chiefs chose their sides, a the game was made-up, and the horrors of civil war, which were to decide it, were let loose upon the land. Still, however, many of the barons kept aloof, and strongly garrisoning their own castles, took the favourable opportunity of setting all laws at definice, and despoiling, torturing, and The whole murdering their weak neighbours. war was conducted in a frightful manner; but the greatest of the atrocities seem to have been committed by these separationists, who cared neither for Stephen nor Matilda, and who rarely or never took the field for either party. They waged war against one another, and besieged castles, and racked farms, and seized the unprotected traveller, on their own account, and for their own private spite or advantage. There was scarcely a corner of the land exempt from these insupportable evils; for castles had been built everywhere, and nearly every castle was the scene of lawlessness and erime.

At first the fortune of the greater war inclined in favour of Stephen; for though he facled in an attempt to take Bristol, which had become the head-quarters of Matilda and Earl Robert, he gained many advantages over their adherents in the west, and defeated a formidable insurrection in the east, headed by Nigel, the bishop of Ely, who built a stone rampart among the bogs and fens of his diocese, on the very spot, it is said, where the brave Earl Hereward had raised his fortress of

wood against the Conqueror. To reach the warlike and inveterate nephew of old Bishop Roger, Stephen had recourse to the same skilful measures which had been employed by the Conqueror at the same difficult place. Defeated at Ely, Nigel fled to Gloucester, whither Matilda had transferred her standard; and while Stephen was still on the castern coast, the flames of war were rekindled in all the west, and the fagitive bishop distinguished himself among the men who were hierally of the church unhtant. The Norman prelates had no scraples in taking an active part in these military operations; and the garrisons of their castles are said to have been as cruel to the defenceless rural population, as eager after plunder, and altogether as lawless as the retainers of the lay barons. The bishops themselves were seen, as at the time of the Conquest, mounted on war-horses, clad in armour, directing the siege or the attack, and drawing lots, with the rest, for the hooty.\* exceptions are named; but we are inclined, in charity, to believe there were several, and that there were many churchmen who deplored, at the same time, the woful dimmution of their peaceful revenues, and the misenes of the people, whose labours, in happier times, made their wealth and plenty.

The cause of Stephen was never injured by any want of personal courage and rapidity of movement. From the east he returned to the west, and from the west marched again to the county of fens,

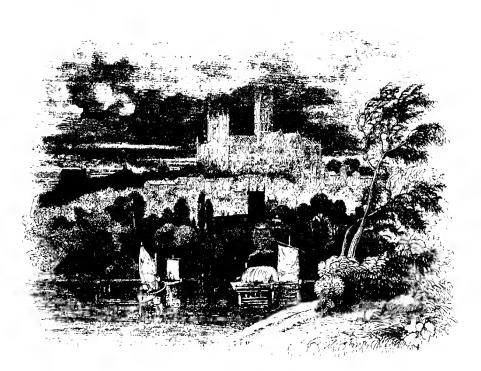

\* Gesta Steph.

on learning that Alexander, the bishop of Lincoln, had got together the scattered forces of the hishop of Ely in those parts, and, in alliance with the earls of Lincoln and Chester, was making himself very formidable. The eastle of Lincoln was in the hands of his enemies; but the townspeople were devoted to Stephen, and assisted hum in laying siege to the fortress. On the 2nd of February, A.D. 1141, as Stephen was prosecuting this siege, the earl of Gloucester, who had got together an army 10,000 strong, and who had hoped, by rapid marches, to take his adversary by surprise, swam across the Trent, and appeared in front of Lincoln. Stephen, however, was prepared to receive him; he had drawn out his forces in the best position, and, dismounting from his war-horse, he put himself at the head of his infantry. But his army was unequal in number, and contained many traitors: the whole of his cavalry deserted to the enemy, or fled at the first onset; and after he had fought most gallantly, and broken both his sword and battle-axe, Stephen was taken prisoner by the earl Matikla was incapable of initiating of Gloucester. his generosity; but her partisans lauded her mercy, because she only loaded him with chains, and threw him into a dungeon in Bristol Castle. Many of the time-serving nobles now made then, submission to the empress, and she does not appear to have encountered much difficulty in persuading

the bishop of Winchester wholly to abandon his un-

fortunate brother, and acknowledge her title. The price paid to the bishop was the promise, sealed by an oath, that he should have the chief direction of her affairs, and the disposal of all vacant bishopric. The scene of the bargam was on and abbacies. the downs, near Wurchester, and the day on which it was concluded (the 2nd March) was dark and tempestuous, as if, says Mahnsbury, the elements themselves portended the calamities that followed The next day, accompanied by a great body of the clergy, the brother of Stephen conducted the empress in a sort of triumph to the cathedral of Winchester, within which he blessed all who should be obedient to her, and denoinced a curse against all who refused to submit to her authority. As legate of the pope, this man's decision had the force of law with most of the clergy; and several beshop, and even Theobald, the new archbishop of Continbury, followed his example.\* It is said, in order to excuse the breach of their former oaths to Stephen, that they previously obtained a release from their allegance from their captive king; but the very circumstance of his being a captive mu t deprive such a release of validity. At Winche, ter, Matilda took possession of the royal castle, the crown, with other regalm, and such treasure a. Stephen had not exhausted. On the 7th of April, she, or the legate acting for her, convened an assembly of churchmen to ratify ber recessors

phen's queen, rose to address the meeting.

legate endcavoured to impose silence on this new advocate; but, in defiance of his voice and autho-

reign of Henry I.; he glanced slightly over the repeated vows made to Matilda, and said the alrence of that lady, and the confusion into which the country was thrown, had compelled the prelates and lords to crown Stephen; —that he blushed to bear testimony against his own brother, but that Stephen had violated all his engagements, particubuly those made to the church ;—that hence God had pronounced judgment against lum, and placed them again under the necessity of providing for the tranquillity of the kingdom by appointing some one to fill the throne "And now," said the legate, in conclusion, " in order that the kingdom may not be without a ruler, we, the clergy of Enghand, to whom it chiefly belongs to elect kings and ordain them, having yesterday deliberated on this great cause in private, and invoked, as is fitting, the direction of the Holy Spirit, did, and do, elect Matilda, the daughter of the pacific, rich, glorious, good, and incomparable king Henry, to be soccream hady of England and Normandy," Many persons present listened in silence—but silence, as usual, was interpreted into consent; and the rest of the assembly haded the conclusion of the speech with loud and repeated acclamations. It is curious to observe, that the citizens of London had risen to such importance, that, if not actually consulted in the disposal of the crown, they were called upon to We learn from Malmsbury, that they formed a body of great weight; that the members of the municipality were considered as barons, and that they also admitted barons into their body. The preceding deliberations of the synod, and the proclamation of Matilda, were hurried over before the deputation from the city of London could reach Winchester; but such was the respect they imposed, that it was deemed expedient to hold an adjourned session on the following morning. When the decision of the council was announced to them, the deputies said they did not come to debate, but to petition for the liberty of their king; that they had no powers to agree to the election of this new sovereign; and that the whole community of London, with all the barons lately admitted into it, carnestly desired of the legate, the archbishop, and all the clergy, the immediate liberation of Stephen. When they anded, Christian, the chaplain of Ste-

rescue her husband from the imprisonment in which he was kept by base and treacherous vassals. But Stephen's brother was not much moved by these measures: he repeated to the Londoners the arguments he had used the day before ;—the deputies departed with a promise, in which there was probably little sincerity, to recommend his view of the case to their fellow-citizens; and the legate broke up the conneil with a sentence of excominuincation on several persons who still adhered to his brother, not forgetting a certain William Martel, who had recently made free on the roads with a part of lus (the legate's) baggage. If popular opinion can be counted for anything in those days, and if the city of London, together with Lincoln and other large towns, may be taken as indexes of the popular will, we might be led to conclude that Stephen was still the sovereign of the people's choice, or, at least, that they preferred him to his competitor. The feelings of the citizens of London were indeed so decided, that it was not until some time had passed, and the Earl of Gloucester had soothed them with promises and flattering prospects, that Matilda ventured among them. She entered the city a few days before Midsummer, and made preparations for her immediate coronation at Westminster. But Matilda herself, who pretended to an indefeasible, sacred, hereditary right, would perform none of the promises made by her half-brother; on the contrary, she imposed a heavy tallage or tax on the Londoners as a punishment for their attachment to the usurper, and arrogantly and insolently rejected a petition they presented to her praying that the laws of Edward the Confessor might be restored, and the changes and usages introduced by the Normans Indeed, whatever slight restraint she abolished. had formerly put on her haughty, vindictive temper, was now entirely removed, and in a surprisingly short space of time she contrived not only to irritate her old opponents to the very utmost, but also to convert many of her best friends into bitter enemies. When the legate desired that Prince Eustace, his nephew and Stephen's eldest son, should be put in possession of the earldon of Boulogne and the other patrimonial rights of his father, she gave him a direct and insulting refusal. In dethroning his brother this prelate, who was perhaps the most extraordinary character of the period, had not bargamed for the impoverishment of all his family, and an insult was what he never could brook. When Stephen's wife, who was her own cousin, and a kind-hearted, amiable woman, appeared before her, seconded by many of the nobility, to petition for the enlargement of her husband, she showed the malignancy and littleness of her soul by personal and most unwomanly upbraidings. The acts of this tragedy, in which there was no small mixture of farce, passed almost as rapidly as those of a drama on the stage; and before the coro-

rity, the chaplain read a letter from his royal

mistress, in which she called upon the clergy, by

the oaths of allegiance they had taken to him, to

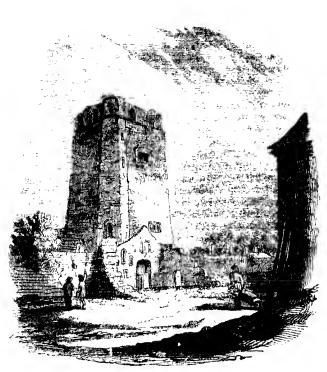

nation clothes could be got ready, and the bishops assembled, Matilda was driven from London without having time to take with her so much as a change of raiment. One fine summer's day, "nigh on to the feast of St. John the Baptist, and about noon-tide, the dinner hour of the court in those times, a body of horse bearing the banner of Queen Mand (the wife of Stephen), who had kept together many partisans in Kent and Surrey, appeared on the southern side of the river opposite the city; on a sudden all the church bells of London sounded the alarm, and the people ran to arms. From every house there went forth one man at least with whatever weapon he could lay his hand They gathered in the streets, says a contemporary, like bees rushing from their hives.\* Manida saved herself from being made prisoner by rushing from table, mounting a horse, and galloping off with headlong speed. She had scarcely cleared the western suburb when some of the populace burst into her apartment, and pillaged or destroyed whatever they found in it. Such was her leave-taking of London, which she never saw again, and which remained unusually firm on the side of Stephen during the rest of the long and Some few of her friends destructive contest. accompanied her to Oxford, but others left her onthe route, and fled singly by cross-country road-

and unfrequented paths towards their respective

Matilda had not been lung at Oxford when she conceived suspicions touching the fidelity of the bishop of Winchester, whom, in the insolence of success, she had offended beyond redress, and who had taken his measures accordingly, absenting himself from court, and manning the castles which he had built within his diocese,-as at Waltham, Faruham, and other places. He had also an interview with his sister-in-law, Maud, at the town of Guilford, where he probably arranged the plans in favour of his brother Stephen which were so soon carried into execution. Matilda sent han a rude order to appear before her forthwith. The cuming churchman told her messenger that he was "getting Immself ready for her;" which was true enough. She then attempted to seize him at Wanchester; but having well fortified his episcopal residence, and set up his brother's standard on its roofs, he rode out by one gate of the town as she entered at the other, and then proceeded to place himself at the head of his armed vassals and the friends who had engaged to join him. Matilda was admitted into the royal castle of Winchester, whither she immediately summoned the earls of Gloncester, Hereford, and Chester, and her uncle David, king of Scots, who had been for some time

TOWER OF OXFORD CASTLE.

in England vainly endeavouring to make her follow While these personages mild and wise counsel. were with her she laid siege to the episcopal palace, which was in every essential a castle, and a strong one. The legate's garrison made a sortie, and set fire to all the neighborring houses of the town that might have weakened their position, and then, being confident of succour, waited the event. bishop did not make them wait long. Being reinforced by Queen Mand and the Londoners, who, to the number of a thousand citizens, took the field for Stephen, clad in coats of mail, and wearing steel casques, like noble men of war,\* be turned rapidly back upon Winchester, and actually besieged the besiegers there. By the 1st of August he had invested the royal castle of Winchester, where, besides the empress-queen, there were shut up the king of Scotland, the Earls of Gloncester, Hereford, and Chester, and many other of the noblest of her partisans. Sallies were made by the besieged, splendid achievements in arms took place on either side, and, between them, the good people of Winchester were made very wretched, for ugurly the whole of the town was plundered and burned at different times. When the siege had lasted six weeks all the provisions in the castle. were exhausted, and a desperate attempt at flight was resolved upon. By facit consent the belligerents of those times were accustomed to suspend their operations and relax their vigilance on the great festivals of the church. The 14th of September was a Sunday, and (what was then far more important) the festival of the Holy Rood or Cross. At a very early hour of the morning of that day Matrida mounted a swift horse, and accompanied by a strong and well-mounted escort, crept as secretly and quietly as was possible out of the castle: her balf-brother, the Earl of Gloncester, followed at a short distance with a mimber of knights who had engaged to keep between her and her pursuers, and risk their own liberty for the sake of securing the queen's. These movements were so well timed and executed that they broke through the beleaguerers with little difficulty, and got upon the Devizes' road before the legate's adherents, who were thinking of their mass and prayers, could mount and follow them. Once in the saddle, however, they made hot pursuit, and at Stourbridge the Earl of Gloncester and his gallant knights were overtaken. To give Matilda, who was only a short distance in advance, time to escape, they formed in order of battle and offered an obstinate resistance. In the end they were nearly all made prisoners; but their self-devotion had the desired effect, for the queen, still pressing on her steed, reached the castle of Devizes in safety. That fortress, the work of Bishop Roger, was, we know, very strong, but it is said that, not finding herself in security even there, Matida almost immediately resumed her journey, and, the better to avoid danger, feigned herself to be dead, and being placed on a bier like a corpse, caused herself to be drawn in a hearse \* Gest, Steph.

the Earl of Hereford alone reached Gloucester castle, and he arrived in a wretched state, being almost naked. The other barons and kinghts who escaped from the field of Stourbridge threw away their arms, disguised themselves like peasants, and made for their own homes. Some of them, hetrayed by their foreign accent, were seized by the English peasantry, who bound them with cords, and drove the proud Normans before them with whips, to deliver them up to their enemies. As this unhappy and uncivilized class suffered so cruelly in these wars between foreign lords and princes, it is not surprizing that they at times took a cruel vengeance on the persons chance threw in their way. Though, if anything, rather more inclined to Stephen than to his opponent, they seem in general to have been impartial in their spite, and to have killed or stripped both parties alike whenever the apportunity offered. The king of the Scots, Matilda's mucle, got safely back to his own kingdom; but her half-brother, the Earl of Gloucester, who was by far the most important prisoner that could be taken, was conveyed to Stephen's queen, who secured him in Rochester Castle. According to one account, she 'caused him to be hardly handled in retaliation for the earl's harsh treatment of her husband, who was still in a dungeon in his castle of Bristol; but another statement, which is better authenticated and more in accordance with what we know of the anniable character of Maud. is, that she treated the earl generously, and so far from loading him with chains, granted him every indulgence compatible with captivity. Both parties were now, as it were, without a head, for Matilda was nothing in the field in the absence of her half-brother. A negotiation was therefore set on foot, and, on the 1st of November, it was finally agreed that the Earl of Gloucester should be exchanged for King Stephen. The interval had been filled up by unspeakable misery to the people; but, as far as the principals were concerned, the two parties now stood as they did previously to the battle of Lincoln. The clergy, and particularly the legate who had alternately sided with each, found themselves in an embarrassing position; but the brother of Stephen had an almost unprecedented strength of face and impudence, and seems never to have blushed at anything. summoned a great ecclesiastical council, which met at Westminster on the 7th of December, and he At different times the Archbishop of Canterbury and several of the Norman bishops and abbots were stripped by the English prasants,—" equis et vestibus ab ratis capte, ab alla horrende abstractis." to do all in his power to effect the liberation of his brother. This letter was held as a sufficient justification of all the measures be had recently adopted; and the presence of Stephen, who was there to speak for hunself, only showed how snecessfully the legate had obeyed the orders of his spiritual cluef, who claimed the right of binding and loosening all mortal ties. Stephen then addressed the assembly, briefly and moderately complaining of the wrongs and hardships he had sustained from his vassals, unto whom he had never demed justice when they asked for it; and adding, that if it would please the nobles of the realm to aid lum with men and money, he trusted so to work as to relieve them from the lear of a shameful submission to the voke of a woman; a thing which at first they seemed much to mislike, and which now, to their great grief, they had by experience found to be intoler-At last the legate himself rose to speak, and as he had with a very few exceptions the same audience as in the synod assembled at Winchester only muc months before, when he pronounced the defirmement of his own brother, and hurled the thunders of excommunication against his friends and adherents, his speech must have produced a singular effect. He pleaded that it was through force, and not out of conviction or good-will, that he had supported the cause of Matilda, who subsequently had broken all her engagements with him, and even made attempts against his liberty and life. rightful King Stephen to his throne.

there produced a letter from the Pope, ordering him

He was thus, he maintained, freed from his oaths the most brutal manner. So general was the to the Countess of Anjou, for he no longer degred discouragement of the suffering people, that whento style her by a higher title. The indigment of ever only two or three horsemen were seen apheaven, he said, was visible in the punishment of proaching a village or open burgh, all the inhabither perfidy, and God bunself now restored the ants fled to conceal themselves. So extreme were Though their sufferings that their complaints amounted to there were some jealousies already existing between implety, for, seeing all these crimes and atrocities him and the archbishop of Canterbury, the council going on without check or visible judgment, men went with the legate, and no objection was started said openly that Christ and his saints had fallen save by a solitary voice, which holdly asserted, in the name of Matilda, that the legate himself had (a. p. 1142.) During Stephen's captivity, caused all the calamities which had happened,— Matilda's husband, Geoffrey of Anjon, reduced that he had invited her into England,—that he had nearly the whole of Normandy, and prevailed upon planned the expedition in which Stephen was the majority of the resident nobles to acknowledge taken,-and that it was by his advice that the Prince Henry (his son by Matilda) as their legitimate duke. The king's party thus lost all hope of empress had loaded his brother with chains. This orator concluded with probabiliting him, by the faith aid and assistance from beyond sea; but, as they he had sworn to his queen, from publishing any were masters of the coasts of the island, they were decision against her rights and dignity. The imable to prevent the arrival of any considerable 1eperturbable legate heard these open accusations, inforcement to their adversaries. Matalda pressed which contained some portion of truth, without any her husband to come to her assistance with all the apparent emotion either of shame or anger, and forces he could raise; but Geoffrey's dislike of his with the greatest composure proceeded to excomwife's society was more prevalent with him than municate all those who remained attached to the ambition, and the past might have instructed him party he had quitted. The curse and interdict that such a war would not be without its dangers were extended to all who should build new castles, and costly sacrifices: he declined the invitation on or invade the rights and privileges of the church, the ground that he had not yet made himself sure and (a most idle provision!) to all who should part of God and the Pope, that they should strenuously assist the king, anomically the will of the nation and with the approbation of the Holy See; and that such as disturbed the peace in favour of the Countess of Anjow should be excommunicated, with the exception of wrong the poor and defenceless. \* . Gervase.- Malmsb. The houest and judicious monk of Malmsbiny says, "I cannot relate the transactions of this council with herself,-ucho was sovereign of the Angroins.

CIVIL AND MILITARY TRANSACTIONS.

Meanwhile Stephen, who had recovered from a long and dangerous illness, marched in person to Oxford, where the empress had fixed her court, and invested that city, with a firm resolution of never moving thence until be had got his troublesome

cester, whom Matilda had sent into Normandy.

rival into his hands. At his first approach the garrison came out to meet him: these enemies he put to flight, and purshed them so hotly that he entered the city pell-mell with them. Matilda then retired into the eastle, and the victor's troops set fire to the town. Stephen invested the citadel, and persevered in the operations of the siege or blockade through the horrors of a winter of extraordinary seventy; and so intent was he on his purpose that he would not permit his attention to be distracted even when informed that the Earl of Gloucester and Prince Henry had landed in England. The eastle was strong, but like all such places at the period, insufficiently stocked with provisions for a considerable force; a proof, perhaps, not merely of the thoughtlessness and improvidence of the two parties, but of the general poverty and actual distress of the country. When the siege had lasted some three months, Matilda again found herself in danger of starvation, to escape which she had recourse to another of her furtive flights.

the 20th of December, a little after undnight, she dressed herself in white, and accompanied by three knights in the same attic, stale out of the eastle by a postern gate. The ground being covered with deep snow, the party passed unobserved, and the Thanks being trozen over, afforded them a sate and direct passage. Matilda, who had the strength and comage of her male ancestors, pursued her course on foot as far as the town of Abingdon, where, finding horses, the party mounted, and she rode on to Wallingford, at or near to which place she was soon after joined by the Earl of Gloncester and her young son, who were at the head of a considerable force, though at their first landing many who had gone out to meet him, on finding the prince had stolen into the land with a very inconsiderable force and but little money, turned their backs upon him as they had done upon his mother under the same circumstances, and resumed their allegance to King Stephen. The day after Matilda's flight Oxford Castle surrendered to the king; but the king himself was defeated by the Earl of Gloucester at Wilton in the following month of July, and, with his brother the legate, narrowly escaped being made prisoner. After the affair of Wilton, no military operation

deserving of notice occurred for three years, during

which Stephen's party prevailed in all the easts;

Matilda's maintained their ground in the west; and the young prince was shut up for safety in

the strong castle of Bristol, where, at his leisure

moments, his uncle, the Earl of Gloucester, who

quence of an alternate succession of excess and privation," in the month of October; and thus deprived of son and brother, and depressed also by the loss of the Earl of Hereford and other staunch partisans, who fell the victims of disease, the masculme resolution of Matilda gave way, and, after a struggle of eight years, she quitted England and retired to Normandy. After her departure Stephen endeavoured to get possession of all the baronial eastles, and to reduce the nobles to a proper degree of subordination; but the measures he adopted were, in some instances, characterized by craft at not treachery; and his too openly avowed

purpose of curbing the power and beense of the

nobility was as unpolatable to his own adherents as

to the friends of Matilda. At the same time he

involved himself in a fresh quarrel with the church,

and that too at a moment when his brother, the

legate and bishop of Winchester, had lost his great anthority through the death of the Pope who pa-

tromzed him, and the election of another Pope, who

took away his legatine office and espoused the

enjoyed—like his father, Henry Beauclerk—the

reputation of being a learned person, attended to his

education. The presence of the boy in England

was of no use whatever to his mother's or his own cause, and, about the feast of Whitsuntide, 1147,

he returned to his father Geoffrey in Normandy,

Gloncester died of a fever, "the natural conse-

quarrel of his declared enemy Theobald, Arch. bishop of Canterbury. For attending the council of Rhemis against the express orders of the king the archbishop was exiled. Caring little for this sentence, Theobald went (A.D. 1148) and put himself under the protection of Bigod earl of Norfolk, who was of the Angevin faction, and then published a sentence of interdict against Stephen's party and all that part of the kingdom that acknowledged the rule of the usur per. Instantly, in one half of the kingdom, all the churches were closed, and the priests and monks either withdrew, or refused to perform any of the offices of religion. From their conduct we might have expected the contrary; but this was a state of things which men could not bear, and Stephen was actually compelled to seek a reconciliation with the archbishop. About two years after this reconciliation a general council of the high clergy was held at London; and Stephen, who, in the in-

kingdom should be settled, required them to recogmize and anoint his eldest son Eustace as his successor. This the Archbishop of Canterbury resolutely and most unceremoniously refused to do. He had consulted, he said, his spiritual master, and the pope had told him that Stephen was a usurper, and, therefore, could not, like a legitimate sovereign, transmit his crown to his posterity. It was quite natural, and perhaps excusable that Stephen, on thus hearing his rights called in question by a man who had sworn allegiance to him, 3 K 2

terval, had endeavoured to win the hearts of the

bishops and abbots with donations to the church,

and promises of much greater things when the

should be overcome by a momentary rage (and it was not more in effect), and order his guards to arrest the bishops and seize their temporalities; but putting aside the question of right, and however much they may have failed in the respect due to one who was their king at the time, the prelates, in acting as they did, indubitably took a most prudent and wise view of the case, and adopted a system which was calculated to narrow the limits of civil war.

As long as the contest lay between Stephen on the one side, and a woman and buy on the other, it was likely to lie, on the whole, favourable to the former; but time had worked its changes; - Prince Henry was no longer a boy, but a handsome, gallant young man, capable of performing all the duties of a knight and soldier, and gifted with precocions abilities and political acmien. He had also become, by inheritance and marriage, one of the most powerful princes on the continent. When Henry Plantagemet left Bristol Castle he was about fointeen years of age In A D 1149, having attamed the military age of sixteen, he recrossed the seas, and landed in Scotland with a splendid retinue, in order to receive the honour of kinghthood at the hands of his mother's uncle, king David. The ceremony was performed with great pomp in "merry Carlisle," where the Scottish king then kept his court crowds of nobles from most parts of England, as well as from Scotland and Normandy, were present, and had the opportunity of remarking Henry's many riminent qualities; and as that prince had only been returned to

the continent some twelve months when Stephen assembled the council for the anointing of his son, the impressions made by the fortunate Plantagenet were still fresh, and his character was naturally contrasted with that of Prince Eustace, who was about his own age, but who does not appear to have had one of his high endowments. Shortly after his return from Carlisle Henry was put in full possession of the government of Normandy: by the death of his father Geoffrey, who died in the course of the same year (1150), he succeeded to the earldon of Amon; and in 1152, together with the hand of Elemon, the divorced queen of Louis VII, of France, he acquired her rights over the carldon of Poicton and the vast duchy of Guvenne, or Aquitaine, which had descended to her from her father. The Plantagenet party in England, which had been for some time in a state of depression, recovered their spirits at the prospect of this sudden aggrandizement, and, thinking no more of the mother, they determined to call in the son to reign in his own right. The Earl of Chester passed over to Normandy, to express what he called the mammons will of the nation; but the king of France, becoming jealous of the great power of Hemy, formed an allimice with King Stephen, Theobald Earl of Blois, and Geoffrey of Anjon, Henry's younger brother, who had good reason to be dissatisfied, and marched a French army to the confines of Normandy. This attempt occasioned some delay; but as soon as Henry bad convinced the French king that his design of overrunning the duchy was hopeless, he obtained a truce, and forth

reconciled the conflicting interests of the two fac-

tions, were Theobald, the archbishop of Canter-

hury, and Henry, bishop of Winchester, Stephen's brother, who played so many parts in this long

and chequered drama. On the 7th of November, 1453, a great council of the kingdom was held at

Winchester, where a peace was finally adjusted on the following conditions .- Stephen, who was to

return undisturbed pessession of the crown during

his life, adopted Henry as his son, appointed

him his successor, and gare the kingdom, after his

return, Henry did present homage, and swore

fealty to Stephen. Henry received the homage of

the king's surviving son William, and, in return,

gave that young prince all the estates and honours,

whether in England or on the continent, which his

father Stephen had er poyed before he ascended the throne; and Hemy promised, as a testimonial of

his own affection, the honour of Pevensey, together

with some manors in Kent. There then followed

a mighty interchange and duplication of oaths

among the earls, barons, hishops, and abhots of both factions; all swearing present allegiance to

Stephen and future fealty to Henry. A clause, for

which there were several precedents under former reigns, was introduced, and the earls and barons

swore that if either of the two princes broke his engagements they would instantly abandon him,

and support the cause of the other. It is curious,

and a consoling proof of the advance made by the

popular hody, notwithstanding the horrors of this reign, to observe that the different beloughs of

England were taken into account, and swore fealty to Henry in the same terms as those employed by

the great nobles. In a mmor article the officers of

Stephen who held the Tower of London, and the

eastles of Winehester, Windsor, Oxford, Laccoln,

and Southampton, gave hostages to Henry for the

own death, to Henry and his hens for ever.

CHAP. L.]

to join his standard. It was imexpectedly found, however, that Stephen was still strong in the affections and devotion of a large party. The armies of the competitors came in sight of each other at Wallingford; that of Stephen, who had marched from London, accupying the left bank of the Thames, and that of Henry, who had advanced from Marlborough, the right. They lay facing each other during two whole days, and were hourly expecting a sangumary engagement, but the panse had given thue for salutary reflection; and the Earl of Arundel had the boldness to say, that it was an increasonable thing to prolong the calamities of a whole nation on account of the ambition of two princes \* Many lords of both parties, who were of the same opnion, or weared at length with a struggle winch had already lasted fifteen years, laboured to persuade both princes to come to an anneable arrangement. The two chiefs consented;

and m a short conversation, which they carried on with our another across a narrow part of the

Thames, Stephen and Henry agreed to a truce, during which each expressed his readiness to

negotiate a lasting peace. On this, Prince Eustace,

who was probably well aware that the first article of the treaty would seal his exclusion from the

throne, burst away from his father in a paroxysm of

rage, and went into Cambridgeshire to get up a war on his own account. The rash young man took

forcible possession of the abbey of St. Edminds-

bury, and had waste or phindered the country

round about, not excepting even the lands of the

abbot. His licentious career was very brief; for

as he was sitting down to a riotons, banquet, he was suddenly serzed with a frenzy, of which he soon died. It has been supposed that this sudden frenzy and decease were in all likelihood owing to an inflammation of the bram, the fruit of habitual intemperance and of frantic passions. According to the monks, his fate was a sudden judgment of the Ahnighty, provoked by his impacty in ravaging the sanctnary of the blessed St. Edinind; and as this was one of the capital favourites in their hagiology, the English people seem generally to have accounted for his death in this way. nowhere find it hinted that he died of poison, though the circumstances which made his death most desirable, and the apposite moment at which at took place, tend almost to excite a suspicion.

\* Gesta Steph.-Gervase. 4 Writers of a later period introduced some confusion in this matter by accounting for his death in different ways. Some of them said Eustice was drowned,

munichate surrender to him of those fortresses in the event of Stephen's death. The whole arrangement was narrated, and drawn up in the form of a charter, which purported to be octroye, or granted, by King Stephen, and witnessed by the prelates and barons.\* When the time came in which he incurred no danger or risk in so doing, Henry treated his adoption by Stephen with scorn; and while some of his partisans, in relating his history, impudently omitted the fact altogether, others considered it as an idle form, giving no right, and others again maintained that King Stephen himself, and the whole nation, were fain to acknowledge the personal claims of Matilda's son, who consequently was called to reign through a legitimate, hereduary The principal obstacle to concession from Stephen right. The treaty, however, stands recorded as we have given it above, and remains an incontrovertible was thus removed, for though he had another evidence of the real nature of the transaction. Stephen did not long survive the arrangement by which he renounced all hope of keeping the royal crown in his lineage. After signing the treaty he and Henry visited together the cities of · Rymer's Fædera,

legitimate son, Prince William, he was but a boy, and was ducile and unambitious. The principal negociators, who with great ability and address Winchester, London, and Oxford, in which places solemn processions were made, and both princes were received with acclamations by the people. At the end of Lent they parted with expressions of mutual friendship.

Henry returned to the continent, and on the following 25th of October (1154) Stephen died at Dover, in the fiftieth year of his age. He was buried by the side of his wife Mand, who died three years before him, at the monastery of Faversham, in the pleasant county of Kent, which she had loved so much while living.

"In this king's time," says the Saxon chronicler, "all was dissension, and evil, and rapine. The great men soon rose against him. They had sworn oaths, but maintained no truth. They built easiles, which they held out against him. They cruelly oppressed the wietched people of the land with this eastle work. They filled their easiles with devils and evil men. They seized those whom they supposed to have any goods, and threw them into prison for

 At the general suppression of abbeys, under Henry VIII, Slephen's tombwas rifled, and his bones were rast into the sea

their gold and silver, and inflicted on them unitterable tortures. Some they hanged up by the feet, and smoked with foul smoke; some by the thumbs or by the beard, and hung coats of heavy mail on then feet. They threw them into dungeons with adders, and snakes, and toads. . . . . . They made many thousands perish with hunger. They laid tribute after tribute upon towns and cities, and this in their language they called tenserie.\* When the townsmen had nothing more to give, they set fire to all the towns. Thou mightest go a whole day's journey and not find a man sitting in a town, nor an acre of land tilled. The poor died of hunger, and those who had been men well to do begged for bread. Never was more mischief done by heather invaders. . . . To till the ground was to plough the sands of the sea. This lasted the inneteen years that Stephen was king, and it grew continually worse and worse."

## HENRY II .- SURNAMED PLANTAGENET.

GREAT SEAL OF HENRY H

A b 4154.—When Henry Plantagenet received the news of Stephen's death he was engaged in the stege of a castle on the frontiers of Normandy. Relying on the situation of affairs in England, and the disposition of men's unids in his favour, he prosecuted the stege to a successful close, and reduced some turbulent continental vassals to obedience, before he went to the coast to embark for his new kingdom. He was detained some time at Barfleur by storms and contrary winds; and it was not till six weeks after the death of Stephen that he landed in England, where he was received with enthusiastic joy. He brought with him a splendid retinue, and Eleanor, his wife, whose inheritance had made him so powerful on the continent, and whose stern cha-

racter was to influence so many events of his reign. This marriage proved, that if the young Henry had the gallantry of his age and all the knightly accomplishments then in vogue, he was not less distinguished by a cool, calculating head, and the faculty of sacrificing romantic or delicate feelings for political advantages. The lady he espoused was many years older than himself, and the repudiated wife of another.

Eleanor, familiarly called in her own country 'Aanor, was daughter and heiress of Wilham IX.,\* Earl of Poictou and Duke of Aquitaine; that is to say, of the sovereign chief of all the western coast

\* This Dake William was a troubadour of high renown, and the most ancient of that class of poets whose works have been preserved.

139

of France, from the mouth of the Loire to the foot She was married in 1137 to of the Pyrences. Louis VII , king of France, who was not less enchanted with her beauty than with the fine provinces she brought him. When the union had lasted some years, and the queen had given birth to two daughters, the princesses Marie and Alix, Louis resolved to make a pilgrimage to the Holy Land, and to take along with bim his wife, whose unch, Haymond, or Raymond, was dake of Antioch. The general morality of the royal and noble crusaders and pilgrams is represented in no very favourable light by contemporary writers; and it is result understood how comps and marches, and a close and constant as ociation with soldiers, should not be favourable to temale virtue. com suon fell upon Eleanor, who, according to her least notavourable pudges, was guilty of great cognetry and treedom of manners; and her conduct on the gay and dissolute court of Antroch at last awakened the indignation of her devont husband. She was very generally accused of an intrigue with a young and landsome Turk, named Saladur; and though, in the notious of the age, it made an immense difference in the weight of her guilt, we should now scarcely waste time in considering whether her paramour was converted and baptized, as asserted by some, or was an incredeemed Maliomedan, as maintained by others. In 1152, about a year after their return from the Holy Land, Louis summoned a council of piclates at Baugenci-sur-Loure, for the express purpose of divorcing limit from a woman who lead publicly dishomoured him - The Bishop of Langres, pleading for the king, gravely announced that his royal master " no longer placed faith in his wife, and could never be sure of the legitimacy of her progruv"- (she had not borne hun an heir male)-and grounded his claim to a divorce on facts proving her flagitiousness. But the Archbishop of Bondeaux, desirous that the separation should be effected in a less scandalous manner, proposed to treat the whole question on very different grounds - namely, on the consanguinity of the parties, which might have been objected by the canonical law as an insuperable barrier to the marriage when it was contracted fifteen years before, but which now seemed to be remembered by the clergy somewhat taidily. This course, however, reheved them from a delicate oblemma, in which they were placed by the rules of the church, which, if fairly interpreted, rendered divorce on any other ground most difficult, and by their anxious desire to avoid going to the extremity of proof against a royal personage; and as Eleanor, who considered Louis to he "rather a monk than a king," voluntarily and readily agreed to the dissolution of the manuage, the conneil dissolved at accordingly-on the pretext that the consciences of the parties reproached; them for living as man and wife when they were · Some old writers confound this Saladin with the Great Saladin,

cousins within the prohibited degree. This decent colouring, however, deceived nobody; but the good, simple Loms wonderfully deceived lumiself, when he thought that no prince of the time ... no, not a private gentleman, -- would be so wanting in deheacy, and regardless of his own honour, as to marry a divorced wife of so-defamed a reputation. According to a contemporary authority, Eleanor's only difficulty was in making a choice, and escaping the too forcible addresses of come of her suitors. Immediately after the dissolution of her marriage, she set off for the capital of her own hercitary states, and on the way met with the following adventures, if we are to give credit to the chaomeler. At the city of Blois, Thiband, or Theobald, carl of Blois, and brother to King Stephen of England, " more from ambition than love," made her the offer of his hand, and not tolerating her refusal, secretly resolved to make her a prisoner in his eastle, and marry ber by force. Suspecting his design, she stale out of the castle by night, and descended the Lone in a boat to the city of Tours, which was then included in the ducky of Amon. Here Henry's younger brother, Geoffrey of Anjou, conceived the same sort of project which had been entertained by Theobahl of Blob, and by in ambush to intercept her and seize her person; but Eleanor being "warned by her good angel," saddenly took a different road, and escaped to Poictiers, where the more courteous and more fortunate Henry soon presented himself, and, " with more ambley than delicacy," woodd and won, and married her too, within six weeks of her divorce." King Louis's conduct was directly the opposite of Henry's; for he had been more deheate than politic; and, however honourable to him unlividually, his deheavy was a great misfortime to France, for it dissevered states which had been united by the marriage, retarded that fusion and integration which alone could render the French kingdom respectable, and threw the finest termtories of France into the hands of his most dangerous enemics. If he could have fixed himself of his wife, without resigning her states, the good would have been unmixed; but this was impossible; and though he retained the two daughters Eleanor had horne ham, and who were by these measures deprived of their appairages and fortime on the mother's side, he found himself obliged to withdraw all the troops he had in the fortiesses of Gnyenne, or Aquitaine, and Poicton, and resign those countries wholly and immediately to his discarded wife, who seems to have been dear to the people, in spite of her irregularities, and to have encountered little or no difficulty in inducing them to admit the garrisons of her new husband, the young and popular Henry. When it was too late, Louis saw the great error in policy he had committed, and made what efforts he could to prevent the by him most unexpected marriage. He prohibited Henry, as his vassal for Normandy and Anjou, to contract any such union without the \* Script. Rer. Franc.

<sup>-</sup> some or which cannot use someon whither cover substitute the heroic opponent of Eleanor's son, Richard; but this is a great mistake, involving an anachionism,

† Mezerai, Hist, de Fiance,

consent and authority of his suzeram lord, the king of France; but the obligations of the vassal or hege-man towards the suzeram, even where the parties had expressly contracted and avowed them, were little binding between two princes of equal power; and Henry, who was soon by far the more powerful of the two, cared little for the prohibition, and Louis, in the end, was obliged to content himself with receiving the empty oaths of allegrance which the fortunate Plantagenet tendered for Gaycane and Poicton, in addition to those he had already pledged for Amou The old French Instorians, who aml Normandy, cannot relate these transactions without losing their temper, give it as their opinion that they would not have happened had those two wise statesmen, the Abbot Suger and the Count de Vermandors, been abve to comisel and direct the king; but the abbot and the count had both died the preceding year; and Louis, who had depended so enterely on them (particularly on Suger), that he was scarcely capable of thinking or acting to himself, was bewildered, like a man who bad lost los guide in a wild and unknown country, and stumbled on the divorce which cost France so dear.\*

The sacrifice was indeed immense. The French kingdom almost ceased to figure as a manitume state on the Athoritic; and when Eleanor's possessions were added to those Heury already possessed on the continent, that prince occupied the whole coast-line from Dieppe to Bayonne, with the exception only of the great promontory of Brittany, where a race of semi-independent princes were established that had sometimes supported the interests of the French kings, and at others allied themselves with the Anglo-Norman sovereigns.† Henry, in fact, was master of one-fifth of the territories now

HENRY II Drawn from the Tomb at Faitherfulled

included in the kingdom of France, and, deducting other separate and independent sovereignties, Louis, driven back from the Atlantic and cooped up between the Lone, the Saone, and the Mense, did not possess half so much land as his rival, even leaving out of the account the kingdom of England, to which he succeeded about two years after his marriage. Eleanor was soon as jealous of Henry as Louis had been of her. The Plantagenet had not married with a view to domestic happiness, but he was probably far from expecting the wretched-

ness to which the union would codenin his latter days. At their first arrival in England, however, everything wore a bright aspect. The queen rode by the king's side into the royal city of Winchester, where they both received the homage of the nobility; and when, on the 19th of December, Henry took his coronation oaths, and was crowned at Westminster by Theobald, archbishop of Canterbury, Eleanor was crowned with him, anidst the acclaimations of the people. Not a shadow of opposition was offered: the English, still enamoured of

interest of any important party in the state, or by

claims on his own gratifude, was carried forward

on the high tide of popular opinion; but in what

there still remained to do there were great and

obvious difficulties, and feelings of a private nature,

which might have overcome a less determined and

politic prince, for, in the impartial execution of

his measures he had to desport those who fought

his mother's battles and supported his own cause

when he was a helpless mfant. The generous,

romantic virtues natural to youth might have been fatal to him; but Henry's heart in some respects

seems never to have been young, and his head was

chester, shortly after his pacification with Stephen,

it was stipulated that the king (Stephen) should

resume all such royal castles and lands as had

been alienated to the nobles or usurped by them, with the exceptions only of what Stephen had

granted to his son William, or had bestowed on

the church; the two last classes of donations to

remain to their possessors. Among the resumable gifts were many made by Matilda; for she, too,

acting as a sovereign, had followed Stephen's example in alienating parts of the demesne of the

crown to reward her adherents. Stephen, poor as

cency on the Saxon blood, which from his mother's side (a bad Saxon herself!) flowed in the veins of the youthful, the handsome, and brave Henry; and all classes seemed to overhold the past Instory of the omen in her grandeur and magnificence, and present attachment to their king. The court pageantries were splendid, and accompanied by the spontaneous reportings of the citizens. Henry and not permit his attention to be long occupied by these pleasures and flattering demonstrations, but proceeded to business almost as soon as the crown was on his head, thus giving his subjects assurance of the busy, active reign they had to expect. He assembled a great council, appointed the crown officers. esued a decree promising his subjects all the rights and liberties they had enjoyed under his grand-Lance, Henry I., whose reign, however tyranmea x. is addessed state compared to the anarchy which had for west, and be made his barons and bishops swear realty to his infant children, his wife Eleanor having heady made him the happy father of two sons.

Hemy then turned his attention to the correcting of those abuses which had rendered the reign of

So ohen a long agony to linuself and a curse to the nation. This reforms were not completed for

s woral years, and many events of a foreign nature

am evened during their progress; but it will render

on man dive clearer to condense our account of

the e transactions in one general statement. Henry appointed the Earl of Leicester grand greeners of the kingdom, and feeling that the office laid lather to been insufficiently supported by the crown, he attached to it more ample powers, and provided the means of enforcing its decisions, A frappened in all seasons of trouble and distress nothose ages, the combad been alloyed and tampered with under Stephen; and now Henry issued an entirely new counage of standard weight and purity. The foreign increenaries and companies of adverture that came over to England during the

long civil war between Stephen and Matilda had done merdenlable muschief. Many of these adventuters had got possession of the castles and estates of the Anglo-Norman nobles who adhered to Matilda, and had been created earls and barons by Stephen; but, treating all these as nets of usurpation, Henry determined to drive every one of them from the land, and their expulsion seems to have afforded almost as much joy to the Saxon population as to the Normans, who raised a shout of trimuph on the occasion. "We saw them," says a contemporary, "we saw these Brabançons and Flemings cross the sea, to return from the camp to the plough-tail, and become again seris, after having been lords." They were, in fact, all rommanded to quit the kingdom by a certain day, under penalty of death, and it is not likely that the Normans allowed them to carry much away, with them. Up to this point the operations were easy, and the king, unopposed by the conflicting

 he was, had neglected this resumption, or made no progress in it during the few months that he sinvived the treaty. But Henry was determined not to be a pamper king, or to tolerate that widelystretched aristocratic power which at once ground the people and bade for to reduce royalty to an empty shadow. In the absence of other fixed revenues the sovereigns of that time depended almost entucly on the produce of the crown lands, and Stephen had allowed so much of these to slip from him, that there remained not sufficient for a decent maintenance of royal digiuty. Besides the numerous castles which had been built by the turbulent nobles, royal fortresses and even royal raties had been granted away; and these could hardly be permitted to remain in the bands of the fendat lords without endangering the peace of the king-Law was brought in to the aid of policy, and it was established as a legal axior) that the ancient demesne of the crown was of so sacred and

inalicuable a nature that no length of time, temire, and enjoyment could give a right of mescription to any other possessors, even by virtue of grants from the crown, against the claim of succeeding princes, who might (it was laid down) at any time resume possession of what had formerly been abenuted.\* Foresceing, however, that this step would create much discontent in those who were to be affected by it, and who (counting both of the old parties) were numerous and powerful, Henry was cantions not to act without a high sanction; and he therefore summoned a great council of the nobles, who, after hearing the argency of his necessities, concurred pretty generally in the justice of his numediately . Lord Lyttelton's Heury 11. Contemporary details are found in

HISTORY OF ENGLAND.

mentioned. The cause assigned for these resumptions was not any inherent delect in the fitle of the grantor, nor any unworthmess in the grantee, but the indispensable necessity of providing for the

crown As soon as he was armed with this sanction the young king put himself at the head of a torandable army, knowing right well that there were many who would not consider themselves bound by the voices of the assembly of nobles, and who would only code their rustles and lands by force. In some instances the castles, on being closely beleaguered, surrendered without bloodshed; in others, they were taken by storm or reduced by famine. In nearly all cases they were levelled to the ground, and about 1100 of these "dens of thieves," as they are usually called, were blotted

out from the fare land they defaced, to the mexpresuble relict and contentment of the poor people. At the siege of the castle of Bridgenorth, in Shropsbue, which Hugh de Mortimer held out against the king, Heray's life was preserved by the affectroa and self-devotion of one of his followers was commanding in person, and occupying an exposed position, when his faithful vassal Hubertde St. Clan, seeing one of Mortimer's archers among point-blank at loin, threw himself before his person and received the arrow in his own breast. The wound proved mortal, and St. Clanexpared in Hepry's arms, recommending his daughter, arouly child and an intant, to the care of his princ : who, telus honom, did the duty of a father to the capture. After many ardness torts, and not is fee checks and deliass, Henry completed his purpose the drove the Earl of Nottingham and some other diagrerons nobles out at the knigdom; be levelled with the ground the six strong eastles of Stephen's brother, the famous Bishop of Winchester, who, placing no confidence in the new king whom he had belied to make, fled with his treasures to Chigny the reduced the Earl of Albearmle, who had long reigned like an independent sovereign in Yorkshire, to the proper state of vassalare and alterrance, and he finally obliged Malcolm long of Scots, to resign the three northern countres of Northumberland, Cumberland, and Westmoreland, for the bona fide possession of the carldon of Hantingdon, which the Scottish princes claimed as descendants of Earl Waltheof driving the nobles from the royal lands and houses they held, no distinction was made between the grants of Stephen and Matilda, for Henry was not 1888 eager to recover everything than wisely anxions to avoid the appearance of acting from motives of party revenge, and by his equal and impartial proceeding, he left the adherents of Stephen no more reason to complain than his mother's or his own partisans. Among the latter were several who lost then all by these resimptions; but, steady

to law purpose, the king would make no exceptions,

and even in favour of those who had succoured his

had exacted an oath from the barons and bishops who attended him, that they would not suffer his body to be buried till his son Henry should solemuly swear to fulfil the dispositions of his will. Henry hesitated, but the nobles and prelates, from to then kept the corpse above ground until, ashamed of preventing the Christian interment, he took the oath required in a most solemn manner, swearing over the dead body of his father, which was then committed to the grave. The king of England, bowever, showed no disposition to relinquish the carldom of Anjon; and, it is said, he solicited the Pope to absolve him from his oath, and that the Pope complied on the ground that he had been made to swear under improper influences. This story, though scarcely more romandic than others of the same period, has generally been condemned as fabrilous, and it does not rest on the authority of any contemporary minator writing on the continent, or in the scene of the events. Hemy, it is time, sem three bishops to Rome, but the ostensible reason was probably the true one, and should seem to be motive sufficient in itself for such a mission. Nicholas Breakspear, the only Englishman that ever wore the tourn, had just been elected, and the three bishops were said to be sent to congratulate the new Pope in the name of the king and the people of England. The king's father, however, may have wished to leave some proper provision for his younger son, and may even have made a will to that effect; and Geoffrey, seeing his brother m possession of so many states, would naturally consider it most unjust that he himself should have none. That vonng prince, moreover, was encomaged by the French court, which was still smarting under the inputies received from Henry's marriage; and he seems to have had a strong party

abandon the cause of his younger brother. He then threw himself into the disputed territory, at the head of an army consisting almost entirely of native English, who soon reduced Chinon, London, Mirabean, and the other castles which held for his The people returned to then allegance to Henry, and Geofficy was soon obliged to resign all his claims for a pension of 1000 English and 2000 Angeym pounds. Having transplied over every opposition, as much by policy as by force of arms, he made a magnificent progress through Agmianne and the other dominions he had obtained by his marriage, and received the fealty of his chie vassals in a great conneil held in the city of Bordeaux. Wherever he appeared he commanded respect, and no sovereign of the time in Emora could equal the power and splendom of this young

On his return to England, in 1457, he engaged at hostilities with the Welsh, whice still fought furiously for their independence. Feeling overconfident in the number and quality of his army, he crossed Flintshire, and threw limited among the mountains. The Welsh let him penetrate as the difficult country about Coleshill Forest, when, assuing from their concealment, and pouring down in forced from the uplands, they attacked Henry in a narrow defile where his troops could not form. The slaughter was modigings. Eastage Fitzs

The slaughter was prodigious. Eustace Fitz-Jalm and Robert de Courcy, men of great honom and reputation, together with several other noldes, were dismounted and cut to pieces; the king himsch was in the greatest danger, and a rinnou was raised that he had fallen. Henry, Earl of Essex, the hereditary standard-bearer, threw down the royal standard and fled. The pame was now universal; but the king rushed among the fugitives, showed them he was unburt, rallied them, and finally fought his way through the mountainpass. The serious loss he suffered made him cantions, and instead of following Owen Gwynned, who artifily tried to draw him into the defiles of Snowdon, he changed his route, and goming the open sea-coast, marched along the shore closely attended by a fleet. He cut down some forests, or opened roads through them, and built several castles in advantageous situations. There was no second buttle of any note, and, after a few months, the Welsh were glad to purchase peace by resignmg such portions of their untive territory as they had retaken from Stephen, and giving hostages and doing feudal homage for what they retained. The homage cost them little: the giving of hostages did not prevent them from renewing histilities whenever times and encumstances seemed favourable to them, and the hardy mountameers gave many a subsequent check to the Anglo-Norman chivalry Six years after the battle of Coleshil, the Earl of Essex was publicly accused of cowardice and treason by Robert de Montlort. The standard-bearer appealed to the trial of arms, and was vanquished in the lists by

his accuser. By the law of the times, death should have followed, but the king, qualitying the rigour of the judgment, granted him his life appointing him to be a shorn monk in Reading Abbey, and taking the earl's possessions into his hands as forfeited to the crown.'

Geoffrey did not live long to exact payment of

his annuities from his loother. Soon after concluding the treaty with Hemy, which left from without may territory, the citizens of Nardes, in Lower Brittany, spentaneously opered her the government of their city, just as the people of Domitiont had done by Henry Beamelerk when under similar circumstances - Lower Brutany was then accupied in intequal propartions by two pepulations of different races, the one speaking the ancient Armoric, the other the language of Lyanger and Normandy. The latter were the more cavalized. and had the greater weight in the towns and come. some of which, like Nantes, were exclusively or cupied by them. There was a constant county between the two races, and the chaefs of the country, . the counts or dukes, were sme to be uspropidar with one party in proportion to their popularity with the other. The people of Nanto, which with its dependent territory formed the most opinion part of the great promontory of Partfany, thought to detach their tortives from those of the native tace by electing young Godfrey Plantagence, and during his short life they rearntained a separa e administration, and a government admost wholly in dependent of the Armonican princes. But Geoffres thed in 1158, and the citizens of Nantes, returning to then old connexion with the rest of the country. were governed by Comm, who was Larl of Righmond in England, as well as the hereditary Count or Duke of Brittany. To the surprise of everybody, King Henry, setting forth the most movel and groundless pretensions, claimed the free city of Nantes as hereditary property, devolved to han by his brother's death. It was in vain the citizens represented that they had not, by choosing Geoffice to be then governor, resigned their independence or converted themselves into a property to be de condable in his family. Henry wanted to fill im the only great gap in his continental territories, and, raceless of right or appearances, be resolved to seize Nantes, hoping that if once he gained a firm footing there he should soon extend has absolute dominion over the rest of Brittany. The stake ndeed was most tempting, and Henry was seldom very scrupulous as to the game he played. He affected to treat the men of Nantes as rebels, and Conan as an usurper of his rights; he confiscated his earldom of Richmond, in Yorkshine, and crossng the Channel with a formidable army, special such terror that the people submitted, and, icnouncing Conan, admitted his garrison within the walls of Nantes. † He then quietly took possession of the whole of the country between the Loire and he Vilaine, relying on his art and address for

quieting the alarms these energachments could not tail to create in the French court. He dispatched

HISTORY OF ENGLAND.

Thomas a Becket, then the most skilful and accommodating of all besiministers, to Paris, the volatile inhabitants of which capital were dazzled and

delighted by the ambas ador's magnificence. Henry soon followed in person, and, between them, these two adroit negatiators completely won over the obtuse French king. The price paid for his neutrality was, Henry's afliancing his eldest son to Margaret, an infant daughter Louis had had by his wife Constance of Castile, who succeeded Eleanor. The young lady was delivered over to one of Henry's Norman batons; and her dower, consisting of three castles in the Vexin, was consigned to the

keeping of the illustrious order of the Knights of the Temple, who were to deliver up their charge to Henry's son when the marriage should be comidered, or restore it to King Louis in case of the affair being broken off by death or other accidents Heary then prosecuted his views on the rest of Brittany, and concluded with Conan, whom he had driven from Nantes, a compact which threatened the independence of the whole country, whether occupied by the wild original population or the burghers and nobles of the other race. He affianced hes then youngest son Geoffrey to Constantia, an intant desighter of Comm, the latter engaging to bequeath to his daughter all his rights in Britanix at his death, and Henry engiging to support him ti his present power during his life, taking up rims for lum against his turbulent subject, and all others that might attack him, whenever eaffed If this freaty was kept secret for a truce from Iving Louis, Henry's ambition humged linu into other schemes, waich interpipted their good understarching before it had lasted a year. Not satished with the transant enjoyment of the states be had provinced by his meanage, he advanced fresh claims, in right of his wife, to ten tories which neither she in a her tather had ever enjoyed, and, by obtaining the great carldom of Toulouse, be

upon so to do ' loged to spread his power across the whole of the broad isthmas that joins France to Spain, and to racge along the French coast on the Methterranean as he already alid along the whole Atlantic sea-- William, Duke of **Aquit**aine, grandfather or Queen Eleanor, Henry's wife, and a contemposary of the Conspector, married Philippa, the only child of William, the fourth Earl of Tombouse. As a female succession was contrary to the laws or usages of the country, the Earl William, Philippa's father, conveyed the principality, by a contract of sale, to his brother Raymond de St Gilles, who succeeded at his death, and transmitted it to his posterity in the male line, who had held it many years, not without cavil on the part of the house of Aquitume, but without any successful challenge of their title. Eleanor conveyed her rights, such as they were, and which she was determined not to leave dormant, to Louis VII. by her first marriage;

\* Chron. Norm,-Newbirg - Darn, Hist, de la Bretagne,

people is passed over as a point of no importance, but that will was decidedly against Henry, and there were free institutions in Toulouse at the time to give legitimate weight and effect to the popular melua-"The common council of the city and suburbs," for such was the title borne by the mumerpal government of Toulouse,\* seconded Raymond's negotiations with the French court, and raised their banner as a free and incorporated com-On this occasion Louis broke through the fine meshes of Heray s and Becket's diplomary, and noised limiself to a formidable excition in order to check the new encroachment. Perceiving that the struggle would be serious, and that success could only be obtained by the k coing on foor a large army very different in its constitution and terms of service from his tendal forces, Henry resolved, by the advice of Becket, to commute the personal services of his vassals for an aid in money, t with which he trusted to procure troops that would serve like modern soldiers for their daily pay, obey his orders directly without the offen troublesome intermission of feudal lords, and have no objection either to the distance of the scene of hostilities or the length of time they were detained from then homes. The term of forty days, to which the services of the vassals was limited, would have been in good part consumed in the march alone from England and the north of France to Tonlonse. began by levying a sum of money in hen of then presence and services upon his vassals in Normandy, and other provinces remote from the seat of action, the commutation was agreeable to most of them; and when it was proposed in England it was still more acceptable on account of the greater distance, and the landable anxiety of many of the nobles to take care of their estates, which had suffered so much during the intestine wars of the preceding reign. The scutage, as it is called, was levied at the rate of three pounds in England, and of forty Augevin shillings in the continental comminous, for every kinght's fee. There were 60,000 kmght's fees in England alone, which . Commune concilium jubis Tholose et subuibu. Script Rer, † This seems to have been the first introduction of a practice

and during their union the French king sent forth

an army for the conquest and occupation of Tou-

louse. But the expedition ended in a treaty, and

Raymond de St. Gilles, the grandson of the first

carl of that name, was confirmed in possession of

the country, and released from all claims to it,

whether on the part of the French king or his wife

Eleanor, by marrying Constance, the sister of

Louis. Henry now urged, that by her subsequent

divorce from Loms, Eleanor was restored to her original rights; and after some curious correspond-

ence and ransacking of dusty archives, he de-

manded the instant smrender of the carldon of

Toulouse upon the same grounds as Louis had done

before him. The Earl Raymond raised his banner of war and applied for aid to his brother-in-lew of

France. By most of the historians the will of the

which tended gradually to the overthrow of the whole fendal system.

would produce 180,000/.--a sum so prodigious in those days, that doubts are entertained as to the correctness of the account, though it is given by a contemporary. But, whatever was the sum, it sufficed Henry for the raising of a strong mercenary force, consisting chiefly of bodies of the famous infantry of the Low Countries. With these marched Malcolm, king of Scotland, who conited the close alliance of Henry; Raymond, kng of Arragon (to whose infant daughter Henry had affianced his infant son Richard); one of the Welsh princes, and many English and foreign barons who voluntarily engaged to follow the king to Toulouse. Thomas à Becket, now Chancellor of England, and the inseparable companion of his royal master, attended in this war, and none went in more warlike guise. He marched at the head of 700 lengths and men-at-arms, whom he had raised at his own expense; and, when they reached the seene of action, he distinguished himself by his activity and gallantis, not permitting the circumstance of his being in boly orders to prevent lune from charging with the chivalry or mounting the deadly breach. After taking the fown of Cahors, Henry marched upon the city of Toulouse. But the French king, crossing Berry, which belonged to him in good part, and the Limothin, which granted ham a free passage, threw himself with reinforcements into the threatened city, where he was received with extreme joy by Earl Raymond and the citizens. The latter meeting in solening assembly, voted Louis a letter of thanks, in which they expressed their obligations for his having succonted them "like a father," +-- a touching expression of gratitude, which did not imply any civil or feudal submission on the part of the citizens. The force which Louis brought with lamwas small, and the caergetic Becket advised Henry to make an ammediate assault, in which the churchman indeed be could hardly fail of reducing the town and taking prisoner the French king, whose captivity might be turned to meal glable advantage. But Henry was cool and cautions even in the midst of his greatest successes; he did not wish to drive the French nation to extremities, - he was so woven up in the complicated feudal system, and so dependent limiself on the furthful observance of its mee gradations, that he wished to avoid outraging the great principles on which it rested; and being limself vassal to Loins, and, in his quality of Earl of Anjou, hereditary Seneschal of France, he declared he could not show such disrespect to his superior lord as to besiege him. While he hesitated a French army marched to the rebef of their Henry then transferred the war to another part of the earldom, and soon after, leaving the supreme command to Becket, returned with part of his army to Normandy. The clerical Chancellor continued to appear as if in his proper element. he fortified Cahors, took three castles which had been deemed impregnable, and tilted with a French

Chap. L1

hills of Languedoc. The political condition, however, of that favoured region declined from that hour. The habit of imploring the protection of one king against another became a cause of dependence; and with the epoch when the King of England, as Duke of Aquitaine and Earl of Poicton, obtained an influence over the aflairs of the south of France, commenced the decline and misery of a most interesting population. Thenceforward, placed between two great powers, the rivals of each other, and both equally ambitious and encroaching, they sought the protection, now of the one, and now of the other, according to encunistances, and were alternately supported and abandoned, betrayed and sold, by both. Their only chance was when the kings of France and England were engaged in open war elsewhere; and the Tronbadours were accustomed to sing the joys that arose when the truce between the Stirlings and the Tornes (the Easterlings and the people of Touraine), as they called the French and English, was broken \* They had the advantages of an earlier civilization, but state policy and worldly wisdom seem to have been meompatible with the character of a people so devoted to pleasure and the parsuits of poetry and romance. There was also wanting a good substratum of national modals; for the code of love and gallantry, which was almost the only one in yogue, did not make the best of citizens. They were timbulent, restless, and passionately foul of change. They were divided by a thousand rivalries; not increly one province being jealous of another, but fown of town, and village of village. They were brave, and passionately fond of war; but they loved it rather for its excitement, and its poetical and picturesque accompaniuments, than from any noble impidse of patriotism. They were always more ready to runcat the word of a fair lady to the wars of Palestine, or some other distant and ronantic enterprise, than to keep steady watch and ward for the defence of their own fair land. They were a people of a light character and lively imagination, they had a taste for the airs and all deheate enjoyments; they were ingenious and mdustrious, and their soil was rich and glowing. Nature had given them everything except steadiness of character, political prindence, and the spirit of innon; and from the want of these they lost their independence, their riches, their civilization, their poetry, and even their beautiful langaage,—the first that spread the melody of recreated verse through Europe. Our Plantagenet race of kings contributed to all this ruin, and a short digression may be excused in favour of an E m'plai quon la trega es fracia

Henry bowed to his spiritual authority, and rivalled each other in their offers of an asylum and suc-

cour, and in their reverential demeanour. When the

two kings met him in person at Courcy sur Louie, they both dismounted, and holding each of them

one of the bridle-rems of his mule, walked on loof by his side, and conducted him to the castle '

England and Henry's continental dominions fidlowed this reconciliation; and when it was dis-

turbed, the storm proceeded from a most unex-

pected quarter -- from Thomas a Becket, the king's

bosom friend. Further particulars of the history

of this extraordinary man, and of the ecclesiastical

quarrel which troubled the reign and embittered

ten years of the life of Henry, will be given in the

next chapter, and we shall here merely handle a few of the great connecting links of the narrative

Becket was born at London, in, or about, the year 1117. His father was a entizen and trader, of

the Saxon race circumstances which seemed

to exclude the son from the career of ambition.

The boy, however, was gifted with an extraordinary

intelligence, a landsome person, and most en-

gaging manners; and lus father gave him all the

advantages of education that were within his

reach — He studied successively at Merion Abbey,

London, Oxford, and Paris, in which last city he

applied to civil law, and acquired as perfect a

mastery and as pure a pronunciation of the French

language as any, the best educated of the Norman

A short period of happy tranquillity both in

the negotiations on the part of his friend and year, and a few months after, when the rival kings had an interview, the timee was converted into a formal peace (a. n. 1160), Henry's eldest son doing homoge to Louis for the duchy of Normandy, and Hemy being permitted to retain the few places he had conquered in the earldom of Toulouse. This precious peace did not last quite one month, Constance, the French queen, died without leaving any male issue; and Lonis, anytons for an heir, as his daughters could not succeed, in about a fortuight after her decease married Adelais, mece of the late English king Stephen, and sister of the three earls of Blors, Champagne, and Sancerre. This muon with the old enemies of his family greatly troubled Henry, who, foreseeing a disposition in the French court to break off the alliance with him, which might give his progeny a hold. upon France, secretly secured a dispensation from the Pope, and solemnized the contract of marriage between his son Henry, who was seven years old, and the daughter of Louis, the Princess Margaret, who had been placed in his power at the conclusion of the original fresty, and who had attained the matically age of three years. Becket, the prime mover in all things, loonght the royal infaut to London, where this strange ceremony was performed. As soon as it was finished, Henry clauned the miant's dower, according to the express terms of the treaty, and the Knights Templars, without

A truce was concluded at the end of the objecting to the irregular manner in which he had precapitated the marriage, delivered up to lum the three castles and towns. Louis instantly raised his banner of war, and exiled the Templars said at the time that Henry had bribed the grand master, and this disservice to the French crown was probably not forgotten a hundred and fifty years after, when the order was suppressed in France with imexampled crucities. The French king, however, was no match for the powerful and politic English monarch, and as Henry was averse to hazardous enterprises likely to be accompanied ly great cost and little solid advantage, the war presented nothing more important than the shivering of a few lances and the besieging of a few castles, and another pence was soon concluded At this time, as at several other periods in

through the mediation of the Pope. the middle ages, there were two popes, each calling the other anti-pape and anti-christ. Victor IV. was established at Rome under the patronage of the Emperor Frederick Barbarossa; and Alexander III., whose election is generally recognised a as more legal and canonical, was a fugitive and an

nobles and officers. While yet a young man, he was employed as an under-clerk in the office of the sheriff of London, where he attracted the attention of Theobald, archbishop of Canterbury, who sent him to complete his study of the civil law to the then famous school of Bologna profiting by the lessons of the learned Guatian, Becket recrossed the Alps, and staid some time at Auxerre, in Burgundy, to attend the lectures of another celebrated law professor. On his return to Leadon, he took deacon's orders, + and his powerful patron, the archbishop, gave him some valuable church preferment, which neither necessitated a residence, nor the performance of any church duties; and he soon afterwards sent him, as the best qualified person he knew, to conduct some important negotiations at the court of Rome. The young diplomatist (for he was then only thuty-two years old) acquitted Immself with great ability and complete success, obtaining from the pope a mohibition that defeated the design of crowning Prince Eustace, the son of Stephen—an important service, which secured the favour of the Empress Matilda and the house of Plantagenet. On Henry's accession, Archbishop Theobald had all the authority of prime-minister, and being old and infirm, he delegated the most of it to the active Becket, who was made Chancellor of the kingdom two years after, being the first Englishman since the Con-Newbrig -Chron Norm He never took the major orders till be became archbishop.

quest that had reached any enument office. As if and priests; and last of all appeared the great to empty the lap of royal bounty, Henry at the same time appointed him preceptor of the heir to the crown, and gave him the wardenship of the Tower of London, the eastle of Berkhamstead, and the honour of Eve, with 340 kinghts' fees. His revenue, flowing in from many sources, was immense, and no man ever spent more freely or magnificently. His house was a palace, both in dimensions and appointments. It was stocked with vessels of gold and silver, and constantly Irequented by numberless guests of all goodly ranks, from barons and earls to knights and pages, and simple retainers-of which he had several himdreds, who acknowledged themselves his immeduate vassals. His tables were spread with the choicest yands; the best of wines were poured out with an inisparing hand; the richest dresses allotted to his pages and serving-men; but with all this costly magnificence, there were certain agutal wants of comfort, which show the imperfect civilization of the age; and his biographer relates, among other things, that as the number of guests was often greater than could find place at table, Becket ordered that the floor should be every day covered with fresh hav or straw, in order that those who sat upon it might not soil their die-ses \* The chancellor's ont-door appearance was still more splendid, and on great public occasions was carried to an extremity of pomp and magnificence, though here again there are circumstances that would seem discordant and gratesque to a modern eye. When he went on his embassy to Paris, he was attended by two hundred lenghts, besides many barons and nobles, and a complete hast of domestics, all richly armed and attied, the chancellor lumself luxing four-andtwenty changes of apparel. As he travelled through France, his train of waggons and simplerhorses, his hounds and hawks, his huntsmen and talconers, seemed to announce the presence of a more than king. Whenever he entered a town, the ambassadorial procession was led by 250 boys singing national songs; then followed his hounds, led in couples; and these were succeeded by eight waggons, each with five large horses, and live drivers in new frocks - Every waggon was covered with skins, and gunrded by two men and a fierce mastiff. Two of the waggons were loaded with ale, to be distributed to the people; one carried the vessels and lumiture of his chapel, mother of his bed-chamber; a fifth was loaded with his kitchen apparatus; a sixth carried his abundant plate and wardrobe; and the other two were devoted to the use of his household servants. After the waggons came twelve sumpter-horses, a monkey erding on each, with a groom behind on his knees. Then came the esquires, carrying the shields, and leading the war-horses of their respective kinghts; then other esquires (youths of gentle birth), falconers, officers of the household, knights

self were left to Becket, who had no competitor in authority Secret enemies he had in abundance, but never even a momentary rival in the royal fuvour. The minister and king lived tagether like brothers; and according to a contemporary, 1 who knew more of Henry than any other that has written concerning him, it was notorious to all men that they were cor unum et animam unam (of one heart and one mind or all things). With his chancellor Henry gave free scope to a facetious frolicsome humoni, which was intural to him, though no prince could assume more dignity and stermess when necessary. The amusing biographer of Becket tells the following well-known story. One day as the king and his chancellor were riding together through the streets of London in cold and stormy weather, the king saw coming towards them a poor old man in a thin coal worn to tatters. "Would it not be very praiseworthy to give that poor man a good warm clock?" said the king "It would, surely," replied the chancellor; "and you do well, Sir, in turning your eyes and thoughts to such objects?" While they were thus talking, they came near to the poor man, and the king, turning to the clamcellor, said, "You shall have the ment of this good deed of charity " then suddenly laying hold of Beeket's line new cloak, which was of searlet cloth, lined with crimine, he tried to pull it from his shoulders. The chancellor defended himself for some time, and prilling and trigging at one another, they had both of them like to have fallen off their horses in the street; but, in the end, Becket let go lus cloak, which the king gave to the beggan, who went his way not less pleased than surprised; while the courtiers in the royal fram laughed, like good courtiers, at the passing pleasantry of their master. The chancellor was an admirable horseman, and expert in hunting and hawking, and all the sports of the field. These accomplishments, and a never-failing wit and vivicity, made him the constant companion of the king's leisure hours, and the sharer (it is limited) in less innocent pleasures-for Henry was a very meonstant husband, and had much of the Norman heentiousness At the same time Becket was an able munster, and his administration was not only advantageous to the interests of his master, but, on the whole, extremely beneficial to the nation. Most of the useful measures which distinguished the early part of the Fitz Steph. † Petrus Blesensis, or Peter of Blors. See his Letters

chancellor lumself with his familiar friends. As

Becket passed in this ginse, the French were heard

to exclaim, "What manner of man minst the king of England be, when his chancellor travels in such

state ! \*\*\* Henry encouraged all this pump and

magnificence, and seems to have taken a lively enjoyment in the speciacle, though he sometimes

twitted the chancellor on the finery of his attre.

his discriminating genius, and good intentions. Such were the restoration of internal tranquillity, the curbing of the baromal power, the better appointment of padges, the reform in the currency. and the encouragement given to trade, the protection of which in foreign countries now became an object of great attention to the government. . He certainly could not be accused of entertaining a low notion of the royal prerogative, or of any linkewarmness in exacting the rights of the king. lumbled the lay aristocracy whenever he could, and more than once attacked the extravagant privileges, minimuties, and exemptions claimed by the aristoeracy of the church. He insisted that the bishops and abhots should pay the sentage for the war of Toulonse like the lay vassals of the crown, and this drew upon limi the violent invectives of many of the Inerarchy, Gilbert Foliot, the Bishop of Hereford, among others, accusing him of plunging the sword into the bosom of Mother Church, and threatening him with excommunication. One day in his synod, when some bishops exalted the independence of the church at the expense of the royal authority, the chancellor openly contradicted their pretensions, and reminded them in a tone of severity that they, as men of the church, were bound to the king by the same oath as the men of the sword,-by the oath to preserve him in lite, limbs, digmty, and honours.\* All this tended to convince Hemy that Becket was the proper person to name primate, as one who had already given proofs of a spart greatly averse to ecclesiastical encroachments, and of an affection and devotion to his own interests that promised to be of the greatest service to him in a project which, in common with other European sovereigns, he had much at heart, namely, to check the growing power of Rome and curtail the privileges of the priesthood. Although his conduct had not been very priest-like, he was popular: the king's favour and intentions were well known, and accordingly, in 1161, when his old pation Theobald, Archbishop of Canterbury, died, the public voice designated Becket as the man who must mevitably succeed him; and after: vacancy of about thirteen months, during which Henry drew the revenues, he was appointed Primate of all England.

Wlikins, Concilia,

From that moment Becket was an altered man: the soldier, statesman, hunter, courtier, man of the world, and man of pleasure, became a rigid and ascetic monk, renouncing even the innocent enjoyments of life, together with the service of his more friend than master, and resolving to pensh by a slow martyidom rather than suffer the king to invade the smallest privilege of the church. Although he then retained, and afterwards showed a somewhat inconsistent anxiety to preserve, certain other worldly honours and places of trust, he resigned the chancellorship in spite of the wishes of the king,—he discarded all his former companions and magnificent retinue,-he ,

son to be followed by the prayers and acclamations of the people, would lead us from our present piupose. With the views the king was known to entertain in church matters, the collision was inevitable, yet it certainly was the archbishop who began the contest, and it is most infair to attempt to conceal or slur over this fact. In 1163, about a year after his elevation, Becket raised a loud complaint on the usurpations by the king and buty of the rights and property of the church. He claimed houses and lands which, if they ever had been included in the endowments of the sec of Canterbury, had been for generations in the possession of lax families. It is curious to see castles and places of war figuring in his list. From the king himself he demanded the strong, and then most important, eastle of Rochester, which he said was his, as Archbishop of Canterbury. From the Earl of Clare, whose family had possessed them in het ever since the Conquest, he demanded the strong castle and the barony of Timbridge; and from other barons, possessions of a like nature. But to con: plete the undiguation of Henry, who had laid it down as an indispensable and inchangeable rule of government, that no vassal who held in capite of the crown should be excommunicated without his previous knowledge and consent, he harded the thunders of the church at the head of William de Eynsford, a military tenant of the crown, for forcibly ejecting a priest collated to the rectory of that manor by the archbishop, and for pretending, as lord of the manor, to a right over that living. When Henry ordered hun to revoke the sentence, Becket told him that it was not for the king to inform him whom he should absolve and whom excommunicate---a right and faculty appertaining solely to the church. The king then resorted from remonstrances to threats of vengeance; and Becket, bending for awhile before the storm, absolved the knight, but reluctantly and with a bad grace." In the course of the following year, the king matined his project for subjecting the clergy to the anthority of the civil courts for murder, telony, and other crimes; and to this reform, in a conneil held at Westimmster, he formally demanded the assent of the archbishop and the other prelates. lemency of the ecclesiastical courts to offenders in holy orders seemed almost to give an immunity to crune, and a recent case, in which a clergyman had been but slightly pumshed for the most atrocious of offences, called aloud for a change of court and practice, and lent unanswerable arguments to the · Gerouse of Canterbury,-Diceto,-Fifz Steph Epist, St. Thora. -Hist, Quad.

novations, upon which Henry asked them if they

CHAP. L.

would merely promise to observe the ancient customs of the realm. Becket and his brethren, with the exception only of Hilary, Bishop of Chichester, answered that they would observe them, "saving their order." On this the king mimediately deprived the archbishop of the manor of Eve and the castle of Berkhampstead, which he had hitherto been allowed to retain. Finding, however, that the bishops fell from his side instead of supporting his quarrel, and being on one side menaced by the king and lay nobles, and on the other, it is said, advised to submit by the Pope himself, Becket shortly afterwards, at a great council held at Clarendon, in Wiltshire (25th January, 1164), consented to sign a series of enactments embodying the several points insisted upon by the king, and hence called the 'Constitutions of Clarendon,' but he refused to put his seal to them, and immediately after withdrew from the court, and even from the service of the altar, to subject himself to the harshest penamee for having acted contrary to his inward conviction Subsequently the Pope rejected the 'Constitutions of Clarendon, with the execution only of six articles of number importance; and the archbishop was then

knowledged in this world.

measures, nor restrict himself to a purely legal course, assembled a great council in the town of Northampton, and summoned the archbishop to appear before it. He was charged, in the first place, with a breach of allegiance and acts of contempt against the king. He offered a plea in excuse, but Henry swore, "by God's eves," that he would have justice in its full extent, and the court condemned Becket to forfeit all his goods and chattels; but this forfeiture was immediately commuted for a fine of 500%. The next day the king regained him to refund 300% which he had received as Warden of Eve and Berkhampstead, and 500*l*. which he (the king) had given him before the walls of Tonlonse; and, on the third day, he was required to render an account of all his receipts from vacant abbeys and bishoprics during his chancellorship, the balance due thereon to the crown being set down at the enormous sum of 44,000 marks. Becket now perceived that the king was bent on his utter run. For a moment he was overpowered; but, recovering his firmness and self-possession, which never forsook him for long intervals, he said he was not bound to plead on that count, seeing that, at his consecration as archlushop, he had been publicly released by the king from all such claims. He demanded a conference with the bishops; but these dignitaries had already declared for the court, and the majority of them now ad-

This was Henry's usual onth when much excited. 'The onths of all these kings would make a curious collection of blasphemy. The chroniclers have been careful to preserve them, and, according to their records, nearly every king had his distinctive oath.

VOI. 1.

vised him to resign the primacy as the only step which could restore peace to the church and nation. His health gave way under these troubles, and he was confined to a sack-bed for the two following days. His indomitable mind, however, yielded none of its firmness and (we must add) its pride. He considered the bishops as cowards and timeservers, and resolved to retain that post from which, having once been placed in it, it was held, by all law and custom, be could never be deposed by the temporal power, or by any authority except that of the Pope. It is said that he thought of going barefoot to the palace, and throwing bimself at the king's feet, to appeal to his pity and the remembrance of their old and dear triendship, - a course which would probably have effected a reconciliation, for the king was not of a harsh or unforgiving disposition, and his pride would have been conchated by the outward semblance of submission. But, in the end, Becket adopted a line of conduct much more natural to his character, resolving to deby the authority of the court and brave the king in his wrath. On the morning of the decisive day (October 18th, 1164), he celebrated the mass of St. Stephen, the first Martyr, the office of which begins with these words:—"Sederint principes et adversum me loquebantur," (Princes also did sit and speak against me Ps. cxix 23). After the mass, he set out for the court, arrayed as he was in encouraged to persist by the only superior he achis pontifical robes. He went on horseback, bearting the archieptscopal cross in his right, hand, and The king being now determined to keep no holding the rems in his left. When he dismounted at the palace, one of his suffragans would have borne the cross before him in the usual manner, but he would not let it go out of his hands, saying, "It is most reason I should bear the cross myself; under the defence thereof I may remain in safety; and, beholding this ensign, I need not doubt under what prince I serve,"--" But," said the Archbishop of York, an old rival and enemy of Becket, "it is defying the king our lord to come in this fashion to his court;---but the king has a sword, the point of which is sharper than that of the pastoral staff" As the primate entered, the king, enraged at his unexpected manner of presenting lumself, rose from his seat and withdrew to an inner apartment, whither the barons and bishops soon followed him, leaving Becket alone in the vast hall, or attended only by a few of his clerks of the inferior clergy, the whole body of which, inlike the dignitaries of the church, inclined to his person and cause, These poor clerks trembled and were sore dismayed, but not so Becket, who scated himself on a bench, and still holding his cross-creet, calmly awaited the event. He was not made to wait long: the Bishop of Exeter, terrified at the excessive exasperation of the sovereign, came forth from the inner apartment, and throwing himself on his knees, implored the primate to have pity on lumself

and his brethren the bishops, for the king had

vowed to slay the first of them that should attempt

to excuse his conduct. "Thou fearest," replied

reply.

thee, then, a traitor, and tell thee we will no longer obey a perjured archbishop, but place ourselves and our cause under the protection of our lord the Pope, and summon thee to answer as before him."—"1 hear," said Becket, and he degreed no further

f According to Roger of Hoveden, the archbishop

was accused in the council chamber of the mi-

possible cribic of magic; and the barons pro-

things that are of God " Soon afterwards, the rest

of the bishops appeared in a body, and Hilary of

Chichester, speaking in the name of all, said,

"Thou wast our primate, but now we disayow

thee, because, after having promised faith to the

king, our common lord, and sworn to maintain his royal customs, thou hast endeavoured to destroy

them, and hast broken thme oath. We proclaim

HISTORY OF ENGLAND.

barons, stepped forth into the hall to read the sentence, beginning in the usual old Norman French form, "Oyez-er" The archbishop rose, and, interrupting him, said, "Son and earl, hear me first. Thou knowest with how much faith I served the king,—with how much reluctance, and only to please him, I accepted in present charge, and in what manuer I was declared free from all secular claims whatsoever Touching the things which happened before my consecration, I ought not to answer, nor will I answer. You, moreover, are all my children in God, and neither law nor reason permits you to sit in judgment apon your father. Level ad you therefore to judge me; —I decline your tribunal, and refer my quarrel to the decision of the Pope To him I appeal: and now, under the holy protection of the Catholic church and the apostolic see, I depart in peace." After this counter-appeal to the power which his adversaries had been the first to invoke, Becket slowly strode through the crowd towards the door of the hall. When near the threshold, the spirit of the soldier, which was not yet extinguished by the aspirations of the saint, blazed forth in a withering look and a few hasty but impassioned words. Some of the courbers and attendants of the king threw at him straw or rishes, which they gathered from the floor, and called limit traitor and fidse perjurer. Turning round and drawing himself up to his full height, he cried, "If

to the full, " \* the arcbbishop supping with them and doing the honoris of the feast. In the course of the eyening he sent to the king to asl leave to repre beyond sea, and he was told that he should receive an answer on the followar: morning. The modern historians, who take the most unfavourable view of the king's conduct in these particulars, intimate more or less broadly that a design was on foot for preventing the archbishop from ever seeing that morrow; but the errenmstances of time and place, and the character of Henry, are opposed to the belief that secret assassination was contemplated; nor does any contemporary writer give reasonable grounds for emertaining such a belief, or indeed say more than that the archbishop's friends were sorely frightened, and thought such a tragical termination of the quarrel a highly probable event. Becket, however, took his departure as if he himself feared violence He stale out of the town of Northampton at the dead of night, disguised as a simple monk, and calling limiself Brother Dearman; and being fol-

descent contributed, no less than his sudden sanc-

tity, to endear lum to the people, who had never before seen one of their race elevated to such

dignities. He seems, indeed, to have been very

popular, even when nothing more than a profane

chancellor, and at this critical moment he resorted

to means that could hardly fail of giving enthes asm to the feelings of the multitude. The stately

bishops, as we have said, had fallen from bis side,

-the lordly abbots remained aloof in their houses,

—the mass of his own elerical followers had for

saken him,—the lay nobles of the land were almost to a man his declared engines: his house wa

empty, and in a spirit of imitation which some will

deem presumptuous, he determined to fill it with

the panpers of the town and the lowly waylarer

from the road-side. "Suffer," said he, "all the

poor people to come into the place, that we may

make meny together in the Lord." " And having

thus spoken, the people had free cutrance, so that

all the ball and all the chambers of the house being

furnished with tables and stools, they were con-

vemently placed, and served with meat and diml.

Book III.

lowed only by two clerks and a demestic servant, he hastened towards the coast, hiding by day and pursuing his journey by night. The season was far advanced, and the stormy wmds of November swept the waters of the Channel when he reached the coast; but Becket embarked in a small boat, and after many perils and fatigues, landed at Gravelines, in Flanders, on the fifteenth day after his departure from Northampton. From the sea-port of Gravelines, he and his companions walked on foot, and in very bad condition, to the monastery of St. Bertin, near to Namur, where he waited a short time the success of his applications to the King of France, and the Pope Alexander III., who had fixed his residence for a time in the city of Sens. Their answers were most layourable; for, fortunately for Becket, the \* Holingshed

my holy calling did not forbid it, I would make my

answer with my sword to those cowards who call me traitor.\* He then mounted his horse anidst

the acclamations of the lower elergy and common

people, and rode in a sort of triumph to his lodgings, the populace shouting, "Blessed be God who

buth delivered his servant from the hands of his

enemics." The strength of Becket's party was in

the popular body; and it has been supposed, with

some reason, that his English birth and Saxon

and the Pope, turning a deaf car to a magnificent embassy dispatched to him by the English sovereign, determined to support the cause of the primate as that of truth, of justice, and the church.

CIVIL AND MILITARY TRANSACTIONS.

in his case before a lay tribinial, and criterfied afresh in the person of lumself, the servant of As soon as Henry was informed of these particulars he issued writs to the sheriffs of England, commanding them to seize all rents and possessions of the primate within their prosdictions, and to detain all bearers of appeals to the Pope till the long's pleasure should be made known to them. He also commanded the justices of the kingdom to detain in like manner all bearers of papers, whether from the Pope or Becket, that purported to prononnec excommunication or interdict on the realing ---all persons, whether by so codesiastic, who should adhere to such sentence of interdict, -and all clerks attempting to leave the kingdom without a passport from the king. The primate's name was struck out of the Laturgy, and the revenues of every elergynou who had either followed linn into France, or had sent him ad and money, were seized by the crown H Henry's vengeance had stopped here it might have been excused, it not institled, but, irritated to madness by the tone of defiance his enemy assumed in a foreign country, he proceeded to further vindictive and most disgraceful measures, issuing one common scritchee of banishment against all who were connected with Becket, cuther by the ties of relationship or those of friendship. The list of proscription contained tour hundred names, for the waves and children of Becket's friends were included; and it is said that they were all bound by an oath to show themselves in their iniserable exile to the cause of their rum, that his heart might be wring by the sight of the misery he had brought down upon the heads of all those who were most dar to him. It is added that his cell at Pontign was accordingly beset by these exiles, but that he finally succeeded in relieving their immediate wants by interesting the King of France, the Queen of Sicily, and the Pope, in In 1165, the year after Becket's flight, Henry sustained no small disgrace from the result of a compaign, in which he personally commanded, against the Welsh. That hardy people had risen

fell after another, and, when hostilities had contimed for some time, the Welsh pushed their memsions forward into the level country. The king, turning at length his attention from the church quarrel, which had absorbed it, drew together an mmy "as well of Englahmen as strangers," and hastened to the Welsh marches. At his approach the mountaineers withdrew "to their starting holes," their woods, and strait passages. Henry, without regard to difficulties and dangers, followed them, and a general action was fought on the banks of the Cicroc The Welsh were defeated, and fled Henry, still following them, to their uplands. , penetrated us far as the lofty Berwin, at the foot of which he encomped. A sudden storm of ram set in, and continued until all the streams and forrents were fearfully swollen, and the valley was deluged. Meanwhile the natives gathered on the ridges of the monutain of Berwin; but it appears to have been nime from the war of the elements than of man that the king's army retreated in great disorder and with some loss. Henry had hitberto showed Impself remarkably free from the cruelty of his age, but his mind was now embittered, and in a hasty moment he resolved to take a barbarous vengeance on the persons of the hostages whom the Welsh princes and placed in his lands, seven years before, as pledges for their tranquillity and allegrance. The eyes of the males were picked out of then heads, and the noses and cars of the females were cut off. The old chromelers hardly merease our horior (which they intended to do) when they tell us that the victims belonged to the noblest families of Wales \* This reverse in England was soon followed by successes on the continent. A formidable insurrection broke out in Brittany against Henry's subservient ally Conan, who applied to him for succour according to the terms of the treaty of alliance subsisting between them. The troops of the king entered by the frontier of Normandy, under pretext of defend-

once more in arms in 1163, but had been defeated

by an Anglo-Norman army, which subsequently

South Wales, was found dead in his hed, and the

uncle asserting he had been assassinated by the secret

emissaries of a neighbouring Norman baron, col-

lected the mountaineers of the south, and began a

fierce and successful warfare, in which he was presently joined by his old allies, Gwynned, the prince

of North Wales, and Owen Cyvelioch, the leader of the clans of Powisland. One Norman castle

ing the legitimate earl of the Bictons against his revolted subjects. Henry soon made himself master of Dol and several other towns, which he kept and garrisoned with his own soldiers. Comm had shown himself atterly incapable of managing the ficice Breton pobles, by whose excesses and

crucities the poor people, who were the victims of

them, were ground to the dust. Henry's power

\* Gerrase - Newbrig - Girald Camb Ilm - Dicclo

plundered and wasted with fire the county of Carmarthen. Somewhat more than a year later a nephew of Rees-ap-Gryfiths, prince or king of HISTORY OF ENGLAND.

halled him as a deliverer \* Submitting in part to the force of encumstances and the wishes of Henry, and in part, perhaps, following his own indolcrit inclinations, Conan resigned the remnant of his anthority into the hands of his protector, who governed the state in the name of his son Geoffrey and Conan's heriess Constantia, the esponsals of these two children being prematurely solemnized Another insurrection ensued; but, though the disaffected barons of Brittany formed a life and death league with the dissatisfied people of Maine, and were assisted, at first secretly and then openly, by the King of France, they could never make head against the power of Henry, who, in the end, levelled most of their castles, and disarmed and dishemiened the turbulent Bretons. In the course of this perty war Henry is accused by more than one French chronicler of making a jest of the virtue of his female prisoners and hostages; but it is fair to remark that, though this is touching one of his known vices, these accounts are from a prejudiced source; and it is acknowledged, even by the same writers, that he gave to Brittany tranquillity, regular courts of law, and prosperity,-blessings which were certainly worth more to the mass of the people than the stormy national independence they had before enjoyed. In the month of December, 1166, Hemy kept his court in the famed old castle on Mount St. Michael, whence his eye could range over the long and extending land of Brittany,

and abilities were well known to the suffering

Bretons, and a considerable party, including the

and there he was visited by William the Lion, who had recently ascended the Scottish throne, on the death of his brother, Malcolm IV. While still abroad he ordered a tax to be levied on all his subjects, whether English or foreign, for the support of the war in the Holy Land, which was taknig a tiirn more and more unfavourable to the Christians, but at the very time his peace was broken by his own war with the church and the unremitting hostility of Becket In the month of May the banished archbishop went from Pontigny to Vezeley, near Anxerre, and encouraged by the Pope, who intimated that he might proceed without my tear of giving offence to the see of Rome, he repaired to the church on the great festival of the Ascension, when it was most crowded with people, and mounting the pulpit there, "with book, bell, and candle," solumnly enried and pronounced the sentence of excommunication against the defenders of the Constitutions of Clarendon, the detainers of the sequestrated property of the church of Canterbury, and those who imprisoned or persecuted either laymen or clergy on his account. This done, he more particularly excommunicated by name Richard de Lucy, Joycelm Bahol, and four other of Henry's courtiers and prime favourates.

and dashed it to the ground, undid his girdle, threw his clothes about the room, tore off the silk coverlet from his bed and rolled upon it, and gnawed the straw and rushes,— for it appears that this mighty and splendid monarch had no better bed \* His rescritment did not pass away with this parmysm, and after writing to the Pope and the King of France, he threatened that, if Becket should return and continue to be sheltered at the Abbey of Pontigny, which belonged to the Cistercrans, he would seize all the estates appertaining to that order within his mimerons dominions. The threat was an alarming one to the monks, and we find Becket removing out of Burgundy to the town of Sens, where a new asylum was appointed him by Louis, who continued to support bim for his own views, but who was mable or unwilling to make any great sacrifice for lum. A paltry war was begun and ended by a tince all within a few months; it was followed the next year by another war equally short and still more inglorious for the French king; for, although he had excited Iresh disturbances in Brittany and Maine, and leagued lumselt with some of Hemy's revolted barons of Porcton and Aquitame, he gamed no advantage whatever for himself, was the cause of rum to most of his allies, and was compelled to conclude a peace at the beginning of the year 1169. Nothing but an empty pride could have been gratified by a series of fendal oaths; but the designations given to his sons on this occasion by the English king contributed to fatal consequences which happened four years later. Prince Henry of England, his eldest son, did homage to his tather-m-law, the King of France, for Anjon and Manne, as he had formerly done for Normandy; Prince Richard, his second son, did homage for Aquitanic; and Geoffrey, his third son, for Brittany: and it was afterwards assumed that these ceremonies constituted the boys sovereigns and absolute masters of the several dominions named. At the same time the two kings agreed upon a marriage between Prince Richard of England and Alice, another daughter of the King of France, the previous treaty of matrimony with the King of Arragon being set aside. Sixteen months before these events Henry lost his mother, the Empress Matilda, who died at Rouen, and was buried in the celebrated Abbey of Bec, which she had enriched with the donations of her piety and penitence. Her adventurous, busy, The king was at Chinon, in Anjon, when he was restless life ceased with the accession of her able startled by this new sign of life given by his ad-\* Script Rer Franc Henry seems to have acted in this mad way

son to the throne of England; but from the hononred retirement of Normandy, to which he wisely condemned her, she continued to take a lively interest in the affairs of courts and governments, and it is said of her that she foresaw Becket's character, and highly disapproved of his elevation to the primacy. - To that extraordinary mun we must now return, for his fate is so interwoven with that of Henry that it is difficult to separate them for any length of time until the grave closes over the priest; and then his ashes, his name, and writings, will be found exercising an influence not only over this king but over his successors. About this time Henry was prevailed upon by

the Pope, the King of France, and by some of his own friends, to assent to the return of Becket and his party. The kings of France and England met at Montmiral, in Perche, and Becket was admitted to a conference. Henry insisted on qualifying his agreement to the proposol terms of accommodation by the addition of the words, "saving the honom of his kingdom," - a salvo which Becket met by another on his part, saying that he was willing to be reconciled to the king, and obey him in all things, "saying the bonom of God and the church" bonom this, Henry, finning to the King of France, said,-"Do you know what would happen if I were to admit this reservation? That man would interpret everything displeasing to himself as being contrary to the honom of God, and would so invade all no rights: but to show that I do not withstand God's bonom, I will here offer him a concession,-what the greatest and holiest of his predecessors did unto the least of mine, that let him do into me, and I am contented therewith." All present exclaimed that this was enough-that the king had humbled himself enough. But Becket still unsisted on his salvo; upon which the King of France said, he seemed to wish to be "greater than the samts, and better than St. Peter;" and the nobles present nammured at his imbending pride, and said be no longer merited an asylum in France. The two kings mounted their horses and rode away without saluting Becket, who retired much cast down. No one any longer offered lum

charity of the common people.\* In another conference the obnoxious clauses on either side were omitted. The business now seemed in fair train; lint when Becket asked from the king the kiss of peace,† which was the usual termination to such quariels, Henry's irritated feelings prevented him from granting it, and he excused himself by saying it was only a solemn oath taken formerly, in a moment of passion, never to kiss Becket, that hindered him from, giving this sign of perfect reconciliation. \* Vita S. Thomæ - Script. Rer. Franc - Gervase - Fpist S

, food and lodging in the name of Louis, and on his journey back to Sens he was reduced to live on the

wave no privilege and no ceremony, and this conference was also broken off in anger. Another brief quarrel between the two kings, and an impotent raising of banners on the part of Louis, which threatened at first to retard the reconciliation between Henry and his primate, were in fact the cause of hastening that event; for hostilities dwindled into a truce, the truce led to another conference between the sovereigns, and the conference to another peace, at which Henry, who was apprehensive that the Pope would finally consent to Becket's aident wishes, and permit bim to excommunicate his king by name, and pronounce an interchet against the whole kingdom, slowly and reluctantly pledged his word to be reconciled torthwith to the dangerous exile. On the 22nd of July, 1170, a solemn congress was held in a spacious and most pleasant meadow,\* between Freteval and La Ferté-Bernard, on the borders of Tourame. The king was there before the archbishop, and as soon as Becket appeared, riding leasmely towards the tent, he spurred his horse to nicet him, and saluted him cap in hand. They then rode apart into the field, and discoursed together for some time in the same familiar mainer as in by-gone times. Then returning to his attendants, Henry said that he found the archbishop in the best possible disposition, and that it would be surful in limi to nomish rancour any longer. The quarter and been still further complicated by the coronation of Henry's eldest son, a ceremony which had been performed in the preceding month of June by the Archbishop of York, in defining of the rights of Becket as primate. But Henry softened his rancom on this account in the course of his private conversation with him,

primate must have known kings too well to attach

much value to their kisses, but he was resolute to

The primate came up accompanied by the Archbishop of Sens and other priests, and the forms of reconciliation were completed, always, however, excepting the kiss of peace, which, according to some, Henry promised he would give in England, where they would soon meet † The king, however, condescended to hold Becket's starna when he mounted. By their agreement Becket was to love, honour, and serve the king, in as far as an archbishop could "render in the Lord" service to his sovereign , and Henry was to restore immediately all the lands, and livings, and privileges of the church of Canterbury, and to furnish Becket with funds to discharge his debts and make the journey into England. These terms were certainly not kept; the lands were not released for four months, and, after many vexations delay., Becket was obliged to borrow money for fus journey. While tarrying on the French coast be was several times warned that danger awaited him on the opposite shore. This was not improbable, as many resolute men had been suddenly driven from the church lands, on which they had fattened for In prata and missima — Script Ret France † Fitz Stephen — Lyist, S. Thomae

<sup>†</sup> See a curious discourse on kisses of peace in Ducauge, Gloss. in roi, Osculum Pacis.

chief enemies, and who were men likely to adopt strong measures to prevent his promulgating the terrible sentence. He was even assured that Runulf de Broc, a knight of a family who all hated him, to the death, and who had himself boasted that he would not let the archbishop live to cat a single loaf of bread in England, was lying with a body of soldiers, between Canterbury and Dover, in order to intercept him. But nothing could move Becket, who said seven vears of absence were long enough both for the shepherd and his flock, and that he would not stop though he were sure to be cut to pieces as soon as he landed on the opposite coast. The only use he made of the warmings he received was, to confide the letters of excommuneation to a skilful and devoted messenger, who, preceding him some short time, stole into England without being suspected, and actually delivered them publicly to the three bishops, who were us much startled as if a thunderbolt had fallen at their feet. This last measure seems to have had as much to do with Becket's death as any anger of the king's. As he was on the point of embarking, a vessel arrived from England. The sailors were asked 'what were the feelings of the good English people towards their archbishop? They replied, that the people would had his return with transports of joy. This was a good omen, and he no doubt relied much more on the popular favour than on the protection of John of Oxford, one of the royal chaplains, and some others whom Henry had sent to accompany him - He sailed from Prance in the same gloomy month of the year on which he had begin his exile, and, avoiding Dover, landed at Sandwich, on the 1st of December. At the news of his arrival, the mariners, the peasants, the working people generally, and the English burgesses flocked to meet him; but none of the rich and powerful welcomed him; and the first persons of rank he saw presented themselves in a menacing attitude. These latter were a sheriff ot Kent, Reginald de Warenne, Ranulf de Broe (who had ridden across the country from Dover),

him, in the name of the prince, not to enter any of the royal towns or custles, but to return and remain within his own chocese. The primate obeyed, and, returning, spent some days at Harrow-on-the-Hill, which belonged to the church of Canterbury a considerable time before the Norman conquest. During his stay at Harrow, Becket kept great hospitality; but this viitue was probably exercised in regard to persons of a condition resembling those whom he had bidden to his memorable feast at Northampton; and the only ecclesiastic of rank mentioned as doing him honour was the abbot of the neighbouring monastery of St. Alban's. Two of his own clergy, Nigellus de Sackville, who was called "the usurping rector of Harrow," and Robert de Broc, the vicar, a relation of his determined foe, Ranulf de Broc, treated him with great disrespect, and when he was departing manned the horse which carried his provisions —an offence which was not forgotten by one who presumed to harl the thunderbolts of damnation Becket returned to Canterbury escorted by a host of poor people armed with trustic targets and rusty lances. On Christmas day he ascended the pulpit in the great cathedral church, and delivered an eloquent sermon on the words, Jenio ad tos mortinlei tos (1 come to you to the among you). He told his congregation that one of their archbishops had been a martyr, and that they would probably soon see another; "but," he added, " before I depart hence, I will avenge some of the wrongs my church has suffered during the last seven years;" and he forthwith excommunicated Ranulf and Robert de Broc, and Nigellus, the rector of Harrow.\* This was Becket's last public As soon as his messengers had delivered his letters, the three bishops excommunicated by them hastened to Prince Henry, to complain of his insatuate thirst of revenge, and to accuse him of a fixed plan of violating all the royal privileges and the customs of the land; and almost immediately and some relatives and allies of the three excomafter they crossed over to the continent, to demand numented bishops, who carried swords under redress from the king. "We implore it," said they, " both for the sake of royalty and the elergy then times, and drew them when they approached the primate. John of Oxford conjuied them to be —for your own repose as well as ours. There is a quiet, lest they should make their king pass for a man who sets England on fire; he marches with traitor, but it is probable that the determined troops of horse and armed foot, prowling round the countenance of the English multitude made more fortresses, and trying to get himself received within impression on them than his peaceful words. them "† The exaggeration was not needed; They retired to their eastles, and spread a report Henry was seized with one of his most violent fits of fury. "How," cried he, "a fellow that bath among their fendal compeers that Becket was liberating the serfs of the country, who were marching eaten my bread,—a beggar that first came to my in his train drunk with joy and hopes of vengeance. court on a lame horse, dures ment his king and At Canterbury the primate was received with acthe royal family, and tread upon the whole kingclamations; but still it was only the poor and why that welcomed him. CHAP, L.] CIVIL AND MILITARY TRANSACTIONS. dom, and not one of the cowards I nourish at my table--not one will deliver me from this turbulent priest." There were four knights present, who had probably injuries of their own to avenge, and who took this outburst of temper as a sufficient death-warrant, and, without communicating their sudden determination to the king (or, at least, there is no evidence that they ilid), Imrried over to England Their names were Reginald Fitzurse, William Tracy, Hugh de Morville, and Richard Brito; and they are described by a contemporary as being barons, and servants of the king's bedchamber. Their intention was not suspected, nor was then absence noticed; and while they were online with loose rem towards the coast, the king was closeted with his conneil of barons, who lafter some decussion, which seems to have occupied more than one day, appointed three commissioners to go and seize, according to the forms of law, the person of Thomas a Becket, on the charge of high treason. But the conspirators, who had bound themselves together by an oath, left the commis-sioners nothing to do . Three days after Christmas day they tarrived secretly at Saltwood, in the neighbourhood of Canterbury, where the De Broc family had a house; and here, under the cover of meht, they arranged then plans -- for precautions were necessary, in proceeding against the object of the people's veneration. On the 29th of December, having collected a number of adherents to quell the resistance of Becket's attendants and the citizens, in case any should be offered, they proceeded to the monastery of St. Augustine's, at Canterbury, the abbot of which, like nearly all the superior churchmen, was of the king's party. From St Augustme's, they went to the archbishop's palace, and entering his apartment abruptly, about two hours after noon, scated themselves on the floor without saluting lum, or offering any sign of respect. There was a dead pause—the knights not knowing how to begin, and neither of them liking to speak first. At length, Becket asked what they wanted; but still they sat gazing at him with haggard eyes. There were twelve men of the party, besides the four kinghts. Reginald Pitzurse, tergning a commission from the king, at last spoke. " We come," said he, " that you may absolve the bishops you have excommunicated; re-establish the bishops whom you have suspended; and answer for your own offences against the king." Becket rephed with boldness and with great warmth, not sparing faunts and invectives. He said, that he bad published the papal letters of excommunication with the king's consent; that he could not absolve the archbishop of York, whose hemous case was reserved for the pope alone, but that he would remove the censures from the two other hishops, if they would swear to submit to the decisions of Rome," "But of whom, then," demanded Regiunld, "do you hold your archbishoprie-of the king or the pope?" "I owe the spiritual rights

the king." "How, is it not the king that both given you all?" Becket's decided negative was received with murmins, and the knights furiously twisted their long gloves. Three out of the four cavaliers had followed Becket in the days of his prosperity and vain glory, and vowed themselves his bege men. He reminded them of this, and observed, it was not for such as they to threaten han in his own honse; adding also, that if he were threatened by all the swords in England, he would not yield. "We will do more than threaten," replied the knights, and then departed. When they were gone, his attendants loudly expressed their alarm, and blamed him for the rough and provoking tone by which he had inflamed, instead of pacifying his enclines; but the prelate silenced the latter part of their discourse by telling them he had no need of their advice, and knew what he ought to do. The Barons, with their accomplices, who seem to have wished, if they could, to avoid bloodshed, finding that threats were inffectiral, put on their coats of mail, and taking each a sword in his hand, returned to the palace, but found the gate had been shut and barred by the terrified servants. Fitzuise tried to break it open, and the sounds of his ponderous axe rang through the building. The gate might have offered some considerable resistance, but Robert de Broc showed them the way in at a window. The people about Becket had in vain urged him to take refuge in the church; but at this moment the voices of the monks singing vespers in the choir striking los car, he said he would go, as his duty now called him thither; and, making his cross-bearer precede him with the cincifix elevated, he traversed the cloister with slow and mea ared steps, and entered the church. His servants would have closed and fastened the doors, but he forbale them, saying that the house of God was not to be barricaded like a castle. He had passed through the north transept, and was ascending the steps which lead to the choir, when Reginald Fitzinise appeared at the other end of the church, waving his sword, and shouting, "Follow me, loyal servants of the king" The other conspirators followed him closely, armed like himself from head to foot, and brandishing their swords. The shades of evening had tallen, and in the obscurity of the vast church, which was only broken here and there by a lamp glammering before a shrine, Becket might easily have hid himself in the dark and intricate crypts under ground. or beneath the roof of the old charch. of these courses was suggested by his attendants, but he rejected them both, and turned boldly to meet the intruders, followed or preceded by his cross-bearer, the faithful Edward Gryme, the only one who did not flee A voice shouted, "Where is the traitor?" Becket answered not; but when Reginald Fitzurse said, "Where is the archbishop?" he replied, "Here am I, an archbishop, but no traitor, ready to suffer in my Saviour's name." Tracy pulled him by the sleeve, saying, to God and the pope, and the temporal rights to

"Come Inther, thon art a prisoner." He pulled

Tracy stagger forward. They advised him to flee, or to go with them; and, on a candid consideration, it seems to us that the conspirators are entitled to a doubt as to whether they really intended a minder, or were not rather hurried into it by his obstinacy and provoking language. Addressing Fitzurse, he said, "I have done thee many pleasures; why comest thou with armed men into my church?" They told Inm that he must instantly absolve the bishops. "Never, until they have offered satisfaction," was his answer; and he applied a foul vituperative term to Fitzurse. "Then die," exclaimed the latter, striking at his head. furthful Gryme interposed his arm to save his master; the arm was broken, or nearly cut off, and the stroke descended on the primate's head, and slightly wounded him. Then another voice ened, "Fly, or thou diest;" but still Becket moved not, but, with the blood running down his

back his arm in so violent a manner, that he made

face, he clasped his hands, and bowing his head, exclaimed, "To God, to St. Mary, to the holy patrons of this church, and to St. Denis, I commend my soul and the church's cause." A second stroke brought him to the ground, close to the foot of St Bennet's altar; a third, given with such force that the sword was broken against the stone pavement, cleft his skull, and his brains were scattered all about : one of the conspirators put his foot on his neck, and cried, "Thus perishes a traitor!"" The conspirators then withdrew, without encountering any limitance or molestation; but when the fearful news spread through Canterbury and the neighbouring country, the excitement was prodigions; and the then mevitable inference was drawn that Becket was a martyr, and mnacles would be wrought at his tomb. For some time, however, the superior orders rejected this faith,

\*Gerv ce - Felz Sleph - Gryme (who was present) and suffered on the orgasion) - Newling --Roy Hove

and made efforts to suppress the veneration of the An edict was published, procommon people. hibiting all men from preaching in the churches or reporting in the public places that Becket was a His old foe, the Archbishop of York, ascended the pulpit to amountee his death as an infliction of divine vengeance, saying that he had perished in his guilt and pride, like Pharaoh.\* Other ecclesiastics preached that the body of the traitor ought not to be allowed to rest in consecrated ground, but thrown into a ditch, or hing on An attempt was even made to seize the body, but the monks, who received timely warnmg, concealed it, and hastily buried it in the subterranean vaults of the cathedral. But it was soon tound that the public voice, echoed, for its own purposes, by the court of France, was too loud to be drowned in this number. Louis, whom Henry had so often humbled, wrote to the pope, imploring him to draw the sword of St Peter against that hornble persecutor of God, who surpassed Nero in

cruelty, Julian in apostasy, and Judas in treachery.

He chose to believe, and the French bishops be-

. Epist Joan Saish.

heved with him, that Henry had ordered the murder.

Attempts have been made in modern times to lower the character of a faulty man, but who was one of the greatest of our sovereigns, and to revive this belief, which is certainly imsupported by any good evidence of contemporary lastory. If Henry had been addicted to cruelty and assassinationwhich he certainly was not -his consummate prudence and foresight would have prevented his ordering such a deed; for he must have felt what would be the mey table effect of it, and have known that Becket, so disposed of, would be a greater thorn in his side, when dead, than be had ever been while living. On receiving the intelligence, he expressed the greatest grief and horror, shut himself up in his room, and refused to receive either food or consolation for three days; and if he took care to have a touching detail of his distressed feelings transmitted to the pope, in which he declared his impocence in the strongest terms, and entreated that censure might be suspended till the facts of the case were examined, such a measure is not to be taken, in itself, as undicating the insincerity

PENANCE OF HENRY II, before the Shrine of Berket, at Conterbury. From an ancient Familiag on Class. Engraved and described in Carter's Ancient Scingtures and Paintings of England.

could scarcely feel, yet as he was not formed of Moors in Spain, as the church should appoint. At the same time, he engaged to restore all the harsh materials, he may have been greatly shocked lands and possessions belonging to the Triends of the late archbishop; to permit appeals to be made to the pope in good faith, and without frond, reserving to biniself, however, the right of obliging his faindy. The extremity of his penance at the such appellants as he suspected of evil intentions to give security that they would attempt nothing tomb of Becket three years and a half later, has been attributed to his remoise-to his consciousabroad to the detriment of him or his kingdom ness of being guilty of the minder; but he might well feel remorse at the basty words he uttered, and which were supposed to have led to the deed,

on former occasions, without their being taken at the letter, or producing any cyal consequences should be remembered, too, that at the time of his pilgriniage to Becket's shrine, Henry had to overcome a mighty prejudice which had been carefully nourished, and spread by his encludes, and that he was depressed and troubled in spirit by the rebellion of his own children. Lake his bishops, who found it much easier to venerate a dead martyr than obey a living and rigid archbishop,\* be may have entered into the view of Becket's sarctity, in spite of his familiarity with his trailties in the flesh; and the suddenness of Becket's conversion was in accordance with the spirit of the times, and not to be set down unliesitatingly as a piece of hypocrisy. We have rea-

sound here as it admitting Henry's smeerity, which

When Henry's envoys first appeared at Rome -

for the pope was no longer a dependent exile--

they were coldly received, and everything seemed

is doubted altogether by many winers.

although he had used expressions equally violent

to threaten that an interdict would be kind upon the kingdom, and the king excommunicated by name. In the end, however, Alexander rested satisfied with an excommunication in general terms of the murderers and the abettors of the come. It is said that Henry's gold was not idle on this occasion; but the employment of it is rather a proof of the notorious rapacity of the cardinals, than of his having a bad cause to In the month of May, 1172, in a council held at Ayranches, at which two legates of the pope attended. Hemy swore, on the holy gospels and sacred relics - a great concourse of the clergy and people being present—that he had neither ordered nor desired the murder of the archbishop. This oath was not demanded from bim, but taken of his own tree will. As, however, he could not deny that the assassus might have been moved to the deed by his wrathful words, he consented to maintain two hundred kinghts during a year, for the defence of the Holy Land; and to serve himselt,

if the pope should require it, for three years against

To these conditions he made an addition too vague to have any praetical effect—that be would relinquish such customs against the church as had been introduced in his time. The legates then fully absolved the king; and thus terminated this quarrel, less to Henry's disadvantage than anglit have been expected.\* In the short interval be had added a kingdom The year that followed the to his dominions death of Becket was made memorable by the conquest of Ireland In the preceding Book, the sketch of Irish Instory was brought down to the reign of Turlogh, the commencement of which is assigned to the year Tittlogh, Loweyer, like his uncle Donchad, whom he had succeeded, and Donelad's father, the great Briču, is scarcely acknowledged by the old annalists as having been a legitimate king, not being of the blood of the O'Niells of Ulster, in which line the supreme sceptic had been turnsmitted, with searcely any incerniption till its seizure by Brien, from the time of O'Niell, or Nul, of the Nine Hostages, who flourished in the beginning of the fifth century. The long acquiescence of the other provincial regal houses in the superiority thus assumed by that of Ulster was broken by the usurpation of the Manster O'Briens, and we shall find that ere long both the O'Connors of Commanght and the MacMurroghs of Lemster make their appearance on the scene as competitors for the prize of the chief dominion along with the other two families. The whole history of the country from this date is merely the history of these contests for the crown, the course of which will be made sufficiently intelligible by a few sen-

[Воок ПЛ.

tences of explanation taken along with the tabular view of the succession at the head of the present Chapter. Turlogh, who kept his court in the palace of his ancestors, the kings of Munster, at Kinkora, in Clare, died there in July, 1086 His second son, Mintach, or Murkertach, soon after acquired the sole possession of the throne of Munster by the death of one of his two brothers and the bamsh ment of the other; but his attempt to retain the supreme monarchy in his family was resisted by the other provincial kings, who united in supporting, against his claims, those of Domnal Mac-Lochlin, or Donald MacLachlan, the head of the ancient royal house of O'Niell. At last, after much fighting, it was arranged, at a solemn convention held in 1094, that the island should be

<sup>\*</sup> We learn, from the letters of Peter of Blois, how Beckel was con "We form from the letters of Peter of Bloss, how Breckel was con-ordered by churchmen provincisty to his tragged lead). divided between the two competitors, the southern 1

half, called Leath Mogh, or Mogh's Half, remaming subject to Murtach, and the northern, called

Leath Cumi, or Coun's Half, being resigned to

the dominion of MacLochlin. This was a well-

known ancient division, which in former times,

even when the nominal sovereignty of the whole

country was conceded to the kings of Ulster, had

often left those of Munster in passession not only of

actual independence but of a share of the single-

macy over both Connaught and Leinster; for the

line of partition was drawn right across the island

from the neighbourhood of the town of Galway to

Dublin, and consequently cut through each of these

provinces. With this real equality in extent of

doronnon and authority between the two houses,

one circumstance chiefly bad for a long period held

in check the rising fortunes of that of Minister, the law or custom, namely, of the succession to the

crown in that province, which was divided into two

principalities, Desmond or South Munster, and Thomond or North Munster, the reigning families

of which, by an arrangement somewhat similar to that which has been already described as anciently

CHAP. I.]

subsisting in the Scottish monarchy, k enjoyed the supreme sovereignty alternately. The two lines of princes derived this right of equal participation from the will of their common ancestor Ohll Ollum, those of Desmond, which comprehended the present counties of Kerry, Cork, and Waterford, being descended from that king's eldest son Eogan, whence the people of that principality were called Eogatiacths, or Eugemans; while the princes of Thomond, which consisted of Clare, Lamerick, and the greater part of Tipperary, were spring from his second son Cormae Cas, whence then subjects took the reame of Dalgars, or Dalcassians But Brien Boru, buoself of the Dalcassian family, had begun his course of inread upon the ancient institutions of his country by setting at defiance the rights of his Engeman kindred, and had possessed himself, by usurpation, of the provincial throne of Munster before he seized, by a like violation of the law, upon the supreme power. The Minister kings had ever since contained to be of his race. The compact between MacLochlin and Murtach did not put an end to their contention.

veral more battles were fought between them, till af length, in 1103, Mirtach sustained a defeat at Cobha, in Tyrone, which so greatly weakened his power as to prevent lum from ever after giving his adversary any serious annoyance. They continued to reign, however, MacLochlm at Ailcach or Alichia, in Donegal, Mirrach at Cashel, till the death of the latter, in 1119, after he find spent the last three or four years of his life in a monastery, the management of aflairs having been meanwhile left in the hands of his brother Dermot. From the date of the death of Murtach, MacLochlm is regarded as having been sole monarch; but he also died in Fifteen years of confusion followed, during which \* Sec pp 219, 220

second time into a new house. O'Connor, however, had to maintain himself on the throne he had thus acquired by a great deal of bard fighting with his neighbours and rivals. Comos O'Braca, the king of Munster, who had vigorously opposed his elevation, and his successor Turlogh O'Brief, did not cease to dispute his power, till the overtions of the latter at the great battle of Mommor, fought in 1151, placed Munster for the moment completely under the tread of the victor O'Brien was driven from his kingdom, and the territory was again divided into (wo principalities, over which O'Connor set (wo princes of the Eugeman House that had some time before joined lain in his contest with the Daleassians. A few years after, however, the expelled king was restored by the interference of Murtogh O'Lochlin, on Murrach Mac Lachhai, O'Niell, the king of Elster, and the legitimate here of the ancient monarchs of Ireland, who now also took arms to recover for hunself the throne of his ancestors With this new rival, O'Connor, for whom his martial reign has procured from the annalists the title of The Great, continued at war during the remainder of his life; and at his death, in 1156, O'Lochim was ocknowledged supreme kmg. Some opposition was made to his accession by Roderick O'Comor, the son of the late king, and has successor in the proxincial throne of Comminght, but he also, at last, as well as the princes of Monster and Lemster, acquiesced in the restoration of the old sovereign house, and submitted to O'N cell The rule of Murtogh O'Lorblin was definguished by vigour and ability; but its close was anfortunate. He was killed, along with many of

a contest between various competitors for the supreme authority spacad war and devastation over

every part of the country. At last, in 1136, Tur-

logh, or Tordelyac, O'Connor, Kang of Connaught,

was acknowledged monarch of all Ireland; the

ancient sceptic of the O'Niells thus passing a

his nobility, in 1466, in a battle with some using gent cluefs at his own maximee at Ulster, to whom he had given abundant cause for taking up arms against him, if it be true that, after buying been professedly reconciled to one of them with whom he had had a quarrel, and scaling the compact by the acceptance of hostages, in had addenly serzed the unfortunate chief, together with three of his friends, and caused his eyes to be put ont, and them to be put to death. On his decease the sovereignty of Ireland devolved upon his i val. Roderick O'Comor, of Commanglit, the son of it former possessor, O'Comor the Great. I p to this time, almost the only connexion be

tween England and Ireland was that of the consimpree carried on between some of the opposite ports; scarcels any political intercourse had ever taken place between the two countries. Her church, judged, attached Ireland to the rest of Christendom; and some correspondence is still preserved, that passed between her kings and paclates and the English archbishops. Lantrane and Anselm, relating chiefly to certain points in which  $3 \times 2$ 

His most noted exploit, however, was of a different character. Dervorgilla, a lady of great beauty, was the wife of Tiernan O'Rnaic, the lord of Breffuy, a district in Lemster, and the old enemy of MacMurrogh. The sworn loc of her husband, however, was the object of Dervorgilla's guilty passion; and, at her own suggestion, it is said,

the actors were men of blood and violence.

far back as the year 1140, he had, in order to break the power of his nobility, seventeen of the

chief of them seized at once, all of whom that he

"Tirdelvac, the Magnificent King of Hibernia." The bishops also of the Danish towns in Ireland appear to have been usually consecrated by the Archbishop of Canterbury. But almost the smale well-authenticated instance of any interference by the one nation in the civil affairs of the other since the Norman Conquest, was in the rebellion of Robert de Belesme, in the beginning of the reign of Henry I., when that nobleman's brother, Armilph de Montgomery, is said by some of the Welsh chromelers to have passed over to Ireland, and to have there obtained from King Murtach O'Brien, both supplies for the war and the hand of his daughter for himself. It is said, indeed, that both the Conqueror and Henry I, had meditated the subjugation of Ireland; and Malinsbury affirms that the latter English king lad Murtach and his successors so entirely at his devotion, that they wrote nothing but adulation of him, nor did any thing but what he ordered. But no facts are specified in support of these vague assertions. It is,

extend their dominion over Ircland. It would appear, however, that such a project had been entertuned by Henry 11., from the very commencement of his reign. The same year in which he came to the throne, witnessed the elevarion to the popedom of the only Englishman that ever wore the triple crown—Nicholas Breakspear, who assumed the name of Adrian IV. Very soon after his coronation, Henry sent an embassy to Rome, at the head of which was the learned John of Salisbury, ostensibly to congratulate Adrian on

at all events, certain that no actual attempt had yet

been made by any of the Anglo-Norman kings to

his accession, but really to solicit the new pope for his sanction to the scheme of the conquest of Ire-Advan granted a ball, in the terms or to the effect desired -declaring that masmuch as all islands which had received the light of the gospel of Christ undoubtedly appertained of right to St. Peter and the holy Roman church, he gave full permission to the English knig to make a descent upon Ireland, and charged the people of that land to receive him and submit to him as their sovereign lord Before the cud of the same year, the matter was submitted by Hemy to a great council of his burons; but the undertaking was opposed by many of those present, and especially by his mother, the empress; and m consequence it was for the present given up. The pope's bull appears to have been laid aside without having been promulgated. Henry's attention was not recalled to the subject

Dermot Mac Murchad, king of Lagema, or Lein-

ster. This prince had early signalized himself by

his sangumary ferocity, even on a scene where all

Lemster was effectually kept in check by their united power. The sucreeding reign of O'Loghlin, on the other hand, was, for the whole of the ten years that it lasted, a period of trumplaint revenge to MacMirrogh. But the recovery of the supremacy, on O'Loghlm's death, by the House of O'Comor, at last put an end to the long and butter strife. A general combination was now formed against the King of Leinster; King Roderick, the lord of Breffix, and his father-in-law, the Prince of Meath, united their forces for the avowed purpose of driving him from his kingdom; they were joined by many of his own subjects, both Irish and Danish, to whom his tyranny had rendered him odious; and O'Ruarc put himself at the head of the whole. MacMurrogh made some effort to defend himself, but fortune was now against him; he could not long keep his ground against his old enemy thus formidably supported; his few remainmg adherents gradually fell away from him; and at last, finding himself deserted by all, he sought safety in flight, and left his kingdom for the present to the disposal of his conquerors. They set another prince of his own family on the vacant throne. Meanwhile the deposed and Ingitive king had embarked for England. till many years after. The course of the story now carries us back again to Ircland, and to another of the provincial kings of that country of whom we have yet said nothing, Dermond MacMurrogh, or

This is the account of the Irish chroniclers, who have in general taken part very strongly against MacMurrogh, and painted his character in the darkest colours. The story of the conquest of Ireland, however, has been most fully told by an English writer, Gerald Barry, commonly called Giraldus Cambrensis (that is, Gerald the Welshman), who was not only nearly related to some of the chief actors in it, but was in Ireland during a

CHAP. L.] CIVIL AND MILITARY TRANSACTIONS considerable part of the time that the events he ! relates were passing in that country. His marrative, though he may have fallen into some mistakes, is likely to be as imprejudiced as that of any native annalist, at least in the view it gives us of some of the most remarkable of the personages that figure on the scene. Against MacMurrogh, in particular, his countrymen may be supposed to have had some prendices from which the Welshman would be iree. Of the affair of O'Rhare's wite, Giraldus gives substantially the common version, only that he is very emphatic in pointing out that the lady was herself the principal mover in the business; she yielded hersell to be carried off, he says, because she would be carried off; "for, by her own procurement and entirings, she became and would needs be a pury into the preyer;" "such," he ungallantly adds, " is the variable and lickle nature of a woman, by whom all mischness in the world (for the past part) do happen and come."\* He acknowledges, too, that MacMarrogh, "from his very youth and first entry into his kingdom, was a great oppressor of his gentlemen, and a cruel tyrant over his nobles, which bied unto him great hatred and malice" But the full-length picture that he draws of him in another place, though rather sombre upon the whole, is not entirely imrelieved -" Dermond MacMuttogh was a tall man of stature, and of a large and great body,—a valuet and bold warner in his nation; and by reason of his continual hallooing and crying, his voice was hoarse; he rather chose and desired to be feared than to be loved; a great oppressor of his nobility, but a great advancer of the poor and weak. To his own people he was rough and grievons, and hateful unto strangers; he would be against all men, and all men against limi " Mac-Marriogh, we may add, had been a great founder of clanches and religious houses, however indifferently it may be thought some other parts of his conduct would sort with such show of picty. This purpose in setting sail for England was to seek the aid of King Henry, to enable him to recover his kingdom, in return for which he was ready to acknowledge himself the vassal of the English monarch. On landing at Bristol, some time in the summer of 1167, he found that Henry was on the continent, and thither he immediately proceeded. Henry, when he came to him in Agritaine, was "busied," says Giraldus, "in

great and weighty affairs, yet most courteously he received him and liberally rewarded lum. And the

king, having at large and orderly heard the causes of

his exile, and of his repair unto him, he took his oath of allegance and swore him to be his true vassal

and subject, and thereupon granted and gave him his letters patent in manner and form as followeth:

Henry, king of England, Duke of Normandy and

Aggitaine, and Earl of Amon, unto all his subjects, Englishmen, Normans, Scots, and all other

nations and people being his subjects, sendeth

greeting. Whensoever these our letters shall come

\* Translation by Hooker, 1587

Prince of Lemster, into our protection, grace, and favour; wherefore, whosoever within our jurisdiction will aid and help him, our trusty subject, for the recovery of his land, let him be assured of our favour and beense in that behalf." It would scarcely appear, from the tenor of these morely permissive letters, that Henry, in granting them, looked forward to the application of MacMurrogh leading to any result so important as the conquest of Ireland; the other " great and weighty affairs" in which he had been engaged, bad long withdrawn his thoughts from that project; and embarrassed both by Ins war with the French king, and Ins more serious contest with Becket at home, he was at present as little as ever in a condition to resume the serious consideration of it MacMurrogh, however, returned to England well satisfied with what he had got. "And by his daily journeying," proceeds Giraldus, " he came at length unto the noble town of Bristow (Bristol), where, because slaps and boats did daily repair, and come from out of Ireland, he, very desirous to hear of the state of his people and country, did, for a time, sojonra and make his abode; and whilst he was there, he would oftenumes cause the king's letters to be openly read, and did then offer great entertainment and promised liberal wages to all such as would help or serve him; but it served not." At length, however, he chanced to meet Richard de Clare, Earl of Pembroke, surnamed Strongbow (sometimes also called Earl of Chepstow, or of Strighul, from a castle belonging to his family in the neighbourhood of that town), with whom he soon came to an agreement. Strongbow, on the promise of the hand of Dermond's cidest daughter, Eva, and the succession to the throne of Lemster, engaged to come over to Ireland with a sufficient military force to effect the deposed king's restoration in the following spring. A short time after this, Dermond having gone to the town of St. David's, to re-embark for his native country, there made another engagement with two young noblemen, Maurice Fitzgerald and Robert Fitzstephen, both sons of the Lady Nesta, a daughter of one of the Welsh princes, who, after having been mistress to Henry L., married Gerald, governor of Pembroke Castle, and Lord of Carew, and finally became instress to Stephen de Marisco. or Maurice, constable of the castle of Cardigan: Fitzgerald was her son by her marriage, and Fitzstephen by her last-mentioned connexion. To these two half-brathers, in consideration of their coming over to limit with a certain torce at the same time with Strongbow, Dermond engaged to grant the town of Wexford, with two cantreds (or hundreds)

of land adjoining, in fee for ever. These arrange-

ments being completed, "Dermond," continues the historian, "being weary of his exiled life and

distressed estate, and therefore the more desirous to

draw homewards for the recovery of his own, and for which he had so long travelled and sought

abroad, he first went to the church of St David's

to make his orisons and prayers, and then, the

weather being fair and wind good, he adventured

ful country; and, with a very impatient mind, hazarded himself among and through the middle of

HISTORY OF ENGLAND.

Waterford

his enemies; and coming safely to Ferns, he was very honourably received of the clergy there, who after their ability did refresh and succour lim But he for a time dissembling his princely estate, continued as a private man all that winter following among them." It would appear, however, that he

was rash enough to come out of his concealment and show himself in arms in the beginning of the year 1169, before any of his promised English succours had arrived; and the result of this premature attempt was, that he was again easily reduced by King Roderick and O'Ruare, who, however, now consented to allow him to retain ten emitreds of his former territory on condition of his holding the land as the immediate vassal of Ro-He accepted these terms, of course, with no intention of observing them His allies in England meanwhile did not forget Robert Fitz-Stephen was the first to set out about the beginning of May, accompanied with thirty gentlemen of his own knudred, sixty men in coats-of-mail, and three hundred picked atchers; they shipped themselves in three small vessels, and sailing right across from St. David's Head, landed nt a creek now called the Bann, about twelve unles to the south of the city of Wexford. them also came the paternal micle of Strongbow, Hervey de Montemarisco, or Monntmaurice, "a man," according to Giraldus, "unifortimate, unarmed, and without all furniture," and intended to act rather as a commissioned agent for his nephew

than as a soldier. On the day tollowing, two more

vessels marved at the same place, bearing Maurice

of Prendergast, "a histy and a hardy man, born

about Milford, in West Wales," with ten more

gentlemen and sixty archers. It seems to bave

been immediately spread abroad that the armed

himiself was not long at hearing of their arrival, on

which he nistantly sent 500 men to join them under

as illegiturate son Donald, and "very shortly after he lamself idso followed with great joy and

foreigners were come to aid MacMurrogh.

gladness." It was now determined, without further delay, to march upon the town of Wexford "When they of the town," proceeds the narrative, " heard thereof, they being a fierce and unrely people, but yet much trusting to then wonted fortune, came forth about 2000 of them, and were determined to wage and give battle". On beholding the imposing armour and array of the English, however, they drew back, and, setting the suburbs on fire, took refuge within the walls of the town. For that day all the efforts of the assailants to effect, an entrance were vam; as they crowded into the ditches and endeavoured to mount the walls, great pieces of timber and stones were thrown down upon them,

and unprotected multitude, or scattered theur in all directions; those that were thrown to the ground the foot-soldiers straight dispatched, cutting off their heads with their battle-axes. Thice hundred bleeding heads were brought and land at the feet of MacMinrogh, "who, turning every of them, one by one, to know them, did then for joy hold up both his hands, and with a lond voice thanked God most highly. Among these there was the head of one whom especially and above all the rest he mortally laded; and he, taking up that by the hair and ears, with his teeth most horribly and cruelly bit away his nose and hips " So nearly in some respects did an Irish king of the twelfth century

resemble a modern savage chief of New Zealand

After this disaster, the people of Ossory nude no

further resistance; they suffered their invaders to

march across the whole breadth of their country,

mardering, spothing, barning, and laying waste

wherever they passed; and at last their prince

that the monarch was at last levying an army, and also that the princes and nobility of the land were, at his call, about to meet in a great conneil at the ancient royal seat of Tora, in Meath. On receiving this intelligence, MacMinrogh and his English friends, withdrawing from Ossory, took up a position of great natural strength in the midst of the hills and bogs in the neighbourhood of Ferns, and after having made it still more seeme by the addition of such artificial defences as the time and circonstances permitted, there awaited what might happen. Their small force was speedily surrounded by the minocious army of King Roderick, and it would seem that, if they could not have been attacked in their anaccessible stronghold, they might bave been starved into a surrender, at no great

expense of patience on the part of those who had

them thus imprisoned. But notwithstanding the

interiority of their numbers, Roderick appears to

CHAP. L.

have been a good deal more atraid of them than they were of him at is said that disminon had broken out in the council, which, after a-sembling at Tara, had adjourned to Dublin, and the Irish king had probably reason to fear that, if he could not in some way or other bring the aflan to a speedy termination, he would soon be left in no condition to keep the field at all. In this feeling he first attempted, by presents and promises, to seduce Fitzstephen; failing in that, be next tried to persuade MacMurrogh to come over and make common cause with his countrymen against the foreigners, at last, when there was reason to apprehend that the enemy, encomaged by these manylestations of finality or conscious weakness, were about to come out and attack him, he actually sent messengers to sue for peace, on which, after some negotiation, it was agreed that Mac Murrogh should be remstated in his kingdom. which should be secured to him and his hears, on condition only of his consenting, like the other provincial kings, to acknowledge the general sovereighty of Roderick, and giving his son as a hostage for the performance of his engagements. Roderick also promised to give him his daughter professed to make in his treaty for his English allies. It is affirmed, indeed, that it was agreed

It does not appear what terms MacMurrogh between him and Roderick by a secret article, that he should send them all home as soon as he had restored his kingdom to order, and in the mean time should procure no more of them to come over But whatever was the intention with which the King of Leinster made these new engagements, he was too far involved in the consequences of those of another knut he had previously made, to have it in his power to alide by them, even if such had been his wish. His English confederates, whose valour and exertions had replaced him on his throne, would not, we may be sure, after such a service, and such assurance of their importance, be so easily shaken oif as both his countrymen and he funselt may have desired. This was soon proved

swear fealty to hun, and to give hostages. He then sent a party of his English friends to assist his son-m-law, the Prince of Limerick, whose territory had been attacked by King Roderick; and the royal forces were in consequence speedily defeated, and forced to return home. From this time MacMurrogh and the English adventurers, encouraged by the uniform and extraordinary success that had hitherto attended them, seem to have raised then hopes to nothing short of the conquest of the whole country. The supreme sovereignty had already been impoyed successively by the kings of Ulster, of Minister, and of Connaught; and the King of Leinster might naturally enough think that the tinn of his own house was now come. To whatever extent his foreign assuciates may have sympathized with hum in this aiobition, they professed, when he opened his mind to them, to enter into his views. By their advice, he dispatched messengers to England to urge the Earl of Pembroke to come over with his force immediately. This letter, if we must suppose it to have run in the words given by. Giraldus, was a somewhat hightlown composition. have already," he wrote, "seen the storks and swallows, as also the summer binds are come, and with the westerly winds are gone ugam; we have long looked and wished for your coming, and albert the winds have been at rast and leasterly, yet lutherto you are not come unto us; wherefore now huger no longer,"Ac. All Leinster, it was added, was already completely reduced, and there could

Strongbow still deemed it prindent, before he took any decided step, to inform King Henry of the proposal that had been made to him, and to ask his leave to engage in the enterprise. Henry, with his usual caution and deep policy, would only answer his request evasively; but the earl yentured to understand, him in a favourable sense, and returned home with his nimid made up to make the venture. As soon as the winter was over, accordmight, he sent to Ireland, as the first portion of his force, ten gentlemen and seventy archers, under the command of his relation, Raymond Fitzwilliam, surnamed, from his corpulency, Le Gros, or the Gross, an epithet which afterwards, in the disguised form of Grace, became the distinguished faintly name of his numerous descendants. Ravmond Le Gros was the nephew of Fitzgerald and Fitzstephen, being the son of William, lord of

HISTORY OF ENGLAND.

the beginning of May, 1170. They had scarcely time to cast a trench and to build themselves a temporary fort of turf and twigs, when they were attacked by a body of 3000 of the citizens of

Waterford; but thus mob, although, at first, they made their assault with such fierceness as to compel the handful of foreigners to retire to their fort. took to Hight as soon as Raymond and his men, having gained their entrenchments, turned round upon them, and were then pursued and scattered with frightful slaughter. Five hundred of them were cut down in the pursuit; and then, as Giraldus asserts, the victors being weary with killing, cast a great number of those whom they had taken prisoners headlong from the rocks into the seas and so drowned them." A still more disgraceful atrocity- because done with more deliberation, and m colder blood, as well as with additional circumstances of crucity followed this. In the general destruction of their prisoners they had saved seventy of the principal citizens of Waterford, for the sake of what they might receive for their ransom; and Raymond himself, on considerations of humanity, as well as of policy, stremously advised that they should be given up; but Harvey of Mountmanrice, who with three of his courades had

Carew, the elder brother of the former. He and

joined them, opposing this counsel, his arguments were at last amanimously acquiesced in; " whereupon," says the lastorian, "the captives, as men condemned, were brought to the rocks, and after their limbs were broken, they were cast headlong into the seas, and so drowned." The Earl of Pembroke did not set sail till the beginning of September. He then embarked at Milford Haven with a force of two hundred gentlemen and a thousand infermi fighting men, and on the vigil of St. Bartholomew, landed in the neighbourhood of the city of Waterford, which still remamed unreduced. On the following day, Raymond le Gros came with great joy to welcome him, attended by forty of his company. " And on the morrow, upon St. Bartholomew's day, being Tuesday, they displayed their banners, and in good array they marched to the walls of the city, being fully bent and determined to give the assault." The citizens, however, defended themselves with great spirit; then resolution to the rather than surrender, was, no doubt, strengthened and made sterner by the experience they had aheady had of the merciless character of their enemy, and the memory of the fate of their friends and relations a few months before so bin barously butchered; and the assailants were twice driven back from the

them to give a new assault at that place; and

walls.

the town wall; and then, a way being thus opened, they entered into the city, and killed the people in the streets without pity or mercy, leaving them lving in great heaps; and thus, with bloody hands, they obtained a bloody victory." MacMurrogh arrived along with Fitzgerald and Fitzstephen while the work of plunder and carnage was still proceeding; and it was in the midst of the desolation, misnamed the restoration of quiet and order, which followed the sacking of the iniserable city, that, in fullilment of his compact with Strongbow, the marriage ceremony was solemnized between his daughter Eva, whom he had brought with him, and that nobleman. humediately after this they again spread their banners, and set out on their march for Dublice The inhabitants of that city, who were mostly of Danish race, had taken the precaution of stationing troops at different points along the common road from Waterford, so as to make it impassable to a bostile force; but MacMurrogh led his followers by another way among the mountains, and to the construction of the citizens made his appearance before the walls ere they were aware that he had

left Waterford A negotiation was attempted, but, while it was still going on, Raymond and his friend Miles, or Mila, de Cogan, "more desnous," as Giraldus after his fashion expresses it, "to light under Mars in the field than to sit in council under Jupiter, and more willing to purchase bonour in the wars than gain it in peace, with a company of lusty young gentlemen suddenly ran to the walls, and giving the assault, brake in, entered the city, and obtained the victory, making no small slaughter of their enemies." These Norman knights seem to have held themselves entitled in the contest, they were now waging to lay aside not only all the courtesies of civilized warfare, but even all honour and fair play; they treated the people whom they had come to rob of their country as at once  $\phi$ race to whom no mercy was to be shown, and with whom no faith was to be kept. Leaving Dublin in charge of Milo de Cogan, Strongbow next proceeded, on the instigation of MacMirrogh, to invade the district of Meath, anciently considered the fifth province of Ireland, and set apart as the peculiar territory of the supreme sovereign, but which King Roderick had lately made over to his friend O'Ruarc. The English chief, although be seems to have met with no resistance from the mhabitants, now laid it waste from one coil to the other with fire and sword. While all this was going on, the only effort in behalf of his crown or his country that Roderick is recorded to have made, was the sending a rhetorical message to Mac But Raymond, who, by the consent of all, Murrogh, commanding him to return to his allehad been appointed to the command, now " having grance and dismiss his foreign allies, if he did not wish that the life of his son, whom be had left in espied," continues the narrative, "a little house of timber standing half upon posts without the pledge, should be sacrificed. To this threat Mac walls, called his men together, and encouraged Marrogh at once replied that he never would desist

CHAP. I.]

Murrogh's son's head. About this time, according to Giraldus, a synod of the clergy was held at Armagh, at which it was unammonsly agreed that the English invasion was a just punishment by Henven for the sins of the people, and especially for the practice, of which they had long been guilty, of buying English captives from pirates and merchants, and making slaves of them. It was therefore ordered that all the English slaves throughout the land should be immediately set at liberty. It does not appear what anthority the synod had to issue such a decree as this, or what obedience was paid to it; laudable as a general liberation of the English slaves may have been, the measure was certainly not very well timed, and regarded as the only expedient the reverend assembly could think of for saving the country, it must be considered a somewhat curious one. There was something suspicious or not easily intelligible in the part taken by the clergy throughout the whole of these transactions, But now the adventurers were struck on a

the passing of any more ships from any port in England to Ireland, and commanding that all his subjects now in the latter country should return from thence before Easter, on pain of forfeiting all then lands and being for ever banished from the reahn. A consultation being held as to what ought to be done in this emergency, it was resolved that Raymond le Gros should be immediately dispatched to the king, who was in Aquitame, with letters from Strongbow reminding Henry that he had taken up the cause of Dermond MacMurrogh (as he concerved) with the royal permission; and acknowledging for himself, and his companions,

sudden with no little perplexity by the arrival of a

proclamation from King Henry strictly prohibiting

Things were in this state when a new enemy suddenly appeared—a body of Danes and Norwegians brought to attack the city of Dubhn by its former Danish ruler, who had made his escape when it was lately taken, and had been actively employed ever since in preparing and fitting out this armament. They came in sixty ships, and as soon as they had landed proceeded to the assault. "They were all mighty men of war," says the description of them in Giraldus, "and well appointed after the Danish manner, being harnessed with good brigandines, jacks, and shirts of mail; VOL. I.

counted upon receiving from England.

fortune that had all along waited upon him and his associates was still true to them. His brother, seeing how he was pressed, led out a few men by the south gate, and, attacking the assailants from behind, spread such confusion and dismay through their ranks, that after a short convulsive effort to recover themselves, they gave way to their painc and took to flight. Great numbers of them were slain, and their leader himself, being taken prisoner, so exasperated the English commander when he was brought into his presence by the bold expressions in which he gave vent to his feelings, " in the open sight and andience of all the people," that Milo de Cogan ordered his head to be struck off on the spot. It would appear to have been not long after this that Dermond MacMarrogh died, on which it is said that Strongbow took the title and assumed the anthority of King of Leinster in right of his wife. Raymond le Gros had now also returned from Agintaine; he had delivered the letter with which he was charged, but Henry had sent no answer, and had not even admitted him to his presence. Meanwhile, on the side of the Irish, there was one individual, Laurence, Archbishop of Dublin, who saw that the moment wax favourable for yet another effort to save the country. Chiefly by his patriotic exertions a great confederacy was formed of all the native princes, together with those of Man and the other surrounding islands, and a force was assembled around Dublio, with King Roderick as its commander-in-clief, of the amount, it is affirmed, of thurty thousand men Strongbow, and Raymond, and Manrice Fitzgerald had all thrown themselves into the city, but their united forces did not make twice as many hundreds as

that whatever they had acquired in Ireland, either by gift or otherwise, they considered not their own but as held for him their hege lord, and as being at his absolute disposal. While they thus sought, the enemy immibered thousands. For the space of however, to protect themselves against its more retwo months, however, the investing force appears to have sat still in patient expectation. Their mote consequences, the immediate effect of the prohope, no doubt, was that want of victuals would in clamation was to deal a heavy blow at their cause, both by the discouragement and alarm it spread course of time compel the garrison to surrender among their adherents, and especially by cutting And at length a message came from Strongbow, and a negotiation was opened; but, before any off the supplies both of men and victuals they had arrangement was concluded, an extraordinary turn of fortune suddenly changed the whole position of affairs. While the besieged were anxiously deliberating on what it would be best for them to do in the difficult and perilons circumstances in which they were placed, Donald Kavenagh, the son of the late king MacMurrogh, contrived to make his way into the city, and informed them that their friend Fitz-Stephen was closely besieged by the people of Wexford in his castle of Carrig, ncar that place, and that, if not reheved within a few days, he would assuredly, with his wife and children, and the few men who were with him, tall

them the conrage of desperation. Fitzgerald proposed, and Raymond seconded the gallant counsel, that, rather than seek to preserve their lives with the loss of all beside, they should, small as their force was, make a bold attempt to cut their way to their distressed comrades, and, at the worst, die like soldiers and knights. The ammating appeal nerved every heart. With all speed each man got ready and buckled on his armonr, and the little band was soon set in array in three divisions; the first led by Le Gros, the second by Milo de Cogan, the last by the Earl and All things being thus in-Manrice Fitzgerald ranged, about the hour of muse in the morning they sudd-uly rushed forth from one of the gates, and threw themselves impetions by upon the vast throng of the enemy, whom their sudden onset so bewildered and conformided, that, while many were lafted or thrown to the ground, and elsewhere the disordeted masses not against and struggled with each other, encumbered by then own numbers, the hold assarbants scarcely encountered any resistance, and in a short time the scattered, host was flying before

them in all directions. King Roderick himself

he had been regaling himself with the luxury of a bath when this sudden destruction came upon him Great store of victuals, armour, and other spoils was found in the deserted camp, with which the victors returned at night to the city, and there set everything in order, and left a sufficient garrison, now well provided with all necessaries, before setting out the next morning to the rebet of then friends at Wexford The Earl and his company marched on monposed on the road to that place till they came to a narrow pass in the midst of bogs, in a district called the Odrone or Idrone. Here they found the way blocked up by a numerous force under the command of the prince of the district; but after a sharp action, in which the Irish leader fell, they succeeded in overcoming this lundrance, and were enabled to pursue their journey. They had nearly reached Wexford when intelligence was received that Fitz Stephen and his companions were already in the hands of the enemy. After standing out for several days against repeated attacks from the people of Wexford and the surrounding district, whose numbers are said to have amounted to 3090 men, he and those with him, consisting of only five gentlemen and a few archers, had, it appeared, been induced to deliver up the fort on receiving an assurance, solemnly confirmed by the oaths of the bishops of Kildare and Wexford, and others of the clergy, that Dublin had fallen, and that the earl, with all rest of their friends there, were killed. They promised Fitz-Stephen that, if he would surrender himself into their hands, they would conduct him

from the vengeance of King Roderick, who would

ford, Stron bow found Hervey there just returned, with the king's commands, that the earl should repan to lem in person without delay. He and Hervey accordingly took ship forthwith. As soon escaped with difficulty, and almost undressed, for as they landed, they proceeded to where Henry was, at Newnham, in Gloucestershire. He had returned from the continent about two months before, and had ever since been actively employed in collecting and compping an army and fleet, and making other preparations for passing over noto Ireland When Strongbow presented himself, he at first refused to see him; but after a short time he consented to receive his offers of entire submission. It was agreed that the earl should surrender to the king, in full possession, the city of Dublin, and all other towns and forts which he

held along the coast of Ireland; on which condition

he should be allowed to retain the rest of his acom-

sitions for himself and his hears, under subjection

to the English crown. This arrangement being

concluded, the king, attended by Strongbow and many other lords, embarked at Milford. His

force, which consisted of 500 kinglits or gentle-

men, and about 4000 common soldiers, is said to have been distributed into 400 yessels. He landed

at a place which the contemporary historians name

Croch, supposed to be that now called the Crook,

otherwise certainly put them all to the sword. But as soon as they had by this treachery got possession

of their persons, "some," according to Giraldus,

"they killed, some they beat, some they wounded.

and some they cast into prison," - a variety enough

of ways, certainly, of disposing of so small a

number of cases. Fitz-Stephen hunself they carried away with them to an island called Beg-Eri, or

Lattle Erm, lying not far from Wexford, having

fled thither, after setting that town on fire, when they heard that Strongbow had got out

of Dublin and was on his march to their district

They now also sent to inform the earl, that, if he

continued his approach, they would cut off the heads

of Fitz-Stephen and his companions, and send them

to him. Deterred by this threat, Strongbow deemed

it best to turn aside from Wexford, and to take his

Gros from his misuccessful mission, it had been determined to make another application to Henry.

and Hervey of Fitzmanrice had been dispatched to

England for that purpose On reaching Water-

near Waterford, on the 18th of October, 1171. In the short interval that had elapsed since the departure of Strongbow, another attack had been made upon Dublin by Tiernan O'Ruarc, but the forces of the Irish prince were dispersed with great slanghter in a sudden sally by Milo de Cogan, in accordance with the uniform fortime of this extraordinary confest. O'Ruarc's own son was left among the slam. This proved the last effort, for the present, of Irish independence. When the English king made his appearance in the country, to a place of sufety, and secure him and his men he found its conquest already achieved, and nothing

remaining for him to do except to receive the

eagerly-offered submission of its various princes and chiefians. The first that presented themselves to him were the citizens of Wexford, who had so treacheronsly obtained possession of the person of Fitz-Stephen; they endeavoured to make a merit of this discreditable exploit-bringing their prisoner along with them as a rebellious subject, whom they had seized while engaged in making war without the consent of his sovereign. Henry entered so far into their views, that for the present be ordered Fitz-stephen into custody; but he soon after released him, though he insisted upon his resigning all his claims to the town of Wexford and the adjoining territory, which had been bestowed upon han by Dermond MacMirrogli. Some of those who had taken part in betraying him were also serzed and put to death. Before Hemy removed from Waterford, the King of Cork, or Desmond, came to him of his own accord, and took his oath of fealty From Waterford he proceeded with his army to Lismore, and thence to Cashel, near to which city, on the banks of the Sun, he received the homage of the other chief Munster prince, the king of Thomoud or Limerick The prince of Ossory and the other inferior chiefs of Munster hastened to follow the example of their betters; and Henry, after recovering their submission, and briving garresons both in Cork and Limerick, returned through Topperary to Waterford Soon after, leaving Robert Fitz-Bernard in command there, he set out tor Dublin. Wherever he stopped on his march, the neighbouring princes and chiefs repaired to lmn, and acknowledged themselves his vassals Gnaldus gives a list of the names, which we need not copy; among them is that of Tiermin O'Riare "But Roderick, the monarch," it is added, "came no nearct than to the side of the tiver Shanon, which divideth Commanght from Meath, and there Hugh de Liev and William Fitzaldelm, by the king's commandment, met him, who, desiring peace, submitted limself, swore allegiance, became tributary, and did-put in (as all others did) hospages and pledges for the keeping of the same. Thus was all Ireland, saving Ulster, brought in subjechon? After this, Henry kept his Christmas in Dublin, the feast being held in a temporary erection, constructed, after the Irish fashion, of wicker-"Oa this occasion," says Giraldus, "many and the most part of the princes of that land resorted and made repair unto Dublin to see the king's court; and when they saw the great abundance of victuals, and the noble services, as also the eating of cranes, which they much loathed, being not before accustomed thereunto, they much wondered and marvelled thereat; but in the end, they being by the king's communidment set down, did also there cat and drink among them."

Henry remained in Ireland for some months longer, and during his stay called together a required of the clergy at Cashel, at which a number of constitutions or decrees were passed for the regulation of the church, and the reform of the ecclesiastical discipline, in regard to certain points

where its laxity had long afforded matter of complaint and reproach He is also said, by Matthew Pans, to have held a lay council at Lismore, at high provision was made for the extension to Ireland of the English laws, and other emetments were made for the civil government of the conquered country. He was in the mean time made very nueasy by the non-arrival of any intelligence from England, in consequence of the state of the weather, which was so temp stimus that scarcely a slip, it is said, came to Ireland all the waiter from any part of the world. Henry took up his residence at Wexford, and while here he employed all his arts of policy, according to Graddis, to attach Raymond le Gros and the other principal English adventmers settled in Ircland to his interest, that he might thereby the more weaken the Earl of Pembroke and strengthen himself — At last, about the middle of Lent, ships arrived both from England and Aquitame, and brought such tidings as determined the king to lose notime in again taking

way a ross the sea. So, having appointed High de Lacy to be governor of Dublin, and as such his clost representative in his realm of Ircland; and baying bestowed other high offices, of the same kind with those that were established at the English court, upon the other principal noblemen whom he I it behind him, all of whom were, Lesides, amply endowed with lands for the support of their newly created dignities, he set sail from Wexford at sunnise on Easter Monday, the 17th of April, 1172, and about noon of the same day landed at Portfinien, in Wales.

It is probable that Henry's very imperfect occupation of Ireland did not greatly increase his resources, but it added to his reputation both in England and on the continent. The envy that accompanied his successes, and the old jealousy of his power, might have failed to do him any schools injury, or touch any sensitive part, but for the dissensions existing in his own family. At this period, the king had four some hving -Henry, Richard, Geoffice, and John-of the respective ages of eighteen, sixteen, fifteen, and five years. He had been an indulgent father, and had made a splendid, and what he considered a pudicious, provision for them all.— His eldest son was to succeed, not only to England, but to Normandy, Anjon, Mame, and Tourame territories which bordered on one another, and comprised an important part of France, Richard was invested with the states of his mother, Aquitaine and Poicton; Geoffiey was to have Brittany, in right of his wife, the daughter of Canan, and Ireland was destined to be the appairage of John

At the coronation of Prince Henry, which had already occasioned so much trouble, his consort, the daughter of the French king, was not allowed to be crowned with him; and this omission being resented by Lauis, led to fresh quarrels. The king at last consented that the ecremony should be repeated; and Margoret was then crowned as well as her husband. Soon after this ecremony, the

 $3 \circ 2$ 

tient ambition of his youthful son-in-law, and incited him to an impatural rebellion against his own father. It had been the practice in France, ever since the establishment of the Capetian dynasty, to crown the eldest son during the father's lifetime, without giving him any present share of the territories or government; but young Henry was persuaded by Louis and others equally well acquainted with this practice, that, by being crowned, he obtained a right of immediate participation; and as soon as he returned, he expressed his desire that the king, his father, would resign to him either England or Normandy, " in order," he said, " that he and the queen, his wife, might have the means of supporting the diguity he had conferred on them " Henry rejected this strange demand, telling the yonth to have patience till his death, when be would have states and power enough. His son expressed astomshment at the refusal, used very undutiful language, and never more exchanged words of real love or sincere peace with his parent. The vindictive Eleanor gave encouragement to her son, and fomented his horrible hatred; and the " clder king,"\* as Henry was now called, was punished for the infidelities which had long since ahenated the affections of his wife. Being at Linioges, Raymond, the Earl of Toulouse, who had quarrelled with the King of France, and renounced his allegiance, went suddenly to Henry, and warned him to have

an eye on his wife and son, and make sure of the

castles of Poicton and Aquitaine. Without showing

his suspicions to young Henry, who was with him,

the king contrived to provision his fortresses, and

a-sure himself of the fidelity of the commanders,

On their return from Aquitaine, he and his son

stopped to sleep at the town of Chmon; and

during the might the son fled and advanced alone to

Alençon. The father pursued, but could not over-

take the fugitive, who reached Argenton, and

young couple visited the French court, where Louis, though a very devout prince, stimulated the impa-

thence passed by night into the territories of the French king Henry, whose activity was unimpaired, then rode along the whole of the frontier of Normandy, inspecting the fortresses, and putting them in the best possible state of defence, to resist the storm which he saw would burst in that diл.р. 1173 (March). A few days after the flight of Henry, his brothers Richard and Geoffrey also fled to the French court, and Queen Eleanor herself, who had urged them to the step, absconded from her husband. Though not for any love that he bore her, the king was anxious to recover his wife; and at his orders, the Norman hishops threatened her with the censures of the church, unless she returned and brought her

sons with her. It is probable that this threat

would have had no great weight, but she was

seized as she was trying to find her way to the

French court (where she must have met her former

years. He committed her to the custody of one of his most trustworthy chatclains; and with the exception of a few weeks, when her presence was necessary for a political object, she was kept in confinement for sixteen years,\* and not hberated till after his death. Before matters came to extremities, Henry dispatched two bishops to the French Court, to demand, in the name of paternal authority, that his fugitive sons should be delivered up to him. Louis received these ambassadors in a public manner, having at his right hand young Henry, who wore his crown as king of England; and when they recapitulated, as usual, the titles and style of their employer, they were told that there was no other king of England than the one In fact, young Henry was recogbeside him. msed as sole king of England in a general assembly of the barons and hishops of the kingdom of France—a ceremony as empty as it was imjust in principle. King Louis swore first, and his lords swore after him, to aid and assist the son with all their might to expel his father from his kingdom; and then young Henry swore first, and his brothers swore after him, in the order of their semonity, that they would never conclude peace or truce with their father without the consent and concurrence of the barons of France † The taking and the exacting of such oaths seem destructive of Louis's character for religion and sanctity; but the measures were clearly urged by the conspiring foreign nobles of the English king, who desired guarantees that they should not be left unprotected by the natural process of a reconciliation between father and sons. A great seal like that of England was manufactured, in order that young Henry might affix that sign of royalty and legality to his treaties and charters. By the feast of Easter, the plans of the rebellious boy and his confederates were matured. The scheme was bold and extensive; the confederates were numerous, including, besides the King of France, whose reward was not committed to a written treaty, William, king of Scotland, who was to receive all that his predecessors had possessed in Northumberland and Cumberland, in payment of his services, and Philip, earl of Flanders, who was to have a grant of the earldom of Kent, with the castles of Dover and Rochester, for his share in the parricidal war. The nature of these arrangements betokens as great a want of patriotism as of filial affection, and shows the cunming and interestedness of his allies, as much as the ignorance, folly, and rashness of the young prince. To these external enemies were added many of Henry's own vassals-old barons, who remembered the license of former years, and were impatient of his firm government,—and young ones, eager for novelty and adventure, and naturally inclined to take part with the young and prodigal. Some of these, imitating the royal examples husband), dressed in man's clothes. Henry, the \* H. ved .- R Diceto. - Neuh - Script Rer. Franc.

towards her as Louis, the consort of her youthful

[Book III.

set them, stipulated beforehand for the nature and extent of their rewards. The Earl of Bloss, for example, was to have Amboise, Châtcau-Revnault, and an allowance in money on the revenues of Amon. The most powerful of the conspirators in England were the Earls of Leicester and Chester. Like the great Conqueror under similar circumstances, Henry saw himself described even by his favourite courtiers, and by many of the men whom he had taught the art of war, and mvested with the honours of chivalry with his own hands. According to a contemporary, it was a painful and desolating sight for him to see those whom he had honoured with his confidence and intrusted with the eare of his chamber, his person, his very life, deserting him, one by one, to join his enemies; for nearly every night some of them stole away, and those who had attended him in the evening did not appear at his call in the morning.\* But Henry's strength of character and consummate abilities were quite equal to the difficulties of his situation, and in the midst of his greatest trouble he maintained a obcerful countepance and pursued his usual annisements, hunting and hawking, even more than his wont, and was more gay and affable than ever towards the compamons that remained with him. † Ili• courtiers and knights might flee, but Henry had a strong party, and wise numsters and commanders, selected by his sagacity, in most of his states, and in England more than all: he had also money in abundance, and these circumstances gave him confidence without relaxing his precaution and exertions. Twenty thousand Brabancons, who sold their mercenary services to the best bidder, soon flocked to the standard of the richest monarch of the west of Europe. Not relying wholly on arms, be sent messengers to all the neighbouring princes who had sons, to interest them in his favour; and, as his case might be their own should encouragement and success attend fihal disobedience, their sympathy was tolerably complete. In addressing the Pope, he worked upon other feelings, and here his present object hurried him into expressions of submission and vassalage which contributed no doubt to form the grounds of future and dangerons pretensions. He declared that the king-

minal neglect, and such was the first and strongest came of the present discord; the blood of the martyr cried to me; I could not render it the vengeance and honours that were due to him, but at least I showed my reverence in visiting the touch of the holy martyr in the view and to the astonishment of the whole kingdom. My father was wrathful against me therefore, but I fear not oflending a father when the cause of Christ is concerned." The youthful hypocrite made most liberal offers to the church; but the Pope rejected his application, and even confirmed the sentence of excommunication prononneed by the bishops of Normandy against the king's revolted subjects. At the same time the legate was dispatched across the Alps with the laudable object of putting an end to the numatural quarrel by exhortation and friendly mediation; but before he arrived, the sword was drawn which it was difficult to sheathe, for national antipathics and popular interests and passions were engaged that would not follow the uncertain movements of paternal indulgence on one side or fibal repentance on the other. In the month of June, the war began on several points at once. Philip, Earl of Flauders, entered Normandy, and gained considerable advantages, but his brother and hen being killed at a siege, he thought he saw the hand of God in the event, and he soon left the country, most bitterly repenting having engaged in such an impious war. The king of France, with his loving son-in-law, Prince Henry of England, were not more successful than the Earl of Flanders, and were first checked and then put to rapid flight by a division of the Brahangons Prince Geoffrey, who had been joined by the Earl of Chester, was equally unfortunate in Brittany, and the cause of the confederates was covered with defeat and shape wherever the kmg showed limiself. King Louis, according to his old custom, soon grew weary of the war, and desired an interview with Henry, who condescended to grant it. This conference of peace was held on an open plani, between Gisors and Trie, under a venedom of England belonged to the purisdiction of the Pope, and that he, as king thereof, was bound to rable elm of "most grateful aspect," the branches him by all the obligations imposed by the feudal of which descended to the earth,† the centre of the primitive scene where the French kings and the law; and he implored the pontiff to defend with Norman dukes had been accustomed for some gene-The rebellious son applied to the court of Rome as rations to hold their parleys for truce or peace. Instead of leading to peace, the present conference embittered the war, and ended in a disgraceful exhibition of violence. The Earl of Leicester, who attended with the princes, insulted Henry to his face, and, drawing his sword, would have killed or wounded his king had he not been forcibly prevented. Hostilities commenced forthwith; but

desire of avenging his death :- "The villains," he † Hoved,-Malt. Par.-Gerv. Dorob.

some important events took place; for Richard de Lucy repulsed the Scots, who had begun to make incursions, burnt their town of Berwick, ravaged the Lothians, and, on his return from this victorious expeditions defeated and took prisoner the great Earl of Leicester, who had recrossed the Channel and, in alliance with Bigod, earl of Norfolk, was attempting to light the flames of civil war in the heart of England. It is honourable abke to Henry and he government, and the people of the two countries, that the insurgents never had a chance of success either in England or Normandy. In Maine, Brittany, Poictou, and Aquitaine, which were held by a more questionable tenme, which had probably not been so well governed, and where the people nourished old national prejudices, the case was different. The natural sons of King Henry, of whom there were two in England grown up to man's estate, and occupying important posts, adhered faithfully to then father, and Geoffrey, the more distinguished of the two, fought most gallantly for his cause. His faith and prowess cansed Henry to exclaim,—"This is my lawful son,—the rest are bastards!\*\*\* A.D. 1174.—The allies now showed more resolution than during the preceding year, and acted upon a

plan which was well-calculated to embarrass Henry Louis, with the jumor king of England, attacked the frontiers of Normandy Geoffrey fried his fortune again in Brittany. Prince Richard, who began his celebrated warlike career by fighting against his own father, headed a forundable insinrection in Poicton and Aquitaine. Relying on the Norman barons for the defence of Normandy and Brittany, Henry marched against his son Richard, and soon took the town of Samtes and the fortress of Taillehouig, drove the insurgents from several other castles, and partially restored order to the country. Returning then towards Amon, he devastated the frontier of Poicton, and was preparing to reduce the eastles there when the Bishop of Winchester arrived with news which rendered the king's presence indispensable on the other side of the sea. The Scots, as had been preconcerted, were pouring into the northern counties, and had already taken several towns. Roget de Mowbray had raised the standard of revolt in Yorkshire;

Earl Ferrers, joined by David, earl of Huntingdon,

brother to the Scottish king, had done the same in

the central counties. In the east, Hugh Bigod, with 700 kinghts, had taken the castle of Norwich;

and at the same time a formidable fleet, prepared by his eldest son and the Earl of Flanders, was ready

on the opposite constto attempt a descent on England, where endeavours were again making to alienate

the affections of the people by the old story of the

king being guilty of Becket's murder. The great

Conqueror himself did not surpass Henry in the rapi-

\* Angl. Sac

HISTORY OF ENGLAND. [Воок III. dity of his movements. The bishop had scarcely finished his dismal news ere the king, with his court, was on horseback for the coast, and embarking in the midst of a storm, he sailed for England, taking with him, as prisoners, his own wife Eleanor, and his eldest son's wife Margaret, who had not been able to follow her husband to the court of her father. Although he had still manetamed an outward appearance of tranquillity, his heart was aching at the rebellion of his children and the treachery of his nobles and friends. Sorrow disposes the mind to devotional feelings, and Henry's high powers of intellect did not exempt him from the superstition of the times. Some sigcenty may possibly have ningled in the feelings and motives that dictated the extraordinary course be now pursued, though, seeing the political expediency of resorting to a striking measure to remove all doubts from the people, and bring their devotional feelings to his side, we would not venture to affirm that this smeerity was very great or was the sole motive of Insconduct. All attempts to depices the fame of Becket had failed, --the Pope had recently in scribed his name in the list of saints and martyrs, the miracles said to be worked over his festering. body were now recognised by bishops and priests, and reported, with amplifications which give a proportion to their distance from the spot, by the credulous multitude. The English had not had a native saint for a long time, and they determined to make the most of him It was on the oth or July that Henry Linded at Southampton. scarcely set foot on shore, when, without waiting to retresh humself after the latigues and discomforts of a rough sea voyage, be mounted his horse and took the nearest road to Canterbury, performing his pilgrimage in a naimer far from being so agreeable as those joinned experitions, described by Chaucer a century and a half-later. He took no refreshment save bread and water, and rode on his way all might. As the day dawned he came in sight of the towers of Canterbury Cathedral, still at the distance of some nules, and instantly dismounting from his horse, he threw off his royal dress, undid his sandals, and walked the rest or his way barefoot like the veriest penitent. The roads were rough, and as the king passed through the gateway of Canterbury his subjects were touched and edified by the sight of his blood, which fell, at every step the took, from this wounded feet. When he arrived at the cathedral he descended at once into the crypt, and, while the bells tolled slowly, he threw himself with sobs and tears upon the grave of Becket, and there remained with his face pressed to the cold carth in the presence of many people,—an attitude more affecting and convincing perhaps than the discourse of the bishop over-head. Gilbert Foliot, formerly Bishop of Hereford, now of London, and the same who, three years and a-half before, had proposed to throw the body of Becket mto a ditch or hang if on a gibbet, but who now, with the rest, acknowledged him to be a blessed and glorious martyr, present, that Henry, king of England, invoking, for his sonl's salvation, God and the holy martyrs, solemuly protests before you all that he never ordered, or knowingly caused, or even desired the

CHAP. L.]

death of the saint; but, as possibly the murderers took advantage of some words imprudently prononneed, he has come to do penance before the bishops here assembled, and has consented to submit his naked flesh to the rods of discipline." The bishop conjured the people to believe the assertions of their king, and, as he ceased speaking, Hemy arose like a spectic, and walked through the church and cloisters to the chapterhouse, where, again prostrating himself, and throwing off the upper part of his dress, he contessed to the minor offence, and was sconged by all the ecclesiastics present, who amounted to eighty persons. The bishops and abbots, who were few, handled the knotted cords first, and then followed the monks, every one inflicting from three to five lashes, and saying, as he gave them, "Even as Christ was scourged for the sms of men, so be thou scourged for thine own sm." The blows no doubt were dealt with a light hand, but the whole thong was startling, and such as had never before been heard of. Nor was the penance of the king yet over. He returned to the subterranean vault, and again prostrating himself by Becket's tomb, he spent the rest of the day and the following night in mayers and tears, taking no nourishment, and never quitting the spot; "but as he came so

he remained, without carpet or any such thing beneath him "\* At early dawn, after the service of matms, he ascended from the vault and made the tour of the upper church, praying before all the altars and relies there. When the sun-rose he heard mass, and then, having shunk some holy water blessed by the martyr himself, and having filled a small bottle with the precious flind, he mounted his horse and rode to London with a light and joyous heart. A burning fever, however, fullowed all this fatigue and penance, and confined him for several days to his chamber † On the fifth night of his malady a messenger arrived from the north, aml announced hunself to the suffering monarch, whose presence he had not reached without much difficulty, as the servant of Ranuli de Glanville, a name memorable in the listory of our laws and constitution, and a most dear friend of Henry: - "Is Glanville in health?" said the king." "My lord is well," replied the servant, "and your enemy the king of Scots is his prisoner." Starting upright, Henry cried, "Repeat those words." The man repeated them, and deli-

• Gery Dorob , † Geryase—Hen Hunt—Girald — Diceto — Hoved — Neub— Previous to this pilgrimage to Camerbury, Henry had done penance for Becket's murder in the cathedral of Avianches in Nor-mandy. The charch is now a ruin, but, according to tradition, a flat stone, with a cup engraved upon it, still marks the spot of kingly humitation.—Stothard's Tour in Normandy.

vered his master's letters, which fully informed

the overjoyed king of the fact. On the morning

for the people of England flocked to his standard and filled the land with an indignant cry against

the leaders aml abettors of an unnatural revolt

The insurgents did not wait the coming of the king, but dispersed in all directions, their chiefs

of the 12th of July Glanville had surprised Wil-

pritchasing their pardon by the surrender of their castles. According to a French chromeler, so many were taken that it was difficult to find prisons for them all. The Scots, disheartened by the capture of their sovereign, retreated beyond the border, and peace being restored at home, the active Henry was enabled, within three weeks, to carry the army which had been raised to subduc the revolt in England, across the seas to . When the Earl of Flanders, who was now the soul of the confederacy, had made ready to myade England, he counted on the absence of the king, whose prompt return disconcerted that measure. Changing his plan, therefore, he repaired to Normandy, and joining his forces with those of King Louis and Henry's ridest son, laid siege to Ronen, the capital. But he was scareely there when the king of England was after him, and surprised all his stores and provisions. In a few days the alfied army was not only obliged to ruise the siege, but also to retreat out of Normandy. Humbled by the rapidity, the genius, and good fortune of the English monarch, the confederates, following the advice of Louis, who was the very king of conferences, requested an armistice and a meeting for the

arrangement of a general peace. Of his icbellious children, Henry and Geoffrey offered to submit to

these arrangements, but young Richard, who had begun to taste the joys of war and the "raptures

of the fight," which were to be his greatest plea-

earl all the territories they had overrun since the commencement of the war, and he restored to those princes whatever he had conquered or occupied himself With one important exception, he also set at liberty all his prisoners, to the miniber of 969 knights. To his eldest son he assigned for present enjoyment two eastles in Normandy, and a yearly allowance of 15,000/. Angevin money; to Richard, two castles in Poicton, with half the revenue of that earldom; to Geoffrey, two castles in Brittany with half the rents of the estates that had belonged to his father-in-law elect (for the marriage was not yet consummated), Earl Conan, with a promise of the remainder. With these conditions the impatient youths professed themselves satisfied, and they engaged henceforth to love. honour, and obey their father. Richard and Geoffrey did homage and took the oaths of fealty; but Henry, the eldest son, was exempted from these eeremonies. The exception made in liberating the prisoners was in the important person of the Scottish km2, who had been carried over to the contiment and thrown into the strong castle of Falaise, where he was kept until the following month of December, when he obtained his enlargement by kneeling to Henry and acknowledging himself, in the set forms of vassalage, his "hege-man against all men " By the degrading treaty of Falaise, the independence of Scotland was nonunally sacrificed; and from the signing of it in December, 1174, to the accession of Richard I, in December, 1189, when a formal release from all obligations was granted for the sum of 10,000 marks, she may be said to have figured as a dependent province of England.\*

An 1175—Henry was still detained on the continent, and a quarrel broke out afresh between him and his eldest son: it did not, however, lead to any immediate consequences; and in the month of May, father and son, or the Rex Senior and Rex Junior, were again reconciled and sailed together over to England, where for some time they lived on such affectionate terms that they not only fed at the same table but slept in the same bed.<sup>‡</sup>

Henry now emoved about eight years of profound peace; but, as active in civil affairs as in those of war, he devoted this time, and all his energies and resources of mind, to the reform of the internal administration of his dominions. His reputation for wisdom, judicial ability, and power, now stood so high in Europe that Alfonso, king of Castile, and his nucle Sancho, king of Navarre, who had been disputing for some years about the boundaries of their respective territories, turning from the uncertain arbitrement of the sword, referred their difference to the decision of the "just and impartial" English monarch, hinding themselves in the most solemn manner to submit to his award, be it what it might. And in the month of March, 1177, Henry, holding his court at Westminster, attended by the bishops, earls, harous, and justices, both of England and Normandy, heard and discussed the arguments proposed on the part of King Alfonso by the Bishop of Palencia, and on the part of King Sancho by the Bishop of Pampeluna, and, after taking the opinion of the best and most learned of the court, pronounced a wise and conciliating award, with which both ambassadors expressed their entire satisfaction.\*

We have some enrious evidence of Henry's personal activity, as evinced by his rapid change of residence, just at this period of peace and tranquillity, in a letter addressed to him, in the most famihar terms, by his confidential friend Peter of Blus Peter, who was not a timed, loitering wayfarer, or a hixurious ease-loying churchman, but a bold and experienced traveller lumself, seeing that, in the discharge of his duty, he had fought his way more than once across the then pathless Alps, in the heart of winter, braving the snow lurricane and the tremendons avalanches, seems to have been lost mamazement at the incessant and untiring progresses of the He had just returned from a royal mession to King Louis, the results of which he was auxious to report. He tells Henry', that he has been hunting after him up and down England, but in vain! that when Solomon set down four things as being too hard for him to discover, he ought to have added a fifth,---and that was, the path of the kmg of Eng-Poor Peter gaes on to say, that he really knoweth not whither he is going—that he has been laid up with the dysentery at Newport, from fatigne in travelling after his majesty, and has sent scouts and messengers on all sides to look for him. He proceeds to express an earnest wish that Henry would let him know where he is to be found, as he really has important affairs to treat of, and the ambassadors of the kings of Spain have arrived with a great retinue, in order to refer the old quarrel of their masters to his majesty. In war, Henry's ubiquity, as we might almost call it, was of course still more conspicuous and astonishing-for the field of his exertions extended from the shores of Ireland to the countries at the foot of the Pyrences. Louis of France, whose character Mezerai rather happily describes by the single word mou (soft and sluggish), was bewildered and constantly foiled by his sharp and active rival. He was once heard to exclaim, "The king of England neither rides on land, nor sails on water, but flies through the air like a bird. In a moment he flits from Ireland to England—in another from England into France!"

into France!"

The moment was now approaching, when those energies, as yet undiminished by age or the premature decay which they probably caused in the end, were again to be called into full practice; for foreign jealousies and intrigues, the name and history of his captive wife Eleanor, and the unpopularity of the Anglo-Norman rule in the provinces of the south, contributed, with their own impatience, turbulence, and presumption, to drive his children once more into rebellion. These princes seem to have passed their time on the continent in

<sup>\*</sup> Allen's Vindication of the Ancient Independence of Scotland, † Diceto,-Benedictus Abbas,

tonrnaments and knightly displays, in which they gamed, in an emment degree, the only fame, next to the glory of real war, which was then dear to voning men of their condition. Henry rejoiced at the report of their prowess, which was spread from court to court, and from eastle to eastle, by jongleuns and immstiels, who then performed some of the offices which now fall to our public newspapers. He probably thought that the image of warfare might distract them from its bloody reality, and that they might allow their sire—the greatest prince in Europe—to descend to the grave in peace.

A.D. 1183. Richard, who was the darling of his imprisoned mother, and who, on account of the more general uniopularity of his lather in Agin-

an almost uninterrupted succession of tilts and

more general unpopularity of his lather in Aquitame and Portou, was stronger than his brothers, was the first to renew the family war. called upon by his father to do homage to his elder brother, Henry, for the duchy of Aquitaine, which he was to inherit, he arrogantly refused. I pon this young Henry, or the jumor king, allied houself with Prince Geother, and marched with an army of Bretons and Brabancons into Aquiturne, where Richard had published his ban of war, - for these princes were not more affectionate as brothers than they were dutiful as sons. king flew to put an end-to-these disgraceful hostilities, and having induced his two sons to come into his presence, he reconciled them with one another. But the reconciliation was rather apparent than real, and Prince Geoffrey had the borrable frankness to declare, shortly after, that they could never possibly live in peace with one another indess they were muted in a common war against their own father. In some respects this was the family of Afrens and Thyestes. Contemporaries seem to have considered it an this light, for they have recorded horrible traditions connected with the whole Plantagenet race. The least revolting of these legends relates to an ancient countess of Anjou, from whom King Henry Imeally descended. The hasband of this dame having remarked with tear and trembling that she rarely went to church, and, when she did, always withdrew before the celebration of mass, took it into his head one day to have her serzed in church, and foreibly detained there for the whole service by four strong squires. The strong men did as they were ordered, but, at the moment of the consecration of the Host, the conntess, slipping off the mantle by which they held her, flew out of a window, disappeared, and was never seen agam.\* Prince Richard, according to a French chromeler of the time, was wont to repeat this pretty tale of diableric, and to say it was not astonishing that he and his brothers, issuing from such a stock, should be so herce and lawless; adding, that it was quite natural that what came from the devil should return to the devil. The recorded gallantries and the worse whispered offences of Eleanor did not alienate the affections

princess of their old native stock; and Henry had no right over them except what he could claim through her and by his aftertionate treatment of Now, he had kept her for years a prisoner, and in their estimation it was loval and right to work for her deliverance, and panish her cruck husband by whatever means they could command, even to the arming of Eleanor's sons against their In the fervid heads and hearts of these men of the south these feelings became absolute passions; and the graces as well as the ardour of then popular poetry were engaged in the service of their captive princess. The Tronbadours, with Bertrand de Born at their head, never tired of this theme; and even the local chroniclers raised their monkish Latin into a sort of poetical prose whenever they touched on the woes and wrongs of Elemor,--- for in Poicton and Aquitaine the manifold provocations she had given her husband were all unknown or "Thou wast carried off from thine own land," cries Richard of Poictiers, "and transported to a land thou knewest not of. Thou wast brought

of the people of Parcion and Aquitume, among

their eyes she was still their chieftainess,-the

whom she had been born and brought up.

mp in all abundance and delicacy, and in a royal liberty, living in the lap of tiches, enjoying the sports of thy maidens and their pleasant songs to the soft accompaniment of the lute and tabor; and now thon weepest and lamentest, consuming thy days in grief. Return, poor prisoner, return to thy faithful cities! Where is now thy court?where are thy young companions?-where thy counsellors? . . . Thon civest and no one hears thee, for the northern king keeps thee shut up like a besieged town; but still cry aloud, and tire not of erving. Raise thy voice like a trimpet, that thy sons may hear thee; for the day is at hand when thy sons shall deliver thee, and when thon shalt see thy native land again. . . . . Woe to the traitors that are in Aquitame, for the day of vengeance is near! . . . . . Fly before the face of bold Richard, Duke of Aquitame, for he will overthrow the vam-glorious, break their chariots, and those that ride in them. Yea, he will annihilate all who

oppose him, from the greatest to the least!"\*

Sentiments like these still more vehemently expressed in their own spoken language, in a deluge of sirrentes, as they called their saturcal poems, constantly kept alive and active the harred of the Born, with other men of insmuating manners and profound intrigue, could always avail themselves of this passionate feeling, and make tools of the voning princes, who (prince-like) considered them their implements. With the exception of Richard, whose fiery nature now and then, for very transitory intervals, gave access to the tenderer feelings, the ambitious young men seem to have cared little.

Chron Ricardi Pictavienses apod Script Rei Franc. He cells King Henry Rev aquidons, of King of the North, and his son Rev austri, or King of the South.

as that of their auxiety to procure better treatment for the other; and Henry, and Geoffrey, and Richard, at times in unison, and at times sepa-

rately, continued to take the name of Eleanor as their err de querre in the south. These family wars were more frequent, of longer duration, and greater importance than would be imagined from the accounts given of them in our popular English histories. Their details would lead us too far away from our object, but a few brief incidents may be given as conveying a striking notion of the times, when refinement and barbarity, baseness and magnammity, were mixed and confounded in

HISTORY OF ENGLAND.

arrows?"\*

The family reconciliation which took place in 1183-4, was speedily interrupted, for Bertrand de Born, nearly indifferent as to which prince he acted with, but who, of the three, rather preferred Henry, on seeing that Richard was mchned to keep his oaths to his father, renewed bis intrigues with the cldest son, and got ready a formidable party in Aquitame, who pressed Prince Henry, or the Rey Jovens, as they called hun in their dialect, to throw himself among them. Henry consequently revolted again, and his brother Geoffrey soon followed his example. The French comt had no inconsiderable share in all these movements; and the sovereign openly amounced himself as the ally of the jumor king and the nobles of Agintaine. As Richard continued steady for a while, the king of England joined his forces with his, and they marched together to lay siege to Lamoges, which had opened its gates to Henry and Geoffiev. Thus the war recommenced under a new aspect; it being no longer the three sons leagued against the father, but one fighting with the father against two brothers. In little more than a month, however, the younger Henry described his partisans of Aquitaine, and submitted to his father, who forgave him as he had forgiven him before, soothed his professed remorse, and once more accepted his oath of fealty. Geoffrey did not on this occasion follow his eldest brother's example; and the men of Aquitaine and Poicton, now regard-

so strange a mauner.

away as being a mere mistake on the part of the soldiery, and it was subsequently agreed that the king should have free entrance into the town. met his son Geoffrey in the midst of the marketplace of Limoges, and began the conference for peace; but here, again, he was saluted by a flight of arrows discharged from the battlements of the castle or citadel. One of these arrows wounded the horse he rode in the head. He ordered an

attendant to pick up the arrow, and presenting it to

Geoffrey with sohs and tears, he said, "Oh, son!

what hath thy unhappy lather done to deserve

that thou shouldest make him a mark for thine

ramparts, one of which pierced his cuirass, while

another of them wounded a knight at his side.

This treacherous-looking occurrence was explained

[Воок III.

This foul attempt at assassination is laid by some writers to the charge of Geoffrey hunself, but it is quite as probable, and much less revolting to believe, that the hows and cross-bows were drawn without any order from the prince, by some of the fiery spirits of Aquitame lubouring under the conviction that their cause and interests were about to be sacrificed in the accommodation between father and son. Prince Henry, who accompanied, his father, expressed horror at the attempt, and disgust at the obstmacy of the men of Aquitame; and he declared he would never more have alliance, or peace, or truce with them † Not many days after he once more deserted and betrayed his sire, and went to join the insurgents,

who then held their head-quarters at Dorat in Poicton. The Bishops of Normandy, by command of the Pope, full mated their excommunications; but as Prince Henry had been excommunicated before this, it was probably not the thunders of the church, but other considerations that induced him to abandon the insurgents at Dorat as suddenly as he had abandoned his father, and to return once more to the feet of the king, who, with mexampled elemency or weakness, once more pardoned him, and not only permitted ham to go at large, but to meddle again with political affairs. Having persuaded his father to adopt measures which cost him the lives of some of his most faithful followers, ing him as their chief, confirmed him in his resistthis manifold traitor, or veriest wheel-about that ever lived, agam descrited his banner, and preance, apprehending, not without some reason, that the king of England would not extend the remarkpared, with his brother Geoffrey and the insurgent able clemency he had shown to his children to men barons of the south, to give limi battle. A short time after this revolt, which was destined to be who were strangers to his blood, and who had incensed him by repeated revolt. Prince Henry his last, and before his preparations for aiming at kept up a private correspondence with Bertrand his father's life or throne, or both, were completed, de Born and others of the insurgents, and this a messenger announced to the king that his eldest enabled him to arrange a meeting for the purpose son had fallen dangeronsly sick at Château-Martel near Limoges, and desired most cornestly that his of conciliation. The king of England rode to father would forgive lum and visit him. Lamoges, which was still in the hands of the inking would have gone forthwith, but his friends surgents, to keep his appointment with his son Geoffrey and the Aquitame barons: to his surprise implored him not to bazard his life again among he found the gates of the town closed against him, men who had proved themselves capable of so although he had taken only a few knights with nuch treachery and cruelty; and they represented that the accounts he had received might be all a him, and when he applied for admittance he was answered by a flight of arrows and quarries from the · Script, Rer. Franc.

Taking, then, a ring from his finger, he gave it to the Archbishop of Bordeaux, and begged that prelate to convey it with all speed to his repentant son as a token of his forgivoness and paternal He cherished the hope that the youth and robust constitution of the invalid would triumph over the disease, but soon there came a second messenger, to announce that his son was Prince Henry died at Château Martel, on the 11th of June, 1183, in the twenty-seventh year of his age.\* In his last agony he expressed the

tame and Poiton, for the worst of purposes.

deepest contrition; he pressed to his hips his father's ring, which land mercufully been delivered to him; he publicly confessed his midutifulness to his indulgent parent and his other sins, and ordered the priests to drag him by a rope out of his bed, and lay him on a bed of ashes, that he might die in an extremity of penance, + The heart of the king was divided between grief at the death of his first-born and rage against the insurgents, whom he held to have been not only the cause of his son's decease, but the impediment which had prevented him from seeing, and cinbracing him in his last moments. The feeling of revenge, however, allying itself with the sense of his immediate interests, soon obtained entire mustery, and he proceeded with all his old vigour and activity against the barons of Aquitaine and The very day after his son's funeral he took Lamoges by assault; then eastle after castle was stormed and utterly destroyed; and, at last, Bertrand de Born, the soul of the conspiracy, the seducer of his children, fell into his hands. Never had enemy been more persevering, insidious, and dangerous-never had vassal so outraged his hege lord, or in such a variety of ways; for Bertrand, hke Luke de Barre, was a poet as well as knight, and had cruelly satirised Henry in productions which were popular wherever the langue d'Oc! was understood. All men said he must surely die, and Henry said so himself. The troubadour was brought into his presence, to hear his sentence: the king taunted him with a boast he had been accustomed to make, namely, that he had so much wit in reserve as never to have occasion to use one half of it, and told him he was now in a plight in which the whole of his wit would not serve him. The troubadour acknowledged he had made the boast, and that not without truth and reason; "And I," said the king,—"I think thou hast lost thy wits." "Yes, Sire," replied Bertrand, mournfully; "I lost them that day the valuant young king died!-then, indeed, I lost my wits, my

senses, and all wisdom." At this affusion to his

son the king burst into tears, and nearly swooned.

patriotism against his treachery; and it has been bruted, that while labouring to free his native country from the yoke of the English king, he was justifiable in making use of whatever means he It is, perhaps, difficult to fix precise limits to what may be done in such a cause, but though we may affect to admire the conduct of the elder Bintus, who slew his own son for the liberties of Rome, we doubt whether the sympathics of our nature will not always be against the man who armed the sons of another against their father's life. Such appears to have been the sentiment of the time, and Dante, who wrote about 120 years after the event, and who merely took up the popular

legend, placed Bertrand de Born in one of the

to prepare for another war. But soon after (in

HISTORY OF ENGLAND.

the soft and incompetent rival of Henry, had now been dead several years, and his son Philip H, a young and active prince, sat on the throne

of France anxious, and far more able than his father had been, to diminish the English momneh's power on the continent — He burned Geoffiev with great pump, and then invited to his court his brother Richard, the Lion-hearted, who was to bate him with a deadly hatred in after years, but who now accepted his invitation, and lived with him on the most affectionate terms, " eating at the same table, and out of the same dish by day, and sleeping in the same bed by night;" -things which were either the common practice of princes who wished

to display their affectionate regard for each other, or the common and received expression of the chroniclers to denote the extreme of royal friendship. King Henry well knew that this friendship betokened mischief to him, and he sent repeated messages to recall Richard, who always replied that he was roming, without hastening his departince. At last he moved, but it was only to surprise and seize a treasure of his father's, deposited at Chinon, and then to raise the banner of revolt once more in Aquitaine. But this time his standard failed to attract a dispirited people, and he was fain to accept his father's pardon. Henry, who had seen so many oaths disregarded, made hun swear fealty upon this occasion on a copy of the Holy Evangelists, in the presence of a great assembly of churchmen and laymen. A.b. 1188. The inisfortunes of the Christians in the Holy Land were the means of producing a brief peace between Henry and Philip, who had been waging an insignificant war with each other, and preparing for more decisive hostilities. Jernsalem had fallen again before the Mahomedan crescent, in the September of the preceding year; the reigning pontiff was said to have died of grief at the news; and the new pope called upon all Christian princes to rescue the tomb of Christ and the wood of the true cross, which latter, it was said, had been carried away by the victorious Saladin. No one responded to the appeal more promptly and entimenastically than Henry, who, at once, de-

view for the settlement of all differences was The two kings met in the ensily arranged. month of January, at the usual place between Trie and Gisors, near to the old clin-tree. William, the eloquent and enthusiastic archbishop of Tyre, attended the meeting, with many bishops and \* Singulis diebus in mua mensil id mum catinum manducabant,

clared himself willing to quit his kingdom and all

his states, and proceed with an army to Asia. A well-settled peace with France' was, however, an

indispensable preliminary; and Philip being also

pressed by the pope to take the cross, an inter-

lowed their masters' example, and took the same The crosses given to the king of France and his people were red; those distributed to the king of England and his people were white. Richard, who was to connect his name inseparably with the subject of the Cinsades, had neither waited for his father's example nor permission, but had taken the cross some time before.† The old clin-tree witnessed another *volemn* peace, which was about as lasting as its predecessors; and Henry returned to England evidently with a sincere desire of keeping it on his part, and making ready for the Holy War. In the month of February, he called together a great council of the kingdom, at Gidnigton, in Northamptonshue, to provide ways and means, for money was much wanted, and a royal crusade was always so expensive an undertaking as to demand the consent and co-operation of all the vassals of the crown. The barons, both lay and ecclesiastie, readily enacted that a tenth of all rents for

one year, and a tenth of all the moveable property in the land, with the exception of the books

of the clergy, and the mims and horses of the

knights, should be levied to incet the expenses.

The lords of manors who engaged to accompany

the king in person were permitted to receive the

assessments of their own vassals and tenants; but

those of all others were to be paid into the royal

exchequer. It appears that no more than 70,000L was raised in this manner. To make up the de-

ficiency, Henry had recourse to extortion and

violent measures against the Jews, whom he had

Intherto treated with landable consideration and

leniency; and from that oppressed fragment of an unhappy people he procured 60,000t., or

almost as much money as he got from all the

rest of his kingdom put together. Nominally, the tax was levied upon the Jews at the rate

of one-fourth of their personal property. Ano-

ther conneil of bishops, abbots, and lay barons,

priests, of whom some had witnessed the reverses

and dangers of the Christians in Palestine. Roger

of Hoveden, the most entertaining and judicious of

the contemporary chroniclers, attributes to the arehbishop's preaching the converting of the two

princes, who had been such bitter enemies, into triends and allies. Henry and Philip swore to be

"brothers in arms for the cause of God;" and in

sign of their voluntary engagement, each took the

cross from the hands of the archbishop of Tyre,

and attached it to his dress, swearing never to quit it or neglect the daties of a soldier of Christ,

\* Script Rei Franc. Not was this the first time the king talked of going to the Holy Limit Several years below, the Patriarch of Jerusalem offered him that kingdom, with the keys of the city and of the holy segmichre. Henry, who was not then carried away by the popular cuthusiasm, referred the matter to an assembly of his bishops and barons, who, most needly, determined that, "for the good of his own soul," he would ito much better by remaining at home and taking care of his own subpects.

CIVIL AND MILITARY TRANSACTIONS.

blished, on both sides of the Channel, that clerks (priests), knights, and serjeants-at-arms, should be exempted on taking the cross; but that all burgesses and peasants joining the crusading army, without the express permission of their lords,\* should be made to pay their tenths, even as if they had staid at home. † But the money wring from Jew and Gentile was never spent against the Turk. "The malice of the

Chap. I.]

ancient enemy of mankind," says the honest chro-nicler, "was not asleep;" ‡ and he goes on to deplore how that infernal malice turned the oaths of Christian princes into a mockery, and relit the flames of war among Christian people on the contineut of Europe. The fiery Richard appears to have been the first cause of this new commotion, in which the French kmg soon took a part. Another conference was agreed apon, and the two kings again inct under the peaceful shadow of the clm; they could not, however, agree as to terms of accommodation; and Philip, venting his spite on the tree, swore by all the samts of France that no more parleys should be held there, and cut it down. \ Had causes of dissension been wanting, the ingeniaty of the king of France and the jealous impatience of Richard would, in all probability, have raised imaginary wrongs; but unfortunately for the fame of Henry, there u as a real existing cause, and one singularly calculated to excite and mute those two princes against him, or, at least on Richard's side, to serve as a not impopular pretext for hostility, while it loaded his father with dark and almost unavoidable suspicions. Richard, when a child, had been affianced, as already mentioned, to the infant Alix, or Adelais, of France. Henry had obtained possession of the person of the royal infant, and of part of her dowry, and had kept both — By the time the parties were of proper age for the completion of the marriage, Richard was at open war with his father; but it is curious to remark, that at none of the numerous peaces and reconciliations was there any deep anxiety shown either by her sponse Richard or her father King Louis, or her brother Philip, about the fate of the fair Adelais, who remained sometimes ostensibly as a hostage, but, of late years, in a very ambiguous situation, at the court of Henry. A report, true or false, had got abroad that the king was enamoured of her person, and when he made an unsuccessful application to the church of Rome for a divorce from Richard's mother, Eleanor, it was believed that he had taken the step in order to espouse Richard's affianced bride. Of late, however, King Pinlup, feeling that the reputation of his sister was committed, had repeatedly urged that Adelais should be given to Richard, and the

marriage completed; and the church of Rome had even threatened Henry with its severest censures in

case of his resisting that demand.

† Roger Hoved.

amount was actually raised in them. It was estabut of this we are perfectly well informed, that he had detained the lady, -- that no consequences had ensued therefrom on the part of the Pope,—and that Philip had even made peace more than once, and had vowed eternal friendship to him while he was thus detaining her. He Richard credited the worst part of the current reports (as he afterwards averred he did), he was not likely to feel anything but the strongest aversion to the marriage. Affection for his affianced bride was, however, a very colourable pretext; and as he was now haunted by a more real and serious incasiness, namely, by the belief that his father destined the English crown for his youngest son John, -- he set this plea forward in justification of his rebellion, and co-operated heart and hand with the French king. If the stipulations and engagements cutered into had been observed with anything like decency, we should be melined to praise the wisdom of these princes in staying the ravages of war, and baying such frequent recourse to conferences and congresses. In the month of November in this same vear (A.D. 1188), another conference was held, not, however, between Trie and Gisors, but near to Bonnionlins in Normandy. Philip proposed that  $\Lambda$ delais should be given up to Richard, and that Henry should declare that prince herr, not only to his knigdom of England, but also to all his contmental dominions, and cause his vassals immediately to swear fealty to Richard. Henry, who could not forget the miseries he had suffered in consequence of elevating his eldest son in this manner, resolutely refused the latter proposition. A violent altereation ensued, and ended in a manner which sufficiently proved that Richard was thinkmg little of the first proposition or of his bride. Turning from his father, he furiously exclaimed, "This forces me to beheve that which I before deemed impossible," (that is, the report concerning his younger brother John). He then ungirded his sword, and kneeling at the feet of King Philip, and placing his hands between his, said,-"To you, Sire, I commit the protection of myself and my hereditary rights, and to you I do homage for all my father's dominions on this side the sea " Lake the rest of his brothers, he had done homage to the French crown on other occasions; but this scene was attended with peculiar and exasperating circumstances, and the declaration of Richard was meant to muply that, by force of arms, and with the and of Philip, he would seize, not one or two states, but everything Henry possessed from the Seine to the Pyrenees. Philip ostentationsly accepted his homage, and made him a present grant of some towns and eastles he had captured from

his father. Henry, violently agitated, rushed from

the scene, and, mounting his horse, rode away to

Sammur, to prepare for the further prosecution of the interminable war.\* But his non frame

relying on exertions making in his favour by the Pope's legate, he remained supine while

Philip and Richard took several of his towns and seduced many of his knights. Even at this extremity, the good people of Normandy were faithfal to him, and, wishing to secure that duchy for his favourite son, of whose love and faith he had

HISTORY OF ENGLAND.

never doubted, he was careful to procure an oath from the seneschal of Normandy that he would deliver the fortresses of that province to John in case of his death. The chirch was on this occasion zealously engaged on the side of Henry, and both the French king and his son Richard were threatened with excommunication. Though clated by imusinal success, Philip was obliged to consent to another conference for arranging a peace. The meeting took place in the month of June in the following year (A.D. 1189), at La Ferté-Bernard, and Richard, John of Anagui, cardinal and legate, the archbishops of Canterbury, Ronen, Rheims, and Bourges, were present. Philip proposed the same conditions as at the conference of Bonmoulius seven months before; Hemy, who had been burt in every feeling by Richard in the interval, rejected them, and proposed that Adelais should be united to his datiful son John, - an overture that tends to shake the credibility of the existing scandal even more than does the circumstance of Henry's advanced Should Philip agree to this arrangement he declared his readiness to name Prince John heir to his continental dominions,—a distribution which he seems to have long contemplated. But Philip would not enter into the new plan, or absording Richard, who was present, and joined the French king in violent abuse of his father. John of Amagni, the cardinal-legate, then threatened to put the kingdom of Figure under an interdict; but these menaces, at tunes all-prevalent, depended

timely interposition of some more moderate members of the party. Henry again rode away from the conference, and this time with a desponding heart. The people of Aquitaine, Poictou, and Brittanywere induced to rise in mass against their now falling master; and under the command of Richard they fell upon him on the west and south, while the French king attacked him in Anjon on the north. He had on former occasions made head against almost equally formidable confederacies, but the strength of frame, the eagle-glance, and the buoyancy of spirits which

the town of Berry, and submit in all things to his decisions; I that he should permit all his vassals, both English and continental, to do homage to Richard; that all such barons as had espoused Richard's party should be considered the bege men and vassals of the son, unless they voluntarily chose to return to the father; that he should deliver Adelais to one out of five persons named by Richard, who at the return of Philip and Richard from the

barnsh from his heart all sentiments of anger and animosity against him, § - a clause better fitted for a sermon than for a treaty. The envoys of the French king read the treaty, article by article, to Henry as he lay suffering on his bed. When they came to the article which regarded the vassals who had descried him to join Richard, he usked for a list of their names. The list was given him, and the very first name upon it which struck his eye was that of his darling son John, of whose base treachery he had hitherto been kept happily ignorant. The broken-hearted king started up from his hed and gazed wildly around, "Is it true," he cried, "that John, the child of my heart,

rest, and for love of whom I have drawn down on mone own head all these troubles, hath verily betrayed me?". They told him it was even so. " Now, then," he exclaimed, falling back on his bed, and turming his face to the wall, "let everything go as it will—I have no longer care for myself or for the world !" \* Shortly after he caused himself to be transported to the pleasant town of Chinon;† but those favourite scenes made no impression on his profound melancholy and hopelessness of heart, and m a few days he land linuself down to die. his last moments, as his intellects wandered, he was heard uttering unconnected exclamations. "Oh shame!" he cried, "a conquered king! I, a conquered king!... Carsed be the day on which I was born, and cursed of God the children I leave behind me!" Some priests exhorted the disordered, raving man to retract these curses, but he would not. He was sensible, however, to the affection and unwearying attentions of lins natural son Geoffrey, who had been faithful to limit through life, and who received his last sigh soon as the breath was out of his body all the aimisters, priests, bishops, and barons, that had waited so long, took a limrned departure, and his personal attendants followed the example of their betters, but not before they had stripped his dead body, and seized everything of any value in the apartment where he died.

followed the demise of the great conqueror 102 years before, were repeated towards the corpse of his great-grandson. It was not without delay and difficulty that people were found to wrap the body in a winding-sheet, and a hearse and horses to convey it to the Abbey of Fontevraid ! was on its way to receive the last rites of sepulture, Richard, who had learned the news of his father's death, met the procession, and accompanied it to the church. Here, as the dead king lay stretched on the bier, his face was uncovered that his son might look upon it for the last time. Marked as it was with the awful expression of a long agony, he gazed on it in silence, and shuddered. He then knelt and prayed before the altar, but only for "a modicing of time, or about as long as it takes to say the Lord's Prayer;" and when the funeral was over, he quitted the church, and entered it not again until that hour when, cut off in the full strength and pride of manhood, he was carried thither a cornse to be laid at the feet of his father. It was a popular superstition which the Normans as well as the Anglo-Saxons had derived from their common ancestors, the Scandinavians, that the body of the dead would bleed in presence of its murderer; and more than one chronicler of the · Script Rer Franc. and accusing him for his miniatural behaviour."\* The story at least shows in what light the conduct of Henry's sons was regarded by their contemporaries. On the day of Henry's denth (July 6th, 1189) he was in the fifty-seventh year of his age, and had reigned over England thirtyfour years, seven lunar months, and five days, counting from the day of his coronation. 4 This long reign had been highly beneficial to the country: with a few brief exceptions, peace had been maintained in the interior, and there is good evidence to show that the combition of the people generally had been elevated and improved. The king's personal character has been differently represented, some dwelling only on its bright qualities, and others laying all their emphasis on his vices, which, m truth, were neither few in number nor moderate in their nature, although, for the most part, common attributes to the princes of those ages, few of whom had his redeeming viitues and splendid abilities. To say with Hume that his character, in private as well as in public life, was almost without a blemish, is a manifest defying of the testimony and authority of contemporary history; but yet, when every fair deduction is made, he will remain aidisputably an illustrious prince, and a man possessed of many endearing qualities. We will briefly state his vices as pointrayed by one party, and then give his picture, both physical and moral, as painted by an admiring friend. He was exceedingly ambitious of dominion,

of Foutevrand, where (say they), from the moment

that Richard entered until that in which he de-

parted, the king never ceased to bleed at both

nostrils,—"the very corse, as it were abhoring

and accustomed to repeat, in his prosperity, that the whole world was but portion enough for one great man. His lust was boundless, and he set no limits to the gratification of that passion. His dissumulation, daplicity, and disregard for trath, when he had any political purpose to serve, were all extreme: no trust could be placed in his promises, he was wont to say himself, that it was better to repent of words broken than of deeds done; and Cardinal Vivian, who had frequent intercourse with him, said of him, that he had never met his equal in lying. He was jealous of every species of authority,-mixions to concentrate all power within his own person,-and to depress and degrade the nobles of the land. [This last accusation arose inevitably out of his successful efforts to earb the baround power.] Though a kind and generous master, and a warm and steady friend, he was a most rindictive enemy fa fact certainly not borne out by the history of his hfc]. He could not bear contradiction. He was trascible beyond measure [this is admitted by his warmest admirers], and was not to be approached without danger in his moments of passion. When under one Benedict Abbas. -- Script Rev. Franc -- Rog. Hoved. -- Spred.

History,

of his paroxysms, he was more like a wild heast than a man; his eyes were blood-shot, his face like fire, his tongue abusive and blasphemous, his hands most mischievous, striking and tearing whatever came in his way. On one occasion he flew at a page to tear out his eyes, and the boy did not escape without some ugly scratches.\*

Let us now turn to the friendly picture of Peter of Blots,—as curious, as elaborate, and as characteristic a portrait as ever was painted of a king—lt occurs in a letter addressed to the Archbishop of Palermo, and written in the latter part of Henry's reign:—

"You are aware," says the manute Peter, "that

lns complexion and hair inclined to red; but the approach of old age bath somewhat altered this, and the hair is turning grey. He is of middle size, such that among short men he seems tall, and even among tall ones, not the least in stature. His head is spherical, as if it were the seat of great wisdom and the special sauctuary of deep schemes. In size it is such as to correspond well with the neck and whole body. His eyes are round, and, while he is calm, dove-like and quiet; but when he is angry, they flash fire, and are like lightning. His harr is not grown scant, but he keeps it well cut. His face is lion-like, and almost square. His nose projects in a degree proportionate to the symmetry of his whole body. This feet are arched; his shins like a horse's; his broad chest and brawny arms proclaim him to be strong, active, and bold. In one of his toes, however, part of the nail grows into the flesh, and mereases enormously to the injury of the whole foot - His hands, by their coarseness, show the man's carclessness; he wholly neglects all attention to them, and never puts a glove on, except he is hawking. He every day attends mass, conneils, and other public business, and stands on his feet from morning till night. Though his shins are terribly wounded and discoloured by constant kicks from horses, he never sits down except on horseback, or when he is cating. In one day, if reed requires, he will perform four or five regular days' journeys, and by these rapid and unexpected movements often defeats his enemies' plans. He uses straight boots, a plain hat, and a tight dress. He is very fond of field-sports; and if he is not fighting, amuses himself with hawking and limitmg. He would have grown enormously fat if he did not tame this tendency to helly by fasting and exercise. In mounting a horse and riding, he preserves all the lightness of youth, and tires out the strongest men by his exentsions almost every day; for he does not, like other kings, lie idle in his palace, but goes through his provinces examining into every one's conduct, and particularly that of the persons whom he has appointed judges of others. No one is shrewder in council, readier in speaking, more self-possessed in danger, more careful in prosperity, more firm in adversity. If he

once forms an attachment to a man, he seldom gives him up; if he has once taken a real aversion to n person, he seldom admits him afterwards to any familiarity. He has for ever in his hands bows, swords, limiting-nets, and arrows, except he is at council or at his books; for as often as he can get breathing-time from his cares and anxieties, he oecupies himself with private reading, or, surrounded by a knot of elergymen, endeavours to solve some hard question. Your king knows literature well, but ours is much more deeply versed I have had opportunity of measuring the attainments of each in literature; for you know the king of Sicily was my pupil for two years. He had learnt the rudiments of literature and versification; and, by my industry and auxicty, reached afterwards to fuller knowledge. As soon, however, as I left Sicily, he threw away his books, and gave himself up to the usual idleness of paluces. But in the case of the king of England, the constant conversation of learned men, and the discussion of questions, make his court a daily school. No one can be more diguified in speaking, more cautious at table, more moderate in drinking, more splendid in gifts, more generous in alms. He is pacific in heart, victorious in war, but glorious in peace, which he desires for his people as the most precious of earthly gitts. It is with a view to this, that he receives, collects, and dispenses such an unmensity of money. He is equally skilful and liberal in erecting walls, towers, fortifications, mosts, and places of inclosure for fish and bards His father was a very powerful and noble count, and did much to extend his territory; but he has gone far beyond his father, and has added the dukedoms of Normandy, of Aquitame, and Brittany, the kingdoms of England, Scotland, Ireland, and Wales, so as to increase, beyond all comparison, the titles of his father's splendour. No one is more gentle to the distressed, more affable to the poor, more overbearing to the prond. It has always, indeed, been his study, by certain carriage of himself like a deity, to put down the insolent, to encourage the oppressed, and to repress the swellings of pride by continual and deadly persecution." \* Besides his five legitimate sons, of whom three

persecution."\*

Besides his five legitimate sons, of whom three preceded him to the grave, Henry had three daughters by his wife Eleanor. Matilda, the eldest, was married to Henry, duke of Saxony, Bavaria, Westphalia, &c.; and from her is descended the present royal family of Great Britain: Eleanor, the second daughter, was married to Alfonso the Good, king of Castile; and Joan, the youngest, was united to William H., king of Sicily, a prince of the Norman line of Guiscard. Two of his natural cluldren have obtained the general notice of history on account of the celebrity of their mother, and of their own emment qualities. The first, who was the way william, surnamed "Longsword," who married the heiress

<sup>\*</sup> We avail ourselves of the translation of this highly passage given in a late number of the Quarterly Review.

Upst. St Thom - Grald-Camb - Script Rer Franc - Radulphus Niger (apud Wilkins, Leg. Sax.) adds still darker tints, but this writer had been punished and bamshed by Henry,

of the Earl of Salisbury, and succeeded to the high titles and immense estates of that baron: the second was the still better known Geoffrey, who was born about the time when Henry became king, and who was made bishop of Lincoln at a very early age. He had much of Henry's spirit and ability, and, if an indifferent prelate, he was a bold and successful warrior in his nonage, when (during the first insurrection promoted by his father's legitimate sons) he gained in the north some signal advantages for the king, to whom he and his brother William Longsword were ever Geoffrey was subscfaithful and affectionate. quently made Chancellor, when, like Becket in the same capacity, he constantly accompanied the king In his dying moments, Henry expressed a hope or a wish that he might be made Archbishop of York, a promotion which, as we shall find, he afterwards obtained.

The history of their mother, the 'Fair Rosamond,' has been enveloped in romantic traditions which have scarcely any foundation in truth, but which have taken so firm a hold on the popular mind, and have been identified with so much poetry, that it is neither an easy nor a pleasant task to dissipate the fanciful illusion, and impeople the "bower" in the sylvan shades of Woodstock. Rosamond de Chifford was the daughter of a baron of Heretordshire, the beautiful site of whose antique castle, in the valley of the Wye, is pointed out to the traveller between the town of the Welsh Hay and the

city of Hereford, at a point where the most romantic of rivers, after foaming through its rocky, narrow bed in Wales, sweeps freely and tranquilly through no open English valley of surpassing loveliness. Henry became enamoured of her m his youth, before he was king, and the connexion continued for many years; but long before his death, and even long before his quarrel with his wife and legitimate sons (with which, it appears, she had nothing to do), Rosamond retired, to lead a religious and peintent life, into the "little immiery" of Godestow, in the "rich meadows of Evenlod, near into Oxford."

As Henry still preserved gentle and generous feel-

As Herry still preserved gentle and generous feelings towards the object of his youthful and indent passion, he made many donations to the "httle numery," on her account; and when she died (some time, at least, before the first rebellion) the nuns, in gratifude to one who had been both directly and indirectly their benefactiess, buried her in their choir, hung a silken pall over her tomb, and kept tapers constantly binning around it. The c few lines, we believe, comprise all that is really known of the Fair Rosamond. The legend, so familiar to the childhood of all of us, was of later and gradual growth, not being the product of one imagination. The chronicler Brompton, who wrote in the time of Edward III., or more than a century and a half after the event, gave the first description we possess of the secret bower of Rosamond. He says, that in order that she might not

Ruins of the Ancient Royal Manor-House of Woodstock, as they appeared before their removal in 1714.

[Воок III.

be "easily taken unawares by the queen" (ne forsan a regina facile deprehenderetin) Henry constructed, neur "Wodestoke," a bower for this "moct sightly maiden" (puellæ-spectatissimæ), of wonderful contrivance, and not imlike the Dædalean labymath; but he speaks only of a device. against surprise, and intimates, in clear terms, that Rosamond died a natural death. The clue of silk, and the porton-bowl forcel on her fair and gentle. rival by the jealous and revengeful Eleanor, were additions of a still more modern date. The adventures of the annable frail one's un-

offending bones are better authenticated. A rigid 1

bishop caused them to be cast out of the church, and interred in the common cemetery, observing to the nuns, that the tomb of a harlot was no fit object for a choir of virgins to contemplate, and that religion made no distinction between the mistress of a king and the mistress of any other man. gratitude rebelled agamst this salutary doctime, and the virgin sisterhood of Godestow gathered up the remains, perfumed the dry bones, laid them again in their clinich, under a fair, large gravestone, and set up a cross hard by, with an inscription, imploring requiem or rest for Re-

A. D. 1189. As soon as has father was barried, Richard laid hands on Stephen of Tonis, the sene-(chal of Anjou and treasure) to Henry H. unfortunate officer was fooded with chains, and thrown into a dungeon, from which he was not released until he delivered up, not only the funds of the late king, but his own money allo, to the last penny he possessed \* Letters were sent over to England for the immediate enlargement of the queen dowager; and, on quitting her prison, Eleanor was invested, for a short time, with the office of regent, and especially charged to have an eve on the momes in England - Her mi-fortunes seem for awhile to have had a beneficial effect on her imperious character; for, during her brief authorn, she relieved the people by many works of mercy; releasing those who were arbitrarily detained in prison, pardoming offences against the crown, moderating the severity of the forest-laws, and reversing several attainders. She also distributed bountiful alms to the poor, that they might pray

· Hoved,

for the soul of the husband whom she, more than any one, had contrived to send with sorrow to the She hastened to Winchester, where the royal treasure was deposited, and having made sure of that city, summoned thither the barons and prelates of the realm, that they might recognise and receive their new sovereign. The state of affines, however, detained Richard on the continent for nearly two months. At last, when he had made the necessary arrangements, he crossed the channel, accompanied by his brother John, and landed at Portsmouth, whence he repaired to Wm-Henry had left in his treasury there a large sum in gold and silver, besides plate, jewels, and precious stones. All these Richard caused to be weighed and examined in his presence, and had an inventory of them drawn up. His soul was occupied by an enterprise that was likely to absorb all the money he could possible procure; and, to find means for a most lavish expenditure, he resorted to the cares and expedients that more properly characterize avarice. It was this enterprise,

Pertrait of Richard I. Trose the Tembrat Popley and,

however, that gave him the benefit of an unduputed succession to all his father's dominions; for John, expecting to be left in full anthority by the immediate departure of his brother for Palestine, and hoping that he would never action above from the perils of the Holy War, submitted to what he considered would be a very brief arrangement, and made no effort to dispute Richard's right. But for these circumstances it is very clear, from the character of the crafty and ambitious John, that the old story of a disputed succession would have been repeated, and that that prince would have raised his banner of war either in England or in some one of the continental states. As it was, it was wiser for him to wait awhile for the chance of getting peaceful possession of the whole, than to risk life or failure for a part. The confidence reposed in him may exerte some surprise, and the more, perhaps, because one of Richard's first acts as a sovereign was to discard and persecute all those who had plotted against his father, not excepting even his own most familiar friends who had plotted for his own advantage; thus reading a good lesson to those who embark their fortunes in the family quarrels of princes. On the 3rd of September the coronation festival was held at Westminster with unusual magnificence; the abbots, and bishops, and most of the lay barons attending on the occasion. The crown was intrusted to the Earl of Albemarle, who carried it before Richard, over whose head was a rich canopy of silk stretched on four lances, each of which was held by a great baron. Two prelates—the bishops of Durham and Bath-walked on either side the

king, who e path, up to the high altar, was spread with cloth of the Tytean die. On the teps of the altar he was received by Baldwin, archbishop of Can(crbmv, who administered to him the usual oath: I. That all the days of his life he would bear peace, honour, and reverence to God and boly church, and the ordinances thereof. 2. That he would exercise right, pi-tice, and law, on the people unto him committed, " 3. That he would abrogate wicked laws and perverse customs, if any such should be brought into his kingdom; and would enact good laws, and the same as good faith keep without mental reservation. The king then cast off his upper garment, put sandals or buskins of gold on his feet, and was amounted from the ampulla of holy oil on the head, breast, and shoulders; he then received the cap, tume, dalmatica, sword, spurs, and mantle, each being presented by the proper officer in due order of succession. The unction over, and the king thus royally arrayed, he was led up to the alter, where the archbeliop adjured han, in the name of Almighty God, not to assume the royal digmty unless he fully proposed to keep the oaths he had sworn. Richard repeated his colemn promises, and with his own hands taking the ponderous crown from off the altar, " in signification that he held it only from God," he delivered it to the archbishop, who instantly put it on his head, and so completed all the ceremonies of coronation. " Which act," says old Speed, with a cold-bloodedness less excusable than

Hoveden and Diceto, who were hold present. At the coronation feast, which immediately followed, the citizens of London wire the king's ballers, and the citizens of Wischester served up the means.

utterly against the king's will), who, in a turnult raised by the multifude, were furiously imredered,

HISTORY OF ENGLAND.

which, though it were afterwards punished by the laws, might seem a presage, that this hon-hearted king should be a special destroyer of the elemies of om Saviour." The modern historian cannot permit these atrocities to pass off-so-easily. We Invermentioned the Jews under the preceding reign, and our cursory allusion to them has shown that they were already in possession of great wealth m England, where they were persecuted by the government, though most useful, and, indeed, essential to it, and hated by the whole nation,

though nearly all the comforts, and, without exception, all the ornaments and luximies of civilized life, brought from foreign markets, were introduced by then commercial enterprise. wealth seems to have had as nunch to do in rendering them odious as the religious faith to which they heroscally adhered, and the advance they had made in the rate of interest on their loans to men who were about departing on the daugerous expeditions to the Holy Land—though the necessary consequence of the great and sudden demand for money, and of the augmented risk incurred by the lenders—had recently had the effect of exasperating the initials of many of the noble but needy emsaders, and had increased that rancour against them which was always a prevalent feeling uniong the superstitions and ignorant populace of the populace descrive these distinguishing epithets when ignorance and superstition were so prevalent among all classes. At the accession of Philip to the throne of France, all the Jews had been bamshed that kingdom, their property confiscated, the obligations of their numerous debtors annualled, and though Henry II. had declined taking this iniquitous course, it was expected by many that Richard, on coming to the throne of England, would follow the example of his friend Philip The Jews probably expected something of the sort they assembled in London from all parts of the kingdom, "meaning to honour the coronation with their presence, and to present to the king some honourable gift, whereby they might declare themselves glad for his advancement, and procure his friendship towards themselves, for the confirming of their privileges and liberties, according to the grants and charters made to them by the former kmg.''\* On the day before the coronation, Richard being "of a zealous mind to Christ's religion, abhorring their nation, and doubting some sorcery by them to be practised, issued a proclamation forbidding Jews and nomen to be present at Westminster, either within the church when he should receive the crown, or within the hall whilst he was at dinner "† A few, however, persevering in a custom sauctioned by remote antiquity among all Oriental people, ventured, on this day of general grace and joy, to lay their offerings at the · Holmshed,

Their humble suit was heard,—their king's feet. rich presents were accepted, "gladly enough;" but a Christian raised an outcry, and struck a Jew that was trying to enter the gate with the rest of The courtiers and king's servants, catching the contagion of the quarrel, then fell on the wealthy Jews who had obtained admittance, and drove them out of the hall. A report spread among the multitude gathered outside the palace that the king had commanded the destruction of the unbelievers, and therefore, following up an example aheady set them by their superiors, the people cruelly beat the Jews and drove them with "stayes, bats, and stones, to their houses and lodgings." This violence being left unchecked, and the rumom of the king's intention still spreading, fresh crowds of familie noters collected, and after barbarously murdering every Jew they found in the streets, they assaulted the houses they occupied and in which they had barricaded themselves. As many of these houses were strongly built, they set fire to them, and burned men, women, and children, with everything they contained. In some cases they forced then way into the apartments, and harled their victims, not excepting even the aged, the sick, and bed-ridden, out of the windows into fires which they had kindled below. The king, alarmed at length by the not, sent Ramilf de Glanville, the Lord Insticiary, and other officers to appease it; but the anthority of these high functionaries was despised, their own lives were threatened, and in the end they were obliged to fly back to Westminster Hall, where the banquet still continued. When might set in, the "rude sort" were lighted in their horrid work of plunder and number by the flames that rose from the Jewish houses, and that, at one time, threatened a general conflagration of the town. The magazines and shops of the Jews were plundered and ransacked; the defenceless wretches who attempted to escape from their forced, or burning dwellings, "were received upon the points of spears, bills, swords, and gleaves of their adversaries, that watched for them very diligently.". These atrocities continued from about the hour of noon on one day till two o'clock in the afternoon of the next, when the mfurnated populace seem to have ceased plundering and butchering out of sheer wearness. One or two days after, Richard hanged three men, not because they had robbed and murdered the Jews. but because (at least so it was declared in the public sentence) they had burned the houses of Christians, some of which were indeed unintentionally consumed by the spreading of the flames. He then issued a proclamation in which, after stating that he took the Jews under his own mamediate protection, he commanded that no man should personally harra them or rob them of their goods and chattels; and these were the only judicial measures that followed the terrific outrage. \* All that the new king could think of at this moment was how he should go to Palestine with a splendid army, and leave the

[Book III.

highest bidder,

To raise money he had recourse to expedients similar to those which ruined Stephen and the nation under him. He alienated the demesne lands, publicly selling, by a sort of anction, royal castles, fortresses, and towns,—and, together with estates that were his own, not a tew that were the property of other men. When some friends ventined to remonstrate, he swore he would sell London uself if he could only find a purchaser for it. Thus most of those royal lands which his father with so much prindence and address had recovered out of powerful private hands, and re-annexed to the crown, were again detached from it. In the

same way places of trust and honour,—the lingliest

offices in the kingdom, - were publicly sold to the

writer, "was a market overt, in which all that the

king could bestow,—all that could be derived from

"Richard's presence chamber," says a recent

care of his kingdom and of all his subjects to others.

the bounty of the crown or imparted by the royal prerogative,—was disposed of to the best chapman. Hugh Pudsey, the Bishop of Durlam, purchased the caldon of Northumberland, together with the lordship of Sadburgh. For the chief justiciarship. he paid, at the same time, the sum of 1000 marks. In the bargain was included a dispensation to the bishop,— or at least such dispensation as the king could grant, - from his vow or promise of joining in the crusade." † There are circumstances attending the sale of the justiciarship which throw at least an odious suspicion on the king. At the period when Richard succeeded to the throne, the celebrated Ratadf de Glanville filled the high office of "rector regm," or regent of the knigdom, and that of " procurator regm," or justiciary; and under these designations he is enumerated amongst the great barous who figured at the coronation. There was not a better or wiser man among the mmusters of the crown, nor was there any man more

cherished by the late king, whose obligations to hun were unmense, for Glanville had served lum with wonderful success as well on the field of battle as in the council chamber and the infant courts of law, and he it was that had taken prisoner the Scottish king near Aluwick Castle. In every sense the crown, as well as the nation, was deeply indebted to this extraordinary and excellent man. According to one contemporary authority he was at the time sinking under bodily infirmity, and being disgusted by the impolicy of the young monarch, he became anxious to free himself from the burden of offices which he could no longer discharge to his satisfaction and the benefit of the country. By this single account, therefore, it appears that Glarville resigned his office of his own free will, and departed as a crusader to the Holy Land,-that his strong intellect became enfeebled by anxiety and vexation, -that he died shortly after, leaving only female issue, and that

name. Several other authorities, who were also contemporaries, inform us, however, that Glanville was forcibly and rudely deprived of the justicrarship by the rapacions king, who at the same time removed the sheriffs and their officers throughout the kingdom, exacting from each the ransom for his release from imprisonment to the very last farthing; and that Glanville himself, in spite of his reproachful grey head and long services, was cast into prison, and detained there until he submitted to pay a fine of three thousand pounds. "The latter account," says Palgrave, "is not destitute of plansibility. Comi de Lion's avarice was equalled only by his extravagance; mid, by creating a vacancy in this or any other office, he obtained the means of raising money by its salc. ''\*

not an individual remained to continue his honoured

Richard hastily filled all the vacant bishopries and abbacies, exacting a heavy fee from each prelate and abbot he appointed. In consideration of twenty thousand marks received from the Scottish king, he granted to lam a release from all the obligations which had been extorted from him and from his subjects during his captivity, and gave back to him all the charters and documents of his servifude, with this proviso, that he should nevertheless duly and fully perform all the services which his brother Malcolin had performed, or ought of right to have performed, to Richard's predecessors. † For the sum of three thousand marks he granted his peace to his half-brother Geoffrey, who had been elected Archbishop of York, according to the wish expressed by his father Henry on his death-bed; and other sums of money were obtained by means ninch less justihable. It was now necessary to nominate a regency,

At this step Prince John saw his hopes disappointed; but he remained perfectly quiet, being anxious, no doubt, that nothing should occur to prevent or delay his formidable brother's departure.  $\Lambda$  great council was held at the monastery of Pipwell, in Northamptonshire. Here the king formally announced the appointment of Hugh Pudsey, the Bishop of Durham, to be Rector Regin and Proemator Regin; but he included with him in the commission of insticiarship William de Mandeville, Earl of Albemarle. This great earl, however, quitted England soon after, leaving the bishop in the fall possession of the lagh office; but he did not retain it long, for his authority was first of all weakened and subdivided by Richard before he began his journey, and finally during the king absence, but while he was yet in Normandy, wrenched from Inpa altogether by the much abler hands of Lougehamp, Bishop of Ely and Chancellor of England. In part of his bargain with the king, poor Pudsey had paid a deal of money for nothing; but Richard seldom scrupled to break his contracts, or revoke and annul the grants which he

HISTORY OF ENGLAND.

She was also to be consulted in similar matters of government; and at a subsequent period, during Richard's confinement in Germany, Elemor exerersel considerable authority with the consent of the king, though whatever power in the state his brother John acquired was usurped and against Richard had proceeded with a most arbitrary haste; but Philip of France being ready before him, and doubting he might delay, sent messengers to remaind him that the time of departure for the Holy Land was unchangeably fixed at the coming festival At the arrival of these messengers Richard, with a vast number of the earls, barons, and knights, who had taken the cross with him, swore he would be ready by the time appointed, and Phdip's cavays took a like oath on behalf of themselves. The form of these oaths was somewhat mm ual, the Frenchmen swearing by the soul of the King of France, the Englishmen by

side of the Channel, and towards the end of the year, and a little more than three months after bis coronation, he left his fair kingdom to its fate, and crossed over to his continental domanor, to see what money he could raise and extort there vib. 1199. In the month of February following Richard held a great council in Normandy, which was attended by the Queen Dowager, by his brother John, and by various bishops, who are stated to have crossed the Channel by the king's command, At this inceting there was an abundant pledging of ouths which were but indifferently kept, and many arrangements for the government of the states on both sides the sea were made, most of which were detested by ambition and intrigue in the sequel, Soon after the two kings made a compact of

Richarl had got all the money be could on this

said to have amounted to one hundred thousand

Lyons, and the people, though much distressed by

the passage of such a host, confidently predicted

that the Paymin could never withstand them, and

that the city of the Lord, with the whole of Pales-

tine, would be recovered by their swords and lances.

At Lyons the two kings separated, with the imitual understanding that they should meet again in the

port of Messina, in Sicily. Philip, with his forces,

took the nearest road to Genoa, for he had no fleet

of his own, and that flourishing commercial republic had agreed with him for the furnishing of

tran ports and some ships of war. Although it

appears that the two kings went on, thus far,

anneally together, great meanveniences to the em-

saders as well as to the people among whom they travelled would result from their keeping one line

of march. Lat it was not this consideration, as

assumed by some old bistorians, but the necessity Philip was under of contracting for a Genoese fleet,

that caused the two armies to part company. From the time of his expedition to Ireland, Henry II.

had paid great attention to maritume affairs, and an English rough any had gradually grown up. We

do not possess much information on this interesting

subject, but we learn from the chromolers that he had

some vessels which would be considered, even now, of a large size, and that one of the "chiefest and

newest" of his shaps was capable of carrying 400

persons. Same time before his death he began to

build vessels expressly for the vayage to Palestine;

Having thus a fleet of his own, Richard was not

dependent, like Philip, on arrangements with the

maritime Italians, and, instead of crossing the

Alps, he kept his course by the beautiful valley of the Rhone towards Marseilles-a free trading

city, belonging neither to the English nor the

They marched in company from Vezelai to

alhance and fraterinty of arms, swearing that each French king, t where he had ordered that his slips would defend the life and honour of the other, should meet him, to convey him and his army thence across the Mediterranean to Sicily, and then to Palestine. When Richard reached the coast, he found his flect had not arrived. After passing eight impatical days at Marseilles, he lured twenty galleys and ten great busses or banks there, and proceeded coastwise with some of his forces to Genoa, where he again met the French kmg. His English ships, for which he left orders at Marseilles to follow him

since that time, have been very much enlarged."

Two prelates, Gerard, archia-hop of Arx, and Ber-

nard, bishop of Bayeux, and three knights, Robert

Fortz, were intrusted with the command of the

fleet, with the title of "constables;" and all men

marched down to Lisbon, where he found more crusaders than he wished for, as sexty-three of Richard's chips had by this time found, their way into the Tagus, and landed their passengers in his appears to be the earliest mention of the puresh-Although two of the constables, De ment called, in modern times, " tarring and feather-Saville and De Camville, were with this portion of the fleet, they could not " so govern then people, menned by their, for the oftender was to be turned but that some naughty fellows amongst them fell a shore on the fars, land the slop might reach, and to breaking and robbing of on hards, and some also, there abandened to his fate, without any hope of on entering into the city, behaved, themselves very disorderly " The king, mindful of his recent linshed, "were the statutes which this famous obligations, would resort to none but courtrons prince dall enact, at the first, for his navy; which, measures; and, for the time, these, with the exertions of the two constables, seemed to suffice, In three day, however, firsh nots broke out, the people of Lasbou took up arms, for the defence of de Saville, Richard de Caniville, and William de then wives and then property, and, as almost invariably happened, whenever these holy warriors stand any timie at a foreign town, a considerable quantity of Christian blood was shed. The king then ordered the gates of La-bon to be shut, and committed all the crusaders found within the walls to prison. The English retaliated by making prisoners outside the walls — Sancho, the reigning king, was moderate and prindent, and he reality consented to a friendly accommodation. The prisoners were released on both sides; the English engaged to maintion peace and friendship with the king; and the Portuguese, glad to be rid of such visitors, promised to aid and succour all future pilgrims bound for the Holy Wai that might put into their ports † The crusaders then sailed from Lisbon. At the month of the Tagns they were joined by thirty-three vessels; and, with a fleet now amounting to 106 sail, they steered for the Strats of Gibraltar. Passing those straits, and hugging the coasts of Spam and southern France, they reached, in less than four weeks from the The accounts of these transactions given by the old Portuguese historians differ in a few particulus. Dr. Southey remarks that, to the honour of the Portuguese, they relate the story in the manner the least discreditable to the English.

only one knight to accompany lum. On passing

through a village, he was told that a peasant there

had a very fine hawk. For a man in his condition to keep that noble bird was contrary to the cus-

toms and the written laws of anistocratic Europe;

and Richard, who wanted some sport, to beginle

the tedium of the way, went into the poor man's

house, and seized the hawk. The peasant ran after him, demanding his property; but the king

kept the bird on his wrist, and would not restore

quarrel, and the Calabrians being then, as now, a

proud and fiery race, they presently attacked the

robber with sticks and stones, and one of them

drew his long kinfe against him. Richard struck

this fellow with the flat of his sword; the sword

broke in his hand, and then matters looked so

The poor man's neighbours took up his

<sup>•</sup> Dr Lingard is in error, in saying that the celebrated medical poem in Leonine verse, by the professors of Salerno, was dedicated to Richard. It was first published (nearly eighty years before his visit) in 1100, and dedicated to Duke Robert (the unfortunite Curlhose), who was then in haly, on his way home from Jerusalem, and who was, by right of birth and treaty at least, long of England, through the recent death of Rufus.

† He was horm a poet—it not in the sense of Horace, at least genealogically—bot his mother Richard, as well as his material grand-father, were regulated ours, and the rook was made hereditary in some limites.

lumilies. He merited it by his compositions.

stones, and if a priory had not been close at hand, to afford him a refuge, it is probable the Lion-heart would have perished in this ignoble At last, he reached the shore of the narrow strait, commonly called the Faro, which separates Calabria from Sicily, and passed the night in a tent hard by the famed rocks and caverus of Scylla. The next morning (September 23rd), being either advised by signal, or by some one of the Marseilles galleys, the mass of his flect

enraged rusties followed him with their sticks and

crossed over from the island to receive him. embarked, and scorning, or being ignorant of, the Homeric dangers of Scylla and Churybdis, was presently wafted over to the noble harbour of Messina, which he entered with so much splendour and majesty, and such a clangour of horns and trumpets and other warlike instruments, that he astonished and alarmed the Sicilians, and the French also, who had reached that port with a shattered fleet a week before him. The first feelmgs of the allies and confederates in the Holy War towards each other were not of an amicable nature; and Philip, foreseeing, it is said, that dissensions would be inevitable if the two armics passed much time together in inactivity, got, ready his fleet as soon as he could, and set sail for the East. But contrary winds and storms drove him back to Messma; and it was then resolved, for the misfortune of the country, that the two kings should winter there together, and find supplies for their armies as best they could. The kingdom of Sicily, which then comprised Calabria and Apulia, and all those parts of lower

Italy now included in the Neapolitan realm, was in a weak and distracted state. A few years before, under the reign of William I., or of his heroic father, Ruggiero, when the kingdom was united, and their powerful fleets of galleys gave the law in both seas (the Tyrrhenian and the Adriatic), the Sicilians might have been able to defend themselves against the insolent crusaders, mmerous as they were; but Richard, who had a private account to settle with their king, well knew their present weakness, and determined to take advantage of it. The king of Sicily, who had scarcely been ten months on the throne, and who reigned by a disputed title, was Tancred, a prince of the Norman line, of great valour and Richard's sister, Joan, who had been wedded when a mere child, had borne her husband no children; and, after nine years' marriage with her, King William II., commonly called "The Good," became uneasy about the succession, and resorted to eurious measures in order to keep it in the legitimate line. The only legitimate member of the family living was an aunt about the same age as himself-a posthumous child of his grandfather, the great Ruggiero. The princess Constance had been brought up from her infancy

in religious retirement, and was living in a con-

vent-some writers say she had taken the veil and the vows of a mm long before-when her nephew, the king, fixed his eyes upon her for his Notwithstanding her acknowledged successor. legitimacy, William the Good knew it would be worse than uscless to propose a single woman to his warlike barous as their queen. It was the same everywhere, and for the same reasons; but, if anything, the objection to a female reign was stronger in Sicily than elsewhere. By the old laws of the country, as of all Italy (and the laws were not changed in Sicily until after the accession of Frederick 11., the son of this very Constance), the deaf, the dumb, the blind, and women, were excluded from the succession to fendal estates, or ficis, held of the crown on condition of military service—a condition which applied to nearly all property, except that belonging to the church. And though the old laws expressly excluding women from the throne had been abrogated since the Norman conquest, the feelings and prejudices of the people, and the usage of the nobles in the inferior class of successions, survived the destruction of the theory, and all tended to make a temale reign odions or impracticable in idea. William, therefore, looked abroad for a powerful husband that might assert her rights; or, considering the age of the parties, he mught reasonably have hoped to live to see a son of his aunt's grow up before he He, therefore, negotiated a marriage with Henry, the son and herr of the Emperor Frederick Barbaiossa. Considering the country and chinate, and the juvenile age at which royal ladies were then given minarrage, Constance was rather in advanced life—for she was thirty-two years old! The dower and the hope of succession were, however, brilliant and tempting; and Henry espoused her with great pomp and magnificence, in 1186, in the city of Milan. In the month of November, 1189—little more than three years after this marrage, and between nine and ten months before the arrival of the crusaders at Messma, William dred at Paleimo, in the thirty-sixth year of his age, leaving his childless widow, Joan, the sister of Richard, who was only in her twenty-fourth year, to the care of his successor. This successor was declared by his will to be his annt Constance, to whom, and to her husband Henry, some time before his decease, he had, according to the practice of the age, made the barons of the kingdom, on both sides the Faro, take an anticipatory oath of allegiance, at the town of Troja, in Apulia. But he was no sooner dead than his will and the oaths he had exacted were alike disregarded. The prejudice against a female succession was as strong as ever; and it was not prejudice, but landable policy, in the people of the south to be adverse to the rule of the German emperors, who were already formidable in the north of Italy, which they had deluged with blood, and who threatened the independence of the whole peninsula. By the insular portions of the kingdom, or in Sicily proper, the notion of being governed by Henry, a foreign prince, was

490

prino, Castel Pagano, and others, with their several

castles; Lesina and Varano, with their lakes and

the forests adjoining; two stately monasteries, with

their pastures, woods, and vineyards—in short, in

one extensive and solid mass, the whole of the

beautiful country comprised in the great promon-

tory of Monte Gargano, between the provinces of

Apulia and the Abruzzi, was allotted to the fair

daughter of our Henry II. Tancred, on his ac-

cession, had withheld this splendid dower, and had

even, it was said, deprived the young queen-

dowager of her personal liberty. \* Richard's fast

certain that Tancred sent her immediately to her

brother, from Palerma to Messma, escorted by the

royal galleys. The impetuous king of England

then demanded her dower, which, under encum-

stances, it would not have been easy for Tancred

to put her in possession of, as the territories lay no

the very heart of the great fiels of the confinental

mg the result of peaceful negotiations, into which

Tancred readily entered, Richard, embarking part

of his army, crossed the straits of Messina, and

took possession, by force of arms, of the town and

castle of Bugnara, on the opposite coast of Cala-

bria. Leaving his sister Joan, with a good gar-

rison, in this eastle, he retinined to Messino, to

commit another act of aggression. There was a

monastery on the sca-shore (a little beyond the

port of Messma) that covered one of the flanks of

his army, which was encamped outside the town.

The place was capable of being strongly fortified,

and was otherwise well sinted to his purpose, so

he drove the monks out of it, and, garrisounig it

for himself, converted it into a place of arms and

military store-house. Whether the poor Sierlans

loved these monks tor not, the honour of then

wayes and daughters was dear to them, and they

were probably as jealons as at the time of the

"Vespers," a century later; and when Richard's

disorderly soldiers of the cross, the very day after

this segzine of the monastery, "strolled been-

tionsly through the city, with much laseryious-

ness,"t the townspeople, no longer able to contain

their indignation, set upon them in the stmets,

killed several of them, and then closed the gates of

English, Normans, Angevins, Poictevins, with the

test that followed Richard's standard, tushed to

the walls, and would have scaled them then, had

not their king ridden among them, and commanded them to desist, beating them the while with his

truncheon as hard as he could § He then went to

the quarters of the king of France, whither the magistrates of the town soon repaired. After min-

the town. On this, the whole camp armed, and .

barous, who were again in revolt

these feelings and circumstances, several of the great barons more or less closely connected with the royal family, advanced claims to the crown, It was difficult, and in part impossible, to reconcile these pretensions; but at length the mass of the people and a large majority of the nobles agreed to elect Tancred, count of Lecce, cousm to the deceased king, William the Good, but reputed of illegitimate birth, though avowedly born of a lady of the noblest rank.\* In Suchy, as in England, the church had made great advances in the estaldishment of the rights of legitimacy; but these rights were, as yet, far from being imperative or sacred in the eyes of the people, who, in all circumstances, would have preferred a bastard to a wom or, and whose choice on the present occasion fell on a primer of ripe mathood and matric experience, who had many qualities to recommend him, besides that of his descent from the great Ruggiero, the founder of the dynasty. Tauered was, therefore, bailed king by public acclamation, and solemnly crowned at Palermo, in the beginning of the year 1190. His election by the nubles and people, or his right, was acknowledged by the court of Rome, just as that of Stephen had been in England, and the reigning Pope (Clement III ) sent him the usual bulls of investiture, and the be-Though acceptable and dear to the people, Tancred's throne was immediately disturbed by his disappointed competitors, and by Archbishop Walter and some of the Apulian

both far away at the time, and, encouraged by

throne for Constance, when Richard, received as a guest, commenced his course of aggressions. I The question of Tancred's legitimacy was not, in itself, likely to claim much of the Liou-heart's attention; his quarrel had a more private ground. When the late king, William the Good, married his sister Joan, in the first impulse of love and generosity, he gave her a magnificent dower-the cities of Moute Sant' Angelo and Vesti, the towns and tenements of Ischitella, Peschici, Vico, Ca-

barons, who declared for Constance, and armed in

her cause. In the island of Sicily this insurrection

was deleated by the unanimity of the people, and,

passing over to the continent in person, Tancied

presently reduced most of the Apulan barons to

his obedience. But the civil war lad weakened

hun-plots and conspiractes were forming against

hun, and Henry of Snabia, now emperor, by the

death of his father, Barbarossa, was on his march

to the south with a powerful army, to claim the

rescuing the tomb of Christ.\* Other laws were enacted at the same time, to prevent any judgrims or crusaders that might chance to die from remit-

ting their property to their family or friends at

his admiral and another—communided at Messina

at the time of Richard's arrival. Seeing that re-

sistance was vain, and feeling that their dignity

was committed by remaining in a town where a

foreign prince gave the law, they both retricil with

their families and movable property; upon which,

Richard seized their houses, galleys, and whatever

else they had not been able to carry of with them.

The made a complete castle of the nonastery en

the sea side, digging a broad and deep ditch round

it, and he built a new fort on the hills above the

town t. There, and other proceedings, in which

he consulted no one, but acted as if he were abso-

Into master of the island, again excited the envy

and disgust of Philip; but they probably baseded

the conclusion of a treaty with Tapered, who, in

the difficulties under which he was labouring, could

hardly contend with so fierce and powerful a dis-

putant. Richard demanded for his sister all the

territories before mentioned, together with a colden

chair, a golden table, twelve feet long, and a fost

and a half broad, two golden tressels for support-

ing the same, twenty-four silver cups, and a many

silver dishes-to all which, it appears, the as queen

was, by the custom of that kingdom, entitled.

After all this, he demanded for himself, as a pre-

s. mative and hen of his father, a tent of silk, large

enough to accommodate 200 knights sitting at

meals, 60,000 measures of wheat, and 60,000 of

barley, with 100 armed galleys equipped and pro-

visioned for two years | This voluminous dona-

tion, which, as it has been pidiciously remarked, was not merely a mark of friendship, but meant as

a prons contribution to the Holy War, had been

left in his will by William the Good to his father-

Two of Tancred's nobles and prime favourites ---

tents and ships. On the following morning a solemn meeting was held, with a view of providing for future tranquillity and concord among all parties; for Richard's men and the followers of the French king regarded each other with evil eyes,

and had already shed some blood in brawls prelates and chief barons of the two natoms, and the prancipal men of Messina, went with Plalip to the quarters of Richard. While they were deliberating a troop of incensed Siethans, gathered on the hills above the English camp, with the intention, it is said, of attacking the king. A Norman Linght was wounded by these people, and so great an muoar arose, that Richard inshed from the

conference, and called all his men to arms. English and Normans rushed up the bill-side, but the French did not move, and Philip at one moment seemed inclined to take part with the Simbans. Richard drove the multitude from the hill, and followed them with the swoul in their lone to the city. Some of the English entered pell-mell with the fugitives, but the gates were then closed, and the entizens prepared to defend then walls. Five knights and twenty men-at-arms were killed before the walls, but Richard, laying brought up nearly the whole of his force, took the town by storm, and planted his banner on its laftest tower, as if it had been his own tawn, or one taken in regular warfare. At this exhibition Pb hp was greatly incensed, but an open rupture between the two sworn brothers in prins was avoided for the present, by Richard's consenting to lower his banner, and commit the city to the keeping of the Knights Hospitallers and Templars, till his demands inon Tancred should be satisfied. Soon after this alternation, the kings of France and England solenmly renewed then yows of friendship and brotherhood, and, by the advice of the prelates embarked in the erusade, and took measures for repressing the excesses of the pilgrimsoldiers. The vice of gaming, it appears, had become very prevalent. Playing for money was now

probibited, with the following exceptions: the two knigs might play themselves, and command their followers to do so in their presence; but these nobles were bound not to lose more than twenty shillings in one day and night; knights and priests might play to the same amount, but were to forbut four times twenty shillings every time they lost more than the sum appointed in one day and night, and the servants of archbishops, bishops, carls, and barons might, in like manner, play by their masters' command; but if any servants were detected in playing without such beense, then they were to be whipped round the camp naked on three successive days. If any mariners played they were to be ducked three times in the sen; and any others of the crusaders of like mean degree, being

in money, which was to go towards the expenses of

in-law, Henry of England, who was bound for the Holy Land, but who died before the death of his sim-m-law gave validity to the testamentary bequest; and Richard must have exercised ingeniaty

as well as impudence in attempting to prove the

Richard either proposed or agreed to a compensation in money. Twenty thousand golden oncies

were paid in satisfaction of all Joan's demands, and

twenty thousand more were paid to Richard him-

self, but not in satisfaction for his claim, which he

waived (caring little, probably, on what ground be

obtained the money, so bing as he got it), left ore a

legality of this part of his demand.

In the end,

affianced his young nephew Arthur, who was his Hoved. We have translated "solidos" by shilling: † This castle, called Mattagriffone, after having been enlarged and reparted at different periods, still frowns over Messing. † Hoved—Heard Abb.

cred, and engaged, in case the marriage should be

prevented by the death of cither of the parties, that

he or his hears would repay to Tancred or his heirs

HISTORY OF ENGLAND.

Tancred the possession of Applia, which was partly in revolt, and of the important city of Capua, which had never submitted to the new king. He, indeed, contracted with him what we now call an alliance offensive and defensive—a league he had cause to regret when his evil fortune threw him into the power of Tanered's competitor, the Emperor Henry. The treaty was sent to Rome, to be placed in the hands of the Pope, who was invited, both by Richard and by Tancied, to enforce its observance, should any want of faith be shown by either of the contracting parties in the sequel. The money obtained was lavished by Richard in a manner which appeared thoughtless and wild; but his liberality had the effect of increasing his populardy with the crusading host; for he made the followers of the French king, and the king himself, share his bounty with his own followers, who highly lauded him, " for that he gave away as much in largesses in one month as his father Henry would do in a whole year." Such a multitude of men collected on one point had greatly raised the price of provisions; and Richard's treasure, and his table too, were open to the crossed knights of all countries, who complained of the expensiveness of their sojourn at Messina. On the feast of Christmas he gave a splendid banquet, to which he myited every man of the rank of a knight or gentleman, in both armies; and when the dumer was over, he made a present in money to each, the amount being more or less, according to the rank of the parties little army of tronbadours and minstrels, who had followed hum from Aquitaine and the rest of the south of France, constantly sang his praises. This display of superior wealth, and the popularity he obtained by lus liberality, seem to have increased

• In the treaty, Richard styled him his "most dear nephew and her," mentoning however, the condition of his dying without children—" in forth me prole not obre contingered."—Recueil des Historiers de France,—Dari, Hist, die Bretagne. The unfortunate Arthur was hitle more than two years old at the time of this control. Inset.

the envy and malevolence of Philip, who, however,

must have had, all along, a standing cause of complant, which we shall presently refer to. Part of

the winter months were spent in repairing the

ships, that were much worm-caten, in the port of Messina, and in preparing catapults, manginalls,

and other worlike engines, wherewith to batter the walls of the infidel towns in Syrna and Palestine.

the timber for which was cut on the mountains of

Sicily and in the extensive forests of Calabria. But in spite of these and other occupations, time

hung heavily on the hands of the impatient Richard.

In a period of inactivity he was seized with a fit of devotion and pentence. He called all the prelates together that were then with his host at Messina,

Abbot Giovacelino's prophecies about Jerusalem and the holy war was falsified by the event, \$ A short time after these theological conferences Richard mounted his horse, and rode to the flanks of the towering and smoking Mount Etna, which had recently been in active emption. At the city

of Catama he was met by appointment-and it ap-

kings embraced, and, walking in splendid procession to the cathedral church (another work of

the Normans), prayed, kneeling side by side, be-

into the chapel of Reginald de Moiac, in whose

house he then resided; and there, in presence of

them all, falling down upon his knees, he confessed

his sins and the profligate life which he had hitherto

led, lumbly received the penance enjoined him by

the bishops; "and so," adds an old historian, who

did not sufficiently bear in mind the deeds of his

after life, " he became a new man, fearing God,

the fame of Giovacchino, or Joachini, the Cala-

brese, a Cistercian monk and abbot of Curacio,

who was commonly reputed a prophet, and who

had lashed the vices of the court of Rome in an

infantade of books and treatises, all bearing the

most extravagant titles. Richard being anxions to

converse with this seer, King Tancred sent for lum into Calabria; and the monk, probably flat-

tered by such an invitation, came over to Messma,

where the hon-hearted soldier had a grand field-

day of theology and vaticination. Grovacchino had

no difficulty in interpreting, in his own way, the whole of the Apocalypse. He told his majesty of

England that Antichrist was born, and then

Richard was to fight, was one of the heads of the

beat in the Revelations; and for every other

symbol or type the fervid imagination of the Calabrian monk found an existing reality in some pub-

covered by the crusaders; and to every doubt he

would reply—"but is it not written in the book?"

The bishops and learned clerks, bowever, in

Richard's train would not permit the abbot to have

it all his own way, and a fierce controversy ensued, m which English lungs (they would have had no

chance but for the disparity of numbers) were fried against the stentorian lungs of Calabria. + Accord-

ing to Giannone, Richard at once set the prophet

down as an idle babbler; thut people must have

been better qualified to give a decided opinion on this head some years later, when every one of the

he character of the time, Chastian or Pagan, foretold the year in which Jerusalem would be re-

Saladin, against whom

CHAP. I.]

cordiality, and each seemed to entertain a high respect for the valour and character of the other. Like the heroes of Homer, they exchanged presents, Tancred giving Richard a ring, and Richard giving Tuncred a sword, reputed to be the en-

fore the shrine of St. Agatha. They lived in great

CIVIL AND MILITARY TRANSACTIONS.

Philip the dishonour and shame of his own sister.

True or false, this exposure was a cruel and de-

grading blow, not likely ever to be forgotten or

forgiven.\* For the present, however, Philip bar-

tered his sister's honour for a pension, agreeing to release Richard from his previous matrimonial

contract, and permit him to marry whatsoever wife

he chose, for two thousand marks a-year, to be

mising this money, Richard engaged to restore the

Princess Alice, together with the forticeses received

as her marriage portion, as soon as he should

return from the Holy Land.—[Eventually the lady

was not restored till some years after that event, when she espoused the Count of Ponthen. 1 - This

precious arrangement, and the settlement of other

differences, t were confirmed on both sides by fresh

oaths, for, in these days, princes seem never to

have tued of swearing, or to have felt that the

continually recurring inplure of their oaths made

them nothing but a solemn mockery. Philip then

got ready for sea, and, after receiving some vessels

and stores bountifully given him by Richard, he

set sail on the 30th of March, 1199, for Acre

Richard, with a few of his most splendid galleys,

accompanied him down the straits of Messina, and

returning the same evening to Reggio, on the Cala-

brian coast, took on board his new bride, who had

been for some time in the neighbourhood, waiting

only for the departine of the French king, and

then carried her over to the city of Messina. This

lady was Berengarai, the beautiful daughter of the

King of Navarie. Richard had seen her in her

own country a year or two before his father's death,

and was passionately enamoured of her at the

moment when, to almoy Henry, he was raising

such a clamour for the Princess Alice. His passion

was romantic and disinterested, for he gained no

territories by the union, and seems to have stipu-

lated for no political advantages, when he de-

spatched his mother Eleanor to ask the hand of

Berengaria. It is said that the fair maiden partook

of his generous passion, and that, without being

deterred by the many dangers and privations to

which she exposed herself, she joyfully consented

paid for the term of fave years.

chanted blade Excalebar, or Caliburn, of the British king Arthur. But his Sicilian majesty also gave, as a contribution to the holy war, four large ships and fifteen galleys. On his return to Messina, he accompanied his guest for many miles, even as far as the town of Taorinina; and before they parted there, it is said, he gave to Richard a letter wherem the French king declared his majesty of England to be a traitor, who meant to break the peace and treaty he had concluded with the king of Sicily, and offered to assist Tancred to drive him and his English out of the island. Cour de Lion, after a firmous explosion, and many oaths that he never had been, and never would be, false to Tancred, collected his ideas, and then expressed a doubt that Plulip, his hege and sworn comrade in that pilerimage, could be guilty of so much baceness Tanered declared that the letter had really been delivered to him, as from the King of France, by the Duke of Burgundy; and he vowed that, if the duke should deny having so delivered it, he would make good his charge inpon turn, in the lists, by one of his barons.\* When he arrived at the camp Richard met Philip with a clouded brow, and a day or two after, in the course of one of their many adtercations, he produced the letter, and asked the French king if he knew it? Philip pronounced it to be a vile forgery, and, changing defence into attack, accused Richard of seeking a pretext for breaking off his marriage with the French This was touching at once on the grievance that must long have made all friendship on the part of Philip a mere similation. clamour Richard had raised for his affianced bride, in the last months of his father's reign, was merely for political purposes; as soon as Henry died he

marry the princess, as it was of public notoricty that his own father Henry had had a child by her; and, according to the minute relater of these curious passages, he produced many witnesses to prove to There are several versions of this mysterious story; we have closen that which appears most indural. If there was any decent about the letter it was practised by Thoretol. It is said that before Richard's arrival the Sierlam prince had offered one of his daughters to Philip for his infant son, and that the French king had rejected the alliance. But, again, it is said that, a few hours after Richard had left him at Taormina, Tancred met Philip at the same town and passed the might with him in a friendly monner. The native histo tious are provokingly silent on nearly all the transactions of the Cusaders in Sierly. crusaders in Sicily.

dropped all mention of the Lady Alice; and at this

very moment, as Philip no doubt well knew, he

had contracted a very different alliance, and was

every day expecting another wife. "I see what it to travel with her mother-in-law from the Pyrenees is," said Philip; "you seek a quarrel with me, in to the Alps and Apermines, and thence to follow order not to marry my sister, whom, by oath, you her husband beyond sea to the land of the Paynin, are bound to marry; but of this be sure, that if Leaving Navarre with a suitable escort of barons, you abandon her, and take another, I will be all knights, and priests, the young Berengaria and my life the mortal enemy of you and yours." Elemor, whose activity was not destroyed by age, travelled by land to Naples, and from the gay city Richard replied that he could not and never would of Naples they travelled on through the passes of Monteforte and Bovino, and across the vast Apuhan plain to the ancient city of Brindisi, there to wait until the French king should be out of the According to an old French writer the insult was "a nail stuck in and drawn through the heart of Pluhp"—De Serres, Inventore Genéral de l'Hist, de France Roger of Hoveden gives the fullest account of this quarrel. See also Diccio, — Iter. Hiero † With reference to young Arthur, Philip consented that Britany should continue to acknowledge the direct fendal supremacy of the

Norman dukes or English kings, who should do homage for it to the

crown of France.

way. As the expedition of Richard was so nearly

ready for sea when the royal travellers arrived, it was not thought proper to delay its sailing, and, as the pentitential serson of Leut was not quite over, the marriage was not celebrated at Messina; and the queen-mother, having placed the bride under the matronly care of her own daughter Joan, the

HISTORY OF ENGLAND.

[Воок III.

he was always very tenacious,—Richard embarked, and, departing immediately with all of the fleet

that had joined him at Rhodes, made way, with

press of oars and sails, for the devoted island. Off Limisso, or Limasol, then the principal sea-

port town of Cyprus, he found the galley of his

bride and sister. Either the Cypriots had refused

the royal ship the entrance of the port, or (which is

more probable) the ladies, knowing how they had

treated the two wrecks, feared putting themselves

in their power, and had refused their invitation to

Greeks, a people who, from a difference in some dogmas of faith and from other reasons, had never

been able to agree with the crusaders of the West,

The islanders had probably learned the overbear-

ing conduct of Richard in Sicily, where there were

many Greek colonies; and general experience had

proved that the holy warriors were most turbulent

and dangerous guests. Hence, the Cypriots might

have been induced to give them so bad a welcome;

but, considering the circumstances of the English

who were thrown on their coast, the conduct they pursued was odious and exasperating. The cove-

reign of the island was one Isaac, a prince of the

imperial race of the Comment, who pompossly

styled lungself "Emperor of Cyprus" When

barshly called upon for satisfaction, be put himself

m a posture of defence, throwing out some armed

galleys to the mouth of the harbour of Litue of, and drawing up his troops along share. The e troops

were ill calculated to contend with the steel-clad

body-guard which was splendidly aimed and ap-

pointed, they lead no defensive armoni, but were

half maked, and the mass of them had no better

weapons than clubs and stones. Richard boarded

and took the galleys, dispersed the troops, and

made lumself master of the city, with little dit-

ficulty. The inhabitants fled, but had not time to

carry off their property, which the crusaders made

prize of They found an abundance of provisions

of all kinds, and when Queen Joan and Berengaris

landed at Lamasol they were welcomed with a

warrons of Richard, for, with the exception of

The island of Cyprus was occupied by

crusade contributed more than her advanced years in preventing her from revisiting Palestine According to a quant old thyming writer, "Dame Joan held her sister Berengaria very dear, and the two ladies lived together like two birds in one cage." \* They did not embark in the same ship with Richard, but a separate galley was delicately allotted to them. The day atter Eleanor's departure for England the whole fleet set sail for Acre. As a rapid current carried a through the straits of Messina at presented a brantiful and imposing appearance, The manners of England, however, were

that called forth the involuntary admination of the people of either thore,—the Sichans saving that so galbant an armament had never before been seen there, and never would be seen again. The size and beauty of the chips seem to have excited this admiration not less than their immber. The flag of Eurland floated over fifty-three galleys, thirteen dromones, "mighty great ships with triple sads," to one bundred carries or busses, and many smaller craft. Thirty burses from England had arrived just before, bringing out fresh stores and not then what ecidinies of struggle and e-petience have made them; and when a great tempert mose, soon after leaving the Sicilian sea, the whole may was "sore tossed and turmoded," and scattered in all directions, not a few of the ships being foundered or cast on share! After a narrow escape lumselt on the coast of Candio or Crete, Richard got safely into Rhodes; but the slup which bore his sister and his bride was not with him, and he passed several days in distressing anyiety as to their fate. At Rhodes he fell sick, and was detained there several days. Treapable of taking the sea burself, he despatched some of his swiftest vessels to look after the Lahes and collect the scattered fleet. This storm blew more mischief to the petty tyrant of Cyprus than to any one che. of the English scouts returned to Rhodes with the information that two of his ships had been cast ashore on the island of Cyprus, and that the people of the country had barbarously plundered the wrecks and cast the manners and crusaders into Vowing vengeance, - and of these vows · Robert of Brance. provoked, sent from his capital of Leikosia, or Nicosia, situated in the centre of the island, to suc for a conference of peace. Richard, guly mounted on a Spanish charger, and splendidly attired in silk and gold, met the humbled Greek in a plam near Liniasol. The terms be imposed were sufficiently hard; but the "Emperor" agreed to pay an indemnity in gold for the wrong he had done the galleys, to resign all his eastles, to do homage to the king of England, and to follow him to the holy Robert of Brinne. From Vinesauf and Hoveden it appears that Isaac, betrayed by the Cyprobs, was surprised before he was out of bed, and fled without armour or clothes.

Having rallied, to make another impotent attempt at resistance, the Cypriots were surprised the next morning, and "killed like beasts," then "Emperor" saving his life by flying "bare in serke and breke." Isaac, who had now learned to his cost the might and fury of the enemy he had CHAP. I.]

holy war should give the king entire satisfaction. That very might the Greek fled to make another y on effort at resistance; but Richard had no great right to complain of this, reeing that he treated Isane, not as a reconciled enemy and ally, but as a prisoner of war, having actually placed guards over han, whose brute force the Greek defeated by a

war with 500 well-armed infantry, 400 light horse,

and 100 knights. Isaac was to place his daughter

and herress as an hostage in Richard's hands, and

Richard was to restore her, with all the castles, on

their return from Palestine, on the delicate condi-

tion, however, that the Emperor's conduct in the

fleet for Acre. Sailing between Cyprus and the

Syrian coast, he fell in with a dronwind, or ship of

the largest size, which was carrying troops and

stores to the great Saladan - He attacked her with

his usual impetuosity, threatening to crucify all his

sailors if they suffered her to escape. She was

taken after a gallant action, in which the superior

height of her board, and an abundant use of the

Greek fire, to which Richard's toflowers were as

yet imaccustomed, gave her for some ring a decided

advantage. There were on board seven Froms, or

Saraceas of the highest rank, and 650 mone my

1500 - packed men. Thirty five individuals only

were saved, the rest were other massicred or

drowned, the great slip sinking before the cin-

triumpets and drimus, and every instrument of war

in the Christian camp, builed the somewhat taidy

arrival of Richard and his host in the roadstrad of

Acre The welcome was smecre, for then and was

indispensable. The French king had arrived some

time before, but had done nothing, and the aftars of the crusiders were in a deplorable condition, for,

after prosecuting the seige of Acre the best part of

two years, they were not only still outside the walls,

but actually pressed and hemmed in, and almost

besieged themselves by Saladan, who occupied

Mount Cornel and all the neighbouring heights with an immense army. The loss of human life

away six archbishops, twelve bishops, forty carle,

and taxe hundred barons, whose names are re-

corded in Justony, and 150,000 of "the memor

sort," who went to their graves without any such

record.) This heavy draft upon population had

been supplied by fresh and continuous mayals

from all parts of Christendom, for, life a modern

conquerer. Fanope then believed that the rate of

Syria and the East by within the narrow circuit of

Acre The operations of the besieved, which had

languashed for some weeks, were vigorously re-

newed on Richard's mireval, but the kings of

France and England quarelled again almost as

soon as they had met: the besiegers became again mactive, and then threw away conc thou ands of

lives from mere pique and jealon vot each other. The French and the English soldiery took a full

share in the ammosities of their respective leaders; and of the other bodies of cruseders, some sided

with Philip, and some with Richard. The Genoese

and Templars esponsed the quarrel of France, the

Pisms and Haspitallers stood for England; and, on the whole, it appears that Richard's more brilliant

very exensable exercise of cuming. Despitching part of his miny by land into the interior of the country, Richard embarked with the rest, and, name, round the island, took all the maritime town, and cut off Isaac's flight by eca, for he cased every ship, and even every boat, though of the smallest dimensions. Isane fought another battle, but the contest was in every way imegial, for the people, whom he had governed har bly and corruptly, instead of fighting for him, by connecance, it not actively, assisted the invaders. Nicocia, the capited, surrendered, and I-sac's beautiful daughter fell into the lands of Richard, who gave her as a companion to Berengara. Isaac, who doated on his child, lost all heart in losing her, and quitting a strong calde or fortified monastery in which he hal taken refuse, he again sought the presence of the conqueror, and threw lumself at his feet, imploring only for the restoration of his child and for the parservation of his own life and limbs conqueror would not restore his fair captive, and he ent her father away to be confined in a strong Gistle at Tripoli in Syria. The unfortunate captive was loaded with chains, but it is said that, in consideration of his rank, Richard ordered that his tetters should be forged of silver instead of inde If the Cypriots had been discontented with their old master, they had little reason to be satisfied with their new one. Richard's first act of government was to tax them to the dreadful amount of half of their movable property, after which he gave them an empty confirmation of the rights and

honours to themselves, repeated the like experiment without the French, and with the like ill success. These two fatal attempts showed the necessity of co-operation, and another brief reconcahation was effected between the rivals.

Richard's personal excitions \* attracted universal admiration in the camp, and gave rise to fresh jealousies in the breast of Philip, of whom it has been well said, that, though brave, be had more of the statesman than the warrior in his character. At length, being disappointed of aid from Cairo, and seeing that Saladin could no longer penetrate the Christian lines to throw in provisions, the brave Mussulman garrison offered to capitulate. some negotiation, during which Philip and Richard once more disagreed, it was finally stipulated that the city should be surrendered to the crusaders, and that the Saracens, as a ransom for their lives (for their property, even to their arms, was forferted), should restore the wood of the holy cross, set at liberty 1500 Christian captives, and pay 200,000 pieces of gold. Some thousands of Saracens were detained as hostages in the fortress for the performance of these conditions. Immediately afterwards,—it was on the 12th of June, 1191, the crusaders entered Acre, and Saladm, evacuating all his positions, retried a short distance into the interior. The banners of the two kings were raised with equal honours on the ramparts; but it

appears that Richard took the best house in the place for the accommodation of limiself and family, leaving Philip to take up his lodgings with the Templars. Scarcely, however, had they entered this terrible town ere the French king expressed his determination to return to Enrope. The cause he alleged for his departure was the bad state of his health; but this probably was not the true one —it certainly was not the only cause. Though Jerusalem was in the hands of the Mussulmans, there was a disputed succession to the throne among the Christians:—Gny of Lusignan had worn the crown in right of his wife, a descendant of the great Godfrey of Bomllon, the first Christian king of Jerusalem; but Sybilla was dead, and Conrad, Marquis of Monferrat and Prince of Tyre, who had married her sister, contended that the sole right of Guy of Lusignan was extinct by the demise of his wife, and that the crown devolved to himself as the husband of the legitimate herre's. The dispute was referred to the English and French monarchs, and it was not likely that they, who from the comincircement of the crusade had never agreed in anything, should act with concord in this important matter. As soon as Philip reached Acre, without waiting for the opinion of Richard, he declared in favour of the claims of Conrad, who, without reference to the doubtful right of legitimacy, seems to have been much better qualified for a throne that was to be won and maintained by the sword than

<sup>\*</sup> He worked like a common soldier at the heavy battering engines. When suk, he caused himself to be carried to the entrenchments on a silk pallet or mattrass.

Philip had been sick. Some of the French chroniclers accuse Richard of having given him poison!

his miserable competitor Lusignan. Richard, however, swayed by other motives, or possibly merely out of pique, had declared against Conrad, and when Lusignan visited him as a suppliant in Cyprus, he had acknowledged him as king of Jerusalem, and, with his usual liberality, had given him a sum of money, his majesty being pennyless and almost m want of bread. This subnet had given rise to many disputes during the siege, and they were renewed with increased violence when the capture of Acre gave the French and English kings more leisure. In the end, Plubp was obliged to yield so far to his fiery and determined rival as to allow that Lusignan should be king of Jerusalem during his life.

The king of France was otherwise irritated by the absolute will and constant domineering of his rayal, who was as superior to him as an adventurous warrior as he was superior to Richard on padacy and political forethought. One of our old thyming chroniclers no doubt hit part of the truth when he said—

" So that King Philip was annoyed there at the thing.
That there was not of him a word, but all of Richard the king."\* But, after all, we should be doing a manifest inpistice to Philip's consuminate king-craft were we not to suppose that one of his strongest motives for quitting an improfitable crusade was to take advantage of Richard's absence in order to raise and consolidate the French kingdom,—an end perfectly mutural, and perhaps laudable in itself, however dishonourable the means that were employed to effect it. Dazzled as he was by dreams of chivalry and glory, Richard himself was yet not so blind as to overlook the danger that threatened him in the west, and, after his efforts to persuade Philip to remain had all failed, he exacted from him an oath not to make war upon any part of the territories of the English king, nor attack any of his vassuls or allies, until at least forty days after the return of Richard from Palestine. Besides taking this oath, Philip agreed to leave at Acre 10,000 of his followers to be immediately commanded by the Duke of Burgundy, who, however, was bound to recognise the superior authority of the English monarch. In the popular eye, Philip appeared as a deserter, and the mob of all nations that witnessed his departure from Acre Inssed him and cursed Jum. † His absence, however, saved him from direct participation in an atrocious deed. Forty days was the term fixed for the fulfilment of the articles of capitulation. Receiving neither the Christian captives, nor the cross, nor the money, Richard made several applications to Saladin, who was unable or unwilling to fulfil the conditions, though he sent to offer Richard some costly presents for himself. A rumour-apparently falsewas spread through the Christian camp and the town of Acre, that Saladin had massacred his Christian captives, and the soldiers demanded nistant vengcance, making a fearful riot, and killing several of their officers who appeared to be opposed

+ Vines .- Hoved. \* Rob, Gloncester. VOL. I.

to a massacre in cold blood. On the following day the term of forty days expired. At an appointed hour a signal was given, and all the Suracen hostages were led out beyond the barriers of the French and English camps, and butchered by the exulting and rejoicing consaders. Richard presided over the slaughter at one camp,— the Duke of Burginsdy Between 2000 and 3000 prisoners\* at the other were thus destroyed, and only a few Emirs and Mahonmedans of rank were saved from the enroage, in the hope of obtaining valuable ransons from Some centuries had to clapse ere their families this deed excited any horror or disgust in Christendom. At the time, and indeed long after, it was considered as a praiseworthy sunting of the infulels, - us a sacrifice acceptable to Heaven; for was not every drop of blood there shed the blood of the accursed followers of Mohommed, who had phindered the sepulctae, and who revited the laws of Christ? Vinesauf says his victorious master showed therein his wonderful great zeal for the glory of God; and the muthor of the popular ro-names of 'Richard Cour de Lion,' which was produced two or three centuries later, for the admiration of the Christian world, represents angels of heaven as assisting at the execution, and crying alond to Richard, "kill, kill, spare them not." † But the atrocities of the crusaders did not end with the death of then victors; the soldiers cut open the bodies of the Saraceus to look for precious stones and pieces of gold which they fancied they had swallowed for concealment. "They found many of these tlones in their bowels," says a contemporary, " and they made store of the gall of the infidels for incdicinal uses." It appears that after this Saladin ordered the massacre of the Christian prisoners in his hands; but these measares neither injured the fame of the two chiefs, nor prevented Richard and Saladin from having a counteons correspondence with each other at a

period a little later Having restored the battered works of Acre, Richard prepared to march upon Jerusalem. The generality of the crusaders by no means shared his impatience; "for the wine (says old Vinesauf) was of the very best quality, and the city abounded with most beautiful girls ,"-- and the gravest kinghts had made a Capus of Acre. At length, however, Richard tore them from these enjoyments, and, leaving behind him his sister and wife, and the fair Cypriot, and strictly prohibiting women from following the camp, he began his march on the 22nd of August. Thirty thousand men, of all countries, obeyed his orders, marching in five divisions: the Templars led the van; the Kinghts of St. John brought up the rear. Every night, when the

HISTORY OF ENGLAND.

infested their march every day, and encamped near them every night, with an army greatly superior in numbers. On the 7th of September Richard brought him to a general action near Azotus, the Ashdod of the Bible, on the sea-shore, and about nine miles from Ascalon ; and after a display of valour, which was never surpassed, and of more cool conduct and generalship than might have been expected, he gamed a complete victory. Mourning the loss of seven thousand men and thirty-two emirs, Saladın, the victor of many a field, retreated in great disorder, finding time, however, to lay waste the country, and dismantle the towns he could not garrison or defend; and Richard advanced without further opposition to Jaffa, the Joppa of Scripture, of which he took possession.\* As the country in advance of that position was still clear of chemics, the Lion-heart would have followed up his advantages, but many of the crnsaders, less hardy than himself, were worn out by the heat of the climate and the rapid marches, on which he had already led thom; and the Prench barons urged the necessity of restoring the fortifications of Jaffa before they advanced. No sooner had Richard consented to this arrangement than the crusaders, instead of prosecuting the work with vigour, abandoned themselves to a luximious case; and Richard lumself gave many of his days to the sports of the field, disregarding the evident fact that Saladin was again making head, and that hordes of Saracens were scouring the country in detached parties. One day he was actually surprised, and would have lost either his life or liberty, Imd not one of his companions, William de Pratelles, a knight of Provence, cried out, "I am the king," and, by drawing attention upon himself, given Richard the opportunity of escaping another occasion thus generous during threw him almost into an equal danger. A company of Tem-

still "St. George, St. George." Many other adventures equally or more romantic are related of this flower of chivalry—this pearl of crusading princes. His battle-axe seems to have been the . Juffa is still a considerable maritime town, distant about thirty miles from Jerusalem.

Saladin, who had been reinforced from all parts, twenty pounds of steel were wrought into the head of it, that he might "break therewith the Saracens' hones."\* Nothing, it was said, could resist this ninghty axe, and wherever it fell, horseman and horse went to the ground. It appears, indeed, after making every rational deduction from the exaggeration of mustrels and chrometers, that it was a fearful weapon, and that Richard's strength and valour were alike prodigious. When the fortifications of Jaffa were restored, the Lion-heart was duped into a further loss of time, by an affected negotiation artfully proposed by Saladin, and skilfully conducted by his brother, Saphadin, who came and went lictween the two armies, and, spite of his turban, ingratiated himself with Richard. At last, the crusaders set forth from Jafla; but it was now the month of November, and meessant rams, nearly equal to those in tropical countries, wetted them to the skin, rusted their arms, spoiled their provisions, and rendered the roads almost impassable Crossing the plain of Sharon, where "the rose of Sharon and the bly of the valley" no longer bloomed, they pitched their tents at Ramula, + only fifteen miles in advance of Jaffa; but the wind tore them up and rent them. They then sought quarters at Bethany, where they were within twelve miles of the holy city; but their condition became daily worse- famme, disease, and descrition thinned then ranks, and Richard was compelled, sore against his will, to turn his back on Jerusden. He retreated rapidly to Ascalon, followed closely by the loose light cavalry of the Kourds and Turks, who, though they could make no impression on the main body, or even penetrate the rear guard, where the gallant knights of St. John wielded sword and lance, yet did much mischief by cutting off stragglers, and caused great distress by keeping the whole force constantly on the alcit by might as well as by day. On the retreat, as during the advance, Richard was greatly indebted to the plars fell into an ambuscade; he sent the brive exertions of the brave Earl of Leicester, who covered one flank of the English army, the other Earl of Leicester to their aid, promising the would being protected by the sea. Ascalon, so celefollow as soon as he could get on his armour. Before that rather long operation was completed brated in the ancient history of the Jews, was still a they told him the Templars and the earl were being city of great importance, being the connecting link crushed by the number of the enemy. Without between the Mahomedans in Jerusalem and the waiting for any one, he leaped on his war-horse, Mahomedans in Egypt.—Saladur had dismantled its fortifications, which Richard now determined to and galloped to the spot, declaring he were unrestore in all haste. To set a good example, he worthy of the name of king, if he abandoned those whom he had promised to succour. He spurred into worked, as he had already done at Acre, upon the walls and battlements, like a common mason, and the thickest of the fight, and so laid about him, that the Earl of Leicester and all the Templars who had he expected every prince and noble in the army not fallen previously to his arrival were rescued. On would do the same; for the common crusaders such onslaughts, say the chroniclers, his cry was required a stimulus, and the Saracens seemed to be gathering for an assault or siege. All the men of rank, with the exception of the proud Duke of Austria, thought it no dishonour to do as the Weber, Metrical Romances.

king of England Jid. There was an old quarrel | between these two princes. During the siege of Acre, the Duke of Austria took one of the towers, and planted his banner upon it; Richard, enraged at this step, which appears to have been, at least, out of order, fore down the banner, and east it into the ditch. Such an affront could never be forgotten. And now, when inged by Richard to work on the fortifications of Ascalon, the duke replied that he would not, seeing that he was the son nerther of a mason nor of a curpenter. Upon this, it is reported that Richard struck him or kicked him, and firmed him and his vassals out of the town, with threatening and most insulting language. Notwithstanding the diske's refusal, the greatest personages there, including bishops and abbots, as well as lay lords, worked as masons and carpenters; and the repairs were soon completed. Richard, acting with great military judgment, then turned his attention to the other towns which Saladm had dismantled, or which had not been previously fortified; and in the course of the winter, and the following spring, he made the whole coast from Ascalon to Acre a chain of well-fortified posts; and below Acre he rebuilt the walls of Gaza. Before these works were completed, however, his forces were considerably dimmished: his lavish generosity had hitherto kept the French and other soldiers not his subjects together; but now his treasures were nearly exhausted. Hence arose a wonderful cooling of zeal-a disposition even to

criticise his military skill, and a pretty general defection on the part of all except his English and Norman subjects. Acre, a pleasanter place than Ascalon, was again crowded with jealons and mercenary chieftams, and became a very hot-bed of corruption and political intrigue. The Genoese and Pisms fought openly in the streets of the town, hiding then old animosities under the pretence of combating for the rights of the lawful king of Jerusalem; for Richard's treaty in favour of Gny had not settled that question. The Genoese had declared for Conrad of Montferrat - the Pisans for Guy of Lusignan; and when Conrad himself, disregarding the treaty and the power of the Enghsh knig, joined his troops with those of the Genocse, a sort of civil war seemed imminent among all the Christians in Palestine. On this, Richard moved from Ascalon to Acre, effected a reconciliation between the Genoese and Pisans, and forced Conrad to retire. He attempted to conciliate that nobleman, who had given him many other causes of complaint; but Montferrat insultingly rejected all overtures, and withdrew to his strong town of Tyre, where he opened a correspondence with the common enemy, Saladin, and where he was soon joined by 600 French knights and soldiers, whom he had seduced from Richard's garrison at Ascalon. Saladin, who was, in all respects, a rival worthy of Richard, gaining fresh heart, from the dissensions of the Christians, once more condensed his forces, in the hope of striking a decisive blow.

[Book III.

mind, wrote to the abbot of Clairvaux,\* who had great interest in several of the European courts, carnestly entreating him to rouse the princes and people of Christendom to arms, in order that he might have a force sufficient for the occasion, and that Jerusalem, the inheritance of the Lord, might be rescued, and made secure for the future. This letter apparently was scarcely despatched when he received others from his mother, Eleanor, informing hmi that his own throne in England was beset by the greatest of dangers. At this crisis he opened a negotiation for peace, declaring to Sidadin that he wanted nothing more than the possession of

Jernsalem, and the wood of the true cross To this Saladin is reported to have replied, that Jernsalem was as dear to the Mussulmans as to the Christians, † and that his conscience and the law of the prophet would not permit him to cominve at idolatry or the worshipping of a piece of wood, The next step related of Richard excites wonder, if not doubt. It is said that he proposed a nuion and consolidation of the Christian and Maliomedan interests, with the establishment of a government at Jerusalem partly Christian and partly Mahomedan; and that, as a basis and bond to this scheme of policy, he offered to give his own sister John, the queen-dowager of Sierly, in marriage to Suplinding the brother of the great Saladin. And it is added, on the same authorities, that the two Mussulman princes entertained the project, which was only defeated by the intolerance of the limanis on the one side and of the Catholic priests on the other.! Strange as it may appear, after the long duration of hostilities, and all the horrors that lead been committed, the people of the two armies, during this negotiation, as during several preceding ones, lived in friendly intercourse, mingling in the tournament and other amusements; and throughout the whole of the war Saladin and Richard

interior \$ In order to reconcile parties, and facilitate his own return to Europe, Richard now abandoned the cause of Guy of Lusignan, whom he most liberally recompensed by the gift of the island of Cyprus; and consented that Conrad of Montferrat, who was

command of the crusaders in Richard's absence, and possibly might have enabled him to gain Jerusalem, and change his condition from that of a titular to a real king; but he was mmdered in the streets of Tyre, while preparing for his coronation, by two of the Assassins, the fanatic subjects of the Old Man of the Mountain. The marderers were seized, and put to the torture. Hoveden and Vinesauf both say that the wretches declared that they had murdered Contad by the order of their master, in revenge for injuries done to his people and moults offered to himself by Conrad, whose imprudent quarrel with the Old Man of the Mountain was notorious. Bohadin, the Arab lustorian, indeed, affirms that the men said they were employed by the King of England; but another Arabic writer, of equal weight, says that the murderers would make no confession whatever, but that, trumphing amidst their agomes, they rejuced that they had been destined by Heaven to snifer in so just and glorious a cause; and this account agrees better with the character of the wonderful association to which they belonged, and is more probable than any other. Everybody knew the generosity which Richard had shown to Conrad; and it appears that that unfortunate prince, with his dying breath, recommended his widow to the protection of the English monarch. The whole tenor of Richard's character and conduct should have absolved him from all suspicion. but both the French and Austrian factions at once charged him with being the instigator of this murder; and the report was diligently spread in Europe on no evidence at all, or on none but of the loosest and most contradictory description. the French king, the German emperor, the Austrian duke, and other sovereigns, were burning with spite and revenge against him; and Philip, more especially, who was contemplating an uttack on Richard's dominions, in order to cover his mfamy, filled all the west with exclamations against his rival's perfidy; and, pretending that a like attempt might be made on his own person even in France (for the daggers of the Assassins despised the bstacles of distance), he ostentatiously appointed a new body-guard for his protection. In the mean-

while the French within the town, declaring that Richard had employed the nunderers, rose in arms, and demanded from the widow of Conrad that she would resign Tyre to them : this she refused to do ; supported by the French, the German, and the Geand the people, siding with the countess, took up arms against the French. In the midst of the tumult Count Henry of Champagne, King Richard's own nephew, made his appearance, and, at the invitation of the people, took possession of Tyre and the other territories in Palestine which had been held by Conrad. Soon after, by marrying Conrad's widow, young Henry received her claim to the imaginary crown, and the crusaders, with the

<sup>\*</sup> The successor of St. Bernard, who had done more than any other single individual, after Peter the Hermit, to promote the cru-† The Arabs still call Jerusalem "El Gootz," or "The Blessed

Christians in the country, generally acknowledged Richard's nephew as King of Jerusalem. Richard had attempted to conceal his many causes of measiness, and when the army showed that they were awme that his presence was most earnestly prayed for in his own dominions, he issued a proclamation stating his fixed resolution of remaining in Palestine another year. By his promises and exertions he again restored something like unaimmity of purpose, and at the end of May the erusaders once more set out on their march towards Jerusalem under his command. Early in June he encamped in the valley of Hebron, where he received some messengers from Eugland bringing fresh accounts of plots within, and armed contederacies without his dominions. We follow the most consistent, though not the most generally received account, in saying that, on this intelligence, and at the prospect of the mercasing power of the Saracens, (who had not only strongly fortified and garrisoned the holy city, but had thrown a tremendous force between it and his advanced post.) and of the mcreasing weakness and destitution of the Christian forces, to whose wants he could no longer administer, Richard now came to a stand, and turned his heart to the west. A conneil, assembled at his suggestion, declared that, under present circumstances, it would be better to march and besiege Cano, whence Saladin drew his mani supplies, than to attack Jerusalem. This decision was perhaps a wise one, but it came too late Richard, however, pretended that he would follow it, upon which the Duke of Burgundy wrote a song reflecting in severe terms on his vacillation. Richard did not reply by despatching two conssumes of the Old Man of the Mountain, or by adopting any other violent measure: he revenged himself with the same instrument with which the offence had been given, and wrote a satire on the vices and forbles of the Duke of Burgundy. It could not be expected, however, that the Lion-heart should renounce his great enterprise without feelnigs of deep mortification. It is related of him that when a friend led him to the summit of a mountain which commanded a full view of Jernsalem, he raised his shield before his eyes, declaring that he was not worthy to look upon the holy city, which he had not been able to redeem. If the expedition to Egypt had ever been senonsly contemplated, it was presently seen that it was impracticable; for as soon as a counter-march from the Hebron was spoken of, all discipline abandoned the camp, and, after some conflicts among themselves, the mass of the French and Germans de-

serted the standard altogether. Richard then fell

back upon Aere. Taking advantage of the circumstance, the vigilant Saladin descended from the

mountains of Judea, and took the town of Jaffa, all

gence Richard ordered such troops as he had been

able to keep together to march by land, while he, with only seven vessels, should hasten by sea to

the relief of Jaffa. On arriving in the road he

but the citadel.

At the first breath of this intelli-

found the beach covered with a host of the enemy, but, turning a deaf ear to the advice and fears of his companions, and shouting "Cursed for ever be he that followeth me not," he leaped into the water. The knights in the ships were too high-minded to abandon their knig; and this small body dispersed the Suracens, and retook the town. On the following day, between night and morning, Saladm cante up with the main body of his army; and Richard, who had been joined by the troops that had marched by land, went out to meet lum in the open country behind Jaffa. The Lion-heart imide up for his immense interiority in point of immber by careful and indicious arrangement; and the victory of Jaffa, which was most decisive, is generally esteemed as the greatest of his many exploits Overpowered by a generous admiration, Saphadin, seeing him dismounted, sent him, diaring the action, two magnificent horses, and on one of these Richard pursued his successes till nightfall—Every champion that met him that day was killed or dis mounted; and the ordinary troops, whenever be headed a charge against them, are said to have turned and fled at the very sight of him. It was by deeds like these that Richard left a traditionary fame behind him that grew and brightened with the passing years, and that his name became a word of fear in the mouth of the Musselman natives. "This fremendons name," says Gibbon, "was employed by the Syrian mothers to silence then infants; and if a larse suddenly started from the way, his rider was wont to exclaim, "Dast than think King Richard is in that buch," \*

As the battle of Jaffa was the most brilliant, so also was it the last fought by the Lion-heart in the Holy Land. His health and the health of his glorious adversary were both declining; and a motival admiration and respect facilitated the terms of a treaty which was concluded shortly after, A truce was agreed upon for three years, three months, three weeks, three days, and three hours; Ascalon was to be dismontled, after Richard had been remibursed the money it had cost him, but Jaffa and Tyre, with all the castles and all the country on the coast between them, were to be left to the peaceful enjoyment of the Christians. The pilgrims of the west were to have full liberty of repairing to Jerusalem at all seasons without being subjected to those tolls, taxes, and persecutions which had originally provoked the crusades. All parties immediately prepared to avail themselves of the treaty, and since they could not enter Jerusalem as conquerors, to visit it as beensed pilgrims. The French, who had refused to take part in the battle of Jafla, and who were on the point of embarking at Acre, now declared their intention of staying yet awhile, that they, too, might visit the holy sepulchre; but Richard, indignant at their recent conduct, told them they had no claim to the benefits of a treaty which they had done nothing to procure. The rest \* The old Sire de Joinville is the reporter of this, " Cuides to que ce soit le roi Richard?" are his words.

nobly protected them from all mjury or insult.

The friends and relations of the hostages that had been murdered at Acre threw themselves on their knees before him, imploring permission to take vengeance on the Christians, who were now in their power; but he rejected their prayer with disgust, and successfully controlled their fanaticism and revenge. The second body that arrived in Jerusalem experienced the greatest kindness, as we

learn from Vinesauf, who was one of the party. The Bishop of Salisbury, who led the third body of pilgrums, was received with marked respect, being invited to the royal palace, and admitted to a long and familiar conversation with the sultan. Saladm was eager of fame, even from the Christians. "What say your men of your king and of me!" he inquired. "My ling," replied the bishop, "is acknowledged as one surpassing all men in valorous deeds and generous gifts; but your fame also stands high, and were you but converted from your unbelief, there would not be in the world two such princes as you and Richard." Saladın applanded, as he had often done before, the loval frankness and the courage of the English king, but blumed his rashness and unnecessary exposing of himself; ending this part of the conversation by saying that, for his own part, he would rather enjoy the reputation of modesty and prudence, than that of mere audacity. He conceded to the bishop's request that the priests of the Latin church should be allowed to have regular establishments at Jernsalem, Bethlehem, and Nazareth,—a privilege hitherto confined to the eastern churches of Greece, Armenia, and Syria. A violent fever, brought on by his tremendous exertions in the field of Jaffa, is said to have been the cause why Richard himself did not visit Jernsalem; but it is at least probable that his reluctance to enter merely on suffrance that town which he had so vehemently hoped to conquer, had some

share in this omission In the month of October, 1192, on the feast-day of St. Dionysius, Richard finally set sail from Acre with his queen, his sister Joan, the Cypriot princess, and the surviving bishops, earls, and kinghts of England, Normandy, Anjou, and Aqui-The next morning he took a last view of the mountains of Lebanon and the hills above the With outstretched arms he exclaimed, "Most hely land, I commend thee to God's keeping. May be give me life and health to return and rescue thee from the infidel." storm arose and scattered the fleet:-it was the usual season for tempestuous weather in the Mediterranean; but people attributed the storm to the wrath of Heaven at the Christians sailing away and leaving the tomb and the cross of Christ unredeemed. Some of the vessels were wrecked on the hostile shores of Egypt and Barbary, where the crews were made slaves; others reached friendly ports, and, in time, returned to England. The galley in which Richard's wife and the other ladies

seilles, fearing the malice of his numerous enemies, he suddenly changed his course for the Adriatic, resolving, it should seem, to pursue his way homeward from the head of that sea through Styria and Germany. He reached the island of Corfu about the middle of November, and there he hired three small galleys to carry him and his suite, which consisted of Baldwin de Bethune, a priest, Auschu the chaplam, and a few Knights Templars,-m all twenty individuals. After escaping capture by the Greeks, who were among his numerous enemics, he landed at Zara, on the coast of Dalmata, where his liberal expenditure attracted attention, and defeated the object of his disguise. He had put on the humble weeds of a pdgrim, hoping that this diess, with his beard and hair, which he suffered to grow long, would enable hun to cross the contment without being discovered. A sterm drove lum on the coast of Istrm, between Venice and Aquileia. From this point he and his companions, erossing the Frmh mountains, proceeded inland to Goritz, a principal town of Carmthua. He could hardly have taken a worse course; for Maynard, the governor of this town, was a near relation to Contact of Montferrat. Richard sent a page to Maynard to ask for a passport for Baldwin of Bethune and Hugh the merchant, who were pilgrims returning from Jerusalem. To forward his request the young man presented a very valuable ring as a proof of his master the merchant's good will towards the governor. Maynard, much struck with the beauty and value of the ruby, exclaimed, "This is the present of a prince, not of a merchant; -your master's name is not High, but King Richard: tell him, from me, that he may come and go in peace." The king was alarmed at this discovery, and, having purchased some horses, he fled by night. Baldwin de Bethune and seven others who remained behind were arrested by Maynard, and the news was spread for and wide that the King of England was advancing into Germany in a helpless state. The fugitives rode on without accident or molestation till they reached Freisach, in the territory of Saltzburg, where Richard was recognised by a Norman knight in the service of Frederick of Beteson, another near relation of Conrad. The Norman's sense of duty to his native prince overcame the love of money, for a large reward had been offered for the detection and apprehension of the disguised king, -and instead of seizing him he warned him of his danger, and presented him with a swift horse. Richard escaped with one knight, and a boy who spoke the language of the country, but all the rest of his companions who had been able to keep up with him thus far were taken and thrown into prison. After travelling three days and three nights without entering a house, and almost without

were embarked reached Sicily in safety. It is not

very clear why Richard sailed in another vessel, or

why he did not take his way homeward through the friendly land of Navarre; but we are told that

when within three days' sail of the city of Mar-

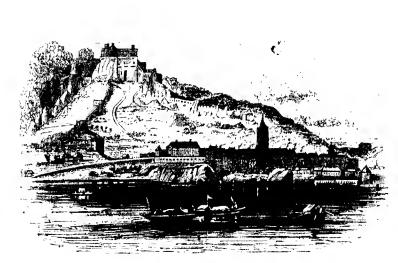

[Book III.

nourishment of any kind, he was compelled by Imager and sickness to enter Erperg, a village close to Vienna. His ignorance of the country was probably the cause of his lighting on a spot which, of all others, he ought most carefully to have avoided. Though sensible of his danger, Richard was too weak to renew his flight. He sent the boy to the market-place of Vienna to purchase provisions and a few comforts which he greatly needed. With his usual thoughtlessness in these matters, he had

given the boy a quantity of money, and dressed lum in costly clothes. These things excited attention, but the messenger cluded inquiry by saying that his master was a very rich merchant, and would presently make his appearance in Vienna. The hoy was again sent into the town to make purchases, and for some days escaped further notice: but one day that he went as usual, the citizens saw in his girdle a pair of such gloves as were not worn save by kings and princes. The poor lad was instantly seized and scourged, and on being threatened with forture and the cutting out of his tongue, he confessed the truth, and revealed the retreat of the king. A band of Austrian soldiers surrounded the house where Richard was, forgetting his pams and auxieties in a deep sleep. Surprised and overpowered as he was, Richard drew his sword, and refused to surrender to any but their chief. That chief soon made his appearance in the person of his deadhest enemy-Leopold, Duke of Austria, who had atrived from the Holy Land some time before him. "You are fortimate," said Leopold, with a triumphant smile, as he received the sword which had often made him quail; "and you ought to consider us rather as deliverers than as enemics;

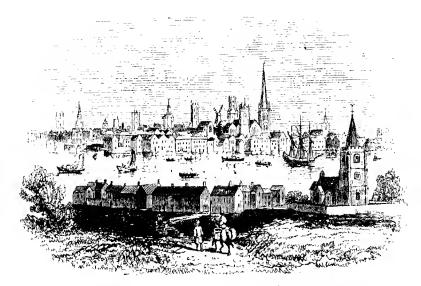

for, by the Lord, if you had fallen into the hands of the Marquis Conrad's friends, who are himning for you everywhere, you had been but a dead man though you had had a thousand lives." The duke then committed the king to the eastle of Tiernsteign, which belonged to one of his barons called Hadmar of Cunring.\* When the Emperor Henry, the degenerate son of

the great Frederic Barbarossa, was informed of this arrest, he claimed the prisoner, saying, "A duke must not pre-ume to imprison a king,—that belongs to an emperor " Henry, the sixth of the name in the list of emperors, and whom old historians designate as "a beggar of a prince, ferocious and avaricions,"† hated Richard almost as much as Leopold of Austria did. This mose chiefly out of the English king's close alliance with Tancred of Sicily, whom the emperor held as the usurper of his or his wife Constance's rights. In the summer of 1191, the year in which Richard sailed from Messma for Acre, Henry, accompanied by his Sicihan wife, advanced with a powerful German army into the south of Italy, and laid siege to the city of Naples, which made a faithful and gallant stand for Tancred. During the heats of summer a matarm fever carried off a vast number of his men, and some nobles of high rank,—the archbishop of Cologne among others, - and, as soon as Henry fell sick himself, he raised the siege of Naples, and made a disginceful retreat. Tancred then established himself on the disputed throne more family

<sup>\*</sup> There are several versions of Richard's adventures from the time he left Acre fachis equivity in the bonds of the emperor, but come nearly very to mis equivity in the maints of the emperor, but they do not duffer very essentially, and are about equally communic We have sological what appears to us the samplest and most con-sistent story, the clinic authorities being Hoveden, Brompton, R Coggeshall, William of Newbury, and Matthew Paris. † Legendre, Hel, de France.

AANN, as it appeared at the commencement of the Eighteenth Century.

than ever, nor had the emperor been able to retrieve his honour in the South. He was, however, at the moment of Richard's capture, engaged in preparations for that object, and he was overjoyed at an event which would save him from the dangerous hostility of so great a warrior and so powerful a prince; for the English king, it will be remembered, had entered into an alliance, offensive and detensive, with the occupant of the Sicilian throne, and Henry and his advisers had little doubt that, if he reached England in time, Richard would perform his part of the treaty and prevent the success of the Emperor.\* The Duke of Austria would not resign his prisoner without a reservation of his own claims, and a payment, or at least a promise, of a large sum of money from Henry. The disgraceful sale and transfer took place at the feast of Easter, 1193, after which, it appears that, even in Germany, Richard was entirely lost sight of, and men knew not where he was confined for some time.

In following the romuntic adventures of one who was rather a kinght-errant than a king, and whose history is more that of a crusade than a reign, t we have strayed far and long from Eugland. And what were the home events during the interval? Our information is scanty, but enough is on record

† Sir James Mackintosh.

to show that they were of a gloomy nature, and that the country paid dearly for the knight-errantry-of the knig.

The tragedy of the Jews, enacted at Richard's coronation, was speedily repeated in several of the other principal towns of the kingdom, beginning at Lann in Norfolk, in the month of February, 1190, while Richard was in Normandy. All these horrors, indeed, were committed before he sailed for Palestme; but though so near home, he was unable or unwilling to check them in their progress, or inflict a proper punishment on the offenders. Withm a month, the populace rose, and robbed and slaughtered the Jews at Norwich, Stamford, St. Edmondsbury, and Lincoln. The great massacre of York was not a mere popular tumult; it was conducted in a more systematic manner. On the 16th of March, in the dusk of the evening, a number of armed men, apparently strangers, entered the city, and, in the darkness of night, attacked the house of a very rich Jew, who himself had fallen six months before in the riot at London. His widow and children were butchered,—their property was carried off,—their house was burnt. On the following day, Jocen, another wealthy Jew, but who had escaped with life from London, sought refuge in the castle of York with his movable treasures and family; and as the governor received him, on his stating that his house was marked for destruction on the ensuing night, most of the Jews in York and the neighbouring country followed his example, and they also were received within the fortress. Soon after, the governor left the eastle; and at his return, the Jews, who, it is said, amounted to five hundred men, besides women and children, fearing he came with evil intentions, and that the mob

<sup>\*</sup> Tancred died at the end of 1193, during Richard's imprisonment. He died a king, and transmitted the crow to his soning son William, who, however, could not keep it on his bead. The Emperor Henry, to 1195, enucled with Richard's ransom, invaded his dominions, and become moster of them after much treachery and bloodshed. The cinclines committed by the gaolet of Court & Lion were most attactions, his advent in Sculy and Naples was made memorable by an apparently interminible process of burning, hanging, blinding, and mutilating. Richard's mother, Eleanor, wrote in earnest terms to the pope, implaining that he would endeavour to put a stop to these horiors. Richard lamself was too much occupied with his wars in Prance to interfeto.

which followed would enter with him should the drawbridge be lowered, refused him ad-They excused their disobedience by stating their reasonable dread of the rabble; but the governor flew into a transport of rage, and, in conjunction with the sheriff of York, ordered the very rabble to attack the castle. It is said that he soon repented of this command, and that he tried to recal it, but in vain. The mob, which continualty increased, and which was kept in the highest state of fervour by a mad monk, who exhorted them night and day to exterminate the cuemies of Christ, laid close siege to the castle, and, at the end of several days, had made all their preparations to take the place by assault. On the eve of the day fixed for the assault, a learned Rabbi. who had been but a short time in England, addressed his afflicted and now despairing brethren:— "Men of Israel," he said, "God bids us die for the law, and our glorious ancestors have so died in all ages. If we fall into the hands of these our cienies, not merely death but eruel torture awaits Let us, then, return to our Almighty Creator that fife which he gave;—let us die willingly and devoutly by our own hands!" The majority applanded this resolution. They kindled a large fire; they burnt their eastly garments and their Eastern shawls; they destroyed or buried their pre-cious stones and vessels. They set fire to part of the eastle in the hope that the whole might be consumed with them, making a vast funereal pyre; and then Joeen, as the chief man among them, ent the throat of his own wife. The rest followed his example, each of them entting the throats of his wife and children. When the women and children were all despatched, Joeen stabbed lumself; and the other men stabbed themselves after lum. the following morning, as the rabble prepared for the assault, they saw only a few dews who had shrunk from the complicated horrors of the over night. Pale as ghosts, these wretches spoke from the battlements, and, in the hopes of saving their lives, expressed their readiness to abjure their religion. On this condition, the mob promised that their lives should be spared. The gates of the castle were then thrown open, and, in the next minute, every Jew in it that still lived was barbarously nurdered. The Christians then marched to the eathedral church, and got forcible possession of the bonds of Christian debtors, which the Jews had deposited there for greater security; and having lit a fire in the middle of the nave of the church, they burnt the bonds in a mass.\* As the perpetrators of this summary method of extinguishing debt by destroying the securities were not of a condition to have money transactions with the Jews, a suspicion naturally arises that they were incited and directed in part of their operations by their superiors, who were in debt to the only people who then had money to lend. On this dreadful occasion, an unusual degree of activity was shown by the government; but the proceedings adopted were · Hoved .- Brompt ,- Matt, Par,

The next important events during Richard's absence arose out of the struggle for power between Hugh Pudsey, the hishop of Durham, and Longchamp, the hishop of Elv. The reader has been already informed how Pudsey purchased the post of chief justiciary for 1000 mm ks. Richard, who was never scrupplons in such bargams, before he departed from England nonunated a new regency, and appointed other justiciaries, by which measures Pudsey's bought anthority was wofully reduced. These additional justiciaries were, Hugh Bardolf, William Briweic, and Longehamp- the last-named being the royal favourite, in whose hands Richard openly showed his intention of placing the whole power of the government. Besides his justiciaryship, Longchamp held the chancellorship, for which he had pind 3000 marks. He was, moreover, intrusted with the custody of the Tower of London. He was a man of great worldly wisdom, activity, and talent for business; his ambition was immense, and must soon have made itself felt; but the first accusation his opponeuts seem to have brought against him was, his lowness of birth. His grandfather, they said, had been nothing but a serf in the diocese of Beauvins. Richard, however, who did not judge of him by the condition of his grandfather, issued letters patent addressed to all his beges, commanding them to obey Longehamp in all things even as they would ohey the king himseff. He wrote to the pope, to obtain for him the legation of England and Ireland; and when Longehamp was appointed legate -which he was immediately-his power in spiritual matters completed his authority. The first act of his administration was the digging of the Tower ditch; but, to use the words of Palgrave, " he had more skill as a politician than as an engineer; for he supposed that the river Thames would keep the excavation constantly full."

searcely characterized by the purity and proper

efficiency of justice. Longchamp, the bishop of

Ely, in his quality of chancellor and chief justiciary

of the kingdom, went to York with an armed force,

displaced the sheriff and governor, and laid a fine

on the richest and fest of the citizens of York, u ho

had not moved in the riot. As the king was still

pressing for money, for the holy war, it appears

that Lougchamp's chief motive in moving at all in

the matter was to procure some, and that the amount

of the fines raised was remitted to Richard on the

continent, whither many of the real crimmals, who

were emsaders, had already repaired to march un-

der his banner; the rest of the ringleaders had fled

into Scotland; and as the rabble of the town had

no money to pay, they were let alone, the "stout

bishop " dealing only with such as could pay.

Poor Pudsey would not without a struggle sink into the obscurity for which he seems to have been hest fitted. Complaints against Longchamp's excessive power had been sent after Richard, and he arrived in great triumph in Loudon, with letters from the king, importing that he should be restored to some part, or to the whole, of his former there from the barons of the Exchequer, who re-Thus rejected, fused to admit him on the bench. Pudsey posted after Longchamp, who was in the north, and surrounded by an armed force devoted

HISTORY OF ENGLAND.

to his interest. When the brother bishops met, he of Ely was all courtesy and compliance. He said he was quite willing to obey the king's commands; and then he invited his lordship of Durham to visit him that day se'ninght in the royal castle of Pudsey, with "smgnlar sumplicity," accepted the myitation; and as soon as he was within the castle-walls, Longchamp laid hands on lum, exclaiming, " As sure as my lord the king liveth, thou shalt not depart hence until thou hast

authority. Although Longehamp was absent from

London, his rival received an immediate check

surrendered all the castles which thou holdest. This is not bishop arresting bishop, but chancellor arresting chancellor." Nor was Pudsey released from this duress until he surrendered the castle of Windsor, and the custody of the forest, together with the shrievalty of the county, as well as the carldom of Northamberland and the lordship of Sadburgh--everything, in short, which he had purchased from the king. Longehamp's power was now without check or control. He had the whole powers of cavil and unittary, and, we may add, ecclesiastical government; and be as represented as tyraminizing equally over clergy and laity. " Had he continued in office," said his enemies, "the kingdom would have been wholly exhausted; not a girdle would have remained to the mail, nor a bracelet to the woman, nor a ring to the knight, nor a gem to the Jew." Another writer says be was more than a king to the laity, and more than a pope to the clergy. Abroad and at home, he made a display of as much or more power and parade than had been exhibited by any Norman king. A mimerous guard always surrounded his house; wherever he went he was attended by a thousand horse; and when he passed the night at an abbey or any house on the road, his immense and greedy retume consumed the produce of three whole years - a poetical exaggeration, implying that they ate, and drank, and probably wasted a great deal. He was a mumificent patron of minstrels, troubadoms, and jongleurs; he enticed many of them over from France, and these sang his praises in the public places, saying there was not such a man in the world.\* It is evident that Longchamp was vain of his authority; but there is nothing to indicate that he was not most loyal to the king, and auxious for the preservation of peace in the kingdom: the worst shades in his portrait were put in by men who were notoriously disloyal to Richard, and careless of delinging the country with blood, so long as they fancied that they were forwarding their own views; and it was the lushop's decided opposition to these men that first called forth the accusations against him. Peter of In those turbulent times, and with such crafty, remarseless opponents as Earl John and his advisers, it was almost impossible that he should preserve peace; but while the ambitious and the great envied him, it is probable that the humbler and quieter classes in the land saw him with pleasure get that power into his hands which alone could give him a chance of averting the storm. He was the first to see that John was endeavouring to secure the succession to the throne, and he steadily opposed those pretensions. After many violent dissensions, John wrote to his brother, to tell him that the chief justiciary was ruining king and kingdom; and several barons of his faction put their signatures or crosses to this letter Richard, whose confidence in Lougehamp was scarcely to be shaken, sent, however, from Messina two letters patent, in which he ordered, that if the accusations against him were true, then Walter, archbishop of Rouen, was to assume the regency, or chief justiciaryship, with William Mare-chal and Geoffrey Fitz-Peter, as his colleagues; if false, the three were, nevertheless, to be associated with him in the government. Although these letters are preserved in the contemporary chronicle of Ralph de Diceto, their anthenticity has been questioned; and it appears quite certain, that if they were really written, Richard repented of his doubts, and that immediately before he set sail from Messma he addressed letters to his subjects in nearly the same terms as those written about a year before from France, requiring them all to obey Longchamp, whom he again mentions with the greatest affection and honour. It is also equally certain, that though the archbishop of Rouen came into England from Sicily, he never showed any royal order until a year later, when Longehamp was overwhelmed by his enemies, who never made any judicial inquest mto his conduct-nor could they have made it with any farmess, seeing that they would have been both accusers and judges. As soon as John knew for a certainty that his brother had actually departed from Sicily, beyond which the real perils of the crusade were supposed to begin, he assumed the state and bearing of an heir-apparent about to enter upon his inheritance. He knew that Richard had named

speaks most highly of Longehamp, and styles him a

man famed for wisdom and unbounded generosity, as

also for his amiable, henevolent, and gentle temper.

BOOK III.

his nephew Arthur for his heir; but that circumstance irritated without discouraging himhe felt that a child would be no formidable rival if he could only dispose of Longchamp, who was bent on domg his master's will m all things, and who, by Richard's orders, had opened a treaty with the King of Scotland to support Arthur's claims in case of necessity. The decisive conflict, which had been postponed as long as Richard was in Europe, began as soon as his loving brother thought he was fairly in Asia. Gerard de Camville, a factious baron and a partisan

Blois, whose testimony carries no small weight, \* Introduct. Rot. Cur. Reg .- Matt. Par .- Hoved ,- Newbr .-

CHAP. I.]

authority. Raising an army, Longeliamp marched to Luncoln; but, while he was besieging the castle, John put himself at the head of a still more numerous army, and attacked the royal castles of Nottingham and Tickhill, and took them both after a siege of two days. This done, the earl sent a threatening message to the regent. Longchamp, who was not much of a soldier, was taken

CIVIL AND MILITARY TRANSACTIONS.

by surprise; he gave up the siege at Lincoln, and Gerard de Camville d.d. homage for his castle to John.\* The regent then convened the chiefs of the king's army and the barons most attached to Richard, and warned them in strong terms that John was seeking the government: but he was not properly supported, and, being compelled to yield, a truce most disadvantageous to Longchamp was concluded between the contending parties. The regent was forced to agree that a certain number of the royal eastles, the possession of which had lotherto constituted his greatest strength, should be placed in the custody of various bishops and barons, who were sworn to keep the forbesses in the king's fealty until he should return from Palestime; but should be the during his julgrimage, then they were to deliver them to Prince John. At the same time another concession of almost equal importance was extorted from Longchamp, the settlement in favour of Arthur was formally set aside, and, the regent himself directing the act, the carls and primates of the kingdom took the oath of fealty to John, acknowledging him, should Richard die without issue, as heir to the throne † For a short time John was satisfied with the progress he had made, and left to the chancellorregent his places and honours; but the tranquillity thus insured was disturbed by circumstances artfully arranged. Geoffrey, archbishop of York, the son of Henry the Second by Fair Rosamond, had been compelled to swear that he would live out of England. He was now preparing to return to obtain possession of his church. The whole board of justiciaries joined their clief in prohibiting his landing; and Longeliamp, fairly acting in the exercise of his authority, commanded the sheriffs to arrest Geoffrey, should be disregard the muunc-At the instigation of his half-brother John, Geoffrey defied the regent, and landed at Dover, where, however, he was presently obliged to take refuge in a church. When the requisition was made by the sheriff or the constable of Dover, he replied that he would never submit to that "traitor, the bishop of Ely." It was lequired of him that he should swear fealty anew or depart the kingdom. For three days he refused to answer, and his asylum was respected the while; but on the fourth morning the officers broke into the church, where the archbishop had just concluded mass, seized him at the foot of the altar, and, after

of John, claimed the custady of Lincoln Castle, literally diagging him through the streets, lodged" and kept that place in defiance of the regent's him in Dover Castle. At the news of this transaction, which excited considerable indignation among the people, John and Ins. party were overjoved. They had got Longehmup fast in the snare they had laid for him, and now they produced what they called Richard's anthority for displacing hun altogether, and substituting the archbishop of Rough. In vam did the regent plead that he had not directed the more violent and offensive part of the proceedings against Geoffrey,-that the authorities of Dover had thought fit to understand much more from his warrant than he ever intended was equally in vain that, at the solicitation of the bishop of London, who gave security for his good hebayiour, Longehamp released Geoffrey within a very few days, and allowed lum to go to London. John, acting with the Archbishop of Rouen, who assumed all the rights of a chief justiceary, peremptorily summoned him to make amends to the archbishop of York, and to answer for the whole of his public conduct before the King's Council. The semblance of an affection which was as sudden as it was tender, spring up between John, who had lutherto hated him, and his illegitimate On the one side all the prelates and barons in the kingdom were invited or ordered by John to assemble—on the other they were all forbidden by Longehaup (who declared that John's object was to disinherit he sovereign) from holding any such meeting. The meeting, however, was held at Loddon Bridge on the Thanics, between Reading and Windsor; and Longchamp himself, who was in Windsor Castle, was ordered to attend, --- an order he did not care to obey. There John and Geoffrey embraced each other weeping; and John, who was a good actor, fell on his knees before the bishops and barons, and implored them to avenge his dear brother's wrongs. Soon after this meeting Longchamp marched from Windsor Castle to the capital, being informed by Richard Biset that John intended to seize the city of London. The regent regained the citizens to close then gates against the carl; but Geoffrey, the archhishop of York, who was beforehand with him, had spread disaffection, and John was close behind him with a considerable army. Under these curcumstances the Londoners replied to the regent's summons by declaring that they would not obey a traitor and disturber of the public peace. Sorely disappointed, Longeliump then took refuge in the Tower of London; and Earl John was joyfully received on taking a solemn oath that he would be faithful to his brother Richard, and would maintain and enlarge the frauchises of the city. On the following day, the 9th of October, 1191, it was decreed by what was called the mammons voice of the bishops, earls, barons, and citizens of London, that the chief justiciar should be deposed, and that John should be proclaimed "The Chief Governor of the whole kingdom " On receiving this news Longchamp fainted and fell on the floor. At an early hour the next morning John assembled 3 T 2

John seems to have assumed a royal authority in the domains which Richard had too liberally given him. From the importance of these possessions the chromelers call John the Tetrauch.

HISTORY OF ENGLAND.

blockaded the Tower both by land and water. The deposed regent came out of the fortress to receive the propositions of his opponents, which were rather liberal, in order, probably, to induce

receive the propositions of his opponents, which were rather liberal, in order, probably, to induce Longeliamp to ratify John's title. They offered him his hishopric of Ely, and the custody of furce of the royal castles. But he was not to be won, and his canduct on this occasion was honourable and dignified; he refused to commit any of the king's rights, or to surrender any of the powers intrusted to him by his master. "But," said he, "you are stronger than I; and, chancellor and justiciary as I am, I yield to force." So saying, he delivered up the keys of the Tower to John. It is rather sin prising that, after these proceedings, Langehamp should be left at large, and allowed to escape from the kingdom. It appears, however,

that he was obliged to put on an unseemly disguise. Some fe hermon's wives saw the tall figure of a woman sitting on the sea-shore near Dover, with a web of cloth under one arm and a mercer's yardmeasure in the right hand - upon a nearer inspection, the women discovered under the "ereen hood" the "black face and new-shorn beard of a man."\* It was the bishop of Ely, the regent, the chancellor, on his way to Normandy' John appointed the archbishop of Rouen grand justiciary and chancellor in his place, and sequestrated the revenues of his hishopine to answer for public momes which he was accused of having dissipated or purloined. His enemies said that, when expelled from office, he left nothing behind him in the treasury except empty chests and the keys. It is very probable that Longchamp did not leave much specie, but it should be remembered that Richard had been constantly calling upon him for money and had left him heavy debts to discharge; and the chancellor offered to account for every farthing which had come into his hands. maintained in the face of the world that his beloved master had never ordered his removal, which had been effected by force, in order that John might with the more case usurp the crown. The pope, to whom he wrote from Normandy, took this view of the case, and warmly espoused Longchamp's quarrel, denouncing excommunication against all those who had seized his authority. This time the anathema had little or no effect, for not a bishop in England would obey the commands of pope or legate. The displaced minister wrote to his master, who assured him that he had not withdrawn his confidence from him, and it should appear (we venture no positive assertion where all is mystery and confusion) that Richard made representations

• Viderant fariem hominis norm et novitei rasam. Hoved. We have omitted the indelicate and improbable parts of the story of Long-hamp's exaps which were written by Hugh, hishon of Covenity, the latter enemy of the chancellor. Peter of Bois took Hugh to account for this sature, which was evidently intended to put Long-champ in a more ridiculous and degrading light than Archbishop Goodley had been in at the same place—Dorer.

that it would much displease the king to know how Longeliamp had been removed from the government without his command. It is quite evident that this fickle, selfish prince only winted to make A council being assembled at London during these negotiations, a messenger suddenly presented himself, and announced the arrival of his master Longelmmp, "legate and chancellor," at Alarmed at this intelligence, the new munsters sent for John, who soon appeared and told them that Longchamp defied them all, provided he could obtain his (John's) protection, for which he offered 700%, to be paid within a week; and he concluded this significant speech by saving that he was in great want of money, and that "a word to the wise is enough." Such a monition could not be misunderstood, and, anxious to prevent the return of their great rival, the ministers agreed to buy John off by lending him 500l, from the king's treasury. John then withdrew his proposition; Eleanor did the same, and a harsh and threatening letter was addressed to Longchamp in the name of the queen, the clergy, and the people, insisting upon his unmediate departure from England.\* The fallen minister withdrew again to Normandy, there to await the return of his master. Such was the state of the government in Eng-On the continent, the French king, who was in close correspondence with Earl John, and who disregarded all his solemn oaths, was preparing most dishonourably to take advantage of Richard's absence. Almost as soon as he returned to France, Philip had demanded the cession of Gisors and the other places in the Vexin constituting the dower of that princess, together with the person of Alice, whom, strange to say, he offered in marriage to John, who (stranger still) listened to the proposition with a willing ear. The governor of Normandy replied that he had no orders from his master; and all of them knew that, by the treaty of Messina, these restitutions were not to be made · Palgrave, Rot. Cur. Reg.

who conducted himself mildly and conscientionsly, refusing all bribes, and deciding equitably and

according to law. Prince John, on the contrary, was only to be gained by money, and when Long-

champ made him a large offer for repurchasing his

places, he invited the exile back to England, pro-

mising to reinstate him. Eleanor, it is said, had been already propritated by eits and promises; and she certainly joined John in Litting up Longchamp,

and endeavouring to persuade the archbishop of

Rouen and the other prelates and nobles to reinstate

the legate. John, who, in fact, had displaced

Longchamp under a colour of acting in obedience

to his brother's orders, now unblushingly urged

until the return of Richard. Philip then threatened to invade Normandy; but, when his army was partly assembled, some of the French nobles refused to accompany him, alleging the oaths they had taken to protect his states, and in no way make war on Richard till he should be returned from the crusade. As the pope, too, expressed his abhorrence of the project of invasion, and threatened him with the thunders of the church, Philip was obliged to renonnce his disgraceful enterprise, and to satisfy lumself with hatching mischief to his rival by intrigues still more disgraceful. John, it appears, offered no objection whatever to the marriage with Alice, and Philip engaged to put him in possession of all that his hear and so long coveted \* These intrigues were in fit activity when the news of Richard's departure from the Holy Land arrived The people were daily expecting his m England arrival, when vague and contradictory, and then very manspicions, intelligence began to circulate. Some returned crisaders asserted that he imist have fallen into the hands of the Moors, others that he must have penshed at sea, and others again affirmed that they had seen the ship in which he had embarked safe in the Italian port of Brindisi. We are sorry at being again forced to reject a touching and beautitul legend, but, leaving Blondel in the congenial hands of the poets, we fear that in historical soberness we must attribute the discovery of Richard's imprisonment to the copy of a letter from his gaoler Henry to Philip. The emperor told the king that the enemy of the empire-the disunber of France—was loaded with chains and safely lodged in one of his eastles of the Tyrol, where trusty guards watched over him, day and night, This discovery shocked and with drawn swords disgusted all Europe. Longchamp, who was still on the continent, was one of the first to learn it, and the first to adopt measures for his master's deliver-Earl John openly rejoiced at the michgence; but Richard's English subjects voluntarily renewed their oaths of allegiance. The archbishop of Rogen, and the bishops and barons, met at Oxford, and munedantely sent two deputies—the abbots of Broxley and Pont-Robert-into Germany to give Beyond the the king advice and consolation. Alps, as everywhere else where the cause of the crusades was cherished and Richard known as the greatest champion of the cross, a most violent indignation was excited. The pope at once excommunicated Leopold, the Austrian duke, and threatened the emperor with the same sentence unless he immediately liberated Richard. Seeing that he could not work his ends with English means, John hustened over to Paris, where he surrendered the greater part of Normandy to the French king, and did Philip homage for the rest of his brother's continental dominions. He then engaged some troops of foreign mercenaries, and returned home, having agreed with his ally, that Philip should fall upon Normandy with a powerful army, while he overran England.

. Script, Rer. Franc,-Hoved,-Newb.

John took the castles of Windsor and Wallingford, and, marching on London, reported that his brother was dead in prison, and demanded the crown as hawful heir. For a moment the steadiness of the grand justiciary, the archbishop of Ronen, was doubtful, but the prelates and harons raised Richard's stundard, defeated John's increenaries, and compelled him to retreat. He, however, obtained an armistice, during which he extended the threads of his intrigues. Philip was still less fortunate in Normandy; for, after advancing to Rouch, he was besten by the indignant and enthisiastic people commanded by Richard's old comrade, the brave Earl of Leicester, who had got safely from Palestine, and he was obliged to make a most disgraccful retreat into his own terri-In the mean time, though irritated by the indig-

nities he suffered, and at times depressed by the notion that his subjects would abandon him - u captive as he was in the hands of his ungenerous enemics-Richard's sangume and joyal spirit saved lum from any long fits of despair or despondence. He whiled away the weary homs by singing or composing troubadom verses,\* and when tired of this resource, he caroused with his keepers, who seem to have been about equally pleased with his music, his facetiousness, and his powers of drinking. Borne down by the weight of Entopean opinion, and the authority of the church, the emperor was at length obliged to relax his hold; and Longchaum, who was now with Richard, seems to have been instrumental in inducing him to produce his captive before the diet at Hagenau - Richard was on his way to that place, when the two abbots despatched from England first met him. He received them in a gay and courteous manner. The full accounts they gave him of his brother's treachery made him look grave; but it was only for a moment, and he said, laughing, " My brother John, however, will never gam a kingdom by his valour." On his arrival at Hagenau, Richard was received with a

 The lave stanzas of Riching have all been lost, but a short poeu of his, written in prison, has been preserved. The following prissages from Mr. Elm's translation will give an idea of it. There is more pathos in it than might be expected, that most men can be pathetic about their own sullerings .

It saydive wight attempt the tuneful strain. His voice, helike, full dolefully will sound, Yet, to the sad, 'us contout to complain Friends have I state, and promoses abound. Shame on the niggards!—Since, these writers lwain l mansom'd, still I hear a tyrant's i lean, Full well they know, my lords and noldes all, Of England, Normandy, Guenne, Ponton, Of Lagino, working the property uses a seal shall slight my poorest vassal shall. But all whom wealth could buy from chains withdrew. Not in reprocess 1 speak, nor ally vain, But I alone unpitted bear the them. My fate will show, " the dangeon and the grave Alike repel our kindred and our friends." Here am I left their pathy gold to save! Sad fate is mine, but worse their cross attends. Their lord will die, their conscience shall temain, And tell how long I wore this galling chain.

There are three more stanzas to the same strong nente, attributed to Richard is preserved. It is addressed to los cousin, Count Guy of Auvergue, whom it represents for lakewarmcousin, count tray of Auvergue, whom it requestions inkewarm-ness in not taking up arms against the trainst, King Philip. One passage is curious—" The desire of building strong castles makes you forgetful of ladies and gallanty. You are no more sean at howers or burnaments. Have a care of the French; they are Lom-bards in their dealings."—Hist, Troubad. many demands, with which his captive would not comply, saving he would rather die where he was, than so dram his kingdom and degrade his crown. On the following day, Richard appeared before the diet of the empire; and Henry, who had no right over him, except what he gained by treachery and force, and from the exploded theory of the imperial supremacy over all the kings of the west, accused him of many crimes and misdemeanors, the chief of which were: -1. His alliance with Tancred, the usurper of Sicily 2. His treatment of Isaae, the Christian sovereign of Cyprus 3. His insults offered to the Duke of Austria, and through him to the whole German nation 4. His impeding the crusade by his quarrels with the French king. 5. His baying employed assassius to murder Conrad of Montferrat. 6. The most impudent charge of all -his having concluded a base truce with Saladin, and left Jerusalem in his hands, Richard, after asserting that his royal diginty exempted him from answering before any purisdiction except that of Heaven, yet condescended, for the sake of his reputation, to justify his conduct before that august assembly, which was composed of all the ceclesustical and secular princes of Ger-His speech is not given by any original writer, but it is stated by Hoveden and other contemporaries, that his reply to all the charges was manly, clear, and convincing—that his cloquence filled the members of the dict with admiration, and left no suspicion of guilt in their Matthew Paris says that the emperor was convinced of Plantagenct's innocence, and that he treated him thenceforth with humanity. He still, however, exacted a heavy ransom, though it is difficult to understand by what right, or under

emperor was discouraging.

Henry revealed all his avarice and unjustifiable pretensions, and made what decent pretext, by could detain Richard, or put lum to ransom, if his innocence was acknow-But there was no right in the transaction -no decency in the actors in it; it began in revenge, and was to end in money, and as much money as could be possibly obtained, without a care or a thought about guilt or innocence. After fixing one price, the emperor raised it to another, and the bargain was protracted for five tedious months, during which, though his fetters were removed, Richard was still kept in prison. This was, no doubt, the most auxious and most painful part of his captivity. He sent Longchamp, as his chancellor, to the council of regency, to press the raising of the ransom. The captivity of the king, or superior lord, was a case especially provided for by the fendal temures on which the vassals of the crown and others held their estates; and a tax of • Richard produced two letters from the Ood Man of the Mountain, of the Prince of the Assassins who (in them) gloried in having indered the morder of the Marquess of Mouth trial because the marquess had robbed and mindered none of the subjects. These letters are generally set down as spurious, but they may have been written, and as Sir James Mackiniosh remarks, the miskillial hands of the chroniclers may have distilgured them, without eucroaching on their substantial truth, But, true or false, such evidence was scarcely wanted.

pay 100,000 marks of pure silver of Cologne standard to the imperial court; that he was also to pay 50,000 marks to the emperor and the duke of Austria conjointly, giving sixty hostages to the emperor for 30,000 marks, and other hostages to the Duke of Austria for 20,000 marks; on condition, however, that these 50,000 marks were to be remitted altogether if Rich performed certain private promises. Several curses of this treaty were either secret or added afterwards. It was also agreed that Richard should restore Isaac of Cypins to his liberty, though not to his dominions, and deliver Isaac's beautiful daughter to the care of the Dake of Austria, and send his own mece, Eleanor of Brittany, the sister of young Arthur, to be married to the Duke of Austria's son. Henry, on his side, agreed to aid Richard against all his cuennes; and, that he might have the air of giving something for so much money, invested him with the feudal sovereignty of the kingdom of Arles, or Provence—an obsolete right which the emperors long claimed without being able to enforce it cording to Hoveden, one of the very best of contemporary authorities, Richard, in an assembly of the German princes and English envoys, by delivering the cap from his head, resigned his crown into the hands of Henry, who restored it to him again, to be held as a fief of the empire, with the obligation attached to it, of paying a yearly tribute of 5000 pounds. But is there not some error in the transmission of this statement, or was not the fanciful crown of Arles here intended? Such a debasing tender may, however, have been made by Richard to cajole the German, and defeat the active intrigues of his brother John and King Philip. These precious confederates offered to pay the eniperor a much larger sum than that fixed for the ransom, if he would detain Richard in captivity, Henry was greatly tempted by the bait; but the better feelings of the German princes, who had attended the diet, compelled him to keep his bargain. More difficulties than might have been expected were encountered in obtaining the money for the ransom; and what was procured seems to have been raised almost wholly in England, the continental dominions contributing little or nothing. In our island, the plate of all churches or monasteries was taken; the Cistercian monks, who had no plate, gave up their wool; and England, in the words of an old annalist, " from sea to sea was reduced to the utmost distress." Seventy thousand marks were sent over to Germany, and in the month of February, 1194, Richard was at length freed.\*

with an enthusiastic and honest joy. There was, it appears, wealth enough left to give him a magnificent reception in London; and one of the German barons who accompanied him is said to have exclaimed, "Oh king! if our emperor had suspected this, you would not have been let off so lightly."\* After spending only three days at London, he headed such troops as were ready, and marched against Nottingham Castle, belonging to Earl hn, which surrendered at discretion. As for John himself, heing timely advised by his ally, Philip, who wrote to him as soon as he learned Richard's deliverance, "Take care of yourself-

the devil is broken loose,"—he had put lumself in

safety at a distance. On the 30th of March,

Richard held a great council at Nottingham, at

which it was determined, among other things, that, if John did not appear within forty days, all his estates in England should be forfeited, and that the ceremony of the king's coronation should be repeated, in order that every unfavourable impression which his captivity had made might be thereby offaced | Accordingly, he was re-crowned with great pomp (not at Westminster, but at Winchester) on the feast of Easter. All his attention was again turned to the raising of money; and he proceeded with as little scruple or delicacy as he had done four years before, when filling his purse for the holy war. He resumed many of the estates which he had then alienated or sold, and took from several individuals the employments and offices which they lead bought, selling them all again to the best bidders. Even from a nature much less fiery л.р. 1194. and yindictive than Richard's, the forgiveness of

such myories as had been inflicted by the French king could scarcely be expected. Philip, moreover, who during his confinement had sent bim back his homage, was now actually in arms within, or upon the frontiers of, his continental states. Richard prepared for war, and his people of Eugland were as eager for it as himself. About the middle of May, he landed at Barflenr, in Normandy, bent on revenge. He was met at his landing by his craven-hearted brother John, who threw himself at his feet, and implaced forgiveness. the intercession of his mother, Eleanor, Richard forgave him, and received him into favour. is a noble trait, and a wonderful one, considering the amount of the provocation and the barbarous usages of the times." "I'forgive him," said Richard, " and hope I shall as easily forget his injuries as he will forget my pardon.". The demoniac character of John was placed in a not less forcible hight. To return to his brother, he had deserted

- month seremington the transfer and the transfer at in deference to the opinion of the council, i 1 Brompt.

from Philip, to whom he had sworn that he would never make peace without his concurrence: so far, however, his step was a usual one; but he further impressed it with his inherent treachery and ferocity. Before quitting Philip's party, he invited to dinner all the officers of the garrison which that king had placed in Evreux, and massacred them all during the entertainment. His hands were wet with this blood when he waited upon Richard; but, with all lus vices, we think too well of the Lion-heart to believe that such a deed facilitated his pardon. Although begun with fury, this campaign was carried on rather langually and on a confined scale, in part owing to the impoverished state of Richard's exchequer, and in part to the disaffection prevalent in most of his dominions on the continent. He, however, defeated Philip in several engagements, took several towns, and m one encounter got possession of his adversary's military chest, together with the cantulary, the records, and the archives of the crown. The campaign terminated, on the 23rd of July, in a truce for one year. Hubert Walter, who luid been а. п. 1195

lately advanced from the bishopric of Salisbury to the archbishopine of Canterbury, was appointed guardian of England and grand justiciary. He had shown his bravery and attachment to Richard m the wars of Palestine, and now he displayed admirable talent and conduct as a peaceful immister. He descryed better times, and a more prudent master. He had been educated under the great Ranulf de Glanville, and was versed in the science of the English laws. Under his administration the justices made their regular circuits; a general tranquility was restored; and men, gradually recovering from the late oppressions and vexations, began to be re-ammated with the spirit of order and industry. The absence of the king might have been felt as a real benefit to the nation, had it not been for his constant demands for money to carry on his wars abroad, and complete the payment of his ransom, which demands frequently obliged the mimster to act contrary to the conviction of his better judgment and his conscience. Hubert, however, seems to have raised more money with less actual violence and injustice than any of his predecessors. Longchamp was employed in some important emhassics, and continued to hold the office of chancellor till his death, which happened about a year before that of his master.

Towards the end of the preceding year death had delivered Richard from a part of his anxieties. Fearing that the brutal Leopold would take the lives of the hostages placed in his hands, the English king fulfilled one of his agreements, by sending the Princess of Cyprus and his mece, " the Maid of Brittany," into Germany. Before the ladies reached Vienna they received news of the As he was tilting on St. Stephen's duke's death. day, his horse fell upon him, and crushed his faot; a mortification ensued; and, when his physicians told him he must die, he was seized with dread at the end of the year without this marriage.

The monasteries alone were exempted. A.n. 1197. A war, contemptible in its results, but savagely cruel, again broke ont between Richard and Philip, and ended when their barons were tired of it, or when they, the kings, had no more money to purchase the services of Brahanters and other mercenaries. Even had the vengeance of Richard been less implacable, and the ambition of Philip to establish his supremacy in France, at

the cost of the Plantagenets, a less fixed and ruling passion, there were other causes which Newb,-Hoved,-Gervase,-Knighton.-Matt. Par.

surprise: they watched all his motions for several days, being always followed by a body of armed men ready to act at their signal. At length they caught him as he was walking quietly along with only nine adherents. They approached him as if they had no business with him, but when sufficiently near they laid hands on him, and the armed men, who were concealed close at hand, ran up to secure lnm. Loughcard drew his knufe, stabbed Genffrey to the heart, and then with his commudes fought his way to the church of St. Mary of Arches. He barrieaded the church tower, and there made a desperate resistance. On the fourth day fire was set to the tower, and the besieved were driven forth by the flames. They were all taken and bound,

HISTORY OF ENGLAND.

and, while they were binding Longbeard, the son of that Geoffrey whom he had slain plunged his long knife into his bowels. He fell, but was not so fortunate as to die there. Wounded and bleeding as he was, they tied him to the tail of a horse, and so dragged him to the Tower, where he was presented to the archbishop-regent, who presently sentenced him to the gallows. From the Tower they dragged him at the same borse's tail to " the

Elms" in West Smithfield, and there hanged limi on a high eibbet, and his nine companions along with hmu. The mob, who had done nothing to rescue him while living, honoured him as a saint and martyr when dead. They stole away the gibbet on which he was hanged, and distributed it in precious morsels for relies; they preserved the very dust on

wlnch he had trod; and by degrees not only the people in the neighbourhood of London, but the peasantry from distant parts of the kingdom, made pilgrimages to Smithfield, believing that miracles were wrought on the spot where the "king of the poor" had breathed his last. The archbishop scut troops to disperse these rustic enthusiasts; but, driven away by day, they re-assembled in the darkness of night; and it was not until a permanent guard was established on the spot, and many men and women had been scourged and thrown into prison, that the pilgrimages were stopped, and the popular enthusiasm and ferment ahated.\* many months after these events England was

name is not recorded, undertook to scize him by

would have sufficed for the disturbance of peace. In Brittany the rule or paramount authority of the English king was most unpopular, and the same was the case in Aquitaine, where Bertrand de Born, who had so often intrigued with Richard against his father Henry, was now intriguing with the French king against Richard. In both these states some of the most powerful of Richard's vassals raised the banner of war, and, at times separately, at times united with French troops, they fought with the view of emancipating their country from the Plantagenets, not heeding the

obvious danger of only changing musters and bearing the yoke of Philip. The Earl of Toulouse also declared war in the south, and, changing from an ally into an enemy the Earl of Flanders in the north at one time menaced Richard with his dangerous attacks. Though surprised and defeated by the Bretons at Carhaix, and beaten again by the Bretons united with some troops of France near Annale, Richard, on the whole, maintained his usual superiority in the field of battle. The Earl of Tonlouse was reconciled by a treaty of family alliance, Richard bestowing on him the

The most memorable incident of this campaign was the capture of the Bishop of Beauvais, a near connexion to the French king, and one of the most bitter of Richard's enemies. He was taken, fighting in complete armour, by Marchadee, the leader of the Brabanters in Richard's service. The king ordered bun to be loaded with irons, and

hand of his sister Joan, the queen-dowager of

Sicily. \*

cast into a dinigeon in Rouen Castle. Two of his chaplams waited on Richard to implore for milder treatment. "You yourselves shall judge whether I am not justified," said Richard. "This man has done me many wrongs. Much I could forget, but not this. When in the hands of the emperor, and when, in consideration of my royal character, they were beginning to treat me more gently and with some marks of respect, your master arrived, and I soon experienced the effect of his visit: over-night he spoke with the emperor, and the next morning a chain was put upon me such as a horse could hardly bear. What he now merits at my hands declare yourselves, and be just." The chaplains, it is said, were silent, and withdrew. The bishop then addressed the pope, imploring bim to intercede. Celestine rated him severely on his flagrant departure from the canons of the church; and told him that though he might ask merey as a friend, he could not interfere in such a

Richard imploring him to pity "his son," the bishop. Richard, who, like most of his Norman predecessors, was not wanting in a rude wit or caustie humour, replied to the pope by sending him the bishop of Beauvais' coat of mail, which was besmeared with blood, and had the following We have mentioned that Queen Berengaria and the two other ladies reached Sicily safely from Acre From Sivily they wont to Rome, where the Pope entertained them some months, and then caused them to be conducted to Aquitaine.

VOL. I.

case as pope. Soon after this the pontiff wrote to

know now whether it be thy son's coat or no." Though, as usual, sorely in want of money, Richard refused ten thousand marks which were offered as a ransom, and the bishop of Bennyms occupied his dungeon and wore his chains till Richard went to the grave. \* In the month of September of this same year

scroll attached to it, -an apposite quotation from the Old Testament, - "This have we found:

discase, misfortime, remorse, and a premature decay did the English king justice on another of his foes. The Emperor Henry died at Messina, after suffering an extremity of humiliation at the hands of his Sicilian wife; and in his dying moments he confessed his shanneful impostice to Richard, and ordered that the money he had extorted as his ransom should be restored. Though a bishop was charged with a message to Richard, and though the clause was solenmly inserted in the emperor's will, the money was never repaid. As the war again waxed languid, and the powerful vassals of both potentates showed again that they were actuated by other motives and interests than those of their masters, the two kings again spoke of peace, and meeting at Andely, on the Seme, finally "concluded upon an abstinence of war, to endure from the Feast of St. Hilary for one whole year." These paltry details vex and the the norrator, but it is impossible to convey a just notion of the course of events and the spirit of the times

A.D. 1198.—When the trace expired, hostilities were again renewed, and with greater ferocity than

ever, both princes burning and utterly desolating the territories they invaded, and tearing out the eyes of many of their pusoners. Near Gisors, Richard gained another victory, and Philip in his flight was nearly drowned in the river Epte, a bridge he had to cross breaking down under the weight of the fugitives. In his triumphant bulletin, Richard said, "This day I have made the king of France drink deep of the waters of the Epte!" As for himself, he had unborsed three knights at a single charge, and made them prisoners. It was Carur de Luon's last fight. A truce was concluded, and early in the following year, through the mediation of Peter of Capua, the pope's legate, it was prolonged and solemnly declared to be binding for five years. A fresh ground of quarrel arose almost immediately after, but the differences were made up, and, marching from Normandy, Richard repaired to Aquitame to look after his intriguing and ever-turbulent vassals in that quarter. A strange ballad had for some time been current in Normandy. Its burden purported, that in the Limousin the arrow was making by which the tyrant would die. The learned writer † who has collected all the discrepancies and contradictions respecting the circumstances by which Richard's death was attended, will not venture to decide whether these shadows east before Hoved.—Brompt.—Matt. Par — Newbrig.

without them.

the event arose out of the wishes of the people or indicated any organized conspiracy. We are inclined to believe ourselves that there was no conspiracy beyond the old, dark brooding, the settled hatred and vindictive spirit of his vassals of the Those fiery men, it will be remembered, had attempted the life of his father Henry more than once by shooting arrows at him. There are many contradictions which throw doubt npon parts of the commonly received story of the death of Richard, but all accounts agree in stating that the heroic Lion-heart fell before an obscure eastle, and in consequence of a wound received either from an arrow or a quarrel. The usual narrative, which has almost a prescriptive right to insertion, is to this effect: arriving from Normandy in the south, Richard learned that Vidomar, Viscount of Lamoges, his vassal, had found a treasure in his domains. This, as superior lord, he demanded; and when the viscount offered only half of it, and refused to give more, Richard, determined to have the whole, besieged him in his castle of Chaluz. The want of provisions reduced the garnson to the greatest straits, and they offered to surrender at the king's merey, their lives only being spared. Richard refused the terms, telling them he would take the place by storm, and hang every man of them upon the battlements. Tho garrison of the castle were driven to despair. The king, with Marchadee, the leader of his mercenaries, then surveyed the walls to see where the assault should be made, when a youth, by name Bertrand de Gurdan, having recognised him from the ramparts, praying God to speed it well, discharged an arrow, and bit the king in the left shoulder. Soon after the castle was i taken by assault, and all the men in it were butchered, with the exception of Bertrand. The wound was not in itself dangerous, but it was made mortal by the unskilfulness of the surgeon in extracting the arrow-head, which had been broken off in the shoulder. Feeling his end approach, Richard summoned Bertrand de Gurdun into his prescuce. "Wretch!" he exclaimed, "what have I done unto thee that thou shouldest seek my life?" The chained youth replied firmly,-" My father and my two brothers hast thou slain with thine own hand, and myself thou wouldest hang! Let me die now, in cruck torture if thou wilt; I am content if thou diest, and the world be freed of an oppressor!" "Youth, I forgive thee!" cried Richard: "loose his chains, and give lum a hundred shillings!" But Marchadee\* would not let him go, and after the king's death he flayed him alive, and hanged him. Richard expired in anguish and contrition, on Tuesday, the 6th of April, 1199, a date in which all the contemporary writers of best note seem to be agreed. He had reigned nearly ten years, not one of which was passed in England, but which had all been wasted in incessant wars, or in preparations for war. He was only forty-two years old, and he left no children to succeed lum. By his will be directed that his heart should be carried to his faithful city of Rouen for interment in the cathedral, that his bowels, "as his ignoble parts," should be left among the rebellions Poicteyms, and that his body should be barried at the

John.—surnamed Sans-Terre, or Lackland.\*

GREAT SEAL OF KING JOHN.

\* A nickname, according to Brompton, given him by his father, who in a will which he made at Domfront in 1170 left John no lands, but only recommended from to be provided for by his edgest brother.

PORCRAIT OF KING JOHN. Fram his Tomb at Worcester

A D 1199 - Earl John was in Normandy when his brother died. As soon as he received the intelligence, he sent to retain the foreign mercenancs who had been in Richard's pay, promising them large gifts and increased salaries. Dispatching Hubert Walter, the archbishop of Canterbury, and William Mareschall into England, to overawe the barons there, he himself hastened to Chinon to seize his brother's treasure, which was posited in that castle. Chinon, with several other castles in the neighbourhood, voluntarily received him; but, in the meanwhile, the barons of Touraine, Maine, Anjou, and Brittany, proclaimed his nephew, the young Arthur, as their lawful sovereign. John, in assertion of his claim, proceeded to clustise the citizens of Mans for the support they afforded his nephew, and then, returning to Normandy, he was received at Rouen without opposition, and, on Sunday the 25th of April, he was there inaugurated, being girt with the sword of the duchy, and having the golden coronal put upon his head. News, whether good or bad, travelled but slowly in those days. A vague report of Richard's death was spread in England, but nothing certain was known, and the friends of John seem purposely to have concealed the fact for many days. When the archbishop of Canterbury and his companion arrived, they required all the lieges m the cities and burghs throughout the kingdom, and all the earls, barons, and frecholders, to be in the fealty, and keep the peace of John Duke of Normandy, son of King Henry, son of the Empress Matilda.\* But John had never been

· Hoved,-Matt. Par,-Paigrave, Rot. Cur. Reg.

popular in the nation, and the more powerful classes seemed disposed to resist his accession. Bishops, carls, and barons, - most of those who had castles, -filled them with armed men and stocked them with provisions. The poorer classes committed great devastations, for in those times a king's death was the signal for the general disorganization of society. The primate and his associate acted with great placinty and vigour, seeing that nothing less would save the country from a frightful anarchy. They convened a great conneil at Northampton, and there, by secret gifts and open promises of justice and good government on the part of John, they induced the assembled prelates and barons to swear fealty and faithful service to the "Duke of Normandy," as the pretender was carefully called, until his coronation at Westminster. John did not arrive until the 25th of May, when he landed at Shoreham. On the 27th he repaired to the church of St. Peter at Westminster to claim the crown. He well knew that many preferred the right of his nephew, the son of an elder brother, who had repeatedly been declared his heir by the late king; and now John professed to be in possession of a will, drawn up in his last hours, by which Richard revoked former wills, and appointed him his successor. But this testament, whether true or false, seems to have carried no weight with it, and to have been altogether disregarded on this solemn occasion. The fact that the crown was not considered heritable property was stated in the broadest terms, and never was the elective character of the monarchy so forcibly put by such high authority. The Arehbishop 3 v 2

Duke of Normandy had been elected king at Northampton, laid it down as a known principle that no over to Normandy, where the Earl of Flanders and other great lords who had confederated with Richard brought in their forces. Philip demanded and

obtained a truce for six weeks, at the end of which

term he met John to propose a definitive peace.

His demands led to an instant renewal of war, for he

not only required the surrender by the English king

of all his French possessions (Normandy excepted)

[Book III.

one could be entitled by any previous circumstances to succeed to the crown unless he were chosen to

be king by the body of the nation,--"ab universitate regni electus." Matthew Paris pretends to give the words of the archbishop: their substance is as follows :-- " Hear, all ye people; -- it is well known that no one can have a right to the crown of this kingdom, unless for his excellent virtues he be elected to it, and then anointed king, as was the case with Saul, the son of no king, nor even royally connected; such a man also was David. And thus it was ordained, to the end that he whose merits are pre-emment be chosen the lord of all the people. If indeed of the family of the deceased monarch there be one thus super-emmently endowed, he should have our preference. This I say touching the noble Duke John, here present, brother of our late excellent King Richard, who had no heir procreding of his body. He possesses the same worthness of qualities, and is also of the same

blood as King Richard was of, and for these qua-

lities, having invoked the Holy Spirit, we elect him

our king?" According to Matthew Paris, John

assented without starting the question cither of his

inherent right by buth, or of his right by will;

and when he had taken the usual oaths to protect

the church and govern justly, all present haded

him with, "Long live the king!". On the fol-

lowing day, the prelates and barons did homage to

him, immediately after which he repaired to St.

John was at this time thirty-two years old,—a

Albans to pray before the shrine of the martyr.

manly age,—which gave him many advantages over kings commencing their reigns in youth. He was robust, healthy, and, like most of his race, handsome; but his evil passions distorted his countenance, and gave him a treacherons and cruel expression. He was already hated by the people, and his reign opened imaispiciously. Many of the nobles in England immediately showed disaffection: the king of Scotland, William the Lion, who had quarrelled with him on account of the provinces of Northumberland and Cumberland, threatened him with invasion; and on the continent, with the exception of those in Normandy, all the great vassals were up in arms for his nephew, and in close alhance with the French king, who had renewed the war, and was promising himself every success, well knowing the difference between the warlike Richard and the cowardly John, as also the weakness that must arise out of a desputed succession, for the election at London and the inauguration at Rouen had no legal effect in those provinces which

• The claims of young Aribur do not appear to have been mentioned. It was, however, only by stretching a point, and declaring the crown elective, that the boy could be set uside. If they had gone on legitimacy and the rights of primagemiture, they must have awarded the crown to him,—and this sufficiently accounts for the mode of proceeding adopted by John and his partizans.

† Dain, Hitt, de la Bretague.—Matt. Par =110ved.

to Arthur, but the cession also of a considerable part of Normandy itself to the French crown. The only being engaged in this game of ambition that can at all interest the feelings was the innocent Arthur, who was too young and helpless to play his own part in it. The greatest of our poets has thrown all the intensity both of pathos and horror around the last days of this prince; but all the days of his brief life were marked with Like William of Nortouching vicissitudes. mandy, the hapless son of Duke Robert, Arthur was the child of sorrow from his cradle upwards. His misfortunes, indeed, began before he came into the world; his father Geoffice was killed in a tournament eight months prior to his birth, and Buttany, to which he had an hereditary right through his mother, was divided into factions, fierce vet changeable, destructive of present prosperity and unproductive of future good; for the national in-

dependence, their main object, was an empty dream,

in the neighbourhood of such powerful and ambi-

tions monarchs as the Plantagenets of England and

the Capetians of France. The people of Britany,

however, hailed the birth of the posthumous child

of Geoffrey with transports of patriotic joy. In

spite of his grandfather Henry, who wished to give

the child his own name, they insisted on giving

hun the name of Arthur. That mysterious hero

was as dear to the people of Brittany as to their

kindred of our own island: tradition painted bin

as the companion in arms of their "King Hoel the

Great;" and though he had been dead some centu-

ries, they still expected his coming as the restorer

of their old independence. Merlin had predicted

this, and Merlin was still revered as a prophet in Brittany as well as in Wales. Popular credulity thus attached ideas of national glory to the cherished name of Arthur; and, as the child was handsome and promising, the Bretons looked forward to the day when he should rule them without the control of French or English.\* His mother Constance, a vam and weak woman, could spare little time from her amours and intrigues to devote to her son, and, at the moment when his uncle John threatened him with destruction, she was occupied by her passion for a third husband, whom she had recently married, her second husband being still living. During the lifetime of Richard, she had declared for Arthur. + Leaving William de had bandied her son between that sovereign and the Stuteville to keep in check the Scots, John crossed French king as circumstances and her caprice varied; and now when, awakened to a sense of his danger, the only course she could pursue was to carry him to Paris, and place him under the protection of the astute and selfish Philip, . Darn, Hist. de la Bretague.

CHAP. I.] to whom she offered the direct vassalage not only of Brittany, which Arthur was to inherit through her, but also of Normandy, Anjou, Aquitaine, and the other states he claumed as heir to his father. The troops of John, composed almost entirely of mercenaries, fell with savage fury upon Brittany, burning and destroying the houses and fields, and selling the inhalutants as slaves. Philip assisted William Desroches, the commander of the small Bucton army, and took several castles on the frontiers of Brittany and France from the English. But as soon as he gained these fortresses he destroved them, in order evidently to leave the road open to himself when he should throw off the mask and invade the country on his own account. Descroches, incensed at these proceedings, withdrew Arthur and his mother from the French court, and they would both have sought his peace, and delivered themselves up to John, had they not been seared away by the report that he intended the murder of his nephew. After this, young Arthur returned to Philip, who knighted Imm, notwithstanding his tender age, and promised to give him his daughter Mary in marriage. But Philip only intended to make a tool of the unfortunate boy, and when some troublesome disputes, in which he was engaged with the pope, induced him to treat with John, he sacrificed all his interests without any remorse. By the treaty of peace which was concluded between the two kings, in the spring of 1200, John was to remain in possession of all the states his brother Richard had occupied; and thus Arthur was completely disinherited, with the conmyance and participation of the French king; for it is said, that by a secret article of the treaty, Plulip was to inherit his continental dominions, if John died without children. Circumstances and the unruly passions of John soon mullified the whole of this treaty, and made Philip again the shippery friend of young Arthur; but nothing could ettace the French king's perfidy, or reinspire confidence in him, in reasonable men. In the summer of this same year, the second of his reign, John made a royal progress into Aquitaine, to receive the homage of the barons of that province. delighted the lively people of the south with his magnificence and parade; he captivated some of the volatile and factions nobles with a display of a familia and festive humour; but these feelings were but momentary; for neither with the people nor their chiefs could be keep up the favourable Though a skilful actor, impression he had made. his capability was confined to a single scene or two; it could never extend itself over a whole act: his passions, which seem to have partaken of insamty, were sure to baffle his hypoerisy on anything like a lengthened intercourse. He had thus shown his true character, and disgusted many of the nobles of Poictou and Aquitame, when his lawless passion for the young wife of one of them completed their irritation and disgust. Isabella, the daughter of the Count of Angoulême, was one of the most

Poictou and Agritaine. When simmoned to attend their hege lord, many of the English vassals refused, declaring that it was too insignificant and dishonourable a warfare for them to embark in afterwards said that they would sail with him if he would restore their rights and liberties. For the present, John so far triumphed over their opposition as to make the refractory baions give hun hostages, and pay scutage in lieu of their personal attendance. Their resistance was not yet organized; but as John's insolence, rapacity, and lawfess last had provoked by and clergy, and as he had engaged in a personal quarrel with one of the most powerful of the monastic orders, a regular and an extensive opposition was in duc process of formation. John, accompanied by Isabella, went through Normandy to Paris, where he was courteously entertained by Philip, a much greater master m deceit, who was, at the very moment, in league with the Count of la Marche, in Aquitaine, and preparing a fresh insurrection against his guest in Brittany. From Paris, John marched without his wife into Aquitaine, but not to fight, and, after  ${f a}$ paltry parade through the safe part of the country, he marched back again to his pleasures, leaving the insurgents in greater power and confidence than ever. A. D. 1202. The moment had now arrived for the decision of the question at issue-whether the Plantagenets or the Capetians should be lords of France. The superiority of the former race had been established by the wisdom of Henry II., and pretty well maintained by the valour of Richard; but under the miwise and pusillammons John it had no longer a chance. Having settled his disputes with the pope, and freed himself from other troubles, Philip now broke the peace, by openly succouring the insurgents in Aquitaine, and by reviving and again espousing the claims of voing Arthur. The poor orphan-his mother had died the preceding year-was living under the protection of the French king, because, says a chronicler, he was in constant fear of treachery on the part of John. "You know your rights," said Philip to the youth; "and would you not be a king?" "That truly would I," replied Arthur. "Here, celebrated beauties of her time: she had been re-

eently married to the Count of la Marche, a power-

ful noble; and John had been married ten years

to Avisa, a daughter of the Earl of Gloucester, a

fair and virtuous woman, who had brought him an

immense dower. In spite of these obstacles, John

got possession of the person of Isabella, and mar-

ried her at Angonlêine, the archbishop of Bor-

deany performing the ceremony. In the autumn,

he brought his new wife to England, and caused her to be crowned at Westminster. • He himself

was recrowned at the same time, the archbishop of

Canterbury officiating. He then gave hunself up

to idleness and luxurious enjoyment. But in the

following spring he was disturbed by the vengeance

of the Count of la Marche, whom he had robbed of

his wife. That nobleman, with his brother, the Earl of En, and several other barons, took up arms in then," said Philip, " are 200 knights; march with them, and take possession of the provinces which are yours, while I make an inroad on Normandy." In the treaty drawn up between these most unequal allies, Arthur was made to agree that the French king should keep all that he pleased of the territories in Normandy which he had taken, or might henceforth take, with God's aid; and he agreed to do homage for the rest of the continental dominions.\* Aithur then raised his banner of war; the Bretons sent him 500 knights and 4000 foot soldiers; the barons of Touraine and Poicton 110 men-at-arms; and this, with the insignificant contingent supplied by Philip, was all the force at his disposal. His friends had counted on a force of 30,000 men; but it was not the plan of his treacherons ally to make him powerful. Philip only wanted a diversion in his own favour, while he followed up his successes in Normandy. The young orphan---for, even now, Arthur was only in his fifteenth year—was of course devoid of all military experience, and dependent on the guidance of others. Some of his friends-or they may have been his concealed enemies—advised him, as his first trial in arms, to march against the town of Mirebeau, about six miles from Poictiers, because his grandmother, Eleanor, who had always been the bitter enemy of his mother, was residing there; and be cause (it was reasoned) if he got possession of her

haid siege to the tower where the "Ate"-the stirrer "to blood and strife," stoutly defended herself. John, with an activity of which he was not deemed capable, marched to her rescue; and his troops were before Mirebeau, and had invested that town, ere his nephew was aware of his departure from Normandy. The unnatural discords of the Norman and Plantagenet race had already and repeatedly presented the spectacle of son warring against father, brother against brother, but here was a boy of fifteen besieging his grandmother of eighty, and an nucle besieging his nephew-all at one point. On the night between the 31st of July and the 1st of August the savage John, by means of treachery, got possession of the town. Arthur was taken in his bed, as were also most of the nobles who had followed him on that dismal expedition. The Count of le Marche, Isabella's busband, on whom he had inflicted the most msnpportable of wrongs, and whom John considered as his hitterest enemy, the Viscounts of Lamoges, Lusignan, and Thouars, were among the distingnished captives, who amounted in all to 200 noble knights. The captor revelled in base vengeance; he caused them to be loaded with irons, tied in open carts, drawn by bullocks, and afterwards to be thrown into dungeons in Normandy and England. Of those whose confinement fell in our island, twenty-two noblemen are said to have been starved to death in Corfe Castle—a mode of destruction, indeed, "worthy of a being of unmingled malignity." Young Arthur was carried to Falaise, and from Falaise he was removed to the castle of Ronen,

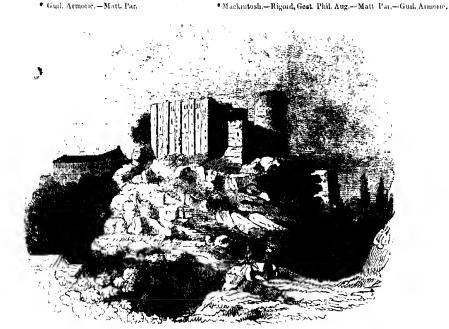

small army established themselves in the town, and

where all positive traces of him are lost. Such dammable deeds are not done in the light of day, or in the presence of witnesses, and some obscurity and mystery must always rest upon their horrors. The version of Shakspeare has made an impression which no time and no scepticism will ever efface; and, after all, it is probably not far from being the true one. Of the contemporary writers who mention the disappearance of Arthur, Matthew Paris is the one who expresses himself in the most measured terms; yet his words convey a fearful meaning. He says, John went to his nephew at Falaise, and besought him with gentleness to trust his uncle. Arthur replied, indignantly, "Give me mme inheritance -restore to me my kingdom of England." Much provoked, John immediately sent him to Ronen, with orders that he should be more closely goarded. "Not long after," proceeds Mackintosh, "he suddenly disappeared; I

trust not in the way that malignant rumour olleges. It was suspected by all that John murdered his nephew with his own hand, and he became the object of the blackest hatred. The monks of Margan tell us, in their brief yearly notes, 'that John being at Ronen in the week before Easter, 1203, after he had finished his dumer, instigated by drunkenness and malignant ficials, literally imbraced his hands in the blood of his defenceless nephew, and caused his body to be thrown into the Seme, with heavy stones fastened to his feet; that the body was notwithstanding cast on shore, and buried at the abbey of Bec secretly, for fear of the tyrant.'"

According to the popular traditions of the Bietons, John, pretending to be reconciled with his nephew, took Arthur from his dangeon, in the castle of Rouen, and proceeded with him towneds Cherbourg, travelling on horseback, and keeping

HUBERT AND PRINCE ARTHUR. Northcote.

the party, John stopped on a high cliff which overhung the sea: after looking down the precipice he drew his sword, and, riding suddenly at the young prince, ran him through the body. Arthur fell to the ground and begged for mercy, but the murderer dragged him to the brink of the precipice, and livrled him, yet breathing, into the waves

below.\* But Ralph, the abbot of Coggeshall, who tells the pitiable tale most minutely, is probably the most correct of all. His account is as follows: — Some of the king's councillors (we beheve John needed no conneil save from his own deprayed heart), representing how many slaughters and seditions the Bretons were commuting for their lord Arthur, and maintaining that they would never be quiet so long as that prince lived in a sound state, suggested that he should deprive the noble youth of his eyes, and so render him incapable of Some wretches were sent to his government. prison at Falaise to execute this detestable deed; they found Arthur loaded with chains, and were so moved with his tears and prayers that they staid then bloody hands. The compassion of his gnards, and the probity of Hubert de Burgh,-the kind Hubert of Shakspeare,—saved him for this time. Hubert, who was warden of the castle, took upon hun to suspend the cruelties till the king should be further consulted. This merciful appeal only produced his removal from Falaise to Rouen. On the 3rd of April, in the year of mercy 1203, the helpless orphan was startled from his sleep and invited to descend to the foot of the tower, which was washed by the peaceful waters of the At the portal he found a boat, and in it his uncle, attended by Peter de Maulac, his esquire. The lonely spot, the dark hour, and the darker countenance of his uncle, told the youth his hour was come. Making a vain and last appeal, he threw lumself on his knees and begged that his life at least might be spared. But John gave the sign, and Arthur was murdered. Some say that Peter de Manlac shrunk from the deed, and that John seized his nephew by the hair, stabled him with his own hands, and threw his body into the

Hemingford and Knyghton, who wrote near the time, say that the squire was the executioner, and this statement is confirmed by the circumstance which they mention, and which is otherwise established, of John having bestowed on De Maulae, the heiress of the barony of Mulgref in marriage, as the reward of his iniquity. In the essential parts of the crime all writers agree. "The small number of English writers," says a recent historian, "who do not speak of the murder, are equally silent respecting the notorious fact of the disappearance of Arthur, which they could have no reason for being afraid to relate, but their conviction of the guilt of John. In all who have dared to speak we can evidently

a universal cry of horror and indignation. The Bretons, among whom the young prince had been born and brought up, and who had looked to him with the fondest hopes, were the loudest of all: their rage amounted to an absolute frenzy; and even when cooler moments came they unanimously swore to revenge their prince's death. The Maid of Brittany,—the fair and unfortunate Eleanor, Arthur's eldest sister,—was in John's hands, and closely confined in a monastery or prison at Bristol, where she consumed forty years of her hic; but the enthusiastic people rallied round Alice, an infant half-sister of the prince, and appointed her father, Gny de Thouars, the last husband of then duchess Constance, their regent and general of their confederacy. At a meeting of the estates of the province, held at Vonnes, it was determined that Guy, with a deputation, should forthwith carry then complaints before the French king, "then suzerain lord," and demand justice. † He listened to their petition, and summoned John to a trial before his peers, as a vassal of the French crown. The process was in the regular order of feudal justice. But the accused monarch did not appear; on which, with the concurrence of the barons, this sentence was pronounced on him :- "That John, Duke of Normandy, munindful of his eath to Philip, his lord, had murdered his elder brother's son, a homager to the erown of rance, within the seignory of that realm; whereon he is judged a traitor; and, as an enemy to the crown of France, to forfeit all his dominions which he held by homage; and that re-entry be made by force of Philip, who had been obliged to retreat from Normandy after the capture of Prince Arthur and the barons at Mirebeau in the preceding year, was now on the frontier of Poietou, where a general

insurrection took place, and most of the nobles joined him against the murderer John. surrendered to Philip most of the strong places, and then marehed with him to Normandy. the enraged Bretons were before him, having invaded and occupied all the territory near their own frontiers; they took the strong eastle of Mount St. Michael by assault, made themselves masters of Avranches, and then advancing, burnt all the towns between that city and Caen. There was the national wildness and ferocity in their vengeance, but it appears that not a few of the Normans joined them. These movements facilitated the progress of the French king, who, being joined by John's subjects of Anjou and Maine, advanced by Andely, Evreux; Domfront, and Lisieux, all of which places he took, and then effected his junction with the army of the Bretons at Caen. While tower and · Mackintosh.

CIVIL AND MILITARY TRANSACTIONS.

French king

town thus fell before the invaders, John was passing his time in a voluptuous indolence at Rouen, surrounded by women and effeminate courtiers, who feasted and played, sang and danced, without a thought of the morrow. He wished to remain ignorant of the loss of his towns, the miseries of his people, his own shaine; and, when obliged to listen to some dismal news, he was accustomed to say, in the fulness of his infatuation, "Let them

CHAP. L.]

go on; let these French and this rabble of Bretons go on; I will recover in a single day all that they are taking from me with so much pains." At last his encures appeared at Radepont, in the neighbornhood of Rouch, and then (in the month of December) he fled over to England to demand We are not sufficiently acquainted with the history of the noble families of the time, and the transmission or division of their estates; but it appears that the Norman barons of England had no longer that property at stake in Normandy which on all former occasions had made them resolute to prevent the separation of the two coun-There were no doubt other causes for their apathy; but, in space of John's demerits, we cannot but believe that they would have made great exertions if they had been in the same position as formerly, when the same barons held great estates

in Normandy as well as in England. Now they would make no streamons effort; and we find John

complaining on this occasion, as a little later, when his other continental provinces were occupied by

the French king, that his English nobles had forsaken lum, and thereby put it out of his power to resist his enemies. аль. 1204. Unable to meet Philip with the sword, John attempted to stop his progress with the spiritual weapons of Rome: he applied to the pope, imploring him to interfere. Innocent despatched two legates to plead in the recreant's favour; but, in the high tide of his success, the French king, made the bolder by the universal odnor John had fallen into, turned a deaf ear to their representations and menaces, and the legates departed without producing any apparent effect. When John fled nothing remained to him save Rouch, Verneuil, and Château-Gaillard. last was a strong eastle, the pride of the late king, who took extraordinary pains in its construction, and it was held for John by a brave warrior who was true to his trust. In Rouen, the people, ani-

mated by an hereditary hatred of the French, determined to defend themselves; but when pressed by a vigorous siege, they applied for aid to their sovereign, the king of England. John had no aid to give. It was in vain he punished his lukewarm barons of England by fines and forfeitures,—it was in vam that he collected a considerable army at Portsmouth,—the nobles resolutely told him that they would not follow his standard out of England. Thus abandoned to themselves, and suffering from

famine, the citizens of Rouen surrendered to the

knowledged the authority of Philip, and John had nothing left in those wide provinces except a few castles. Aquitaine, or Guicine, retained its connexion with the English crown, but there the authority of the king was limited and uncertain. An. 1206. Philip soon found that it was much easier to meite the people against the detested John than to keep them obedient to himself. The men of Brittany, who indulged in their old dream of national independence, were soon disgusted by seeing their country treated as a mere province of France; and discontents also broke out in Anjou and Poicton. John contrived to land an English army at Rochelle, and even to take the strong castle of Montanban; then marching to the Lorre, he took and binned Angers, committing many cruelties. He then reposed on his lanrels, and gave lumself up to feasing and debauchery, When again aroused, he descended the Lone, and laid siege to Nantes This siege he raised, to

offer battle to Philip. As the battle was about

to commence he proposed a negotiation, and as the proposal was under discussion he ran away

to England, loaded with new infancy. Philip, who

had nothing more to do, as it was not convenient for him to attack Guienne, and an invasion of

England was as yet a thing not to be contemplated,

listened to another legate from the pope, who

induced him to consent to a truce with John for

time, and Château-Gaillard fell after nobly sustain-

ing a siege of seven months. Thus, John had no

longer an inch of ground in Normandy, which

duchy, after a separation of two hundred and

ninety-two years, was finally re-annexed to the

French knigdom. Within this year Brittany,

Anjou, Maine, Touraine, and Poicton equally ac-

two years. A.D. 1207. The next step of the degraded but still arrogant John was to quarrel with the pope, and provoke to the utmost-and by deeds which gave an othous colouring to his cause, even where he was wholly or partially in the right—the enduring cumity of that power which had shaken the throne of his great and wise father. The dispute

arose out of the conflicting claims of the crown and the church in the appointment of hishops; while John insisted that his favourite minister, John de Gray, Bishop of Norwich, should be elevated to the see of Canterbury, the pope cannmeally appointed Stephen Langton, - and the monks of Canterbury would receive no other archbishop. Never was time, never was place so ill chosen for an attack on the church; but John, blinded by passion, despatched two knights with an armed band to drive the monks of Canterbury The ministers of his vengeance from the land. entered with drawn swords into the clusters which had alike witnessed the slaughter of Becket and the subsequent lumiliation of his sovereign. "In the king's name," exclaimed the knights, "we

command you, as traitors, to quit the realm;

begone in a moment, or we will set fire to these

walls, and burn you with your convent." All the monks who were not bed-ridden departed forthwith, and going into Flanders, were there received and hospitably entertained in different religious houses. John serzed their effects: but as no one would labour upon them for the king, the lands of the archbishopic and of the convent of Canterbury lay without culture \* When Inno ent, in a gentle but most decided tone asked for rediess, John braved his authority; and thus an open struggle began between one of the ablest priests that ever wore the trana, and the meanest and basest king that ever disgraced the English throne. While John amused himself with terrible but impotent threats against the monks, the pope wrote to the already disaffected English barons, ordering them to do all they could with the arms of the flesh to save their king and kingdom from perdition; and he called upon the prelates and abbots of the kingdom to fight with their spiritual weapons for Langton and the liberties of the church.—He then sent orders to the bishops of London, Ely, and Worcester to wait upon the king in his name, and, if they found him still refractory, to threaten him with the interdict. John at last received these prelates: when they came to the threat he grew pale with rage, and his hips quivered and frothed. "By God's teeth," he cried, "if you, or any of your body, dure to lay mry states mider interdict, 1 will send you and all your clergy to Rome, and confiscate your property. As for the Roman shavelings, if I find any in my dominious, I will tear out their eyes and cut off their noses, and so send them to the pope, that the nations may witness their infancy? The bishops trembled and withdrew: but these were not times when personal fear stopped the trumphant march of Rome. A few weeks after, on Monday, the 23rd of March,  $1208,\,\mathrm{m}$  passion week, they pronounced the sentence of interdict against all John's dominions, and then fled for safety to the continent. To secure himself at this moment of danger, the king obliged as many of his nobles as he could to place their children in his hands as seemities for their allegamee; a measure which created fresh disgust. When his commissioners went to the eastle of William de Braousc, that nobleman's lady exclaimed, "My son shall not go near him; he murdered his own nephew, whom he should have cherished." "Thou hast spoken like a foolish woman," said her linsband; and then turning to the officers, the baron added, "If I have done anything against my sovereign, let a day and place be named, for I am ready, and ever shall be, to make him satisfaction, without hostiges, according to the judgment of his court and of my peers." John gave secret orders to seize the whole family: they were warned in time, and escaped safely into Ireland, but soon after perished in a miserable manner, the victims of the tyrant's insatiable vengeance † In the mean time the nation was plunged in

Matt. Par,—Annal, de Marg.

instantly closed,—the priests ceased their functions, refusing to administer any of the usual sacred rites, except baptism to infants, and the sacrament to the dying. The dead were buried, without prayers, on unconsecrated ground, -- the relies of the saints were taken from their places and laid upon ashes in the silent church,—their statues and pictures were covered with veils of black cloth,—the chimic of church bells no longer floated on the air, and everything was so arranged under an interdict as to give a most lugubrious aspect to the whole country upon which it had fallen. When this had lasted a year, the pope followed up the sentence of interdict by a bull of excommunication against John. Although by narrowly watching the ports, he prevented the entrance of the Roman envoy and the official publication of the latter bull, the king was seriously alarmed, for he knew that excommunication would be followed by a sentence of dethronement, and that Pluhp was making ready to invade England with a banner that would be blessed by the pope. He also saw that the disaffection of his barons was still merearing, and that there was no part of Christian Europe to which he could apply for succour or alliance. At this critical moment, if we are to believe a curious story picturesquely told by Matthew Paris, he applied for aid to the Mahommedans of Spain. The Emir al Nassir was in the full career of conquest, and, by crossing the Pyrences, he could at any time fall upon the dependencies and states of Philip in the south, and so make an important diversion in favour of John Sovereigns much more scrupulous than this false-hearted tyrant have had recourse to such infidel alliances, even when pressed by much less danger than John, who, it is reported, intrusted a secret negotiation to Thomas Hardington and Ralph Fitz-Nicholas, knights, and a priest called "Robert of London." These envoys being led through several apartments, haed with Moorish guards with turbans on their heads and cimeters in their girdles, were presented to the emir, "a man of moderate size and grave aspect," who kept his eyes fixed on a book which lay open before him. The Englishmen presented their king's letter, which was translated to the emir by an interpreter. According to the report which was afterwards spread, John offered to hold the English crown of the emir, and to embrace the faith of Mahommed. This looks like exaggeration, but John may have set no limits whatever to promises which he never intended to keep, and was quite capable of offering even more than this to serve his purpose in such an emergency. The Moorish chief questioned the envoys as to the population and strength of England, and the age and personal character of the king, and then dismissed them with vague expressions of friendship which signified nothing. He, however, recalled "Robert of London," the priest, and adjured him, by his respect for the faith of Christ, on which he trusted for salvation, to tell him what manner of man his

Book III.

teeth plucked out of his head." \*\* The Jew

braved the pain to save his money. John's exc-

that John was a tyrant that would soon feel his own subjects' wrath. This terminated the business. On his return, Robert received the enstody of the abbey of St. Albans, and there Matthew of Paris, who was a monk of that house, heard him tell the curious story to his companions.

The effect of the interdect upon the laity of England must have been weaker than was anticipated,

or probably the expedient had lost its efficiency

by time and use, for, as it has been justly remarked,

John's strength was so little lessened that the only

master really was. Thus pressed, Robert replied

two successful expeditions of his reign, those against Ireland and Wales, occurred during the time that he lay under the proscription of the Roman sec. л в 1210 —John employed the spring of this year in raising money by the most arbitrary means: all classes suffered, but none like the unfortunate Jews, who were seized, imprisoned, and tortured all over the kingdom. A great sum is said to have been collected, and with this he levied in army, pretending that he would go and drive Philip out of Normandy. When all was ready, he sailed for Ircland, where the English nobles had for some time defied his authority. On the 6th of June he landed on the Irish coast and proceeded to Dublin, where more than twenty of the native chicitams repaired to do him homage and offer tribute. He then marched into the province of Commanght, reduced the castles of some of the revolted English nobles, and drove Hugh de Lacy, Earl of Ulster, and lns brother Walter de Lacy, Earl of Meath, out of the island. The divided such parts of the island as were subjected to England into counties, established English laws, and appointed sheriffs and other officers. He also ordered, for the convenience of traffic, that the same monies should be equally current in both countries; and then, intrusting the government of Ireland to his favourite the bishop of Norwich, whom he had not been able to make archbishop of Canterbury, he returned to England after an absence of twelve weeks, during which he had enjoyed the pleasures of an easy triumph, for no one offered resistance. In the following year he determined to show his prowess in Wales. Money was again wanted he simmoned all the abbots and lady-abbesses,-all the heads of monastic houses, whether male or female, to meet him in London; he urged his wants in a manner which was not to be resisted, and, having got what he could from these servants and hand-maidens of Christ, he again racked the unbelieving Jews, putting them to torture and throwing them into dungeons, where they were kept until they paid enormous fines to the king. Among other Jews thus treated was one of Bristol, a very wealthy man, but who would not consent to pay 10,000 marks for his deliverance. "Wherenpon," says an old historian, "by the king's commandment he was put into this penance, that every day till he would

agree to give those 10,000 marks that he was

seized [assessed] at, he should have one of his

cutioner began with the double teeth, and, in the course of as many days, pulled out seven. On the eighth day this terture had its effect, and the Jew gave security for the money. With the smus obtained in part by such flagitions means John raised a mighty army, and penetrated into Wales, as far as the foot of Snowdon. He was not a man to do more than his great and warlike predecessors, and he marched back again pnmediately, having, however, forced the Welsh to pay him a tribute in cattle and horses, and to give him twenty-eight hostages, youths of the hest families. Whenever John had a glimpse of success, he increased his arbitrary proceedings against his Faiglish subjects: on a former occasion he gave new rigorir to the barbarous forest laws, and now be levied scutage-money in an impist manner. In the following year the Welsh again were up in arms to assert their independence. John savagely hanged the twenty-eight hostages, and was preparing for a fresh invasion when he was terrified by a report that many of his own barons were conspiring against him. He shut himself up in the castle of Nottingham for infleen days, seeing no one but the personal attendants on whom he most relied. He then marched to Chester, still collecting troops, and vowing to exteriomate the Welsh; but from Chester he turned suddenly back to London, where he kept strong bodies of foreign mercenaries constantly about him, and seldom showed himself to his people. His enemies increased every day, and the crowd of English exiles were meessantly mging the pope to take vengeance on their king. A b 1213—At last Innocent landed his deadliest thunderbolt at the head of John he pronounced his deposition, absolved his varials from their oaths of allegiance, and called upon all Christian jamees and barons to take part in the mentorious act of dethroning an impions tyrant. He then sent Stephen Laugton, the exiled archbishop of Canterbury, with other English and some Italian prelates, to the French court, there to convoke a solemn meeting, and declare to the king and the whole nation that the pope anthorized an immediate invasion of England The worldly temptation was so great, that Philip probably required none other; but the pope promised him the remission of his sins if he executed this pious purpose, and drove John from

his throne. About the middle of March, Philip

collected a great army in Normandy, and prepared

a fleet of 1700 vessels of all sizes at Boulogne and the other ports or the Channel. John, being well

niformed of these preparations, took for once a bold step: he summoned every man capable of bearing

arms to be ready to march to the coasts of Kent

and Sussex, and be collected every vessel in his

dominions capable of carrying six or more borses. When the ships were ready, he anticipated Philip's

attack: the English mariners crossed the Channel,

took a French squadron at the mouth of the Scine,

HISTORY OF ENGLAND. pact inviolate. The dastardly spirit of John, the

destroyed the ships in the harbour of Fecamp, and burned Dieppe to the ground. They swept the whole coast of Normandy, and returned in trimuph, the main division of the French flect at Boulogne not huzarding un attack. On Barham Downs 60,000 landsmen stood as yet firm around the standard of John; but he dreaded these his own brave subjects, and he was always spiritless and unmanly, "It was soon seen, after all his vam boasting, and his threats against the church of Rome, that he would lower hunself to the dirt before that incensed enemy,—that he would do anything rather than fight. The pope's legate, Pandulph, well knew his dastardly character, and now skilfully took advantage of it. Two knights of the Temple (travelled men and crafty diplomutists) landed at Dover and proceeded to the English camp. "We come," said they, with great respect, " from Pandulph, the sub-deacon and servant of our lord the pope; for your advantage and for that of the realm of England, he asks to see you in private."—"Let han come forthwith," said John. Pandulph came and drew so formidable a picture of the French army of invasion, and represented the general and just disaffection of the great barons of England in such forcible, and, on the whole, true colours, that the paltry despot's heart died away within him. What added to his fears, was the prediction of a certain Peter, called " the Hermit," that, before the Feast of the Ascension should be passed (it was distant only three days) John would be unknighted. As he trembled before the astate charchana, Pandalph bade han repent, and remember that the pontiff was a merciful master, who would require nothing which was not absolutely necessary either to the honour of the church or to the security of the king hunself. After a little wavering, John gave way, and subscribed an instrument which, in itself, was not very objectionable, and which had been offered lum some time before, when, by accepting it, he might have avoided his present excessive debasement. H was agreed, on the 13th day of May, that John should obey the pope in all things for which he had been excommunicated, that he should receive into favour the exiled bishops and others, particularly Stephen Langton and the prior and monks of Canterbury,-that he should make full satisfaction to the clergy and laity for the damages they had suffered at his hands, or otherwise, on account of the interdict, and that he should pay down, in part of restitution, the sum of 8000l. John further agreed not to prosecute any person for any matter relating to the late disagreement; and, on his part, Pandulph promised that, on the performance of these conditions, the sentences of interdict should be recalled, and that the hishops and other proscribed churchmen, on their return, should swear to be truc and faithful to the king. John set his seal to the

John was closeted with the Italian in secret consultation, and when seen for a moment abroad, his countenance was sadly dejected. Though deprayed m morals and notoriously irreligious, he was a prey to superstition, and he was now thinking more of the prediction of a hair-brained recluse than of his kingdom, for he fancied that Peter the Hermit's prophecy betokened he must die, On the 15th of May, at an early hour of the morning, John repaired to the church of the Templars at Dover, and there, surrounded by bishops, barons, and knights, took, on his knees, before Pandulph, an oath of fealty to the pope,—the same oath which vassals took to their lords. At the same time he put into the envoy's hands a charter, testifying that he, the king of England and lord of Ircland, in atonement for his offences against God and the clurch, not compelled by the interdict or by any fear or force, but of his own free will and with the general consent of his barons, surrendered

to our lord the Pope Innocent, and Innocent's suc-

cessors for ever, the kingdom of England and the

lordship of Ireland, which were henceforth to be

held as fiefs of the holy see, John and his suc-

cessors paying for them an annual tribute of 700

marks of silver for England and 300 marks for

earnest of his subjection, but Pandulph trampled it

under his feet,—an act which called forth an

angry remonstrance from the bishop or archbishop of Dublin. Pandulph, it is said, meant to signify that the church of Rome scorned worldly riches; but it is hinted by some old writers that he afterwards stooped down to gather up the money. The next day was the fatal term, the Feast of the Ascension, during which John watched the progress of the sun with an anxious eye; it set, and he died not,—it rose on the morrow, and he was still alive: instantly, in punishment for the vile terror be had suffered, he ordered Peter and his son to be dragged at the tails of horses and hanged on gibbets. The people contended that Peter, after all, was no false prophet, and that John, by laying Ins crown at the feet of a foreign priest, had verified the prediction.\* Five or six days after these transactions, Pandulph went over to France, and, to the astonishment and great wrath of Philip, announced to him that he must no longer molest a penitent son and a faithful vassal of the church, nor presume to invade a kingdom which was now part of the patrimony of St. Peter. "But," said Philip, "I have already

expended enormous sums of money on this expedition, which I undertook at the pontiff's express instrument, and four of his greatest harons, Wilcommands, and for the remission of my sins." liam Earl of Salisbury, Reginald Earl of Boulogne, The nuncio repeated his inhibition and withdrew. and the Earls of Warren and Ferrers, swore, "on the soul of the king," that he would keep this com-

CIVIL AND MILITARY TRANSACTIONS.

CHAP. I.]

The French king, however, who was already on the road, continued his march to the coast. It appears, indeed, that Philip, who inveighed publiely against the selfish and treacherous policy of the pope, would not have been prevented from attempting the invasion by the dread of the thunders of the church which again rumbled over his head.\* But other circumstances of a more worldly nature interfered: Ferrand, the new Earl of Flanders, demanded that certain towns which had lately been annexed to the French crown should be restored to him. Philip refused; and now when he proposed to his great vassals that they should continue the enterprise against England, the Earl of Flanders, the most powerful of them all, said that his conscience would not permit him to follow his lord in such an imjust attempt; and so saying, he suddenly withdrew with all his forces. Philip, yowing he would make Flanders a mere province of France, marched after him, and, taking several of the Earl's best towns on lns way, sat down with his army before the strong city of Ghent. Fortunately for both parties, Ferrand had already a secret understanding with John, and now he applied to that king for help. John's fleet lay ready in the harbour of Portsmouth, Seven hundred knights, with a large force of infantry, embarked i 500 yessels, under the command of William Earl f Holland, and William Longspear, Earl of Salisbury, one of the sons of Fair Rosamond, and immethately made sail for the coast of Flanders. They found the French fleet at anchor at Damme, which was at that time the port of Bruges; it was three times more nume**rous than the E**nglish fleet; but most of the sailors and land-troops embarked with them were on shore plundering the neighbouring country, and committing all sorts of ravages in a district which, through the blessings of peace and commerce, had made a wonderfully rapid progress. in civilization and the arts that adorn life. This was the first fleet that the French kings of the Capetian line had ever put to sea,—this was the first naval engagement between the two nations whose unfortunate emnity has since then animated so many sanguinary encounters in all the quarters of the globe. It was an unfortunate beginning for the French: their navy was annihilated. quote the account of the battle as Southey lins abridged it from Holinshed :- "The English, as they neared the coast, espied many ships lying without the haven, which, capacious as it was, was not large enough to contain them all; many, therefore, were riding at anchor without the haven's mouth, and along the coast. Shallops were presently sent out to espy whether they were friends or enemies; and if enemies, what their strength, and in what order they lay. These espials," approaching as if they had been fishermen, "came near enough to ascertain that the ships were left without sufficient hands to defend them, and, hastening

their hands if they would only make good speed. No time was lost; they made sail towards the enemy, and won the 'tall ships,' which were riding at anchor, with little difficulty, the men on board only requesting that their lives might be spared. The smaller ones, which were left dry when the tide was low, they spoiled of whatever was useful and set on fire, the sailors escaping to the shore. This done, they set upon those that lay in the harbour, within the haven; and 'here was hard hold for a while,' because of the narrowness of the place allowing no advantage for numbers or for skill. 'And those Frenchmen,' says the chronicler, 'that were gone abroad into the country, perceiving that the enemies were come by the running away of the mariners, returned with all speed to their slups to aid their fellows, and so made valuant resistance for a time, till the Englishmen, getting on land, and ranging themselves on either side of the bayen, heat the Frenchmen so on the sides, and, the ships grappling together in front, that they fought as it had been in a pitched field, till that, finally, the Frenchmen were not able to sustain the force of the Englishmen, but were constrained, after long fight and great slaughter, to yield themselves prisoners." first act of the conquerors was to give thanks to God for their victory. They then manned three hundred of the prizes, which were laden with corn, wine, oil, and other provisions, and with military stores, and sent them to England the first fronts of that maritime superiority for which the church bells of this glorious island have so often pealed with joy. An hundred more were burnt, because they were drawn up so far upon the sands that they could not be got off without more hands and cost of time than could be spared for them. There still remained a great part of the enemy's fleet higher up the harbour, and protected by the town, in which Philip had left a sufficient force to protect the stores which he had left there, and the money for the payment of his troops, The English landed; the Earl of Flanders joined them, and they proceeded to attack the place; but by this there had been sufficient time for the French king to hasten, with an overpowering force, from the siege of Ghent. The English and their allies sustained a sharp action, and were compelled to retreat to their ships, with a loss computed by the French at two thonsand men. But they retreated no farther than to the near shores of the Isle of Walcheren; and Philip saw the impossibility of saving the remainder of lus fleet, constdering the unskilfulness of his own scamen, as well as other things. He set fire to them, therefore, himself, that they might not fall into the enemy's hands."\* The French king thus lost the means of supporting his army in Flanders or of transporting it to the English coast: half famished and overcome with vexation, he harried across his

back, told the commanders that the victory was in

Philip had been excommunicated, and his kingdom had been had under an interdict, a ten years before, by the reigning pope, Innocent III.

as he had promised to do. After some tergiversation John granted a reluctant consent, and Archbishop Laugton, the bishops of London, Ely, Hereford, Lincoln, and Bath, the monks of Canterbury, all with their companions and numerous dependants returned. John and the archbishop met and kissed each other at Winchester; and there, in the porch of the cathedral church, Langton gave full absolution to the king, who again swore to govern justly and maintain his feulty to the pope. It was, however, clear to all men that Langton placed no confidence in the king; and that the king, who considered him as the chief cause of all his troubles, regarded Langton with all the deadly hatred which his dark character was capable of. John now set sail with a few ships, but his baroirs were in no hurry to follow him, being far more eager to secure then own liberties, than to recover the king's dominions on the continent. They said that the time of their feudal service was expired, and they withdrew to a great council at St Albans, where Fitz-Peter, one of the king's insticuries, presided, and where they published resolves, no the form of royal proclamations, ordering the observance of old laws, and denouncing the punishment of death against the sheriffs, foresters, or other officers of the king who should exceed their proper and legal anthority. John got as far as the island of Jersey, when, finding that none followed him, he turned back with yows of vengeance. landed, and marched with a band of mercenaries to the north, where the barons were most contumacious. Burning and destroying, he advanced as far as Northampton. Here Langton overtook "These barb gous measures," said the prelate, "are in violation of your oaths; your vassals must stand to the judgment of their peers, and not be wantonly harassed by arms." " Mind you your church," roared the furious king, " and leave me to govern the state." He continued his march to Nottingham, where Langton, who was not a man to be intimidated, again presented himself, and threatened to excommunicate all the munisters and officers that followed lum in his lawless course. John then gave way, and, to save appearances, summoned the barons to meet him or his justices. Langton hastened to London, and there, at a second meeting of the barons, he read the liberal charter which Henry the First had granted on his accession; and after inducing them to embrace its provisions, he made them swear to

legate from the pope, cardinal Nicholas, arrived in England to settle the indemnity due to the exiles, and to take off the interdict. John renewed his oath of fealty to Innocent, knelt in honinge before the legate, paid fifteen thousand marks, and promused forty thousand more to the bishops. interdict was removed; and from this moment the court of Rome changed sides, and, abandoning the cause of liberty and the barons, stood for the king. This abandonment, however, did not discourage the nobles, nor did it even detach Archbishop Langton from the cause for which they had confederated. A.D. 1214. A formidable league was now formed against the French kmg, and John was enabled to join it with some vigour. Fernand, Earl of Flanders, Reynaud, Earl of Boulogue, and Otho, the new emperor of Germany, nephew to John, determined to invade France and divide that kingdom among them, giving the English king all the country beyond the Loire for his share. Fernor I was to have Paris with all the Isle of France, Reynaud the country of Vermandois, and the emperor all the rest. John sent some English forces under the command of his half-brother, the Earl of Salisbury, to Valencienies, where the contederates established their head-quarters, and then sailed himself to the coast of Poictou, where several of his former vassals joined him, and enabled form to advance to Angers. This diversion was well planned: it obliged Philip to divide his forces, and while he limiself marched towards the frontiers of Flanders, he sent his son Louis into Britiany, whither the English king now advanced John was kept in check, or lost his opportunity through cowardice and indolence, while his allies were thoroughly defeated at the battle of Bouvines, one of the most memorable battles of the middle ages, in which the emperor was completely ruined, and the Earl of Flanders, the Earl of Boulogue, and the Earl of Salisbury were taken prisoners, with an immense number of inferior lords and Salisbury, the gallant Longsword, was captured by the Bishop of Beauvais, the very mdividual whom King Richard had loaded with chams, and upon whose coat of mail that king had been so facetious. This prelate, however, had become more prudent or more circumspect,—he no longer wielded the sword, but fought with a heavy club, thus knocking people on the head without shedding blood, which was contrary to the canons of the church. He was not the only prelate in this herce melée. Philip was chiefly indebted for his success to Guerm, bishop-elect of Scalis, who had also some scruples of conscience, for he would not use a sword, but marshalled the French host and directed the slaughter with a wand. battle certainly gave lustre to the French arms; but the French writers grossly exaggerate the disparity of numbers. It was fought on the 27th of

he true to each other, and to conquer or to die in

support of their liberties. This was on the 25th

of August. On the 29th of September a new

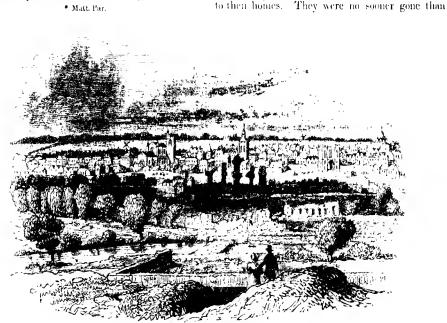

[Book III.

between Lisle and Tonrnay. On the 19th of October following John begged a truce, and obtained one for five years, on condition of abandoning all the towns and custles he had taken on the continent. He arrived in England on the 20th of October in a humour more ferocious than ever. As if he would take vengeance on his English subjects. for the reverses and shame be had suffered, he again let loose his foreign mercenaries on the land, and began to violate all his most solemn promises Fitz-Peter, his justiciary, the only one of his ministers that could moderate his fary, had now been dead some months. John, who feared him, reporced at his death. "It is well," cried he, long hing as they told him the news; "in hell be may again shake hands with Hinbert, our late primate, for surely he will find lum there. By God's teeth, now for the first time I am king and lord of England.\*\* But there were men at work resolute. and skilful. Immediately after his arrival the barons met to talk of the league they had formed with Langton. "The time," they said, "is favourable, the feast of St Edmind approaches; anidst the multitudes that resort to his shrine we may assemble without suspicion." On the 20th of November, the same's day, they met in crowds at St Edminds-Bury, where they finally determined to demand their rights, in a body, in the royal count at the festival of Christmas. The spirit of freedom was awakened, not soon to sleep again: they advanced one by one, according to semotify, to the high altar, and, laying their hands on it, they solemnly swore that, if the king refused the . Matt. Par.

July, near an obscure village called Bouvines,

rights they claimed, they would withdraw their fealty and make war upon him, till, by a charter under his own seal, he should confirm their just petitions. They then parted to meet again at the Feast of the Nativity. When that solemn but festive season arrived John found himself at Worcester, and almost alone, for none of his great vassals came as usual to congratulate him, and the countenances of his own attendants seemed gloomy and unquiet. He suddenly departed, and riding to London, there shut hunself up in the strong house of the Knights Temphas. The barons tollowed close on the coward's steps, and on the Feast of the Epiphany (at every move they chose some day conscenated by religion) they presented themselves in such force that he was obliged to admit them to an audience At first he attempted to browbeat the nobles. One bishop and two barons were recreants, and conscuted to recede from their claims, and never trouble him again, but all the rest were firm to then purpose. John turned pale, and trembled. He then changed his tone, and cajoled instead of threatening. "Your petition," he said, "contains matter weighty and arduous, You must grant me time till Easter, that, with due deliberation, I may be able to do justice to myself and satisfy the dignity of my crown." Many of the barons, knowing the use he would make of it, would not have granted this delay, but the majority consented, on condition that Cardinal Langton, the lashop of Ely, and William, Earl of Perabroke, ould be the king's smeties that he would give them the satisfaction they demanded on the ap-

pointed day. The confederated nobles then retired

St. Edmunds-Bury .-- 1745.

revenge. He began by courting the church, and

formally renounced the important prerogative that had been hitherto so zealously contended for by himself and his great ancestors, touching the election of bishops and abbots. Having thus, as he thought, bound the clergy to his service, he turned his attention to the body of the people, whose progress had been slow, but pretty steady, and whose importance was now immense. He ordered his sheriffs to assemble all the free men of their several counties, and tender to them a new oath of allegiance. His next step was to send an agent to Rome, to appeal to the pope against what he termed the treasonable violence of his vassals The barons, too, despatched an envoy to the eternal city; but it was soon made more than ever evident that Innocent would support the king through right and wrong. He wrote a startling letter to Cardinal Langton; but that extraordinary priest was deaf to the voice of his spiritual elicf where the interests of his country were concerned. To make himself still surer, John took the cross on the 2nd of February, solemnly swearing that he would lead an army to the Holy Land. This taking of the cross, by which the debtor was exempted from the pursuit of his creditor,—by which the persons, goods, and estates of the emsaders were placed

met at Stamford with great military pomp, being followed by two thousand knights and a host of retainers. The king was at Oxford. The barons marched to Brackley, within a few imles of that city, where they were met by a deputation from the sovereign, composed of Cardinal Langton, the Earl of Pembroke, and the Earl of Warcime. The confederates delivered the schedule containing the chief articles of their petition - "These are our claims," they said, "and, if they are not instantly

under the immediate protection of the church till

then return from Palestine, --- seemed to John the

On the appointed day in Easter week the barons

best of all defences.

granted, our arms shall do us justice." When the deputies returned, and Langton expounded the contents of the parchment be held in his hand, John exclaimed, in a fury, "And why do they not demand my crown also? By God's teeth I will not grant them liberties which will make me a slave." He then made some evasive offers which the barons understood, and rejected. Pandulph, who was with the king, now contended that the cardinal-primate ought to excommunicate the confederates; but Langton said he knew the pope's real intentions had not been sigmfied, and that unless the king dismissed the foreign mercenaries, whom he had brought into the kingdom for its ruin, he would presently excommunicate them. The barons now proclaimed themselves "the army of God and of holy church," and unanimously elected Robert Fitz-Walter to be their general. They then marched against the castle of Northyet, no declaration had been made in favour of the confederates. But now anxiety vanished,—the people of Bedford threw open their gates; and soon after messengers arrived from the capital with secret advice that the principal citizens of London were devoted to their cause, and would receive them with joy. Losing no time, they marched to Ware, and, not stopping to rest for the night, pursued their course to London, which they reached in the morning. It was the 24th of May, and a Sunday: the gates were open,—the people hearing mass in their churches,—when the army of God entered the city in excellent order and profound silence. On the following day the barons issued proclamations requiring all such earls, barons, and kinghts, as had litherto remained neutral, to join them against the perjured John, unless they wished to be treated as enemies of their country. In all

parts of the kingdom the lords and knights quitted

their easites to join the national standard at

London. It is needless, say the old chroniclers,

to emmerate the barons who composed the army

of God and of holy church: they were the whole

nobility of England. The heart of the dastard

John again turned to water, he saw himself

almost entirely deserted, only seven knights re-

maining near his person. Recovering, however,

from his first stupefaction, he resorted to his old

arts; he assumed a cheerful countenance; said

what his heges had done was well done; and

ampton, but they had no battering engines; the

walls were lefty and strong; the garrison, com-

posed of foreigners, stood out for the king; and their first warlike attempt proved a failure. After

fifteen days they gave up the siege, and marched

to Bedford with anxious minds. On whichever

side the free burghers of England threw their sub-

stantial weight that party must prevail, and, as

from Odrham, in Hampshire, where he was staying, he despatched the Earl of Pembroke to London, to assure the barons that, for the good of peace, and the exaltation of his reign, he was ready freely to grant all the rights and liberties; and only wished them to name a day and place of meeting. "Let the day," replied the barons, "be the 15th of June,—the place, Runny-mead." \* On the morning of the appointed day, the king moving from Windsor Castle, and the barons from the town of Staines, the parties met on the green meadow, close by the Thames, which the barons had named. With John came eight bishops, Pandulph, Almeric, the Master of the English Templars, the Earl of Pembroke, and thirteen other gentlemen; but the majority of this party, though they attended him as friends and advisers, were known to be in their hearts favourable to the cause of the barons. On the other side stood Fitz-Walter and the whole nobility of Eng-With searcely an attempt to modify any of its clauses, and with a facility that might justly

have raised suspicion, the king signed the scroll

presented to him. This was Magna Charta,—the

· Matt. Par.

BUNNY MEAD.

Great Charler,—a most noble commencement and foundation for the future liberties of England. As the profound duplicity and immorality of John were well known, the barons exacted securities. They required that he should disband and send out of the kingdom all his foreign officers, with their families and followers; that for the two ensuing months the barons should keep possession of the city, and Langton of the Tower of London; and that they should be allowed to choose twenty-five members from their own body to be guardians or conservators of the liberties of the kingdom, with power, in case of any breach of the charter, -such breach not being redressed immediately,—to make war on the king; to distrain and distress him by seizing his castles, lands, possessions, and m any other manner they could, till the grievance should be redressed; always, however, saving harmless the person of the said lord the king, the person of the queen, and the persons of their royal children. This last article, which invested a council of twenty-five with the real sovereignty of the realm, has been viewed by some as an unwarrantable invasion of the royal prerogative; but a strong barrier was indispensable against the tyrannical and faithless character of the monarch, and without extreme securities the charter drawn from his reluctant hand would have been utterly valueless. It is true that no limits were set to the authority of the barons either in extent or duration; but, under the circumstances, it was necessary that their

power should be dictatorial, and the only bound as to time which could have been introduced was the death of John,—a clause which could not be decently inserted.

As soon as the great assembly dispersed, and John found hunself in Windsor Castle safe from the observing eyes of his subjects, he called a few foreign adventinces around hun, and gave vent to rage and curses against the charter. According to the chromelers has behaviour was that of a frantic madman; for, besides awearing, he gnashed his teeth, rolled his eyes, and gnawed sticks and straws. The creatures, who would be ruined and expelled by the charter, roused him by appealing to his passion of revenge, and he forthwith despatched two of them to the continent to procure him the means of undoing all that he had been abliged to do. One of these adventurers went to Flanders, Poicton, Aquitaine, and Gascony, to hire other adventmers to come to England and fight against the barons, the other went to Rome, to implore the aid of Innocent. John then sent messengers to such governors of his castles as were foreigners or men devoted to him, commanding them to lay in provisions and put themselves in a state of defence; "doing all this without noise and with caution, lest the barons should be alarmed." He caused the alarm himself, by instantly evading some of the clauses of the charter. On their departure from Runny-incad, the barons, in the joy of their hearts, appointed a great

tournament to be held at Stamford on the 2nd of

HISTORY OF ENGLAND.

[Воок III.

to the cause of the barons, who were soon after

excommunicated by the pope; for the king's application to Rome had met with full success, not-

withstanding a counter appeal made by the English

nation. Innocent declared that the barons were

worse than Saracens for molesting a vassal of the

holy see—a religious king who had taken the cross.

Thus emboldened, John marched from Kent to St.

Alban's, accompanied by "Falco, without bowels," "Mauleon, the bloody," "Walter Buch, the mur-

derer," "Sottim, the merciless," "Godeschal,

the fron-hearted," and a most finxed and savage

host. It was thought at one time he would turn

upon London, but the attitude of the capital struck

lum with terror; and leaving a strong division to

manœnyre round it, and devastate the south-eastern

countres, he moved towards Nottingham, marking

his progress with flames and blood. Alexander,

the young king of Scotland, had entered into an

alliance with the English barons, and, having

crossed the borders, was investing the castle of

Norham. The whole northern country, moreover,

was especially obnoxious to John, and thather he

determined to carry his vengeance. A few days

after the feast of Christmas, when the ground was covered with deep snow, he marched from Nottingham into Yorkshire, still burning and slaving, and becoming more savage the farther he advanced and the less he was opposed. Every hamler, every house on the road, felt the fury of his execrable host,—he lumself giving the example, and setting free with his own hands in the morning to the bouse in which he had rested the preceding hight, His foreign soldiery put his native subjects to the torture to make them confess where they had concealed then money. The tortures inflicted were worthy of fiends, and too horrible to bear description. All the eastles and towns they could take were given to the flames; and the people of Yorkshare and Northumberland were remaided of the expedition of William the Conqueror, which their local traditions faithfully painted as the extremity of human barbarity on the one side, and of human misery on the other. The Scottish king retired before a superior force, and John, vowing he would "unkennel the young fox," followed him as far as Eduburgh. Here, meeting with opposition, he pansed, and then—never having any valour but when unopposed-he turned back to England, burning Haddington, Dunbar, and Berwick on his Near the borders, Morpeth, Mitford, Alawick, Wark, and Roxburgh had been consumed already. In the mean time the division left in the south, which seems to have been reinforced by fresh arrivals of mercenaries from the continent, committed equal atrocities; and wherever the eastle of a noble was taken, it was given, with the adjoining if any should fall into their hands. The tyrant estate, to some hungry adventurer,-John thus was, therefore, contented to butcher the inferior renewing the early scenes of the Conquest. On the prisoners, while all the knights were sent to the 16th of December another sentence of excommunication was promulgated by the abbot of Abing-The loss of Rochester Castle was a serious blow don and two other ecclesiastics: in this bull Robert

CIVIL AND MILITARY TRANSACTIONS. Fitz-Walter, the general of the confederacy, and

all the principal barons, were mentioned by name; and the city of London was laid under an interdict. This measure excited some fear and wavering in the country, but the citizens of London had the

boldness to despise it. According to Matthew Paris they asserted that the pontiff had no right to interfere in worldly concerns; and, spite of the interdict, they kept open their chinches, rong their bells, and celebrated their Christmas with unusual festivity. But the barons, who were confined in London by the force that continually increased around them, who saw their property the prey to new myaders,and who knew the full extent of the danger to which the nation was exposed (the effect of the excommunication on the villains in the country not being the least of these), were sorely disquieted, and knew not what measures to adopt meetings were held, and a variety of plans debated; but at last they mianimously resolved, in a moment of desperation, upon the very equivocal and perdous expedient of calling in foreign aid. They sent to offer the crown to Philip's eldest son, Prince Louis, who was connected with the reignme family by his marriage with Blanche of Castile. John's own mece, believing that, should be land amongst them, the mercenaries now with John, who were chiefly subjects of France, would join his standard, or at least refuse to bear aims agranst bun. Philip and Louis cagerly grasped at this offer; but the wary old king moderated the impatience of his son, and would not permit limit to venture into England until twenty-four bostages, sons of the poblest of the English, were sent into France. There a fleet, with a small army, was sent up the Thames at arrived at London at the end of February, and the commander assured the barons that Lonis houself would be there with a proper force by the feast of Easter. Innecent in the meanwhile was not mactive in John's, or rather in his own, cause; he despatched a new legate to England; and Gualo, on his journey, reached France in time to witness and to endeavour to prevent the preparations making for invasion. He boldly asked both king and prince how they dured attack the patrimony of the church, and threatened them with instant excommunication. astomshment of the churchman, Louis advanced a claim to the English throne through right of his wife, and departed for Calais, where his army was collecting. At the appointed time, he set sail from Calais with a numerous and well-appointed army, embarked on board 680 vessels. His passage was

stormy: the mariners, of the Cinque Ports, who

adhered to the English king, cut off and took some

of his ships; but on the 30th of May, he landed

safely at Sandwich. John, who had come round to Dover with a numerous army, fled before the

French landed, and, burning and ravaging the

country, he went to Guildford, then to Winchester,

and then to Bristol, where Gualo, the pope's legate, soon joined him. Leaving Dover Castle in his

CHAP. L.]

the standard of the tyrant, and either returned to then homes or took service under Loms and the barons, who were now enabled to retake many of then eastles. Gualo, the legate, did all he could to keep up the drooping, abject spirit of John; but, at the very moment of crisis, on the 16th of July, the pope lumself, the nugbty Innocent, ded, and left the church to be wholly occupied for some time by the election of a new pontitl. Louis marched to Dover, and laid siege to the castle, which was most bravely defended for the king by Hubert de Burgh, and, at the same time, some of the barons attacked Windsor Castle, which was equally well defended. Plulip sent his son a famous inhitary engine, cidled the maliforsine, or bad neighbour, with which to batter the walls of Dover Castle; but when the siege had lasted several weeks, Louis found himself obliged to covert it into a blockade. Withdrawing his army beyond reach of the arrows of the garrison, he swore that he would reduce the place by tamme and then hang all its defenders. The barons raised the suge of Windsor Castle entirely, in order to repel John, who, after running from place to place,

rear, Louis besieged and took the Castle of Roches-

the 2nd of June, a.p. 1216, he was joyfully re-

cerved by the barons and entizens, who conducted

him, with a magnificent procession, to St Panl's.

After he had offered up his prayers, the nobles and

citizens did homage, and swore fealty to him. And

then he, with his hand on the Gospels, also swore

to restore to all orders then good laws, and to each

individual the estates and property of which he had

been robbed. Soon after, Loins published a main-

festo, addressed to the king of Scotland and all the

nobles not present in London. An immense effect

was presently seen; nearly every one of the few

nobles who had followed John now left him and

repaired to London; all the men of the math, from

Luicolnshire to the borders, rose up in arms against

hun; the Scottish king made ready to march to

the south; and, at fir tim small troops, and then in

masses, all the foreign mercenaries, with the ex-

ception of those of Gascony and Poicton, deserted

He then muched to the capital, where, on

bad at last made his appearance near them, and was pillaging the estates of some of those nobles, At their approach he fell back, and cluding their pursuit by skill, or, more probably, by hard runumg, he reached the town of Stamford. barons wheeled round, and joined Louis at Dover, where much valuable time was lost in mactivity, for that prince would neither ascault the castle nor move from it. Other circumstances at the same time caused discontent: Louis treated the English with disrespect, and began to make grants of estates and titles in England to his French followers. But jealousy and apprehension were excited to the very atmost by an event which happened, or at least was said to have happened. The

Viscount de Melin, who had come over with the

prince, being suddenly seized by a mortal inalady

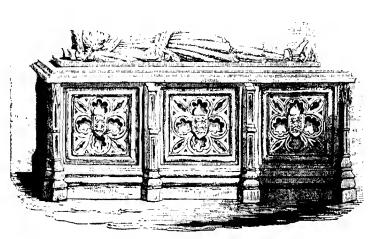

in London, earnestly implored to see such of the

 $-3 \times 2$ 

English nobles as had remained in that city. barons went at the summons of the dying man. "Your fate grieves me," said De Mehin; "the prince and sixteen of his army have bound themselves by onth, when the realm shall be conquered and he be crowned, to banish for ever those who have joined his standard as traitors not to be trusted. Their whole offspring will be beggared or exterminated. Doubt not my words; I, who here he dying before you, was one of the conspirators: look to your safety!" and so saying, the Viscount died. This dramatic seene, which possibly originated in the invention of some of John's partisans, was whispered everywhere, and beheved by many. Several barons and knights withdrew from Dover, and though few would trust John, all began to doubt whether they had not committed a fatal mustake in calling in the aid of a foreign prince. As these doubts prevailed more and more, and as the gloom thickened round the camp at Dover, where Louis had now lost nearly three months, the cause of John brightened in proportion. Soon after cluding the pursuit of the barons, he had made himself master of Lincoln, where he established his head-quarters for some time, making, however, predatory incursions on all sides. Associations were formed in his favour in several of the maritime counties; and the English cruisers frequently captured the supplies from the continent destined for Louis. At the beginning of October, marching through Peterborough, he entered the district of Croyland, and plundered and burnt the farm-houses belonging to that celebrated abbey: he then proceeded to the town of Lynn, where he had a depôt of provisions and other stores. Here, turning his face again towards the north, he murched to Wisbeach, and from Wisbeach be proceeded to a place called the Cross Keys, on the

southern side of the Wash. It is not clear why he took that dangerous route, but he resolved to cross the Wash by the sands. At low water this estuary is passable; but it is subject to sudden rises of the tide. John and his army had nearly reached the opposite shore, called the Fossdike, when the returning tide began to roar. Pressing forward in linste and terror, they escaped; but, on looking back, John beheld the carriages and sumpterhorses which carried his money overtaken by the waters; the surge broke furiously over them, and they presently disappeared,-carriages, horses, treasures, and men being swallowed up in a whirlpool caused by the impetuous ascent of the tide and the descending current of the river Welhand. In a mournful silence, only broken by curses and uscless complaints, John travelled on to the Cistercan abbey of Swineshead, where he rested for Here he eat gluttonously of some peaches or pears, and drank new eider immoderately. The popular story of his being poisoned by a monk may be true or fulse; but it is told in two ways, and was never told at all by any writer hving at the time or within half a century of it, and the excess already mentioned, acting upon an ritated mind and fevered body, seems to be cause cuough for what followed. He passed the might sleepless, restless, and in horror. At an early hour on the following morning, the 15th of October, he mounted his horse to pursue his march, but he was soon compelled, by a burning fever and acute pain, to dismount. His attendants then brought up a horse-litter, in which they laid him, and so conveyed him to the castle of Sleaford. Here he rested for the night, which brought him no repose, but an increase of his disorder. The next

day they carried him with great difficulty to the custle of Newark, on the Trent, and there he sent

TOMB OF KING JOHN, AT WORCESTER.

for a confessor, and laid himself down to die. The Abbot of Croxton, a religious house in the neighbourhood, who, it appears, was equally skilled in medicine and divinity, attended him in his last hours, and witnessed his anguish and tardy repentance. He named his eldest son Henry has successor, and dietated a letter to the recently elected pope, Honorius III., imploring the protection of the church for his young and helpless children. He made all the knights who were with hun swear fealty to Henry; and he sent orders to the sheriffs of counties and the governors of castles to be faithful to the prince. Messengers arrived from some of the barous, who were disgusted with Louis, and proposed returning to their allegiance. This gleam of hope came too late,-the "tyranfever" had destroyed the tyrant. The Abbot of Croxton asked him where he would have his body buried? John grouned, "I commit my soul to God, and my body to St. Wulstan!" and soon after be expired, on the 18th October, in the forty-moth year of his age and the seventeenth of his wietched reign. They carried his body to Worcester and interred it in the cathedral church there, of which St. Wilstan was the patron saint.\*

During the whole of the period through which

we have now passed, the three states of Albin, Pictland, and Strathelyde, which had formerly divided the northern part of the island, were consolidated into the single kingdom of Scotland, of which, however, the southern limits varied considerably at different times; for the proper Scotland key all beyond the Forth and the Clyde; and the territory to the south of these rivers was not accounted as strictly forming part either of Scatland or England till some ages after the Norman Conquest. At the time of that event the Scottish king was Malcolm III., surnamed Commore, or Great Head, whose reign commenced in 1057. † dominions undonbtedly included the ancient kingdom of Strathelyde, or the district now forming the south-western part of Scotland, which had been conquered by Kenneth III, in the latter part of the preceding century; and the district of Cumbria, lymg on the same side of the island, but within what is now called England, was also at this time an appanage of the Scottish crown, having been made over to Malcolm I. by the Saxon king, Edmund I., in 946, and held from that date, either by the occupant of the throne or by the person next in succession, as an English fief or lordship. With regard to the south-eastern portion of modern Scotland, or the district then known by the name of Lodonia or Lothian (now confined to a part of it), the state of the case is not so clear. The people appear to have been chiefly or exclusively Angles, mixed in later times with Danes; and the territory undoubtedly at one period formed

part of the Anglo-Saxon kingdom of Northumbria. From the defeat, however, of the Northumbrian kmg, Egfrid, by the Picts m 685,\* it may be considered as having been withdrawn from the actual dominion of its former masters, although perhaps their claim to its sovereignty was never abandoned, and it may have been for short periods wholly or partially re-subjected by the English. "Situated between the Scotch or Pietish and the Northimbrian kingdoms," observes a writer to whom we owe the latest as well as the most acute and learned discussion of this obscure matter, "it is impossible to say to which it usually or rightfully belonged. It seems to have been a debateable land, subject, as they alternately preponderated, to the strongest." # Mr. Allen, however, is inclined to accept the necount given by Wallingford (who, although he wrote in the twelith or thirteenth century, appears, as it is observed, "to have possessed original materials which are now lost,") of the innuner in which what he calls the old quartel, respecting Lothian, was at last determined Wallingford's statement is, that m the reign of the English Edgar, Kenneth IV., King of Scotland, having come to London, and represented that Lothian properly belonged by hereditary right to the Scottish longs, Edgar laid the affair before his nobles, who, seeing that it was, from its remoteness, difficult to protect, and bitle profitable to England, agreed to resign the territory to Kenneth; but only on condition that he should hold it, as they maintained his predecessors had done, or at least ought to have done, by doing homage for it to the English crown. To these terms Kenneth assented, promising, while he did his homage, that he would allow the people to keep their ancient customs, and that they should continue English in name and in language; † all which, adds the lustoman, remains family established to this day. This transaction appears to have taken place in the year 971. It is probable, from the account, that Lothian was already in the actual possession of the Scottish kings; and they appear from this time to have continued in the imdistinibed occupation of it till the defeat of Malcolin II, in 1005, by the Earl of the Northmulianis; in consequence of which, Mr. Allen thinks, the whole or part of the district was re-annexed to the Northumbrian earldom. Some years after, however, the Northumbrians were in their turn defeated by the same Malcoln; at the battle of Carrum, near Weak, and eventually, in 1020, a final cession of Lothian to the Scottish king was formally made by the Northumbrian carl Endulf.§ It is probable that the English kings did not consider their ancient claim to the paramount dominion of the district to be affected by this last cession; but there is no record of any subsequent assertion of the claim till after the Norman conquest. <sup>§</sup> See ante, p. 221.

HISTORY OF ENGLAND. entered England, through Cumberland, and spread may therefore be regarded as reigning in full sovenearly as great devastation in the western parts of

reignty over Lothian, as well as over all the rest of the country now included under the name of Scotland. It is only necessary further to mention, that the south-western augle of Scotland, formerly called

Galloway, and now forming the counties of Wigton and Knikeudbright, received various bodies of colomsts from Ireland in the course of the minth, tenth, and eleventh centuries. "They appear," says Mr. Allen, " at all times to have owed subjection to the Scottish kings, but they long retained the barbarons habits and ferocious manners which the ravages of the Northmen had impressed on the country they had quitted. In the twelfth century, they are called Picts, or Galwegians; and as late as the fourteenth century, they are distinguished by the appellation of the Wild Scots of Galloway."

In fact, the name of Galloway, which is first mentioned in the early part of the twelfth century, was

Malcolm had passed about fifteen years at the

derived from this Irish or Gaelic population,

court of the Confessor before he became king; and in his long exile he must have formed various English connexious, as well as become habituated to the manners of the sister country. He may thereforc be supposed to have, from the first, kept my a more intimate intercourse with England than had been customary with his predecessors. The chief of his English friends, in the beginning of his reign, appears to have been Harold's notorious brother Tostig, who obtained the earldom of Northumberland about the same time that Malcolin ascended the throne of Scotland. Simeon of Dm. ham says they were so much attached to each other that they were commonly called the sworn brothers. Accordingly, when Tostig was driven off from the English coast, on his first invasion after the accession of Harold,\* he took refuge in the first instance with Malcolm. The Scottish king, however, seems to have taken no part in the new attempt made by his friend in the close of the same year; and he

ally, Hardrada of Norway, lost their lives. The principal events that make up the subsequent history of the reign of Malcolm arose out of his connexion with another English fugitive, the unfortunate Edgar Atheling. Edgar fled to Scotland, according to the most probable account, with his mother and his two sisters, in the beginning of 1068; and soon after, Malcolm espoused Edgar's elder sister Margaret, at Dunferuline. From some cause, which is not distinctly explained, Malcolm did not arrive with lus forces in time to support the insurrection of the people of Northumbria, in couinnetion with the Danes and the friends of Edgar. m the following year, and it was not till after the complete suppression of that attempt, and the whole of the east coast, from the Humber to the Tyne, had been made a desert by the remorseless vengeance of the Norman, that the Scottish king, in 1070,

did not therefore share in the decisive defeat of

Staneford Bridge, in which both Tostig and his

York and Durham as William had done in the east. He commanded his oldners to spare only the young men and women; and they were driven into Scotland to be made slaves. A writer of the following century \* says that Scotland was in consequence so fully supplied with make and female slaves of English race that, in his own days, not a village, and scarcely even a house, could be found without them. Great numbers of the people of the east coast also now fled to Scotland, and there sold themselves into slavery, to escape from the sword of the conqueror, or from perishing by hunger in the desolation it had left. It was not till 1072 that William found leasure to chastise Malcolm for this inroad.

[Book III.

advanced into Scotland, and wasted the country as far as the Tay, though the inhabitants, after the plan which they had been accustomed to pursue in such cases from the days of Galgacus, and which they continued to follow occasionally to a much later age, destroyed or removed everything of value as the invader advanced, so that, as the Saxon chronicler expresses it, "he nothing found of that which to him the better was." In the end, however, Malcolm came to him at Abernethy, t when, according to the Saxon Chronicle, a peace wa arranged between the two kings, on Malcolni agreeing to give hostages, and to do homage to Wilham as his hege lord. William then returned home with his army. This transaction makes a principal figure in the

controversy which was formerly carried on with so much unnecessary heat, and which stilt continues to divide Instorical inquirers, respecting the alleged dependence in ancient times of the kmgdom of Scotland upon the English crown. The position taken by the asserters of this dependence appears to be that, from a date long before the Norman Conquest of England, the Anglo-Saxon kings of that country had in some way or other obtained possession of the sovereignty of the whole island, and the kings of Scotland, as well as the princes of Wales, had become their acknowledged vassals. We may say without hesitation that this notion is directly opposed to the whole course of the history of the two countries.

Upon what could the Anglo-Saxon kings possibly found any pretension to the savereighty of Scotland? The country was never conquered by any of them, nor is there a vestige of evidence that even an attempt was ever made by them to settle in it, or to wrest it from the possession of the people of another lineage that occupied it before the Saxons and Angles ever set foot in the island, The Northumbrian kings were occasionally en-

manifest anxiety to flatter or magnify the renown

of the particular kings to whom they attribute this

fancied supremacy over the whole island. Against

all this, we have, in an age of writing and of char-

but no one of these wars, as far as any account of it has been preserved, ever terminated in anything like the conquest of the one country by the other, or even took the shape of a contest having that object; and the supposition that it did, would be as contrary to all the probabilities of the case, as it is wholly unsupported by the testimony of historians of records. The quarrel between the two contending parties appears to have been exchisively for the possession of Lothian; and, on the whole, the course of the contest went rather against the English, who, as we have just seen, were at a very

gaged in wars with those of the Scots and Picts;

for the possession of Lothian; and, on the whole, the comse of the contest went rather against the English, who, as we have just seen, were at a very early period driven from the disputed territory, and eventually consented to relinguish all chams to its occupation and actual government, on iccerving from the Scottish Kings at most an empty acknowledgment of their merely titular sove-But at any rate there is no evulence whatever to show that any attempt was ever made by a Northumbran or other Anglo-Saxon king to reagner the territory to the north of the Forth, which alone originally and properly constituted the country called Scotland; to suppose that any such attempt was ever successfully made, would be an assumption in the face of all evidence. Notwithstanding this state of the fact, if appears to be clear, on the other hand, that certain of the

Anglo-Saxon kings did assume the title of monarch a emperor of all Britam—of Scotland as well as of England. This is proved, not only by the testimony of the monkerh chroniclers, but by the charters of the kings themselves. It is unnecesany for our present purpose to dispute the genumeness of these charters; their evidence may be at once admitted -- for it proves nothing. The dispute is not, as to whether the vainting titles in question were assumed by some of the Anglo-Saxon kings, but as to whether they ever actually possessed that right of dominion over the whole island which they thus arrogantly claimed. The whole course of the history of the two countries shows that they never could have acquired any such dominion; their asserted sovereignty over Scotland could only have been founded upon a conquest of that country, of which there is no more evidence than there is of their conquest of France or of Spain. As little good evidence is there of any acknowledgment of this pretended sovercignty by the Scottish kings. To prove what is, in itself, to grossly improbable, as that any country would, without being compelled by force, relinquish its undependence, and place itself in subjection to another country, which had always been its rival, and often its enemy, would demand the very strongest But here all the evidence that we have Gulence consists of a few vague expressions by writers for

the most part extremely creditions and ill-informed, neither agreeing in this particular matter one with another, nor even each with himself, and, especially, all having then testimony, meagre and unsatisfactory as it is, rendered suspicious by their mational connection and partialities, and for the most part by a

ters, the absence of any anthentic instrument in which any of the Scottish kings acknowledges his subjection, and a crowd of undisputed historical facts, proving that, in the general government of their dominions at least, all of these Scottish kings acted in every respect as independent sovereigns.

The titles of basilens, or emperor of Britain, and king of England, Scotland, and Treland, assumed by Edgar and some of the other Anglo-Saxon princes, are it ally no better evidence of their possession of this extensive dominion either in fact or in 19th, than was the long-continued assumption of the title of king of France by our modern English kings a proof that they really were sovereigns

of that country in any sense whatever indeed, seems to be merely that the principal Saxon king, after having reduced to subjection the other states of the heptarchy, and thus made himself king of all England, not unnaturally chose to consider hanself as in some sort the legitunate successor of Canansus, and Maximus, and the other tukers over a smodal extent of territory, who, in the old Roman times, had boasted with as little finth of possessing the empire of Bis-We have nearly a parallel case in the pretensions of the emperors of Germany, who, on the ground that they were the successors of the Roman emperors, long-claimed a sort of sovereignty over all the other kings of Europe, and were strennogsly supported in this yair assumption by a crowd both of chinchmen and of lawyers. It may be conceded that the English king in Britain, like the emperor in Europe, was considered the cluef among the several crowned heads; the others may have generally "confessed the preemmence of his rank and dignity;" but the defirence that may thus have been paid to limit is altogether a different thing from any acknowledgment of his paramount dominion, or any entrender by those who yielded it of the independence of their own kingdoms The only subjection or homage which either the

Scottish kings rendered, or the English crown claimed from them, before the Norman conquest, appears to have been not for the kingdom of Scotland, but for territories annexed to that kingdom or otherwise held by them, situated or conceived to be situated in England. Such was the lordship of Cumbria, or Cumbraland, after the donation of "Norwas the supremacy of the emperor," says Gibbon, "confined to termany alone, the heighbary moments of Energy con

<sup>\* &</sup>quot;Nor was the supremacy of the emperor," says Gibbon, "confined to termany alone—the hereditary moments of Europe concessed the pre-eminence of his rank and figure, it was the first of the Cristian princes, the temporal head of the great republic of the west, to his person the title of majesty was long appropriated, and he disputed with the pope the sublime prergative of ceating long and assembling councils. The oracle of the civil law, the harned Bartons, was a pensioner of Charles IV, and he seeked it confined with the doctrine that the Roman couperor we the redshift socretion of the earth, from the rising to the setting sun. The contact opinion was condemiced, and as an error, but so here sy, since even the gospel had promounced, "And there went furth a decree from Casar Augustic, the all the world should be taxed."—Dee, and Fall of Rom. Empire, ch. 42.

it by the English king Edmund to Malcolm I., in 946. Lothian, or a part of it,\* may be considered to have been similarly circumstanced after the agreement between Kenneth IV. and Edgar, in There is reason to believe, also, that the Scottish kings were anciently possessed of other lands clearly within the realm of England, besides the county of Cumberland. For these possessions of course they did homage to the English king, and acknowledged him as their liege lord, exactly in the same manner as the Norman kings of England acknowledged themselves the vassals of the crown of France for their possessions on the con-

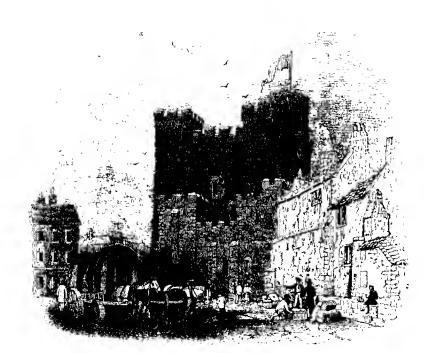

When Malcolm III., however, on the seizure of the English crown by the Duke of Normandy, esponsed the cause of Edgar Atheling, he necessarrly at the same time refused to do homage for his English lands to the Norman invader, whom by that very proceeding he declared that be did not acknowledge as the rightful king of England. William, on the other hand, took measures to maintam his authority and to compel the obedience of his rebellious vassal; and these objects he completely attained by the submission of Malcolni at

 Land Harles has embrayoured to show that the district anemally called Ladian, and perhaps considered as part of sine area and my called Ladian, and perhaps considered as part of Fighand, by can means included the whole of the south east of southind, but andy the counties of Berwork and Last Lothian, and the part of Mul Lothian lying to the rest of Labinburgh. And, he adds, 'only a small part of that (erritary could be remained as hemilally dependent on Ling-land, leavely well of the part of the counties.) land. Great part of those triploms was the paritimony of Si Cuth-hert,"--Remarks on the Rist, of Scothard (Edin 1772), chap 2

Abernethy. The latter now consented to make that acknowledgment of William's title, and of his own vassalage for the lordship of Cumberland and his other English possessions, which he had Intherto refused; he gave hostages to the English king, as the Saxon chronicler expresses it, and became his man.

After this Malcolm appears to have remained quiet for some years. He did not, however, finally abandon the cause of his brother-in-law, the Atheling; and in 1079, choosing his opportunity when the English king was engaged in war with his son Robert on the continent, he again took up arms, and made another destructive inroad into Northumberland. The following year, after the reconcilement of William and his son, the latter was sent at the head of an army against Scotland; but he soon returned without effecting anything. It was immediately after this expedition that the fortress bearing the name of the Castellum Novum, on the Tyne, which gave origin to the town of Newcastle, was creeted as a protection against the invasions of the Scots. When Rufus succeeded to the English throne

the two countries appear to have been at reace. But in the summer of 1091 we find Malcolin again myading Northumberland. Rufus mamediately made preparations to attack Scotland both by sea and land; and, although his ships were destroyed in a storm, he advanced to the north with his army before the close of the year. We have

war. After being suspended for a short time by a treaty made, according to the Saxon chronicle, "at Lothian in England," whither Malcolm come "out of Scotland," and awaited the approach of the enemy, it was renewed by the refusal of the Scottish king to do the English king right, that is, to allord him satisfaction about the matter in dispute between them, anywhere except at the usual place,—namely, on the frontiers, and in presence of the chief men of both kingdoms. William required that Malcolm should make his appearance before the English barons alone, assembled at Gloneester, and submit the case to their "It is obvious on feudal principles," jadgment. as Mr. Allen observes, "that if Malcolin had done homage for Scotland to the king of England, the Scotch nobles must have been rere-vassals of the latter, and could not have sat in court with the tenants in chief of the English crown." Yet it is evident that the nobility of both kingdoms had been wont on former occasions to meet and form one court for adjudication on such demands as that now made by the English king. The hostilities that followed, however, were fatal to Malcolm. He was slain in a sudden attack made upon limi while besieging the castle of Alnwick, on the 13th of November, 1093. The reign of Malcolm was one of the most

already related\* the course and issue of this new

memorable and important in the early history of Scotland. It was in his time, and in consequence, in great part, of his personal fortunes, that the first foundations of that intimate connexion were laid which afterwards enabled the country to draw so largely upon the superior civilization of England, and in that way eventually revolutionized the whole of its social condition. From the time of Malcolm Cammore, Scotland ceased to be a Celtic kingdom. He himself spoke the language of his forefathers as well as Saxon; but it may be doubted if any of his children nuderstood Gaelie, any more than their English mother. All his six sons, as it has been remarked, as well as his two daughters, received English names, apparently after their mother's relations. His marriage with the sister of Edgar Atheling exercised a powerful influence both over the personal conduct of Malcolm and over public affairs. There is still extant a Latin Life of Queen Murgaret by her Confessor Turgot, which is on various accounts one of the most interesting records of those times. Margaret was very learned and cloquent, as well as pions, and she exercised her gifts not only in the instruction of her husband, but also in controversy with the Scottish elergy, whose various errors of doctrine and discipline she took great pains to reform. One of the subjects upon which she held a solemn conference with them was the proper season for celebrating Lent. On this occasion, "three days," says Turgot, "did she employ the sword of the Spirit in combating their Scriptures convincing the Jews." Turgot has preserved the heads of the debate, in which Malcolm acted as interpreter between his wife and the clergy, and which ended in the acquiescence of the latter in the queen's arguments. Her affections, however, were not all set upon the beauty of spiritual things. She encouraged merchants, we are fold by Turgot, to come from various parts of the world, with many precious commodities which had never before been seen in that country, among which are especially mentioned vestments ornamented with various coloars, which, when the people bought, adds the chronicler, and were iniluced by the persuasions of the queen to put on, they might almost be believed to have become new beings, so fine did they appear. She was also, to adopt the summary of the monk's account given by Lord Hades, "magnificent in her own attire; she increased the number of attendants on the person of the king, augmented the parade of his public appearances, and cansed him to be served at table in gold and silver plate. At least (says the honest historian) the dishes and vessels were gift or silvered over ' Malcolm is traditionally said to have, with the advice of his nobility, made various important in-

riovations in the Constitution of the kingdom, or the administration of public affairs. He appears to have restored the rule of law and order, which had been banished from the country by the civil wars that preceded his accession; and it is probable that in the measures he adopted to accomplish this end, he imitated, as far as he could, the forms and usages of England. There is neither proof nor probability, however, for the statement which has been often repeated, that he introduced feudalism m a systematic form into Scotland. That state of things appears rather to have grown up gradually under the influence of various causes, and its complete establishment must be referred to a period considerably later than the reign of this king. The modern titles of Earl and Baron, however, arc traced nearly to his time, and seem then, or very soon after, to have begun to supplant the older Celtic Marmor and Saxon Thanc. Surnames also began to be used in this or the next reign. But, on the whole, it was probably not so much by any new laws which were enacted by Malcolm Cammore (the collection in Latin which has been attributed to him is admitted to be spurious), or by any new institutions which he established, that Scotland was in a manner transformed into a new country in lins days, as by his English education and marriage, the English manners which were thus introduced at his court, and the numbers of English of all ranks whom the political events of the time drove to take refuge in the northern kingdom. Much of the change, therefore, was really the effect of the Norman Conquest of England, which in nearly the same degree that it made Saxon England Norman, made Celtic Scotland Saxon. The disastrous close of the reign of Malcolm, whose

own death was followed in a few days by that of

HISTORY OF ENGLAND

Bane (or the Fair) to seize the throne. Malcolm's eldest son, Edward, had fallen with his father at Alnwick; his second, Ethelred, was a churchman;

but he left four other legitimate sons, although they were all as yet under age. Donald is said to have remained till now in the Western Islands, where he had taken refuge, on the death of his father Dini-

afforded an opportunity to his brother Donald

can, more than fifty years before.\* He now invailed Scotland with a fleet fitted out in the Western Islands, and, with the aid of the faction which had all along been opposed to the English annovations of Malcolm, carried everything before him children of the late king were hastily conveyed to England by then uncle Edgar Atheling; and Donald, as soon as he mounted the throne, expelled all the foreigners that had taken reinge at his brother's court. He had reigned only a few months, however,

when another claimant of the crown appeared in

the person of Duncan, according to the common

account, an illegitimate son of Malcolm Canmore.

He had been sent, it seems, by his father as a hostage to England; and by now offering to swear fealty to Rufus, be obtained his permission to raise a force for the invasion of Scotland – He succeeded in driving Donald from the throne and mounting it Jumself in May, 1094. But after a reign of only about a year and a half, Dimean was, at the instigation of Donald Bane, assassinated by Malpedir, Earl of Mearns, and

Donald again became king about the end of the year 1095. After his restoration, he proceeded in his former course of policy—the expulsion of the foreign settlers, and the abobtion, as far as possible, of all the recent uniovations upon the old national manners and usages, being now prosecuted with greater zeal and vigour than ever. Affans proceeded in this train for about two years; but at length, in 1097, Edgar Atheling

raised an army, with the approbation of the English king, and marching with it into Scotland, after an obstinute contest, overcame Donald, in the beginmig of the following year, and obtained the crown for his nephew Edgar, the son of Malcolm Can-"Edgar, like Dimean," observes Mr. Allen, "appears to have held his kingdom in fealty to William. These two cases, and the ex-

which, like Imperator, implied that the holder acknowledged no superior upon carth.'' On his second deposition, Donald Bane was deprived of the power of giving further distinbance by being detained in prison and baving bis eyes put out. Edgar retained the throne till his death, on the 8th of January, 1107; and during his reign the country appears to have enjoyed both internal tranquillity and freedom from foreign war The accession of Henry I, to the throne of England, which took place in 1100, and his marriage the same year with Edgar's sister Mand, had the effect of maintaining peace between the two countries for a long course of years from this date. This tayourable tendency of circumstances was not opposed by the disposition of Edgar, when a contemporary chronicler describes as "a sweettempered, annable man, in all things resembling Edward the Confessor; mild in his administration, equitable and beneficent."\* Like Edward, the Scottish king appears to have been a favoinite of the clergy, to whom he probably showed both liberality and deference Edgar, dying without issue, was succeeded by his next brother, Alexander 1. Soon after heaccession, Alexander strengthened his connexion with the English king by a marriage with one of Henry's numerous illegitimate daughters, the Lady

Sibilla, or, as she is called by other authorities,

Elizabeth, whose mother was a sister of Walleran,

the Scottish kingdom, as it had existed for some reigns preceding, now took place, by the separation of Cumberland, which Edgar on his death-bed had bequeathed to his younger brother David. Alexander at first disputed the validity of this begnest; but, the English barons taking the part of David, he found himself obliged to submit By this arrangement, the king of Scotland would for the present (putting aside the doubtful case of Lothian) cease to be an English baron; and accordingly it appears that Alexander never attended at the English court. Nearly the whole history of his reign that has been preserved is made up of a lone contest in which he was engaged with the English archbishops on the subject of their assumed anthority over the Scottish church. Turgot, the confessor of the late Queen Margaret, had been appointed to the bishopric of St. Andrew's soon after the accession of Alexander; but his consecration was delayed for two years in consequence of a twofold dispute about the right of performing the ceremony, the archbishops of Canterbury and York Aldred, Rival.

torted submission of William the Lion, during his captivity (to be presently mentioned), are the only instances I have found since the Conquest of any king of Scotland rendering fealty to England for Both occurrences took place after a \* See ante p 222 - It must be confessed that the great length of the interval shiry long years— between the dides assigned to the death of Dimeson and that of Maksolin, throws some suspicion upon dealt of Dimeon and that of Madeolin, throws some asspicious upon the common statement that the one was the son of the other. All that we know of the large of Mulcolm is, that he was immediabout 1969 of 1976, that he reigned thrity-six or thrity-seven years, and that in his death he left several children under age. As he fell in battle, however, it seems improbable that he was very old when he died Pinkerien (who, to the by, places his accession on the authority of the Chromole of Melrose, in 1956, not in 1957) strongly unsasts that he must have been not the son, but the grandson of Duncan,—In-quiry in 293, 294. զունչ, ու 203, 204.

CHAP. L.

independence of the Scottish errorn; and Alexander.

the Fierce, as he was surnamed, fought the battle with apparently a full sense of its importance Turget was at length consecrated on the 30th July, 1109, by the archbishop of York, but only after an agreement between the two kings that the necessary ceremony should be so performed, "saving the authority of either church " Thirgot, however, died in 1115; and then the former difficulty recurred For come years no new bishop was nommated; but

at last, in 1120, Alexander wrote to Auselia, the areldushop of Canterbury, requesting him to set at Eadmer, one of the monks of that church, hat he might be placed in the vigant cjascopal Eadmer was accordingly sent to Scotland, and elected to the bishopne, as he has himself told us, by the clergy and people of the country, with the consent of the king. On the following day, however, Alexander called the new bishop to a secret conference, and surprised him by intimating the strongest aversion to his receiving consecration from the archbishop of Canterbury. Fadmer remarking that the church of Cauterbur, had by ancient right a pre-emmence over all Britani, Alexander started up with much emotion and left the spartment. It was not till after a month, during which time the person who had paraded in the bishopine since the demise of Turnet had by the royal command resumed his tonctions, that Eadmer was again sent for. compromise was now arranged, and it was agreed that the bishop should in the mean time assume the charge of his diocese without consecration, occreciving the ring from the hands of the king, and taking the pastoral staff from the ultar Eadmer, however, soon found that, in the peculiar cucumstances in which he was placed, his situation was not a very comfortable one, and he resolved, therefore, to repair to Canterbury for advice. But Alexander at first peremptorily refused to allow him to leave the kingdom. "Treceived you altogether free from Canterbury," he said, in a warm altercation they had together; "while I live I will not permit the hishop of St. Andrews to be subjected to that see." "For your whole kingdom," miswered Eadmer, "I would not renounce the dignity of a monk of Canterbury." "Then," replied the king passionately, "I have done nothing in seeking a hishop out of Canterbury." In a letter written some time after to Auselin, Alexander affirmed that the bishop had refused to accommodate himself to the usages of the country and the manners of its inhabitants, as the exigencies of the times required; but Eadmer himself denies

hops, however, he may have needed the advice

which it appears he received from an English

friend, named Nicolas, who, in a long letter which

he wrote to han, urged upon him with especial

had returned to Canterbury, he wrote a long letter to Alexander requesting leave to return and resume his office "I mean not," he said, "in any pmticular to alcrogate from the freedom and independence of the kingdom of Scotland. Should you continue ne your tornier sentiments I will desist from my apposition; for, with respect to the King of England, the archbishop of Carderbury, and the sacerdotal benediction, I had notions which, as I have since learned, were crioneous. They will not separate me from the service of God and your favour. In those things I will act according to your inclinations, it you only permit me to enjoy the other rights belonging to the see of St. Andrews " Alexander, however, would not listen to his petition; and in January, 1121, a new bishop of St. Andrews was appointed in the person of Robert, prior of Score. The archbishop of York again insisted upon his right of consecration; "but the Scots," says Smoon of Durham, "with foolish prating, asserted that his claim had no foundation either in right or usage.23 Alexander did not long survive the settlement of this affair. He had about two years before lost his oneen, who had brought hun no offspring; and his own death took place on the 27th of April, 1124. The quality for which this king is most celebrated by the old Instorians is his personal

carnestness, as the best course he could take for

softening the barbarity of the Scots, promoting

sound doctrine, and establishing ecclesiustical dis-

cipline, the keeping of a plentiful and hospitable

table! Nicolas, who seems to have been a sort of

agend or solicitor in ecclesiastical causes, strongly

advised Eadmer to obtain consecration from the

pone himself; and he requested him to inform

Alexander that he should himself be happy to

undertake the defence of the independence and

freedom of the Scottish church at the papal court,

In making this offer he probably had an eye to his

own interests fully as much as to those of the It was followed up by a strange request

-- Lentreat you," the letter concluded, "to let

me have as many of the fairest pearls as you can

procure: in particular, I desire four of the largest

sort. If you cannot procure them otherwise, ask

bem as a present from the king, who is the richest

of all men in this sort of treasure." Eadmer at

last was obliged, in order to obtain permission to

take his departure, to resign his bishopric, and to

engage not to reclams it always the life of Alex-

ander, undess by the advice of the pope, his convent, and the king of England. Yet, soon after he

valour, of which various remarkable instances are related, although some contests with revolted portions of his own subjects, of which there are obscure notices, seem to have been the only opportunities he had of displaying military talent. But he that there was any ground for this charge. Persufficiently proved has intrepidity and firmness of

character, in the manner in which he defended

and maintained the independence of his kingdom,

in the only point in which it was attacked in his

-3z2

pears to have had with him the great body of the national clergy, and they and he were always on the best terms. Aldred describes him as "hims-ble and courteous to the clergy; but to the rest of his subjects, terrible beyond measure; high-spirited, always endeavouring to compass things beyond his power; not ignorant of letters; zealous in establishing churches, collecting relies, and providing vestinents and books for the clergy; liberal, even to profusion, and taking delight in the offices of charity to the poor."

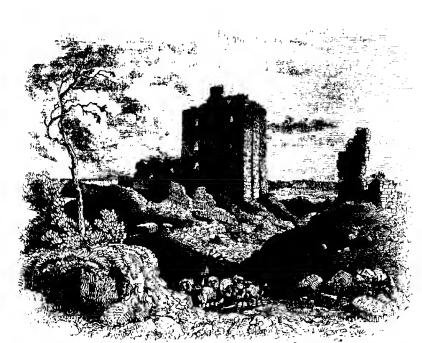

David, Earl of Cumberland, the youngest of the sons of Malcolm Cammore, now became king. Having lived from his childhood in England, his manners, says Malmshmy, were polished from the rast of Scottish barbarity. He had also, before he came to the throne, married an English wife, Matilda, or Maud, the daughter (and eventually heness) of Waltheof, Earl of Northumberland, and the widow of Simon de St. Laz, Earl of Northampton. The King of Scotland was now again an English baron, by his tenure of the carldon of Cumberland; and accordingly, when Hemy L, in 1127, called together the prelates and nobles of the realm, to swear that they would after his decease support the right of his daughter Matilda to the inheritance of the English crown, \* David was one of those that attended, and was the first who took the oath. In observance of this engagement, the Scottish king, on the usurpation of Stephen,

led an army into England, and compelled the

. See ante, page 116,

northern barons to swear fealty to Matilda. "What the King of Scots," said Stephen, when this news was brought to him, " has gained by stealth, I will manfully recover." He immediately collected a powerful force, and advanced at its head against David. They met at Newcastle; but no engagement took place; a compromise was effeeted (February, 1136), and David consented to withdraw his troops, on Stephen engaging to confer on his eldest son, Henry, the carldom of Huntingdon, with the towns of Carlisle and Dorcaster, and promising to take into consideration his claims, m right of his mother, to the earldom of Northumberland. Earl Henry did homage to Stephen for the new English honour he was thus to recerve; but David himself still refused to do so, although he appears to have retained the carldon of Cumberland in his own hands.

The war was, however, renewed before the end of the same year by David, on the pretence that Stephen delayed to put his son in possession of the county of Northumberland, but, in reality, in consequence of a confederacy into which he had entered with the Earl of Gloucester and the other partizans of the Empress Matilda, who were now making preparations for a grand effort to drive her rival from the throne. With the same impetuosity he had shown on the former occasion, David was again first in the field. A truce, negotiated by Archbishop Thurstan of York, gained a short space for Stephen; but in 1137 David entered Northumberland, and ravaged that unfortunate

RUINS OF NORMAM CASTLE

however, he deemed it advisable to fall back imon Roxburgh at the approach of Stephen, who followed him across the Tweed, and made requital by wasting the Scottish border for part of the injury Ins own subjects had sustamed. But the English king was soon recalled by other enemies to the south, and then David (in March 1138) reentered Northumberland, sending forward at the same time Wilham, a son of the late King Duncan, into the west, where he and his wild Galwegams (on the 9th of June) gave a signal discomfuture to a party of English at Chtherow. while, Norham castle, erected in the preceding reign by Bishop Flambard on the south bank of he Tweed, to gnard the main access from Scotland, smrendered to the Scottish king after a short 4 siege; and from this point he marched forware through Northumberland and Durham, to Northallerton in Yorkshire, without opposition. Here, however, his barbarons host was met by an English

force, collected chiefly by the efforts of the aged

archbishop of York. At the great battle of the Standard, fought on the 22nd of August,\* the

Scots sustained a complete defeat. The victors,

district for some time, without mercy and without

check. In the beginning of the following year,

death, and left it to his descendants. David, however, was never cordially attached to the interests of Stephen. When a few years after this the cause of Matilda for a short time gained the ascendant, he repaired to the court of his niece, and endeavoured to persuade her to follow a course of moderation and policy, at which her imperious temper spurned. He was shut up with her in Winchester castle, when she was besieged there by Stephen, in August and September, 1141+, and escaped thence along with her. said that he was indebted for his concealment afterwards, and his conveyance home to his own kingdom, to the exertions of a young man, named David Oliphant, to whom he had been godfather, and who chanced to be serving in the army of

From this period the reign of David is scarcely marked by any events, if we except the disturbances occasioned by some piratical descents made upon the Scottish coasts by an adventurer of obscure birth, named Wimund, who gave himself out for a son of the Earl of Moray, but was at last, after giving considerable trouble, taken and deprived of his eyes, in 1151. In his latter years, † Ibid. p. 433. · See ante, pp. 424-426,

Stephen.

phed himself assiduously to the internal improvement of his country, by the encouragement of agriculture, commerce, and manufactures, the establishment of towns, the election of churches, monasteries, and other public buildings, and the reform of the law and its administration. Many of the statutes cuacted by him are still preserved. When the son of the Empress Matilda, afterwards Hemy II, came over from the continent, in 1149, to assert in person his claim to the English crown, he was met by the Scottish king at Carbsle,\* and after receiving from him the honour of knighthood, bound himself, when he should become King of England, to make over to David the town of Newcastle, and the whole territory between the Tweed and the Tyne. David and his son, Henry, immediately invaded England, and advanced as far as Lancaster; but on the approach of Stephen, the Scottish army retired without risking a battle. David did not live to witness the issue of the

contest between Stephen and Henry. His death was probably hastened by that of his son,

Henry, which took place on the 12th of Jane,

1152, to the great grief of his countrymen, whom

however, David, relieved from foreign wars, ap-

however, were not in a condition to prirsue then las amable character had filled with the auticipaadvantage. King David retired to Carlisle, and tion of a continuation of the same prosperity and happiness under his rule which they enjoyed soon after laul siege to the castle of Werk, which under that of his father. Aldred, who knew him, having reduced, he razed it to the ground, and then, to adopt the expression of Lord Hailes, "returned says that he resembled his father in all things, exinto Scotland more like a conqueror, than like one cept that he was in manner somewhat more gentle. whose army had been routed." The next year a Soon after this stroke, David fixed his residence treaty of peace was concluded between the two at Carlisle; and there he expired on the morning of the 24th of May, 1153, having been found dead kings at Durham, by which David obtained the carldom of Northumberland, the ostensible object m bed, with his hands joined together over his breast in the posture of devotional supplication, of the war, for his son, who enjoyed it till his Both the virtues and the capacity of this king have been exfolled in the highest terms by the monkish chrometers; but he seems on the whole to have descried the praises bestowed upon him. It is true that among the acts for which he is most eulogized, his donations to the church, and his founding of numerous religious houses stand conspicuous-in allusion to which, his descendant, James I., is said to have feelingly complained of him as having been "a sore saint for the crown." But we may reasonably doubt whether it would have been for the advantage of the public interests that the funds thus expended should have remained in the possession of the crown; and it may a so be questioned whether anything more effective

> could have been done to promote the civilization of a country just emerging from barbarism, as

> Scotland was at this period, than the planting over

all parts of it these establishments, which were not only seminaries of picty and letters, but ex-

amples of ornamental architecture, and even central

fountain-heads for diffusing a knowledge of the

art of cultivating the civil, and other useful arts.

David, however, had many other estimable qualities

HISTORY OF ENGLAND.

lns palace, hearing and deciding upon the causes brought before him by the poor. He took great

pains also, it is added, to make them understand the reasons, and to convince them of the justice of his decisions—allowing them freely to argne the matter with him when they were not satisfied. His custom was to dismiss all his attendants at sunset, and to retire for solitary meditation; at daybreak he reappeared in public. One of the favourite occupations of his leisure hours was gardening, and the planting and engrating of trees. Hinting also he used as an exercise, but "I have seen him," says Aldred, " quit his horse, and dismiss his limiting compage, when any of the meanest of his subjects implored an audience." The late Earl Herry's eldest son, though as yet only in his twelfth year, succeeded his grandfather, under the name of Malcolm IV. The notices we have of the events of his reign in the contemporary chromelers are searcely sufficient to furmsh a continuous or intelligible narrative—and in the lack of recorded facts the writers of later date appear to have filled up the story by drawing on their invention with even more than their usual liberality. With a king of such tender age, the government must have been for some years in the hands of a regency; but there is no account of any such arrangement. This was the first example of the Scottish throne having been occupied by a boy, and it may be regarded as having for the first time established the principle of hereduary succession as the rule of the monarchy in all encounstances. As might have been expected, however, the sceptie was not allowed to pass into the hands of so mere a pageant of a king without dispute. A few months only after Malcolm's accession, the public tranquillity was disturbed by what appears to have been more properly an myasion than an insurrection, being an attack

made with the avowed object of effecting the con-

quest of the knigdom by Somerled, the Thane

of Argyle, whose daughter had married the

adventurer Wimund. The provinces, it may

be observed, of Argyle, Moray, Ross, and Gal-

loway, seem still to have remained so many

principalities, usually indeed acknowledging a

sort of fendal dependence upon the Scottish

crown, but searcely considered as forming parts

of the kingdom of Scotland, any more than the

vassal dukedoms and carldoms of the crown of

France were held to be integral parts of that

kingdom. They had each its own chief, and in

all respects its own government, with which that

of the supreme sovereign rarely if ever interfered.

Their princes indeed were legibly bound to follow his banner in war; but even this was an obli-

gation which was only attended to when the vassal

chose, or did not feel himself strong enough to

disregard it. In the present case the Thane of

Argyle made war upon his sovereign just as any

independent potentate might have made war upon another. All that we know of the events of the war is, that it lasted for some years; and then in 1157 the king of Scotland appears to have made peace with the Thanc of Argyle, just as he might have done with any other sovereign as independent as himself. To this date also is assigned Malcolm's first transaction with the English king. At an interview held at Chester he was induced not only to give up his claim to the territory to the north of the Tyne, promised to his father David, but also to abandon Cumberland, and whatever other lands and honoms he possessed in England, with the exception only of the couldon of Huntingdon, which Henry either confirmed to him, or conferred upon him, taking it from his vonlegest brother David, to whom it appears to have been left by the late king. Malcolm at the same time is stated to have done homage to Henry in the same manner as his grandfather had to Hemy's grandfather, that is to say with the reservation of all his dignities. The accounts given of the whole of this affair by the old chromclers are confused and obscure, but it is asserted by Fordun that Henry succeeded in effecting the agreement by bribing the advisers of the Scottish king, and taking advantage of his youth and mexpenence, and that it produced a deep and settled lactical against Malcolm among all classes of his own subjects. Nor does his facility appear to have gained for him much gratifiede or consideration from Henry. He repaired the following year to Carlisle to obtain the honour of knighthood from the English king; but this interview ended in a quarrel, and Malcolm returned frome in disgust, and without his knighthood. When Henry, however, set forth on his expedition for the recovery of Toulouse in 1159,\* Malcolm went with him to France, and was knighted by him there. had followed Henry's banner on this occasion in opposition to the judgment of the Scottish nobility, and after a few months a solemn deputation was sent to him to urge his immediate return to his dominions. The people of Scotland, the deputies were commanded to tell him, would not have Henry to rule over them. Malcolm felt it necessary to obey this call; but the faction opposed to the connexion with England was not, it appears, to be satisfied with having succeeded in merely bringing him home. While he was holding a great council at Perth, Ferquhard, Earl of Strathearn, and five other noblemen, made an attempt to seize his person, and openly assaulted a tower m which he was lodged. The movement threatened to lead to a general popular insurrection, when an accommodation was brought about by the intervention of the clergy. Immediately after this, Malcolm with judicious policy applied himself to the reduction of those districts of his kingdom which, inhabited for the most part by races of foreign extraction, had never yet been completely brought under subjection to the general

Book III.

\* Sec ante, p. 445,

against the wild Irish of Galloway, and then against the people of Moray, who seem to have been principally of Danish lineage. In his two first expeditions against Galloway he was repulsed; but in a third attempt, he compelled Fergus, the lord of the country, to sue for peace and to make complete submission. In regard to the province of Moray (at that time certainly not confined to the modern county of the same name, but comprebending apparently the whole or the greater part of what is now called Inverness), where rebellions had been meessant, Malcolm is asserted to have adopted the strong measure of removing the old inhabitants altogether to other parts of the longdom, and replacing them with new colonies We may presume, however, that any such transterence of population could have been only very partedly carried into effect. The subjugation of Galloway and Moray was followed in 1164 by another coatest with Somerled, who had again usen in arms, and landed at Renfrew on the Clyde with a numerous force, which he had collected both from his own territories and from Ireland The Thane of Argyle probably sympathised with the Lords of Galloway and Moray, or regarded then fate as of evil omen to himself. The issue of his present attempt, however, was emmently disastrons; his army was scattered with great forces, and both himself and his son were lett It thus appears that Malcolm IV, was at least as successful as any of his predecessors in the

slaughter in its first encounter with the among the shan, maintenance of this proper authority as sovereigh of Scotland, and that he probably nideed very considecibly extended the real sway of the sceptie which they had left him in the country beyond the Tweed. His relinquishment, however, of the possessions which had been held by his grandfather in the south, and the partiality he evenced for a connexion with England, seem to have been in the highest degree distasteful to the generality of his subjects. At the bead of the party which this technic raised against him was his next brother William, for whom his grandfather is said to have intended the carldon of Northumberland, and who accordingly considered lumself to be deprived of his inheritance by the agreement with Henry which Malcolm had made in the commencement of his reign. Meanwhile Malcolm is recorded to have, on the 1st of July, 1163, at Woodstock, renewed his homage to Henry, and also to have tal en an oath of fealty to his infant son as heir apparent, and the relations between the two knigs appear to have become more intimate than ever. The next notice that we have of the course of events in Scotland represents Malcolm as deprived of the government, and his brother William at the head of affairs as Regent. Even the fact of this revolution, however, is involved in considerable doubt, and various accounts are given of the causes that led to it. One story is, that Malcolm mentred the displeasure of his subjects by neglecting the administration of affairs, and giving himself up wholly to devotion; and that, moreover, he had bound humself by a yow of clastity, from which no intreaties of nobles or prelates could prevail upon limi to depart. Boyce gives at full length a singular harangue, which be says was addressed to the king upon this subject by the bishop of St. Andrews, at a great council held for its especial consideration at Score — But the legend of Malcolm's yow of chastity appears to be most probably an invention, founded upon his surname of the Maiden, which it is likely was intended to designate him only as young and of an elleminate countenance; for it is known from one of his own charters that be had a natural son. Nor would the history of his reign and actions denote him to have been in any respect a person of monkish tendencies. The devotion, indeed, may have come on in his last days. Be this as it may, another account (by no means preconcileable with the last) makes him to have been obliged to give up the management of affairs in consequence of an attack of illness. It is certain that he died at Jedbrigh on the 9th of December, 1165, on which his brother William was raised to the throne. Notwithstanding the part he had lutherto taken, William appears to have begin his reign by courting the alliance of the English king passed over to the continent to Henry, while he was employed in reducing the revolted Bretons in 1166, and, as already mentioned, was with him while he kept court in the castle on Mount St. Michael in the close of that year? The Chromele of Mehose (which is written throughout in an English spirit) says that Wilham followed Henry to France " to do the business of lus lord" It is probable that he expected to succeed by this conduct in his favorinte object of

recovering possession of Northmuberland Henry seems to have kept up his hopes by fair promises for some years; when his eldest con Henry was solemnly crowned at London on the 1 fth of June, 1170, both William and his younger brother David were present at the ceremony, and both did homage to the hen apparent along with the other English barons; but in 1173, when the quarrel broke out between the English king and his son, Wilham, tired of fruitless solicitation, changed his course, and, joining in confederacy with the "pimor king," from whom he obtained a grant of the earldon of Northumberland for himself, and of that of Cambridge for his brother, he raised an army and entered England as an enemy. But after merely ravaging part of the northern counties, he consented to a truce, which was eventually prolonged to the end of Lent in the following year. 1174, however, he again invaded Northumberland. As before, his troops spread devastation wherever

soon stopped. William, as has been already related,\* was on the 12th of July suddenly fallen upon at Alnwick by a party of Yorkshire barons, headed by Ranulf de Glanville, and made prisoner, with all his attendants. The Scottish king and his sixty knights, however, were not taken enptive without resistance. As soon as William perceived who the enemy were, which was not till they were close upon him, for at first he had taken them for a returning party of his own stragglers, he cried out, " Now it will be seen who are true knights," and instantly advanced to the charge. But the numbers of the English (there were four lumdred horsemen with Glanville) made this gallantry wholly unavailing. The king was quickly overpowered and unhorsed, and was then carried that same night to Newcastle, his attendants voluntarily sharing the fate of their sove-He was at first confined in the eastle of Richmond, in Yorkshire; but after a few weeks Henry carried him across the seas to Falaise, in Normandy. In this strong fortress he remained shut up till the conclusion of the treaty of Falaise, in December following, by which William, with the consent of his barons and clergy, became the liegeman of Henry for Scotland and all his other territories. He was then liberated and allowed to return home, on delivering up to the English king the eastles of Edinburgh, Stirling, Roxburgh, Berwick, and Jedburgh, and giving his brother David and many of his chief nobility as hostages for his adherence to the treaty. The next event requiring to be noticed in the reign of William is a remarkable contest in which he was engaged with the court of Rome. It began in 1178, when, on the death of Richard, bishop of

they appeared; but their destructive course was

544

St. Andrews, the chapter elected as his successor John Scot, an Englishman of distinguished learning. The nomination of a bishop by the chapter, without the royal consent, was a stretch of ecclesiastical muthority which had never been quietly submitted to either in England or Scotland, although any actual conflict between the claims of the spiritual and the temporal powers had usually been avoided by the king and the chapter uniting in the election of the same person. But in the present case William had a particular motive for making a stand against the clerical encroachment, having destined the see for High, his chaplain. "By the arm of St. James," he passionately exclaimed, when he heard of the election made by the chapter, " while I live John Scot shall never be bishop of St. Andrews." immediately seized the revenues of the see, and, disregarding the appeal of John to Rome, made High be consecrated, and put him in possession. When the Pope, Alexander 111., cancelled this appointment, and John was the following year consecrated in obedience to the papal mandate, William instantly banished him from the kingdom. The pope on this resorted to the strongest mea-· See anle, p. 471.

sures; he laid the diocese of St. Andrews under an interdict; he commanded the Scottish clergy within eight days to instal John; soon after he ordered them to excommunicate Hugh; and, finally, he granted legatine powers over Scotland to the archbishop of York, and authorised that prelate and the bishop of Durham to excommuniente the king of Scotland, and to lay the whole kingdom under an interdict if the king did not forthwith put John in peaceable possession of the Still William was inflexible on the man point. He offered to make John chancellor, and to give him any other bishoprie which should become vacant: but this was the only concession he would make. When the archbishop of York and the bishop of Durham called upon the clergy of the diocese of St. Andrews to yield obedience to John under pain of suspension, he banished all who complied with that summons. At last the two prelates went to the full extent of their tremendous powers, and actually pronounced sentence of excommunication against William, and laid the kingdom of Scotland under an interdict. But at this point the death of Alexander (m August, 1181) prevented further consequences. William lost no time in making application to the new Pope, Lucius III., who, with the customary regard of each sovereign pontiff for the decrees of his predecessor, consented to reverse the sentence of excommunication, and to recal the interdict. The affair was ended by the pope himself nominating Hugh to the bishopric of St. Andrews, and John to that of Dunkeld, and so, to use the words of Lord Hailes, "making that his deed which was the king's will." Lord Hailes observes that William, in the obstinate stand he made on this occasion against Pope Alexander, " seems to have been proud of opposing to the uttermost that pontiff, before whom his conqueror Henry had

Notwithstanding the success which is attributed to the measures taken by the preceding king for reducing to a real obedience the various provinces that had before only acknowledged, at the utmost, a qualified dependence upon the Scottish crown, we find insurrections in these districts still disturbing the present reign. In 1171 the old minalists record another revolt of the people of Moray: m 1179 William was obliged to march with an army to Ross, to compose some commotions there; a state of anarchy and confusion which had lasted for more than ten years in Galloway was only put an end to in 1186; and in 1187 Ross and Moray were invaded by Donald Bane, or Mac-William, a grandson of the late king, Dunean, whose attempt, however, was soon put down, and himself slain.

In 1186, William, on the proposal of the English king, married Ermengarde, the daughter of Richard, Viscount Beaumont, and the descendant of an illegitimate daughter of Henry 1.; on which, as part of the dower of his cousin, Henry restored the castle of Edinburgh. Two years afterwards he also offered to give up the castles of

Roxburgh and Berwick, if William would pay the tenths of his kingdom for the holy war; but the Scottish barons and clergy made answer, "That they would not, although both kings should have sworn to levy them."

The accession of Richard I. to the English throne was followed, in a few months, by the release of William from the obligations which Henry, in the words of the charter of acquittance (dated December 5th, 1189), "had extorted from him by new instruments, in consequence of his captivity;" with the proviso, only, that he should in future perform whatever homage had of right been performed, or had been of right due, by his brother Malcolm. There seems to be no pretence for denying that this was a full renunciation by Richard, at least of whatever new rights of sovereignty over Scotland had been created by the treaty of Falaise. "There is no clanse, it must be owned," observes Mr. Allen, "in the charter of Richard, which recognises in express terms the independence of the Scottish crown. . . . . The charter merely replaces the two knigdoms on their ancient footing, and leaves it open to discussion what were the lands and possessions for which homage and fealty were due to the Eughsh crown. But from one of the most full and accurate of our contemporary chroniclers, it is apparent that the independence of Scotland was understood at the time to be the effect and purport of the treaty. Benedictus Abbas, in his account of the transaction, informs as that William did homage to Richard for his English dignities; and that Richard, on the part of himself and his successors, granted to the Scotch king, and to his heirs for ever, an acquittance from all allegiance and subjection for the kingdom of Scotland." For this acquittance, and the restitution of the castles of

Roxburgh and Berwick, William agreed to pay ten thousand marks sterling.

William lived many years after this, but scarcely any events of importance mark the remainder of his teign. Some disturbances in Caithness, in 1196 and the following year, compelled him to march an army into that province, where he seized Harald, the Earl of Orkney and Carthness, who was at the head of the insurrection, and detained him in captivity until his son Tortin surrendered hunself as a hostage. This was, perhaps, the earliest actual assertion by any Scottish king of his anthority in that remote district; the earls of which, if they acknowledged any limitation of their independence, had probably been want to consider themselves subject rather to the Damsh than to the Scottish crown. After the accession of John to the throne of

England, William did homage to him (November 22nd, 1200) at Lancoln, "saving his own rights." A few years afterwards a misunderstanding arose between the two kings respecting a fort which John attempted to erect at Tweedmouth, and which William repeatedly demolished as soon as it was A war at last threatened to arise out of this quartel; and, in 1209, the English king advanced to Norham, and the Scottish to Berwick, each at the head of an army. But no encounter took place; a trenty of peace was concluded by the intervention of the barons of both nations, by which William became bound to pay to John lifteen thousand marks, as a compensation, it is supposed, for his demolition of the fort, which John, on his part, is said to have inidertaken not to rebuild. William also delivered his two daughters to John, that they might be provided by Inm with sintable matches.

William died, after a long illness, at Studing, on

But it is believed, on the authority of Alexander Nishet, the herald, fills is the only Seal of William the Lion that has been engraved. that there was, in the charter-chest of the Setons, Earls of Winton, a Charter of William with a scal appended to it, in which the hon rampant appeared on the shield, as it does in the scal of his son and successor, Alexander II .- See Anderson's Diplomoia, p 64, note k)

was surnamed The Lion on account, says Bovee, of his singular justice, -- which seems a strange reason. It is more probable that he took this title from the lion rampant, the coat armoral of the Scottish kings, which he appears to have been the The statutes attributed to him first to introduce. consist of thirty-nine chapters; but a few of them are believed to be interpolations of a later period. He left many natural children; but, besides his two daughters, mentioned above, only one son by his wife Ermengarde de Beaumont, a vouth in lus seventeenth year, who succeeded his father, and was crowned at Scone on the 10th of December,

We have now merely to add a notice of the few leading events, of subsequent date to Hemy's expedition, which occur in the history of Ireland before it becomes mixed in one stream with that of Eng-The appearances of entire submission which had been exhibited during Henry's stay in the island were not long preserved after he left #s shores. Before the close of the year 1172 the

taken by the new king of Scots, in computation with

the English barons in their contest with John, has

been related above.

people had risen against the English domination m various districts; and, for the next three years, De Lucy, Strongbow, and their associates, were kept in constant activity by the active or passive resistance of one part of the country or another. In 1175, Henry, in the hope that it might have some effect in subduing this rebellious temper, produced, for the first time, the bull which he had procured

from Pope Adrian twenty-forn years before, along

with a brief confirming it, which he had received

in the interval from Alexander III. William Fitz-

Aldelm, and Nicholas, prior of Wallingford, were

sent over to Ireland with the two instruments;

and they were publicly read in a synod of bishops

O Connor, by which the former granted to the latter, who was styled his begeman, that so long as he continued faithfully to serve him, he should be king of the country under him, and enjoy his hereditary territories in peace, on payment of the annual tribute of a merchantable lude for every tenth head of cattle killed in Ircland. For some years after this one chief governor rapidly succeeded another, as each either incurred the dis-

pleasure of the king by the untoward events of his

administration, or, as it happened in some cases, awakened his jealousy by seeming to have become

too popular or too powerful. But Hemy never

houself retained to Ireland. At length, in 1185,

he determined to place at the head of the govern-

ment his youngest son, John, then only in his

nmeteenth year; the lordship of Ireland, it is said,

being the portion of his dominions which he had always intended that John should inherit. But this

experiment succeeded worse than any other he had tried. The same evil dispositions which were

afterwards more conspicuously displayed on the

throne, showed themselves in John's conduct almost from the airst day he hegan to exercise his delegated

authority; by his insulting behaviour be converted

into enemics those of the Irish chieftains who had

Intherto been the most attached friends of the

English interest; and he met with nothing but loss

and disgrace in every military encounter with the

natives. He was hastily recalled by Henry after

having been only a few months in the country.

The government was then put into the hands of

John de Conrey, who had some years before pene-

trated into Ulster, and established the English

power for the first time in that province. De-

Conacy remained governor to the end of the reig-

of Henry; and from this date the history of Ire-

land may be considered as merged in the Instory

of England.

was concluded between Henry and Roderick

### CHAPTER II.

## THE HISTORY OF RELIGION.

HE first act by which the Conqueror | expressed the joy of his heart for the victory Hastings was necord. ance with the spirit 110 which he laid professed to conduct his enterjuise from its commencercent, and betrayed

none of that jealousy of the church which ke · howed at a later period. Up to this time the countenance of the pope and the church had been one of his main stays, and he had still to look to that quarter for much important aid in establishing his power. In these circumstances, and in the hom of trumph, when he gave orders for building the abbey of Battle, he was naturally liberal to profusion, both in the privileges which he granted to the new establishment and the revenues with which he proposed to endow it. On being told, after the foundation was dug, that there was a scarcity of water in the place, in consequence of which it would be advisable to choose another site for the building; "Wark! work on" cried the clated victor. "If God gives me hfe, there shall be more wine for the monks of the abbey to drink than there is now clear water in the best convent in Christendom."\*

Although many of the higher churchmen, however, had, during a great part of the reign of the Confessor, been in the Norman interest, and contimed among the firmest friends of William after his scizure of the throne, the great body of the clergy were strongly attached to the national cause. Some of them had even taken arms and fought on the side of Harold at Hastings; and, in the course of the protracted contest which followed before the country was finally subjugated, the English in their resistance to the foreigners had been on several occasions animated and led on by their priests. Hence it soon became a leading principle in the policy of William to depress the ecclesiastical power; while on the other hand the church, thus Dugdale's Monasticon, ni. 241.

selected as a chief object of attack, rose on that account in the affections of the country, and grew every day to be more and more regarded as the strength and best representative of the patriotic cause

Among the higher ecclesiastics who stood by what was considered as the English faction, the most conspirious had all along been the Primate Stigand. He had refused, as we have already related, to put the crown on the head of the Conqueror, who was thereupon obliged to apply to Aldred of York to perform that office -Stigane besides, lay under the displeasure of the court of Rome on other grounds William therefore, when he judged that the proper time had come, found no difficulty in effecting the removal of the obnoxious prelate; he was deposed by the papal legates at a conneil held at Winchester in the early part of the The person appointed by the king, vear 1070 with the consent of the barons, to be his successor, was the celebrated Lanfranc. Lanfranc had been a professor of laws in his native city of Pavia; but he had afterwards removed to Normandy, and opencil a school at Avianches. Here be acquired great celebrity, and his seminary became the source from which the surrounding country was gradually provided with a lettered clergy. Of such importonce were his services thought to be, that having, on the advance of old age, given up his public employment and retired to the monastery of Bec. he was after a few years induced, much against his own wish, to resume his occupation of schoolmaster or lecturer, and he continued to perform its duties with indiminished reputation till be was past the age of eighty, when William made him abbot of his new monastery of St Stephen at Caen. bad nearly reached his minetieth year when he was mysted to the archbishoptic of Canterbury. first he sought an apology for refusing the offered dignity in his ignorance of the language and manners of the English barbarians,-for such they still appeared to an Italian ecclesiastic. request of Wilham, however, backed by the earnest exhortations of the pope, at length overcame his scruples.

Having once assumed his high office, Lanfranc showed himself determined to neglect neither its duties nor its rights. The first thing to which he applied himself was to recover for his church of Canterbury the numerous ancient possessions of which it had been deprived in the confusions or by the arbitrary proceedings of the last few years. In pursuing this object, obliged as he was to contend with

powerful Odo, uterme brother to the king, was thus compelled to restore twenty-five manors which had formerly belonged to the see of Canterbury. The

course.

wealth thus recovered for the church was applied by Lanfranc to the promotion of its interests. ' He rehult the cathedral of Canterbury with Norman stone, repaired the sacred edifices in a style of comfort and elegance hitherto unknown to the Saxons, and erected churches and monastic establishments where they were considered most necessary. He also caused the bishop to remove their seats from the villages, in which many of them resided, to the larger towns. he is said to have introduced certain reforms into the monastic institutions; and he established schools in various parts of the kingdom. Lanfranc at the same time cordually co-operated with William in that particular point of ecclesiastical reformation which the latter no doubt had most at heart, the general substitution of a foreign for a native elergy.

Very good reasons were easily found for the dis-

placement of many of the English priests, on the

ground both of ignorance and immorality; and, on the whole, it is probable that the result of their

ejection was the settlement in the country of a more

instructed body of pastors than it had previously

possessed.

We must suppose that, whatever may have been the motives of another kind that principally actuated William, this was the end which Lanfranc kept in view, and by which be justified to himself the measures of severity in which he II is own elevation, indeed, had been one of the commencing moves of the royal scheme of reform; for it was at the conneil at which Stigand was deposed, held by the papal legates in 1070, that the removal of the native clergy and the introduction of foreigners were begun. For some years after this, the course which bad been thus entered upon was vigorously pursued, till the conversion of the spiritual estate to a community of interest and feeling with the civil government was pretty completely effected. In many instances, the crime of being an Englishman, or inability to speak the Norman tongue, was reckoned sufficient for clerical deposition in the absence of more substantial charges. Even the saints of the Saxon calcudar shared in the fate of their worshippers. Their smithty was denied, and their worship ridiculed. Of the unfortunate dergy, some endeayoured to make terms with a power they had no means of resisting, by consenting to descend to a humbler station in the church: others fled to Scot-Their necessities, or the hope of vengeance, drove many to the forests, where they joined the

bands of outlaws, and sunctioned with the rites of

religion the wild struggle of independence which

was there long maintained by the sparks of the

popular spirit that were last in being trodden out,

and also the deeds of rapine and cruelty with which

of learning and virtue; but it was impossible for him, whatever his wishes may have been, to prevent the intrusion of many unworthy persons into the inferior appointments. He had lured adventurers to his standard by promises of ecclesiastical as well as political preferment. The powerful barons, whose swords had been out his way to the throne, and now maintained him upon it, had kinsmen and retamers of the elerical order, whose domands could not be refused; and thus, though vacancies were rapidly made, they were still in-

sufficient for a throng of greedy expectants, the

gratification of whose demands, on the other hand,

only deepened the miseries of the land and the

hatred of the unhappy people.

it was doubtless plentifully deformed. Some even

of the deposed prelates are said to have taken this

It appears that in most instances the higher church benefices were filled by William with men

[Boor III.

Annalst the acts of deposition that took place during this reign, an attempt was made to eject the venerable Wulstan from the see of Winchester This hishop, though illiterate, surpassed the generality of his brethren of English birth, in purity of character and a blumeless life. But, on the charge that he was unacquainted with the French language, the resignation of his episcopal staff was required of him, in a synod held in Westminster Abbey, at which Lanfranc presided. At this demand, Wulstan arose, and, grasping the erozier with a firmer hand, thus addressed the primate: " I am aware, my Lord Archbishop, that I am neither worthy of this dignity, nor equal to its duties; this I knew when the elergy elected,—when the prelates compelled,—when my master called me to By the authority of the holy see he laid this burden upon me, and with this staff he commanded me to receive the rank of a bishop now demand of me the pastoral staff which you did not present, and the office which you did not Aware of my insufficiency, and obedient bestow. to this holy synod, I now resign them-not, however, to you, but to him by whose authority I received them." He then advanced to the tomb of Edward the Confessor, and thus solemnly invoked the dead king: "Master, thou knowest how reluctantly I assumed this charge, at thy instigation. It was thy command that, more than the wish of the people, the voice of the prelates, and the desire of the nobles, compelled me. Now we have a

new king, a new primate, and new enactments.

Thee they accuse of error, in having so commanded,

and me of presumption because I obeyed. For-

merly, indeed, thou mightest err, because thou wert

mortal; but now thou art with God, and canst err

no longer. Not to them, therefore, who recall

what they did not give, and who may deceive, and

be deceived, but to thee who gave them, and art

now raised above all error, I resign my staff, and

surrender my flock." He then laid his erozier

upon the tomb, and took his seat among the monks

as a simple brother of their order. The synod did

vileges of a victor in the church as well as the state, he was surprised by finding bimself threatened with vassalage in turn. The subtle and imperious Hildebrand, now Pope, by the title of Gregory VII., declaring that kings and princes were but the vassals of St. Peter and his successors, summoned William to do homage for the possession of England. The answer of the prond Norman was brief and decisive. The tax of Peter's-pence, discontinued of late years in England, and now required by the Pope, he declared that he would regularly pay; but the homage he peremptorily refused, alleging that it had never been promised by limiself, nor rendered by any of his predecessors. With this answer to his demand, Gregory was obliged to remain satisfied for the present; he probably, indeed, expected no other, and only annonneed his claims with a view to their enforcement in more favourable circumstances, and that no future English king might be able to profess astonishment at their being advanced, seeing that they had first been pressed upon the Conqueror. William, in the mean time, taking advantage of the contest which arose between the pope and the emperor, and of his own remoteness from Rome, which enabled him to act with the more independence, commenced a vigorous warfare against the papal encroachments He ordered, first, that no pontiff should be acknowledged in his dominions without his previous sanction, and that papal letters, before they were published, should be submitted to

in capite, until the offence had been certified to hmiself.+ During the latter period of William's reign an event occurred, arising out of the disorders of the conquest, but from which an important benefit resulted to religion. No uniformity was observed in the public worship-the prayers and their mode of recital frequently depending upon the caprices of the officiating priest. In order to enforce a favourite liturgy among the Saxon monks of Glastonbury, Thurston, their Norman abbot, entered the church with a band of archers and spearmen. The monks withstood even this armed demonstration; a desperate conflict commenced round the altar, and be-

the king, by which his excesses were frequently restrained; and, with longer time, Lantianc might perhaps have been also enabled to develop some of those better qualities, the elements of which Rufus undoubtedly possessed. But the archbishop, being nearly a himdied years old, died in 1089, about two years after the commencement of the reign, ‡ Lamfranc was succeeded in los office of the king's chief adviser by the notorious Ralph Flambard. One of the chief somices to which the new minister, among his plans of extortion, looked for the supply of the royal coffers, was the plumber of the At his instigation Rufus took to himself the revenues of all vacant bishopines and abbacies, and in many cases kept, the most important offices in the church unfilled for years, drawing the profits all the while into his own exchequer. In these cases the eccle-nastical estates were farmed out to those who officied the highest terms for the uncertain tenure, and who of course emhis inspection; secondly, that no decision, either ployed, without scraple, all the means at their command to repay themselves, and to make the of national or provincial synods, should be carried most of their temporary occupation. to repair the wrongs he had done the church. Since the death of Lanfranc he had kept the sec of Canterbury vacant, swearing that it should have

HISTORY OF ENGLAND.

no archbishop but himself; but now, impetuous in repentance as in guilt, he insisted that Anselm, the successor of Lanfranc in the abbacy of Bec, and whom that prelate had before his death ex-

pressed his wish to have also for his successor in the primacy, should forthwith be appointed archbishop. Anselm happening to be at the time in England, he was hurried to the bed-side of the long. A crozier was presented to him, but he refused to touch it, till the royal attendants unclenched his fingers, and forced the sacred staff into his struggling hand, when all with one accord burst forth into a Te deum for the primate whom heaven had sent them, while the helpless monk in vain protested against the whole proceeding. would perhaps be wrong to assume that the resistance of Anschn was hypocritical. Independently of his love of studious retirement, he may be supposed to have foreseen that the primacy, from the temper of the kmg and the state of the country, would be no enviable elevation. "What me you doing "" was his language to his friends who were most importunate for his consent: "the church of England should be drawn by two animals of equal strength: but you are yoking to the plough a feeble old slicep with a mad young bull that will tear its companion through every obstacle, and finally drag it to death " Anselm had not done justice to his own charac-

ter when he likened lumself to the most gentle of animals. Although unequally yoked with the fiery spirit of Rufus, yet upon occasion he could display an unbending obstrucey that even matched the The seeds of future disficreeness of the king. sension were sown between them at the commencement of their connexion. Anselm, upon accepting the primacy, had supulated for the restoration of all the church lands belonging to bis see, and the implicit obedience of the king to his advice in all matters of religion; and to these demands William had evasively replied that the archbishop's reasonable expectations would be fulfilled. But the penitence of the king vanished with his fit of illness, and he rose from his sick bed with fresh vigour to resume the plunder of the church. His first quarrel with the primate was on the subject of the price to be paid by the latter for his promotion. As Rufus had not been accustomed to confer the higher benefices without a valuable consideration, Anselm was willing to comply with the usage; but, pleading his previous poverty and the impoverished condition of the see, he offered only the sum of five hundred pounds. Rufus eyed the money with disdain, and refused it, on which the primate bestowed it upon the poor. Afterwards he was given to understand that a thousand pounds would be a more welcome offering, but he declared that he was unable to raise such a sum from his exhausted revenues.\* When this answer was

· Rufus exacted the same sum from his favourite Flambard, on

English kings!" The archbishop, nevertheless, did not liesitate to amounce that he intended to proceed on his journey, even without the leave of the king. In these circumstances a council of the nobility and prelates was forthwith assembled at Rockingham to decide upon the case. The bishops acknowledged the illegality of the primate's conduct; but when the king demanded his deposition, they declared that that could only be effected by the anthority of the pope. They agreed, however, to unite in endeavouring to persuade him to retract his decision in favour of Urban, and to forego his journey; but Anselm would make no such concessions. The affair was thus fast advancing to a erisis, when the difficulty was solved by Rufus finding it expedient to acknowledge the claims of Urban, and by the pope, on the other hand, by way of returning the favour, dispensing with the personal attendance of Anselm, and transmitting the pall to England. As Rufus, however, still persisted in keeping many of the chief offices of the church vacant, while Anselm felt it his duty to urge that proper persons should be appointed to the abhacies and other preferments which the king thus retained in his own hands, the quarrel between them was not long in breaking out again with all its former violence. "Are not the abbeys mine?" exclaimed the Red King, when the archbishop pressed his unwelcome solicitations;-" Do what you please with the farms of your archbishopric, but leave me the same liberty with my abbeys!" Anselm eventually determined to go to Rome, and lay the matter before the pope, deterred neither by the steady refusal of Rufus to grant him permission to leave the kingdom, nor by the confiscation and banishment which he was assured would follow his mauthorized departure. He set out on his journey in the spring of 1098, on foot, as a humble pilgrim, with a staff and wallet; and in this guise presenting him with the bishoptic of Durham. It is likely, however, that this able financier found no great difficulty in raising the money.

that the bearer was a servant of the archbishop, he swore that he would tear out his eyes unless he instantly quitted the kingdom.

Before, however, it was known what reception the pope's application had met with, an ecclesisatical council which was held at Rome in the class of this year and at which Angelin was now.

the pope's application had met with, an ecclesiastical council which was held at Rome in the close of this year, and at which Anselm was present, declared that the king of England deserved excommunication for his treatment of that prelate; but at Anselm's request, made upon his knees, the pope reframed from actually pronouncing the sentence for the present. But this council is especally memorable in the history of the church, for the decision to which it came upon the great question of investiture, which had now become the main point in the contest between the pretensions of the spiritual and of the temporal power in every part of Christendom The matter in dispute was simply, whether ecclesiastical persons, on being inducted into bishoprics and abbeys, should be permutted to receive the ring and erozier, by which the temporahties of the benefice were understood to be conveyed, from the hands of the prince. It is evident, however, that this ceremony involved the whole question of, whether, in every country, the clergy should be under the dominion of the king or of the pape. Its observance accordingly had been for a long time as strongly protested against by the court of Rome, as it had been usually insisted upon by every temporal sovereign. present council denounced excommunication both against all laymen who should presume to grant investiture of any ecclesiastical benefice, and against every priest who should accept of such investiture. It was alleged, with a daring freedom of language, to be too horrible for hands that created the Creator lumself—a power not granted even to the angels and that offered him to the Father as a sacrifice for selm was not recalled so long as Rufus lived.

When Henry Beanchere succeeded, his defective title required the sanction of the clinrch, and he, therefore, politically recalled Anselm from banishment, at the commencement of his reign. He also

promised neither to farm nor sell the ecclesiastical benefices, as his brother had done, and to restore to the church all its former immunities; and he threw into prison the abnoxious Flambard, the agent of the late oppressions. The friend-hip and aid of the church in the matter both of his establishment on the throne, and of his marriage shortly after with Matilda, notwithstanding her apparent dedication as a num, rewarded this show of regard It was not long, however, before the quarrel respecting investinite was renewed, by the denound of Henry, that Anselm should do homage for his archbishopric. To this demand, the latter returned a decided negative. In consequence, the vexations subject was again referred to Rome, and, as might have been expected, the decision prononneed by Pascal II, who was now pope, was m

favour of the church. Henry, notwithstanding,

still commanded Auselm either to do homage, or

leave the kingdom; but the archbishop would do

neither. He declared that he would abide in his

province, and be defied any one to inpute him

there. A second deputation was thereupon sent to Rome, to intimate, in the name of the king and nobles, that imless the right of investiture was conceded, they would banish Anselm, dissolve then connexion with the papal see, and withhold the usual payments. Thus pressed, if we may behave the account given by Anselm's hographer, Eadmer, the court of Rome had recourse to a very strange and clumsy stratagem. Three bishops had brought the mesage of the king, and two monks had also arrived to plead the cause of the archbishop. To the hishops, it is affirmed, the pope verbally conceded the right of investiture as claimed by the long, but excused himself from committing the permission to writing, lest other sovereigns should demand the same privileges, and despise his authority, while by the monks he sent letters to Anselm, exhorting him to resist all royal investitures, and hold out to the intermost. The deputies of both parties returned to London, and, at a great council held there (A.D. 1102), after the bishops had rehearsed their verbal

The pope afterwards declared the statement of the bishops to be false, and even excommunicated them as hars; but still Henry stood out. At length it was arranged that the archbishop should himself repair to Rome to obtain a positive decision; and he set out on his journey, accordingly, on the 29th of April, 1103.

Some years of further negotiation followed, during which Anselm remained abroad. At last a compromise was effected by the pope consenting

upon the investiture with ring and crozier, the bishops and abbots should do homage, in the same manner with the lay tenants in chief of the crown, for the temporahues of their sees. On the tedious controversy being thus brought to a close, Anselm returned to England in Angust, 1106.

Two years after this act of pacification, a council was held at London, to enforce the obligation of clerical celebacy, a rule which both Anselm and his predecessor Lamfranc had always shown great zeal in promoting, although the subject had been partially lost sight of during the late controversies Ten canous were now passed on this head more rigid than any that had been hitherto promulgated. All married priests of whatever degree were commanded instantly to put away their wives,—not to suffer them to live on any lands belonging to the church,—and never to see them or converse with them except in urgent cases, and in the presence of witnesses. As a punishment for their crume in marrying, they were to abstant from saying mass for a certain period, and to indergo several penances. Those who refused to banish their wives were to be deposed and excommunicated; their goods were to be confiscated, and their wives, as adulteresses, to be made slaves to the bishop of the diocese.\*

Anselm ended his troubled career in 1109, in the seventy-sixth year of his age and sixteenth of his prinney. His writings, which still remain, prove that he possessed a large share both of literary knowledge and metaphysical acuteness; and it deserves to be remembered, as one of his chief merits, that he zealously followed up, and even extended, the plans of his predecessor Laufranc, for the establishment of schools and the diffusion of learning in the country of his adoption. Whatever may be thought, also, of the course which

he took in defence of what he conceived to be the rights of his station and of his order, or of some of his measures for the reform of the church over which he presided, it is evident that the contest he so perseveringly waged was for no merely personal or selfish objects. To his honour, it is recorded that the English loved him as if he had been one of themselves.\* To the favour which he thus enjoyed with the conquered race, and the predilection for them on his part by which it may be supposed to have been acquired, it is probable that he owed part of that royal aversion by which his primacy was embittered. After his death, Henry was in no haste to fill the see of Canterbury, and he kept it vacant for the space of five years. The ecclesiastical history of the remainder of the

reign of Henry offers no events that require to be related. The conduct of the leading clergy in the contention between Stephen and Matilda has been detailed at sufficient length in the preceding chap-The defective nature of Stephen's title afforded a favourable opportunity, which the ecclestastical interest did not neglect, of extorting from the crown an acknowledgment of its hangliticst and heretofore most strenuously-disputed pretensions. Exemption from the royal investiture, and the right of carrying ecclesiastical causes by appeal to Rome, were conceded by Stephen, or usurped in spite of him, by a church that was daily improving in the art of profiting by every political emergency. not till the reign of Henry II., however, that the contest re-assumes much interest or distinctness; and to that period we will now therefore at once proceed.

The principal figure here is Becket. The legend of the origin of this celebrated personage is sufficiently romantic. Gilbert Beck, or Becket, a Saxon yeoman, followed to the crusides the

Having abjured her native faith,

and been baptized, the foreign maiden became the wife of Becket, now a citizen of London. From this inmonwas born Thomas, the future Archbishop of Canterbury, a man whose remarkable life was destined to be a fit sequel to this singular bistory.\*

His education has introduction at court by the

His education, his introduction at court by the patronage of Archbishop Theobald, the rapid progress which he made in the royal favour, his elevation to the chancellorship, and his subsequent appointment to the primacy, with the extraordinary transformation which his mode of life and his whole character underwent upon the last-mentioned event, have been already related. There can be little doubt as to what Henry's design was in thus.

Consecration of Becket as Archbishop. From the Royal MS, 2 B. vil.

placing at the head of the church the man who had litherto been the most compliant as well as the most active and dexterous of his ministers in civil affans. When the intention of making him primate was first intimated to Becket he frankly declared to his friends that, in accepting the new dignity, he was aware that he must forfeit the favour either of God or the king. He expressed the same sentiment to Henry himself, but in such an equivocal manner that his remark scemed rather intended for a jest. When the king informed him that he had fixed upon him for archbishop, he lifted up a corner of his gay robe, and laughtingly said, "A fine saint you have chosen for so holy an office!" At first, also, men wondered when the news became public, as if a miracle had been announced.\* Many persons, also, professed to be not a little shocked as well as astonished; but perhaps the indignant feelings of the Norman part of the community were as much excited by Becket's Saxon lineage as by the during profanation, at which they affected to be scandalized.

During the space of twelve months that the measure waited its accomplishment, the chancellor gave no indication of that decided change of sentiment and conduct which he afterwards exhibited. It was not till after the appointment was completed, and made irrevocable, that he suddenly underwent that metamorphosis at which the whole realm was astounded. The effect, however, produced throughout the nation by so complete a disappointment of the expectations that all men had formed, was great and instantaneous. Unclerical as the archbishop's former life had been, and notwithstanding his obnoxious promotion, the bishops as well as the clergy generally were at first delighted with such a primate; and the Saxon population, while they were charmed with his affability and humbleness of demeanour, had their cynltation and affection heightened in regarding him as belonging to their own race.

The circumstances which led to the first breach between the king and the archbishop have already been stated. The whole comes, indeed, of the contest between Henry and Becket is so interwoven with the general history of the kingdom, that a sketch of it from its commencement to its close has been necessarily given in relating the civil transactions of the period, and we have only now to fill up certain parts of that online by a few additional details in regard to points belonging more especially to the subject of the present chapter.

The various matters in dispute hetween the two parties, it will be remembered, were all submitted to the great council of prelates and barons which met at Clarendon in January, 1164. A short review of what took place upon that occasion, and of the history of the decrees, or "constitutions," as they were called, passed by the council, will best explain the conflicting claims of the king on the one hand and the archbishop on the other, and the relative positions in which the church and the state were left by the issue of the controversy.

The particular question which originated what eventually became a general contest about their respective rights between the crown and the spiritual estate, appears to have been—whether the clergy, when accused of crimes, should be tried and punished by the ecclesiastical or the civil courts. Filled as many of the lower offices in the church were, with persons of little education, and whose emoluments were not such as to raise them above the habits and temptations of the lowest poverty, it is no wonder that, in an age of such general rudeness and disorder, some of the most serious offences, including even acts of violence and blood, should occasionally be committed by

#### \* Stephan.-Vita Quadripart.

rent reason, that the temptations to the commission of crime in the case of a priest were greatly ingmented by the peculiar sort of trial and punishment to which it subjected him. During the Saxon times, the clergy and laity were alike amenable to the courts of common law; but the Conqueror withdrew the bishops from the civil tribunals, and, in imitation of the order of things already existing mall the other countries of Christendom, placed them at the head of other courts or their own. The extent of the ecclesiastical jurisdiction thus esta-

churchmen. It was alleged, however, with appa-

blished had, from the first, been a subject of nncertainty and dispute; but latterly the church courts had asserted the right of alone taking cogmeance of all offences whatever committed by the clergy. One strong ground on which this claim was objected to by the civil anthorities, was the madequacy of the punishments which the ecclesusstical judges were considered to have the power of inflicting, for they were held to be restricted by the canons from pronouncing sentence of death; and, in consequence, for the most hemons offence committed by a priest, the heaviest retribution was stripes and degradation from his sacred office. was also alleged that a natural partiality for their order induced those who presided in the church courts to treat the offenders that were brought before them with dangerous lenity, and sometimes, perhaps, made them shut their eyes altogether to the proofs of a churchman's guilt. The Constitutions of Clarendon, as finally digested, were sixteen in number. They were pre-

sented for the acceptance of the council by the king, as a restoration or recognition of the ancient customs of the realm, or, as it was more specifically declared in the preamble, of the usages, liberties, and dignities which had prevailed and been maintained in the days of his grandfather and the other knigs his predecessors. It must be admitted that this title was not a correct description as applied to all the The instrument comprehended, as has been already observed, the entire scheme of reformution by which Henry proposed to bring the church under subjection to the civil authorities; and, however necessary certain of the clauses might he for this end, or however just and proper, they were undoubtedly innovatious upon the laws and practice that had subsisted ever since the Con-The substance of the principal enactments was-that all cases, whether civil or criminal, in which a clergyman was concerned, should be tried and determined in the king's court; that appeals should be from the archbishop to the king; and that no cause should be carried further than the archbishop's court (in other words, to Rome) without the king's consent; that no archbishop, hishop, or dignified clergyman, should depart from the kingdom without the king's leave; that no tenant in chief of the crown, and no officer of the royal household or demesne, should be excommunicated, or his lands put under an interdict, until application had been made to the king or the grand justiciary;

that churches in the king's gift should not be filled

without his consent; that when an michbishopric, bishopric, abhaey, or priory became vacant, it should remain in the custody of the king, who should receive all its rents and revenues; that the election of a new incumbent should be made upon the knig's writ, in the royal chapel, and with the asself of the king; and that the person elected should do homage and fealty to the king before hemg consecrated. To these propositions Becket, at an interview with the king some time before the meeting of the conneil, had, although with nuch reluctance, pro-

mused that he would give his assent; and all the

other bishops had also expressed their readiness to acquiesce in them. But now the archbishop, on being formally asked by the king to fulfil his promise, to the surprise of all present, peremptorily refused to give any other answer than that he would render obedience to the said ancient customs of the realm, saving the rights of his order. Termfied at the rage noto which the king broke out at this unexpected opposition, Becket's brethren vehemently implored him to yield. Meanwhile the door of the antechamber being thrown open, discovered a band of knights standing clad in armour, and with their swords drawn alarming circumstances Becket's firmness was at last shaken; and he promised that if the meeting should be adjourned for the purpose of having the emetments digested into a regular form, he would then do what was required of him. But when he retired into solitude he was confounded at the thought of his weakness. Filled with remoise, he re-olved even yet to draw back, to whatever of remeach or danger he might, by so doing, expose When, therefore, the meeting re-assembled on the following day, and copies of the Constitutions were produced, he peremptorily refused Neither enticaties nor threats could his signature now move him, Retiring from the comocil, he wrote to the pope an account of all that had taken place, soliciting absolution for the momentary lapse of which he had been guilty; and, as a penanec for the same crime, he condemned himself to an abstinence of forty days from the service of the

The Constitutions of Charendon, however, as assented to by the barons and the other prelates, became for the present the law of the land, notwithstanding the dissent and opposition of the archlushop.

The rest of Becket's memorable story, -his condemination a few months after this by the council of Northampton, -his flight to the continent, -his reconciliation with the king and return to England after an absence of nearly six years,—and, finally, his barbarous murder, has been already told. It is only necessary to add, here, that Henry, on his reconciliation with the pope in 1172, only obtained absolution on solemnly promising to abplish all laws and customs hostile to the clergy that might Gervase, 1388.

have been introduced in his kingdom since the beginning of his reign,—to remstate the church of Canterbury in all the possessions it had held a year previous to Becket's departure, - and to make restriction to all the friends of the late primate who had been deprived of their property these, it is said, were added some other engagements which were not committed to writing; and one version of the oath taken by Henry makes him arknowledge the kingdom of England to be held by him in feudal subjection to the pope. This article, however, has generally been held to be a forgery; and while on the one hand the evidence. of its anthenticity is very defective, its inherent improbability on the other is certainly strong. We cannot agree with a modern writer \* in thinking it likely that this acknowledgment of vassalage on the part of Henry may be what is alluded to in some of the accounts no one of the king's promises. or engagements which it was held expedient to keep secret. It is much more probable that what is

See Lingard's History of England, vol. 0. p. 114

thus alluded to was a payment of money to the

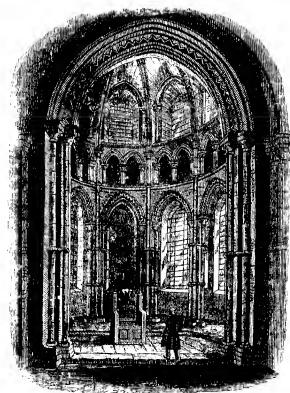

sovereign pontiff. It is expressly stated that these

secret engagements were not committed to writing,

so that they would not be found in any copy of the

oath. It is unnecessary to remark how irreconcileable with the character of Henry is the supposition that be could in any circumstances have made such an acknowledgment as this. If the oath, it may also be asked, existed with his signature in the form in which it has been published by Baronius and Miratori, how came it never afterwards to be brought forward, even when, as in the reign of John, it might have been produced with so much advantage in support of the pretensions of the papal count?

Notwithstanding Henry's promise to abolish the customs that infringed upon the rights of the clergy, the Constitutions of Chrendon remained unnepealed for some years after this time. But if they were still nominally law, they were little better than a dead letter. All effective opposition to the cause of which Becket had been the great champion, was for the present put down by his maityrdom, and by the wonders that were believed to have followed that event. The spirit of the mindered archibishop seemed still to walk through the land, to animate his friends and conformenencies. While his mangled body lay in the choin of the church, the right hand, it was affirmed, had solemnly raised itself, and made the sign of the

BECKET'S CROWN, a CHAPER in CANTERBURY CATHEBRAL, saturated immediately behind the chapel of the Holy Trinity, in which stood the sharme of the morter. Becket's C own, probably seconded from the form of the ribs of the arched toof, appears to have been in course of ejection at the Reformation, and was only finished about the middle of the last century, at the expense of a private citizen of Canterbury.

His eyes also, which had been dislodged by the

blows of the murderers, were averied to have been

replaced by two others smaller in size, and, that

the miracle might be incontestible, of different

colours. After the interment of the body, crowds

of the afflicted repaired to the spot, where the lame

recovered the action of their limbs, the blind

received sight, and the sick were heafed ! Every

day added to the number of the pilgrims and the

muncles, and consequently to the spread and

feryour of the delusion. The court, perplexed and

their own pence to make with the pope, and might

be injectain how far their interference would be

welcone; and perhaps among both parties there

might be a hirking dread that miracles so immerous

parafyzed, looked on in silence; the prelates, who had opposed the martyr while he lived, had still

and so well attested might be true. The enthusinsm became general, and messenger after messenger was despatched to Rome with fresh fidings of prodigies, and supplications that Becket niight be made a tutelary saint for the blessing and protection of England. This favour was at last granted by the pape; and the 29th of December, the day on which the samt was assassinated, was assigned to fum in the calcudar.§ It was not, however, till the year 1176 that, at a great council field at Northampton, the repeal, or cather the modification, of the Constitutions of Clarendon was formally effected. It was there agreed, though not without much opposition from many of the barons, - first, that the clergy should not be brought to trial before the temporal courts on may changes except for offences against the forest laws; and, secondly, that no bishopine or abley should be kept in the king's hands longer than a year, except in circumstances which might make if impossible to have the vacancy filled up in In this state the law continued during the remainder of the period now under review.

Before dismissing this reign, an event remains to be mentioned, which although otherwise insigficant, is memorable as the first instance on record of any opposition being made to the common faith, and as such may be regarded as the earliest harbunger of the Reformation in England. About the beginning of the vear 1166, a synod was held at Oxford in the presence of the king, for the arraignment of certain foreigners accused of heresy. It appears that five years before, several Germans, to the number of thirty men and women, had arrived in England, and began to disseminate their ichgions opinions; but as they had hitherto only converted one woman of low rank, and as their demeanour had been peaceful, they had been allowed to live unmolested. Attention, however, was at last called to the circumstance that their principles differed from the established creed, on

which they were thrown into prison, and now

threatened with punishment, they answered, with a smile, "Blessed are they who suffer for righteonsness' sake, for theirs as the kingdom of beaven " As here t was new in England, the indiges were at a loss, how to act; but canons had already been emacted by the council of Toms against the Albigenses, and sentence was proconneed in conformity with these. The accused were condemned to be branded in the forchead with a hot from and to be publicly whipped and expelled out of Oxford, while the king's subjects were forbidden by pro-Clamation to shelter or relieve them. The cuthustasts went to their punishment in triumph, singing, "Blessed are ye when men shill hate you mad per-scente you?" Their garments were ent off by the waist, their brows were seared, and their backs torn with sconiges; and thus bleeding, and almost naked, in the depth of winter, they wandered about unsheltered among the fields, until they died Such is the obscure account delivered by the contemporary writers, in whose eyes dissent in belief from the church of Rome was an incomprehensible It is probable that these strangers, from the notions asembed to them on the institution of of marriage and the sacraments, were Cathari, or Albigenses. The history of ecclesiastical affairs in England during the reign of Richard I is almost a blank, every feeling was absorbed in the great subject of the Crusades, and the elergy, who had already gained all for which they had contended at home, found ample scope for their belligerent propensities in the fields of Palestine, to which many of them repaired in warlake array notwith tanding the canons that had been emeted against their bearing arms. During the reign, the power of the popedom, which had been exerted in favour of Richard in the negotiations for his release, was also directed effectually against him when he showed symptoms of opposition to Rome. Hubert, the primate, jealous of the monks of Canterbury, and desirous to abridge their practeges, had determined to raise up against them a rival body, in the form of an

establishment of canons regular, for whom he

proceeded to erect a splendid edifice at Lambeth,

with the approbation of Richard. But the monks

of Canterbury, alarmed for their rights, and sus-

pecting that the gainful relics of Becket would be

transferred to the new house, fiercely opposed the project, and appealed to the Pope, Innocent III.,

who warmly esponsed their cause, and directed a bull to the Archbishop, in 1198, commanding him

brought for trial before the king. To the question

of what was their belief, Gerard their leader an-

swered that they were Christians, and venerated

the doctrines of the apostles. But it is alleged that,

when they were examined upon particulars, they

spoke imprously of the euclidist, baptism, and

marriage, and when arged with texts of scripture,

refused all discussion, declaring that they believed

as they were taught, and would not despute about

their faith. When they were exhorted to recant,

they received the admonition with scorn; and when

in a very imperious style to desist immediately from his proceedings. "It is not fit," he said, "that

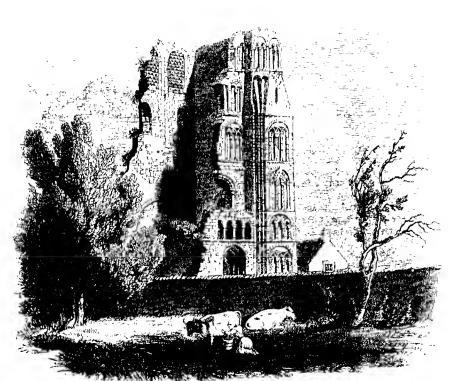

any man should have any authority who does not reverence and obey the apostolic sec." He after-

wards addressed another bull to Richard, whom he

threatened for his contumacy in abetting the archbishop; warning him that if he persevered he

should soon find in his punishment how hard it was to kick against the pricks. By a subsequent mandate also addressed to the king, Innocent declared that he would not endure the least contempt of himself or of God, whose place he held upon earth. "We will take eare," he says, "so to punish both persons and lands without distinction that oppose our measures, as to show our determination to proceed prudently, and in a royal manner." The hon-hearted king and the rebellious archbishop were equally dismayed at these menaces, and the obnoxious building was destroyed.\*

RUINS OF THE AUGUSTINE MONASTERS AT CANTER WHY

The history of the church in the reign of King John is principally a continuation of the same great contest respecting the appointment to the higher ecclesiastical offices between the clergy, or the pope, on the one side, and the crown on the other, which had been earried on throughout the greater part of the preceding century; and the events that arose out of which, exercising as they did an important influence on the course of public affairs, have necessarily been related in the preceding chapter. In the earliest ages of the Christian church, the election of bishops was by the voice of the clergy and the people of the diocese. After the establishment, however, of the feudal system in the different kingdoms of Europe, and

the annexation to bishoprics of high political power and large landed possessions, the king naturally claimed the right of being at least a party in the nomination to an office which gave to its possessor so much weight in the state. The claim to a veto upon the election, was as inturally extended to that of an absolute right of appointment, as soon as the erown found that it could not otherwise secure the office for its own nomince. Accordingly, this was substantially the position which the crown at last assumed, although the form in which it asserted its claim varied with cir-When it found itself obliged, for eumstances. instance, to relinquish the absolute nomination of the bishop, it stood out for the right of granting

THE HISTORY OF RELIGION. or refusing to the individual elected that investiture, without which he certainly could not draw the revenues of the see, even if he could exercise any of the spiritual powers of his office. course taken by the climich, on the other hand, equally varied in conformity to the course of events. In the first place, at a very early period, the mterference of the laity was first reduced to a mere form, and then got rid of altogether. Subsequently the claim of the general body of the clergy of the diocese to a voice in the election was disputed, and the right of voting was asserted to reside solely in the chapter. As the chapter in many cases consisted of the monks of some religious house to which the cathedrals were held to belong, the natural enmity between the regular and the secular elergy here interfered materially to inflame the quarrel. This was the case, for instance, at Canterbury, where the chapter consisted of the monks of the great monastery of St. Augustime, who thus claimed the sole right of electing the Punnate of all England. The regular clergy, (that is, those living under a monastic rule,) were always, it may be observed, regarded by the court of Rome as the main support of its authority, and it usually took their side against the secular (so catted, as hving at large in the world). What the popes therefore endeavoured to effect in regard to the nomination of bishops, was to retain that power cither in their own hands or in those of the chapters. Against the claim of the king to present in the first instance they constantly protested, and this was a point which they would never In many cases, however, the chapters submitted to present the person named to them by the king, and when the affair was arranged in that manner, the compromise of course prevented for the present any collision between the adverse claims of the church and the erown. this case, however, the question of investiture, as we have already seen, created a serious difficulty to be got over after the nomination had been settled. But the particular point upon which the dispute between John and Innocent III. hinged, was the power claimed by the papal court of appointing to a bishopric vacated by the irregularity of the election, or by the unfitness of the person elected, the right being also assumed by it of deciding upon the irregularity or unfitness. On the death of Archbishop Hubert, the monks of Canterbury had, in the first instance, elected Reginald, their subprior, to the vacant see, but had subsequently, in their apprehension of the king's displeasure, proceeded to a new election, and nominated the royal candidate, John de Gray, the Bishop of Norwich. The pope decided that, although the right of election was in the monks, the appointment of the Bishop of Norwich was invalid, as having been made without the previous election of Reginald being legally annulled; and thereupon he took the nomination into his own hands, and appointed Stephen Langton, who happened to be then at Rome. John's resistance to this appoint-

have been already related. Lattle or no change took place in the internal constitution of the English church in consequence of the Norman Conquest; and its establishment

ment, the consequences that followed to himself

and the kingdom, and the issue of the contest,

remained through the whole of the period now under review nearly the same as it was before that event. The principal alteration was that made by the creation of two new sees-of Elv in 1109, and of Carlisle in 1133, in addition to the fifteen (including the two archbishopries) that had existed in the Saxon times, being the same that still exist, with the exception of Oxford, Peterborough, Gioncester, Chester, and Ripon. Before the Conquest the only order of monks known in England was that of the Benedictines, or

observers of the rule of St. Benedict, instituted in

the early part of the sixth century, which some

conceive to have been brought over by Augustine,

but which was most probably unknown in the

country till a considerably later period, and cer-

tainly was first generally established by St. Dimstan

in the tenth century. Nor perhaps was the rule of St. Benedict ever strictly observed by the English monks till after the Conquest. In the course of the twelfth century two new orders were introduced, the Cistercians, or Bernardines, in 1128, and the Carthusians in 1180. Both these indeed may be considered as branches of the Benedictines, only distinguished by subjection to a discipline of still greater severity. The order of the Carthusians especially (founded at Chartreux, in France, by St. Bruno in 1080, whence their establishments in England were corruptly called Charter-houses) was the strictest of all the monastic orders, the members never being allowed to tuste flesh, and being restricted on one day of every week to bread, water, and salt. The Carthusians never became numerous in England. The order of the Cistercians (instituted at Cisteaux, in Latin Cistertium, in Burgundy, in 1098, and afterwards greatly patronized by the eclebrated St. Bernard) was chiefly distinguished by having its houses situated for the most part at a distance from all other habitations. There were a considerable number of them both in England and in Scotland. The habits of the monks of these three orders were distinguished from each other by some minor peculiarities; but they all consisted of an under garment of white, with a long loose black cloak or gown over it, which latter, however, seems to have been only occasionally worn. The Cistercians, and, according to some representations, the Carthusians also, when in church, wore a cloak of white. The most common form, however, which cuthusiastic devotion assumed in the eleventh and twelfth centuries, was that of going on pilgrinage to some spot supposed to be of peculiar sanctity,

either within the kingdom or abroad. After the martyrdom and canonization of Becket, his shrine at Canterbury became, and for ages continued to be, the favourite resort of the pious when they did

VOL. I.

## CHAPTER 111.

# HISTORY OF THE CONSTITUTION, GOVERNMENT, AND LAWS.

HE essential character of the Norman Conquest of England, as distinguished from the conquests of the northern nations who overran the Roman empire (for example, from those of the Saxous in Britain and of the Franks in Gaul), was this: it was not an old enervated community overrun by a

band of men much inferior to it in civilization and much superior in energy and courage, but a semibarbarous and warlike people invaded and subdued by another people in the same state nearly as regarded these points, but better organized, and led by an able chief whose power was sufficiently established and concentrated to ensure order and discipline. The Normans would appear to have been the most widely successful warriors of the middle ages; comparatively a mere handful of men, they filled Europe and Asia with their victories and their renown. were victorious wherever they went; in Italy and the East, under Robert Guiscard, no less than in England under William the Bastard,—and agam, be it added, in France, strongly backed, however, by Anglo-Saxon aid, under the banner of the Anglo-Norman Plantagenets, the Henrys and the Edwards. Their victorious course is no less striking and no less distinctly marked if we turn our eyes to Scotland and Ireland. Like the lunge image of Nebuchadnezzar's dream, which was broken by the shock of the stone cut from the mountain rock, horde after horde, nation after nation, sank beneath the desperate onset of the Norman chivalry,—was shivered to pieces by the fierce yet firm and comact charge of the Norman lances. It was mainly by the help of the Anglo-Norman nobility, whom they attached to their country by the offer of broad domains, that the kings of a part of the eastern coast of North Britain became "kings of broad Scotland." The Bruces and Bahols had about as much Norman blood in their veins as the Plantagenets or Abrincis. The battle of the Harlaw was as decisive in establishing a Scoto-Norman aristocraey in the northern extremity of the island as that of Hastings had been in establishing an Anglo-Norman aristocracy in the south.

After the Conquest, the Norman feudal aris-

tocracy, encamped as it were in the midst of a hostile people, who had possessed independence, and who might therefore be supposed to have the will, as they had a considerable portion of the power, to regain it, would necessarily be firmly united. On the other hand, their common sufferings united the Saxons. Those dissensions which, before the Norman invasion, had rent the king-dom in pieces, disappeared. While the Normans, too, found an instrument of union in the feudal organization which they had possessed in Normandy, the Saxons found one in their ancient customs and laws, which they now cherished the more as being associated with the remembrance of their independence and their prosperity. It was for this reason, probably, as much as for anything peculiarly and eminently good in them, that they constantly demanded with such carnestness the restitution of the laws of Edward the Confessor. In order to comprehend the constitution of

society during this period of our history, it will be necessary to enter into a short examination of the feudal system. We have already touched upon this subject when treating of the Anglo-Saxon tenures, but it will now be necessary to go into it somewhat more fully. For although, under the Saxons, feudalism existed in parts, it was with the Normans that it came in us a system.

The formation of the feudal system was not, as sometimes conceived and described, sudden and referrible to one point of time, but progressive, and the work of several centuries.

In the fifth century, when the northern hordes overran and took possession of the Roman empire, the leaders portioned out among them the lands in full and unconditional ownership. They called these alod, a term, according to some etymologists, properly signifying allotted possessions; according to others, full, independent property. It is probable that, from the very first, the portions which they gave to their followers were held on a different termire, as we find them very early called beneficia and precaria. The former term is still retained in English, and its signification will elucidate our subject. A clergyman receives his benefice upon eondition of performing certain services. larly a soldier received his benefice. The word was borrowed from the mode of rewarding the Roman soldiers, and applied to the same purposes. The conquests having been made by a great number of separate and independent bands of warriors, the leaders of each of which would of course have a larger portion of land than those they led,

Europe, or at least the greater part of it, was divided into a very great number of independent properties, we might almost say small independent sovereignties, for, according to the nature of allochal

property, the smallest landholder was as little dependent on any one else as the largest. Now

in the state of war and insecurity which then prevailed, the small landholders would of course have a much less sure existence, and much less secure tenure of their land, than the large Whence it came to pass in time, that most of the smaller allodial holders of land gave up to some large holder the absolute dominion over their land which they before possessed, recriving in its stead a conditional dominion; the condition being, that they should help the large proprietor when he required their assistance, and hkewise, when they required it, receive help from him. Beneficium was the word made use of, from the fifth to the mith century, to denote this sort of tenure, and is proved\* to have designated the same thing which, towards the end of the ninth century, received the name of feodum, the origin of our fend. The etymology of the latter word is uncertain; some deriving it from the Latin, others from the German.

2. The combination of sovereignty with property; that is to say, the assignment to the owner of the soil over all the inhabitants of that soil, of all or nearly all the rights which constitute what we call sovereignty, and are now possessed by the

According to M. Guizot, the principal facts, the

1. The particular nature of the territorial property.

essential elements of the feudal system, are redu-

cible to three-

government. The system of political, that is of legislative, judiclid, and military nistitutions, which bound together the owners of fiefs, and formed them into

a general society. We have already, in the section on the Anglo-Sayon Government, said as much as is necessary

on the first of the above-named subjects. Of the history of the other two, into which M. Guizot enters at considerable length, our limits will not permit us to give more than his conclusions. That fusion, then, of sovereignty with property was not altogether, as by some supposed, the result of conquest. An analogous fact existed in Germany. In the German tribe, the head of a family was sovereign within his domains. There also existed the fusion of sovereignty and property. But in Germany this fusion took place from the influence of two principles;—from the family or clannish spirit on the one hand, on the other from conquest-from force. Whatever might have been the proportions in which these two elements existed together in Germany, it is certain that in Gaul the patriarchal or clannish proportion

predominating element of that fusion. With regard to the third leading fact:-Immediately after the establishment of the Germanic nations in the provinces of the Roman empire,

three principles of social organization, three systems

of institutions, are found co-existing among them:

1. The system of free institutions. 2. The system

of aristociatical institutions. 3. The system of

monarchical institutions. Of these the system of

free institutions had its origin—1. In Germany, in

the general assembly of the heads of families of the

tribe, and in the common dehberation and personal

independence of the warriors who formed the band

2. In Gaul, in the remains of the municipal regime

in the cities. The system of aristocratical institutions originated-1. In Germany, in the domestic

became the principal, if not the only, certainly the

sovereignty of the heads of families, and in the patronage of the leader of a band over his compamons. 2. In Gaul, in the very unequal division of landed property, and in the reduction of the great mass of the population to the condition of villains or of slaves. The system of monarchical institutions originated-1. In Germany, in the military and religious royalty of the people. 2. In Gaul, in the traditions of the Roman empire and the doctrines of the Christian church. Now, while the system of free and that of monarchical institutions went on declining, the system of aristocratical institutions acquired greater strength, so that towards the end of the tenth century it was the predominating one in Europe. Towards the end of the tenth century the feudal society was fully formed. It is therefore, then, in a state fit to be studied, to be analyzed, - in a state such that its dissection will make known to us its component elements. The fundamental element of the fendal system, the "primitive feudal molecule," to use the words of M. Gaizot, is the simple domain possessed in fief or fee by a lord who has over the inhabitants the sovereignty inherent, as we have seen, in property. This contains-1. The fendal castle and its proprietor. 2. The feudal village and its inhinbitants. After learning the relations between the owner

of a fief and the inhabitants of that fief, it will be necessary to inquire into those subsisting as between the owners of field themselves. And, even then, to approximate to a complete view of the subject, it would be also requisite to inquire how the fenda. system was acted upon or affected by two other elements, which, though co-existent, never thoroughly amalgamated with it, and at last destroyed it,—we mean royalty and the towns, or mumcipal institutious.

The feudal castle, then, usually built in an elevated and isolated situation, and rendered as strong as nature and the art of the time could make it, is inhabited by the owner of the fief, his wife and children: in addition to these, perhaps by a few freemen who have not become proprietors, and, being attached to his person, continue to live with

was greatly diminished; while, on the other hand,

the other element, that of conquest-of force,

kind existed in the Roman empire. The rich either byed in the cities or in fine houses agreeably

speak presently. One of the first features that strikes us in the condition of this feudal lord is its isolation. any other form of human society with which history has made us acquainted, - the purely savage, —the nomade,—the Greek and Roman,—in all you will find man brought into constant contact and co-operation with his equals. Not so here. The feudal lord is like Robinson Crisce in the desert island,--" monarch of all he surveys;" for the human beings about the former are as much subjected to bis will as the brutes mound the latter. To this feature was joined another-idleness,

want of occupation, almost miczampled many other luman society. For although the feudal baron is compelled, from time to tune, to make great, to make lesperate exertions to retain his place in that wild, almost anarchical society in which he lives, yet these exertions are called for at such long and irregular intervals, that they provide him with nothing whatever of the nature of regular occupation. He becomes, therefore, a prev to ennu---an ennui so intolerable, that, cost what it may, he must find an escape from it. And what is the refuge he seeks? The documents that have come down to us from these wild times sufficiently show the resture of it. It consisted in that long series of lumting-matches, robberies, and wars, which characterise the middle ages. The crusades may be considered as one valve by which the pent-up energy escaped—by which the ennue was sought to be dispelled. Two consequences of the above-mentioned features are-1. The strange and savage energy with

which individual character is developed, as in the case when man lives alone, given up to the caprices of his imagination and the original tendencies of his nature. 2. The very slow progress of civilization—slower than under any other circumstances when a similar previous advance had been nmde. Yet, at the same time, there existed within those

rude and gloomy fendal fortresses a principle of eivilization which has exerted a most powerful influence in modern society. It is well known that the domestic life and the condition of women have attained a much higher degree of importance in modern Europe than anywhere else. causes of the importance of women in modern Europe, the life of the feudal lord in lins solitary castle must be considered as one of the principal.

In the other nations that have made most advances in civilization-the Greeks and Romans,-

mode of life the feudal society—the men were too much occupied to devote much time and attention to their wives and children:-Sword, gown, gain, glory, offer'd in exchange, Pride, lame, applition to fill up the heart

as well as in those that more resembled in their

POOK III.

Here, on the other hand, the sword was the only, and that not a constant occupation,—and, indeed,

HISTORY OF ENGLAND

rather an amusement than an occupation. When the fendal baron returned from any of his wild adventures to his eastle, he always found his wife and children there to receive him—almost his only equals, his only intimates. When he left his home, too, in search of adventures, his wife remained inistress of the castle, the representative of her husband, charged in his absence with the ser-

vices and the defence of the fief. Hence the examples of displays of courage and dignity which we meet with in women of this period to a greater degree than anywhere else. Out of this state of things arose the order and spirit of chivalry; the latter of which has long outlived the former, and has certainly performed no mean or imamportant part in the drama of European civilization. But into this our limits do not permit us to enter in any detail. We shall content

ourselves with stating M. Guizot's opinion on the

subject—which is, that chivalry was not the result

of any regular design, but spring up spontaneously in the interior of the feudal castles—a consequence, on the one hand, of the ancient German customs -- on the other, of the relations subsisting herween the *suzerain* and his vassals. Leaving the lordly fortress, let us pause for a moment among the population inhabiting the cluster of liuts that are closely huddled together under its walls, or at the foot of the rock or hill on which it is built. It is a common opinion that the deplorable condition of the agricultural population or the times of which we are writing, dates from the destruction of the Roman empire; that the progres-

sive development of the feudal system plunged

them into the state in which we find them from

the sixth to the twelfth century. Von Savigny, and after him M. Guizot, have completely demonstrated the erroneousness of this opinion. merons passages which they have quoted from the Theodosian Code, from the code and novels of Justinian, and from the Constitutions of Justinian and succeeding emperors, they have shown that, at least during the latter periods of the Roman rule, the condition of the tillers of the soil, of the colom, was almost precisely the same as it was afterwards under the feudal system; that the husbandman, or peasant, occupied a sort of intermediate position between that of the freeman and that of the personal slave, corresponding exactly to that of the class in the feudal times described in the language of the English law as

villains regardant, that is, amiexed to the manor For land; and intermediate between freemen and the class described in English law language as villains in gross, who were annexed to the perCONSTITUTION, GOVERNMENT, AND LAWS.

CRAP. III.]

general mainer.

which the Roman colonus paid to the proprietor

of the soil was a fixed sum; but the tax which he paid to the State was a variable one. When the northern nations came into the Roman possessions, they lett the colony pretty much as they were; but from the union of property and sovereighty, which we have aheady adverted to as a characteristic featine of the fendal system, the State and the owner of the soil became to the tiller of the soil identical. Consequently, the variable sum which was before m the power of the State, passed to that of the owner, and hence the pecidiar relations long subsisting between the tendal lord and the tendal villam. On the one side, unchecked oppression, in-oleme, rapacity-on the other, helpless, hopehiss toll, degradation, and suffering. The pagest, another portion of this little society, was not likely, M. Gnizot thinks, to be able to exercise much influence between the lord and his villions, although the church excreised a very great influence upon European civilization, but in a

on the other. An attempt was made to raise up rights. corresponding to these obligations, and to establish an fillitions that might protect those rights. Thus their were certain jurisdictions appointed to decide disputes and administer justice among the owners of ficts. And thus every fendal land of some consequence assembled his vassals in a parliament, to treat with them of the affairs in which he required then concurrence. It is to be understood that we speak now rather of what was the case in France than of any state of things that ever existed in England either before or after the comment is of the Normans; but, in order to have a correct idea of

feudalism, we must study it in its pure state, and

it never was precisely pure in England; and this, too, is necessary, in order to understand the state

in which it existed in England, masmuch as to

know anything in a modified, it should first be

studied and known in a simple form.

We now pass to the wider fendal society, exhi-

biting the relations of the fiel owners with one

another. We have already mentioned the fendul-

obligations of service on the one side, of protection

But, to give efficacy to the rights and obligations which fendalism professed to recognise, one indispensable element was wanting,—a sovereign, a supreme power. Consequently, whenever any member of the feudal body dishked the sentence of the court, he refused to comply with it, and, taking refuge in his fendal fastness, set it at defiance. Sometimes the other members of the confederacy, by making their force against the delinquent, carried their point, but that was a work of time and difficulty; and sometimes they failed,

das due from the vassal to the lond of whom he immediately held his land, and to no other. But William received the fealty of all landholders in England, both those who held *in capite* or in chief, and their tennuts or vaesals. This was one powerful blow struck against the great fendatores. Moreover, the fiefs of the Angla-Norman barons were not only much smaller than those of France, hut they were dispersed over various counties: The e two circumstances, taken along with the preceding, must have had a powerful effect in preventing any one of the vassals of the crown from making head acadest it. Again, there were certain feudal services which, though everywhere due to foulal royalty, were, from the very nature of fendalism, as explained above, often meapalde of being enforced by the

and the obnoxious member of their body succeeded

in defeng them. The histories of France and of

Scotland abound in examples of this. Why that

of England does not equally abound in them, why,

there, the suzerum became really the sovereign,

immediate vassals, than the king of France was in

relation to him. Thus, the duke of Normandy, for

example, had much more of the substance of

sovereignty in Normandy than the king of France had throughout France. This power the duke of

Normandy retained in full: afterwards, by obtaining possession of England, the field of his superanne's

became greatly cularged. The general of a vic-

torious army, if in addition to his military be pos-

sesses political talent, may make his power almost

co-extensive with his will. This was the case with William the Norman, who, to the character of an

able military leader, imited that of a cold, hard,

far-sighted statesman. The consequence was, that

he was able to retain as much of the feudal system,

then established in France, as tended to support his

power, and to set aside or aber much of it which

was calculated to weaken that power. For exam-

ple, it was a principle of that system that fealty

Any of the great feudatories in France was much

we will now endeavour to explain.

more powerful, in relation to any one of

feudal kings of the continent, but which the carly Anglo-Norman kings were in a condition to enforce, Their vassals, for instance, were bound to attend them to the wars for forty days in every year, if called upon. Then there were the pecuminry payments due from the vassal to his lord; and the various profits arising from wardship, marriage, and other rights, the nature of which will be explained when we come to speak of the royal revenue. Besides all this, William secured, as his own shar: of the conquest, 1422 manors, and the principal towns of the kingdom. The fortestures of the insurgent Saxons were constantly adding to these acquisitions. All these sources of revenue, together with the sale of public offices, and of the royal protection and justice, and the grievous imposition upon the infe-Fror subjects, called tallages, recured to the king an independent power-a power against which any of . Dugdale's Baronage .- Madox's History of the Exchequer.

<sup>•</sup> Blackstone, Com b ii. c. 6. The word " serf," often confounded with " with m regardant," or " colonus," means the same us " viblain in gross."

his vassals, however great, would singly be as

nothing. As we have before had occasion to remark, their very position, in the midst of a conquered but spirited and warlike people, caused the great vassals of the king to assemble frequently around There is reason to believe that, at least on certain solemn occasions, all the immediate vassals of the king had a right to attend his great council. According to the Saxon Chronicle and other ancient authorities, the Conqueror was wont "to wear his crown," as it is expressed, at Christmas in the city of Gloucester, at Easter in Winchester, and at Whitsuntide in Westminster. these occasions, Malmsbury states, all the spiritual and temporal nobles were assembled and feasted by the king. The same custom was kept up by William Rufus, and, although discontinued by Henry I., was revived by Stephen. Henry II. and his successors, in the same manner, used to call

their nobles around them both at these great festivals and on other occasions; and there can be no doubt, from the accounts of contemporary writers, that consultation on public affairs was always one of the purposes of these meetings. But the real power of such a parliament could not have been considerable. The king is far richer and more powerful than any of his vassals. He alone makes laws, levies taxes, rewards with lands, punishes with banishment or death. He is supreme judge and commander-in-chief, as well as supreme legis-

lator, throughout his dominions.\*

Before we proceed further in the development of our subject, let us pause for a moment to examine the machinery by which he puts his government in motion and does its work. It is the more important that we chould do this see the evaluation we are

that we should do this, as the explanation we are

• Glanville, in the Preface to his Tractatus de Legib et Consuctud,

emperors.

8. The Treasurer.

CHAP. III.]

immediate snecessors being, as we have seen, not limited by any other power within the realm of England, they did whatever seemed good in their

own eyes. If they chose, therefore, to administer

the aflairs of state, or to execute justice between subject and subject, in person, they did so; or if they chose to delegate any of those functions to their officers, they did so. Among our early Norman princes, as throughout the whole of feudal

Europe, and likewise, as we have seen, under the Roman empire, the officers of state were the prince's household officers. Thus the king's treasurer was the state treasurer; the king's steward the state steward; the king's secretary the state secretary; \* and so for other officers. There is here a contrast not unworthy of remark between the Roman polity and the feudal. In the former everything bore the popular stamp; in the latter, the monarchical. Thus, instead of Prations, ÆDILES, QUATEOR VIRI VIARUM PUBLICARUM CURANDARUM, + (the Four Curators of the Public Roads), we have the King's Justiciary, the KING'S CHAMBERLAIN, the KING'S FORESTER (now Commissioners of Woods and Forests). The

contrast between the results is also striking. Here the basis of the government has been widening from the first William downwards. There it went on narrowing, that is with some oscillations, till it ended in the agex of the imperial despotism. The only titles of nobility at this period were those of Baron and Earl, or Count; the latter being in all cases either the possessor or at least the governor of a county, and being always also a Baron, which indeed meant no more than a person holding lands in fee of a superior on the usual condition of The king's barons were the mulitary service. tenants of the crown, or the tenants in chief, as they were called, just as other tenants were the barons of the lordship of which they held. All the barons of the crown, among whom were included the hishops, appear to have consituted what the old writers call the Commune Concilium, or

Common Council of the realm. It has been commonly supposed that what is called the Curia Regis (literally, the king's council or senate) was a different body from this; but for that notion there appears to be no foundation. ‡ The ordinary Lusiness of the state, however, was certainly mainly conducted in the first ages after the Conquest by the great officers of the king's court, or, which is much the same thing, the great officers of the king's household. In order to see this matter \* The Home Secretary was at first merely the clerk of the Privy Council. The King's secretary, or clerk, was, properly speaking, the † Heinecc, Hist. Jur. Rom. § 55 et seq., and 1. 2. § 30 D. de orig. jur.

‡ See this point established in a very learned and able Article on the History of the English Legislature in the Edinburgh Review,

stone and others seem to have followed, in his History of the Exchequer, places the great officers of the king's court in the following order:—1. The High Justiciary, or High Justiciar, as he writes it. 2. The Constable. 3. The Marcschall. 4 The Seneschall, or Dapifer. 5. The Chamberlain. 6. The Chancellour. 7. The Treasurer. Instead of this classification we shall substitute the following, for reasons which will be given immediately:

in a clear light, we must go a good way back. The Anglo-Normans borrowed from the Normans,

the Normans from the Franks; and the Franks,

though doubtless, like other people in a similar

stage of civilization, they would have some offices attached to the persons of their kings, which they

retained after their conquest over the Roman

territory (that they had such, is implied in the

names seneschal, mareschal); yet they inquestionably borrowed that complex graduated system

of offices and ranks from the courts of the Roman

confusion on the subject of some of these offices.

I. The Grand Seneschall, or Dapifer—Sene-

The English lawyers and legal antiquaries have produced between them almost inextricable

scallus, or Dapifer\* Angliæ; in modern pluaseology, the Lord High Steward—comes palata, major domus regiae, or maire du palais. The word seneschalch, about the etymology of which opmous vary somewhat, meant originally a sort of steward in the household of the Frank kings. After their conquest of Ganl, it came to signify a high political dignity. Dapifer, as shown in the preceding note, means the same thing, being the Latin synonyme for it. This officer was the highest in the State after the king, executing all the chief offices of the kingdom as the king's representative. He

was not only at the bead of the king's palace, but of all the departments of the State, civil and military, chief administrator of justice, and leader of the armies in war. This is proved not only to have been the case in France, by Ducange and other high anthorities, as well as by the public records of that kingdom, t but to have been so That these terms are synonymous, is shown by Ducange,

• That these terms are synonymous, is shown by Ducange, Sp.1 man, &c. Dapter seemesty have been introduced when a Latin wood came to be wanted for seneschallt, and was adopted by want of a better, there being no Latin term exactly corresponding. Daplied has been ignorably translated "sewer," by Dugdale and others whereas sewer, so far from meaning semeschall, means only cause transland, an officet a great many degrees below the semestable. several officers employed about horses, game, &c. For some time the Mareschal was an officer subordurate, in the leading of the armies, to the Constable. V1. The Chamberlain.—This requires little explanation. It is sufficient to observe, that while some of his functions belonged to the king's household, others belonged to the Exchequer. VII The Chancellor. — This other did not enjoy by any means the same importance in early times which he afterwards obtained. There was an officer about the court in later times whose functions and even whose title will furnish a good idea of what the chancellor originally was. This was the "clerk of the closet," a sort of confulential chap-

ham or (before the Reformation) confessor to the

Ling, occasionally employed by line as secretary, or

clerk, in the modern sense of the term. In this

capacity the Chancellor applied the king's great scal

to charters and other public documents. But, as

Madox observes, "the chancellorship, from a small

beginning, became, in process of time, an office of

great dignity and pre-emmence." | When the

grandeur of the Seneschal and High Justiciary

began to decline, the power of the Chancellor gra-

dually increased, until it last approached to within

a certain distance of-for it has never come up to

by many steps-that portion of the authority of

the Great Seneschal which was represented by the High Justiciary. The Chancellor, up to a late period, was a churchman. He was ex officio chief of the king's chapel. He also was wont to act with the High Justiciary and other great officers in matters of revenue at the Exchequer.\*\* Of the Chancellor, we shall add one curious fact, • Bretton, (ol. 1, b.) † Ducange, ad vac. † Ducange, ad vac. † Ducange, ad vac. small things.\*\*\*

Exchequer in the management of the king's re-The dignity of the Treasurer, as well as that of the Chancellor, was by no means, however, what it became afterwards, he being an officer subordinate to the Chamberlam, and more so to the Scheschal. But in the mutations brought about by time, which often decrees that the first shall be last and the last first, the Chancellor has become (after the king), in noint of dignity, the first officer of the state; and the Treasurer, or rather only a portion of him, - namely, the First Lord of the Treasury,-the first in political power, while the Lord Steward and Lord Chamberlam of the Honsehold, and the Earl Marshal (albert the last has become hereditary in a potent house of high and comparatively ancient nobility), are little more than old lumber; and the High Steward, to all ordinary intents and purposes, is no longer in existence.

given from an ancient memorial by Madox. "The

Chancellour has five shillings a day, and so much

in similarlis (a sort of sweet biscuit), wine, and other

These high officers seem not only to have attended, each in his department, to all the public business which is commonly understood at present to fall under the province of the king's munisters, but also to the hearing and decision of causes between suitors, - to have, in other words, fulfilled the purioual as well as the arluministrative office. The court of justice which was thus formed was originally held in the king's palace or wherever he happened to be in person. There was a particular branch of it held in a particular part of the palace, m which all matters relating to the revenue were transacted, and which, though composed of nearly the same persons, was known by the name of the Exchequer. Among the things that most strike us on first

looking at this period of our legal and judicial history are the substitution of general and contral for local indicatures, and the appointment of judges regularly trained to a knowledge of the law to preside in the several courts. Soon after the Conquest great inconveniences appear to have been felt from the administration of justice in the county courts, hundred courts, and courts baron. These meonveniences arose from various causes, of which the principal, according to Sir Matthew Hale, were the three following :-- 1st. The IGNORANCE of the judges, who were the freeholders of the county. " For," says Hale, "although the alderman or cluef constable of every hundred was always to be a man learned in the laws, and although not only the freeholders, but the bishops, barons, and great men, were, by the laws of King Henry L., appointed to attend the county court, yet they seldom attended there, or, if they did, in process of time they neglected to study the English laws, as great men

\* Mados, p. 131, † 11nd, p. 5%, ‡ History of the Common Low of England, c. 7,

usually do." 2ndly. The GREAT VARIETY of laws, the effect of several independent jurisdictions. Glanville says, "The customs of the lords' courts are so numerous and various that it is scarcely possible to reduce them into writing." \* 3rdly. The corruption and intimidation practised; for all the business of any moment was carried by parties and factions. It is probable, however, that we are to seek for

the main causes of the subversion of the ancient system in certain changes which the very principle of that system was itself producing, and which we shall now proceed to consider. Of these changes the most important and fundamental was the establishment of the trial by jory.

It has been explained, in the preceding book, that the essential principle of the original Saxon mode of trial was the submission of the matter in dispute, in some form or other, to what was held to be the arbitration of Heicen. There was no interference of the human indgment,-no attempt to arrive at the truth by weighing and comparing the adverse probabilities; the question was not held to be a question of probabilities at all; it was concerved to be capable of a solution as certain as any question in arithmetic. The decision was left not to the fallible judgment of man, but, as was beheyed, to the infallible judgment of the Deity. As long as this behef subsisted universally, it is evident, as we have already observed, that no mode of trad proceeding upon a different principle could well come into use. Men would not readily relinquish a method which afforded them in all cases a certain determination of the matter, for one which afforded them only a doubtful determination of it. They would not easily be disposed to remain satisfied with a decision which might be wrong, while they behaved that they had it in their power to obtain one that could not but be right. That belief, however, was so entirely founded in ignorance and superstation, that it of necessity decayed in the light of increasing knowledge and civilization; even the results of the trials at law that were founded on it would themselves be constantly raising suspicions Nevertheless, there is reason to suppose that it was not any general conviction of

of its fallacy, the absordity of the ordeal, or of the vamity of the imagination on which the use of it rested, that led first to its discouragement, and eventually to its entire abandonment. If such a conviction had been arrived at, the practice would have been given up at once, as one wholly irrational and iniquitous. But this was not the course taken. In the first instance, the legislature only interfered to narrow the application of the ordeal, and the church to discountenance the frequent or indiscriminate resort to it. It is evident that the popular prejudice in its favour could not yet be attacked in front. Its folly was discerned by the ruling and more enlightened part of the community; and the government and the church, even if either or both may be supposed to have had an interest in keeping it up as a conve-\* Lib xii, c. 6 -Beames's Translation.

that it was one which could not be much longer left in their hands; but they did not, for all that, annonnee that the supposed judgment of Heaven was really nothing of the kind. If they had, they would have offended what was yet the general sentiment, and their announcement would probably have been received with incredulty and scorn. Besides, there would be a natural reluctance on the part of those by whom the ordeal had been hitherto sanctioned and upheld to make a frank acknowledgment that it was all a solemn mockery. They therefore took another course. The clergy began to preach against the ordeal, not as being absurd, but as being impious; they did not deny its efficacy, as an appeal to Heaven, but they endeavoured to show that it was an appeal which, in ordinary circumstances, at least, it was sinful in human They may possibly also have beings to make. sometimes insimuated that one of the consequences of its abuse would be its frequent failure,-that the Deity would not consent to favour with a true decision of their cause the parties who thus improperly called Be this as it may, it was only after a long coarse of partial opposition to the ordeal that the church ventured finally and distinctly to prohibit its esc. It did do this at last, however, by the 18th canon of the Fourth Council of Lateran, published in November, 1215. Meanwhile, the ordeal had been gradually falling

more and more into disuse under the operation of

various causes. The discouragement of it by the

church, and the diffusion of the feeling upon which that disconragement was professedly grounded, would, no doubt, have a powerful effect in indisposing the public mind towards such a mode of trial except in very extraordinary circumstances. Then, the conviction of its inherent absurdity, and utter insuitableness in any circumstances, was of course growing and extending itself. Besides, it was not necessary, in order to be opposed altogether to the ordeal as a mode of trying causes, that a person should be a disbeliever in the assumed principle of that kind of trial. That principle was, that the Deity, if fairly appealed to, would work a miracle in vindication of the innocent party-would prevent the boiling water from scalding him, or the red-hot iron from burning him. This might be granted; and still the ordeal might be objected to on the ground that there was, and could be, no security for its being in any case a fair submission of the matter to the arbitration of Heaven. might be alleged that, from the way in which the matter was managed, the result was wholly in the hands of the functionaries who superintended the process. The historian Eadmer relates, as an instance of the daring impiety of William Rufus, that upon one occasion, when about fifty Englishmen, of good quality and fortune, whom he had caused to be tried for killing his deer, by the ordeal of hot iron, had all come off unburnt, and were consequently acquitted, that king declared he would have them tried again by another mode, and not by

this pretended judgment of God, which was made favourable or unfavourable at any man's pleasure. Yet Rufus here did not dispute the efficacy of the ordeal if it had been fairly managed; he did not deny that Heaven, if appealed to, would pronounce a just decision, and would even, if necessary, work a miracle for that purpose; he only denied that the professed appeal to Heaven was really made. And this was a suspicion that was, no doubt, very generally entertained.

The gradual extinction, however, of the practice

generally entertained. of trying causes by appeal to the judgment of Heaven was namely brought about by the natural development of the principle of that mode of trial itself. And this is the most enrious point in the inquiry, and that which is most deserving of attention. It less been shown in the former Book that the manter in which what we should now call evidence originally obtained admission in trials at law was by its assuming the form of an appeal to Heavere; that is to say, it obtained admission on the only principle theo recognised,-the principle of the ordeal. In a commal case, instead of the ordeal of water or cron being at once resorted to, an attempt was made to avoid that expedient, and to decide the case by a contest of oaths between the authors of the charge on the one hand, and the accused party and has friends on the other: it was only to the event of the charge not being estahisted by this preliminary process that the trial was carried farther. But the persons who thus swore were not at first witnesses at all: they dol not profess to testify to the facts at issue upon their own knowledge; all that they declared was, those on the one side their belief in the guilt, those on the other their belief in the innocence of the accused. Nor was their testimory considered and weighed by any act of the judgment; their testimony, properly speaking, was not estimated at all, but they thereselves were counted and valued, cacle orang according to his "were," or the legal worth at which he was rated according to his rank ne society. This, therefore, was not the hearing of evidence in any sense; it was merely another mode of appealing to Heavers, which it was supposed would no more suffer the guilty party to come off victor nethis contest of oaths than it would fail to vandicate the innocent in the ordeal of fire or water. Nevertheless, this method of compargation, as it was called, could scarcely fail to lead, in course of time, to a further innovation. The person pledging his faith in favour of the one side or the other, with an evident or understood knowledge of the facts bearing on the question at issue, would inevitably make a stronger impression upon the court than the person manifestly destitute of such knowledge who presented himself to make a similar or an opposite deposition: this would happen even while the letter and practice of the law made no distinction on that ground between the two deponents. The bringing forward of persons to make their depositions who were not acquainted with the facts of the case would, in this way, become disre-

putable, and gradually fall into disuse, till at length the deponents on both sides, though still only called upon to make oath to their belief in the statement of the one party or of the other, would he almost always understood to speak not merely from partiality to the party whom their declarations were to benefit, or from a general confidence in his credibility, but from their owic knowledge of the disputed facts. In truth, a person gnorant of the facts would, it may fairly be presumed, scarcely dare now to present himself to make oath ne opposition to one to whom the facts were well known. Here, then, we have the deponents on both sides already turned into witnesses even before the law yet demands their testimony. But, this point arrived at, it is impossible that the next step should be long delayed. The witnesses, that is the persons having a knowledge of the facts, being thus brought before the court, would naturally be led by degrees to extend their depositions beyond a mere general declaration in support of either party; they would proceed to state the grounds of the belief which they made oath that they criterianed; in other words, they would state the facts which they knew no relation to the cause, -they would give their testemony as well as their depositions. Evidence having thus once obtained adiacssion, however irregillarly, and with however little legal efficacy on the first nestage, would speedily come to be received as of weight in the decision of the cause, and would then be demanded as indispensable. But this change would render necessary other important chaiges,

So long as causes were tried on the principle of

submetting the matter in dispute, ne some form or other, to the arbitration of Heaven, no functionines that could properly be called indges were required in the courts of law. There night be a person to preside, and to declare or make publicly known the result of the process which had been gone through; but an exercise of the judgment was denouded either here or in any other part of the proceedings. The whole affair, as already observed, was of the nature of a clemical experiment, or an arithmetical calculation; it was conducted according to certain fixed rules, or might be said to carry on itself; and the ascertainment of the residt was merely a matter of observation, and of observation of the easiest kind. Under this state of thores. therefore, all kinds of causes were tried at popular meetings-at the wittenagemote, and the shiremote, and the other assemblies of the same kind; and the pudgment passed in each case might as truly be said to be that of the attending crowd as that of the members of the court. It was really the magment neither of the one nor of the other, nor was it so considered; it was called not the judgment of man at all, but the judgment of God. But as soon as the principle of the appeal to Heaven was departed from, by the admission of evidence, the whole system of the administration of the law necessarily assumed a new form. The exercise of judgment by the court now became indispensable. 4 n 2

gress of the change, this consequence was not for some time very clearly perceived, and that it came upon the country and the government before the requisite preparations were made for it. Hence, as occasions arose, expedients of various kinds

would be at first resorted to with the view of making the old machinery still answer. It would soon be found, for instance, that the hearing of evidence, unlike the ordeal and the trial by compurgation, produced differences of opinion among the persons present; and it would also become abundantly apparent that a large multitude of persons did not form the most convenient tribinial for weighing and coming to a decision upon the statements of conflicting witnesses. In these cuconnstances we might, on the first view of the matter, suppose the most autoral course would be to appoint a small committee of the court to examme the witnesses and come to a judgment upon the cause. But this is to assume that the proper distinction between the provinces of the court and of the witnesses was already much more distinctly perceived than it could as yet be, when things were only beginning to emerge out of that state in which the court had really never taken any part in the trial of the cause at all. The witnesses, or the persons who came to give evidence, and not the court, would at this time in fact be most maturally looked upon as the real triers of the cause A committee of the witnesses, therefore, rather than a committee of the court, would be the select body appointed for its consideration and settlement in the carliest attempts to escape from the confusion and perplexity of conflicting evidence. Those of the witnesses who were conceived to be the persons of greatest probity, or to be those best acquainted with the facts, would be chosen out from among the rest, and left to agree among themselves as to how the truth stood,—m other words, to try the cause. The persons thus set apart would probably be called upon to make their depositions with more form and soleminty than ordinary witnesses; for instance, although the ordinary witness might be heard merely upon his declaration, the selected witness would be required to give his evidence upon oath. Finally, it would very soon become the custom for the selected witnesses, or triers, to be always of the same number; such a rule would

In the above deduction we have in fact what appears to be the history of the origin in this country of trial by jury, in as far as it can be collected from the scanty notices that remain to us of changes which, however important they were destined to be in their ultimate results, were scarcely deemed worthy of being recorded by any contemporary chromicler, and the only memory of which that has come down to us has been preserved more by accident than by design. We

particular unimbers.

tribunal of sworn witnesses, "according to the low of Normandy." The first regulation, however, which established the purviss a general mode or trial appears to have been one of the laws, or " assizes," as they were called, chacted by Henry H. at Clarendon, about 1176. By this law, to quote the account of Sn F. Palgrave, "the justices, who represented the king's person, were to make inquiry by the oaths of twelve kinghts, or other lawful men, of each hundred, together with the four men from each township, of all inniders, robberies, and thefts, and of all who had harbonied such offenders since the king's accession to the throne." Another enactment of the same assizes abolished the trial by compurgation in criminal cases, except in certain boroughs. The verdict of the inquest, however, was not yet made final. The person charged by the twelve knights was still allowed to clear himself, if he could, by the ordeal be properly held to conduce to fairness of proof fire or water. Other laws of the same king, cedure; and besides, the papular feeling has some of which, however, are only imperfectly prealways attached a certain virtue or importance to served, appear to have established the inquest or "recognition" by the twelve lawful men as the regular mode of trial in various knids of civil sints. If the trial by battle was at all known in the Saxon times, the earliest record of it in England is subsequent to the Conquest. The duel (or orneste, as its Saxon name appears to have been) would seem to be a still ruder mode of trial than any of those methods that were more peculiarly called the ordeal, as allowing, which they did not, mere physical force to be the main arbitrator of the dis-See Palgrave's Eng. Com. p. 253, and Illustrations, p. claxvni.

[Book III.

know that, even in the Saxon times, it was oc-

casionally the practice to select for the decision of

a civil suit certain of the most reputable of the

persons who professed to be acquainted with the

facts in dispute, the parties agreeing together in

their nomination, and consenting to abide by their

decision or verdict. In the Norman times this

became a more usual mode of trying causes, and it

was now consequently subjected to more strict

regulation. Nothing is better established than that

the original jury, or body of sworn triers, were

really the witnesses in the case, and that their

verdict was then deliverance upon it from then

own knowledge of the facts. At first this mode of

trail appears to have been only occasionally and

sparingly resorted to. Two instances are recorded

in the reign of the Conqueror, one m a sint between

the crown and Gundulphus, Bishop of Rochest 7,

m 1078, the other m a snit respecting certain

bands claimed for the bishopric of Ely in  $1080 \pm$ 

In the subsequent reigns the instances are more

frequent Sir F. Palgrave is of opinion that in

eranipal cases the pury was unknown in this

country until emeted by the Conquetor. Williams,

in a charter by which he professed to restore the

laws of the Confessor, with certain additions, di-

rected that, in the particular case of a charge made

by an Englishman against a Norman, or by a

Norman against an Englishman, the guilt of m-

nocence of the accused should be determined by a

provement of the law f

not more barbarous or more unjust custom of the

ordeal was bamshed from the indicial practice of

Christendom. Yet even within the period now

under consideration in important step was taken

towards the extinction of the appeal of buttle in

civil suits by a law of Henry B., which gave to

both the tenant and defendant in a writ of right\*

was called the grand assize, which was in tact

merely a pray composed of four knights returned

by the sheriff, and of twelve other persons named

by them. The introduction of the grand assize is

ascribed to the mivice of Glanville, who has in his

book given a very particular description of it, and

expatiated upon its great importance as an im-

character assumed by indicial proceedings, and i the commencement of the practice of trying and

deciding causes by evidence, would render the old

machinery for the administration of the law al-

together unserviceable. An exercise of the pulg-

ment was now called for on the part of the count,

instead of merely an exercise of the faculty of

observation. Judges were therefore of necessity

appointed in all the courts. It is probable that

this innovation was partially introduced in the

Saxon times; but it was not generally established till after the Conquest. The general character of

the Norman domination, under which all authority

was held to proceed and to derive its being from

the crown, was especially favourable to the com-

pletion of the new system. It appears to have

been as early as 1118, in the reign of Henry L.,

that Justices Itmerant, or Justices in Exic, as they

It is obvious that the entirely new form and

CHAP. III.] CONSTITUTION, GOVERNMENT, AND LAWS pute, and being therefore almost identical in principle with the mode of deciding quarrels which is proper to a state of nature. It is, probably, indeed, of greater antiquity than the ordeal; yet it was neither supplanted by the ordeal, nor when that mode of trial was abolished and the duel even share its fate. It continued in common use for ages afterwards. The duel was undoubtedly looked upon as being, not less than the ordeal, an appeal to the judgment of God, and it was in virtue of this character that it retained its place as one of the allowed modes of trial in association with the ordeal. It at laid been deemed to be a mere contest of physical strength, it is difficult to conceive that it eyer should have been adopted as a mode of legal trial at all, and it certainly could not bave kept its ground as such after the more refined principle of the ordeal came to be recognised. The belief was that Heaven would by no means allow the issue of the appeal to depend upon the thews and smews of the two combatants, but would defend the right, of necessary, by enabling the weaker man to overcome the stronger,-that is to say, by working a miracle, just as in the case of the ordeal. The duel and the ordeal therefore stood in the popular imagination upon the same principle. Why, then, when the ordeal was probabited, was not the duel abolished along with  $\mathfrak{n}^{\mathbb{Z}_+}$ . To be enabled to answer this question we must recollect that the prohibition of the ordeal was by no means distinctly placed by the church upon the ground of the inherent absurdity of such a mode of trial, -- of the fallacy of the notion that the special interference of Heaven was to be so seemed. The practice was discouraged, and at last formally condemned as unlawful, on other grounds altogether, as has been shown above. It was denounced as impious rather than as fallacious or absurd. If it was admitted to be in any sense fallacious, it was inerely in so far as the supposed appeal to Heaven might by dishonest management be rendered only apparent instead of real. The generally received opinion that the direct indement of God in a cause might be obtained by being properly sought for was left unassailed. All that was affirmed was, that the ordeal of fire, or of water, was not a proper mode of seeking for such judgment. The condemnation of these modes, therefore, and not necessarily touch the trial by combat. It lay under none of the objections on account of which they were condemned. It did not easily admit of collision or any other species of unfair management. It was from its infure not likely to be resorted to upon

trivial occasions, or to be taken advantage of m any circumstances as a mere form, but was always of necessity a solemn encounter, in which neither party could engage without peril of his life. Add to all this the accordance of the trial by combat with the martial spirit of the times, when prowess in arms was looked upon as almost the chief of human virtues; and we shall be at no loss to understand the favour, or at least the toleration,

were called, were first appointed to go on circuits through the kingdom for the holding of all pleas both civil and criminal! They were not however made a regular part of the judicature of the kingdom till 1176, the twenty-second year of the reign of Hemy H The court which sate in the king's palace was also, in course of time, divided into several courts, although opinions vary comewhat as to the precise period at which this change took place, According to Madox, whose inquires into the subject were more immate and accurate than those of Su Edward Coke and others, the bank or court of Common Pleas was in being several years before the Magna Charta of the seventcenth of King John, though it was then first made stationary. That the division, as existing at this day, was complete in the time of Edward I, is proved more fully than from any other of the ancient law books from a passage of Britton, in which he speaks of the . The wat of right was the proceeding in which the right to kind was the down the chircant, of those of a volume term to add best the possession for more from twenty year. The inotation to the custom was sexty years—Booth on Real Accions— † The more of that by the grand as its wis only abolished in 130 by the 3rd and 4th Will IV (1). [Book III.

several separate judicatures, and the increasing complication of legal proceedings, the great officers of state, whom we have enumerated, and who were originally, together with the king, the judges of it, gave up their places in it to regular lawyers. Of the original nature of this great court it will afford some illustration to remark that, as was the case generally in the fendal system, where, from the top to the bottom, the less was slipped after the image of the greater, the courtbaron was a model of it on a small scale. baron had his court, in which, subordinate to himself, presided his seneschal, dapifer, or steward, precisely as the king had his court, wherein, subordurate to himself, presided his seneschal, dapifer, or steward. In the case of the kings of England one portion of the judicial functionst of the steward's office came, as we have shown, first to be executed by a sort of deputy or representative, called the chief justiciary, afterwards to be abolished, or rather to be divided among a number of judges; while the other portion of those judicial functions remained with another representative of the original steward, or rather representative of another portion of him, called the Steward of the king's Household. There has been much controversy respecting the

origm of what is called the common law of England. The oldest treatise we have on the English law after the Conquest is the work bearing the name of "Glanville," and composed in the reign of Henry H. Doubtless many individual laws and customs passed from the Anglo-Saxon to the Anglo-Norman times. There is still extant, as we have already had occasion to notice, a charter, or body of laws which the Conqueror is said to have granted to the English people, being, says the title, "the same which his predecessor and consin, King Edward, observed before him." These recognise all the mann features of the Saxon system, and especially the principle of the "were," or pecu-mary compensation for personal injuries. We know also, that the system of the frank-pledge continued to be strictly enforced for a long period after the Conquest.§ Still the general features and character of the English law after the Conquest appear to be, on the whole, more Norman than Anglo-Saxon. One striking feature of distinction between Glanville and the Anglo-Saxon laws is the detail with which the former enters into the matter of procedure or actions at law; and the minute intricacy of the system which he thus presents to us strangely contrasts with the rudeness and simplicity of that of the Anglo-Saxons, described in the last chapter. We

Britten, f 37 b
 For, originally, as has been shown, the seneschal was the king's representative universally, in his military as well as his judicial.

I These laws of the Conqueror have been preserved both in Lain and in Romance, or French. The best edition of both texts is to be found (with a valuable Commentary) in the Illustrations to Sir F. Palgrave's Eng. Com. pp lxxxvni—cxl. § See Palgrave's Eng. Com. p. 527.

much, both in body and spirit, of the English common law as it existed for many ages, and does in some degree still exist. With respect, however, to the portion of the common law that may be considered of Saxon, and the portion that may be considered of Norman origin, there is a remark of Mr. Hallam's that appears worthy of quotation. "Perhaps," says he, "it might be reasonable to conjecture that the treatise called 'Leges Henrici Primi\* contains the ancient usages still prevailing on the inferior jurisdictions, and that of Glanville the rules established by the Norman lawvers of the king's court, which would of course acquire a general recognition and efficacy in consequence of the institution of pastices holding their assizes periodically throughout the country." It is icmarkable, and may be taken as some confirmation of what is here advanced, that the pecumary compositions are not mentioned in Glanville. However, even by Mr. Hallam's estimate, the Saxon would bear but a small proportion to the Norman element in the compound produced under the name of the common law of England. But to say precisely what the proportion of either element may be, is a very different matter; for we must needs admit this much at least, with Sir Matthew Hale, that "among all those various ingredients and mixtures of laws, it is almost an impossible piece of cheimstry to reduce every caput legis to its fine ongmal, as to say this is a piece of the Danish, this of the Norman, or this of the Saxon or British Among the most important of the remaining in-

novations in the law and its administration which were introduced in the period now under review may be mentioned the following:—Courts of ecclesiastical jurisdiction were for the first time established by the Conqueror, the bishops being forbidden for the future to sit as heretofore with laymen in the county or other civil courts, and all spiritual causes, and all those in which clergymen were concerned, being made over to the new jurisdiction. By the time of Henry H, we find express mention of the courts of the archdeacon, the bishop, and the archbishop. The contests which soon broke out between the temporal and the spiritual jurisdictions have repeatedly occupied our attention in the two preceding chapters. These ecclesiastical courts established the partial authority of the canon law in England; and the principles and rules of the civil, or Roman imperial law being also favoured by the clergy, were introduced into the Court of Chancery and into other jurisdictions where churchinen presided, and opposed by them to the common law. Attorneys, or agents for the management of causes at law, are first distinctly mentioned after the Conquest, and were probably not introduced till then. The series of our judicial records commences with . A summery of Saxon law, in unety-four chapters, found ap-

pended to some copies of the charter of Henry I.

† Middle Ages, vol 11. p. 468.

‡ Hist, of Com Hist. of Com. Law, chap. iv.

the reign of Richard I., and the custom of making any written memorials of legal proceedings does not appear to be of much earlier origin. Down to this time the technical phrase, "to record," meant mixely to testify from memory. It is commonly said that after the coming of the Normans all pleadings, at least in the supreme courts, were carried on in French, and that all deeds were drawn and all laws promulgated in the same language, "This popular notion," observes Sir F. Palgrave, "cannot be easily supported. . . . Before the

reign of Henry HI, we cannot discover a deed or law drawn or composed in French. Instead of prohibiting the English language, it was employed by the Conqueror and his successors in their charters until the reign of Henry II., when it was superseded, not by the French, but by the Latin lenguage, which had been gradually gaming, or rather regioning, ground; for the charters anterior to Altred are invariably in Latin,"\* To this it may be added that, according to Ordericus Vitalis, so fat was the Conquetor from showing any aversion to the English lauguage, or making any such attempt as has been ascribed to him to effect its abolition, that he applied himself to learn it for the special purpose of understanding the causes that were pleaded before him. The common statement rests on the authority of Ingulphus, which is

Mr. Hallam thinks the subtle and complex cha-

extremely suspicious

racter of English law and legal proceedings attributable in some measure to the shrewd and hignous spant observable in the Normans † It may, perhaps, be more correctly ascribed to a more general cause—the state of society then existing in fendal Europe. The practitioners of the law, who were, in a great measure, churchmen, had to deal with men-the iron barons "of the bloody hand" - - who were accustomed to obtain every object of their desire by the shortest road—direct violence. In bringing about many alterations in the law, both as regarded the punushment of crimes and the conveyance and descent of real property, each of which alterations might be considered as a step made in the march of civilization, though it, at the same time, either directly or obliquely, struck at the power of the feudal aristocracy, they had to take a circuitous course, so as in a great measure to conceal their real design from the powerful and violent, but for the most part obtuse and uninstructed men with whom they had to deal, We must here note a grand distinction between the Roman aristocracy and the fendal. The Roman patricians, as we before observed, were carefully instructed, not only in the art of war, but in the laws and proceedings of the courts. The feudal aristocracy were mere men of the sword, regarding the habits of study and intellectual industry that would have been necessary to enable them to master a knowledge of their laws as things far beneath their consideration. The consequence

upon the subtle men of the gown, whose power proportionally rose, till they were at last reduced somewhat to the condition of an animal which, though physically stronger than a spider, has become the spider's prey, by being caught in its cummigly-devised net. In short, what M. Guizot has remarked of the Roman lawyers (meaning rather those under the empire, when the practice of the law had become a distinct profession, than the patrician lawyers alluded to some sentences back) is applicable, with very slight modification, to the English. The English as well as the Romans troubled themselves little about the foundations and the general principles-about the philosophy of law, They set out with certain axiomswith certain legal precedents; and then ability consisted in tracing with subtlety the consequences of these, in order to apply them to particular cases as such presented themselves. Thus the English, as well as the Roman lawyers, were dialecticians of wonderful aenteness, but never philosophers. to what has been said of the English lawyers borrowing less than those of any other civilized people from the writings of philosophers, it just amounts to nothing at all, seeing that in the works of the Roman prisconsults and their modern commentators (however admirable as expositors both may be) there is not a particle more of the philosophy of law than in the writings of the English lawvers. The most important part of the history of the legislation of this period consists of the history of those great. Charters which are usually regarded as the bulwarks of English liberty. As we have before remarked, the Norman barons, from the circumstances in which they were placed in England, formed a compact body, of which body the Norman king was the undisputed head. When the necessity which kept this body together ceased to exist, when the invaders began to feel themselves tolerably secure in their possessions,

was, that the more complicated the legal net be-

came which was woven around them, the less powerful they became, and the more dependent

feudalism again resumed its natural character. Each fief-owner sought to isolate himself on his own lands, and to enrich himself by violence and robbery. The kings took advantage of this to increase their own power. If Henry I, and Henry H. cannot be called absolute sovereigns, they possessed more power than any other contemporary king. But the barons, although they had no longer the same motives—namely, their common safety-to rally round the king, which they had formerly, had not lost the recollection of how they had thus been banded together to side with the king; and they now thought that they night again assemble and unite, when the purpose was no longer to defend themselves and the king against the Saxons or English, but to defend themselves against the encroachments of the royal power, becoming every day more formulable. Several circumstances favoured the tendency

Eng. Com, p 56.

Several circumstances favoured the tendency which we have above alluded to. Three usurpers

HISTORY OF ENGLAND. in less than fifty years, William Rufus, Henry I,

and Stephen, had occasion to have then title ac-

knowledged by the barons, and consequently made

general promise respecting their liberties. After-

wards, in the reign of Richard L, from the disputes about the regency, and the antrigues of John,

factions of all sorts mose. In this state of things the government fell into the bands of a commit of barons. Hence one portion of the barons acquired the babit of governing, the other portion that of resisting the government, composed only of their peers; and when, in 1199, John mounted the throne, the face of things was quate changed,

Though the amalgamation of the two race, the Normans and Saxons, was by no means completed, the principal war was no longer between the Normagis and Saxens, but between royalty and mistociacy; the former de ring to retain the power, very nearly absolute, which it had held for a little time, - the latter confederating to compel the recogintion of certain rights which they clumed. Some barons joined the king; and without that there could have been no struggle. And the struggle, when it came, was not, as on the continent, a series of combats between individual interests,--it was truly a contest between two general inde-

Comies-or by the Conqueror, mentioned above, may be considered as the first charter granted by the Anglo-Norman knies. It is assigned by the old chroniclers to the year 1070. Henry I. having usurped the throne from his

pendent forces. The concession of the charters

The confirmation of the laws of Edward the

was the result of that stringgle.

elder brother Robert, who remained duke of Normandy, accupied a less firm position than his father. Soon after his coronation he granted a charter, which enumerates the abuses of the preceding reigns, and promises the redress of them. Many of its enactments have reference to the relations of feudalism; but one of its clauses expressly

restores the laws of Edward the Contessor, "with those emendations," adds Henry, "with which my father amended them, by the advice of his barons," Most of the engagements contained in this charter were very indifferently observed; but it is of importance in the Instory of the Constitution, as baying served in some respects for the model of that which was afterwards extorted from John, Matthew Paris informs us that when the barons took arms, in 1215, their demand was that those rights and liberties should be conceded to the church and the kingdom which were set down in the charter of Hemy I, and in the laws of Edward the Confessor. Lead Lyttelton remarks that, "in some respect, this charter of Henry I, was more advantageous to liberty than Magna Charta itself."

nuses before made, but not kept. Henry II, again renewed those promises in a fourth charter, also short, and also inefficacious.

Stephen, likewise a usurper, granted two char-

ters—one to the barons, the other to the clergy—

both short, and contined to a renewal of the pro-

to all that his predecessor claimed, without jossessing any of the qualities that made good that claim. Such were the circumstances in which John assumed the crown of England. The strong hands of the two first Plantagenets—Henry H. and Richard Corn de Lion, his father and brother were in the dust, and the non-sceptie which they had wickled by rusting among the heavy armour which an imbecile and a coward could not wear, Magna Charta was granted on the 15th of Jane, The enactments of it may be arranged under three heads: - I. Rights of the clergy

The Anglo-Norman barons, under their first kings,

were not in a condition to undertake a struggle, even

if they had wished to do so. Under Henry II.

circumstances were somewhat changed. The extent of Herry's possessions on the continent drew him

into long wars, into which the Anglo-Norman

barons were not always disposed to follow him.

Nor were they much more disposed to submit

patiently to the heavy imposts he levied on them

to support the numerous mercenary trongs he was

obliged to employ. The strong and firm hand of

Henry H., however, suppressed, for a time, this

insurrent spirit, which, on that account, only broke

out with the more violence under his feeble,

cowardly, and vicious son John. It would seem

that the encumstances most favourable to liberty's

making a step in its progress are those of a power-

ful and arbitrary ruler, followed by a techle suc-

cessor, who fancies that he has an undoubted right

[Book III.

1 With regard to the elergy, the charter merely gives a general confirmation of their immunities and privileges. H It carefully emmerates and confirms the rights of the barons. In particular, the right of

the only clause which relates to the interests of the class of villains, -- probably, as Hume observes, at that time the most numerous in the kingdom.

The king, also, promised to appoint none but able and upright judges; to remstate in his possessions every man unjustly ousted; to compel no one to make or support bridges but by ancient customs; that the goods of every freeman should be disposed of according to his will, or, if he died intestate, that his hens should succeed to them; and that no officer of the crown should take any horses, carts, or wood, without the consent of the owner.

Upon the whole, we are inclined to agree with Barrington, that the main object of those who framed and obtained Magna Charta was not so much the restoration of the Saxon laws in general, or those of Edward the Confessor in particular, as the continuance of the Norman and feudal law mtroduced with the Conquest, and the preservation of their own feudal privileges, which the great power of the early Anglo-Norman kings threatened to destroy. "In Magna Charta," says Barrington, "there is not one Saxon term for anything that relates to feudal tenures, which are the great object of many of the chapters. It appears by the last chapter of the Charter, that all the attesting witnesses not in holy orders were of Norman extraction. Whence, then, could arise the induce-VOL. I

ment to make it an express article that the Saxon laws should be restored?" The Norman barons, he adds, " could never mean to abolish the Norman and fendal law, which was in every respect so highly advantageous to them '\*

In reading Magna Charta, we are struck with the even lawver-like precision with which it is worded. It was evidently drawn up by men with intellects as sharp as the swords of the iron barons who wrested it from the reluctant king, who had the will, but not the courage and ability, to be a tyrant

But though the provisions of this famous charter were as complete as the knowledge of that age could make them, and though they were then and there solemnly signed and scaled, they had many fortunes to go through, many reverses to encounter, many violations to endure, before they were destined These it will be to operate quictly mid securely. our business to give some account of in the sequel; contenting ourselves here with the cheering reflection, that though the movement of free institutions is an oscillating one, it is, upon the whole, a decided progress -an advance in the course of a certain number of years, and that

" Freedom's battle, once begun, Though baffled off, is ever won."

We have now to give a short account of the famous · Observations upon the Statutes, p. 3.

record called Domesday, which remains so remarkable a monument of the extensive and statesmanlike genus of the Conqueror. Damesday Book consists of a general survey of all the lands in the kingdom, with the exception of the northern countics, Westmoreland, Cumberland, Northumberland, Durham, and part of Lancashne; specifying their extent in each district; their proprietors, temmes, value; the quantity of mendow, pasture, wood, and arable land, which they contained; and, in some counties, the number of tenants, villams, cottani, and servi who lived upon them. this," says Sir II. Ellis, in his 'Introduction to Domesday," "was to be triply estimated; first, as the estate was beld in the time of the Confessor; then, as it was bestowed by King William; and, thirdly, as its value stood at the formation of the survey. The jurous (upon whose oaths it was made) were, moreover, to state whether any advance could be made in the value." The making of this survey was determined upon, after much debberation, at a great council beld at Gloucester in 1085, and it was finished in the course of the following year. The particulars were collected by Commissioners appointed by the king, on the verdicts of sworn inquests, or recognitions; and this important application of the pary (in the form m which it their existed) may probably be considered to have had much influence in establishing the general use of that mode of trial.

Domesday Book, perhaps the most valuable monument of its kind possessed by any nation, is still preserved. It consists of two volumes—a greater and a less; the greater comprehending all the counties of England except those specified above, which were never surveyed, and except Essex, Suffolk, and Norfolk, which are contained in the lesser volume.

The name Domesday has been by many, and, among others, the author of the 'Dialogue on the Eveloquer,' supposed to allude to the final day of judgment. But "if this whimsical account of the name was the real one," says Barrington, "the

Latin for it would be Dies Judicii; whereas, in all the old chromeles, it is styled either Laber Judicialis, of Crasimalis. Bullet, in his Celtie Dictionary, has the word Dom, which he renders Scur, Scupicur, and hence the Spanish word Dox; as also the words Deva and Deva, which he translates Programation, Advertisement. Domesday, therefore, may signify the lord's or knig's advertisement to the tenants who hold under him; and this sense of the word agrees well with part of the contents of this famous survey." \* account given by Stow, from an old monastic chronicle—the 'Book of Berniondsey'—is, that Domesday is a corruption of Domus Dei (or God's house), the name of the apartment in the king's Treasury where the volumes were kept.

As some specimen of so currous and important a document may be acceptable to our readers, we select the following examples of the manner of entering the lands in it, and subjoin an English translation.

"Essessa. Terra Regis. Dinud. Hundred de Witham. Witham temnt Haroldus t. R. E. pro maner, et pro 5 hidis. Modo custodit hoc manerum Petrus vicecomes in mann regis; time 2 car. in dũio, modo 3; time 21 villan, modo 15; time 9 bordar, mode 10; time 6 servi, mode 9; time 23 sochemanni, et modo similiter; time 18 car. hominum, modo 7; tunc inter totum valebat 10 lib. modo 20; sed vicecomes inter suas consuctidinis et placita de dimid. hundred, recepit inde 34 lib. ct 4 lib. de gersuma . . . . 20s. Goscelinus Loremarius habet terrata unius,

the leaf); the king's land;" and before the parti-

cular manor or town, the hundred is noted, as here,

"The hult-hundred of Witham. Harold held

Witham, in the time of King Edward, for a manor

and for 5 hides. Now, Peter, the sheriff, keeps

this manor in the king's hand. Then there were

2 carticates in the lord's hands, now 3. Then there

were 21 villems, now 15 (for they recorded what

was in Edward the Confessor's time as well as in

that of the Congneror); "then there were 9 bordars,

now 10; then 6 slaves, now 9; then there were

23 sochemans, now the same number; then 18 carucates among the men, now 7: then the whole

was valued at 10 pounds, now 20 pounds; but the

sheriff, for his customs and mulets from the half-

lumdred, received on account of this manor (mde)

6 shillings, and paid their old tent to the manor.

Tedric Pointel holds 8, who had ladf a Inde, and

Thus in English: - "Essex (title in the top of

10 young growing beasts, 160 hogs, and 269 sheep.

To this manor there belonged 4 freemen, who had

4 holes in the time of Edward the Confessor,

paying an accustomable rent; now Robert, son of

Corbutio, holds 3 of those hides, and Hugh Mont-

fort the fourth, and have paid no rent since they

held them. This manor was worth, in the time of

King Edward, 36 pounds, now 10; and Peter the

viscount, or sheriff, receives from it \$0 pointds for

of the Tally Court in the Exchequer, under three

different locks and keys; one in the custody of the

treasurer, and the others of the two chamberlands of the Exchequer. In 1696 it was deposited in the

Chapter-house at Westminster, where it still re-

house of lords, his majesty gave directions for the publication, among other records, of the Domesday

Survey "In the following year," says Sa Henry

Ellis, t "specimens—one executed with types, the

other by engraving – were submitted, by command

of the lords of his impesty's Treasury, to the president and council of the Society of Antiquaries, for

their opinion; and an engraved copy of the work

In 1767, in consequence of an address of the

Domesday Book was formerly kept by the side

rent, and 10 pounds for an income or time."

mams,\*

34 pounds, and 4 pounds for fine. In this manor there were, in the time of King Edward, 31 freemen, who then paid an accustomable tent of 10 shillings and 14 pence. Of these, Hoods holds 2, who had 45 acres, and they were worth to him

221 acres, paying custom or old rent. Ranulph Piperel holds 10, who had 2 hides and 45 acres, not paying custom or old rent. William Grosse holds 5, and only one of them pays custom, and were worth 3 pounds 13 shillings. Ralph Baignaid holds 6, and one pays custom; they were worth 20 shillings. Hamo, the seneschid or steward, holds 1, who has 3 hide, and is worth 20 shillings. Goscelin Loremar has the land of 1, and pays no custom." We give another example, which differs some-

what from the former:--"Essessa Terra Regis Hund, de Beventre,

Haveringas tenuit Haroldus t. R. E. pro I. maner. et pro 10 hid. Tunc 41 villan, modo 40; semp. 41 bordar, et 6 servi, et 2 car, in dominio; time 41 car. hominum, modo 40; sylv. d. pore e. acr. prati ; modo 1 molen, et 2 runc. et 10 animalia, et 160 porc. et 269 ov. HISTORY OF ENGLAND. liberi homines are mentioned as distinct from the

Sochemanni, or Socmen; but by the time of Magna Charta, they would seem not to have been distinct; at least the three classes of society specified in the famous 10th article of that, are the

free men, the merchants, and the villains. 2. The Sochemanni, or Socmen.—In regard to these, whatever may be the disputes about the

origin of their name (some deriving it from soca, a plough; others from soc, a franchise) and their condition, one thing is certain, that they held their land by a tenure of a different and inferior kind to imbiany tenure. Littleton defines tenures in socage to be, where the tenant holds his tenement of the lord by any certain service, in heu of all other services, so that the service be not knight's service; and Blackstone describes the "grand criterion and distinguishing mark of this species of temire" to be, "the having its renders or services ascertained."

3. The Bordarn.—Respecting these, opinions

vary. Coke calls them "boors, holding a little

house with some land of husbandry, bigger than a

cottage \* - " The Bordarii, often mentioned in the

Domesday Inquisition," says Bishop Kennett, "were distinct from the Servi and Villam, and seem to be those of a less servile condition, who had a bord or cottage, with a small parcel of land allowed to them, on condition they should supply the lord with poultry and eggs, and other small provisions for his board and entertainment." "Bordarn," adds Sir H. Ellis, "it should seem, were cottagers merely; and in the Ely manuscript, we find *Bordarn* where the Breviate of the same entry in Domesday itself reads Cotaru." 4. Seacy). These, as distinguished from the villani, seem personal, the latter being territorial bondmen; or, in the English law language, rillians in gross, as distinguished from rellains regardant. The term serf, which is used on the continent as

common discourse to designate villain regardant. 5. Homines is synonymous with vassals, or fendatory tenants, and seems, in fact, a literal translation of the Saxon "men;" to be any one's man being the same as being his vassal. 6. Terra Regis. " The Terra Regis of Domesday," says Mr. Allen, "was derived from a varicty of sources. It consisted in part of land that happened at the time of the survey to be in the king's hands by escheat or forfeitures from his Norman followers. It was constituted, in part, of the lands of Saxon proprietors, which had been confiscated after the Conquest, and had not been

ber of manors assigned to him as his demestie lands \* 1 Inst. p. 5. b.

private inheritance.

the translation of servus, is not recognized in Eng-

hsh law, though it is sometimes loosely used in

20 acres. The trnth seems to be, that a hide, a vard-land, a knight's fee, &c., contained no certain number of acres, but varied according to different places."‡ " 9. Carucate.—The carucate was of Norman introduction, and probably nearly corresponded in Norman to hide in Saxon. Its measure is involved in as much uncertainty as that of the hide. Bishop Kennett gives instances of its application to quantities of land varying from 60 to as much as 150 acres.

We now proceed to give some account of the

in Domesday, with the estates of hocland possessed

by Alfred, it seems incredible that the whole should

have been his private property. A great part must

have been the foleland or public property of the

state, of which, though the nominal proprietor, he

was only the usufructuary possessor, and, with the

license and consent of his witan, the distributor on the part of the public. The land which is called

terra regis in the Exchequer Domesday, is termed,

in the original returns of the Exon Domesday;

demesne land of the king belonging to the king-

" uniformly signifies arable land, as distinct from

uncertain. "Gervase of Tilbury," says Bishop

Kennett, " makes it 100 acres. The Malmsbury

MS., cited by Spelman, computes it at 96 acres,

1 hide, 4 vigates; and every vigate 24 ocres.

And yet the history of the foundation of the abbey

of Battle makes 8 vigates go to 1 hide. But Poly-

dore Vergil blunders most, who reduces a hide to

wood, meadow, and common pasture."†

7. Terra.—" Put simply," says Sir H. Ellis,

8. HDDE.—The quantity of land it contained is

[Book III.

royal revenue in this period. The complete establishment of the fendal system after the Norman conquest, put the kings of England in possession of revenues greatly more ample

than their predecessors had enjoyed. The crown, in the first place, as appears from Domesday Book, acquired the entire property of above 1400 manors, the rents of which must have formed a large income altogether independent of casualties. were in addition to 68 royal forests, 13 chases, and 781 parks, in different parts of the country,

which were retained to serve as hunting grounds,

and only became a source of revenue in conse-

quence of the penalties to which the people were subjected for trespasses upon them in breach of the forest laws. But a very considerable annual return must also have been derived from the various fendal dues that remained payable even from the lands that were granted to his followers granted away to subjects. But it was chiefly comby the Norman conqueror. The crown, it is to be posed of land that had been possessed by the Conremembered, still retained to itself what was called fessor in demesne, or in farm, or had been held the dominium directum, or property of these by his thegas and other servants. Of the last delands: the persons to whom they were granted held them only as tenants under the crown; and, scription, part was probably the private bocland of the Confessor, which had belonged to him as his besides the services which they were bound to Inquiry Into the Rise and Growth of the Royal Prerogative in England 8vo. Lond. 1839, p. 150.
 1 Introd. to Domesday, v. 1 p 95.
 2 Par Annq. Gloss. Hide. But if we compare the num-

ment both of quit-rents, which were regularly collected by the sheriffs, and of other dues to the lord superior, which, although only exigible upon certain extraordinary occasions, were generally of much greater amount than the annual quit-rents. Of these, the principal were, the Rebef, or fine, which, on the death of every tenant, his heir was obliged to pay to the lord before entering upon the possession of the lands—being the same thing that was known in the Saxon times by the name of the Heriot, that is, the suit of armour, a certain quantity of warlike weapons being the original exaction; the Primer Seism, a species of additional relief. consisting in some cases of a whole, in others of half a year's profits of the lands, which was payable only by tenants of the crown; Fines of Alienation, paid on the sale or grant by the tenant of any part of the lands to a stranger; and Aids, which were called for to ransom the king whenever he was taken pusoner in war, to firmish a portion for any of his daughters when she was married, and to defray the expense incurred when his eldest son was made a kinght. Every tenant of the crown also was bound, whenever the king went to war, to furmsh an armed soldier, and to maintain him in the field for forty days, for each knight's fee that he possessed—the whole kingdom, as appears from Domesday Book, containing 60,215 such fees. This law, therefore, enabled the crown to raise and keep on foot a mimerous army in times of war at no cost. The builden which it imposed upon the tenants of the crown was afterwards communited by Heury II, into a money-payment of twenty slullungs for each kinght's fee, which was ealled an

render as vassals, they were subjected to the pay-

msling a soldier armed with a bow.\* The crown, besides, drew large profits from its prerogatives of wardship and of marriage, by the first of which it took the custody and drew the rents of all estates held of it so long as the tenant, if a male, was under twenty-one; if a female under SIXteen years of age; and by the second of which it disposed of all female henesses, and also of all widows, of its tenants in marriage, or exacted a fine for the relinquishment of the right. Both of these, indeed, were rights of all lords of manors over their vassals; and that of marriage was extended in the thirteenth century to heirs male as well as female. Another right which the king possessed in common with other lords was, to all escheats, that is, to all the landed property of persons who either died without beirs or whose blood was attainted by the commission of treason or felony. numerous forfeitures of the estates of the large proprietors, who were all tenants of the crown, that were constantly occurring in the first ages after the Conquest, must have brought immense wealth into the royal treasury. The estates of which the crown acquired possession in this

manner formed the only fund from which it could

legally make new grants—the alienation of any

. See Barrington's Observations on the Statutes (2nd edit.) p. 277.

part of the original royal demesne being prohibited by law; and although this restriction was often violated, it was also at other times taken advantage of by the king, and made a pretext for resuming the illegal grants of his predecessors. It was in this way that Henry II., on his accession, recovered from the crown all the estates (with the exception only of those acquired by the church) that had been alienated in the preceding times of confusion, whether by Stephen or by bis own mother, the empress. The profits of the estates of all idiots also belonged to the crown, as well as all the personal effects of persons who had died without known hears. The crown had likewise a right to all treasure trave, or money, plate, or bulbon found hidden in the earth; to all waifs, or stolen goods thrown away by the thief in his flight; to all estrays, or cattle found wandering without an owner; to all royal fish-that is, whales and sturgeous—either thrown ashore, or caught close to it; to all goods wrecked to which the owner did not establish his claim within a certain time; and to all spoil taken in war. The crown also possessed various other regular sources of meome, besides the produce of the crown

lands, and the different dues from its vassals.

There were various descriptions of what we should now call taxes, either permanently estublished, or occasionally imposed. In 1083, the Conqueror is said to have revived the old Saxon land-tax, or Indeage, called the danegeld, of which an account has been given in the preceding book,\* and to have advanced it to six shillings on each hide; a rate at which, if the common account of the miniber of Indes of land in England may be depended eschage, or scutage, that is, literally, a tax for furupon, it would have produced above 80,000%, in amount of silver equal to what is contained in 240,000% of our present money. Gervase of Tilbury, or the author of the 'Dialogue on the Exchequer,' commonly attributed to him, says that William would not revive this tax as an annual supply, nor yet would be entirely give it up, but reserved it to answer extraordinary and unforeseen occasions; for which reason it was rarely taken either by him or his successors, and only when actual wars with foreign nations, or the fear thereof, came upon them. A land-tax, however, can be traced to have been repeatedly collected, either under this or another name, by all the succeeding kings. Such a tax appears, indeed, to have been regularly levied throughout a great part of the reign of Stephen; it was occasionally revived by Hemy II.; and Richard I. is recorded to have, in the tenth year of his reign, collected it at the rate of five shillings on each hide. The aids, mentioned above, and also the scutages, appear to have been sometimes exacted under the name of a hideage, or carucage.

A species of house-tax is mentioned in Domesday Book under the name of Hearth-money, and seems to have been collected both before and after the Conquest. Another species of hearth-money, of

which was really only another name for bribes. If the dealers, for instance, in any commodity in a particular place wished a certain price to be fixed upon it below which it might not be sold for

a certain time, they bought an order to that effect.

Numbers of persons are recorded in the rolls of

the Exchequer to have paid large sums merely to

obtain the favour or good will of the king, or to

induce him to remit his displeasure. Other pay-

ments were made to purchase his direct inter-

ference with law proceedings. "Even in the reign

of Henry, 11.," observes Lord Lyttelton, "we have

instances of fines being paid to the king, from

and a fine to the king, was no doubt recommended

to the Conqueror, among other considerations, by

has even been suspected that Henry 11., in the insti-

tution of the itingrant justices, looked more to

the benefit of the revenue than to any other

object. The instructions given to them certainly

show a great solicitude to turn, their administration

of the law to account in the augmentation of the

toyal profits. But the fines exacted for offences

by no means formed the only revenue that the

crown drew from its power of administering and

executing the law. Privileges of all kinds were

matter of open purchase from the king or the royal

officers, by what were called oblations or offerings,

the supplies it provided for the royal coffers.

[Book III.

tion on the accession of Henry I., was that called Moneyage, being a tax of a shilling on each hearth, payable every three years, as a recompense to the king for not exercising his prerogative, as he was entitled to do, in altering or debasing the coins. Customs, or duties upon the import and export of articles of merchandize, seem to have existed from the earliest times, and were no doubt continued after the Conquest. Similar duties appear to have been also paid by merchants selling their goods within the kingdom, for the use of the king's watehouses, weights, measures, &c. Another permanent tax consisted of the tallages, that is, the cuttings, being a certain assessment upon their property, animally exacted from the inhabitants of the towns and boroughs throughout the kingdom. The first general personal tax, however, is said to have been imposed by Henry II., in 1166, for the support of the war in the Holy Land: it amounted only to sixpence in the pound upon each man's personal effects, to be collected in five years, at the rate of twopence the first year, and a penny cach of the four years following. It was followed, in 1188, on the news of the expulsion of the crusaders from Jerusalem, by another tax of the same kind, but much beavier in amount, being an exaction of the tenth of the personal property of all those who should not join the expedition which it was proposed to send to regain the holy city. This tax, which came to be known by the name of the Saladin tithe, is said to have produced 130,000%, of which the Jews contributed 60,000/. Some years after

Much additional revenue was also obtained by means of various prerogatives of the crown that yet remain to be mentioned. By that of purveyance and pre-emption the king's purveyors were entitled to take such provisions and other necessaries as were wanted for the use of his household at a certain fixed price, without the owner's consent, and also to impress the carriages and horses of the subject to do the king's business on the public roads. Considerable profits were derived from the tolls and other dues exacted, at public fairs and markets; from the coming of money, and, in later times at least, from the superintendence of weights and measures, for which fees were received; and from the grant of patents and monopolics. All fines and amerciaments paid by persons convicted

of breaches of the law also went to the king; and

this was one of the most productive sources of

revenue in early times. The maintenance of the

muted to engage in the exercise of the tournament;

lands, four marks, and a knight without lands, two

marks.

several of his subjects, for stopping or delaying of pleas, trials, and judgments, or for expediting and speeding them, or to have seism or restitution of their lands or chattels, or to be replevied or bailed, or to be quit of certain crimes or certain methods another new species of general taxation was introof trial (as, for instance, by hot iron), or to have duced by Richard I., under the form of a scheme the assistance of the king in recovering then for the sale of heenses, which persons of different debts." The right of being tried by a jury was at degrees were obliged to obtain before being perfirst often purchased by a money payment. Fines were often paid for permission to hold or quit an earl being called upon to pay twenty marks certam offices: and in some reigns all offices under of silver, a baron ten marks, a knight having the crown were sold. In the reign of John we find the wife of High de Neville paying a fine of two hundred hens for permission to sleep one night with her husband; she was probably a ward of the erown who had married without the king's consent. It appears also to have been customary, when any of these bribes were paid to the king, for an acknowledgment of smaller amount, which passed under the name of the queen's gold, to be paid to his consort.\* To all these irregular sources of revenue may be added the sums that were repeatedly obtained by actual extortion and robbery. The Conqueror, according to Matthew Paris, possessed himself in this way of great quantities of wealth by plundering the churches and monasterics, and seizing not only the money that had been deposited in these buildings for security, but even the shrines and chalices, and other furniture of the altars. Both Rufus and Stephen are accused of obtaining money by the same open disregard of all law and right. victims of the most frequent exactions of this the Saxon times. See Palgrave's Eng. Com., p. 652.

Saxon system of pecuniary expiation for crimes, " Mention is also found of the aurum regina, or queen's gold, in including both compensation to the party injured

CONSTITUTION, GOVERNMENT, AND LAWS.

583

fleeced the subjects of the realm," says Madox, "so the king fleeced them." Besides the general impositions that were laid upon them, so constant a stream of fines and amerciaments was derived from individuals of their body, that a particular office of the Exchequer was set apart for the management of the revenues thus obtained. In the same class of irregular gains may be placed the profits accruing from vacant church livings retained in the hands of the crown, which were sometimes very great. William Rufus is stated to have been at his death in the receipt of the temporalities of an archbishopric, four bishoprics, and eleven abbeys. Under this head, too, may be reckoned the sums first extracted from individuals in the same reign under the name of Benevolences, and the disguise of being free gifts, although they were in fact compulsory; and the Loans, equally free and equally gifts with the benevolences, the credit of the contrivance of which is assigned to Richard I. Auother of the expedients adopted by this king for raising money is said to have been the causing a new great scal to be made, under the pretence that the 'old one had been lost, and then declaring all existing royal grants to be invalid unless the holders should take out renewals and confirmations of them at the cost of a second payment of the fees. But it would be endless to commente all the forms of royal extortion of which the records of the period firmsh instances. Any contrivance, however esscanally importous or oppressive, to which the thmnest colour of a legal character could be given, would appear to have answered the purpose when an argent occasion arose; and indeed at all times the sovereign seems to have been less restrained in his exactions from the subject by any barriers that the law presented, than by his own sense of the length to which it was prindent to go, or by the absolute failure of sources from which to feed lis rapacity. It cannot be doubted that the annual returns which flowed into the royal treasury through all these channels must have been very great. Orderious Vitalis, who was a contemporary of the Conqueror, assures us that the daily meome of that prince

CHAP. III.]

amounted to above 1060%, without including the casual profits arising from the redemption of offenders and the other prerogatives of the crown. This would make a fixed ordinary revenue of about 400,000% a-year in the money of that day, which would be equivalent in weight of silver to nearly

and other modern writers; but from its precision

and formality (the exact sum is set down, after the

manner of keeping accounts in the Exchequer

having crept into the text. William is said to have left at his death, in the royal Treasury at Winchester, 60,000 pounds of silver, besides gold, jewels, vestments, and other articles of great value; and this was probably only part of his accumulated wealth, much, if not most, of which we may suppose, he would have with him in Normandy, where he died. Nor is the account of the Conqueror's income given by Ordericus inconsistent with almost the only other notice of a similar kind relating to this period that has been preserved,—that which is found in Hoveden of the revenue of Richard 1. This historian relates that when Hubert, Archbishop of Canterbury, resigned the office of High Justiciary m 1196, he proved from his books that the revenue he had collected for the king during the two preceding years amounted to not less than 1,100,000 marks, or about 750,000 pounds of silver. The revenue of the Conqueror in all probability considerably exceeded that of Richard. According to the author of the 'Dinlogue on the Exchequer,' the rents of the crown lands were paid in kind from the Conquest till the latter part of the reign of Henry L., when, in consequence of the complaints of the vassals of the great oppressions they suffered in being obliged to bring provisions for the royal household to different parts of the country from their own dwellings, that prince, with the advice of his great council, sent commissioners over the kingdom to estimate the money value of

all the rents; after which the sheriff of each county

was appointed to collect them, and to account for

them to the Exchequer. It is certain, however,

sence of so august an assembly may remain in-

violable." This treatise appears to have been

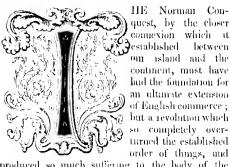

ably disputed on the supposition of some corruption

that they were partially paid in money before this The institution of the Exchequer, we may add, is ascribed by the author of the 'Dialogue' to the Conqueror, who took the plan of it, he says, from the Exchequer of Normandy, yet with many differences, and some even in points of great importance. "The anthonty of this court," the writer proceeds, "is very amount, as well in respect of the image of the king impressed on his great seal, which is constantly kept in the Treasury, as of the persons who sit there, by whose wisdom the whole state of the realm is preserved and mamtained in safety; for there resides the king's chief justiciary, who is next to the king in jurisdiction; 1,200,000t. of our money, and in real efficacy, no and all the greatest men of the kingdom, who are doubt, to a much larger sum. This statement of of his privy council, have also places there; that Ordericus has been rejected as incredible by Hume whatsoever is decreed or determined in the pre-

written in the reign of Henry II.

## CHAPTER IV.

## HISTORY OF THE NATIONAL INDUSTRY.

produced so much suffering to the body of the population, could not be favourable, in the first instance, or until after the lapse of a considerable space of time, either to the foreign trade of the country, or to the national industry in any of its other branches. For the first four reigns after the Conquest, accordingly, the notices that have come down to us on the subject of the present chapter are very few and unimportant.

When the Normans first came over, however, they found England a country possessed of considerable capital, or accumulated wealth, and also, as it would seem, of a flourishing foreign commerce, which had, no doubt, chiefly grown up in the long, and, for the greater part, tranqual reign of the Con-We have already quoted the account fessor. given by Wilham of Poictiers of the quantities of gold and silver and other precious effects which the Conqueror carried with him on his first visit to Normandy, and of the admiration which these spoils excited both in the Normans themselves and in strangers from other parts of the continent by whom they were seen.\* The writer expressly testifies that merchants from distant countries were at this time wont to import to England articles of foreign manufacture that were unknown in Normandy. He incutions also in other passages, the great wealth of the native or resident merchants both of London and Winchester. Exeter was another town distinguished for its opulence; and Ordericus Vitalis relates, that when it was attacked by the Conqueror, in 1068,† there were in the harbour a great number of foreign merchants and mariners, who were compelled by the citizens to assist them in their defence. These notices occur incidentally in the relation of political transactions or military events; no chromcler has thought it worth his while to enumerate either the various points at which this foreign commerce was earried on, or † Ibid, p. 366,

· See ante, p. 364.

the articles in the exchange of which it consisted. If our information were more complete, we should probably find that it was shared by various other towns besides those that have been mentioned. There is reason to believe that Hastings, Dover, Sandwich, and the other towns on the coast nearest to France, which afterwards came to be distinguished as the Cinque Ports, and also Lincoln, and York, and other places in the more northern parts of the kingdom, all at this time maintained some commercial intercourse with the continent—with Italy, and perhaps also with Spain, as well as with France and the north of Enrope or Germany. An active trade also seems to have existed between Ireland and both Bristol and Chester on the west coast.

The principal exports at this early period were probably the same that for many ages after constituted the staples of our trade with foreign countries, namely, the natural productions of the island--its tin and lead, its wool and hides, and sometimes perhaps also its beeves, and the other produce of the same description reared in its pastures and forests. We find a regular trade in these and other articles established at the most remote date to which it is possible to carry back the history of English commerce; and it may be safely presumed that they were the commodities for which the island was resorted to by foreign merchants from the earliest times. As for corn, it was probably at this date, as it long afterwards continued to be, sometimes an article of export, sometimes of import. The articles we have enumerated were, no doubt, those in the production of which the industry of the great body of the people was employed. The only manufacture for their skill in which the English were then eminent was the working in gold and silver; and William of Poicticrs states that the best German artists in that department found themselves encouraged to come and take up their residence in the country. From this, we may presume that the chief demand for their productions and those of the native artists of the same class was among the English themselves; but from the high repute of the English workmanship, some of the embroidered stuffs, of the vases, ornamented drinking-cups, and other similar articles fabricated here, would, no doubt, also be sent abroad. Considerable quantities of the precious metals must have been consumed in the manufacture of these articles; and it is not unlikely that the supply was in great part obtained from Ireland, where it is agreed on all hands, that, whencesover it may have been obtained -whether from native mines, or from the ancient

intercourse of the island with the East, or from the Northmen, enriched by the spoils of their piracy, who had conquered and occupied a great part of the island in the period immediately preceding that with which we are now engaged—there was formerly an extraordinary abundance of gold and silver, of the former especially.\* William of Malmsbury, it may be observed, seems to speak of the trade between England and Ireland as one which the former country could dispense with without any serious inconvenience, but upon which the latter was dependent for the necessaries of life. He tells us that upon one occasion, when the Irish monarch, Mnrcard (or Mnrtach O'Brien) behaved somewhat hangbtily towards Henry I., he was speedily humbled by the Euglish king prohibiting all trade between the two countries; "for how wretched," adds the historian, " would Ireland be if no goods were imported into it from England." Perhaps English agricultural produce was exchanged for drish gold.

In the violent transference and waste of property, however, that followed the Conquest, and the long struggle the invaders had to sustain before they made good their footing in the country, the wealth, and commerce, and general industry of England, must all have received a shock from which it was not possible that they could rapidly recover. The minds and the hands of men were necessarily called away from all peaceful pursuits, and engaged in labours which produced no wealth. Nor was the system of government and of society

""It appears that there were greater stores of the precious metals in Irrland than could well be supposed. Large sums of gold and silven were frequently given for the ransom of mon of rank taken in battle, and dates or vents, pand in gold or silver, to ecclesiastical battle, and dates or vents, pand in gold or silver, to ecclesiastical stablishments, occur very often in the Irish annals. At the consecution of a church in the year 1157, Murha O'Luchin, king of Irrland, gave a town, 150 cows, and 60 nunces of gold, to God and the clergy a chief called 'O'Cgrol gave also 60 annees of gold; and Treman O'Ruark's wife gave as much—ilonations which would have been restered very great in that age in Fraghand on pion the continuat. What superstition so liberally gave, some species of industry must have acquired; and that was most probably the pasturage of eattle ... unless we will suppose that the mines of Ireland, which, though inmoticed by any writer, seem to have been at some time very productive, were still capable of supplying the same solelected in the cuffers of the chiefs and the clergy. —Macpherson's Annals of Commerce, p. 334. See also onte, p. 14.

that was at last established favourable, even after its consolidation and settlement, to trade and industry. It was a system of oppression and severe exaction on the one hand, depriving the industrious citizen of the fruits of his exertions and of the motive to labour; and, on the other hand, it was a system of which the animating principle was the encouragement of the martial spirit, to which that of trade and industry is as much opposed as creation is opposed to destruction.

Two charters were granted to the city of London

Two charters were granted to the city of London by the Conqueror, and a third by Henry I.; but it is remarkable, that not even in the last-mentioned, which is of considerable length, and confers numerous privileges, is there anything relating to the subject of commerce, with the exception of a clause, declaring that all the men of London and their goods should be exempted throughout England and also in the ports from all tolls and other eustoms. There is no reference to the city itself as a great mart, or to either its shipping or its port. Even in the general charter granted by Henry 1., on his accession, there is not a word in relation to commerce or merchants. It is stated, however, by William of Poictiers, that the Conqueror invited foreign merchants to the country by assurances of his protection. The numerous ships in which the Congeuror

The numerous ships in which the Conquiror brought over his troops—amounting, it is said, in all, to about 700 vessels of considerable size, besides more than three times that number of inferior dimensions—must have formed, for some time, a respectable royal navy. William of Poietiers informs is that the first care of the duke, after disembarking his men, was to erect defences for the pietection of his ships; and most of them were, doubtless, preserved, and afterwards employed in war or commerce. It is the opinion of a late writer, that the numerous fleet thus brought over by the Conqueror, "when not engaged in ferrying himself and his armies to and from the continent, was probably employed in trading between his old and new territories and the adjacent coasts of France

woollen cloths appears to have been first intro-

duced into this country; and it is supposed that

they soon came to be made for exportation as well as for home consumption. Giraldus Cambrensis

describes the foreigners as "a people excellently

[Book III.

the new masters of England."\* We find a naval force occasionally employed in the wars even of the first English kings after the Conquest. The Saxon Chronicle states, that when the Conqueror made his expedition against Scotland in 1072, he sent a fleet to attack that country by sea, at the same time that he invaded it in person at the head of his The good service done for Rufus against his brother Robert by the privateers which he permitted his English subjects to fit out in the beginning of his reign, has been mentioned in the narrative of eivil and military transactions. + A fleet was also equipped by Henry I., to oppose the threatened invasion of Robert, on his accession, the greater part of which, however, deserted to the cnemy. T Provision, indeed, was made by the Conqueror for the defence of the kingdom, whenever it should become necessary, by a mayal force, by means of the regulations which he established in regard to the Cinque Ports—originally Hastings, Hythe, Romney, Dover, and Sandwich-each of

which towns was bound, upon forty days' notice, to furnish and man a certain number of slups of

war, in proportion probably to its estimated wealth

or population. Other towns in different parts of

the coast also appear to have held of the crown by

the same kind of service.

586

One of the old Saxon laws revived or continued by the Conqueror, and the only one in the collection of enactments which passes under the name of his charter, having any reference to trade, is the prohibition against all purchases above a certain amount, except in the presence of witnesses. "No one shall buy," it is declared, "either what is living or what is dead, to the value of four pennies, without four witnesses, either of the borough or of the village."

We have already mentioned the establishment by Henry I. of the colony of Flemings in the district of Ross, in Pembrokeshire. These foreigners had come over in the reign of the Conqueror, driven from their native country, it is said, by an numdation of the sea, and they had been settled, in the first instance, chiefly about Carlisle and the neighbouring ports, and as it would seem, with a view merely to the service their hardihood and skill in war might be of in the defence of the northern frontier of the kingdom. But they were as dexterous in bandling both the plough and the shuttle as the sword. Henry is said to have been induced to remove them to Wales, by finding that they and the English, with"whom they were mixed, did not agree well together. In the distriet of which he put them in possession, and which he had taken from the Welsh, they maintained their ground against all the efforts of the hostile people by whom they were surrounded, to dislodge them, and soon eame to be regarded as the force to be mainly depended upon for keeping the Welsh in

skilled both in the business of making cloth and in that of merchandize, and always ready with any labour or danger to seek for gain by sea or land."\* It is probable that they also introduced some improvements in agriculture; and, altogether, the example of industry, activity, and superior acquirements set by this interesting colony—the last, as it has been remarked, of any consequence settled in any part of the island till the coming over of the French Protestant silk-weavers, after the revocation of the edict of Nantes, in 1685-could not fail to be of high public benefit. Their language was very nearly the same with the English; and the district in which they dwelt, it seems, used to be called Little England beyond Wales; in fact, they made the whole county of Pembroke, though lying at the further extremity of Wales, an English Henry II. afterwards added to their numbers by permitting some of those of their countrymen who had served as increenaries under Stephen to settle among them. It is said that the descendants of these Flemings may still be distinguished from their Welsh neighbours. The Flemings were indebted, both for the welcome reception they met with in the first instance, and for the permanent settlement they obtained, to their martial more than to their commercial skill to their being a people, as Giraldus expresses it, equally most ready, now at the plough—now at the

sword.† The Jews, who came over in great minibers soon after the Commest, were a people of altogether another stamp. Precluded by their religion from engaging in the wars of any of the Enropean nations among whom they had settled, they had become mere traders, and were, indeed, men of peace in a more strict sense than any other class of persons in those days, the clergy themselves not excepted. Independently, therefore, of the odum to which their faith exposed them, their habits made them in a peculiar degree objects of hatred and contempt to the warlike population of England and the other countries in which they took up their residence. Yet almost wherever commerce had taken any root, there were they to be found, pursuing perseveringly, under obloquy, danger, and the cruellest oppression, their peculiar trade. To draw down upon them still more of the popular suspicion and dislike in a rude and ignorant age, that trade was not any species of industry by which produce of any kind was visibly created; it did not necessarily imply even the exertion of any peculiar powers or acquirements; it was lahour neither of the hand nor of the head. Yet it was, in truth, a trade as essential to the creation of

<sup>1</sup> lbid. p 409. | lbid. p. 412.

wealth as any labour. The Jews were the capitalists of those times; they were the dealers in that other element, by a combination with which alone t is that labour itself can, in the creation of wealth,

accomplish any extraordinary results Even in that dark and turbulent age the inherent power of property was strikingly evinced in their case, by the protection which it long secured to them, notwithstanding all the hostility of the popular feeling, and the disregard of them by the law itself. It was early found necessary to support them in their rights over their debtors; and, while affairs went on in their ordinary course, it does not appear that a Jew ever had any greater difficulty in recovering law, indeed, seems to have considered the Jews as

the money owing to him than a Christian. the property of the king; and he oppressed and plundered them to any extent that he deemed prudent. But he did not usually allow them to be inpured by others; and perhaps, indeed, they were more secure under the royal protection than they would have been under that of the law. Some of the kings, William Rufus in particular, excited much popular clamour by favouring them, as it was alleged, too much. Their wealth enabled them, at different times, to purchase charters from the crown. For one which they obtained from King John, and which is styled a confirmation of thear charters, they are recorded to have paid four thousand marks; and it refers to previous charters which they had received both from Henry I. and Henry II \*

There are traces, as we have already had occasion to obscive, of an intercourse having subsisted between these islands and the East from the remotest The mere derivation of the people of Europe from Asia most probably, of itself, had always kept up some connexion between the East and the West; neither the Gothic nor the earlier Celtie colonists of Europe seem to have ever altogether forgotten their Oriental origin; the memory of it lives in the oldest traditions alike of the Irish and of the Scandmavians. But even within the historic period we find a succession of different causes operating to keep up a connexion between Britain and the East. As long as the country was under the dominion of the Romans it was of course united by many ties, and by habits of regular intercourse, with all the other parts of the extended empire to which it belonged. Afterwards, in the Saxon times, the establishment of Christianity in the country contributed in various ways to keep up its connexion with the East. The Greek learning, and probably also some of the Greek arts, were introduced by Archhishop Theodore and other churchmen from Asia: at a later date we find Alfred despatching a mission to the Christians in

India; and not long afterwards we find pilgrimage

to the Holy Land becoming a common practice.

From this practice we may most properly date the commencement of our modern trade with the East;

it has ever since been a well-established and

the establishment of any branch of the manufacture in this country; but from about this time we find silks becoming much more abundant in England

as well as in the other countries of Europe than

formerly—and they must now have been imported,

probably from Spain, Sierly, and Italy, as well as

come down to us respecting the commerce of Scot-

It so happens that rather more information has

4 F 2

and other parts of the East. Afterwards the Saracens introduced the art of weaving silk into Spain. The silk-worm, however, was first brought from Greece, m 1146, by Roger, the Norman king of Sicily, who, in an expedition which he led against Athens, Thebes, and Corinth, carried off a great number of silk-weavers from these cities, and settled them in his capital of Palermo. them the Sierhans learned both how to weave the cloth and how to rear the worm; and within twenty years from this time the silk fabrics of Sicily were calchiated over Europe. It is not till some centuries later that we have any accounts of

regular intercourse. The pilgrims, from the first,

very generally combined the characters of devotees

and merchants. Then, towards the close of the eleventh century, commenced the crusades, which

for nearly two hundred years kept, as it were, a

broad highway open between Enrope and Asia,

along which multitudes of persons of all sorts were

eastern commodities now began to find their way

to the remotest extremuties of Europe may be col-

lected from the records of the times. One very

remarkable notice occurs in the Register of the

Priory of St Andrew, in Scotland, in which it is

related that Alexander 1., when bestowing a certain

endowment of land upon the church of that city,

presented at the same time an Arabiun horse which

he was wont to ride, with lus bridle, saddle, shield,

and silver lance, a magnificent pall or horse-cloth,

and other Turkish arms (arma Turchensia) of

various descriptions. He cansed the horse, airayed

in its splendid furniture, to be led up to the high altar of the church, and the chromeler adds that

the Turkish armour, the shield, and the saddle

were still preserved there, and shown to the people, who came from all parts of the country to behold

them. Alexander reigned from 1107 till 1124;

and this account is written in the reign of his

shorn cloths which appear in the charter of William the Lion to the burgh of Perth, must have

been greatly improved by the superior dexterity

and knowledge of the Flemings; and the constant commercial intercourse which they kept up with

their own little states could not fuil to be beneficial

in imparting the knowledge and improvements of

the continental nations into the remoter country where they had settled."\* A manuscript in the

Cottoman Library, the work of a contemporary

writer, is quoted by Mr. Macpherson for the fact,

that, in the reign of David I., the Frith of Forth

was frequently covered with boats manned by

English, Scottish, and Belgie fishermen, who were

attracted by the great abundance of fish (most pro-

bably herrings) in the neighbourhood of the island

of May. Anderson speaks of the Netherlanders

resorting to Scotland so early as about the year

BOOK III.

as the reign of the same king, and is generally admitted to be, in the greater part, of that anti-Ailred celebrates the attention of David to foreign commerce. He exchanged, he says, the produce of Scotland for the wealth of other kingdoms, and made foreign merchandize abound in his harbours. Among the laws of the burghs attributed to him the following may be quoted as referring to trade with other countries: -- By chap. 10, all goods imported by sea are ordered not to be sold before being landed, except salt and herrings; by chap. 18, foreign merchants are prohibited from buying wool, hides, or other goods, from any but burgesses; and by chap. 48, the lands of all persons trading to foreign countries are exempted from seizmic for any claim whatever during their absence, unless they appeared to have withdrawn on purpose to evade justice. From this regulation it would appear that some of the Scottish merchants already traded themselves to foreign parts. Another of these burgh laws prohibits all persons except hurgesses from buying wool for dyeing, or making into cloth, or for cutting cloth for sale, except the owners of sheep, who might do with their own wool what they The manufacture of woollen cloth had, therefore, been by this time introduced into Scotland. The art had probably been taught to the inhabitants of that country by settlers from England. William of Newbury, writing about twenty years after the death of David, says that the towns and burghs of Scotland were then chiefly occupied by English inhabitants. We know, too, that in the next reign numbers of Flemings left England and took refuge in Scotland. "We can trace the settlement of these industrious citizens," says Mr. Tytler, "during the twelfth and thirteenth centuries, in almost every part of Scotland; in Berwick, the great mart of our foreign commerce; in the various towns along the east coast; in St. Andrews, Perth, Dambarton, Ayr, Peebles, Lanark, Edinburgh; and in the districts of Renfrewshire, Clydesdale, and Annandale. There is ample evidence of their industrious progress in Fife, in Augus, in Aberdeenshire, and as far north as Inverness and Urquhart. It would even appear, from a record of the reign of David II., that the Flemings had pro-

carried from the Scottish monarchs a right to the

protection and exercise of their own laws. It has

been ingeniously conjectured that the story of

Malcolm IV. having dispossessed the ancient in-

habitants of Moray, and of his planting a new

colony in their stead, may have originated in the

settlement of the Flemings in that remote and re-

bellious district.\* The early domestic manufactures

of our country, the woollen fabrics which are men-

tioned by the statutes of David, and the dyed and · See aute, p. 543.

burghs of Scotland, which professes to be us old

ment is not known. Mr. Macpherson considers the passage in the Cottonian Manuscript to be "the very first authentic and positive notice of a fishery, having any claim to consideration as a commercial object, upon the North-British coast." He also doubts if it be not "the earliest notice of Euglish fishermen going so far from their own ports, on a fishing voyage, if they were indeed subjects of England; for in the age of the writer here quoted the Scottish subjects on the south side of the Frith of Forth were called English." The long reign and able and successful government of Henry II. not only enabled the commerce of England to recover from the depression under which it had languished during the whole of the turbulent and imserable reign of his predecessor, but eventually raised it to an extent and importance which it had certainly never attained either since the Conquest or before it, at least since the departure of the Romans. The intercourse, in particular between this country and France, must immediately have been placed upon a new footing, and no doubt greatly augmented, both by the restoration of the old connexion with Normandy, and still more by Henry's acquisition through his marriage of the great Duchy of Aquitaine, which gave the English crown the dominion of all the Freuch coast from Picardy to the Pyrenees. Some

years afterwards the conquest of Ireland, and the

establishment in that island of a numerous English

population, must have also considerably extended

the range, or at least added to the activity, of

of the commerce of London, and also of other

English cities, in this reign. Henry II., in a

charter which is without date, but which was pro-

bably granted soon after he came to the throne,

confirmed to the citizens of London all the privi-

leges which they enjoyed under his grandfather,

In several contemporary writers we find notices

English commerce in that other direction.

CHAP. IV.] with some others in addition, none of which, however, have any particular reference to the commerce of the city. The fullest and most curious account we have of London at this period is that given in the introduction to a Latin Life of Becket by a monk of Canterbury, of Norman descent, named William Fitz-Stephen, or Stephanides, as he calls himself in Latin, which appears to have been written about 1174. He says that no city in the world sent out its wealth and merchandize to so great a distance; but he has not recorded either the description of goods that were thus exported or the countries to which they were sent. Among the articles, however, which were then brought to London by foreign merchants, he enumerates gold, spices, and frankincense from Arabia; precious stones from Egypt; purple cloths from India; palm-oil from Bagdad; furs and ermines from Norway and Russia; arms from Scythia; and wines from France. The citizens he describes as distinguished above all others in England for the elegance of their manners and dress and the maginficence of their tables. It was in this reign, it may be observed, that London first became decidedly, what Fitz-Stephen calls it, the capital of the kingdom of England (regni Anglorum sedes). Winchester, the ancient royal sent of the West Saxons, although it was the place where the early Norman kings kept their treasury, had begun to decline even before the Conquest, and had sustamed such calamities in the civil wars of the time of Stephen that it was never afterwards in a condition to dispute the ascendancy of its rival on the Thames. At this time, according to Fitz-Stephen, and his account is confirmed by Peter of Blois, there were, in the city and suburbs, thirteen large conventual churches and 126 parochial ones. The archdeacon says that the population was only 40,000; but this is not absolutely inconsistent with the statement of Fitz-Stephen, that in the reign of Stephen there issued from the city, of fighting men, no fewer than 60,000 foot and 20,000 horse, since the army assembled in the city, or raised under the orders of its authorities, might very possibly greatly exceed the number of the actual inhabitants. It is most probable, however, that there is an error in the numbers found in Faz-Stephen's text as it has come down to us. He adds, that the dealers in the various sorts of commodities, and the lahourers and artizans of every kind, were to be found every day stationed in their several distinct places throughout the city, and that a market was held every Friday in Smithfield for the sale of horses, cows, hogs, &c. At this time Ludgate, now far within Temple Bar, was the west end of London; the space from thence to Westminster was a tract of fields and gardens: Moorfields was a large lake of water, into which ran several streams turning mills; the rising grounds towards Pentonville and Islington were covered with corn and grass; and a large district of country beyond was a forest, that had probably stood since the creation, in which the citizens hunted wild-boars and other

game. According to Fitz-Stephen, the citizens of London were distinguished from those of other towns by the appellation of harons; and Malmsbury, an author of the same age, also tells us that, from their superior opulence and the greatness of the city, they were considered as ranking with the chief people or nobility of the kingdom. "It is filled," he adds, "with merchandize brought by the merchants of all countries, but chiefly those of Germany; and, in case of scarcity of corn in other parts of England, it is a granary where the article may be bought cheaper than anywhere else." It was in London that the Jews chiefly resided, and many of them were no doubt among its wealthiest citizens. The following are some of the most remarkable particulars that are to be collected from contemporary anthorities respecting other English cities at this period. Exeter, according to Mahnsbury, was a magnificent city, filled with opulent citizens. Henry of Huntingdon states, that in consequence of its being the principal port for the mineral productions of the adjacent country, it was so much resorted to by foreign merchants, that everything that could be desired might be purchased there in Bristol is mentioned by Mahnsbury as having a great trade, not only with Ireland, but also with Norway and other foreign countries. Both Gloucester and Winchester are celebrated for the excellence of their wines made from the grapes of the country. For foreign wines, again, Chester would appear to have been one of the chief ports, if we may trust the testimony of a monk of that city named Lucian, whom Camden quotes. According to this authority, ships repaired to Chester in great numbers, not only from Ireland, but also from Gascony, Spain, and Germany, and supplied the inhabitants with all sorts of commodities; "so that," adds Lucian, "being comforted by the favour of God in all things, we drink wme very plentifully; for those countries have abundance of vineyards." Dunwich, on the coast of Suffolk, now reduced by the encroachments of the sea to an msignificant village, is described by William of Newburgh as a famous sea-port town, stored with various kinds of riches; and in the reign of John this town is stated to have paid twice as much rent to the king as any other upon the neighbouring Norwich is described in general terms by Malinsbury as famous for its commerce and the numbers of its population. Lynn is described by Newburgh as a city distinguished for commerce and abundance, the residence of many wealthy Jews, and resorted to by foreign vessels. Lincoln, Malmsbury speaks of as having become one of the most populous seats of home and foreign trade in England, principally in consequence of a canal of about seven miles in length, made by Henry I., from the Trent to the Witham, which enabled foreign vessels to come up to the city. Grimsby is noted by the Norwegian, or Icelandic writers, as an emporium resorted to by merchants from Norway, Scotland, Orkney, and the Western Islands. York is

are the spiceries, jewels, silks, furs, and other

luxuries enumerated by Fitz-Stephen, of which there could not be any very extensive consump-

tion; some woad for dyeing, and occasionally corn,

which was at other times an article of export. The

exports, on the other hand, appear to have been of

much greater importance and value. Henry of

Huntingdon enumerates as being annually sent to Germany by the Rhine, great cargoes of flesh and

of different kinds of fish (especially herrings and oysters), of milk, and, above all, of what he calls

"most precious wool." He also mentions mines

of copper, iron, tin, and lead as abundant; and it

appears from other authorities that there was a

[Book III.

lay very much out of the way of any trade with the latter country. Wlitby, Hartlepool, and some other towns on the same part of the cast coast, appear to have possessed shipping. Berwick, as already noticed, was the most eminent of the Scottish towns for foreign commerce. It had many ships. Perth, bowever, was at this time, properly speaking, the capital of Scotland; and Alexander Neckham, abbot of Circucester, a Latin poet of this age, says that the whole kingdom was supported by the wealth of that city. Inverleith (now Leith), Striveling (now Stirling), and Aberdeen, are also mentioned in charters as places at which there was some shippmg and trade, and where customs were collected.\* Glasgow was as yet a mere village; it was made a burgh, subject to the bishop, by William the Lion, in 1175; but in the charter there is no mention of a guild, of any mercantile privilege, or of any trade whatever, except the liberty of having a weekly market. Edinburgh, though it was probably made a borgh by David I., was of little note till the unddle of the fifteenth century. In Ircland, Dublm, which Henry H. granted by a charter in 1172 to be inhabited by his men of Bristol, is spoken of by Newburgh as a noble city, which, it is added, somewhat hyperbolically, might be considered as almost the rival of London for its opulence and commerce.

mentioned by Malmsbury as resorted to by vessels both from Germany and Ireland, though surely it

commerce, that deserve to be here mentioned. Herry 1, had so far mitigated the old law or eustom, which made all wrecks the property of the crown, as to have enacted, that if any human being escaped ative out of the ship, it should be no wreck; and his grandson still farther extended the operation of the humane principle thus introduced, by decreemg, that if either man or beast should be found alive in any vessel wrecked upon the coasts of England, Poictiers, Gascony, or the isle of Oleron, the property should be preserved for the owners, if claimed within three months. The other law is the last clause of the statute called the 'Assize of Arms,' published in 1181: it very emphatically commands the Instices in Eyre in their progress through the counties, to enjoin upon all the lieges, as they love themselves and their property, neither to buy nor sell any ship for the purpose of its being carried out of England, and that no person should convey, or cause to be conveyed away any mariner out of England. It has been inferred, from these regulations, that both English ships and English scamen were already held to be superior to those of other commtries; but they can only be considered as showing that the naval force of the kingdom had now come to be looked upon as an important arm of its strength, and was the object of a watchful and jealous superintendence. The only articles that are mentioned as imported

into England from foreign countries in this period,

\* See these and other facts collected, and the authorities cited, by the laborious and accurate Macpherson, Ann. of Com i. 330-333.

large exportation both of lead and tin. The roofs of the principal churches, palaces and castles, in all parts of Europe, are said to have been covered with English lead; and the exports of the from mines belonging to the crown in Cornwall and Devonshire furnished at this time and for ages afterwards a considerable portion of the royal revenue. It is probable also that hides and skins, and woollen cloths were exported, as well as wool. All this could not be paid for by the few articles of luxury above enumerated; and it may, therefore, be concluded that a large part of the annual returns derived by the country at this time from its foreign trade was received in the form of money or bullion. This supposition is confirmed by the account of Huntingdon, who expressly informs us that the There are two laws of Henry II, relating to Germans paid for the wool and provisions they bought in silver; on which account, he adds, that metal is even more plentiful in England than in Germany, and all the money of England is made of pure silver. The balance of trade, then, was what is commonly called in favour of England, unreasonably enough, as if nothing were wealth but gold and silver. The country at this time did not really become richer by exchanging its produce for money, than it would have done by taking foreign produce or manufactures in exchange for it. Nor, even if we should hold money to be the only true wealth, could it have accumulated in the country with more rapidity or to a greater amount under the one system than under the other; for a country in a given social condition can only retain a certain quantity of money in circulation within it, and that quantity it always will obtain, if it is able to obtain anything else of equivalent value. Money is neeessary, and profitable, to a certain extent, just as shoes or hats are; but beyond that extent, neither they nor it are either profitable or necessary--- that is to say, something else for which the article could be exchanged would be more useful. The money anciently obtained by England through its foreign trade did not enrich the country, or even remain in it; so much of it as was not required for the purposes of circulation was as sure to find its way abroad again, as the stone thrown up into the air is to return to the ground. If the commerce of England had not struck far deeper root, and grown to far greater magnitude and strength at the time of the death of Henry II.

than at that of Henry I., somewhat more than half a century before, the reign of Richard would have been, in proportion to its length, nearly as rumous to it as was the disorderly and distracted reign of Stephen. All the activity and resources of the country were now turned from trade and industry to the wasteful work of war, which was carried on, indeed, in a foreign and distant land, and therefore did not produce the confusion and desolation within the kingdom that would have resulted from a civil contest; but, on the other hand, was, doubtless, on that account attended with a much larger expenditure both of money and of human life. Yet even from Richard's warlike preparations, and the pecaniary burdens which his expedition in other ways brought upon his people, we may collect a few notices of interest in regard to the progress of the commerce, navigation, and wealth of the coun-The fleet which carried out his troops to the

Holy Land was probably, as already observed, by far the most magnificent that had ever as yet left the English shores, although some of those of former times may have consisted of a greater number of vessels. But the barks, amounting, it is said, to some thousands, m which the Conqueror brought over his army from Normandy, and the four hundred vessels in which Henry H. embarked his forces for the conquest of Ircland, not to speak of the more ancient navies of Edgar and Ethebred in the Saxon times, must have been craft of the smallest size, or what would now be merely called Besides a crowd of vessels of this description—the number of which is not given – Richard's fleet, when it assembled in the harbour of Messina, is said to have consisted of thriteen large vessels, called busses or dromons, fifty-three armed galleys, and a limided carricks, or transports.\* All these vessels were constructed both to row and to sail, the dromons having three sails, probably each on a separate mast, and both they and the galleys having, as it would appear, in general two tiers or banks of oars. " Modern vessels," says Vinisauf, "have greatly fallen off from the magnificence of ancient times, when the galleys carried three, four, five, and even six tiers of oars, whereas now they rarely exceed two tiers. The galleys, anciently ealled liburna, are long, slender, and low, with a beam of wood fortified with iron, commonly called a spur, projecting from the head, for piercing the sides of

country, and to raise both the military skill and the seamanship of English sailors. The kingdom had not yet recovered from the exhausting exertions it had made in fitting out this great

fleet and army, when it was called upon to raise what

was in those days an immense sum for the king's

ransom. The agreement was, that before Richard's liberation, his gauler, the emperor, should be paid 100,000 marks of silver, besides 50,000 more afterwards-an amount of money their deemed so great, that a contemporary foreign chronicler, Otto de St. Blas, declines mentioning it, as he could not, he says, expect to be believed - It does not clearly appear how much of the 150,000 marks was paid in all; but it is stated that 70,000 marks of silver, equal in weight to nearly 100,000t. of om money, were remitted to Germany before the king was set free. The grievous exactions by which this money was raised have been alluded to in a former ehapter.\* It was not all obtained till three successive collections had been made Four years before this, it may be noted, in the beginning of Richard's reign, the much poorer kingdom of Scotland had repurchased its independence at the eost of 10,000 marks. A few laws for the regulation of trade are recorded to have been enacted by Richard after his return home. The same year in which he returned, a prohibition was issued against the exportation of corn, "that England," as it was expressed, "might not suffer from the want of its own abundance." The violation of this law is stated to have been punished in one instance with incredess severity: some vessels having been seized in the port of 5t. Valery, loaded with English corn for the king of France, Richard burned both the vessels and the town (which belonged to that knig), hanged the scamen, and also put to death some monks who had been concerned in the illegal transaction. then, after all this wild devastation, divided the corn among the poor. In 1197 also, a law was passed for establishing a uniformity of weights and measures, and for regulating the dyeing and sale of woollen cloths. The business of dyeing, except in black, it was enacted, should only be carried on in cities and boroughs, in which alone also any dyeing stuffs, except black, were allowed to be sold. It appears that the duties upon woad imported into London in 1195 and 1196, amounted to 96*l*. 6*s.* 8*d*. "If London alone," observes Macpherson, " imported woad to an extent that could bear such a pay-

ment (and it will afterwards appear that but a small part of the whole woad imported arrived in Lon-

don), the woollen mainfacture, to which it was ap-

parently mostly confined, must have been somewhat

but few fine woollen goods were made in England,

and that the Flemings, who were famous at this

time for their superior skill in the woollen mann-

facture, as is evident from the testimony of several of the English historians of this age, continued for a series of ages to supply most of the western

But there is reason to believe, that

considerable.

the enemy. There are also small galleys called galeons, which, being shorter and lighter, steer

better, and are fitter for throwing fire."† The fire

here alluded to is the famous Greek fire, the great

instrument of destruction at this time, both in encounters at sea, and in assaults upon fortified places

on shore. This expedition of Richard was the

first in which an English fleet had accomplished so long and various a navigation; and, under the

conduct of so energetic a commander, it could not

fail to give an impulse to the naval progress of the

called French cloths, either as reckoning Flanders a part of France (as, indeed, in feudal language it was), or because they received them from the ports of the south coast of that country." Much of the

wool used in Flauders, however, appears to have been obtained from England. In the History, indeed, which bears the name of Matthew of Westminster, it is said that all the nations of the world

used at this time to be kept warm by the wool of England, which was made into cloth by the Flemish manufacturers. In the patent of incorporation of the guild of weavers in London by Henry 11., granted in the thirty-first year of his reign, there is a prohibition against maxing Spanish with English wool in the making of cloth, from which it may be inferred that the wool of England was in this age

of superior quality to that obtained from Spain. From the commencement of his reign, John appears to have affected to favour the interests of the part of the community connected with trade, now daily rising into more importance, and to have courted their support against the power of the nobility and the clergy. Immediately after his accession, he granted three charters to the citizens of London; the first generally confirming all their ancient rights and privileges; the second empowering them to remove all kidells, or wears, for catching fish, from the rivers Thames and Mcdway, the navigation of which had been much impeded by these crections, set up by the keeper of the Tower and others; and the third confirming to them the fee-farm of the sheriffwicks of London and Middlesex at the ancient rent, and also giving to them the election of the sheriffs. For these charters he received 3000/. He also, probably at the same time, addressed letters to the most important com-

mercial towns throughout the kingdom, promising that foreign merchants of every country should have safe conduct for themselves and their merchandize in coming into and going out of England, agreeably to the due right, and usual customs, and should meet with the same treatment in England that the English merchants met with in their countries.\* The places to which these letters were sent were the towns of London, Winchester, Southampton, Lynn, the Cinque Ports, and the counties of Sussex, Kent, Norfolk, Suffolk, Dorset, Somerset, Hants, Hertford, Essex, Devon, and Cornwall; " whence it appears," observes Macpherson, "that the south coast, and the east coast only as far as Norfolk, were esteemed the whole, or at least the chief, of the commercial part of the country." is certain, however, that several towns beyond these limits had already risen to considerable commercial importance. In a list of towns which in the year 1205 paid the tax called the quinzième, or fifteenth, which appears to have been a speeies of excise or tallage exacted from merchants, we find enumerated the following places in the northern part of the kingdom:- Newcastle in Maitland's Hist. of London, i. 73-75.—Hakluyt's Voyages, i. 129.

royal favour to the city, and the 200 marks to have been paid merely as an acknowledgment. Neweastle is the only other town the amount paid by which is mentioned; it is set down as paying 158l., and must therefore have already grown to considerable consequence, although only founded, as we have seen, little more than a century before this time. Hull also appears for the first time as a place of trade only in the close of the last reign. That several of the Scotch burghs were at this period possessed of very considerable opulcaee is testified by their having, in 1209, contributed 6000 marks of the 15,000 which William the Lion bound himself to pay to John by the treaty of Berwick.! In this age Mr. Macpherson calculates that 6000 marks would have purchased in Scotland

Yorkshire; and Lincoln, Barton, Ymmingham,

other towns in the list are Lynn, Yarmouth, and Norwich, in Norfolk; Dunwich, Orford,

and Ipswich, in Suffolk; Colchester in Essex;

Sandwich and Dover in Kent; Rye, Winchelsea,

Pevensey, Scaford, and Shoreham, in Sussex; Southampton in Hampshire; Exmouth and Dart-

mouth in Devonshire; Esse (now Saltash), and

Fowey, in Cornwall; and London. It will be

observed, however, that these are all coast towns,

or places having a river communication with the

sea; and it surely cannot be supposed that there

were not at this time some trading towns in the interior of the country. Either the quinzième was

not a duty payable, as has been asserted, by "all persons who made a business of buying and selling,

however trifling their dealings might be," or this

is not a complete list of the places from which it was collected. Besides, not a single place on the

western coast of the kingdom is mentioned, not

even Bristol or Chester. We should be disposed to conjecture that the quinzième was only an

impost upon forcign commerce, and even perhaps only upon some particular branch or branches of

more intelligible the proportions of the whole amount collected which are set down as received

from particular towns. It appears that the whole

tax at this time yielded about 50001, per aunum;

while of this total Lynn paid 6511., Southampton

712*l.*, Boston 780*l.*, and London only 836*l*. It cannot for a moment be beheved that in their

general mercantile wealth London and Boston stood

in this relation to each other. To add to the perplexity, we find that three years after this time the

merchants of London purchased from the king an entire exemption from paying the quinzième for

the small sum of 200 marks, that is to say, for less

than a sixth part of the amount of the tax for one

the exemption to have been accorded as Anark of

money-lending.

CHAP. IV.]

wheat. Among other countries, a trade with Norway is known to have been carried on by the Scotch in the beginning of the thirteenth century. Among the articles which are mentioned in the monastic chartularies of the country as paying tithe at this time are wood, corn, butter, cheese, cattle, fish, and flax. From the occurrence of the last article it may be inferred that some linen was already made in Scotland.

It was in the reign of John, as already related,

that their first great naval victory was gained by the English, at the battle of Damme, or of the Sluys, as it is sometimes called, fought in 1213.\* As yet, however, the country possessed nothing that could properly be called a navy. The royal navy usually consisted merely of merchant ships collected from all the ports of the kingdom, each of which, as we have seen, was bound, when required by the king, to furnish him with a certain number. pressing emergencies, indeed, the king seized upon the whole mercantile shipping of the knigdom, or as much of it as he required; "so that in those times," as the historian of commerce observes, "the owners could never call their vessels their own.  $\Lambda$  striking illustration of the king's claim of right to the services of all merchant ships appears in a letter, written by Edward H. to the king of Norway, upon the detention of three English vessels,

which he concludes by saying, that he cannot quietly put up with the vessels belonging to his

kingdom, which ought at all times to be ready for

his service, being detained in foreign countries."+

John appears to have possessed merely a few

galleys of his own. In this reign we find the earliest mention of what may be called *letters of credit*, the first form, it may be supposed, of bills of exchange, the introduction and general employment of which ver soon followed. In a document printed in the Fordera, John, under date of 25th August, 1199, at Ronen, engages to repay in four instalments, in the course of two years, a sum of 2125 marks, which had been advanced by a company of merchants of Placentia to the bishops of Anjou and Bangor, on the faith of the letters of King Richard. Afterwards John himself repeatedly raised money by such letters, addressed to all merchants, whereby he bound himself to repay the sums advanced to his agents to the amount named, at such time as should be agreed upon, to any person presenting his letter, together with the acknowledgment of his agents for the sum received by them. Mr. Macpherson is of opinion that, as there is no mention of interest in any of those letters, it must have been discounted when the money was advanced. It is remarkable that although at this ports in Yorkshire paid 98/.; those in Lincoln, 47/.; those in Norfolk and Suffolk, 53/.; those in Essex, 44; those in Kent and Sussex (exclusive of Dover), 103/.; Southampton, 72/.; and other places, not named, 214l. The woad, it may be presumed, was almost wholly used in dvemg cloths; but much cloth would also be both exported and worn at home without being dyed. The freedom of commerce was sought to be secured by one of the clauses of the Great Charter (the forty-first), which declared that all merchants should have safety and security in going out of, and coming into England, and also in staying and travelling in the kingdom, whether by land or by water, without any grievous impositions, and according to the old and appright customs, except in time of war, when, if any merchants belonging to the hostile country should be found in the land, they should, at the commencement of the war, be attached, without injury of their persons or property, until it should be known how the English merchants who happened to be in the hostile country were treated there: if they were uninjured,

the foreign merchants should be equally safe in

England. This was as reasonable and even liberal

a regulation as could have been desired on the

subject. By other clauses, it was declared, that the debts of a miner should bear no interest during

his minority, even if they should be owing to a Jew; that Loudon and other cities and towns

should enjoy their ancient privileges; that no fine

should be imposed upon a merchant to the de-

struction of his merchandize; and that there should be a uniformity of weights and measures

The interest which they actually received, accord-

profits, however, which they thus made the crown

largely shared, by the power of arbitrarily fining

them, which it constantly exercised. William of

Newburgh frankly speaks of them as well known to be the royal usnrers; in other words, their usnry

was a mode of suction, by which an additional portion of the property of the subject was drawn

into the royal treasury; and this sufficiently accounts for the manner in which they were tolerated

and protected in the monopoly of the trade of

this reign have come down to us. Licenses are

recorded to have been granted to the merchants of

various foreign countries to bring their goods to

England, on due payment of the quanzième, which

would thus appear to have been a customs duty,

payable probably both on the import and export of commodities. The Flemings were the chief

foreign traders that resorted to the country, and

the duties paid on woad in:ported from foreign

countries amounted to nearly 600*l*.; of which the

throughout the kingdom.

The only coined money of this period, as far as is ecrainly known, was the silver penny, which, as at present, was the twelfth part of a shilling;

VOL. I.

time, in England, no Christian was permitted by

law to take interest, or usury as it was called, even at the lowest rate, upon money lent, the Jews in

this respect lay under no restriction whatever.

[Book III. bable, perhaps, that both halfpence and farthings the shilling being also, as it has ever since been,

the twentieth part of a pound. The pound, however, was still a full pound of silver, according to the ancient Saxon or German standard of eleven onnees and a quarter troy, or 5400 grams to the pound. \* The same amount of silver is now comed, as explained in the former Book, into 21 16s 3d, sterling; and that, therefore, was the amount of money of the present denominations in the early Norman pound. The shilling, consequently, being the twentieth part of this, was equivalent to 2s,  $9\frac{3}{4}d$ , of our present money; and the penny, being the twelfth part of the shilling, or the 240th part of the pound, was still of the same value as in the Saxon times, and contained an amount of silver equal to a trifle more than what might be purchased by  $2 \frac{1}{4} d$ , of our money. both the pound and the shilling were only money of account; there were no coms of these denominations. It is doubtful, also, if there were any coms of inferior value to the silver penny; no specimens of any such have been discovered. Both halfpence and faithings, however, are mentioned in the writings of the time; and a comage of round halfpennies by Henry I, is expressly mentioned by Florence of Worcester, Simeon of Durham, and Hoveden. It has been supposed that the people before, and also perhaps after this, used to make halfpence and farthings for themselves, by breaking the penny into balves and quarters, which, it has been said, they were more easily enabled to do from the coin having on one side of it a cross very deeply indented. Leake, bowever, has remarked that "the story of the cross being made double, or

so deeply impressed for the conveniency of breaking the penny into halves and quarters, is dis-

proved by the coms now extant, whereon the crosses

generally terminate at the inner circle, and, instead

of being impressed, are embossed, which prevents

From the capital of a pillar at St. Georges de Bocherville, Normandy CORERAT WORK.

were actually coined, though none have come down to us.

Other denominations of money, however, than the above are also mentioned. In the early part of the period, and especially in the reign of the Conqueror, the Saxon mode of reckoning appears to have remained in general use. "In his laws," says Ruding, "the fines are regulated by pounds, oras, marks, slullings, and pence. The slullings are sometimes expressly stated to be English shiflings of four permies each. But in Domesday Book various other coms or denominations of money are to be found, such as the mite, farthing, halfpenny, mark of gold and silver, onnce of gold, and marsum. There seems also to have been current a com of the value of half a farthing, which was probably the same as the mite above mentioned " \* The values of the Saxon coms here enumerated have been stated in the former Book. The mark, it may be added, long remained a common denomination, and was at all times reckoned two-thirds of the pound. Some foreign coms, especially Byzantines, which were of gold, are also supposed to have been still in use, as in the Saxon times.

The coms of the earlier Norman kings are of great rarity. Those issued by the Conqueror

SHAFE PANEO WHE AND I TOMPPED

"were made," Ruding thinks, "to resemble those of Harold in weight and fineness, and some of them in type," in conformity with the policy upon which William at first acted, of affecting to be the regular successor of the Saxon kings. The coms of the two Williams can scarcely be distinguished, the

SILVER PENNY OF WILLIAM H. From specimen in Brit Mus.

numerals being for the most part absent. The same is the case with those of the two Henrys. Royal mints were still established in all the principal

 + See ante, pp. 271-273.

towns; and the name of the place where it was struck continues to be commonly found on the In the lawless times of Stephen all the bishops and greater barons are said to have very generally coined and issued money of their own; every eastle had its mint; and the money thus thrown into circulation is alleged to have been so debased that, in ten shillings, not the value of one in silver was to be found. Stephen himself is

also charged with having, in his necessities, resorted to the expedient of dimmishing the weight of the When Henry II. came to the throne, however, he put down all this base money; and

The econs of this reign are very numerous, but in most cases bully

none of the baronial coins of Stephen's reign are now known to exist, with the exception of a few begring the names of his son Eustace, and of his brother, the Bishop of Winchester, which were probably issued by the royal beense.

Herry I, on his accession, abolished the tax of moneyage, which had been introduced either by the Conqueror or his son Rulus; and he afterwards effected a reform of the comage, which had been greatly corrupted by the frauds of the moneyers. Henry II. also called in all the old coins in circulation in the year 1180. No coms are known to be in existence either of Richard I. or John, as kings of England, although there are some of the former as Earl of Poictou and as Duke of Aquitame, and of the latter as lord of Ircland.

An English penny of Richard's is given in various collections of plates of coins, but is admitted to be a forgery. Mr. Ruding, speaking of it and another of John, says-" These two pennies are now well known to be the fabrication of a late dealer in coms, who pretended to have discovered them amongst some which were found upon Bramham Moor in Yorkshire. He sold one of them for thirty guineas; the other remained in his possession, and was disposed of with the rest of his collection, after his death." The man's name was White. \*

The earliest Scotch coins that have been discovered

\* See Ruding's Ann. of the Comage, ii. 35 and 50, and v. 98 and

are some of Alexander L, who began his reign in 1107. The Scotch money appears to have, at this period, entirely corresponded with the English;

INSU SHARR PENNY OF JOHN. From a specimen in Brit. Mus.

and, indeed, the circulation of Scotland probably consisted in great part of English coms

In regard to the real or efficient value of the money of those days, as compared with that of our present money, it is, as we have before had oceasion to remark, impossible to make any statement which shall be universally applicable. The question of the value of money at any given period is merely a question of the price of a particular commodity--namely, the metal of which the money is made. But we have no means of estimating with precision the price of any commodity whatever, in the scientific sense of that term. All that we can do is to state it relatively to the price of some other commodity. This is all that we really do when we state the money-price of anything. That is only a statement of the relation between the price of the article in question and the price of the other article called money. It is no expression either of the general price of citter, or of the relation of the price of either to that of any other article whatever. Commodities of all kinds, from causes sufficiently obvious, are constantly changing their relative positions in regard to price; and, therefore, the relation between the prices of any two of them can be no permanent index of the relation between the prices of any two others. In other words, the money-price of any one article at a particular time will give us no certain information as to the money-price either of all other articles, or of any other article.

Although no precise estimate, however, can be arrived at of the general value of money in former times as compared with its present value, many important conclusions in regard to the state of society, and the command possessed by the several classes of the population over the necessuries and comforts of life, may be drawn from the notices that have been preserved of the money-prices of commodities and labour at different periods. But these inferences will be more fitly introduced in our chapter on the Condition of the People. The only point which properly belongs to our present subject is that of the relative values of gold and silver in the period we have been reviewing. The relation between the values of these two metals has fluctuated considerably in different ages. ancient Rome, about the commencement of our era, it seems to have been usually as one to ten. About the fourth century, however, silver had become so much more plentiful, or gold so much scarcer, that fourteen pounds eight ounces of the

former were exchanged for a pound of the latter. In Eugland, in the Saxon times, the legal proportion appears to have been as one to twelve. After the Conquest, however, gold became cheaper; and, about the middle of the twelfth century, one pound of it was exchanged for nine pounds of silver. In the beginning of the thirteenth century we find the value of silver rated to that of gold in the proportion of ten to one. At present the proportion is about as foniteen to one.

Our notice of the useful arts within the six centuries which the Saxon period comprises will, in some degree, render it unnecessary to enter into a lengthened account of their state from the Conquest to the death of King John. A century and a half is an interval sufficiently long to produce and consolidate political changes; but the arts of life, under ordinary circumstances, move with a slower step, and their progress is thwarted by individual habits, and prejudices, and old customs. The power which effects, with little difficulty, alterations of a constitutional nature cannot be brought to act with the same force upon the com-

mon course of life, and time is required to work silently any material changes in its character. The devastations of the Conqueror at the commencement of the present period, the wretchedness of the people during the nineteen turbulent years of Stephen's reign, and the lawlessness which distinguished the unprincipled reign of King John at its close, together with many intermediate causes arising from the unsettled state of society, were sufficient to retard improvement either of handierafts or agriculture. There were, however, some other causes of a beneficial kind which served to counteract the evils of the times. The instability of Stephen's position led to concessions which were subsequently favourable to improvement. Stephen's reign had been preceded by five-and-thrity years of comparative tranquillity, and it was fortunately followed by a reign of the same length, presenting the same contrast to the intermediate period.

As in the Anglo-Saxon times, land was still held during the present period in large masses, the great landowners residing in the undst of their possessions, and reserving to themselves a portion of their

REARING AND GUEANING ROYAL MS 2 B AM.

demesne, which they cultivated by their own hinds. The following are the descriptions of rural laboriers mentioned in Domesday Book, from which we may infer the ordinary divisions of rural employments soon after the Conquest: ploughmen, shepherds, neat-herds, cowherds, goatherds, swineherds, and keepers of bees \*

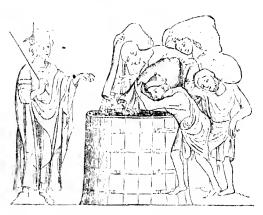

The population to be fed from the produce of the soil was probably under two milhous, and an unfavourable season always occasioned severe distress; while in our own time the soil of Great Britain is capable, in ordinary seasons, of sustaining a population of sixteen milhous. Still the importance of agriculture was highly estimated. The Conqueror seems to have been fully aware of the capabilities of the soil, and did not neglect the means of deriving the utmost advantage from its resources. The Saxon chronicler complains of

the rapacity which he exercised towards his tenants:—"The king (he says) let his land at as high a rate as he possibly could; then came some other person, and bade more than the former one gave; and the king let it to the man that bade him nore. Then came the third, and bade him yet more; and the king let it to hand to the man that bade him most of all; and he recked not how very sinfully the stewards got it of wretched men."\*

The use of manures was carried to a greater extent than before, as not only was the old practice of marling the land continued, but the more expensive application of chalk was not uncommon.† Ingalphus notices the spirit with which one of the great landowners, Richard de Rulas, lord of Brunne and Deeping, and chamberlain of the Conqueror, carried on his agricultural operations.

THRISHING. ROYAL MS 2 B VII.

CORN-SACKS AND SCORE-BASKET. Royal MS. 2 B. VII.

"He was," says Ingulphus, "much addicted to agriculture, and delighted in breeding horses and cattle. Besides enclosing and draining a great extent of country, he embanked the river Welland (which used every year to overflow the neighbouring fields) in a most substantial manner, building many houses upon the bank, which increased so much that, in a little time, they formed a large town called Deeping, from its low situation. Here he planted orchards, cultivated commons, and converted deep lands and impassable quagmires into fertile fields, rich meadows, and pastures."

To the monks belong the praise of effecting the greatest improvements in the agriculture of this period. They were, many of them, acquainted with the best modes practised in Normandy, and their intelligence enabled them to apply their knowledge with skill in the cultivation of their own ample estates. Land was the cheapest means of obtaining the favours of the church, and it was rich in this description of property; but it

was the skill and labour of the monks which gave it value, which drained the marshes, and cleared the woodland. They engaged actively in the labours of husbandry; and even Becket, while he filled the see of Cantenbury, was accustomed, during harvest, to go into the fields with the monks of the monasteries where he happened to reside, and to join them in reaping their corn or in making their hav.\*

Further to illustrate the part which the clergy took in husbandry, the twenty-sixth canon of the third Council of Lateran, held a.D. 1179, may be quoted. This canon decreed "that all presbyters, clerks, monks, converts, pilgrims, and peasants, when they were engaged in the labours of husbandry, together with the eattle in their ploughs, and the seed which they carried into the field, should enjoy perfect security; and that all who molested or interrupted them, if they did not desist when they had been admonished, should be excommunicated." †

\* Chron. Gervas, col. 1400. [† Idem. col. 1456.

period, proves that, in spite of the insecurity arising from various causes, the spirit of agricultural improvement existed in considerable vigour, and that

598

it only waited for tranquillity and the stimulus of commerce to put forth greater powers. ture does not seem to have been in so advanced a state in Scotland; for we find that, in 1214, a law made respecting the cultivation of the land directed that those who did not possess a sufficient uninber of oxen should delve as much with hand and foot as would produce enough of corn to support themselves and their families. He would seem, therefore, that at this time a considerable part of the country was only cultivated by the method of spade linsbandry. At the same time a law was passed requiring farmers carefully to destroy a weed called "guilde." In Ireland, somewhat cather, agriculture was probably not much further advanced than amongst the ancient Britons. The food of the people was flesh, fish, and milk; and it is even said that neither bread nor cheese formed any part of their diet.\* It is impossible, at this distance of time, to

obtain any certain knowledge of the processes of

agriculture in England at this period. In most parts of the country they ploughed their lands

twice in summer and once in winter, to prepare

them for wheat; but in Wales they were ploughed

only once a-year, in March or April, in order to be sown with oats, † Summer fallowing and careful ploughing were confined to England, and the produce would be large in proportion to the care bestowed. The description of stock upon a farm would be regulated by the state of the land. If there were much wood-land many hogs would be kept; while sheep would be more profitable on the uplands and wolds. Goats were kept in parts of the country where they are now seldom seen. The authority for these inferences rests upon a single statement in Domesday Book, in which the stock upon a farm is eminicrated. The land was in Hertfordshire, and was held by Hunfrid, who, at appears, possessed 68 head of cattle (animalis), 350 sheep, 150 hogs, 59 goats, and 1 mare. number of sheep is larger than could have been expected, being greater that that of hogs. † Horses, it will be recollected, were not commonly employed in field labour. Hunfield had as much household stuff (pannos et yasa) as was worth

Licenses to export corn, as has already been mentioned, were not unfrequently granted during this period; and though there were frequent famines, they seem to have been occasioned rather by untoward seasons and warlike devastations than by defective husbandry. This part of the sub-

twenty shillings.§

rienced, may be illustrated by a reference to some of the notices in the Saxon Chromele, in which years of scarcity are carefully recorded. In 1070, form years after the Conquest, and

before the Conqueror had firmly established his power, there was a great famine. In 1082, 1086, and 1087, there were also famines; but these were owing either to one or other of the causes before alluded to. The year 1086, the Chromeler remarks, "was a very heavy season, and a swinkful and sorrowful year in England in marrain of cattle; and corn and fruits were at a stand, and so much untowardness in the weather as a man may not easily think." The following year "was a very beavy and pestilential year in this land;" and the cause is attributed " to the badness of the weather " Then came, says the writer, "so great a famme over all England, that many pien died a mis i dde death through hunger." The year 1089 "was a very late year in corn, and in every kind of fruits, so that many men reaped then corn about Martinuas and yet later." In 1095 the weather was "very unseasonable; in consequence of which, throughout all this land were all the truits of the earth reduced to a moderate crop." The year 1096 "was a very heavy-timed year through all England; both through the manifold tributes, and also through the very heavy-tuned hunger, that sorely oppressed this earth." The succeeding year was "mall things a very heavy-timed year, and beyond measure laborious from badness of weather, both when men attempted to till the kind, and afterwards to gather the fruit of their tilth "Agam, 1098 "was a very troublesome year, through manufold impositions; and from the abundant rame that ceased not all the year, nearly all the takk in the marsh-lands penshed." Five years afterwards (A.D. 1103) was "a very calamitous year." There was a marram among the cattle, and a deficiency of the crops of every kind; but the latter mustortime seems to have been occasioned by a violent storm of wind on St. Lawrence's day, which "did so much barm to all fruits as no man remembered that ever any did before " In 1105 the produce of the soil was also injured by the weather. In 1110 the weather was again unfavourable, "by which the fruits of the earth were very much marred, and the produce of the trees over all this land almost entirely perished." In 1111 "was the winter very long, and the season heavy and severe; and through that were the frints of the earth sorely marred, and there was the greatest murram of cattle that any man could remember." The next year was fortunately "a very good year,

and very fruitful in wood and in field." It was, how-

ever, accompanied by a severe mortality amongst

men. In 1116 occurred a "very heavy-timed

winter, long and strong for cattle, and for all things," The chronicler adds, that "this was a very yex-

atious and destructive year with respect to the fruits of the earth, through the immoderate rains that fell soon after the beginning of August, ha-

Giraldus Cambrensis. Giradus Cambrenss, e. vin. p. 887 1 At Kempsfold, Gloncestershire, 120 weys of cheese were paid as rent for a sheep-walk — Bandwen's Domesday, p. 60. § Translation of Domesday; Hertfoldshire, p. 51. By Rev. W.

rassing and perplexing men till Candlemas day." It was also noted for a deficiency of the woods in mast, to such an extent "that there was never Luown such in this land or in Wales "\* The next ven was "a very blighted year in corn, through the rams, that scarcely ceased for nearly all the ven ". In 1124 "the scasons were very unfavourable in England for corn and all frints." A tamme ensued in the following year. In 1131 was so great a murram of cattle as never was betere in the memory of man over all England. That was in neat-cattle and swme; so that in a town where there were ten ploughs going or twelve, there was not one left; and the man that had two to three hundred swine had not one left. Afterwards perished the hen-fowls; then shortened the fle h-meat and the cheese." In 1137 (in Stephen's in) the writer of the Chronicle observes,— "then was corn dear, and flesh, and cheese, and butter—The earth bare no corn,"—in consequence of the pervading rapine.

It ceems impossible to read these notices without entertaining the conviction that the vicissitinles of the seasons were greater in those days than in our own. Years of plenty and scarcity till ocem, and with something like regularity, but there is no comparison in the averages of the two periods. An initavourable season tries severely the present highly-improved system of agricultime, but it is easy to see that when the means of stall-feeding were exceedingly limited, the backwardness of vegetation would be fatal to numbers of cattle which had been supported with difficulty throughout a mutracted winter.

ft appears from Dome-day Book, which was completed twenty years after the Conquest, that there was generally "pasture for the cattle of the village" on land where all enjoyed rights of common. The owners of woodland were accustorned to let at a fixed sum the right of turning hogs into the woods. The charge for pannage was often defrayed by taking one hog in ten; this system also prevailed in Scotland. But money was also paid. The value of a wood was ascertained by the number of logs it would support;† and a wood yielding neither acorns nor beech-mast was comparatively of httle value. We find, however, that there were in some parts of the country young plantations; a fact which seems a little inconsistent with this notion. The oak is mentioned in Domesday Book only once; a grove of ash-trees occurs in one county, and many osieries existed.

"Wood for the hedges" is often mentioned in the survey of the southern counties. Gardens, orchards, and vineyards are mentioned

in the Conqueror's survey; and if the unprovements that took place in agriculture were in a

great measure owing to the skill of the monks, still more was the kindred art of gardening in-

debted to them. The objects of culture to which the linsbandman directs his care are few in number, but there is a much greater diversity in those which claim the attention of the horticulturist. The introduction of a foreign clergy at the Conquest could not fail to be immediately followed by the transplanting of the arts with which they were acquamted; and gardening was one of those which the soil and climate of Normandy Vineyards are menhad alike encomaged. tioned in thirty-eight different places in the Sorvev \* The vme had been cultivated in the time of Bede, and is noticed in the laws of Alfred, but probably its culture was but little attended to. In several parts of Middlesex vinevards are mentioned in the Survey as being "newly planted" The vale of Gloucester is represented as being rich in vineyards and frint-trees. William of Malmsbury describes it in glowing terms :- "This vale," he says, "as planted thicker with vineyards than arry other province in England; and they produce grapes in the greatest abundance and of the sweetest taste. The wine that is made in these vineyards hath no disagreeable tartness in the mouth, and is cery little inferior in flavem to the wines of France. It was not, however, until a subsequent period that additions were made to the number of cubnary vegetables, or that the number and quality of fruits underwent much change; but the work of improvement had commenced. At Fulham, now celebrated for the number and productiveness of its marketgardens, there were in the days of the Conqueror "eight cottagers with their gardens;" and it is stated, that in the village where the church of St. Peter (Westminster Abbey) is situated, there were forty-one cottagers who paid forty shillings for their gardens. In addition to the food furnished by the field and the garden, a considerable supply would be obtained from the woods and forests after the forest-laws had become less rigorous. Parks of "beasts of the

wood" were kept by persons of distinction. The " Hane" belonging to minor-houses were enclosed places, hedged or paled round, into which beasts were driven for catching. † A warren of harcs occurs in the Survey of Lucolnshire. By a letter of grace respecting the forests, in 1215, proprietors of land were permitted to form rabbit-warrens on their own land. The coasts, rivers, and meres were also productive of food. In Kent, Sussex, Norfolk, and Suffolk, herring-fisheries are noticed as existing at the period of the Survey. Sandwich yielded annually 40,000 herrings to the monks of Christ Church, Canterbury; and in Cheshire and

FISHING WITH A SEINE NET. Royal MS 2 B. vii.

Devonshire there were salmon-fisheries. In the former county one fishery paid 1000 salmon annually as rent. Stews or fish-ponds are also frequently mentioned. One at Tudennorde (Tudworth), Yorkshue, yielded 20,000 cels annually. The rent of marsh or fen-land was generally paid in cels.

Another source of natural riches which the industry of the age rendered productive, existed, as already mentioned, in mines and quarries. In Gloucestershire, mines of iron were worked;\* and in the king's demesne, in Derbyshire, the mines of lead supplied ore which was smelted and rolled into sheets, and used for roofing the churches and other purposes. The progress of cultivation had not • Gualdus Cambiensis, lib. i. c. 5.

yet rendered wood the dearest description of fuel, and though coal was consumed to a small extent, yet wood and turf continued to be used for fuel in this as it had been in the preceding period. Stone-quarries are but seldom mentioned in the Survey, and the stone used in many of the ecclesiastical edifices was brought from Normandy. Salt was not obtained in a fossil state until the seventeenth century, before which time it was procured by evaporation in salt-pans on the coast, and from the salt-springs in the interior parts of the country. The management of these salt-pans was an important branch of industry.

But few changes in the common handierafts took place within the century and a half subsequent to the Conquest. The aris of the miller and baker

Conn Hard-Mart. Royal MS 2 B vit.

were necessarily in constant exercise. No description of building is so frequently mentioned in Doinesday Book as water-inils. They were in every case the property of the lord of the manor, and his tenants were not permitted to grind at any other mill; a restriction which has not been abolished in some cases even at the present day. Hand-mills had not, however, gone out of use. The lord of the manor monopolised also the privilege of baking his tenants' bread at the common fourne; but the necessity of the case

put 'an end to this restriction at an early period. Water-mills were known on the continent at the end of the sixth century: they existed in England before the Conquest, and were applied to other purposes besides that of grinding corn. The cornills are described by Strutt as square weather-boarded houses, sometimes without a covering at the top, the water-wheel being at one end. The machinery was simple enough, as the process of separating the bran from the meal was not performed by the machinery, but by a sieve with the

higher direction to the art of working in metal.

The shoeing of horses with iron is supposed not to

have been usual before the Conquest.\* The number

of builders and artificers employed in the construc-

tion of domestic, ecclesiastical, and defensive edifices

was far greater than it had been at any previous

time, and their skill was much superior, as will be evident from the notice of the progress of architee-

ture in the subsequent chapter. Norman nicty displayed itself in founding cathedrals, abbeys, and

monasteries, and the insecurity of society every-

where led to the erection of strongholds for pro-

tection. In Stephen's reign, "every one who was

able (says the Saxon Chromeler) built a castle;" and he adds, that "the whole kingdom was covered

with castles." The progress of one art mevitably

leads to improvements in others, as obstacles which

have never before been encountered stimulate in-

genuity, and lead to inventions for overcoming

them. Thus, we are told, that William of Sens,

whom Lanfranc the archbishop employed as an architect, constructed machines for loading and

unloading vessels, and for conveying heavy weights by land. In the reign of Rufus, a bridge of timber

was thrown across the Thames, the old one having been carried away by a flood; and in 1209 this

· Beckmann, Hist, of Inventions, vol. ii. p. 310

hand. Wind-mills were not known in England at the Conquest,\* but were introduced in less than a century afterwards. Those who did not bake at the common fourne made the dough into cakes and baked them on the hearth. The law fixed the assize of bread, and the price at which it was to be sold by the bakers; and they were severely punished for "lack of size," the first offence subpeeting them to the loss of the bread, the second to imprisonment, and a third offence to the pillory or tumbrell. In the year 1202 the assize of bread was fixed on the principle that in a quarter of wheat, supposed to weigh 512 lbs., the baker should make a profit of three pennics. The price of wheat at this period ranged from two to six shillings the quarter, and a scale was framed which fixed the weight of the farthing loaf at each fluctuation. Thus, when wheat was sold at two shillings the quarter, the loaf of white bread was to weigh three lbs., and the loaf of brown bread four lbs.,

The fabrication of armour now gave a new and

and the weight was diminished at each successive

increase in the price of wheat.

The architect explaining his plan and receiving instructions - the build is raising and laying stones with a mane ;-carving, plumbing the work, &c.

Building a House

The textile arts were also improved. The introduction of the art of weaving woollen cloth by the Flemings has been mentioned above. 1197 this manufacture had become of sufficient consequence to call forth laws for its proper regulation, in regard to both the fabrication and the sale of the cloth. In the unprincipled reign of King VOL. I.

Royal MS 2 B, vii John the merchants and manufacturers obtained heenses for permission to manufacture cloth under the prescribed measure.\* Linen was also manufactured. The weavers and fullers, and the bakers,

timber bridge was replaced by one of stone.

were amongst the earliest of the incorporated trades or guilds. In the reign of Henry I, the weavers

Hoveden, Annal. p. 467, col 2.

<sup>•</sup> In the year 1143 there was in Northamptonshire an abbey, situated in a wood, which, in the course of 180 years, was entirely destroyed. One of the causes of this destruction was said to be, that, in the whole neighbourhood, there was no house, water-mill, or "wind-mill" built, for which timber was not taken from this wood. - Beckmann, Hist, of Inventions, vol. i. p. 250,

The art of refining and working in metals was perhaps, as already observed, carried to greater per-

fection than any of the useful arts; and a superior

class of men was engaged in this department of

industry. Two candlesticks, made of gold and

silver, which Robert, Abbot of St. Alban's, sent to his countryman, Pope Adrian, are stated to have

excited the warm admiration of the pontiff, who

declared that he had never seen more beautiful

workmanship. \* A large cup of gold, made by

order of the same abbot, by a goldsmith named Baldwin, is described by Matthew Paris as being

"adorned with flowers and foliages of the most

deheate workmanship, and set around with precions

stones in the most elegant manner." Native artizans were always to be found to execute the vese(ls

required in the services of the clinich and the

costly and curious ornaments with which shrines and altars were adoraed. The precious metals

were lavished on works of this description. Otho,

of convents and the higher class of females.

BOOK III.

as well as in London.\* Subsequently many other trades were incorporated; but the next period was the era in which these incorporations generally took place. In 1180, the saddlers were an incorporated body, but the goldsmiths, glovers, butchers, and curriers, who had established themselves as corporate bodies without permission from the king were fined.† The oldest charters of incorporation now existing are of a later date. The object of the Saxon guilds was rather to afford each other mutual succour than to regulate trade. The art of dveing was necessarily of considerable

importance in connexion with the woollen manufacture. The Jews in some instances are said to have followed the trade of dyeing; but the art was probably in a very imperfect state, and persons of rank are said to have maintained dye-houses on Embroidery was the chief their own account. occupation of ladies of rank as it had been in the Anglo-Saxon period. Christma, Abbess of Markgate, is mentioned as having worked three mitres and a pair of sandals, which she sent as a present to Pope Adrian. The vestments of the ligher ranks of the clerry were embroidered, and it was regarded as a pious work to be thus occupied. The churches on festival days were

many of them lung with tapestry, which illustrated

## CHAPTER V.

## THE HISTORY OF LITERATURE, SCIENCE, AND THE FINE ARTS.

T is probable that learning in England had begun before the Norman Conquest to recover from the state of depression wluch it had fallen in the calamitons period of the last Danish invasions. The Danish Conquest, as completed by the accesson of Canate, preceded the Norman by exactly half a century,

and during the whole of this space, with searcely any interruption, the country had enjoyed a government which, if not always national, was at least acknowledged and submitted to by the whole nation. The public tranquality was scarcely disturbed either by attacks from abroad or by domestee commotions. Such of the latter as occurred were either merely local or of very short dination. During this period, therefore, many of the monastic and other schools that had existed in the days of Alfred, Athelstan, and Edgar, had probably been re-established. The more frequent comnumication with the continent that began in the reign of the Confessor ought also to have been favourable to the autellectual advancement of the country. Accordingly, as we have before remarked, the dawn of the revival of letters in England may be properly dated from about the commencement of the eleventh century.\*

Still, at the time of the Norman Conquest, there is reason to believe that literature was at a very low ebb in this country. Ordericus Vitalis, a contemporary writer, and himself a native of England, though of French descent and educated idnoad, describes his countrymen generally as having been found by the Normans a mistic and almost illiterate people. The last epithet may be understood as chiefly intended to characterize the clergy, for the great body of the laity at this time were every where illiterate. In fact we know that, a few years after the Conquest, the king took advantage of the general illiteracy of the Saxon benchees, and to supply their places with foreigners. His real motive for making this substitution was probably not that which he avowed; but he would scarcely have alleged what was notoriously not the

age of the aimsds of the Saxon church. The Norman Conquest introduced a new state of things in this as in most other respects. That event made England, as it were, a part of the continent, where, not long before, a revival of letters had taken place searcely less remarkable, if we take into consideration the encumstances of the time, than the next great revolution of the same kind in the beginning of the liftcenth century. In France, indeed, the learning that had flourished in the time of Charlemagne had never undergone so great a decay as had betallen that of England since the days of Alfred. The schools planted by Alcum and the philosophy taught by Erigena had both been perpetuated by a line of the disciples and followers of these distinguished masters, which had never been altogether interripted. But in the tenth century this learning of the West had met and been intermised with a new learning originally from the East, but obtained directly from the Arab conquerors of Spam. The Arabs had first become acquainted with the literature of Greece in the beguining of the eighth century, and it instantly exercised upon their minds an awakening influence of the same powerful kind with that with which it again kindled Europe seven centuries afterwards, One difference, however, between the two cases is very remarkable. The mighty effects that arose out of the second revival of the ancient Greek literanne in the modern world were produced almost solely by its cloquence and poetry; but these were precisely the parts of at that were negleeted by the Arabs. The Greek books which they sought after with such extraordinary avidity, were almost exclusively those that related either to metaphysics and mathematics on the one hand, or to medicine, chemistry, botany, and the other departments of physical knowledge on the other. All Greek works of these descriptions that they could procure they not only translated into their own language, but in course of time illustrated with volumnous commentaries. The prodigious magnitude to which this Arabic hterature eventually grew will stagger the reader who has adopted the common notion with regard to what are called clergy to deprive great numbers of them of their who middle or the dark ages. "The royal library of the Fatimites" (sovereigns of Egypt), says Gibbon, "consisted of 100,000 manuscripts, elegantly transcribed and splendidly bound, which were lent, without jealousy or avarice, to the students of Carro. Yet this collection must appear 4 n 2

fact, even as a pretence. No names eminent for

learning, it may be observed, are recorded in this

of which were employed in the mere catalogues. Their capital Cordova, with the adjacent towns of Malnga, Almeria, and Murcia, had given birth to more than 300 writers, and above 70 public libraries were opened in the cities of the Andalusian kingdom." The difficulty we have in concerving the existence of a state of things such as that here described arises in great part from the circumstance of the entire disappearance now, and for so long a period, of all this Arabic power and splendour from the scene of European affairs. But long extract as it has been, the dominion of the Arabs in Europe was no mere momentary blaze - It fasted, with little diminution, for nearly 500 years, a period as long as from the age of Chaucer to the present day, and abundantly sufficient for the growth of a body of literature and science, even of the wonderful extent that has been described. At the time of which we are now writing Arabic Spain was the fountainhead of learning in Europe. Thither students were accustomed to repair from every other country to study in the Arabic schools; and many of the teachers in the clucf towns of France and Italy had finished their education in these seminaries, and were now diffusing among their countrymen the new knowledge which they had thence acquired. The writings of several of the Greek authors, also, and especially those of Aristotle, had been made generally known to scholars by Latin versions of them made from the Arabic. There is no trace of this new literature having found its way to England before the Norman conquest. But that revolution immediately brought if m its train. "The Conqueror himself," observes a writer who has illustrated this subject with a profusion of curious learning, "patronized and loved letters. He filled the bishoprics and abbacies of England with the most learned of his com-

moderate if we can believe that the Ommiades of

Spam had formed a library of 600,000 volumes, 44

trymen, who had been educated at the University of Paris, at that time the most flourishing school in Europe. He placed Lanfranc, abbot of the monastery of St. Stephen at Caen, in the see of Canterbury—an enument master of logic, the subtleties of which he employed with great dexterity in a famous controversy concerning the real presence. Anselm, an neute metaphysician and theologian, his immediate successor in the same see, was called from the government of the abbey of Bec, in Normandy. Herman, a Norman, bishop of Salisbury, founded a noble library in the ancient cathedral of that see. Many of the Norman prelates preferred in England by the Conqueror were polite scholars. Godfrey, prior of St. Swithin's at Winchester, a native of Cambray, was an elegant Latin epigrammatist, and wrote with the smartness and ease of Martial; a circumstance which, by the way, shows that the literature of the monks at this period was of a more liberal east than that which we commonly amex to their character and pro-. Decline and Fall of the Rom. I mp. t. lii.

Geoffrey, also a learned Norman, who came over from the University of Paris, and established a school at Dunstable, where, according to Matthew Paris, he composed a play, called the 'Play of St. Catherine,' which was acted by his scholars, dressed characteristically in copes borrowed from the sacrist of the neighbouring abbey of St. Alban's, of which Geoffrey afterwards became abhot, "The king himself gave no small countenance to the clergy, in sending his son Henry Beauclere to the abbey of Abingdon, where he was imtrated in the sciences under the care of the abbot Grymbald, and Farice, a physician of Oxford. D'Oilly, constable of Oxford Castle, was ordered to pay for the board of the young prince in the convent, which the king himself frequently visited. Nor was William wanting in giving ample revemues to learning. He founded the magnificent abbeys of Battle and Selby, with other smaller convents. His nobles and their successors co-operated with this liberal spirit in creeting many monasteries. Herbert de Losinga, a monk of Normandy, bishop of Thetford, in Norfolk, instituted and endowed with large possessions a Benndictine abbey at Norwich, consisting of sixty monks. To mention no more instances, such great institutions of persons dedicated to religious and literary lessure, while they diffused an air of civility, and softened the manners of the people in their respective circles, must have afforded powerful incentives to studious pursuits, and have consequently added no small degree of stability to the interests of learning."\*

To this it may be added, that most of the successors of the Conqueror continued to show the same regard for learning of which he had set the example. Nearly all of them had themselves received a learned education. Besides Henry Beauclere, Henry 11., whose father Geoffrey Plantagenet, earl of Aujou, was famous for his literary acquirements, had been carefully educated under the superintendence of his admirable uncle, the Eurl of Gloucester; and he appears to have taken care that his children should not want the advantages which he had himself enjoyed; for, at least, the three eldest, Henry, Geoffrey, and Richard, are all noted for their literary as well as their other accomplishments.

What learning existed, however, was still for the most part confined to the elergy. Even the nobility—although it cannot be supposed that they were left altogether without literary instruction—appear to have been very rarely initiated in any of those branches which were considered as properly constituting the scholarship of the times. The familiar knowledge of the Latin language in particular, which was then the key to all other crudition, seems to have been almost exclusively confined to churchmen, and to those few of the laity who embraced the profession of schoolmasters, as some, at

Warlon's Dissertation on Introduction of Learning into England, prelixed to History of English Poetry, p. cxid. (Edd. of 1824.)

were others established in all the religious houses,

all kinds there were founded no fewer than five

hundred and fifty-seven between the Conquest and

the death of King John; and, besides these, there

still existed many others that had been founded in

the Saxon times. All these cathedral and conventual schools, however, appear to have been

intended exclusively for the instruction of persons proposing to make the church their profession.

But mention is also made of others established

both in many of the principal cities, and even in

the villages, which would seem to have been open

to the community at large; for it may be presumed

that the laity, though generally excluded from the

benefits of a learned education, were not left

wbolly without the means of obtaining some ele-

mentary instruction. Some of these city schools,

however, were emment as institutes of the highest

departments of learning. One in particular is

mentioned by Matthew Paris as established in the

town of St. Alban's, which was presided over by Matthew, a physician, who had been educated at

enally, they seem to look upon all beyond their own small circle as beings of an inferior species. This gride of thems, however, worked beneficially upon the whole: m the first place, it was in great part merely a proper estimation of the advantages of knowledge over ignorance; and, secondly, it helped to make the man of the pen a match for him of the sword—the natural liberator of the human race for its natural oppicssor. At the same time, it intimates very forcibly at once the comparative rarity of the highly-prized distinction, and the depth of the darkness that still reigned far and wide around the few scattered points of light. Schools and other seminanes of learning, however, were greatly multiplied in this age, and also elevated in their character, in England as well

as elsewhere. Allusion has been made in a preceding chapter to the exertions made by Archbishop Lanfranc to establish proper schools in connexion with the cathedrals and monastenes in all parts of the kingdom. Both he and his successor, Anselm, laboured for this praiseworthy object with great zeal; and it was one which was also patromzed and promoted by the general voice of the church. In 1179 it was ordered by the third general council of Lateran, that in every cathedral should be appointed and maintained a head-teacher, or scholastic, as was the title given to him, who, besides keeping a school of his own, should have authority over all the other schoolmasters of the diocese, and the sole right of granting licenses, without which no one should be entitled to teach. In former times the bishop himself had frequently undertaken the office of scholastic of the diocese; but its duties were rarely efficiently performed under that arrangement, and

may therefore suppose instructions were given both in law and in medicine. According to Fitz-Stephen there were three of these schools of a higher order regularly established in London, besides several others that were occasionally opened by distinguished teachers. The London schools, however, do not seem to have been academies of science and the higher learning, like that of St. Alban's. Fitz-Stephen's description would rather lead us to infer that, although they were attended by pupils of different ages and degrees of proficiency, they were merely schools of grammar, rhetoric, and dialectics. "On holidays," he says, "it is usual for these schools to hold public assemblies in the churches, in which the scholars engage in demonstrative or logical disputations, some using enthymems, and others perfect syllogisms; some aiming at nothing but to gam the victory, and make an ostentatious display of their acuteness, while others have the investigation of truth in view. Artful sophists on these occasions acquire great applause; some by a prodigious immdation and flow of words, others by their specious but fallacions arguments. After the disputations other scholars deliver rhetorical declamations, in which they observe all the rules of art, and neglect no topic of persuasion. Even the younger boys in the

poration, divided into nations, and presided over by a rector.\* The University of Oxford, properly so called, is probably of nearly the same antiquity. It seems to have been patromzed and fostered by Richard L, as that of Paris was by his great rival. Philip Augustus. Both Oxford and Cambridge had undoubtedly been eminent seats of learning long before this time, as London, St. Alban's, and other cities had also been; but there is no evidence that either the one school or the other had at an earlier date become anything more than a great school, or even that it was distinguished by any assigned rank or privileges above the other great schools of the kingdom. In the reign of Richard I. we find the University of Oxford recognized as an establishment of the same kind with the University of Paris, and as the rival of that seminary. Of the state of the school at Cambridge throughout the twelfth century we have the following distinct account from a contemporary writer :-"In the year 1109," says Peter of Blos, in his 'Continuation of the History of Ingulphus,' "Joffiid, Abbot of Croyland, sent to his manor of Cottenham, near Cambridge, Master Gislebert, his fellow monk, and professor of theology, with three other monks who had followed him into England: who being very well instructed in philosophical theorems, and other primitive sciences, went every day to Cambridge, and, having hired a certain public hard, taught the sciences openly, and in a little time collected a great concourse of scholars; for, in the very second year after their arrival, the number of their scholars from the town and country increased so much that there was no house, barn, nor church capable of containing them. For this reason they separated into different parts of the town, and imitating the plan of the Studium of Orleans, brother Odo, who was eminent as a grammarian and satirical poet, read grammar, according to the doctrine of Priscian and of his commentator Remigius, to the boys and younger students, that were assigned to him, early in the morning. At one o'clock, brother Terricus, a most acute sophist, read the logic of Aristotle,

according to the Introductions and Commentaries

of Porphyry and Averroes, to those who were

† The works of Avertoes, however, who shed in 1198, were certainly not in existence at the time here referred to. Bither Peter of Binis must have been ignorant of this, or-affe was really the author of the statement—the mane must have been the insertion of

See Crevier, Hist de l'Univ. de Paris, i. 255.

some later transcriber of his text,

adds, that at the time when he wrote (in the latter part of the same century), the school founded by Gislebert and his companions had attained to great eclebrity; but there is nothing to lead us to suppose that it had even their become more than a very distinguished school. "From this little fountain," he says, "which hath swelled into a great river, we now hehold the city of God made glad, and all England rendered frintful, by many teachers and doctors issuing from Cambridge, after the likeness of the boly Paradise." of Oxford and Cambridge, the most ambitious or the English students continued to resort for part of their education to the more distinguished foreign schools during the whole of the twelfth century. Thus, it is recorded that several volumes of the Arabian philosophy were brought into England by Damel Merlac, who, in the year 1185, had gone to Toledo to study mathematics. Salerno was still the chief school of medicine, and Bologua of law, although Oxford was also becoming famous for the latter study. But, as a place of general m-truetion, the University of Paris stood at the head of all others. Paris was then wont to be styled, by way of pre-emmence, the City of Letters. many Englishmen, or, to speak more strictly,

subjects of the English crown, were constantly

found among the students at this great semmary,

that they formed one of the four nations into

which the members of the university were divided.

It would appear from the following verses of

Negel Wircker, an English student at Paris in

1170, that his countrymen, whom they describe,

were already noted for that spirit of display and

expense which still makes so prominent a part of

lectures on Tully's Rhetoric and Quintilian's

Institutions. But Master Gislebert, being ignorant

of the English, but very expert in the Latin and

French languages, preached in the several churches

to the people on Simdays and holidays." There

is here no hint of any sort of incorporation or

public establishment whatever; the description is

merely that of a school set on foot and conducted

by an association of private individuals; and even

this private school would seem to have been first

opened in the year 1109, although there may pos-

sibly have been other schools taught in the place

before. It may be gathered from what the writer

Morrbus egregii, verbo vultuque venusti, Ingenio pollent, consideque vigent Ilona pluint populis, et detestantir avarus, Fercula multiplicant, et sinc lege bibunt.

their continental reputation:

Of graceful micu and manuers, gracious speech. Strong sense, with gemus brightened, shines in each. Their free land still rains largess; when they dine Course follows course, in rivers flows the wine.

Among the students at the University of Paris in the twelfth century are to be found nearly all the most distinguished names among the learned of every country. One of the teachers, the celehrated Abelard, is said to have alone had as pupils

of books without a teacher; but he who was farther

advanced, and was master also of the Quadrivium,

could answer all questions and unfold all the secrets of nature." The present age, however,

had outgrown the simplicity of this arrangement; and various new studies had been added to the

ancient seven, as necessary to complete the circle

of the sciences and the curreculum of a liberal

came to be ranked as a science. This was the

age of St. Bernard, the last of the Fathers, and of

Peter Lombard, the first of the Schoolmen. The

distriction between these two classes of writers is,

that the latter do, and the former do not, treat their

subject in a systematizing spirit. The change was

the consequence of the cultivation of the Aristotelian Logic and Metaphysics. When thes

It was now, in particular, that Theology first

education.

twenty persons who afterwards became cardinals, and more than fifty who rose to be bishops and archbishops. It has already been mentioned that Thomas à Becket received part of his education Several of the most connent teachers were Englishmen. Among these may be particularly

mentioned Robert of Melmn (so called from having

tast taught in that city), and Robert White, or Pallus, as he is called in Latin. Robert of Melun,

who afterwards became Bishop of Hereford, dis-

tinguished himself by the zeal and ability with

which he opposed the novel views which the

rising sect of the Nominalists were then intro-

ducing both into philosophy and theology. He is

the author of several theological treatises, none

of which, however, have been printed. Robert

White, after teaching some years at Paris, where

he was attended by crowded andiences, was induced

to return to his own country, where he is said to

have read lectures on theology at Oxford for five years, which greatly contributed to spread the

renown of that rising seminary. After having

declined a bishopric that was offered to him by

Henry L, he went to reside at Rome in 1143, on the invitation of Celestine II., and was soon after

made a cardinal and chancellor of the holy see.

One work written by him has been printed, a

summary of theology, under the then common

title of 'The Book of Sentences,' which is said to

be distinguished by the superior correctness of its

style and the lucidness of its method.

CHAP. V.]

became pope by the title of Adrian IV. But, above all others, John of Salisbury deserves to be here mentioned. It is in his writings that we find the most complete account that has come down to ns not only of the mode of study followed at Paris, but of the cutire learning of the age. At this time, it is to be observed, those branches of literary and scientific knowledge which were

mentary of which, comprehending Grammar, Rhetoric, and Logic, was called the Trivium; the second, comprehending Music, Arithmetic, Geometry, and Astronomy, the Quadrivium. The whole seven arts, so classified, used to be thus enumerated in a Latin hexameter :---Lingua, Tropus, Ratio, Numerus, Tonus, Angulus, Astra;

or, with definitions subjoined, in the two still more

specially called the Arts were considered as divided

into two great classes,—the first or more ele-

singularly constructed verses,— Gram. loquitur, Dia vera docet, West verba colorat, Mas cadit, Ar. numerat, Geo. pondeint, Ast. colit astra.

John of Salisbury speaks of this system of the

sciences as an ancient one in his day. "The Trivium and Quadrivium," he says, in his work entitled 'Metalogicus,' "were so much admired by our ancestors in former ages, that they imagined they comprehended all wisdom and learning, and were sufficient for the solution of all questions

Another celebrated name among the Englishmen who are recorded to have studied at Paris in those to be regarded as having first set the example of the method afterwards pursued by the schoolmen. days is that of Nicolas Breakspear, who afterwards But although the influence of their writings may thus probably be traced in preparing the way for the introduction of the scholastic system, and also afterwards, perhaps, in modifying its spirit, it was derived immediately, in the shape in which it

studies were first introduced into the schools of the West, they were wholly unconnected with theology. But, especially at a time when all the learned were churchmen, it was impossible that the great instrument of thought and reasoning could long remain unapplied to the most important of all the subjects of thought—the subject of reli-It would appear, as was formerly stated, that John Erigena and other Irish divines introduced philosophy and metaphysics into the discussion of questions of religion as early as the eighth century; and they are consequently entitled appeared in the eleventh and twelfth centuries, from another source. Erigena was a Platomst; the spirit of his philosophy was that of the school of Alexandraa. But the first schoolmen, properly so called, were Aristotchans; they drew their logic and metaphysics originally from the Latin translations of the works of Aristotle made from the Arabic. How far, if at all, they may also have have been indebted to the commentaries of the

Arabic doctors, would be a curious inquiry. But

whether they took their method of philosophy entirely from the ancient heathen sage, or in part

from his modern Mahomedan interpreters and

illustrators, it could in neither case have at first

any necessary or natural alliance with Christianity.

Yet it very soon, as we have said, formed this

alliance.

of the twelfth century of his celebrated Four Books of Sentences, properly founded the system of what is called the Scholastic Theology. The schoolnich, from the Master of the Sentences down to Francis Suarez, who died after the commencement of the seventeenth century, were all theologians. Although, however, religious speculation was the field of thought upon which the spirit of the Aristotelian philosophy chiefly expended itself, there was scarcely any one of the arts or sciences upon which it did not in some degree seize. The scholastic logic became the universal instrument of thought and study; every branch of human learning was attempted to be pursued by its assistance; and most branches were more or less affected by its influence in regard to the forms

which they assumed. John of Salisbury went to complete his education at Paris in the year 1136. "When I beheld," he writes in a letter to his friend Becket, "the reverence paid to the clergy, the majesty and glory of the whole church, and the various occupations of those who applied themselves to philosophy in that city, it raised my admiration as if I had seen the ladder of Jacob, the top of which reached to Heaven, while the steps were crowded with angels ascending and descending." The first master whose lectures be attended was the renowned Abelard, still, after all the vicissitudes of his life, teaching with undiminished glory, in the midst of a vast confinence of admiring disciples, on the Mount of St. Genevieve. "I drank in," says his English pupil, "with incredible avidity, every word that fell from his hps; but he soon, to my infinite regret, retired." Abelard lived only a few years after this date, which he spent in devotion and entire seclusion from the world, John of Salisbury then studied dialectics for two years under other two masters, one whom was his countrymen, Robert de Melan, mentioned above. After this he returned to the study of grammar and rhetoric, which he pursued for three years under William de Couches, of whose method of teaching he has left a particular account. It appears to have embraced a critical exposition both of the style and the matter of the writers commented upon, and to have been well calculated to nourish both the understanding and the taste. After this he spent seven years under other masters, partly in the further prosecution of his acquaintance with the writers of antiquity and the practice of Latin composition, partly in the study of the mathematics and theology. The entire course thus occupied twelve years; but some, it would appear, devoted the whole of this time to the study of dialectics, or logic, alone. One of the treatises of John of Salisbury, that entitled 'Metalogicus,' is intended principally to expose the absurdity and injurious effects of this exclusive devotion to the art of wrangling; and although it must be considered as written with

[Book III. some degree of satirical license, the representation which it gives of the state of things produced by the new spirit that had gone abroad over the realms of learning is very curious and interesting. The turn of the writer's own genius was decidedly to the rhetorical ratker than the metaphysical, and he was not very well qualified, perhaps, to perceive certain of the uses or recommendations of the study against which he directs his attack; but the extravagances of its devotees, it must be confessed, fairly exposed them to his ridicule and castigation. "I wish," he says in one place, "to behold the light of truth, which these logicians say is only revealed to them. I approach them,—I beseech them to instruct me, that, if possible, I may become as wise as one of them. They consent, - they promise great things,—and at first they command me to observe a Pythagorean silence, that I may be admitted into all the secrets of wisdom which they pretend are in their possession. But by-and-by they permit, and even command me, to prattle and quibble with them. This they call disputing; this they say is logic; but I am no wiser." He accuses them of wasting their ingenuity in the discussion of such puerile puzzles as whether a person in buying a whole cloak also bought the cowl? or whether, when a hog was carried to market with a rope tied about its neck and held at the other end by a man, the hog was really carried to market by the man or by the rope? It must be confessed that if their logic had been worth much, it ought to have made short work with these questions, if their settlement was deemed worth any thing. Our author adds, however, that they were declared to be questions which could not be solved, the arguments on both sides being perfectly equal. But his quarrel with the dialecticians was chiefly on the ground of the disregard and aversion they manifested, in their method of exercising the intellectual powers, to all polite literature, to all that was merely graceful and ornamental. And there can be no question that the ascendancy of the scholastic philosophy was fatal for the time to the cultivation of polite literature in Europe. So long as it reigned supreme in the schools, learning was wholly divorced from taste. The useful utterly rejected all connexion with the beautiful. head looked down with contempt upon the heart. Poetry and fiction, and whatever else belonged to the imaginative part of our nature, were left altogether to the unlearned, to the makers of songs and lays for the people. It was probably fortunate for poetry, and the kindred forms of literature, in the end, that they were thus left solely to the popular cultivation for a time; they drew nonrishment and new life from the new soil into which they were transplanted; and their produce has been the richer and the racier for it ever since. The revival of polite literature probably came at a better time in the fiftcenth, than if it had come in the Yet it was not to be expected twelfth century. that when it was threatened with blight and extinction at the earlier era, its friends should either

have been able to foresee its resurrection two or three centuries later, or should have been greatly

consoled by that prospect if they had. John of Sahsbury's chief work in his 'Polycraticon, or, as he farther entitles it, 'A Treatise in eight books, on the Frivolities of Courtiers and the Footsteps of Philosophers,' (De Nugis Curialium et Vestigiis Philosophorum.) It is, says Warton, " an extremely pleasant miscellany, replete with erndition, and a judgment of men and things, which properly belongs to a more sensible and reflecting period. His familiar acquaintance with the classics appears not only from the happy facility of his language, but from the many citations of the purest Roman authors with which his works are perpetually interspersed." \* He also wrote Latin verses with extreme elegance. John of Salisbury died bishop of Chartres in 1182. ther distinguished cultivator of polite literature in the same age was Peter of Blois, to whose letters, abounding as they do in graphic descriptions of the manners and characters of the time, we have already more than once had occasion to refer. Neither in elegance of taste and style, however, nor in general literary accomplishment, is the Frenchman to be compared with his illustrious

English contemporary.

The classical knowledge of this period, however, was almost confined to the Roman authors, and some of the most emment of these were as yet unstudied and unknown. Even John of Salisbury, though a few Greek words are to be found in his compositions, seems to have had only the slightest possible acquaintance with that language. Both it and the Hehrew, however, were known to Abelard and Eloisa; and it is probable that there were both in England and other European countries a few students of the oriental tongues, for the acquisition of which inducements and facilities must have been presented, not only by the custom of resorting to the Arabic colleges in Spain, and the constant intercourse with the East kept up by the pilgrinages and the crusades, but also by the numbers of learned Jews that were everywhere to be found. In England the Jews had schools in London, York, Lincoln, Lynn, Norwich, Oxford, Cambridge, and other towns, which appear to have been attended by Christians as well as by those of their own persuasion. Some of these seminaries, indeed, were rather colleges than schools. Besides the Hebrew and Arabic languages, arithmetic and medicine are mentioned among the branches of knowledge that were taught in them; and the masters were generally the most distinguished of the rabbis. the eleventh and twelfth centuries, the age of Sarchi, the Kimchis, Maimonides, and other distinguished names, rabbinical learning was in an emi-

nently flourishing state. In regard to the state of the other branches of knowledge that have been mentioned, only a few There is no

words more require to be added. certain evidence that the Arabic numerals were

yet known in Europe; they certainly were not in general use. Although the Elements of Euchd and other geometrical works had been translated into Latin from the Arabic, the mathematical sciences appear to have been but little studied. "The science of demonstration," says John of Salisbury, in his Metalogicus, "is of all others the lost difficult, and alas! is almost quite neglected, except by a very few who apply to the study of the mathematics, and particularly of geometry. But this last is at present very little attended to amongst us, and is only studied by some persons in Spain, Egypt, and Arabia, for the sake of astronomy. One reason of this is, that those parts of the works of Aristotle, that relate to the demonstrative sciences are so all translated, and so incorrectly transcribed, that we meet with insurmountable difficulties in every chapter." The name of the mathematics at this time, indeed, was chiefly given to the false science of astrology. "Mathematicians," says Peter of Blois, "are those who, from the position of the stars, the aspect of the firmament, and the motions of the planets, discover things that are to come." Astronomy, however, or the true science of the stars, which was zealously cultivated by the Arabs in the East and in Spain, seems also to have had some cultivators among the learned of Christian Europe. Latin translations existed of several Greek and Arabic astronomical Ingulphus gives the following curious description of a sort of scheme or representation of the planetary system called the Nadir, which he says was destroyed when his abbey of Croyland was burnt in 1091: "We then lost a most beautiful and precious table, fabricated of different kinds of metals, according to the variety of the stars and heavenly signs. Saturn was of copper, Jupiter of gold, Mars of iron, the sun of latten, Mercury of amber, Venus of tin, the moon of silver. The eyes were charmed, as well as the mind instructed, by beholding the colure circles, with the zodiac and all its signs, formed with wonderful art, of metals and precious stones, according to their several natures, forms, figures, and colours. was the most admired and celebrated Nadir in all England." These last words would seem to imply that such tables were then not uncommon. This one, it is stated, had been presented to a former abbot of Croyland by a king of

John of Salisbury, in his account of his studies at Paris, makes no mention either of medicine or of law. With regard to the former, indeed, he expressly tells us that the Parisians themselves used to go to study it at Salerno and Montpellier. By the beginning of the thirteenth century, however, we find a school of medicine established at Paris, which soon became very celebrated. Of course there were, at an earlier date, persons who practised the medical art in that city. The physicians in all the countries of Europe at this period were generally churchmen. Many of the Arabic medical works were early translated into Latin; but the treatment of diseases from Hippocrates, Galen, and

the other ancient writers, embraced a considerable hody of botanical and chemical knowledge. Che-

mistry in particular the Arabs had carried far

Parisian professors soon began to publish treatises on the art of their own. The science of the physicians of this age, besides comprehending whatever was to be learned respecting the diagnostics and

Roger, surnamed the Bachelor, a monk of Beck, in Normandy. The study was, from the first, vehemently opposed by the practitioners of the common law, but, sustained by the influence of

HISTORY OF ENGLAND. taught a few years before this time at Oxford by

the church, and eventually also favoured by the government, it rose above all attempts to put it down. John of Salisbury affirms that, by the blessing of God, the more it was persecuted the more it flomished. Peter of Blois, in one of his letters, gives us the following curious account of the ardour with which it was pursued under the superintendence of Archbishop Theobald:-" In the house of my master, the Archbishop of Canterbury, there are several very learned men, famous for their knowledge of law and politics, who spend the time between prayers and dinner in lecturing, disputing, and debating causes. To us all the knotty questions of the kingdom are referred, which are produced in the common hall, and every one in his order, having first prepared himself, declares, with all the eloquence and acuteness of which he is capable, but without wrangling, what is wisest and safest to be done. It God suggests the soundest opinion to the voungest amongst us, we all agree to it without envy or detraction." Study in every department must have been still greatly impeded in this period by the scarcity of

[Book III.

books; but their multiplication now went on much more rapidly than it had formerly done. We have already alluded to the immense libraries said to have been accumulated by the Arabs, both in their oriental and European seats of empire. No collections to be compared with these existed anywhere in Christian Europe; but of the numerous monasteries that were planted in every country, few were without libraries of greater or less extent. A convent without a library, it used to be proverbially said, was like a castle without an armoury. When the monastery of Croydon was burnt in 1091, its library, according to Ingulphus, consisted of 900 volumes, of which 300 were very large. "In every great abbey," says Warton, "there was an apartment called the Scriptorium; where many writers were constantly busied in transcribing not only the service-books for the choir, but hooks for the library. The Scriptorium of St. Alban's Abbey was built by Ahbot Paulin, a Norman, who ordered many volumes to be written there, about the year 1080. Archbishop Lanfranc furnished the copies. Estates were often granted for the support of the Scriptorium . . . . I find some of the classics written in the English monasteries very early. Henry, a Benedictine monk of Hyde Abhey, near Winchester, transcribed, in the year 1178, Terence, Boethius, Suetonius, and Claudian. Of these he

formed one book, illuminating the initials, and

forming the brazen bosses of the covers with his

own hands." Other instances of the same kind

both to illuminate and to bind books, as well as to transcribe them. "The scarcity of parchment," it is afterwards observed, "undoubtedly prevented

The monks were much accustomed

heyond the spoint at which it had been left by the ancients. Of anatomy little could as yet be accurately known, while the dissection of the human subject was not practised. Yet it would appear that physicians and surgeons were already beginning to be distinguished. Both the eanon and civil laws were also introduced into the routine of study at the University of Paris soon after the time John of Salisbury studied there. The canon law was originally considered to be a part of theology, and only took the form of a separate study after the publication of the systematic compilation of it called the 'Decretum of Gratian,' in 1151. Gratian was a monk of Bologna, and his work, not the first collection of the kind, but the most complete and the best arranged that bad yet been compiled, was immediately introduced as a text-book in that university. It may be regarded as having laid the foundation of the science of the canon law, in the same manner as the system of the scholastic philosophy was founded by Peter Lombard's Book of Sentences. Regular lecturers upon it very soon appeared at Orleans, at Paris, at Oxford, and all the other chief seats of learning in western Christendom; and before the end of the twelfth century no other study was more eagerly pursued, or attracted greater crowds of students, than that of the canon law. One of its first and most celebrated teachers at Paris was Girard la Pucelle, an Englishman, who afterwards became bishop of Lichfield and Coventry. Great taught the canon law in Paris from 1160 to 1177; and, in consideration of his distinguished merits and what was deemed the great importance of his instructions, he received from Pope Alexander III. letters exempting him from the obligation of residing on his preferments in England while he was so engaged; this being, it is said, the first known example of such a privilege being granted to any professor. The same professors who taught the canon law taught also, along with it, the civil law, the systematic study of which, hkewise, took its risc in this century, and at the University of Bologna, where the Pandects of Justinian, of which a more perfect copy than had before been known is said to have been found, in 1137, at Amalphi,† were arranged and first lectured upon by the German Irnerius,—the Lamp of the Law, as he was ealled,-about the year 1150. Both the canon and the civil law, however, are said to have been Crevier, Hist, de l'Univ. de Paris, i. 244.
† "The discovery of the Pandects at Amalphi," says Gilibon, "Is first notreed (in 1501) by Ludovicus Bologninus, on the faith of a Psan chronicle, without a name of date. The whole story, though unknown to the twelfth century, embellished by ignorant ages, and suspected by rigid criticism, is not, however, destitute of much internal probability."

610

the transcription of many other books in these socicties. About the year 1120, one Master Hugh, being appointed by the convent of St. Edmondsbury, in Suffolk, to write and illuminate a grand copy of the Bible for their hibrary, could procure no parchment for this purpose in England."\* Paper made of cotton, however, was certainly in common use in the twelfth century, though no evidence exists that that manufactured from linen rags was known till about the middle of the thirteenth.

We have already had occasion to notice the in-

correctness of a statement frequently made which attributes to the Conqueror the dehberate design of abolishing the Saxon language in England. oldest authority for this statement appears to be a writer of the name of Robert Holkot, who hved in the fourteenth century; and his account is not more improbable in itself than it is in opposition to the testimony of the earlier historians. although the Norman appears neither to have made any efforts to extirpate the English tongue, nor even to have introduced the French as the language of the law and of public documents, the substitution of French for English must have followed to a great extent, as one of the inevitable consequences of the Conquest. Indeed, causes that helped to bring about this change were in operation even before that event. The Confessor hunself, according to Ingulphus, though a native of England, yet, from his education and long residence in Normandy, had become almost a Frenchman; and when he succeeded to the English throne, he brought over with him great numbers of Normans, whom he advanced to the highest digmties in the church and the state. "Wherefore," it is added, " the whole land began, under the influence of the king and the other Normans introduced by him, to lay aside the English customs,

Tha was Engle-land suithe todeled, sume helden mid te king. & sume mid themperice, for tha the king was in prisum, the wenden the eorles & te rice men that he nevre mare sculde cumme ut. & sæhtleden wyd themperice. & brohten hirc into Oxenford, and iauen hire the burch. Tha the king was ute. tha herde that sægen, and too his feord & besæt hire in the tur. & me leet hire dun on milt of the tur mid rapes. & stal ut & seæ fleh & iæde on fote to Walingford. Therefter sea forde ofer sa. & hi of Normandi wenden alle fra the king to the eorl of Angieu, sume here thankes & sume here unthankes. for he besæt hoom til hi aiauen up here castles. & hi nan helpe ne hæfden of the king. Tha ferde Eustace. the kinges sune, to France. & nam the kinges suster of France to wife, wende to bigæton Normandi thær thurh, oc he spedde litel. & be gode rilite, for he was an yuel man, for ware se he wes dide mare yuel thanne god. he reuede the landes & læide micel gildes on. he brohte his wif to Engle-land. & dide hire in the castle of . . teb. god wimman see wees. oc seæ hedde litel blisse mid him. & xpist ne wolde that he sculde lange rixan. & wærd ded and his moder beien. & te eorl of Angæu wærd ded. & his sune Honri toc to the rice. And te ewen of France things; for example, all the nobility in their courts began to speak French as a great piece of gentility, to draw up their charters and other writings after the French fashion, and to grow ashamed of their old national habits in these and in many other particulars." The establishment of the Norman dominion of course perpetuated and added much additional force to this tendency, in various ways. The king himself, and, with few exceptions, all the nobility, could speak no language but French. The residence of the Norman nobles and great proprictors in all parts of the country must have spread the language of the court. Above all, it would be diffused over the land by the clergy, who were now brought over in great numbers from Normandy, both to serve in the parochial cures, and to fill the monasteries that were multiplying so These churchmen must have been in constant intercourse with the people of all classes. Besides, they were not only the instructors of the people from the altar, but the teachers of all the schools. This last circumstance sufficiently accounts for the fact mentioned by Ingulphus, that it now became the practice for the elements of grammar to be taught to boys at school, not in English, as formerly, but in French. All this would soon make the French language universally familiar to the educated classes even of the Saxon population, while to the Norman part of the nation it was the only language known. The English or Saxon, however, still continued to be the common language of the great body of the people; and for nearly a century after the Conquest it appears, though considerably modified from its form in carbor times, to have preserved what may still be called a decidedly Saxon character. We give as a specimen the following passage from the Saxon Chronicle, relating to the close of Stephen's reign:

and to imitate the manners of the French in many

Then was England very much divided: some held with the king, and some with the empress; for when the king was in prison, the earls and the rich men supposed that he never more would come out: and they settled with the empress, and brought her into Oxford, and gave her the borough. When the king was out, he heard of this, and took his force, and beset her in the tower.† And they let her down in the night from the tower by ropes. And she stole out, and fled, and went on foot to Wallingford. Afterwards she went over sea; and those of Normandy turned all from the king to the earl of Anjou; some willingly, and some against their will; for he beset them till they gave up their castles, and they had no help of the king. Then went Eustace, the king's son, to France, and took to wife the sister of the king of France. He thought to obtain Normandy thereby; but he sped little, and by good right; for he was an evil man. Wherever he was he did more evil than good; he robbed the lands, and levied heavy guilds upon them. He brought his wife to England, and put her into the castle of . . . Good woman she was ; but she had little bliss with him; and Christ would not that he should long reign. He therefore soon died, and his mother also. And the earl of Anjou 612 HISTORY OF ENGLAND. died, and his son Henry took to the earldom. and the wise men went between them, and made this settlement: that the king should be lord and king while he hved, and after his day Henry should be king: that Henry should take him for a father, and he him for a son: that peace and umon should be betwixt them, and in all England. This, and the other provisions that they made, swore the king and the earl to observe, and all the bishops, and the earls, and the rich men. Then was the earl received at Winchester, and at London, with great worship: and all did him homage, and swore to keep the peace. And there was soon so good a peace as never was here before. Then was the king stronger than he ever was before. And the carl went over sea; and

Bodlean Library (MS, 343), supposed to have been written in the time of Henry 11. communicated to the Society of Antiquaries, in 1811, by the late Rev. John Josiah Conybeare, For thee is a house built Ere thou wert born, For thee was a mould shapen Ere thou of (thy) mother camest. Its beight is not determined, Nor its dep!h measure l,

Nor is it closed up (However long it may be) Until I thee bring Where thou shalt remain Until I shall measure thee And the sod of earth. Thy house is not Highly built (timbered), It is unhigh and low; When thou art in it The heelways are low, The side-ways unhigh. The roof is built Thy breast full nigh; So thou shalt in earth Dwell full cold, Dim. and dark. That clean putrefies. Doorless is that house, And dark it is within : There thou art fast detained, And Death holds the key,

Loathly is that earth house,

And worms shall share thee.

And grim to dwell in;

There thou shalt dwell,

For some thu bist ladlic And lad to iscounc. From about the middle of the twelfth century, the Saxon language is commonly considered to have begun to take a form in which we may discover the beginning of the present English.\* We are not, however, in possession of any undoubted specimens of the language in the latter part of the twelfth century. Of the pieces which Warton has

given as belonging to this period, the late able and

learned editor of the 'History of English Poetry'

has remarked that, "judging from internal evi-

dence, there is not one which may not safely be

And ladgest thine fronden,

referred to the thirteenth century, and by far the greater number to the close of that period." † In these circumstances we shall reserve the consideration of what may be called the birth of the English language for the next book. We shall there also find the most convenient opportunity of noticing the rise and progress of the poetry of the Provenced troubadours, and of the French and Auglo-Norman romance minstrelsy. The Latin, during the whole of the present period, was the chief language of literary com-It was in Latin that the teachers at the chief seats of learning (many of whom were foreigners) delivered their prelections in all the sciences, and that all the disputations among the students were carried on. English and French churchmen of this age appear to have generally been as familiar with Latin as with their native

tongue, and to have usually employed it in their intercourse with each other. Nay, some of them who could not speak English seem to have been accustomed to preach to the people in Latin, and, what is remarkable enough, sometimes with much Peter of Blois, as we have acceptance and effect. seen, speaks of this having been done by the French monk Gistebert, or Gilbert, who was one of the founders of the University of Cambridge. So Giraldus Cambrensis tells us that, in a progress which he made through Wales in 1186, to assist Archbishop Baldwin in preaching a crusade for the recovery of the Holy Land, he was always

prior of Durham, Robert Dunstable, the historian, Henry of Huntingdon, Geoffrey of Monmouth,

Eadmer, Wilham of Malmsbury, John Hauvil,

Giraldus Cambrensis, Alexander Neckham, Walter Mapes, and, above all, Josephus Iscanus, or Joseph

of Exeter, are enumerated and celebrated by Warton

as flourishing within the present period. Joseph

of Exeter Warton characterises as "a minacle in

classical composition." of his cpic poem on the

Trojan war he says, " the diction is generally pure, the periods round, and the numbers harmonious;

and, on the whole, the structure of the versification

approaches nearly to that of polished Latin poetry.

The writer appears to have possessed no common command of poetical phraseology, and wanted

nothing but a knowledge of the Virgilian chastity." Some of the compositions of this age, especially

some of those of Walter Mapes, who has been

styled the Anacreon of the eleventh century, are

written in the rhyming Latin called Leonine verse.

Thou hast no friend

That will come to thee.

Who will ever inquire

Who shall ever open

. For thee the door, And seek thee?

chromelers of the eleventh and twelfth centuries is probably not possessed by any other nation. We will briefly mention some of the chief names. That venerable monument, the Saxon Chronicle, in the first place, comes down to the end of the reign of Stephen. We have the Life of the Conqueror from the pen of William of Poictiers, his chaplain. Doubts have been cast upon the authenticity of the history which passes under the name of Ingulphus, Abbot of Croyland, and indeed it may now be considered as established that the work is not what it professes to be; \* but if a forgery in respect to its title and the form of is made to assume, it is inmost successful when he appealed to the people in possible not to believe that it is founded upon a Latin sermon; it never failed, although they did genuine records of the times to which it relates, not understand a word of it, to melt them into and that much of the information contained in it is tears, and to make them come in crowds to take as trustworthy as it is eurious. It narrates the

siastical History of Ordericus Vitalis comes down See an able Article on the sources of early English History, in the Quarterly Review, No. lavn. pp. 289—297.

[Book III. Devizes, Walter of Coventry, Ralph, abbot of Cogto the year 1121, and is interspersed with many notices of civil transactions. The History of Eadgeshall, &c.; not to mention the foreign writers,

mer, the monk of Canterbury, which embraces the period from the Conquest to the year 1122, is

especially valuable for the original papers preserved in it, and for the great number of facts related upon the author's own knowledge. The work of Florence of Worcester, though in what he has given of English history he is little more than a translator of the Saxon Chronicle, is not to be the less prized on that account. "He understood the ancient Saxon language well," says the learned critic to whom we have referred above, "better, perhaps, than any of his contemporaries; and he has furnished as with an accurate translation from a text which seems to have been the best of its kind."\* He comes down to the year 1117; and the work is continued to the year 1141 by another monk of the same place.

The excellent histories of William of Malms-

bury, his five books of the Acts of the English

kmgs, and the sequel, in two books, under the title

of 'Historia Novella,' extend over the time from the first arrival of the Saxons to the year 1143, in Simeon of Durham, and which the author died. his continuators John and Richard, successively priors of Hexham, have preserved much infermation, especially respecting the northern part of the kingdom, that is nowhere else to be found: their narrative comes down to the year 1156, Another highly valuable work relating to the latter part of the same period is the anonymous account of the reign of Stephen, entitled 'Gesta Stephani.' The eight books of the History of Henry of Huntingdon, which, beginning with the earliest accounts of Britam, also come down to the end of the reign of Stephen, and are continued by another writer for ten years farther, derive a high value from the immerous ancient authorities, now lost, which appear to have been consulted in their preparation; some fragments of very early Saxon compositions appear to be almost literally translated and fitted into the text. William of Newbridge, or Newburgh (also known by the names of Little, or Parvus, or Petit), has written with great ability a history of the events from the Norman conquest

belongs to this age. The critic quoted above is inclined to believe that the author of the greater part of the work was anterior even to Florence of To these might be added a long list of other names: -Brompton, Turgot, Ailred, Gervase of Canterbury, Ralph de Diceto, Benedict, abbot of

William of Jumieges (Gulichnus Gemeticensis), Vinesauf, William of Tyre, and others; and the Chronicle of Mailros, the Annals of Burton, Margan, Waverley, and other monastic registers.\* Few nations, in any period of history, have been

more distinguished than the Normans by a taste

for magnificent buildings. At the period of their establishment in Neustria, the later Romanesque architecture—the origin of which has been adverted to in the preceding book—had already taken its ultimate form and character; and in this style, which they adopted, and continued to practise for above two hundred years, many examples remain to attest their proficiency as early as the tenth century. But in the early part of the eleventh century, which was to them an interval of comparative peace and tranquillity, when they began to enjoy the benefits of permanent security in their possessions, the Normans appear to have been seized with a mania for founding monasteries. The nobility emulated each other in crecting churches on their domains, and the period immediately preceding the descent upon England is distinguished by the erection of the most magnificent edifices in this style remaining in Normandy. Among these may be cited the two celebrated abbeys at Caen, founded by William the Conqueror and his wife Matilda, of which one at least was nearly completed at the time of the Conquest, and the other immediately-The success of the Norman arms in England was immediately followed by the general diffusion of Norman arts; and when the land was parcelled out among Norman barons, and appropriated to the endowment of Norman monasteries, and when the sees and religious establishments were filled with Norman bishops and monks, edifices rivalling those of their continental dominions speedily rose in every part of the country. Such was the activity and zeal with which the Normans exerted themselves in securing their acquisitions by the construction of fortresses, and in displaying

CHAP. V.]

to its remotest parts; and in addition to the mmerous religious establishments originating from the munificence of the Normans, many of those already existing were refounded, and the buildings demolished for the purpose of restoring them on a more extensive scale. However rapaciously the Normans may have possessed themselves of the wealth

of England, they certainly applied it with good taste, and, by a liberal expenditure, encouraged the ants, and restored the forms of religion. "You might see," says William of Malmsbury, "churches rise in every village, and monasteries in the towns and cities, built in a style imknown before. might behold the country flourishing with renovated sites, so that each wealthy man accounted that day lost to him, which he neglected to signalize by some magnificent action." The twelfth century was still more productive in works of architecture, especially of the military class. Henry 1, was a great builder both of castles

and monasteries; but in the following turbulent reign the country became, in the words of the Saxon Chronicle, "covered with castles—every one built a castle who was able." So that before the death of Stephen they are reckoned to have amounted to the number of 1115. Church architecture flourished in nearly an equal degree in the more trangual part of this century; and to this period, accordingly, we are indebted for a large proportion of our principal ecclesiastical edifices. Of the resources which the clergy of this period brought to the work of founding and constructing churches and monasteries, we may form an idea

from the example of Bishop Herbert Losing, who removed the episcopal see of Thetford to Norwich m 1094. Besides settling a community of Clight inc manks at Thetford, he established an extensive and numerous monastery at Norwich, defraying the expense entirely out of his private fortune, and erected the splendid church which still remains a monument of his wealth and liberality; and yet William of Malmsbury, to whom we owe these particulars, expressly says, that he was by no means a rich bishop. This church, however, was much surpassed in size by others of the same date; and the enlarged ideas of Mauritius, bishop of London, appear to have astonished even his contemporaries. He began to rebuild his cathedral in 1086, upon a plan so vast and magnificent, that it was consured as a rash undertaking, never likely to be completed; and though this building be lost to posterity, the accounts we have of its form and dimensions would go far to justify these feelings of wunder and incredulity. Roger, bishop of Sarum (1107-1139), was another munificent builder. Besides his cathedral, which he rebuilt in such a manner "that it yielded to none, and surpassed many, he crected several castles," says Malmsbury, "and splendid mansions on all his estates, with

work of this great prelate; and its ruins and some fragments of Sherborne castle are all that remain of the numerous works which drew forth these high encomiums from the historian. To particularize all the ecclesiastical edifices founded during this period, would be to enimerate most of the cathedrals and principal abbeys in Eng-So solid and well constructed are these works, that wherever the hand of time has not been assisted by violence or neglect, they remain to this

day entire, and apparently imperishable.

true that in many instances the alterations and

additions of succeeding periods have done much to

obliterate the original character of the Norman

style, yet there are few of the buildings in which it

cannot be distinctly traced, and in a considerable

number it still predominates. In this latter class,

besides the cathedral of Norwich already men-

tioned, we may notice those of Durham, founded by

William de Carrlepho (1093); Chichester, by

Bishop Ralph (1091); Peterborough, by Ernulph

(1107); Rochester, by Gundulph (1077); Here-

ford, by Robert de Losing (1079); Gloucester, by Abbot Scrlo (1088); and Oxford, by Prior Guymond (1120). There are also considerable re-

mains of this period at Ely, in the pave and transepts (1081-1106), at Exeter, in the two noble

taining them, the labour of his successors will toil in vain." The abbey of Malmsbury was also the

615

towers built by Bishop Warelwast (1112); at Winchester, in the tower and transepts, the work of Bishop Walkelyn (1070); and in the cathedral of Canterbury, of which the whole of the eastern part was erected before the end of the 12th century. Many other examples will be noticed incidentally as we proceed, It is not only as the munificent founders of so many noble buildings, and the patrons of the artists by whom their erection was superintended, that these prelates have a claim upon our admiration. In an age when all arts, sciences, and learning were confined to the clerical order, there is great reason to believe that it was their architectural skill which produced the designs which their wealth contributed to carry into execution. Gundulph, bishop of Rochester, is recorded to have been the most able architect of his day, not only in the ceclesinstical, but also in the military style. The cathedral and castle of Rochester, though neither was completed in his lifetime, and the Tower of Lon-

don, are sufficient evidence of his talents. Peter

of Colechurch, architect of the first stone bridge

across the Thames at London (1176), was also an

less direct evidence, the names of Henry de Blois,

bishop of Winchester, who, besides continuing the

works at his cathedral, founded the monasteries of

St. Cross and Romsey, in Hampshire, where the

churches still retain their original architectural

character; the bishops Roger and Ernulph, already

mentioned, and Alexander, bishop of Lincoln (from 1124 to 1147). The list might be much further

ecclesiastic.

To these may be added, though on

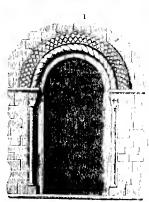

616 HISTORY OF ENGLAND.

extended, upon at least probable grounds. William of Sens, however, who rebnilt part of Canterbury eathedral in 1174, appears to have been a professional architect, as well as another William, an Englishman, who succeeded him, and completed

Englishman, who succeeded him, and completed his works.

As the Norman style of architecture forms an intermediate hink between the Roman and the Gothic, and as its transition into the latter is extremely gradual, we find in it, as may be expected, much that recalls the memory of the one, and much which connects it with the other. Its principal characteristic feature is the circular arch, springing either from a single column, varying in every degree from a cylinder of two diameters

high to a proportion nearly classical, or from a pier decorated with half columns or light shafts, the evident origin of the clustered pillar of a later date. Both these forms are frequently used in the same building, as in the cathedral of Durham, where they support the main arches alternately. Polygonal shafts and plain rectangular piers are also to be met with, but they are less common. The walls are so massive as to render buttresses unnecessary—the projections so called being rather for ornament than utility. The windows are small in proportion, and generally simple in form, though sometimes divided by a column into two lights within the external arch. Circular windows were also used, and in their simple division by

small shafts, we may see the outline of the elaborate wheel windows of the Gothic style. The cornices

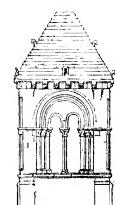

WINDOW OF CASTLE HEDINGHAM CHURCH.

are often extremely bold, and supported by corbels in a variety of forms, of which grotesque and monstrous heads are the most common. Another sort of cornice consists merely of a band, indented underneath, and forming a parapet: this cornice is usually of the same projection as the buttresses,

which die into it. The former style of cornice was generally used to terminate towers, and perhaps originally to support an acute-angled stone roof, many of which remain in Normandy; though in England, so universal has been the taste for alterations, as various styles of architecture succeeded to

cach other, it would be difficult to find an example in its original state. These roofs are probably the origin of the spire; and in that of the church of Then, the angles are decorated in a manner in which the germ of a *crocket* may be distinguished. But the general pitch of the Norman roof is moderate;

the acute pitch accompanied the establishment of

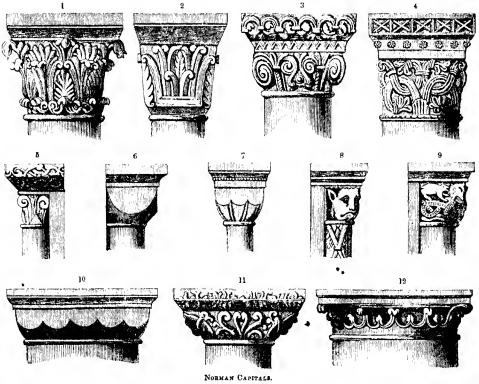

Tower of Then Church, Normandy

The details of the Norman style are extremely varied, yet the mouldings are few and simple, and may be traced to a Roman origin. The bases of the columns are also usually simple and regular. In the capitals we constantly find initations of the classical orders (except, perhaps, the Ionic), from the plainest to the most elaborate. Other forms of the most frequent occurrence appear to be peculiar to the style, whilst in a very large class, possessing the general resemblance of a sort of campanulate form with a massive square abacus, the imagination seems to have exhausted itself in devising the ornaments with which they are sculptured. In the main columns of buildings the shafts are for the most part plain, and a certain degree of umformity is observed in the capitals, as in those of the cathedral of Oxford, where they are foliated and of the same general aspect, though varied in the details with much taste; but when columns are used decorations only, as they frequently are to a great extent, it is common to find a studied variety not only in the capitals, but even in the The running decorations are also extremely

various, and, like the capitals, may often be traced to a classical origin. The antique scroll is reproduced in a variety of modifications. \*But the most characteristic ornament of the style is the

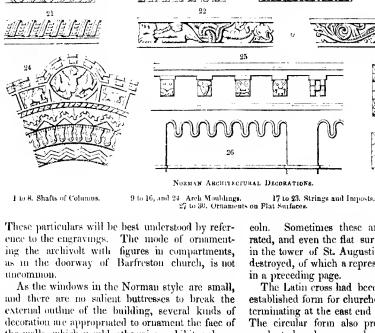

chevron, or zigzag, which is used in the greatest profusion equally in the earliest and latest examples, and even lingers after almost every other trace of the style has disappeared. After this almost universal decoration, frets and reticulations of various forms, night-angled, triangular, and lozenge-shaped, are the most common; and the billeted moulding, described by Bentham, "as if a cylinder should be cut into small pieces of equal length, and then stuck on alternately round the face of the arch." Another common and peculiar decoration is a range of beaked heads lying over a hollow moulding. Cabled and spiral mouldings are also frequent. These decorations, and an infinite number of

others, of which many may be gathered from the accompanying illustrations, were frequently used in great profitsion, both in arches and horizontal bands. But in Anglo-Norman works the greatest display of ornament was lavished on the doorways, the arch of which often consists of a repetition of many enriched bands, one within another, surrounded by an archivolt, sometimes resembling that member in classical architecture, sometimes partaking more of the form of a label. Square-headed doors are common; but this form is generally (the exceptions are rare) inclosed within an arch, and the space filled up with sculpture.

being sometimes a spacious open arch, as at Waltham Abbey, and sometimes a very insignificant member of the composition, as at Tewksbury. The windows of the clerestory also vary from a single to a triple light.

The internal roofs are sometimes vaulted and sometimes left open to the timbers. In the former case the groins most commonly spring from a lofty shaft, either rising from the ground, or superposited on the capitals of the main columns.

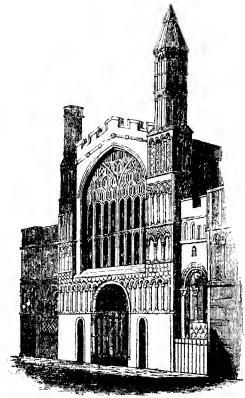

The intersection of the cross generally supports a tower, low in proportion, and much decorated with arches pierced for windows. Within it is open to the roof, and forms a lantern. The westend is often flanked by two other towers, as at Southwell Muister, Worksop Abbey, and Durham Cathedral. The angles of the building very commonly break forward before the face of the wall, and are surmounted by square or octangular turrets, formed of groups of columns and arches, and terminating in a pinnacle, of which examples remain at Rochester, Bishop's Cleeve in Gloucestershire, and a few other places; but their mutilation is almost inniversal.

The smaller parish churches of this period consist of a nave and chancel, without side aisles or

transepts, with a tower, generally at the west end, but sometimes, as at Iffley and Stewkeley, at the junction of the two divisions of the building. In all churches of this class which possess a decorative character a great share of enrichment is bestowed upon the arch which spans the building between the nave and chancel, as at Tickencote and Barfreston. The east end sometimes terminates in the semicircular apsis, as at Steetly in Derbyshire, but is more commonly square.

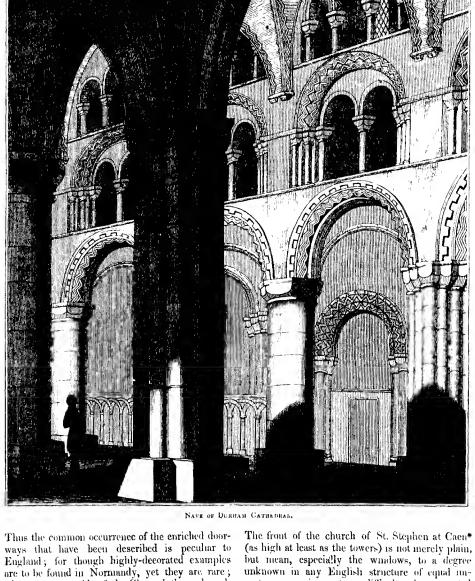

In this view of Norman ecclesiastical architecture it has been decrued expedient to dwell at some length upon its details. In the most important structures of this class, the dates, as we have had occasion to see, are generally to be ascertained; but we shall not find the light of history so clearly thrown upon the other branches of our inquiry; analogy must often supply its place, and then a knowledge of detail will be our only guide.

But, previously to entering into the support of the military and domestic architecture of this period, it may not be uninteresting to offer a few remarks upon a point which has caused some embarrassment to antiquarics,—namely, that in some particulars there is a marked difference between the Anglo-Norman style and that of the continent.

West Front of Rochester Catherral.

The centre window is an addition of much later date.

Thus the common occurrence of the enriched doorways that have been described is peculiar to England; for though highly-decorated examples are to be found in Normandy, yet they are rare; whereas on our side of the Channel they abound, and seem at all periods to have been respected and thought worthy of preservation, since nothing is more common than to find an enriched Norman doorway remaining in a parish church of which every other part has been altered or rebuilt at a subsequent period. In fact, the exterior of our principal churches of this date is generally in a more decorative style than those in Normandy.

The front of the church of St. Stephen at Caen\* (as high at least as the towers) is not merely plain, but mean, especially the windows, to a degree unknown in any English structure of equal importance,—a circumstance difficult to be accounted for, since there is no appearance of parsimony or of imperfection in the style in any other respect; and the instance is by no means singular. On the other hand, the details are more regular, better drawn, and more skilfully executed in Normandy than in England, where we shall seek in vain for so near an approach to the graceful forms of antiquity

\* Page 390.

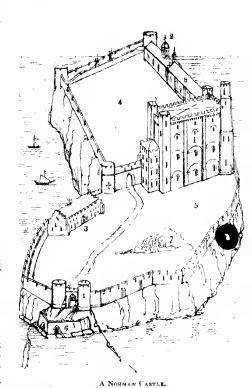

architectural sculpture to be found in France, may lead to an explanation of the difficulty.

The architectural works of this period, and throughout the middle ages, must have been the result of a division of labour. The share the clerical architect took in the work was probably confined to the general dimensions, outline, and character of the building; the actual construction was the business of the master mason; while the subordinate parts, with their various details, were 'confided to a class of operative artists unknown in the present age, whose minds as well as hands were occupied upon the mouldings and decorations, which they invented as well as executed, each man's province being, perhaps, extremely limited. It is difficult upon any other theory to account for the combination of unity of design and prodigious variety of detail in the works of the middle ages. We shall find, upon examination, what has been incidentally noticed in a former Chapter,—that Byzantme sculpture abounds in the architecture of this period on the continent, but is of extreme rarity in England. A people so far advanced as the Anglo-Saxons in an original style of decorative painting might be independent of foreign aid in architectural sculpture; general designs would naturally be modified by the means of execution at hand; and we may fairly conclude that, though we undoubtedly owe our greatest works to the energy and magnificence of the Normans, yet much that is valuable about them is due to genuine native talent.

The military structures of this period must not be confounded with the extensive fortified residences which came into vogue toward the end of the thirteenth century. The palatial character of the castles of the feudal barons, the vast halls and lightsome oriels which the records and fictions of chivalry and romance have inseparably associated with them, had no existence in those of the twelfth century, which were essentially fortresses, in which everything was sacrificed to security.

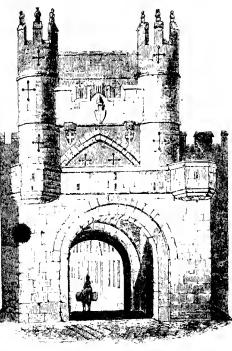

At this period the principles upon which such places were constructed were of necessity essentially different from those adapted to the modern art of war, and in some respects even totally opposite, the chief strength of the fortress lying in the height and maccessibility of the defences. For resistance to the modes of attack then in use the buildings in question were admirably calculated, and though the form and arrangement of the strongholds of the Anglo-Norman barons were as various as the positions in which they were erected, yet it is not difficult to perceive in their scattered remains a common resemblance from which the general system of their construction may be deduced.

The Anglo-Norman castle occupied a considerable space of ground, sometimes several acres, and usually consisted of three principal divisions, - the outer or lower Ballium (Anglicé Bailey) or court,

From an Ancient Drawing published in Grose's Military Antiquities. 2. Chapel. 6 Barbican. 1. The Dungeon. 3 Stable 4. Tunce Barbey 7. Mount The Mount is supposed by Grose to be the Court hill. where the lard dispensed justice, and where it was also executed.

the inner or upper court, and the keep. The outer circumference of the whole was defended by a lofty and solid perpendicular wall, strengthened at intervals by towers, and surrounded by a ditch or Flights of steps led to the top of this rampart, which was protected by a parapet,\* embattled and pierced in different directions by loop-holes or chinks, and ceillets, through which missiles might be discharged without exposing the men. ramparts of Rockingham Castle, according to Leland, were embattled on both sides, "so that if the area were won the castle keepers might defend the walls." The entrance through the outer wall into the lower court was defended by the barbican, which in some cases was a regular outwork, covering the approach to the hridge across the ditch; but the few barbicans which remain consist only of a gateway in advance of the main gate, with which it was connected by a narrow open passage commanded by the ramparts on both sides. Such a work remained until lately attached to several of the gates of York, and still remains, though of a later date, at Warwick Castle. The entrance archway, besides the massive gates, was crossed by the portcullis, which could be instantaneously dropped upon any emergency; and the crown of See ante, p. 368.

f Cry Walls. g Stars to ditto. h Guard-room. r Sally-port

the arch was pierced with holes, through which melted lead and pitch, and heavy missiles, could be cast upon the assailants below.

A second rampart, similar to the first, separated

the lower from the upper court, in which were placed the habitable buildings, including the keep, the relative position of which varied with the nature of the site. It was generally elevated upon a high artificial mound, and sometimes inclosed by ontworks of its own. The keep bore the same relation to the rest of the castle that the citadel bears to a fortified town. It was the last retreat of the garrison, and contained the apartments of the baron or commandant. In form the Anglo-Norman keeps are varied, and not always regular; but in those of the larger size rectangular plans are the

ruin. Time and violence appear to have assaulted them in vain, and even the love of change has respected them through successive generations. In those towers much indigment is shown in disposing of the limited space they afford so as to obtain the best accommodation in a manner compatible with security; and as it was also necessary to provide for the subsistence of a garrison independently of all external communication, they invariably contain a well, which is sometimes contrived with a funnel in the wall to supply water to each story separately. There are generally three stories, and often four, of which the lowest is a dark, vaulted basement, traditionally assigned to the custody of prisoners of war. To such a use these dungeons were indoubtedly too often put, but their general destination was more probably for store-rooms. This story communicated from above with the second, on which was the entrance, accessible only by a steep and narrow flight of steps. The upper floor was the principal apartment, and often the only one possessing the advantage either of a window or a climmey. There was always one, and in the larger keeps two rooms, on each floor, as large as the extent within the walls would admit; and, in the upper story, a variety of closets and conveniences contrived in the projections and thickness of the walls At Comsborough, the keep, which is four stories high, is a circle of about twenty-two feet drameter miside, with walls fifteen feet thick, flanked by six projecting turrets. In this example both the third and fourth stories contain fire-places, and were therefore both intended for lodging rooms, though the former is very imperfectly lighted. From the latter, though the state-apartment has but one window, opens a small but well-decorated hexagon room, occupying one of the turrets, with a closet adjoinmg. A piscina or basin for holy-water in the wall indicates the former to be the chapel, a necessary appendage to every castle. Six other closets, opening to the platform on the top of the building, are obtained in the six turrets, which rise above the parapet, one of which, from the appearance of an oven within, seems to have been used as a kitchen. The floors have been of timber, and the stone corbels upon which the beams rested still

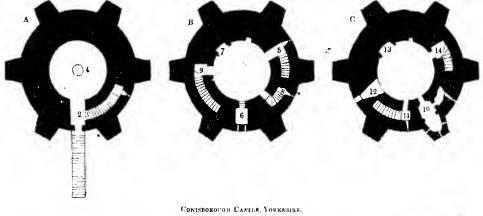

most common, and of the smaller class many are circular. The solidity of their construction is so great that we find them retaining at least their outward form in the midst of the most dilapidated

Norman keeps of the smaller class.

The greater keeps are often enormous masses of building. That of the Tower of London is a parallelogram of one hundred and sixteen feet by ninety-six, and sixty-uine high. Rochester occupies a square of about seventy feet, and rises to the immense height of one hundred and four. Dover, Colchester, Castle Rising, Kenilworth, Richmond, Bamborough, and others too numerous to be separately distinguished, are of the same

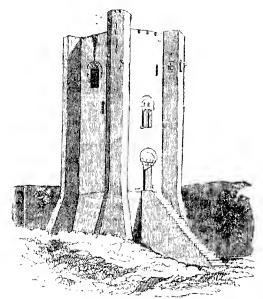

remain. In its extent and arrangement this build-

ing may be taken as a fair representation of the

class and on a similar plan. Their vast surfaces are relieved by shallow buttresses, and in some instances, as at Norwich,\* by ornamental arches. Their angles are broken by turrets containing staircases, and a projecting tower of entrance with the chapel in the upper story is a feature common to many.† In their internal accommodation they differ from the smaller keeps only in extent. The principal rooms are larger, and the secondary ones more numerous, but they are in no respect more conveniently arranged or less gloomy.

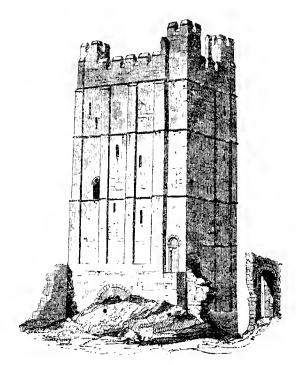

conveniently arranged or less gloomy.

Dark and comfortless as these towers were, the incessant warfare which rendered their construction necessary also compelled the Anglo-Norman ba-

• See ante, p. 380. + Sce ante, p. 395.

rons to inhabit them with their families and retinue. In Scotland, and particularly in the border country, where society long remained in a similar state, even the private houses continued for centuries to be erected in the form of towers, with windows reduced to loop-holes; the ground-floor, strongly barrieaded, being used to seeme the cattle at night, and the family dwelling in the ill-lighted apartments above, where they were sometimes obliged to shut themselves up for days together. These Peel houses, as they are called, abounded on the frontier; and Hoddam Castle, a fortalice of this description, was crected by John, Lord Herries, as late as the reign of Mary Stuart.

The long continuance of the feudal system in the

THE KELL OF RELIMOND CASHLE.

northern parts of Great Britain has had the effect of bringing down many ancient customs to a recent As lately as the year 1740, the notorious Simon Frazer, Lord Lovat, maintained all the customs of his ancestors in his residence of Castle Dume; and his manner of living, described on the authority of Ferguson (the astronomer), who in his youth had passed several months there, may serve to explain by what means the Norman barons and their numerous retainers could find even temporary accommodation in the confined buildings that have been described. "The residence of this powerful lard was a sort of tower, forming at best such a house as would be esteemed but an indifferent one for a private country gentleman in England had in all only four apartments on a floor, and none of them large. Here, however, he kept a sort of court and several public tables, and had a very numerous body of retainers always attending. His own constant residence, and the place where he received company and dured with them, was in one room only, and that the very room in which he His lady's sole apartment was also her lodged. bedchamber. The only provision made for lodging either the domestic servants or the numerous retainers was a quantity of straw, which was spread every night over the lower rooms, where the whole of the inferior part of the family, consisting of a very great number of persons, took up their abode. Sometimes above 400 persons attending this petty court were kennelled there."

It is not, however, to be doubted that the extensive circuit of the Norman castles inclosed subsidiary buildings, and those not always confined to such as were requisite for the mere accommodation of the garrison, their horses, and their live-stock. Portchester Castle protected a religious community within its walls, whose church remains to attest its carly date. A similar structure is to be traced at At Okeham Castle, a great hall Bamborough. erected before the end of the twelfth century, is still extant, and Robert Earl of Gloucester, who died in 1147, is said to have built a baronial hall in his eastle of Bristol. All such appendages must, however, be absolutely distinguished from those which were afterwards incorporated with the main The extensive and connected residentiary buildings which form the upper ward of such Norman castles as were subsequently retained for habitation, are invariably in a later style than the keep. The castle of Newark, built by Alexander, Bishop of Lincoln, is a rare example of any departure from the established system of fortification at that period, and its remains may indicate a first step toward that union of habitable space with strength, which afterwards expanded into the magnificence of Warwick, Kemlworth, and Aln-

There are few remains of the domestic buildings of this period, but a sufficient number exist to prove that even those of the greatest extent and solidity were buildings of a character altogether distinct from the

VOL. I.

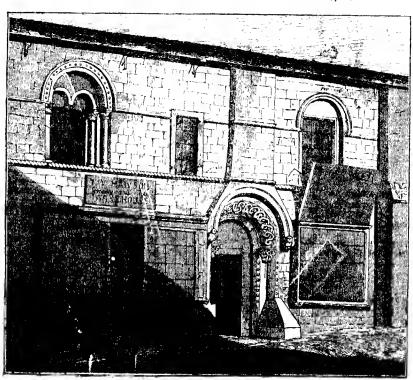

strong holds that have just been described. This fact may also be inferred from the incidental testimony of ancient writers. At an earlier period we find that Edward the Confessor had a huntingseat, and Harold a country-house. William of Malmsbury, in a passage already quoted, distinguishes the mansions erected by Bishop Roger from his castles; and from the same passage we may also infer, that they were in a style of maginficence corresponding to that of the other descriptions of Norman architecture. Of the Palatial style of the period, William Rufus's hall at Westminister survives, a splendid monument; for though no feature of its original character remains in view, yet there is indisputable evidence that the dimensions of the building are unaltered. It is supposed, with much reason, to have been originally divided by columns into a centre and sale aisles. least appears to have been the general construction of the great halls of the Norman period, as far as there are means of judging. Such was the hall of Henry L's palace at Oxford; that of Okeham Castle is on the same plan; and the remains of a similar hall existed until lately at the Norman manorhouse of Barnack, in Northamptonshire.

Of the smaller class of country-houses there are sufficient remains to warrant some general conclusions as to their usual form and distribution, which we shall find to have been mainly influenced by the necessity for protection from hos-

tile attacks. The manor-house of Boothby Pagnel, which, though degraded to baser uses, remains nearly in its original state, is built in the form of a parallelogram, with a gable at each end; the lower story is vaulted, and has no communication with the habitable apartment above, which was originally divided into two rooms, of which one only had a clumney; the entrance was by an external stan, probably moveable. In the roof was a loft, ance-sible only by a ladder, for there is no appearance of an internal staircase in this building or any other of the same class The structure called Pythagoras's school, at Cambridge, has been a domestic edifice, in all respects similar; and another was destroyed near the church of St. Olave, in Southwark, during the alterations consequent upon icbuilding London Bridge.

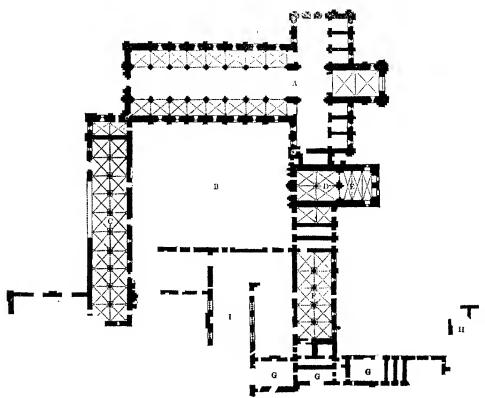

These confined and comfortless dwellings evidently bear considerable analogy to the keeps of the same period, and we must suppose them to have been placed within enclosures, and surrounded by offices and ontbuildings, which were probably, for the most part, of timber; upon the general use of which material in domestic architecture, now and long after, some observations have appeared in a former chapter.\* In town houses it was certainly the principal material, but that stone was sometimes employed, and a high degree of decorative character bestowed upon street architecture at this period,

See ante, p. 317.

JEWS HOUSE AT LINCOLN.

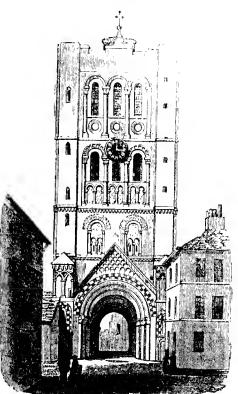

PLAN OF KIRKSTALL ABBEY, YOUKSHIRE.

A, The Church. B. Quadrangle. C. Cloister, over which was the Dormstory. B. Chapter House. F. An addition of later date F. Refectory. G.G. Kitchen and Offices. H., Remains of the Abbot's lodgings. I, Buildings of later date.

several instances remain to prove, especially that remarkable building at Lincoln, known by the name of the Jew's house, in which the position of the clumney clearly shows the same distribution to have been followed, of placing the principal apartment in the upper floor. Another Norman house, on precisely the same plan, but maless perfect state, remains within a short distance; and a third in the same city (vulgarly called John of Gaunt's stables), of which the lower part remains intact, shows the ground-floor to have been lighted on the outside by loopholes only. This latter is an extensive building, and encloses a court-vard, with a large ornamented gateway. Movses Hall, at Bury St Edmind's, another Norman domestic building, agreeing in every respect with the general conclusions that have been stated, is further remarkable for the form of the windows, which are squareheaded (within the eircular arch), and divided, not by a column, but a mullion. These windows are undoubtedly original.

The conventual buildings of all ages may be expected to throw considerable light upon contemporary domestic architecture; but of those of the period under consideration subsequent alterations have left little but what is peculiar to the monastic style. The systematic use of external starcases is, however, proved by several instances, and

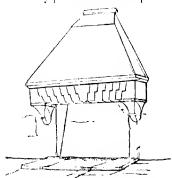

Anney Carewal, Bury St. Lonunds.

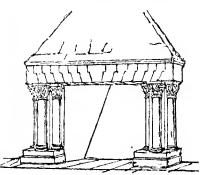

especially by the very remarkable one remaining in the conventual buildings at Canterbury.

The distribution of the conventual buildings of the twelfth century will be best understood by reference to the accompanying plan of the remains of Kirkstall Abbey, Yorkshire, the principal features of which are common to all similar edifices, whether on a larger or smaller scale. The quadrangle, which adjoins the transept, and extends westward, is always placed on the south side of the church, unless local circumstances prevent it. The position of the chapter-house is invariable, and the arrangement of the larger apartments about the quadrangle differs but little in any instance. edifice and that of the Norman abbey of Jervany, m the same county, are nearly similar in plan, and the conjectural references in the one are supplied by comparison with the other. Much architectural splendour was at all times displayed in the abbey gate-houses. That of Bury St. Edmund's is the most periect remaining of this period, and exhibits m its plain rectangular outline the unvarying character of the Norman style.

The Norman chimneys are of the same construction as those now in common use. It is only in some very early examples that we find the flues carried through the wall, and continued merely for a few feet upward outside. The fire-place consists of a spacious hearth, with a projecting funnel on brackets above. Those at Cousborough are remarkable for their close resemblance to the modern style of chimney-pieces. With this perfect know-

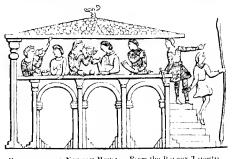

FIRE-PLACE, BOOTHBY PAGNER MANOR HOUSE,

FIRE PLACE, CONISBOROUGH CASTL

ledge of their construction, it seems astonishing that the Norman huilders should have introduced chimneys so sparingly; but when we see that the builders of the middle ages down to a much later period gave the preference to warming their halls by a central hearth, leaving the smoke to blacken the roof, and escape as it best might by an open lantern, we can only wonder at the different ideas of domestic convenience which have prevailed in different ages.

The conclusions which have been drawn as to the general system of the military and domestic architecture of the Normans will be strikingly corroborated by a reference to the Bayeux Tapestry. In the compartment relating to the embarkation of Harold, he is represented setting out with his suite from a house precisely like those that have been described, arched below, a large spartment above (in which several persons are drinking), and an external stair, which two of the party are descend-

ELEVATION OF A NORMAN HOUSE. From the Bayeux Tapestry

ing to join those who are on their way to the ships. Further on is a building, which, from the connexion of the history, must be the palace of Rouen, represented by a gate-house in advance of the hall in which William receives the embassy, the architectural character of which is distinctly marked by the long range of windows above. Subsequently we have several fortified places, of which Dol, Dmant, and Bayeux are identified by the inscriptions. They are represented, according to the ancient custom, both in the classical and middle ages, of putting a part for the whole, as castles, consisting in every case, of the mound, the tower, and the steep approach by steps: that of Dinant is also surrounded by palisades, to which the assailants

are setting fire. In this general view of the architecture of the Norman period, the great change of style which took place before its conclusion by the introduction of the pointed arch, has not yet been adverted to. The Norman style of architecture expired with the twelfth century; and in the reign of John, the lancet Gothic had entirely superseded it. enter into a description of that style in the present chapter would be to extend it to an undue length, and to anticipate much that properly belongs to

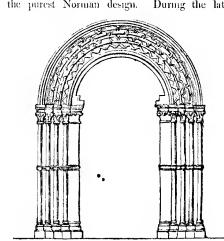

the ensuing period; to which it may be deferred

without inconvenience; since the transition led to

no immediate alteration in those general outlines,

characteristic of the manners and customs of the age into which it is more especially the province of lustory to inquire. The origin of the pointed arch, and the priority of invention of the style with which it became identified, are questions which it would be foreign to our purpose to discuss. None of the theories which have been propounded with regard to the origin of the pointed arch have succeeded satisfactorily in assigning it to any remote source, and the latter question can scarcely be settled but by the assistance of a mass of precise dates which are known to be unattainable. The first introduction of the pointed arch certainly

brought with it no change of style, either in Normandy or England, but was merely incidental, as in the example of St. Bartholomew the Great, in London, founded in 1133, where the arches of the transept at their intersection being narrower than those of the maye, are, for convenience, thrown into the pointed form in preference to using the horse-shoe arch, which is very common in similar cases. But it was not long before the pointed arch came to be introduced systematically, as in the church of St. Cross, in Hampshire, and the abbeys of Malmsbury and Knkstall; in all of which examples the mam arches are pointed, though the style is essentrally Norman in every other respect. After the middle of the twelfth century, a new mode of treating the detail may be observed, sometimes altogether independent of the pointed arch, as in the chapel of St. Leonard, near Stamford, in which the detached and slender shafts, the band which encircles them, the umform foliated capitals, the cucular abacus, and the lightness and deep undercutting of the arch mouldings, all approaching the character of the lancet Gothic, and tending to an entire revolution in style, are applied to forms of the purest Norman design. Durmg the latter

DOOR WAY OF ST. LEONARD'S CHAPPL, STAMFORD. This door was originally square, as may be seen by the abutments of the flat arch.

part of the twelfth century the two styles are blended in every possible variety, and apparently with a caprice subject to no rule. The eastern part of Canterbury cathedral, from the choir to the extremity called Becket's Crown, is an interesting example of the transition during the reign of Henry II. In the latter the lancet Gothic is nearly complete; but the square abacus and the chevron ornament still remain to connect it with the Norman.\* Of the same date is the round church in the Temple, one of the imitations of the Holy Sepulchre at Jerusalem which resulted from the crusades. But the mixture of style in this example is greater; for though the main arches are pointed, and spring from a cluster of four detached shafts, yet the door and windows are circular, the triforium displays the interlaced arch, and the dado is ornamented

with billets. After the reign of Henry II, the

new style is dominant. The architecture of Scotland during this period is identical in character with that of the southern portion of Great Britain; but there are few examples of the Norman style in an unmixed state. Notwithstanding the introduction of the Norman arts of civilization under Malcohn Can-more, and the foundation of Dunfermline Abbey, of which the style indicates its early date, architecture seems to have been little cultivated until the time of David I., since, in the reign of his predecessor, magic was supposed to have assisted in the construction of an arch somewhat beyond the ordinary proportions. The reign of David I, is the great architectural era of Scotland; and the buildings of the numerous monastic institutions founded by that munificent prince and his nobles during the twelfth century, rival those of England, and exhibit the same struggle between the circular and pointed styles The churches of Kelso, Dryof architecture.

\* See ante, p. 556.

may be cited as examples. All these were founded before the middle of the twelfth century; and if no delay took place in the erection of the buildings, (and there is no reason to suppose any), it would appear that the transition style was introduced into Scotland in a more forward state than it had attained in England at the same date,—a fact very difficult to be accounted for, since there is no room to believe that the Scots at this period drew their style of architecture from any source independent of the Anglo-Norman school.

Kelso, which exhibits a considerable mixture of

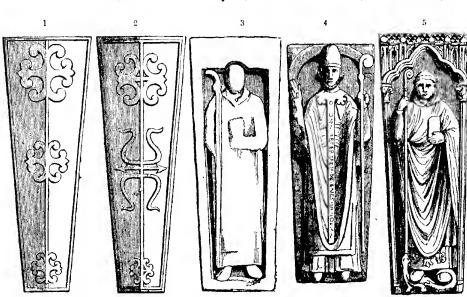

Jedburgh, Dundrennan, and Dunkeld

Kelso, which exhibits a considerable mixture of the pointed arch, was founded in 1128, and was certainly completed in the lifetime of David I., since his son was buried there. In Dundreman Abbey, founded in 1142, the arches are mixed, though the circular form predominates; and the transition proceeded regularly till the latter part of the twelfth century, when the lancet Gothic, as in England, hecame completely established. The abbeys of Aberbrothick and Glenhice, the one founded by William the Lion in 1178, and the other by Roland, lord of Galloway, in 1190, are both in that style.

The system of military architecture in Scotland at this period is also the same as that of the Anglo-Normans. The construction of the Scottish keep-towers differs in nothing from those aheady described, but they do not generally possess an equal degree of architectural character, being for the most part plain rectangular masses, without breaks or buttresses, or any decorations on the arches.

Sculpture did not flourish during the Norman

Sculpture did not flourish during the Norman period. Statues hold no place in the composition

1, 2 STONE COFFINS.-Ixworth Abbey, Suffolk.

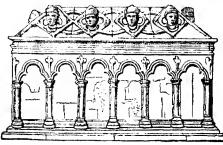

4. Rogen, Bisnor or Sarum, 1193,-Salisbury Cathedral.

of Norman architecture. A few examples of such an imperfect approach to a figure in a niche as that of Herbert Losing, at Norwich, cannot be considered as exceptions. Those of Herry I, and his queen, under the porch at Rochester, form one of externe rarity; and the feeble artists of the age seldam ventured upon the human figure otherwise than in rehet, in which mainer we sometimes find the second person of the Trinity in glory, represented in the heads of doorways. Even in monumental sculpture the effigy was rarely introduced before the twelfth century, and then in a very imperfect mainer.

The cachest sepulciral monuments of the Norman period consist merely of the stone coffins in general use with all who could afford them; the lids of which were shaped in a ridge, or, as it is commonly called en dos d'âne. Such coffins being let into the ground no lower than their depth, which was the usual mode of interring persons of consequence, the covering-stone stood above the level of the pavenient; and they thus became a memorial as well as a receptacle for the dead.

Monuments of this kind were frequently quite plam. When they bore an inscription, which was seldom, it ran round the edge of the coveringstone. The custom of sculpturing them with a cross is nevertheless of great antiquity, and was by no means confined to the elergy, as it has been supposed, though Gough imagines that some peculiar forms may have been appropriated to them to mark not only their profession but their Thus a cross-flory in a circle may denote a rector, as a cross-patée may probably indicate a Templar. Crosiers, chalices, and other ecclesustical insigma, are also introduced for the same purpose.

Stone coffins were often placed entirely above ground, in the manner of a sarcophagus, in which case the sides are sometimes sculptured. Architectural decorations were afterwards introduced, but probably not earlier than the middle of the twelfth century. Of this kind is the monument at Canterbury assigned to Archbishop Theobald, who died in 1161. And here it may be remarked,

SARCOPHAGUS, assigned to Archbishop Theobald, at Canterbury.

with reference to this monument, that in all trancitions the new style first shows itself in a perfect form in smaller works, such as tombs and shrines; and we must not be surprised at finding in such works the trefoil arch, and other forms peculiar to the lancet Gothic, at an earlier date than the establishment of that style in works of architecture generally.

The earliest monumental effigies are sculptured on the covering slabs of collins in low-rehef, the ground being sunk into the stone, and the figure level with the surrounding margin. A specimen of this kind, probably a very early one, remains, though in the last stage of dilapidation, in the cloister at Westimister. It was not long, however, before a bolder style was adopted; and the monumental effigies of the twelfth century are mostly in half-rehef.

With the Gothic style of architecture, canopies were introduced over the head of the effigy, consisting of a tiefoil arch supported by columns, to which was added the pediment and other characteristics of that style as it advanced. Of this class several monuments of the abbots remain at Peterborough.

Most of the effigies which remain of this period represent ecclesiastics. There is little variety in the manner of treating the subjects. The figures are generally represented treading on a dragon, emblematic of the evil principle, and piercing it with the pastoral staff or crosier they bear in the right hand; the left frequently holds a book; or the left hand bears the crosier, and the right is clevated in the act of benediction. The two angels supporting the head of the effigy were introduced at this period, and are to be found in early examples.

The full recumbent effigy cannot be assigned to a date much earlier than the thuteenth century. King John is the first of our monarchs for whom such a memorial was executed in England, though lns two predecessors were so commemorated at Fonteyrand. The efligy of Robert, Duke of Normandy, who died in 1134, in Gloucester Cathedral, is admitted not to be contemporary, and that of Geoffrey de Magnaville, Earl of Essex, in the Temple church, assigned to about the middle of this century, must be considered more than doubtful. The armorial bearing on the shield seems sufficient to invalidate its claims to so early a date, independently of its similarity to other statues in the same place, which indisputably belong to the succeeding period. In addition to these, the circumstances attending his death and burial render it not improbable that a delay took place in executing the monument.

In the higher departments of the art of painting this period is destitute of monuments and sendy in records. The most industrious collector of authentic documents on the subject, Vertue, could find none bearing even remotely upon it until the reign of Henry III., when a precept appears to the sheriff of Southampton, directing that the wainscot of the king's room in the castle of Winchester shall be painted with the same pictures as formerly. This, as Walpole observes, implies that history painting had been in use at an earlier date;

and we may, moreover, reasonably conclude that the artists who designed the Bayeux Tapestry would not finch from any historical subject, however extensive or complicated.

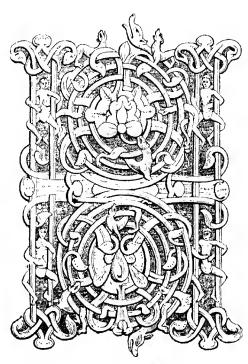

Nothing, however, is certain but that painting and gilding were used abundantly, especially in the decoration of ceilings. William of Malmsbury, in a curious passage, calls Godfrey of Bouillon "a brilliant enirror of chivalry, in which, as in a splendid ceiling, the lustre of every virtue was reflected." Both this author and Gervasius extol highly the painted roof of Canterbury Cathedral, completed by Prior Conrad in 1114, but give us no insight into the style in which it was executed further than that it represented Heaven, though the latter is very particular in his description of the building. A reference to Normandy will afford no better satisfaction. The portraits of William the Conqueror and his family, formerly at Caen, might be cited; but their authenticity, the antiquity of the wall on which they were painted, and the accuracy of Montfaucon's engraving, by which alone they are preserved to the present day, are alike doubtful. Nor is any trace left of the paintings on the tomb of Walter Gifford, Earl of Buckingham (buried at his own foundation of the Priory of Longucville, in 1102), though they existed to a comparatively recent date.

With this deficiency of examples in its more

important branches, we must again have recourse to illuminated manuscripts for information upon the state of the art as regards composition and drawing; and upon these points it will be sufficient to refer to the numerous engravings from these manuscripts that are elsewhere given in illustration of the manners and costumes of the period.

The manuscripts of the twelfth century are described by Sir F. Madden\* "as remarkable for a profusion of ornament, and a graecful but intricate mode of illuminating capital letters, which renders it more easy to recognise manuscripts of this period than any other. This style, by the aid of gold and silver, was carried to an excess of extravagance scarcely to be conceived. In elegance and claborate art the decorations of this century will yield to none, but they occasionally betray a portion of that false taste which gradually erept into the patterns of a later period. About this time it became the practice with the scribes to Icave blanks for the initial letters, to be filled up by one or more limners; and this accounts for the imperfeet state, and sometimes total omission of them, which we find in manuscript volumes of this and the two succeeding centuries. The fashion, also, of writing books of a size and magnitude almost incredible; was adopted toward the end of the twelfth century.''

1ntroduction to Shaw's Illuminated Ornaments.

SPECIMEN OF ORNAMENTAL LETTER OF THE PERIOD.

Drawn from a MS, of the period in the Royal Library.

present period, a new form was given to the science of music by the improved scale of musical notation invented by the celebrated Guido of Arczzo. This invention was first published by, the author in his 'Micrologus,' which appeared about 1030. not, however, till after the introduction of a correct method of marking time that the full benefit from Guido's invention was felt. In the present period great attention was paid to church music by the clergy, some of whom composed pieces for the use of the choirs. Thomas, the first archbishop of York after the Conquest, who had doubtless become acquainted with the Italian scale, is described as frequently employing his leisure in singing or in playing muon the organ; and "in making organs, and in teaching his clergy to make them, and to set hymns both in prose and verse to music."\* When the archbishop "heard any of the secular minstrels sing a tune which pleased him, he adopted and formed it for the use of the church, by some necessary variations."† The trouveurs and troubadours were also active in contributing to the improvement of secular music during the twelfth century. During the thuteenth century, it is not unlikely, from the increasing popularity of musticls and troubadours, that secular music, having a wider field for its exercise, underwent greater improvement than church music. Attempts were made to force the latter beyond the limits to which it had been confined during an earlier period. John of Salisbury complains of this change, and says that in the churches "the singers endeavour to melt the hearts of the admiring multitude with their effeminate notes and quavers, and with a certain wanton

> \* Stubbs, de Poutilie Ehor, † William of Malmsbury.

A short time before the commencement of the | luxuriancy of voice."\* But at this period the choral services were not the same in all parts of the country. Each cathedral had its own formulary, or as it came to be called, "use." In the northern counties the " use" of the archiepiscopal church of York prevailed; in South Wales that of Hereford; in North Wales that of Bangor; and in other places the "use" of other principal sees, particularly that of Lincoln. In Canterbury, where the monks of St. Augustine had introduced their church music, the "use" of Salisbury was almost general throughout the province. Secular music was still more likely to be modified by local circumstances. The music of the English was grave and measured, and that of the Scotch, Irish, and Welsh of a more lively kind. In the country about York, and generally beyond the Humber, the popular music resembled that of Wales, organ was the instrument used in sacred music. The harp, used as an accompaniment to the popular ministrels, was the most common matrument in Scotland, Wales, and Ireland; and there were but few others in those countries. "The Irish," says the writer just quoted, I "use only two musical instruments—the harp and the timbrel; the Scotch use three—the harp, the pib-corn, and the bagpipe. The Irish harps have brass strings." "It is the opinion of many," he adds, "that the Scotch music at present not only equals, but even very much excels the hish; for which reason they go to Scotland as to the fountain-head of perfection in

that art." The English were acquainted with a

greater variety of instruments—a fact which may

be accounted for by their more intimate and exten-

sive intercourse with the continent.

## CHAPTER VI.

## THE HISTORY OF MANNERS AND CUSTOMS.

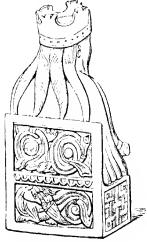

E shall begin the present chapter as we did the last under the same title, with a notice of the few facts that are to be collected respecting the furniture of the houses and other domestic accommodations of the period. In as far as we can judge from the Bayeux Tapestry and

the various illuminated MSS, of the eleventh and twelfth centuries, it would appear that very few additions or improvements were made by the Normans to the stock of English household furniture. We perceive the same description of tables, long and oval, bearing the same sort of plates, dishes,

cnps, and knives; the fowls and roast meats being still served up upon the spit to the guests scated at the festive board. In the reign of King John we  ${f A}$  mark of gold is find mention of saltcellars. ordered in the Close Rolls to be furnished to make a saltcellar for the king's use; and twentynine shiftings and sixpence to be paid for a silver saltcellar, gilt within and without, chairs of state, the scats of regal and ecclesiastical personages, are similar to those already described of the Anglo-Saxons; and though some appear to be more claborately carved and ornamented, it is a question whether such was, indeed, the fact, or if the improvement is not rather in the art of the delineator than in that of the maker of the article itself. The chairs in which are scated the kings and bishops of the set of chess-men of the twelfth century, found in the isle of Lewis, in 1831, and engraved in the 24th volume of the

CHAIRS. Ancient Chessmen, from Specimens in the British Museum.

CRADIER, Royal MS. 2 B. vii.

Archæologia, are amongst the best specimens of the ornamental carved furniture of that period. The hangings of needlework and embroidery which adorned the walls of the Anglo-Saxon palace seem to have been partially superseded in the course of this period by the fashion of painting on the walls themselves, or the wainscot of the chamber, the same historical or fabulous subjects which had intherto been displayed in threads of colours and gold; for in the early part of the reign of Henry III., as mentioned in a preceding page, the sheriff of Hampshire is commanded to take care that the wanscoted chamber of the king in the castle of Winchester be painted with the same histories and pictures with which it had been previously painted, thereby showing that this style of decora-

Cur found in the Ruins of GLASCONBURY ABBRY.

tion had been introduced prior to that date. Thus, says an old French romance:

" Lors cambres et lors grans sales font tambroissier peindre et

They caused their chambers and great halls to be wainscoted and painted with figures.

In the 23rd volume of the Archæologia is engraved one of a pair of candlesticks of the twelfth century, now at Goodrich Court. . They are of copper, engraved and gilt, and ornamented with enamel of seven colours let mto the metal, displaying figures of men, women, and animals. They have spikes at top, on which the candles were fixed, the socket to contain them being of much later date.

Limoges, in France, was celebrated as early as 1187 for the art of enamelling; and boxes, cups, and dishes, ornamented like the candlesticks above mentioned, are occasionally met with, and may be considered of the same period.

Ypres, in Flanders, was equally famous before the year 1200 for its manufactures of fine linen, and from thence the term Diaper, or D'Ypres, i.e. of Ypres, which was afterwards applied to all similar cloths wherever fabricated. Thus, in the 'Roman d'Alexandre,' written about 1200, we find the expression "Dyapres d'Antioche," and we may presume the napkins and cloths of the Anglo-Normans were scarcely inferior to those of the present day. In the Close Rolls of the reign of King John

forty-nine shillings and eight pence halfpenny are ordered to be paid for three pieces of taffety and one and a half of fustian, and five pounds of silk or line cotton for three couches or beds for the king and for the workmanship of the same.

Linen sheets were also used at the same period: there is an order to the sheriff of Sonthampton to deliver to Norman Esturmy, the king's valet, amongst other gifts, because he had become a knight, a couch or bed, and a pair of linen sheets.

Slender as the information is that we possess upon this subject, it affords some indications of the advance of refinement; and if our materials were more ample we should no doubt find that the augmentation of wealth and the improvement of taste made themselves visible in many more particulars than we can now discover, though it is not probable that the progress of comfort and elegance in either the useful or decorative furniture of the houses of the period at all corresponded to that which took place in the magnificence of their external architecture. The art of architecture was fostered by the passion for erecting ecclesiastical buildings into what we may almost call a premature development as compared with any of the other arts,-certainly as compared with those whose province it is to minister to the convenence of the great body of the people. But the spirit of show which belonged to the time found ample oppor-

<sup>•</sup> To disper was also understood in heraldry to signify the mode of covering the field with a pattern of flower-checquers or scroll work to independent of the charge placed upon it. The shield of Robert de Verg. Earl of Oxford, engraved in Stothard's Monumental Effigies, exhibits a fine specimen of this-style of ornament.

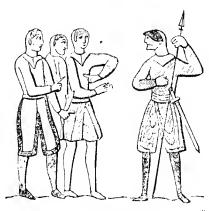

tunity of displaying itself in what we are next to describe, the fashions of dress which prevailed, and which had adready acquired not a little of the mutability for which this characteristic is still proverbial above all other fashions.

The Angles Sygns during the reign of Edward

The Anglo-Saxous during the reign of Edward the Confessor had aped so much the dress and

between the two nations in their appearance, if we except that produced by the singular fashion amongst the Normans of not only shaving the upper lip as well as the rest of the face, but also of shaving or cropping the hair at the back of their

Conquest, little difference seems to have existed

that the army of William appeared to be composed wholly of priests."

The general habit of the Normans consisted of the tunic, the cloak, the long tight hose, called by them chauses, the leg bandages and shoes, or short boots. A greater variety of caps appear in the Anglo-Norman illuminated MSS.; but the Pluygam-shaped and a flat sort of bounet, like that of the modern Scotch, are those most frequently

 William of Malmsbury, lib. in and Wace, Roman de Rou, William de Percy, who came over with the Compueror, was called Alsgermon, i.e., with the whiskers, from his not being shaven so closely as the rest of the Normaus.

met with. The Saxon subjects of William contunied for some time after the Conquest to be distinguished by their long flowing locks and the rich embroidery of their dresses.\*

In the female costume the change was more in name than in garment. The gunna or gown became the robe, and the veil or head-cloth the courre-chef, from whence the modern word kerchief. The hair is rarely seen in illuminations of this period, but occasionally it appears long, and sometimes platted, after the ancient Gothic or in the

modern Swiss fashion. During the reigns of Rufus and Henry L. the dress of the higher classes became much more costly in material) and extravagant in shape, Some most richculous fashions are reprobated and caricatured by the historians and illuminators of that period. The sleeves of the tumes were made long enough to cover and hang considerably below the band. Peaked-toed boots and shoes of the most absurd shapes, some terminating like a scorpion's tail, others stuffed with tow and curling round like a ram's horn, are mentioned by the monkish historians. Orderiens Vitalis says they were invented by some one deformed in the foot. The martles and tumes were worn much longer and fuller, and the former lined with dhe most expensive firs. Hency I is said to have had one presented to han by the Bishop of Luncoln, lined with black sable with white spots, and which

The English now, both Saxon and Norman, suffered their han to grow to an immoderate length instead of being cropped ridiculously short; and William of Malinsbury, who has previously complained of his countrymen having unitated the latter fashiou, now laments over the long hair, the loose flowing garments, the pointed shoes, and effeminate appearance of the English generally. Even long beards were worn during the reign of Henry I.; and Orderseus Vitalis compares the men of that day to "filthy goats."

cost 100%, of the money of that day,

Anselm, Archbishop of Canterbury, refused his beachetion on Ash Wednesday to those who would not cut their hair. Councils were held on this important matter. The razor and the seissors were not only recommended ex cathedra, but positively produced sometimes at the end of a sermon, against the sinfulness of long locks and curling moustaches. Serlo d'Abon, Bishop of Seez, on Easter Day, 1105, after preaching against beards before Henry I., cropped not only that of the king but those of the whole congregation with a pair of scissors he had provided for the ecasion. nothing could long repress these fashious, which in the time of Stephen again raged to such an extent

those whose ringlets were not sufficiently luxurious added fidse hair to equal or surpass in appearance their more favoured brethren. The female dress of those times appears to have

 William of Malmsbury.—William of Posetiers.
 † The well known story, told by Wilham of Malmsbury and Robert of Hoster, of Rufus, that he threw away with disdain a pair of new hose because they only cost three shillings, is very characteristic.
 "A king," said he, "should not wear anything so cheap; fetch no some unith more desirable. me some worth a mark of silver!

r kadmer, p. 23. § At Limoges, in 1031; by Pope Gregory VII., in 1073; and at Ronen, m 1095.

surcote (surcoat) was worn as an upper robe or tunie, as its Latin name implies (super-tunica); and the under garment was laced up the front, a custom often alluded to in the iomances of the twelfth and thirteenth centuries. In an illuminated manuscript of the close of the eleventh century,\* the sareastic painter has represented the devil so attired; the skirts as well as the sleeves of the robe being tied up in knots; as before mentioned. The surcoat was frequently richly embroidered, and the edges escalloped or indented, a lashion exceedingly prevalent during the middle ages, and which provoked many legislative attempts to put it down. first enactment against its being followed by the lower classes appeared during the latter part of the reign of Henry II. The bair was still worn in

With the reign of Henry II. a more becoming and graceful, although equally splendid style of attire, seems to have made its appearance. The monumental effigies, which begin now to afford us their valuable information, exhibit the sovereign and the nobles of this period in full and flowing robes of a moderate length, girded with a richly " Cotton, Nero, C. iv.

long plaited tails, and sometimes encased in a

sort of silken pipe, or bound with ribbon like a

ornamented waist-belt, mantles fastened by fibulæ on the breast or on the shoulders, chausses or long hose, and shoes or boots, the latter sometimes beautifully embroidered, caps of various forms (the Phrygian style predominating), and jewelled gloves. In the illuminated manuscripts we still see the leg bandages crossing each other all the way up the leg from the very point of the toes, sandal-wise, as they are seen in the latest Saxon and carliest Norman manuscripts, the Bayenx Tapestry, &c. They are generally represented as made of gold stuff or leather. Henry H. introduced, or, we should rather say, re-introduced the short cloak of Anjou, and was in consequence survained Conitmanteau or Curt-mantell; and also the old Norman fashion of close cropping and shaving, which was adhered to pretty generally till the latter part of the reign of Richard I., when the beard and moustache were agam worn,

In the reign of John the lasty were at length liberated from all legislative interference upon this point, and allowed to consult their own fancy or convenience. The hair in the reign of King John was curled with cusping-irous, and bound with fillets or ribbons; the beaux of the day wearing no caps, in order that its beauty might be seen and admired.

EFFIGY OF HENRY II. from the Tomb at Fontevraud.

from the Tomb at Fontevraud

BERENGARIA, QUEEN OF RICHARD I., from the Tomb at Fontevraud.

or having set them the example (for we confess we have no authority for deciding that part of the question), appear in the reign of Henry II. to have discarded their long cuffs and trailing skirts, their knotted sleeves, kerchiefs, &c., and adopted a more rational appearance altogether. The robe, like that of the men, girdled round the waist, and having long but tight sleeves reaching to the waist, a mainle gracefully depending from the shoulders, and the hair again almost entirely concealed by the veil, kerchief, or wimple, which is frequently brought together under the chin, or fastened by a band passing beneath it, give altogether a conventual appearance to the costume.

The ladies, following the example of the men,

There is nothing requiring notice in the ecclesiastical costume of the present period, except that the form of the nutre begins to approach that now in use. The armour of the Anglo-Normans, judging

from the figures in the Bayenx Tapestry, does not appear to have differed very materially from that of the Saxous. During the eleventh century the hauberk of flat rings sewn upon leather, or of small pieces of iron similarly secured, was apparently the defensive body armour of the Saxons, the Danes, the Franks, and the Normans. It was called, as we have observed, the gehringed byrne by the first, brynto by the second, and by the Normans halbers and haubert, or hauberk, Lutinized halbercum, the word being generally derived from halsberg, a protection for the throat; and as at this period we perceive that the mailed tunic is formished with a cowl which protects the neck behind, and is hooked up occasionally over the clim, and fastened to the nasal before, it may owe its Norman denomination to that additional safeguard. The word mail, too, so farmhar to our ears, is of this period, the French word mailles being derived, according to some authors, from the Latin macula, sometimes used for the mesh of a net.\*

Mascled Armour. - Seal of Milo Fit. Walter, Constable of England and Governor of Gloucester under Henry I.

try, and in the illuminated manuscripts of this period, appear marked with transverse lines, which,

\* There is a British word mack, signifying iron generally, but it may have had the same derivation.

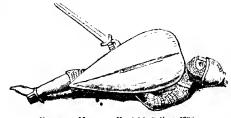

EXAMPLES OF MASCLED ARMOUR. Cotton MS. Caligula, A. 7. The Illumination represents the Slaughter of the Innocents.

if they were not intended to depict the quilted panzar worn by the Danes, and therefore most likely by the Normans and Saxons also, would seem to be lozenge-shaped pieces of iron or steel sewn, like the rings, upon a leathern or woollen foundation; a species of defence which Sir S. Meyrick has denominated muscled armoin,\* and which still more resembles the meshes of a net. Instances of that peculiar mail composed of rings set up edgewise, which came generally into use towards the close of the twelfth century, occur as early as the close of the eleventh.

In Kerrick's collection of notes and drawings in

the British Museum, there is a highly curious sketch of the marble figure of a knight under one of the lions which support the choir of the cathedral of Modena, armed in a hauberk of rings set edgewise, the front hooked up to the masal of the helmet, which is of a very early shape, and laced or buckled under the throat by double thougs of leather. His shield is of the pear or kite shape, and has a ridge down the centre like that of King

KNIGHT OF MODENA. Kettick's Collect. 6738.

Stephen on his great seal. The long-pointed shee, the prick spur, and the great breadth of the sword-blade near the hilt, are all indicative of a period corresponding with that of our early Anglo-Norman monarchs, Rufus, Henry I., and Stephen.

• Vide Letter on the Body-armour anciently worn in England. Archeologia, vol. xix.
† Mr. Kerrick remarks, in his note to this sketch, "I take this to be the most ancient figure I have yet seen in carving." the ancients, was also worn during the eleventh and twelfth centuries, and in some instances the overlapping plates are of a square form, instead of being rounded or plumated. This description has been denominated by Sir S. Meyrick the tegulated, -and a specimen is presented in the seal of Richard, constable of Chester, temp. Stephen.

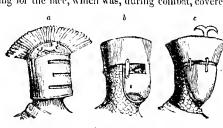

Scale armour, the *lorica squamata*, in fact, of

Seal of Richard, Constable of Chester in the time of Stephen

Anna Commena mentions the French knights at the close of the eleventh century as wearing both ringed and scale armour; and Bohadai, the Saracen historian of the Crusades, describing the infantry of Richard I. says, "they were covered with thick strong pieces of cloth, fastened together with rings, so as to resemble dense coats of inail.\*

The Anglo-Norman behind was conical, with a nose-guard, called the nasal, to which, as we have remarked, the front of the collar of the hanberk was occasionally looped up, so as to leave no part of the face exposed but the eyes. Check-pieces were afterwards added; and in the reign of Richard I, we find the helmet assume a cylindrical or barrel shape, flat at the top, with an oval opening for the face, which was, during combat, covered

AVANTAILES. a Helmet of Richard 1 b Baidwin, Count of Flanders, 1193.

with a perforated plate or grating, removable at pleasure, and called the avantaille or rentaille.

Vide Turner's Hist of Eng., vol. 1. p. 382, note.

In some lately discovered perfect impressions of the second great scal of Richard I., the monarch's helmet of this form is surmounted by a sort of crest composed of a semicircle of rays or points, in the centre of which is portrayed a hon passant gardant. The shield was, from the time of the Conquest to that of Henry II., of the form called kite or

Geoffrey Prantagener. (Le Bel.) Kenick's Collect. 6728.

pear-shape; and, from its similitude to those seen in the Sicilian bronzes, is imagined to have been brought by the Normans from that part of Europe after their Italian conquests. Those in the Bayeux Tapestry are perfectly flat, and ornamented with rude figures of animals, crosses, rings, &c. the time of Stephen it appears curved, but destitute of heraldic bearings. On the first great scal of Richard I. it is considerably shortened, and bent till it is almost a semi-cylinder; and this is the first of our regal seals which presents us with an undoubted armorial bearing,-namely, a lion heraldically termed counter-rampant, i. e., facing the sinister or left side instead of the dexter or right side of the shield. The form of the military standard is shown in some of the great seals, and also by the annexed representation.

A short notice of the rise and progress of English heraldry may here not inappropriately find a place.

Most writers on the subject worthy of attention consider the close of the eleventh century as the period when armorial bearings, properly so called, became the distinctions of the royal and knightly families of Europe; but until the middle of the

WHALAM L and Tonstain bearing the Consecrated Banner at the Bartle of Hastings. Bayeux Tapestry.

twelfth we have no positive authority for their The rude and fanciful existence in England. figures upon the shields of the Normans, in the Bayeux tapestry, can no more be called coats of arms than the better executed lions and griffins on the bucklers of the Greeks and Romans. A monk of Marmontier, who is said to have lived in the reign of Henry L., describes that monarch, upon the occasion of the marriage of Geoffrey Plantagenet, Count of Anjou, with his daughter Matilda, A.D. 1122, as hanging about the neck of his son-in-law "a shield ornamented with little golden lions," and the count is said also to have worn shoes embroidered with similar animals. But neither the number of the hons nor the colour of the field is mentioned, and they are spoken of more as fanciful ornaments than as insignia having any distinct signification, not the slightest allusion being made to the arms of England, of Henry himself, or of any particular family.\*

The shield of Stephen on his great seal is perfectly plain, having only a ridge down the centre; and that of Richard, constable of Chester during his reign, is covered with a pattern resembling the tegulated hauberk he wears. It may be intended to represent that charge which the heralds afterwards called checquy, but we know not who would venture to assert its title to be considered an armorial bearing.

Henry II., on his great seal, presents us but with the interior of his shield.† John of Salisbury, however, who wrote during his reign, speak-

• The words are simply "Clypeus lenneulos aureos imaginatios habors collo ejus suspenditur" (a shield is suspended from his neck, laving upon it the likenesses of hite lions in gold). The same author, speaking afterwards of a combat of this prince, again menutors the lions on his shield,—"Petros leones pracferens in clypeo, veris leonthus nulla etat inferior fortfundo" (bearing painted lions on his shield, his courage was not inferior to that of real flons)—Menestrier, Origine des Armoiries.

on his shield, his courage was not interior to that of real tions)—
Menestrice, Origine des Armoiries.

† A proof, in our oplaton, that it bore no particular device by
which that monarch was distinguished, or the artist would surely
have so disposed the shield as to have rendered the bearing at least
partly visible. The same inference may be drawn from those of
William I. and H., Henry I., and the various knights and abbes of
those reigns, whose seals are extant, on which the interior of the
shield alone is uniformly represented. It is not improbable, however,
that Henry II. may have occasionally borne lions on his shield, as
his father Geoffrey did before him, and thus transmitted them to his
sons, Richard and John.

ing of the luxuriousness and effeminacy of the English knights, says, "if a piece of gold, minium, or any colour of the rainbow, by any chance or blow should fall out of their shields, their garrulous tongues would make it an everlasting memorial;" and, further, he remarks that they "gild their shields;" but he intimates nothing of armorial bearings.

It is nevertheless during the reign of this monarch that the first undoubted description of English heraldic devices occurs. Gulhelmus Brito, or William the Breton, the author of the Latin poem on the exploits of Philip Augustus, called the 'Philippeis,' not only describes Richard Count de Lion, while Count of Poicton, us being recognised by his antagonist, William de Barr, by "the hons grinning on his shield," \* but he also mentions the swallows borne by an ancestor of the Cornish family of Armdel, and which his descendants display to this hour.

The first great seal of Richard I. presents us, as we have already mentioned, with a shield on which is distinctly seen a fion counter-rampant, leaving at doubtful, according to some writers, whether this alone constituted the whole charge of the field, or that the remaining half unseen, in consequence of the curve of the shield, was charged with another hon-rampant, making the device two lious combatant, and therein bearing out the description of the old Latin writer above quoted.

On Richard's second seal, and after his return from captivity, we find his shield emblazoned with three lions passant regardant, us they have ever since been quartered in the English arms. The shield of his brother John exhibits before his accession to the throne two lions passant regardant, and to these a third was added when he became king.

In the reign of Henry III, heraldry appears to have become a science. A roll of arms of that period is in existence, and from that time the principal terms of blazon are to be found in the fabliaux and romances of France and England.

The singular combination of the military and the religions spirit, which forms the most striking characteristic of the prescut period, was especially exemplified in those usages which constituted the system of kinghthood or chivalry. The youth of noble birth was placed, while yet in his boyhood, under the care of some distinguished kinght, in the quality of a page. In this capacity he waited upon his preceptor, by whom he was treated as a son, and carefully instructed in the forms of courtesy and the military exercises. Even the sons of princes attended in this imminer upon kinghts of inferior rank, but redoubted prowers and great military accomplishments, under whose severe instruction they were trained for future enumence.

grade, he was advanced to the rank of squire. He was now perfected in the necessary arts of riding and tilting, and also in the accomplishments of hunting and hawking, and frequently of music; and if war broke out, he then followed the banner of his instructor into actual service. The rank,

but more especially the military renown of the knight, contributed to swell his tram of pages and squires; and while the houses of some might be considered as schools, those of others might be termed colleges of chivalry. Fitz-Stephen describes their pupils during the reign of Henry II.

as exhibiting, on horseback, before the citizens, all the active evolutions of a battle, on the Sundays during Lent. Youths, so educated, and constituting one household, naturally formed strong attachments for each other, and cach selected his future companion in arms, between whom and himself there was from thenceforth to subsist a reciprocity of affection and interest. The connexion between the members of these associations, who were termed fratres conjurate, or swom brothers, often superseded the ties of common re-When the pupil had spent seven or eight years in the capacity of squire, and was considered fit to

lemn and imposing ceremony took place. candidate passed several nights in prayer and watching, in a church or chapel, and the sacraments of religion were administered during this period of probation. At length, when the longed-for day of consummation had arrived, the sacred huilding was arrayed in all its splendour; the youth, accompanied by his patron, his kindred, his friends and companious, and followed by an eager crowd, repaired in procession to the church, with his sword of knighthood dependent from his neck in a scarf; the weapon was blessed by the officiating priest at the altar, and the oaths of the highest order of chivalry were administered. He swore that he would be loyal and obedient to his prince; that he would defend the church and clergy; and be the champion of virtuous ladies, and especially of the orphan and the widow. When he had thus pledged himself to fulfil the duties of a true knight, the warriors of noble rank, or sometimes the high-horn ladies, who attended the spectacle, first buckled on his spurs, then clothed him in the various pieces of a suit of armour, and, lastly, girded his sword to his side. The prince or noble from whom he was to receive the honour of knighthood then advanced, and giving him the accolade, which consisted of three gentle strokes with the flat of a sword upon the shoulder, exclaimed, "In the name of God, St. Mi-

chael, and St. George, I make thee a knight; be

brave, hardy, and loyal !" After the impressive cere-

mony was thus finished, the young cavalier, all

armed as he was, leaping into the saddle of his war-

Ducange.

might aspire to its highest offices and distinctions.\* It is not, however, till an age considerably later that we are to look for the full development of the principles of chivalry; what we have now described of it is perhaps as much of the system as existed at the close of the present period. The knightly virtues inculcated by this course of education, as has been already mentioned, were finally impressed by the solemn sanction of oaths; and chiefly consisted in devotion, in courtesy to females, and in gentleness towards the weak. The general practice of the age, however, and, what is more strange, even that of most of the persons who took apon themselves the vows of kinghts. was certainly very little in accordance with the elevated theoretical morality which was thus taught and professed. Still, amidst the disorder and licentiousness that prevailed, we meet with occasional instances of true knightly excellence, proving that noble principles could not be amounced, even in a form the most fantastic, and in a state of society the most unfavourable, without producing some beneficial effect. The science of heraldry arose naturally out of the usages of knighthood and war. The adoption by each knight of some peculiar mark or cognizance was rendered necessary by the sort of panoply in which he was wrapped up, which otherwise, especially after the introduction of the aventale, or the vizor, would have made it impossible to distinguish him in the fight or the tournament. The Saxon and Norman warriors, therefore, like their

savage ancestors in the wilds of Germany, were

probably early accustomed to wear upon their crests

the figure of some animal. As the parts of de-

fensive armour were multiplied, and chivalry

assumed a more regular form, additional cogni-

zances were painted upon the shield. These were

chiefly animals, or emblematic devices, rudely

delineated, and which seem for a long period to

have been assumed at the caprice of each individual.

At first also, it was, probably, only the individual,

and not the family to which he belonged, that was to be distinguished by the blazonry upon a shield.

The case, however, was altered by the wars of the

the uttermost in the well-fought fields of the East,

while a peculiar sacredness was supposed to belong

to those warlike devices by which the brave knights who were them were distinguished, a feeling of

honourable pride as well as piety induced the son

to assume the hallowed escutcheon of his crusading

parent; and thus the bearings upon the shield, from

a merely personal, became a family and hereditary

distinction. It was from this period that heraldry as-

sumed the form of a regular science, while the bezant, \* Mémoires sur la Chevalerie, par M. de St. Palaye, tom. i.

the crescent, and other Asiatic emblems, became its choicest distinctions. Contemporaneously with this practice on the part of the princely and lordly leaders, the natural custom was copied by such of their followers as were by their bath entitled to that privilege, of adopting all or a part of the military distinctions of their patron. Those who had followed the banner of a distinguished noble, or who even held lands of him as their lord, thus indicated the illustrious house with which they were connected, and perpetuated the tie to their posterity. When a motto was added to the figures upon the shield, it was generally taken from the war-cry with which the leader summoned his followers to the rescue or animated them in the conflict. As for the erest, it does not appear to have been used at this period as a family cognizance. It was only when the refinements of heraldry had so overloaded the shield with figures as to make its frequent defineation a work of labour and difficulty that the crest was adopted as the more summary distinction of a noble family.\*

It does not appear that the Normans assumed family names at the same time that they adopted family escutcheons. The former distinction was as yet unknown even to the royal house, and such additions as the Bastard, the Red, the Fine Scholar, the Son of the Empress, the Lion-heart, and the Landless, were the only surnames by which the proud sovereigns of the Norman race were distinguished. We find, however, that their chief vassals had been, from an early period, accustomed to use an addition to their Christian name, as may be seen by the roll of Battle Abbey. This was generally derived from the birthplace or patrimontal possession of the individual, on which account so many names of our noble English families are derived from towns or estates upon the Sometimes, also, the office held at court supplied the possessor with the necessary distmetion, such as the Steward, the Seneschal, the Warden, &c. What is properly termed a familyname, however, was scarcely introduced within the present period. The nearest approach to it was the assumption of the father's Christian name in addition to his own, by which the man who perhaps had neither office nor landed property, still aunounced his Norman descent. The only species of surname known among the English, for some time after the Conquest, appears to have been an epithet descriptive of some quality of the individual, distinguishing him from others of the same baptismal name. But this addition was not regarded as a family name, and did not descend to the posterity of the person who bore it. The generality of the people had only one name. The Normaus, on the contrary, soon came universally to assume second names, usually commencing with a De, or Le, or Fitz (that is, Fils, or son), taken either from the estate, the birth-place, the office, or the immediate parentage of the individual, till it became a mark of low birth or of bastardy to be

without such a distinction. Thus, it is related by one of the old chroniclers that the daughter and heiress of a great lord, named Fitz-Haman, refused at first to give her hand to Robert, the bastard son of King Henry L, for no other reason except that he had no second name. "My father and my grandfather," said the lady, "had each two names, and it were a great shame to me to marry a man who has only one." This was, in other words, declaring that she would not consent to accept the husband proposed for her until the stain of his illegitimate birth should be as far as possible wiped off. The king on this gave him the surname of Fitzroy, which amounted to a district acknowledgment of him for He is the same who makes so great a figure in the succeeding reign under the title of the Earl of Gloncester, and who, if he was not, as Camden has called him, "the only worthy of his age in England," was certainly one of the very few characters entitled to that epithet, and the first of those few. During the ages of chivalry, personal distinction

was eagerly attempted to be secured, not merely by names and heraldic insignia, but also by numerous and splendid retinues; these formed the guard of the prince or noble in war and his ornament in peace; and as the Norman chiefs, from their national liabits as well as the immense possessions they acquired in England, were able as well as willing to indulge in this species of ostentation, we find that their attendants were sometimes multiplied to an incredible amount. But, after all, these cavalcades more resembled an Asiatic caravan toiling through the desert than a well-ordered princely procession. Such was the case even at the court of Henry II, incontestably the richest and most powerful monarch in Europe. Peter of Blois, in one of his letters, gives a description of one of these royal processions, which is sufficiently startling to every idea of modern refinement. There were knights and nobles,—througs of cavalry and foot-soldiers,—baggage-waggons, tents, and packhorses,-players, prostitutes, and the marshals of the prostitutes,—gamesters, cooks, confectioners, numics, dancers, barbers, pimps, and parasites,-and in the rising at morn of this tremendons medley to commence the march of the day, he adds, that there was such justling, overturning, shouting, and brawling, that you would have imagined hell itself had let loose its inhabitants. Such was the real squalidness that lay beneath so much superficial glitter; a kingly array was but a mob, in which everything pertaining to taste and order was imknown or disregarded. The train of Becket, notwithstanding the waggons of alc, and furniture with which it was encumbered, and the monkeys on horseback,\* was immeasurably superior in point of dignity and true elegance to that of his royal master, and perhaps was the choicest specimen of this kind of magnificence which the taste of the age could have produced. When a royal procession travelled through the country the purvevors swept the district in every direction of its provisions, which, in virtue of the prerogative, were seized for the king's use at any price they

chose to offer; and the powerful barons were not slow to imitate the example of their sovereign. The greatest of the English nobles travelled with trains scarcely inferior to that of the king; and, in

time of war, their retainers composed formidable William Longchamp usually travelled, in the time of peace, with above 1000 horse; \* and we may suppose that the same vanity operated through all the inferior ranks of nobles down to the knight who could innister a few spears under his pennon, and that in most cases there was the same want of order, economy, and elegance. are not, however, to attribute this mode of travelling altogether to a passion for show and magnificence. From the scarcity of places for the entertainment of travellers, and the wild state of many parts of the country, it was often difficult to find the articles of subsistence, or at least the instruments with which to cook them; and even materials for setting up tents in which they might lodge had to be provided and carried along with them by personages undertaking any considerable journey with a numerous train of attendants. During part of this period, also, in the reign of Stephen, the land was dotted with fortresses, the abodes of predatory nobles, who were ready to dart out upon those whom they were able to outnumber, while the forests, on the other hand, embosomed numerous bands of Saxon outlaws who regarded every Nor-

Normans, indeed, introduced a more stately and durable style of architecture than had hitherto been practised in the island; and it is probable that, with these exterior improvements, they added largely to the elegancies and comforts of domestic But still this improvement was only comparative, and, in its best condition, was sordid and poor when measured by the present standard of Thus the stately palaces and castles of those days had no better carpets than a litter of straw or rishes, and no better beds than a rug hid

combination of grandeur and discomfort.

upon a weeden bench, or spread upon the floor. The kingly or noble banquet, although it blazed with a rich profusion of gold and silver plate, could not even furnish the necessary accommodation of a tork; the fingers of the eaters were thrust into the rich dishes, or employed in tearing the flesh into morsels; and the luxuries that were collected at the greatest expense were laid upon a huge table of plan oak, while the princes and lords sat upon clumsy benebes, and partook of the good cheer. Several English estates were held upon the con-

they were actually at table, may, sometimes when they were asleep on their rugs, the marshals would come in with violence and abuse, cat their horses' halters, tumble their baggage out of doors without any distinction, and (with great loss to the owners) turn them out of their lodgings shamefully; and When we descend from the public to the domesthus, when they had lost every thing which they tic life of this period, we find the same nucouth had brought for their comfort, at night they could not, though rich, find a place to hide their head in."\* The Normans, however, are stated to have introduced into England a fashion of more delicate living and solemn banqueting than had previously been known in the country. The Saxons, as we have already seen, were a people of large and gross

appetite, who spent the chief part of the day at feasts, in which excess was considered to compensate for elegance; while their thirst was at least commensurate with their hunger; so that drunkenness had become their national reproach. The Normans, on the other hand, notwithstanding their Danish descent, appear to have, in a great degree, renounced the coarse habits of their ancestors; so that at their arrival in England, their moderation and refluement in eating and drinking distinguished them from the natives. This is testified, not only by incidental hints of the mode of living that are scattered through the writings of the period, but by the express testimony of William of Malmsbury. He tells us that the Normans were delicate in the choice of meats and drinks, but seldom exceeded the bounds of temperance; so that they lived with greater eleganec, and at less expense

than the English. Peter of Blois, indeed, would

seem to intimate that, by the time of Henry II.,

whence he collected all that was rich and difficult to be procured for the farmishing of his table. The same anthor also mentions that he was present at a great entertainment where there were served up the choicest luxuries of Babylon and Constan-

Lever a cinque, diner a neuf, Sonper a cinque, coucher a neuf, Fait vivre d'ans nonante et ucul. To rise at five, to dine at nine, To sup at live, to bed at nine, Makes a man live to minety-nine. Among a people so choice in their diet as the Normans are declared to have been, we can imagine that cookery, as a science, was held in particular estimation. We find, accordingly, that some of the English estates were held by the termine of dressing a particular dish. Among the dishes of which the names are recorded we find Maupiquenun, Diligrout, Karumpie;\* but we are ignorant of their particular composition. Indeed, of their preparations in cookery in general, nearly all we know is, that rich spices were plentifully used in the greater part of them. Among their most esteemed dainties seem to have been the peacock

and the erane; the former of which was only produced at solemn chivalric banquets, while the latter was served up at the common meals of the Norman princes. The hoar's head was regarded as a truly regal dish; and we are told that it was brought to the table of Henry II. in great pomp upon the coronation of his son, and, as it was brought into the hall, musicians went before it sounding upon their trumpets. The bread which was used was of various kinds. The panis piperatus was a sort of spice-cake composed of the finest flour; and, at the tables of the

in general use.

with cider, perry, and ale. Excess in the use of liquor still continued to form the national vice of the Saxons, as we find from the revival of the laws against "drinking at pms;" which were especially directed against their rural clergy. But whatever the refinements in Norman gastronomy may have been, we are justified in suspect-

common people were contented with their brown

banquets and solemn occasions. Peter of Blois, in one of his letters, speaking of the wretched accommodation afforded to those unfortunate knights and nobles who attended the court of Henry H., says, "I often wonder how one who has been used to the service of scholarship and the camps of learning can endure the aimoyances of a court life. Among conflicts there is no order, no plan, no moderation, either in food, in horse exercise, or in watchings. A priest or a soldier attached to the court has bread put before him which is not kneaded, not leavened, made of the dregs of beer; bread like lead, full of bran, and mabaked; wine spoiled either by being sour or mouldy,—thick, greasy, rancid, tasting of pitch, and vapid. I have sometimes seen wine so full of dregs put

unlucky guests are sick or dead, provided there are fuller dishes sent up to their masters' tables. Indeed, the tables are filled (sometimes) with carrion, and the guests' stomachs thus become the tombs for those who die in the course of nature. Indeed, many more deaths would ensue from this putrid food, were it not that the famishing greediness of the stomach (which, like a whirlpool, will suck in anything), by the help of powerful exercise, gets rid of everything. But if the courtiers cannot have exercise (which is the case if the court stays for a time in town), some of them always stay behind at the point of death." \* We have seen from the proverh quoted above,

that the customary hour of retiring to rest in England was nine o'clock in the evening; and it has heen commonly supposed that, by a regulation established by the Conqueror, the people were compelled to put out their fires and all other lights on the ringing of the eurfew-bell (or courre-feu,

a portion of his remains for sepulture. The body of young Henry, the junior king (son of Henry 11.),

was wrapped up in those linen clothes that had been

used at his coronation, and upon which the sacred oil

had flowed. But the most splendid of all the royal

finerals in England, during this period, appears to

have been that of Henry II., which is particularly described by Matthew Paris. The body was

arrayed in royal robes; the face was uncovered,

and the head was adorned with a golden crown; the hands were covered with gloves, and the feet

with shoes embroidered with gold-work; spurs were buckled to the heels, and a sword was girded

upon the side of the dead, while the fingers, on

one of which was a large ring, were closed upon a

lead; at least such is stated to have been the case

with that of Stephen. As kings were thus buried

with the insignia of their rank, the same rule was probably followed in the finerals of the nobility.

At all events we know that it prevailed in the

sepulture of coclesiastical dignitaries; primates,

bishops, and abbots were always placed in their graves attired in their canonical roles, and having

beside them the several symbols of their rank in

in the royal, noble, and common burials, during this period, and by which the living endeavoured

to display their respect and affection for the dead. But the case was very different with those who died under excommunication. The body, now

died under excommunication.

Such were the practices that generally prevailed

the church. \*

The royal coffins seem to have been lined with

the Conqueror. The curfew appears to have prevailed in early times not only in England, but in Scotland, France, Spain, Italy, and perhaps most of the other countries of Europe; and it was pro-

that any such regulation as this was introduced by

bably in use in England, as elsewhere, long before the Norman Conquest. Such a regulation was rendered expedient by the combustible materials of which the houses were generally composed, and the frequency of conflagrations in the towns and villages. Notwithstanding the precaution of the curfew law, Fitz-Stephen, in his account of London, mentions frequent fires as one of the great inconveniences of the metropolis. It may be added that the curfew was continued in England as a useful police regulation till after the beginning of the sixteenth century. In the article of popular superstitions, both the Normans and Saxons might furnish a chapter sufficiently copious. From their northern descent,

their ancient traditions, their recent and imper-

feetly understood Christianity, and the habits of a

chivalrous life among the great, as well as the general rudeness and ignorance of the common people, the path of their existence was bestrown with omens, prodigies, and superstitions observ-People were afraid to meet a hare in their path, as the omen of some coming calamity. woman with dishevelled hair, a blind man, a lame man, or a monk, were all, strangely enough, regarded as equally indicative of misfortune. the contrary, if a wolf happened to cross them, if St. Martin's bird flew from left to right, if they heard distant thunder, or met a hump-backed or leprous man, these omens were considered as promises of good fortune.\* We find that certain particular forms characterised the practice of sepulture at the present

period. The nearest relative, as in the earliest ages of antiquity, closed the eye-lids of the dead. The face was then covered with a linen cloth, and afterwards the body was washed, anointed, and laid out for burial. A suit of apparel which the deceased had been accustomed to wear frequently, sufficed for a shroud; the body was carried to the place of interment upon the shoulders of the mourners, or, when the distance was considerable, upon a sledge or car; and, commonly, the remains were deposited in the grave without the protection of a coffin. We do not find coffins in general use until the reign of Henry III.; and for some time before this date they seem to have been confined to people of high rank. at first they were dispensed with even in the ease of princes themselves. The Conqueror appears to have been interred in this primitive fashion, except that the grave itself was a sort of chest or

coffin formed of solid masonry. A more decent

and respectful ceremonial was observed in the

regarded as the special property of Satan, was viewed with fear and abhorrence; no sacred earth could receive it, or hallowed rites be performed over it; it was thrown forth like a polluted thing, or hurried into some obscure spot, and interred in silence and secrecy by those who were ashamed of so humane and necessary a deed. Thus, in the case of an unfortunate Templar, during the reign of Henry I ., - one Geoffrey Mandeville, who had been excommunicated, and who had died without being reconciled to the church,-it is related that his brethren, equally afraid to hury and unwilling to degrade the corpse of their departed member, adopted a singular compromise by which it might he reduced to its kindred dust within their sacred precincts. They inclosed the body in a pipe or coating of lead, after which they hung it upon a tree in the orehard of the old Temple.+

in this, his favourite recreation, that the rayal chases were guarded from the intrusion of both Saxon and Norman by the severest penalties: every offender detected in hunting the king's deer was subjected to the loss of life or limb; and the dog that strayed into the king's enclosures was lamed by the amputation of one of its claws, unless redeemed by the owner. The nobles followed the example of their sovereigns by surrounding extensive parks with walls, for the preservation of game; in doing which they frequently, by a lawless exercise of power, drove the unfortunate peasantry

from their meadows, fields, and pasture lands; and when these ferocious hunters burst through enclosures and swept over corn-fields in pursuit of the flying deer, the wretched cottagers were compelled to hurry to their doors with provisions and refreshments, lest they should be reckoned disaffected, or punished as traitors.\* The Conqueror, in his paternal fondness for wild beasts, is said to have collected and imported many from abroad, with which he stocked the New Forest.

As the habits and interests, however, of the

HISTORY OF ENGLAND. two races became more closely united, the 'lawlessness of these tyrannical Nimrods was restrained,

and after the reign of Rufus the severity and restrictive character of the game-laws were considerably abated. It has been already mentioned

that, by a charter of Henry 1., the citizens of

London were allowed to have their chases to hunt as well and fully as their ancestors had had, in the Chiltern hundreds, in Middlesex, and in Surrey. The Norman prelates and clergy, it would appear

from the records of the times, were as keen luinters as the laity. Fersales, also, seem to have sometimes pursued this diversion. Hawking was another favourite sport of this period. This amusement had been keenly followed in Eugland before the period of the Conquest; so that, by some writers, the cause of Harold's unfortunate voyage to Normandy is attributed to the straying of a favourite falcon which he wished to recover; and in the Bayeux Tapestry, as we have seen, he is represented as journeying to the court of William with one of those birds on his wrist. After the Conquest the common people seem to have been prolubited even from keeping hawks; to hunt with them was considered an

amusement fitting only for kings and nobles. Thus

those hirds became as distinct marks of high wink as the spurs of knighthood or the emblazonry

upon a shield. The nobles carried their favourite

falcons along with them on journeys, and even to

time prevailed throughout Europe, will account for

These feelings and habits, which at that

the extravagant conduct of Richard when he seized by force, as already related, the splended hawk of the peasant in Calabria.\* By the Great Charter, however, granted by King John, hberty was given to every freeman to have in his woods eyries of hawks, spar-hawks, falcons, eagles, and herons. Stores of good hawks were generally kept in the monasteries for the recreation of their reverend immates; and many of the ecclesiastical dignitaries were so enamoured of the sport of hawking, that one of the favourite topics of declamation with the censors of the manners of the time was the conduct of those pastors who cared for birds, not sheep (aves, non oves), and hallood the falcon upon its quarry with the same voice that had

been consecrated to chant the praises of God.+ From the gentle exercise which this sport promoted, it seems to have been endeared not only to churchmen, but also to the female sex; and in the twelfth century we find that they excelled the men in dexterity in hawking;—a proof, says John of Salisbury, that it is an effeminate amusement, When the hawk was earried it was generally upon. the wrist, which was protected by a thick glove; the head of the bird was covered with a hood, and its feet were secured to the wrist by straps of leather called jesses, and to its legs were fastened small bells toned according to the musical scale.

he says, "is to be run by this sort of horses (hackneys and war-steeds), and perhaps by others which also, in their kind, are strong and fleet, a shout is immediately raised, and the common horses are ordered to withdraw immediately out of the way. Three jockeys, sometimes only two, according as the match is made, prepare themselves for the contest (for such, as being used to ride, know how to manage the horses with judg-

ment): the grand point is to prevent a competitor

that of horse-racing. Fitz-Stephen has given us a

description of the London horse-races, which were

held in Smithfield, then, as in the present day, the great cattle-mart of the city. "When a race,"

[Book III.

from getting before them. The horses, on then part, are not without emulation,—they tremble, are impatient, and continually in motion; and at last, the signal once given, they strike, devour the course, hurrying along with unremitting velocity. The jockeys, inspired with the thoughts of applause and the hopes of victory, clap spurs to the willing horses, and brandish their whips, and cheer them with their eries. You would think, according to Herachtus, that all things were in motion, and that the opinion of Zeno was certainly wrong, as he held that there was no such thing as motion, and that it was impossible to reach the goal."\* But the chief of all the amusements of those ages, and that which was the most characteristic of the chivalric period, was the tournament. The origin of this great military spectacle is lost in the darkness of the middle ages; but we find that tournaments were practised in France and Normandy previous to the Norman conquest of Eng-It might have been expected, that after the

Norman invasion they would have been speedily established in England; but instead of this, we find that William and his immediate successors absolutely forbade them. The reason assigned for this prohibition was, the expense and danger with which tournaments were attended. But it may be suspected that the true reason was of a different kind. It is probable that the Norman kings apprehended danger from such concourses as those which a tournament would have occasioned, where the hard-ruled nobles would have learned their own strength, and found every facility for plotting against their sovereign. During the unsettled reign of Stephen, when the toyal authority was relaxed, these prohibitory laws were disregarded, and tournaments were frequently held by the nobility, at which it is probable they alternately conspired against him and his rival Matilda, as circumstances inclined them. This license, however, with many others, was restrained on the accession of Henry He revived the prohibitions that had formerly been in force; so that his sons, when arrived at manhood, were obliged to repair to the tournaments

on the continent, at which they exhibited the reck-

less daring of knights-errant, and gathered many

trophies of their valour and skill. A partial revival

of the tournament took place in England under

· Translation by Pegge.

however was practised only on a small scale, was \* See ante, p. 483. t Letters of Peter of Blois,

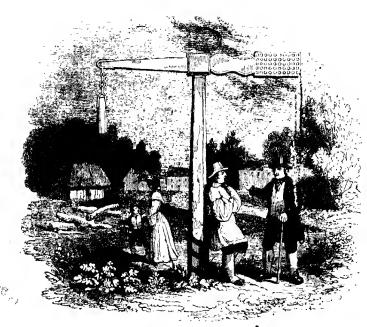

Another of the sports of the time, which as yet

the reign of the Lion-hearted Richard. After his truce with the French king in 1194, he permitted tournaments to be held in his own kingdom, in consequence of having seen the insults and numerous foils which his own unskilful knights had suffered at the hands of those of France.\* however, this chivalrous monarch had the policy to restrict these dangerous assemblages, so that they could only be held at five places in England, which were particularly specified; and as money was at all times welcome to him, he contrived that they should be conducive to the replenishment of his empty exchequer, by compelling those who attended them, as we have had occasion to mention in a preceding chapter, to purchase each a license, the price of which varied with the rank of the party. the same law, all foreigners were prohibited from entering the lists, probably in consequence of their superior experience and skill. From this era, the tournament rose in importance in England, and speed by occupied a prominent place in the national institutions and history.

During the long interval that elapsed before these military spectacles were sanctioned by law, we find that the young students of chivalry in England improved their strength and skill by certain military sports, which still continued to be praetised after the tournament was legalized. One of these was the Pel (in Latin, palus), practised with a post, or the stump of a tree, about six feet in height, which the youth, armed at all points, attacked vigorously on foot; and while he struck or thrust at the different parts which were marked

\* W. Newb.

to represent the head, breast, shoulders and legs of an antagonist, he was taught to cover himself carefully with his shield in the act of rising to the blow. Similar to this was the Quintain, where the attack was made on horseback. A pole or spear was set upright in the ground, with a shield strongly bound to it, and against this the youth tilted with his lance in full career, endeavouring to burst the ligatures of the shield, and bear it to the earth. A steady aim and a firm seat were acquired from this exercise, a severe fall being often the consequence of failure in the attempt to strike down This, however, at the best, was but a monotonous exercise, and therefore the pole, in process of time, was supplanted by the more stimulating figure of a misbelieving Saracen, armed at all points, and brandishing a formidable wooden The puppet moved freely upon a pivot or spindle, so that unless it was struck with the lance adroitly in the centre of the face or breast, it rapidly revolved, and the sword, in consequence, smote the back of the assailant in his career, amidst the laughter of the spectators. Every blow in the centre of the figure was numbered from one to three, according to its ascertained effectiveness in unhorsing a real enemy, while the false strokes that orly sufficed to turn the figure were counted against the player as forfeits. In addition to these exercises, the young squires and pages were taught to career against each other with staves or canes; and sometimes a whole party exhibited on horseback the various evolutions of a battle, but without the blows or bloodshed of a tournament. The clegant practice of riding at the ring, which was an

HISTORY OF ENGLAND.

improvement upon the quintain, was the refine-As for the tournament itself, it was generally

held in honour of some important event, such as a coronation, a marriage, or great national victory; and previous to the celebration, heralds were despatched in every direction to minomice the place of meeting, and invite all good kinghts and true to repair to the solemnity. The joyous summons roused the neighbouring counties—the hut and the eastle equally sent forth their inhabitants, and every

ment of a later age.\*

road to the place of meeting was thronged with those who repaired to the appointed spot as combatants or spectators. Even from distant lands, when the event commemorated was of general nnportance, the noblest in rank were accustomed to attend, either to grace the spectacle by their pre-The space sence, or win honour in the lists. marked out for the combat was a level piece of ground, cleared of every impediment that might annoy the feet of the horses, and stroughy paled in, to prevent the intrusion of the crowd; the inclosure was entered by two gates, one of which was at the east, and the other at the west end of the barriers; and round the whole paling scaffolds were erected for the high-born dames and maidens, the princes, the nobles, and the elected judges of the conflict. A throng of heralds, troubadours, and minstrels, dressed in their gorgeons and picturesque attire, were also present to discharge their

several offices, and give order and solemnity to the assembly. As so much importance was attached to the tournament, various precautions were adopted to prevent the intrusion of the unworthy; the shields of those who were competitors for the honours of the combat were, for some days previous to the event, bung up in the neighbouring church; and if any candidate was charged with an offence against the rules of clavalry, the accusation was sometimes made by a lady touching his shield with a wand. Even when the lists were filled, and when the combats had commenced, the same auxiety was manifested to guard the tournament from profanation; and if a knight behaved himself discourtconsly to the assembled ladies, or infringed upon the fair and chivalrous rules of encounter, he was driven from the inclosure as a recreant by the spear-staves of the combatants. It sometimes happened that a favoured knight was led to the gate of the barrier by the lady of his love, in whose honour he had vowed to contend, and whose colours he wore in his crest and upon his scarf. different kinds of fighting were practised at the tournament. The first was called justing-an encounter performed with the lance; the second was either a close hand-to-hand duel, or a desperate, general pell-mell, in which the combatants, divided into two parties, hewed, struck, and thrust at each other with battle-axes, two-handed swords, maces, and daggers. The simple just was not reckoned

so honourable as the latter kind of engagement,

which properly constituted the tournament. The

\* Strutt's Sports of the English. .

rity which it was qualified to display, and perhaps on account of its less hazardous nature, outlasted the more formidable melée of the tournament, and continued to be practised with sharpened or headless lances till a very late period. The chief excellence of a combatant in this kind of exercise consisted in bearing the point of his spear against the breast or helmet of his adversary, so as to throw Inm backward out of the saddle to the ground—or, failing in this, to shiver his own weapon in the encounter, by which he avoided a similar downfall for himself. The lists, as has been already mentioned, were guarded from intruders; but every kinght or squire who entered them was allowed to bring with him a page, who stood aloof from the contest, and supplied his master, at need, with a sword or trancheon. Such were the laws and usages of the tournament, and the circumstances devised to give them splendour and importance. We now proceed to describe the encounter:-The combatants, in two parties, having entered the barriers, the one by the castern, and the other by the western gate, arranged themselves in order for battle; and at the sonorous cry of the heralds-"To achievements! to achievements!"--they closed their vizors, conched their spears, and impatiently waited the signal of onset. This was given by the president dropping his wand furious Imrthing together of men and horses, the

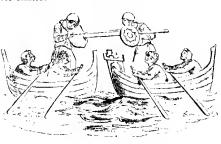

just, however, from the superior grace and dexte-

[Book III.

or truncheon, and the trumpets at the same instant sounding the charge; and then commenced the shivering of spears, and the clashing of helmets and shields. As the conflict proceeded, and the confusion deepened, the ground was gradually covered with fallen knights, some deeply wounded, and others endeavouring to continue the strife on foot; or, where they were utterly disabled, the pages endeavoured to extricate them from amidst the rushing and trampling of the horses' hoofs. When the battle had continued for some time, knight after knight from either party might be seen retiring to the palisade, to open his aventaile, and take breath for a few moments; and it was considered ignoble and unlawful to assail him while so occupied. Ghastly wounds, lameness, and death, generally summed up the disasters of the day; but victory had been won, and the lustre of the wreath was only enhanced by the blood that At the close of each day (for sometimes the tournament continued for several days) the names of those who had most distinguished themselves were proclaimed by the heralds, and the rewards distributed by the ladies; after which, the joys of the banquet succeeded: the successful combatants, after being unarmed by those fair hands that had distributed the prizes, were advanced to an honoured place at the board, where their valour was commended by princes and redoubted warriors, and sung by attendant minstrels. was the nature of that solemn festival, which may be regarded as the great master-piece of chivalry, and by which knightly bravery and skill were improved to their utmost capability. The church, indeed, denounced the tournament on account of the bloodshed with which it was attended, and the priests directed their spiritual thunder against all who engaged in it or favoured it; but this opposition had little effect against a species of amusement so accordant with the whole bent of the spirit and habits of the times.\*

As noble birth was so indispensable a qualification for these beroic exercises, that none under the rank of an esquire could engage in them, the yeomen and burgesses consoled themselves with certain other warlike amusements, in all probability derived from those of the Norman aristocracy; and although these bornely sports were inferior in solemnity and high excitement to the fournament, they were certainly superior in incremient and freedom. One of these was similar to the quintain of the young nobility.  $-\Lambda$  pole was strongly fixed in the ground, and across its top was fixed, to turn upon a spindle, a piece of wood, having at one end of it a board, and at the other a sand-bag. The peasants who repaired to the sport galloped against, the quintam by turns, conching their staves, and striking the board in their rapid career. But indess a dexterous escape immediately followed the blow, the heavy sand-bag at the other extremity came rotated with a furious counterbuff, and struck the tilter between the shoulders, amidst the jeers and shouts of the Another sport in use among the English, and similar to the foregoing, has been called the water-quintain, and is thus described by Fitz-Stephen, as practised by the Londoners. shield was nailed to a mast that was set up in the midst of the Thames, against which a boat was impelled swiftly by vigorous rowers, and a man standing upright in the stern of the boat conched his lance against the shield, and struck it in pass-If the spear shivered while the champion maintained his place, the prize was won; but if, on the contrary, the stave did not yield to the encounter, the boat glided from beneath his feet, and he fell back into the water. To avoid a tragic close, however, to such mirthful exhibitions, two boats filled with men were always in readiness beside the quintain, to rescue the baffled wight. There was also practised what may be called the water tournament, in which the combatants, armed with staves and shields, tilted against each other in boats, in the same manner as, in the common land tournament, the knights were wont to do on horseback. These sports, in their natural course, descended, with the necessary modifications, to the children, who had also their own quintains, by which they trained themselves to the exercises of manhood and to dexterity in war. One of these is mentioned by Fitz-Stephen. In winter, he tells us, the young boys tied the shank-bones of slicep to their feet, upon which they skated along the ice, and tilted against each other with staves in full career. Such,

it would appear, was in those days the substitute for skates.

WATER TOURNAMENT. ROYAL MS 2 B. vii.

In addition to these exciting sports, the peasantry annised themselves with archery, throwing large stones, darting spears, wrestling, running, leaping, and sword and buckler playing; and in large towns, the citizens frequently diverted themselves with boar and bull-baiting. Cock-fighting, which as yet had not been exalted into a noble or even a manly amusement, was confined to children. On the Tuesday of Shrovetide, each schoolboy was allowed to bring a lighting-cock to the school, which for a day was turned into a cockpit for the diversion of the urclims. The game of football was general in England during the reign of Henry II., and seems to have possessed equal attractions for men and children \*

Of the sedentary or within-doors amusements that were known in England in this period, a very brief notice will be sufficient. Among them, we find certain diversions then possessing attractions for persons of the highest rank which, in a more refined age, are exclusively confined to the lowest. The juggler, with his feats of dexterity and slightof-hand was an important personage even in the royal court, when men had not yet learned to distinguish between the natural and the supernatural. The buffoon, with his ribald jests, was a welcome substitute, where more refined wit was wanting, along with the power to appreciate it; and the mime, with his antic personifications, added enjoyment to the luxuries of the feast. To these may be added dramatic exhibitions. Plays founded upon romantic, historical, or passing events, were already represented before the nobles and entizens; but these primitive attempts were so completely in accordance with the grossness and licentionsness of the age, both in langnage and manner of acting, that they were condemned by the church, and all priests were prohibited from attending them. + The actors of those days appear to have strolled from town to town, and from castle to castle, attended by a congenial fraternity composed of jongleurs, tumblers, dancers, jesters, and mimics. The immorality of these theatrical exhibitions awoke not only the ne, but the inventive powers of the church, and the clergy endeavoured to supersede the secular by the reli-

HISTORY OF ENGLAND.

gious drama; and hence the origin of those productions called miracles and mysteries. These those days emphatically called the "damnable art

ductions called miracles and mysteries. These were composed of scriptural incidents; or, as Fitz-Stephen informs us, "representations of those miracles that were wronght by holy confessors, or those passions and sufferings in which the martyrs so signally displayed their fortitude." The actors were the scholars of the clergy; the church itself was frequently used as the place of exhibition; and the rich vestments and sacred furniture employed in the church service were sometimes permitted to be used by the actors to give superior truth and lustre to their representations.

be used by the actors to give superior truth and lustre to their representations.

In a propensity to gambling, the Normans and Saxons equally evinced their northern origin: they had ten different games that were played with dice; of which, however, we have no particular account; and the large sums that were lost, as well as the

those days emphatically called the "damnable art of dicing," may be surmised from the curious enactments on this head by Richard I. and Philip Augustus, on their expedition to the Holy Land.\* Matthew Paris also is careful to reproach the English barons who revolted against John, with their fondness for dice; and the same charge was brought against the clergy in general by those ecclesiastics who censured the vices of the age. The intellectual game of chess, we may also notice, which is undoubtedly of oriental origin, is commonly supposed to have been imported into England and the Crusaders. There is some reason, however, for believing that it was known to our Saxon ancestors

ANCIENT CHESSMEN, preserved in the British Museum.

Allusion has been already made to the bands of Saxon glee-men, dancers, and jugglers, that traversed the kingdom, and found a ready welcome from

burgher and noble. The following group represents one of these peripatetic bands, consisting of a taborer, a bagpiper, three dancers, and a singer or glee-man.

COUNTRY RAVEL. Royal MS. 2 B vii.

The juggler was generally the superintendent of the purity; and his feats of slight-of-hand, which passed for supernatural, and by which he astomshed the unrkilful peasants and equally illiterate nobles, were similar to those exhibited in the present day. A part of the exhibitions of these jugglers consisted in feats of balancing, of which the following engraving is a representation. Here, two

BALANCING -Strutt, from various ancient MSS, in the Bodlean and private Collections,

men support a large board, on which a girl kneels, and balances three swords, resting upon their hilts, with the points in contact. The steadiness of nerve requisite for such a feat, in the female, but more especially in her supporters, is evident at a glance. The other figures of the group are employed in such trials of balancing as are witnessed among us every day, with the exception perhaps of the person who is attempting, in rather an unfavoriable attitude, to make two swords stand upright on the ground. The women who formed a part of the juggler's train balanced, danced, and tumbled,

and performed those feats of agility or gracefulness for which they were better qualified than the more robust sex. These females, as may be supposed, were of very light reputation, on which account the daughter of Herodas was classed among them by our ancestors. When she procured the death of John the Baptist, she is said, in the Saxon translation of the Gospels, to have "tumbled before Herod;" and in an ancient illuminated MS., she is thus represented at her exercise, attended by her maid-servant.

In addition to such displays of human strength and

pear to be studying the defensare part of the science merely, are cronching safely behind their bucklers, while each is armed with nothing better than a light endgel. The Saxons also appear to have learned from their German ancestors to play gracefully with their weapons in the sword-dance, where dexterity could be exhibited without dangerons consequences. The sword-dance of the Anglo-Saxons which we have already described, † continued to be practised long after the Norman Conquest. In the following delineation two men are wielding sword and buckler, and directing their movements by the music of the bagpiper.

Wresting was also practised in various forms. One mode of a very peculiar kind is also said to have been in use among the ancient Greeks. In this game, two persons, mounted each on the back of a companion, encountered each other like knights on horseback; and he who could throw his

## CHAPTER VII.

## HISTORY OF THE CONDITION OF THE PEOPLE.

T is no justification, on the one hand, of the spirit of wrong and violence in which the enterprises in question may have originated, nor any condemnation, on the other, of the resistance that was made to them, to admit that all the successive foreign layer turned out, in the end, to be fortu-

nate events for the country. We do not include under that term the temporary ascendancy of the Danes, which lasted only for a quarter of a century in all, and was then followed by the re-establishment of the Saxon power—although the country probably made greater progress in wealth and civilization, and enjoyed in every way more of the advantages of good government, during the twenty years of the reign of Canute than it laid done in any period of the same length since the death of the great Alfred; but, confining our view to the permanent conquests of the original Britons by the Romans,—of the Roman provincials by the Saxons, -and of the Saxons by the Normans,-it is impossible to doubt that, of each of these revolutious, severe us was the immediate suffering which they occasioned, the eventual result was an immense addition to the civilization, the power, and the general prosperity of the country.

It was by the Romans that the arts and habits of civilized life were first introduced into and planted in the island. There is no reason to suppose that, but for their subjugation by the arms, and annexation to the empire of Rome, the ancient Britons would have attained a condition much superior to that of their contemporaries inhabiting the forests of Germany or Scandmavia. The estabhshment of the Roman dominion substituted for this state of rudeness and comparative destitution an empire of the arts and of letters, which continued to flourish unimpaired for a longer space of time than has clapsed from the Reformation to the present day, and which, even after its decay and ruin, left behind it many enduring benefits. It is not probable, however, that the Romanized Britons, if they had been left to themselves after the fall of the Western Empire, would have succeeded in working out their emancipation from the anarchy into which they were thrown by the dismemberment of the mighty system of which they had formed a part; the stroke of fate had fallen upon the heart of that system, and it was unpossible that any of its extremities should escape desolution.

The Saxons brought along with them no new arts or additional intellectual culture; they swept away, in the violence of their first seizure of the country, much of the civilization that had previously been established in it; and they were indebted for the communication of the light of religion and letters long after their settlement to that very Rome whose old institutions and monuments they had at first thrown down and trampled upon. But they brought with them what was better than any literary civilization, the spirit, at least, and clementary forms of a new system of political arrangements, founded upon larger and juster views of human rights and duties, and, in its final development, more favourable to the general security of person and property, and to the promotion of all the other ends of good government and social umon, than any with which antiquity had been acquainted.

The soil of the national character is to this day mainly Saxon, with our institutions, our manners, our language, our literature, and whatever else has spring out of it. The conquest of the country by the Saxons has made its population in all things essentially a Teutome race, and, as such, partakers in the most vigorous and productive species at least of modern civilization. This is a distinction which no subsequent revolutions or changes have been, and which it is not probable that any ever will be, able to obliterate.

But various causes contributed to hinder the Saxons from rearing a superstructure of state, in their kingdom of England, of a height and proportions at all corresponding to the broad and deep foundations they had laid. The better part of their original energy they would seem to have expended in the long and arduous contest they had to sustain before they made good their possession of the country; when, after this was over, they found themselves in the undisturbed occupation and enjoyment of the settlements their swords had won, the cessation of the only excitement to exertion they had ever hitherto known, and the want, owing to their unacquaintance with letters and the arts, of any new stimulus to supply its place, would naturally have the effect of allowing them to subside into habits of indolence and sensuality. Then followed a long succession of miserable contests, sometimes between one state and another, sometimes between adverse factions in the same

state,—in either case having almost equally the

rancorous character of civil strifes. Thus were

consumed three hundred and fifty years of the six

hundred which make up what is commonly called

the Saxon period. The destructive ravages of the

Danes extend, with some interruptions, over nearly

the whole of the remaining two centuries and

a half: the several states had, indeed, been consu-

lulated into one kingdom, and then ferocious con-

tention with one another was at an end; but for the

greater part of this space the old scene of blood-

shed, desolation, and public distraction was kept

up by the testless plague of a foreign enemy, either

hovering upon the coasts and making descents now at one point, now at another, throughout their whole cucuit, or permanently stationed in the heart of the kingdom and sweeping it in all directions with fire and sword. Even during the only considerable interval for which this long contest with the Danes was suspended, the space that clapsed from the time of Alfred to that of Ethelred. the numerous foreign population which had forced its way into the country was only kept quict by being allowed to divide the possession of it with its previous occupants. How precamous was the subjection that was thus obtained from them was at length testified by the renewal of the old contest between the two races in the reign of Ethelred, and its obstmate prosecution by the Danes till they placed their own king on the English throne. In short, of the whole six hundred years that intervened from the coming of the Saxons to the coming of the Normsus, the quarter of a century forming the reign of the Confessor is almost the only portion that can be referred to as that in which the country enjoyed the blessings of a national government and a united people. Nearly all the rest of the period was spent in the contest of the invaders with the previous inhabitants, in the wars that the several bands of the invaders afterwards carried on among themselves, and, finally, in the long struggle they had to sustain with their foreign competitors for the possession of the country, the course of which was only an alternation of hard tighting and reluctant concession, of the dru and confusion of arms and of occasional intervals of an insecure and uneasy calm, attempted to be maintained by truces and oaths which quenched no hostile feeling, and which either party was constantly on the watch for the first fair occasion to break. It was impossible that in such circumstances the

national character should not have become deteriorated, and that the country should not have lagged behind in the career of wealth, of the arts, of literature, and of every other line of public prosperity and greatness. Accordingly, at the era of the Norman invasion. England was still a country of no account in the political map of Europe. Some foreign commerce it was beginning to have; but still its intercourse, either commercial or of any other

description, with other parts of the world was apparently very hunted. A certain degree of excellence indeed seems to have been attained by its artists in some kinds of ornamental work, in the fabrication of trinkets and other articles of luxury, a taste for which probably prevailed among its few wealthier inhabitants, - and on a first view we might be disposed to conjecture that other and more necessary descriptions of industry must needs have also flourished where there was room and encouragement for the exercise of this species of refined and expensive ingenuity; but nothing can be more misate and fallacious than such a mode of inference, by which some particular feature is taken to indicate in one age, or country, or state of society, the same thing which it would indicate in prother. It would be quite unwarrantable to assame the existence of any general wealth or refinement among the Anglo-Saxons of the eleventh century merely from their passion for show and glitter, which, in its lower manifestations, is au instinct of the indest savages; and, even when directed with very consultriable taste, may co-exist both with the most imperfect civilization and with much general poverty and squator, as we see it doing in eastern countries at the present day. No other species of art or manufacture, except the ordinary trades required for the supply of their most common necessities, appears to have been practised among them. But the bockward and dealming condition of the country was most expressively expiced by the himentable decay of all liberal knowledge among all classes of the people. The oldest lustorians are unanimous in their attestatious to the general ignorance and illiteracy that prevailed among the English of this age. To the testimony of Ordericus Vitalis, which has been already addriced,\* may be added that of Malinsbury, who, writing within sixty or seventy years from the time of the Conquest, may be considered to speak almost with the authority of a contemporary. He was an Englishman as well as Vitalis, and, as he informs us himself, as much a Saxon as a Norman by descent. He assures us that, when the Normans first came over, the greater number of the English clergy could hardly read the church service, and that, as for anything like learning, they were nearly to a man destitute of it: if any one of them understood grammar, he was admired and wondered at by the rest as a prodigy. The rest of his account represents the upper classes in general as sunk in sloth and self-indulgence, and addicted to the coarsest vices. Many of the nobility, he says, bad even given up attending divine service in churches altogether, and used to have matius and mass said to them in their chambers while they lay in bed, and as fast as the priests could harry them over Besides other gross practices, they were universally given to gluttonous feeding and drunkenness, continuing over their cups for whole days and nights, and spending all

and wretched in the extreme.

houses, and the domestic accommodations of the people of all ranks are stated to have been mean

Whatever judgment may be formed as to the comparative moral qualities of the two races, the Normans, at the time of their conquest of England, were undoubtedly much farther advanced than the Saxons in that sort of cultivation to which the name of civilization is commonly applied. They

introduced into the country not only a bigher learning, but improved modes of life. They set an example of elegance and magnificence, to which the Saxons were strangers, in their festivities, in their apparel, and in their whole expenditure. Instead of wasting the whole of their wealth in eating and drinking, their pride was to devote the greater part of it to works of permanent intibity or crubellishment, to the building of castles, and churches, and monasteries. The art of architecture in England may be said to have taken its rise from them. By them, also, it is probable that the agriculture of the country was improved, and its commerce extended. Under their government, after it was fairly established, the kingdom for the first time had its natural strength and resonrees turned to account, and come to be recognized as of any importance in the political system of Europe.

occasioning much inserty to individuals, and also giving a severe shock for the moment to the whole tabric of the public interests. But the Norman conquest of England, from the manner and errormstances in which it was effected, swept the land with an appropriag and destructive fary far transcending that of ordinary tempests of this description. It was much more than a mere transference of the dominion of the country into the himds of foreigners; along with the dominion nearly the whole property of the country was torn from its former possessors, and seized by the conquerors. A handful of aliens not only wielded the powers of the government, and recast at will the whole system of the national institutions, but the natives were, for the most part, stripped of their estates as well as of their political rights, and driven forth to destitution and beggary, at the same time that they were made to pass under the yoke. The distinction of this conquest was, that it was to an almost nnexampled extent one of confistation and plunder. It was not merely the establishment of a foreign prince upon the throne, but the surrender of the country to a swarm of foreign robbers, who divided it among them like sommeh spoil, and, settling in all parts of it, treated the unhappy natives as their thralls. The necessity of satisfying the claims of

It was impossible that the moderation and clemency with which William at first affected to treat the conquered people should be long kept up. His spolutions and incessant exactions could not fail to provoke a spirit of resistance, which was only to be reined in by the steadiest and most determined hand. After some time, accordingly, he seems to have thrown away all scruples, and, resigning lumiself to the necessities of his position and the current of events, to have relinquished every view of governing his English subjects by any other means than force and terror. The consequence was, the establishment of a system of government which, in so far as respected the great body of the people, was certamly as iron a despotism as ever existed in any country calling itself civilized. The constitutional changes introduced by the Norman Conquest do not appear to have greatly altered the legal position of the different ranks of the population. The labouring classes, and the great body of the occupiers and cultivators of the soil, remagacd, as before, partly serfs or bondmen, entirely the property of their masters,-partly villams, attached to the estates on which they resided, so as neither to have the power of removing at their own will nor to be removable at the will of their lord. Of these latter there appear to have been a variety of descriptions, whose conditions and rights probably differed in some subordinate particulars; but the distinctions implied by the various names which we find used to designate them are very imperfectly understood. Some of them, perhaps, were entitled only to a maintenance from the land, -others to the occupation of a cottage, -others to a certain portion of the estate to cultivate for their own profit, for it would appear that some descriptions of the villains at least were capable of possessing and accumulating private property. There is no proof that all of them might

extravagantly to overstretch and abuse even the hateful rights of conquest; and the system thus

entered upon could only be maintained by a perse-

verance in the sternest and most grinding tyranny.

[Book III.

These eventual benefits, bowever, were purchased at a licavy immediate cost. No national revolution brought about by violence can take place without not have done so, although some classes of them may have been more advantageously placed than others for saving or otherwise acquiring wealth. Glanville, indeed, informs us that whatever money or goods a villain possessed were considered by the law to belong to his lord, and therefore he could not emancipate himself, or purchase his freedom, with his own money; but all that can be meant by this is, that the lord had perhaps the legal right if he chose of taking from his villain whatever property the latter might have acquired. This very statement is an evidence that the villain might possess money or other property, which was his own at least so long as his lord refrained from demanding it. It is probable that custom; if not the law, imposed some limitation upon the lord's the troops of hungry and rapacious adventurers power of exaction, and that, even although. It that from all countries, by whom he had been assisted the villain had might strictly or technically be said in his enterprise, compelled the Norman thus to belong to his master, it rarely or never happened

that, if he paid from his carnings or his savings the ordinary dues, he was disturbed in the possession of what remained. The great and conspicuous distinction at all events of his peculiar position was, as explained in the last book,\* that on the one hand he was bound to remain on the estate on which he was born, and to perform certain labours or services, and to pay certain dues to the ford or proprietor of the estate; and that on the other hand he could not be removed by the lord from the soil to which he was thus attached, nor deprived of what was substantially his tenure or holding in it, which no doubt always implied at least lodging and maintenance for himself and his family, and probably in many cases more extensive rights Besides the villains, however, there was a considerable class of persons designated as freemen or free tenants. These, it may be mesumed, were in no respect bound to the soil, or otherwise subjected to a qualified servitude, as the villams were. They beld apparently the same legal position that all commoners hold in the present day, modified only by the very different constitution of society and state of the law generally which then prevailed, The villains, though by no means excluded from the protection of the law, seem not to have possesser any political rights; these were exclusively confined to freemen. They alone were the *legales* homines, or lawful men, of whom the laws and other writings of the time so often make mention. Such of the freemen as occupied land which was not their own property may be considered as having nearly corresponded to our modern tenantry, in the popular acceptation of that term, tenants of those days again were, what tenants still are in the language of the law, the proprictors of estates; and were called either tenantsin-chief (in Latin, tenentes in capite), by which expression were meant holders under, that is, by direct grant from the king, or tenants under a mesne (that is, a middle) lord, under which description was included all other proprietors. The higher political rights seem originally to have been exclusively confined to the tenants-in-cluet. The common frecholder, or freeman, for instance, might exercise municipal functions; might be a deputy from his township to the hundred or the county-court, and might sit upon an inquisition or jury; in other words, he might take part in various ways in the execution or administration of the law; but with the making of the law, or with the function of legislation in any form, he seems to have been considered as having nothing to do. That was a right reserved to the tenants of the crown, though in what degree it was participated m, or in what manner exercised, by all the descriptions of persons who belonged to that class, has given rise to much difference of opinion. It may certainly be reasonably doubted if all the tenantsin-chief were ever considered as barons, in the sense of what we now call noblemen, and were summoned as such to the meetings of the great

. • Bes ante, p. 353, &c.

vilege was a distinct honour conferred by the crown only upon certain of the tenants-in-chief. The others, who had no such privilege, niight be considered as lesser barons. It may be added, that the existence of allochal property\* ceased altogether in England from the time of the Norman Conquest. The establishment of the fendal system was made complete by the Conquetor assuming to himself the dominium directum, or original and supreme property, of all the lands in the knigdom, at the same time that he took possession of the throne. "If we compare the constitution established here by the Normans with that of the Anglo-Saxons," says a learned historian of this period, "the greatest difference between them will he found to arise from many estates which were allodial being made feudal, and from others which approached the nearest to fiels, and were indeed of a fendal nature, but not lands of inheritance, being rendered hereditary, and in consequence of that change subjected to burdens to which they had not been Itable in their former condition."† The sufferings of the nation under the Norman dominion, therefore, were not principally occasioned by any new form or element of slavery that was introduced into the constitution of the kingdom or of society. The legal restrictions amb disabilities by which the great body of the people were fettered all existed before the Conquest, nor was any portion of the community deprived by that revolution of rights which it had previously exercised, or depressed to a lower position in the state than it had previously held. The laws and institutions of the country, in short, remained in all essential respects nearly the same as before. But in that immature state of society comparatively little of the substance of liberty resided in its mere forms. As yet the spirit in which the law was administered was of infinitely greater importance than the letter of its enactments. The government of the Normans proved a yoke of grievous bondage to the English m manifold ways. First, it was a government of foreigners, and, therefore, intolerably hateful to every feeling of patriotism and national honour. Secondly, it was a system which put a mark of exclusion and degradation upon all native Englishmen, ejecting and debarring them from every office of honom or profit in the state, and treating them in every way

HISTORY OF ENGLAND.

national calamity, and one that, for the time, must have disorgamzed society as completely as the most convulsive overthrow of old laws and institutions could have done, for nearly the whole body of the landed proprietors of the country to be suddenly stripped of their possessions, and new families to enter everywhere upon the lordship of the soil and of its cultivators. Domesday Book

shows the extent to which this spolution of the natives was carried by the Norman conquerors, It is not correct to assert, as has been sometimes done, that the English were indiscriminately deprived of their lands; for a few of them appear to have been left in almost every county even as tenants-in-cliref, and a considerable number more are mentioned as holding of mesne birds. But still the depravation was so sweeping and general as to produce nearly the same amount of change and unsery as if it had been universal; it was substantially the overthrow of the whole order of native proprietors, and the transference of the lordship of the soil into new hands. The sufferings of the numerous individuals who were the immediate victims of this policy would be but a part of the misery it inflicted; the shock of their downfall would be felt in some degree by all their connexions and dependents; and in the violent and simultaneous tearing asunder of so many old ties, and unlinking of men from the anchorages by which they had been accustomed to hang, the entire frame of society must have been loosened and weakened But, fifthly, the conquered people were made, by the rapacity and meessant exactions of their new masters, to grown under a permanent load much more burdensome and oppressive, there is reason to believe, than they had ever before experienced. Their foreign government and their foreign landlords ground them to the earth at the same time with their separate extortions. The government especially was essentially a government of extortion and rapine; the main principle upon which it was conducted was to wring from the country the utmost revenue it could be made to yield; to meet the demands of the government upon themselves, again, the nobles and other landed proprietors were compelled in their turn to become the fleecers of all under them; and thus, in every way, the miserable people were harassed and robb, d of the carnings of their industry. Sixthly, there was the occasional occurrence of such terrible excesses of reckless and unbridled tyranny as the formation of the New Forest, by which the government made open profession of its contempt for all the restraints of law, and right, and common humanity; and might be said actually to wage improvoked war upon its subjects. Finally, there was the long succession of wars that grew out of the Conquest,

of the first three generations that followed the establishment of the Norman dominion were made to pass in the sadness of continual anxiety and fear, the land was everywhere drenched with blood, and large districts of it were repeatedly laid desolate with fire and sword. The sufferings of the people from all these causes have been very imperfectly detailed in the accounts that have come down to us; but they are

expressively indicated by the demand that was

constantly made for the restoration of the laws of

the Confessor, in other words, of the comparatively

happy state of things that had existed before the

arrival of the Normans. It is remarkable that

these supposed laws of the Confessor were really,

as has been already noticed, the laws which had

been first collected and reduced to a system by the

Danish king Canute; so that the popular cry was

-first between the two races nearly throughout

the reign of the Conqueror, and afterwards between

[Book III.

the expression of a strong preference even for the Danish over the Norman dominion. And, in fact, there can be no question that the nation was much happier under the government of Canute than under that of the Norman conqueror. Domesony Book also is the faithful record both of the extent of the spoliation which followed upon the Norman Conquest, and of part of the general depression of the national prosperity which was the numedrate consequence of that great revolu-By the statements there given, almost all the principal towns throughout the kingdom appear to have been greatly reduced in their population and the number of houses they contained, at the end of the reign of the Conqueror, from their condition in the time of the Confessor; while the rents, customs, and other payments exacted from them had been in most cases seriously augmented. Part of this diminution appears to have been brought about by the ravages of war or accidental conflagrations—part by mere decay and neglect, In either case it equally told the miseries through which the country had passed, and the heavy weight that pressed upon all the springs of the national industry. This will be more clearly shown by the cummeration of a few particulars. The city of York—as yet the only town in the vast county to which it gives name—is set down as containing, at the date of the survey, only 967 inhabited houses out of 1607 which it had contained before the Conquest. Of the six scyree, or wards, into which it was divided, one is described as laid waste

for building the castles, or military strongholds for

overawing the town. Besides the 640 houses pulled

down or quite waste, 400 others are stated to be so

much decayed as to be capable of paying to the

crown only an annual tax of a penny each, or even

bited houses; of these, 166 were now laid waste

for building the castle, and other 74 were also in

ruins, having been reduced to that state by fire or

In Lincoln there were formerly 1150 inha-

condition to pay any geld or tax. In Cambridge, 28 houses had been pulled down to build a castle.

In Northampton, of 46 houses—all that the place appears to have contained-14 were lying waste. In many of the towns also a considerable propertion of the houses were now occupied by Frenchmen, as the Normans are called, who, in most mstances, appear to have contributed no part of the

CONDITION OF THE PEOPLE.

plaint of the English burgesses, that they were still compelled to pay the whole of the royal dues they paid in the time of King Edward, although, of the 252 houses of which the town consisted, there were 51 destroyed for the call's castle, and 50 others lying waste, besides 43 that were occupied by Fieuch burgesses, who paid nothing, and 39 given by the cm1 to an abbey, which were in like manner exempted from taxation. The amutal gold exacted from this town, and now, according to this statement, to be paid by little more than a fourth of the number of persons who formerly contributed to it, was 77. 16 s Sd. But the geld or tax paid by the largesses was far from being the whole of what each town paid to the king. From Shrewsbury, for instance, the entire profits of the crown were estimated at 30% annually. Derby, 103 houses were destroyed out of 243. In Ipswich, 328 houses are set down as now waste, which had yielded geld in the time of King Edward. Of 210 burgesses which remained out of 808, 100 were so poor as to be able to pay only a penuy each. The entry respecting the city of Chester presents a rare instance of a partial recovery from the devastations of the earlier part of

tax exacted from the place by the crown. Thus, in the city of Shrewsbury, it is noted as a com-

Chap. VII.]

had since so far recovered as to be farmed from the earl for 70% and one nunk of gold. Both the Conqueror and his son Henry have the character of having been strict administrators of the laws, and rigorously exact and severe in the punishment of offences against the public peace. The Saxon Chronicler says that, in the time of the former, a girl loaded with gold might have passed safely through all parts of the kingdom. In like manner the same authority tells us, that, under the government of Henry, "whoso bore his burden of gold and silver, durst no man say to him bought but good." The maintenance of so effective a system of police must, no doubt, have made a great difference between these reigns and those of Rufus and Stephen-in both of which robbery ranged the kingdom almost without restraint, and, in the latter especially, the whole land was almost given up as a prey to anarchy and the power of the strongest. But still even this supremacy of the law was in many respects an oppressive bondage to the subject.

precipitate, reckless, and nicroless, that any salutary effect of the example must have been, to a gread extent, neutralized by its tendency to harden and brutalize the public imud; and the most cruel minstice must have been often perpetrated in the name and under the direct authority of the law. Hemy I was popularly called the Lion of Justice, and be well described the name. This mode of indical procedure was in the highest degree simimary and sweeping. In the twenty-fifth year of his reign, for instance, in a fit of furious indigmation occasioned by the continued and increasing debasement of the com, he had all the moneyers in the kingdom, to the number of more than fifty, brought up before the Court of Exchequer, when, after a short examination by the treasurer, they were all, except four, taken one by one into an adjoining apartment, and punished by having their right bands struck off, and being otherwise partillated. The year before he had hanged at one time, at Huncot, in Leicester-bire, no fewer than forty-four persons, charged with highway tobbery. Robberies, however, of the most atrocious description were, during a great part of the reign, perpethe reign; there were, it is stated, 205 houses lying trated, without check, by the named ade servants, and waste when the town came into the possession of it may be said under the very orders, of the crown. Earl Hugh, and it was worth only 30%; but it

The insolence of the purveyers and immerous

followers of the court in the royal progresses is

described by conferaporary writers as having

reached a height under this king for transcending

even what it had attained to mider either of lus

numediate predecessors. They used not only to

cuter the houses of the farmers and peasantry

without leave asked, to take up their lodgings and

remain as long as it suited them, and to eat and drink their fill of whatever they found, but, in the

wantonness of their official licence, frequently even to burn or otherwise destroy what they could not con-

sume. At other times they would carry it away

with them, and sell it. If the owners ventured to remonstrate, their houses would probably be set

on fire about their cars, or mutilation, and some-

times even death, might punish their presumption. Nor was it their goods only that were plundered

or wasted; the honour of their wives and daughters

was equally a free prey to these swarms of pro-

tected spoilers. The approach of the king to any

In this, as in everything else, the main object of

the government was the protection and augmenta-

tion of the royal revenue; and it may be correctly enough affirmed, that private robbery and depreda-

tion were prolubited and punished chiefly on the

principle that no interference was to be tolerated

with the rights of the great public robber, the government. Many of the laws, also, which were

so sternly enforced, were in reality most imjust and rievous restrictions upon the people. Of this cha-

racter, in particular, were the forest-laws, which

punished a trespass upon the royal lumting-grounds,

or the slaughter of a wild beast, with the same

penalty that was inflicted upon the robber or the

murderer. And in all cases the vengeance of the

law was wreaked upon its victims in a spirit so

whole of this reign. Taxes were imposed with no reference to any other consideration except the

wants of the crown; and the raising of the money

was managed by any measures, however violent

or irregular, that would serve that end. It is an

affecting trait of the sufferings of one numerous

class of the people which is recorded by the historian Eadmer, in his statement that the peasantry

on the domains of the crown would sometimes

inability to pay the heavy exactions with which

they were burdened. These unhappy men, it is to be remembered, were without any means of

offer to give up their ploughs to the king, in

to fice to the woods.

ants were wont to conceal whatever they had, and

It was not till the necessity of reforming these frightful abuses was at last forced upon Henry, by the solitude which he found around him wherever he appeared, -- in other words, till this system of unrestrained gapacity came at last to defeat its own purpose,—that he had some of the delinquents brought before him, and pumshed by the ampatation of a hand or a foot, or the extraction of one of their eyes. Yet the most unspaning pillage of the people in other forms continued throughout the

escape from the extortion which thus ground them to the earth; even if, in some cases, they were not attached to the soil by any legal bond, they might still be considered as rooted to it nearly as much as the trees that grew on it; for in that state of society there was, generally speaking, no resource for the great body of the community except to remain in the sphere in which they were born, and m which then fathers had moved. The same historian paints in strong colours the miseries occasioned by the oppressiveness of the general taxes. The collectors, he says, seemed to have no sense either of humanity or justice. was equally unfortunate for a man to be possessed of money as to be without it. In the latter case, he was cast into prison, or obliged to flee from the country; or his goods were taken and sold, the very door of his house being sometimes carried away as a punishment for not satisfying the demand made upon lum. But, if he had money, it was no better; his wealth was only a provocation to the rapacity of the government, which never ceased to harass him by threats of prosecutions on nufounded charges, or by some of the other means of extertion at its command, until it drove him to comply with its most unjust requisitions. The language of the Saxon chroniclei is to the same purport, and equally strong. "God knows," says that other contemporary writer, "how unjustly this miscrable people is dealt with. First they are

deprived of their property, and then they are put

by famine."

the military, and the church, - the three most important interests of the kingdom, - appeared to have each sent its representatives to reproach, and enise, and menace hun. We insert copies of three ancient drawings, which are found accompanying a contemporary manuscript version of this legend, and which, besides illustrating the story, will convey some notion of the costume and general appearance of the different ranks of men introduced in it. The dream, it may be added, is said to have made a great impression on Henry. He awoke in extreme perturbation, leaped out of his bed, seized his sword, and called violently for his attendants, When he became more calm be solemnly resolved upon repentance and amendment of life, and it is affirmed that, from this time, he began to be an The excess to which the tyraphy of the crown was thus carried probably had the effect of bringing about, sooner than it might otherwise have taken place, the commencement of the interior ture of the two races inhabiting the country, and then union into one nation. It was not long after the Conquest, as we learn from William of Malmsbury, before the superior refinement of their Norman masters began to communicate itself to the English. That historian, who died in the reign of Stephen, after describing the peculiarities of numbers and habits which originally distinguished each people, tells us that this diversity had become in great part obliterated at the time when he wrote. English had generally accommodated themselves to the customs and the mode of living brought over by the Normans, in all points except one, their old habit of immoderate eating and drinking: thus, which they themselves are said to have learned from the Danes, the Normans had now acquired from The two races must, therefore, have come by this time to live with each other in common and familiar association. The name of Englishman, it appears, had also now ceased to be what it was esteemed in the reign of the Conqueror,—a term of degradation and reproach. It was assumed even by the barons, and others of Norman lineage, as their proper appellation, under which they were accustomed to make common cause with the great body of the population in demanding the resto-

by some of the old historians, forcibly depicts the

deep sense that was popularly entertained of the tyranny of his government, and the fierce hatred

which it engendered in the hearts of his subjects.

In the year 1130, as he was passing over to Normandy, he is said to have been visited one night

there gathered around him a multitude of country-

men, bearing scythes, spades, and pitch-forks, and

with anger and threatening in their countenances:

they passed away, and the place they had occupied was filled by a crowd of armed soldiers with drawn

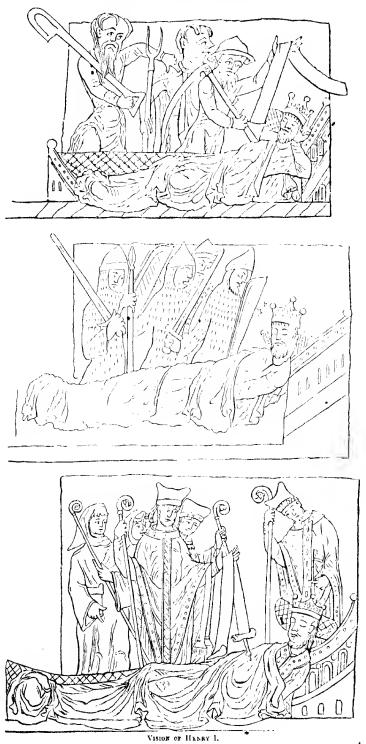

swords; the scene changed again, and crosicied

bishops seemed to be learning over his bed, ready

to fall upon him, as if they meant to kill him with then holy staves. Thus the tillers of the ground,

with an extraordinary dream or vision.

to death. If a man possesses anything, it is taken from him; if he has nothing, he is left to perish A legend respecting Henry I., which is related

VOL. I. . . 4 Q

the time of Henry II, the English had begin to be re-admitted to offices of honour and profit in the state, and intermarriages had taken place

lished by statute.

There can be little doubt that the national cha-

knights, who, being descended both from the Norman and Eastlish blood, were an honom to the one and a comfort to the other. But the most distinct statement of the general intermixture of the two races that had by this time taken place is found in a remarkable passage of the Dadogue on the Exchequer, in relation to the old legal custim of what were called presentments of Englishiy. A presentment of Englishry was the return of an inguisition held upon the bady of a person found slam, when the author of the slaughter could not be discovered, declaring him to have been an Englishman; in which case the vill or limited was excused from a heavy amererament, which it would otherwise have bad to pay, by a law said to have been first introduced by Cannie for the protection of his Danish countrymen, and which was afterwards contained or revived by William the Conqueror for the scentity of the Normans. But now, says the writer of the Dialogue, by reason of the English and Normans dwelling together, and constantly intermarrying, the two nations are so completely mixed one with the other, that, in so far as regards the portion of the community that is free, it can searcely any longer be ascertained who is of English, who of Norman descent The villains attached to the sod, however, it is added, were still an exception; they remained of unmixed Saxon blood, a statement, by the way, from which we may gather that it was not usual for marriages to take place between the villains and persons in a state of freedom, -that such manringes sometimes happened we know, from the provisions made by law respecting then issue The consequence of the state of things which had thus arisen, the writer of the Dialogue concludes by informing ne, was, that, except it were a villain, the case of every person found secretly slain was considered to be murder, -that is to say, was pum-hed by the imposition of the fine upon the neighbourhood, for that was then the meaning of the word which we now use for the highest degree of the illegal shedding of blood. Had it not been for the sake of the revenue which accrued to the crown from these americaments, the directly opposite result would seem to be that which should have most naturally flowed from the general obliteration of the old distinguishing characteristics of the two races; all persons found secretly slun should have been assumed to be English, and the fine upon the neighbourhood remitted. It was not, however, till nearly two centuries after this time that presentations of Englishry were formally abo-

solidity was brightened, and its tendency to decline between the two races to a great extent. The hisinto heaviness and coarseness checked, by an toran Arhed, who lived in that reign, observes infusion of the more fiery temperament and more that England had now, not only a king, but many brilliant qualities of the Norman race. The Celtic bishops and abbots, many great carls and noble tmeture which was thus introduced into the pure Teutonic blood of the Saxons was, however, but very slight; for the Normans were but half Frenchmen, and the French themselves were but half Gauls. The substance of the English closracter, therefore, remained thoroughly Tentome as before, though lighted up with something of a more refuned animation. But the perfect produce of this chemistry was a result not to be realized till a distant period; the consequences of the ablivion by the two races of their old ammosities, and their coalescence into one nation, were evidenced for the present chiefly in the favourable change that followed in their political and social encomstances. The government, indeed, still continued to be in many respects an oppressive tyramiy: its spirit, and also to a great extent it. power, was still despotie; the law was a most imperfect protection for either the property or the liberty of the subject; witness, to mention no other instances of its scandalous insufficiency and barbarism, the right which it appears was still left to the crown, and not unfrequently exercised by it even in the reign of Henry II., of not only panushing the individual himself who might have been found guilty of certum crimes, but also sending into bamshment all his innocent relations. Henry, it may be remembered, in 1165, banished out of England, by a general sentence, all the relations, friends, and connexious of Thomas à Becket, to the number of nearly four hundred per ons, without distinction of sex or age; even infants at the breast, as we learn both from Berket's own letters and from his biographer Fitz-Stephen, were not excepted. What liberty, or what law deserving the name, could there be said to exist in a country where so enormous a stretch of arbitrary power could be tolerated? Many of the other prerogatives of the crown, indeed, were utterly incompatible with a state of general security and freedom. Yet from this time the spirit of resistance to had government, however inclicient as yet for the prevention of munerous abuses, was at least a national spirit. It was no longer the mere feeling of a part of the people either actually contending in arms with the rest, or only kept down by force and fear; it was no longer a sentiment of disaffection or open rebellion; the classes naturally most attached to the existing government, and most interested in its preservation, shared equally with their fellowsubjects in the desire for good laws and a just administration of them. The Saxons had ceased to be rebels; the Normans had ceased to be conquerors; both, united under the common hame- of Englishmen, had come to feel that they had the

[Book III.

racter was decidedly improved on the whole by

this mixture of new blood with that of the old Saxon population of the country. The Saxon

BANCHING PERSONS LANGUA

same interests and the same rights. Their union, as has been just observed, did not at fust enable them always to restram the excesses of the crown; that power would still, on occasion, break through all restraints; but yet, in ordinary circumstances, a considerable degree of moderation and good government was enforced. The government of Heray II., for instance, was undoubtedly an infinite improvement on that of his grandfather. At first this practical amelioration was nearly all that was a ancel at; but the reform of the constitution of the kmgdom followed in due course: when King John attempted to renew the arbifrary rule of the Conqueror and his sons, he found that he had neither the same kind of resistance to encounter, nor the same support to lean upon; the Norman party was not now to be wielded as an it striment for beating down the English; his tyraniacal proceedings were as little agreeable to the former as to the latter; and they soon gave proof of their combined strength, and of the both of a power which Intherto had not showed itself in the state, by not only stopping him in his course of insolent aggression and outrage, but by proceeding to extract some and to pare down others of the nuschievous prerogatives through which he had been enabled to perpetrate the wrongs thus put an end to. For the manner in which it was gamed, and its glorious memory as the first victory of the nation over the old despetism of the crown, even more than for any of the provisions contained in it, MAGNA CHARTA is worthy to stand in the front of the Statute Book, and to be regarded as laying laid the foundation of the likerties of England.

The precise information that has come down to us respecting the social statistics of this period, amounts only to a few scattered facts, from which scarcely any general conclusions can be drawn as to the condition of the people. We have not as yet arrived at the age of regular and official records; we have only the occasional notices incidentally let fall by the chroniclers while pursuing their main subject—the course of public affairs. Most of these notices that throw any light upon

the important point of the prices of commodities and of labour bave been collected by Bishop Fleetwood, in the 'Chromeon Preciosum,' by Sir Frederick Eden, in his 'State of the Poor,' and by Mr. Macpherson, in his 'Annals of Commerce.' Then numb r, as we have said, is very meonsidetable; and, few as they are, they are for the most part of little value "The accounts, for mstance," as is observed by one of the writers we have jut named, " of the prices of grain, are in general only those which, from the particular ciremustances of the time, attracted the attention of the annalest, they are usually the prices in dearths and fammes, or in years of extraordinary cheapness; and are, therefore, no very accurate criterion of the mean or culmary price; it is often impossable to ascertain the capacity of the measures that were med, or to point out the places where the prices were taken. In the distracted state of the country from the twelfth to the fifteenth century, the micronic between the different parts of the island was interrupted; the want of good roads, an amadicious system of agriculture, and the desolating increasions of rival barons, often prevented one part of the kingdom, where the crop was scanty, from being supplied with the superabundant produce of another. It is further to be remarked. that, in stating both the prices of labour and commodities, authors have often been misled by the composition price agreed upon between the landlord and tenant, perhaps according to some ancient valuation. In some instances it is difficult to distinguish whether the rent of land, as stated in ancient records, is the whole benefit the landlord received, or whether the personal services of the tenant did not constitute by far the most valuable part; in others, whether the price of grain is the price for which it sold in the market, or the quota which in ancient times tenants paid to their landlords in hen of a rent in kind, and which was always much below the market price."\* To these sources of fallacy may be added the chances of a corrupt text, which are very great wherever figures

\* Eden's State of the Poor, vol. in , Appendix, p. vi.

HISTORY OF ENGLAND. are concerned, and the occasional contradictions hens rated at a halfpenny each; sheep at about

times between two statements of the same writer. The value of the money of the present period, or rather the quantity of silver contained in each denomination, has been explained in a preceding

between one authority and another, or even some-

The price which, in ordinary circumstances, chiefly regulates all other prices, or sympathizes with them where at does not regulate them, is the price of labour. But, in regard to that in the present period, our information is hardly worth anything. It appears, however, to have varied from about three farthings to a penny a day, with victuals. Thus, in 1126, the wages of the common servants employed at the abbey of Peterborough are stated to have been 11, 4s. 4d. yearly, which is at the rate of about three farthings a day. The Abbey baker had the same wages, with bread and beer;

but what we are to infer from this probably is, not that the other servants bad no victuals, but that bread (that is, wheaten bread) and beer were not allowed them as a part of their fare. In 1173, the subsistence of a footman for one day is set down at twopence, which makes about 36. in the year; so that it can hardly be supposed that the 11. 4s. 4d. was the whole that domestic servants received. The entire yearly gains of persons of this class may probably be taken as amounting to about 4%. Labour of a higher kind was of course better paid. By the old Scottish burgh laws, which may be referred to about the middle of this century, it is enacted, that a butcher, for slaughtering an ox, or a cow, or a hog, or five sheep, should be paid a halfpenny, with victuals, while employed. Supposing the work stated to be that of half a day, the butcher's annual earnings in money would amount to about 11, 10s, 6d.; and, if he was allowed provisions at the same rate with a footman or common domestic servant, his entire yearly income would amount to about 41. 10s., or, m quantity of silver, to about 131. of our present The prices of grain were wont to vary excessively, not only in different years, but even at different periods of the same year. Stow asserts that, in the reign of Henry 11., the usual price of wheat was 1s., and of oats 4d. the quarter; but

no contemporary notice places it nearly so low. In scarce years the price of wheat is stated to have sometimes risen to a pound. If we take it as averaging 4s., the yearly gains of the butcher would purchase about twenty three quarters of wheat, which, estimating the wheat at about 50s. the quarter, would now make an income of between 50l, and 60l. Nothing, however, can possibly be more uncertain than such a deduction as this. Every element and step of it is tainted with uncertainty. The prices of many other kinds of provisions

were low in comparison with that which we have assumed for wheat. Thus, in 1185, we find . See ante, p. 594.

be equivalent to the value of four hens, and of more than a third of a sheep. It is unnecessary to remark how greatly these and the other proportions deducible from the account differ from those that now subsist. In the year 1205, again, we find ten capital horses rated at 20l. each, or nearly 60*l*, of our present money. Of the prices of other commodities we have very few notices. In 1172, twenty-live ells of scarlet cloth, bought for the king, cost 5s. 6d. the ell; and twenty-six ells of green, 2s. 10d, the ell. Ten pairs of boots for his Majesty at the same time cost 1s. 6d. each. In 1212, a pair of Cordo-

 $5\frac{1}{2}d$ .; rams at 8d.; hogs at 1s.; exen at

nt less than 3s. At these rates, the expense of a day's maintenance of a man-servant at 2d, would

[Book III.

van boots for the king are charged at 2s. 6d.; and a pair of what are called single boots, at only 7d. About the end of the twelfth century, the price or the tun of French wine appears to have varied from about 17, to 17, 6s 8d. A sack of wool about the same time cost 3l, 6s, 8d. The expense of the building of two arches of London Bridge in 1140, was 25%. A few years later, a piece of glound, with a stone house on it, in the city of London, was sold for 2t., besides a rent in perpetuity of 6s. 8d. It is evident that, by an appeal to these various prices, the value of money in the twelfth century might be made out to bear any proportion to its value in the present day that the fancy of the calculator might prefer, or that it might best suit his particular object to fix upon. The most curious illustrations we possess of the social life of this period, and the point to which civilization had attained in England, are afforded by some of the facts mentioned in Fitz-Stephen's

account of London. According to this writer, for

instance, the English capital had already its sewers

and aqueducts in the streets (cluvies et aqueductus in evers). He speaks of the comfort of a residence in the place, and the beauty of the surrounding country, in very glowing terms. It was encompassed, he tells us, on the north side, by " corn-fields, pastures, and delightful meadows;" and these lichds, he adds, "are by no means hungry gravel or barren sands, but may vie with the fertile plains of Asia, as capable of producing the most luxuriant crops, and filling the barns of the herds and farmers with Ceres' golden sheaf." "The city, on the whole," he proceeds, " is doubtless most charming—at least when it has the happiness of being well governed." "The two only inconveniences of London," he afterwards informs us, " are the excessive drinking of some foolish people, and the frequent fires." "To all that has been said," he concludes, "I may add, that almost all the bishops, abbots, and great men of this kingdom, are, in a manner, citizens and inhabitants of London, as having their respective and not inclegant habitations there, to which they resort, and where their disbursements and expenses are

from the country, to attend councils and solemn meetings, by the king or their metropolitan, or are compelled to repair thither for the prosecution of their own proper business." But the most remarkable passage in the account is the description he gives of a sort of public cating-house, or cook's shop (publica coquina), which was established on the bank of the river. "Here," he says, "according to the season, you may find victuals of all kinds, roasted, baked, fried, and boiled; fish, large and small; and coarse viands for the pooter sort, and more delicate ones for the rich, such as venison, fowls, and small birds. case a friend should arrive at a citizen's house much wearied with his journey, and chooses not to wait, anhungered as he is, for the buying and cooking of meats,--

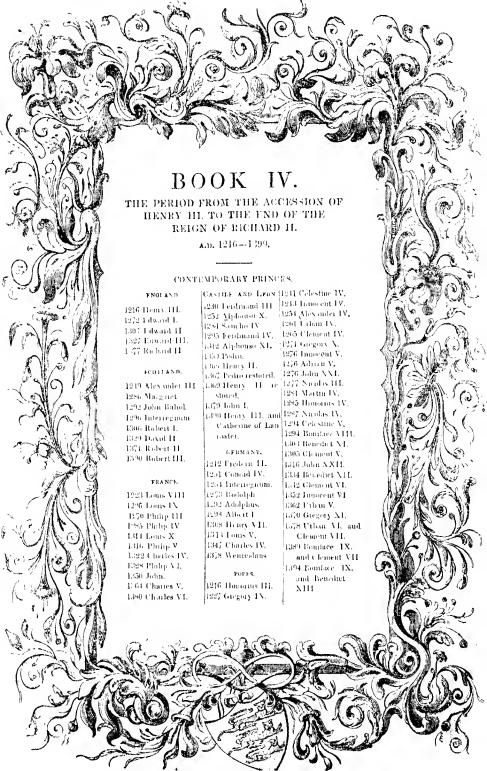

" Dant famuli manibus lymphas panesque camstris "--The water's served, the bread's in baskets brought,and recourse is immediately had to the bank abovementioned, where everything desirable is instantly procured. No number so great, of knights or strangers, can either enter the city at any hour of

with provisions; so that those have no occasion to fast too long, nor these to depart the city without their dinner. To this place, if they are so disposed, they resort, and there they regale themselves, every man according to his abilities. Those who have a mind to indulge need not hanker after sturgeon, or a Guinea-fowl, or a gelinote de bois (a particularly delicate bird) for there are delicacies enough to gratify their palates. It is a public cating-house, and is both highly convenient and useful to the city, and is 'a clear proof of its civilization." We may smile at this notion of civilization, and at the instance selected to set forth the wealth and pre-emmence of London at this early period; but, after all, the establishment here described is highly interesting, as an indication of the growing importance of the more numerous classes, and as the commencement of that extended system of public accommodations of all kands, which, far more than the palaces of her grandees, has since made our noble capital the

day or night, or leave it, but all may be supplied

Queen of Cities.

## CHAPTER I.

## NARRATIVE OF CIVIL AND MILITARY TRANSACTIONS

HENKY III., SURNAMED OF WINCHISTER.

S soon as they had binied John at Worce-ter, the Earl of Pembroke, the Marof England, marched with the royal army and Prince Henry, the deceased ling's eldest son, to the city of Gloucester. On the day after their arrival, being the feast of St. Simon and St.

Jude, October 28th, 1216, Henry was crowned in the church of St. Peter, belonging to the Abbey of Gloucester, by Gudo, the pope's legate, whose services in supporting the royal cause were of great value and efficacy. The ceremony was precipitated: no English bishops were present except those of Winchester, Bath, and Worcester; no lay nobles save the earls of Chester, Pembroke, and Ferrers, and four barons. The seanty retinue was completed by a few abbots and priers. The prince took the usual oaths "upon the gospels and relics of saints." The crown had been lost, with the rest of the regalm, in the Wash, and, instead of it, Gualo put a plain ring of gold on his head. Henry was only ten years old when he went through these solem-

unties, without understanding them. It required no great force or persuasion to induce him to consent to do homage to the pope for England and Ireland, and to swear to pay the thousand marks a-year which his father had promised. The clergy of Westminster and Canterbury, who considered their rights invided by this hinried and informal coronation, appealed to Rome for redress: Gualo excommunicated the appellants, who, however, persevered; and this matter occasioned considerable trouble, which did not end till the ceremony was repeated in a more regular manner.

A great council was held at Bristol on the 11th of November following; and there the Earl of Pembroke was chosen Protector, with the title of *Rector Regis et Regui*. His pure cliaracter and many eminent qualities, -his temper, prindence, and conclusting manners,—his experience in public affairs and his military skill, all seemed to point him out as the most eligible per-ou; but some jealousies arose on the part of the great Earl of Chester, and Pembroke did not assume the style of "Rector" till the end of the month of November. At the same great council of Bristol Magna Charta was carefully, and, on the whole, skilfully revised, with the view of satisfying the demands of the barons who adhered to Louis, without sacraficing the royal prerogative. These measures, however, were not considered conclusive, for Pembroke prudently left several clauses open for future discussion, when all the barons of the kingdom should be reconciled, and should meet again in one council. As yet the greater number of the nobles were on the side of Loms, who not only held London and the rich provinces of the south, but was powerful both in the north and the west, where the King of Scotland and the Prince of Wales supports I his cause.\*

When Louis learned the death of John he fancied that all opposition would presently cease. To take advantage of the consternation which he fancied must prevail among the royal party, he again pressed the siege of Dover Castle with great vigour, and, finding himself still incapable of taking it by force, he skilfully worked upon the tears and musgivings of the garrison, representing to them that they were fighting for a king who no longer existed, and whose death freed them from the obligation of their oaths of fealty. He tempted the governor, the brave Habert de Burgh, with the most magnificent offers; and, when these failed, he threatened to put Hubert's brother to death. But threats were as meffectual as promises; and, finding he was losing precious time, the French prince finally raised the siege, and returned to London, where the Tower, which had hitherto held out, was gaven up to him on the 6th of November. From London Louis marched to Hertford, and laid siege to the castle there, which he took on the 6th of

Rymer.-Carte.-M. Paris.

December. He then attacked the eastle of Berkhampstead, which he reduced on the 20th of the same month. Both these castles made a stout resistance, costing him many men; and the taking of that of Berkhampstead was a loss rather than a gain, for it led to a quarrel with Robert Fitz-Walter, to whom he refused the custody of the eastle. But his mistrust of the English was made every day more evident. From Berkhampstead Louis marched to St. Albans, where he threatened to burn the vast abbey to the ground if the abbot did not come forth and do him homage as legitunate king of England; but the abbot, it is said, escaped on paying a fine of eighty marks of silver. For a long period the carriage of war had been brought to a panse, by unanimous coasent, on the seasons of our Saviour's birth and suffering, Christmas was now at hand, and a truce was agreed upon which was to last till a fortnight after the Epiphany. At the expiration of this truce Pembroke willingly agreed to another which did not expire till some days after the festival of Easter. Each party hoped to gain by this long armistice, and both were extremely active during its continuance. Louis, in Lent, went over to France to procure supplies of men and money, and Pembroke recruited, in England, and drew off many of the nobles during the absence of the French prince. Louis left the government in the hands of Enguerrand de Coucy, a nobleman of great quality, but of very little discretion, under whose misrule the French became more arrogant than ever, and the English barons were made to feel that, by securing

HENRY UI. From his Tomb in Westminster Abbey.

upon themselves foreign nobles for masters.

truce with the French, and cared not for the armis-

tice concluded by the Earl of Pembroke. On his

way to the coast Louis came into collision with these standy patriots, who treated han very roughly,

and would have made him a prisoner but for the

opportune arrival of the French fleet, in which he

the same time the death-bed story of the Viscount

de Mehm was artfully revived; and the clergy, in obedience to the orders of Gualo the legate, read the sentence of excommunication in the churches every Sunday and holiday against the partisans of Hubert de Burgh, as constable of Dover Castle and warden of the Cinque Ports, was in constant communication with the best mariners in England, and he kept them true to young Henry. Plulip d'Albiney put hinself at the head of a popular party in Sussex, where one William de Collingham collected a thousand gallant archers, rough English veomen, who would allow of no

and his attendants embarked in great disorder. On his return from France with reinforcements, the marmers of the Conque Ports cut off several of his ships at sea, and took them by boarding. On this Louis landed at Sandwich, and burned that town to the ground in spite. He then, after making another unsuccessful attempt on Dover Castle, marched to London, where everything was falling into confusion. On the expiration of the truce the Earl of Pembroke recommended hostilities by laying siege to the castle of Mount Sorel, in Leicestershire. Loms sent the Count of Perche with six hundred knights and twenty thousand armed men to relieve it. On their march this mixed aimy of English, French, Flemings, and all kinds of increenaries, committed great havoe, plundering the peaceful inhabitants, and wantonly burning the churches and monasteries. They succeeded, however, in their first object, Pembroke's forces raising the siege and retiring before superior numbers. Flushed with this success, the Count of Perche marched away to Lincoln: the town received him, but the castle resisted, and when he laid siege to it, he was foiled by a woman,-Nichola, the widow of Gerard de Camville, who held the custody of Lincoln Castle by hereditary right, and made a brave defence. While the confederates were wholly occupied with this siege, Pembroke suddenly collected a force of four hundred knights, two hundred and fifty crossbowinen, many yeomen on horseback, and a considerable body of foot, and appeared before Lincoln

in admirable order. The count for a time would

not believe that the English would venture to attack

him within a walled town; and though his supe-

riority in cavalry would have given him an advan-

tage in the open country, he rejected the advice of

some English barons who were with him, and

would not march out of the town. He continued

to batter the eastle until he found himself engaged in a fatal street contest. To animate Pembroke's

force Gualo now excommunicated Prince Louis by

VOL. I.

the besiegers by firing from the castle walls; and serzing a favourable opportunity, they made a sortie, drove the enemy from the inside of the northern gate of the city, and enabled Pembroke to enter with all his host. The French cavalry could not act in the narrow streets and lones: they were wounded and dismounted, and at last were obliged to surrender in a mass. The victory was complete: as usual, the Toot-soldiers were slaughtered, but the "better sort" were allowed quarter; only one kingbt fell, and that was the commander, the Count of Perche, who threw away his life in mere pride and petulance, swearing that he would not surrender to any English traitor. This battle, facetiously called by the English "the Far of Lincoln," was fought on Saturday, the 20th of May, 1217. Without halting or refreshing himself, the Earl of Pembroke rode the same night to Stow, to give how royal pupil an account of his success.\* It was indeed a victory worthy of such a conrier, its effect was to keep Lonis cooped up within the walls of London, where plots and disturbances soon forced him to propose terms of accommodation. the middle of June a conference was held at a place between Brentford and Hounslow, but it led to nothing. Philip of France had been so seared by the threats of Rome that he durst not send reinforcements in his own name; but he urged that he could not prevent Blanche of Castile, the wife of his son Louis, from aiding her own husband in his extremity; and under this cover another fleet and army were prepared for England. It was not till the 23rd of August that this fleet could sail from Calais: it consisted of eighty great ships and many smaller vessels, having on board three hundred choice knights and a large body of infantry. On the next day, the great festival of St. Bartho-

against all his adherents; dispensing at the same

time full absolution, and promises of eternal life, to

the other party. The regent took advantage in the

most skilful manner of the count's blunder: he

threw all his crossbows into the castle by means of a postern. These yeomen made great havor on

lomew, as they were attempting to make the estuary of the Thames, in order to sail up the river to London, they were met by the hero of Dover Castle, the gallant De Burgh. Hubert had only forty vessels great and small, but he gained the weather gage, and by tilting at the French with the iron beaks of his galleys, sunk several of the transports with all of board. He afterwards grappled with the enemy, fastening his ships to theirs by means of hooks and chains, and in the end he took or destroyed the whole fleet with the exception of fifteen vessels. Eustace le Moine, or "the Monk," who had left his monastery in Flanders to adopt the more congenial life of a sea-rover, had his head struck off on his own deck; for he was not considered a true knight entitled to the honours Mat. Par.—Chron, Dunstap.

of war, and he had previously given great offence to the English.\*

This decisive naval victory gave the death-blow to the project of Louis. That prince, however, acted generously and nobly in the midst of his difficulties: he would not abandon his friends, but said, when pressed, that he was ready to agree to any terms not inconsistent with his honour or the safety of his English adherents. The prudent regent was glad enough to promise good terms to these barons, who, whatever might be their after errors, lad been among the foremost champions of English liberty, and had assisted in obtaining the great charter, which he himself loved as much as any of them. There were also many other nobles, on the same side, equally averse to proceeding to extremities against countrymen, former friends, and relations. The final terms were easily settled in a conference held on the 11th of September on an islet of the Thames near Kingston. was agreed that the English barons who had continued to adhere to Louis, besides having their estates restored to them, should enjoy the customs and liberties of the kingdom, and all improvements thereof, equally with other-The privileges of London, as of all other cities and boroughs, were to be confirmed, and the pfisoners on both sides taken since Louis's first landing were to be released without ransom, unless where previous arrangements had been made between parties. Louis was to give up all the castles he possessed; to order the brothers of Eustace the monk to evacuate the isles they had made themselves masters of; and to write to Alexander, king of Scotland, and Llewellyn, prince of Wales, to induce them to restore all the fortresses and places they had taken, if they would be included in the treaty. He also acquitted the English nobles of their oaths and obligations to him, and promised never to enter again into any confederacy with them to Henry's prejudice; and the barons made a like engagement on their own behalf. The French prince and his adherents swore to observe these articles, and to stand to the judgment of the church, upon which they were all absolved by the legate. Matthew Paris adds another article, which does not appear to have been committed to writing, though it was frequently urged by Henry in aftertimes as an existing and sacred engagement. This article imported that Louis would do all in his power to persuade his father to restore all the foreign possessions lost by John; and, failing in thus, that he should fairly restore those provinces when he himself became king of France. Such a clause was utterly useless, for it was one which could never be considered binding by the French nation, nor by any other in similar circumstances. Louis was so poor, that he was obliged to borrow money from the citizens of London to defray the expenses of his journey home. On the 14th of September, a safe conduct was granted to him:

he was honourably escorted to the sea-side by the Earl of Pembroke, and he sailed for France with his foreign associates. On the 2nd of October, a few refractory barons, the only remnant of a great party, went to court, and were exceedingly well received there. On the fourth day of the same month, a new charter for the city of London was promulgated; and a few days later, the regent, for the general good of the nation, concluded with Haquin, or Haco, king of Norway, a treaty of free commerce between the two countries. At the same time, this excellent regent's prudence and equity did more than a written treaty in reconciling conflicting parties at home. He was accessible and courteons to all, taking especial care that no man should be oppressed for his past politics. His authority, however, did not extend to the church, and Gualo severely chastised many of the English abbots and monks who had ventured to disregard his excommunications. This circumstance contributed with others to render the new reign unpopular with a large portion of the English church; and, during the struggles between the king and the barous which ensued at a later period, the barons had generally the monks on their side.

In all these transactions no mention had been made of Eleanor, the Maid of Brittany, who still occupied her dungeon or her cell at Bristol, nor was her name ever breathed during the civil wars which followed—a proof how little female right was then regarded; for, by the rules of succession as now recognised, she was the undoubted herress to the throne. Henry began his reign in leadingstrings, and owing to his weak and defective character, he never freed himself from such absolute guidance, but passed his whole life in a state of tutelage and dependence—being now governed by one powerful noble, or by one foreign favourite, and now by another. Nothing, however, could well surpass the wise policy and moral worth of his first gnardian, the great Earl of Pembroke, who continued to act as protector to the kingdom, and as a more than father to the boy-king. As for Eleanor, the selfish queen-mother, she abandoned her child in the midst of his troubles, and hurried back to Guienne in search of a new husband. It conveys a strange notion of the delicacy of those times, to find that the Count of La Marche, from whom John had stolen her, consented to take her back, and remarried her with great pomp. England, and probably her son, too, gained by her absence, for she had as little conscience or conduct as her luishand John. Gualo, the pope's legate, continued for some time near the young king's person. Every day the peace of the country was made more secure-" the evil will borne to King John seeming to die with him, and to be buried in the same grave." But the determination to preserve the liberties which had been wrung from him was alive and active, and a second confirmation of Magna Charta was granted by the young king. Besides that the benefits of the charter were now

extended to Ireland, several alterations were made in the deed, and a clause was added, ordering the deniolition of every eastle built or rebuilt since the beginning of the war beween John and the barons, Other clauses were withdrawn, to form a separate charter, called the Charter of Forests. By this instrument, which materially contributed to the comfort and prosperity of the nation, all the forests which had been enclosed since the reign of Henry II., were thrown open; offences in the forests were declared to be no longer capital; and men convicted of the once hemous crime of killing the king's venison, were made ponishable only by fine or imprisonment. These famous charters were now brought nearly to the shape in which they have ever since stood, the repeated confirmations of them not being intended to change or modify them, but to strengthen them by fresh guarantees, and increase the reverence of the people for them. Meanwhile the spirit of insubordination which

had arisen out of the civil war was gradually cociced or soothed by the valour and wisdom of the Earl of Pembroke, who was singularly averse to the crucities and bloodshedding which had formerly disgraced all similar pacifications. But the excellent protector did not long enjoy the happy fruit of his labours; he died in the year 1219, about the middle of May, and was briried in the climich of the Knights Templars at London, where his tomb or statue is still to be seen, with an inscription which scarcely exaggerates his virtues as a warrior and statesman. His authority in the state was now shared between Hubert de Bingh, the justiciary, the gallant defender of Dover Castle, and Peter des Roches (a Poicteym by buth), bishop of Winchester. These ministers were jealous of each other: De Burgh was the more popular with the nation; but Des Roches, who had the custody of the royal person, possessed the greater influence at court, and among the many foreigners who, like lumself, had obtuned settlements and honours in the land. sensions soon broke out; but dangerons consequences were prevented by the skill of Pandulph, who had resumed the legateship on the departure of Gnalo. On the 17th of May, 1220, young Henry was erowned again by Langton, archbishop of Canterbury, whom the pope had permitted to return to the kingdom. In the following year, Joanna, the eldest sister of Henry, was married at York, to Alexander, the king of Scotland; and nearly at the same time, one of the Scottish princesses who had been delivered to John, and who had ever since remained in England, was married to Hubert de Burgh, the justiciary. Pandulph then returned to Rome, having previously demanded, in the name of the pope, that no individual should hold more than two of the royal castles. On his departure, however, little respect was paid to the orders from Rome. Many of the barons—chiefly foreigners imported by John-refused to deliver up the fortresses which they pretended to hold in trust till the young king should be of age. While De

Burgh insisted on their surrender, his rival, Des Roches favoured the reensant chiefs. Plots and conspiracies followed; but in 1223, the justiciary, with the assent of the pape and the great conneil of the nation, declared Henry of age; and in the course of the following year he succeeded in getting possession of most of the disputed castles, taking some of them by siege and assault. Des Roches then gave up the struggle, under pretence of making u pilgrimage to Jerusalem, and mar, of the foreign adventurers followed him out of England. Though not a cruel man, Hubert de Unrgh was far more severe thun the Earl of Pembroke; for at the taking of Bedford Castle be hanged eighty of the foreign garrison, knights and others, who had been in the habit of committing flightful excesses in the country. A.D. 1225. In the following year, 1225, one of the main springs of the English constitution, which

checks the abuse of power, by the mode of allotting money, began its salutary movements. the French prince, who had now succeeded his father, Philip, on the French throne, minimidful of his promises, not only refused to surrender Normandy and the other states wrested from King John, but overran some parts of Guienne and Poicton, and took the important maritime town of Rochelle. The young king summoned a parliament (for that name was now coming into use) to meet at Westminster; and there Hubert de Burgh, having opened the proceedings by an explanatory speech, asked for money to enable the king to recover his own. first the assembly refused to make any grant, but it was finally agreed that a fifteenth of all moveable property should be given, on the express condition, however, that the king should ratify the two Henry, accordingly, gave a third ratification of Magna Charta, together with a ratification of the Charter of Forests, and sent fresh orders to some of his officers, who had bitherto treated them with little respect, to enforce all their provisions.\* In the month of April, Richard, earl of Cornwall, the king's brother, was sent to Guienne, under the guidance of the Earl of Salisbury, with an English army. But the French king had taken the cross against the Albigenses, an unfortunate people in the south of France, who were called heretics, and treated more crucily than Saracens. A papal legate interfered, threatened the English with excommunication if they raised obstacles to Loms m bis holy war, and, at last, made both parties agree to a truce for one year. Before the term expired, the French kmg died at Paris, after a brief reign of three years, and was succeeded by his son Loins IX., who was only in his twelfth year. A stormy minority ensued; and Henry, who was now twenty years of age, might have taken advantage of it, had his character and his own circumstances been somewhat different from what they were. But the English king had little more real manhood than the child on the French throne; his barons were by no means anxious for the foreign war, \* Matt Par. - Brady

HISTORY OF ENGLAND.

and the French making no further progress of nn-

Though he ruled with a firm hand, Hubert de Burgh was not always able to cause the government to be respected, and to maintain the tranquility of the country. The king's brother Richard, carl of Cornwall, who was possessed of immense estates, repeatedly defied his authority, and exacted humiliting concessions. As for the king, he continued a mere puppet, notwithstanding the flattering assurance of the pope, that his manly virtues supplied the defects of his unripe A.D. 1229. It was at length, however, resolved to carry war into France. Henry was twenty-two years old, Louis only fifteen; but Blanche, the mother of the latter prince, and regent of the kingdom, had composed all dissensions, and put the kingdom into a posture of defence. When Henry went to Portsmouth he found that the shipping provided was not sufficient to carry over his army, and after a violent altercation with Hubert de

Burgh, who was accused of being the cause of this deficiency, the expedition was given up till the following year. At length the English king, elated by the promises and invitations of the barons of Guienne, Poictou, and even many nobles of Normandy, set sail for the continent, and landed at St. Malo, in Brittany, where he was joined by a host of Bretons. He advanced to Nantes, where, like his father before him, he wasted his time and his means in feasts and pageantries, leaving the malcontents in Normandy and Poictou to curse their folly in committing their fortunes in the cause of so mwarlike a prince. In the meantime young Louis, accompanied by his mother, who shared all the hardships of a campaign which was prolonged through the winter months, took several towns belonging to Henry. In the beginning of October the English king returned home, covered with disgrace; and his ally, the Duke of Brittany, was obliged to appear at the foot of the throne of Louis with a rope round his neck.\* De Burgh had accompanied his muster on this expedition; and, in spite of his known honour, bravery, and ability, the king, and some favourites with whom he had surrounded himself, attempted to throw all the blame of the miserable failure upon Hubert. The people, however, took a different view of the case, and set Henry down as a trifler and a coward. When he applied to parliament for a further grant of money, and complained of the poverty to which his French

and told him that, through his thoughtlessness and extravagance, his barons were as poor as he was. A.D. 1232.—Hubert had now been eight years at the head of affairs. He enjoyed the good opinion of the people, whom he had never wantonly oppressed; but many of the nobles envied him his power, and hated hun for his zeal in resuming the Daru, Hist, de Bret.

expedition had reduced him, they refused the aid

eastles and other possessions of the crown. for his tried fidelity, and his courage in the worst of times, that crown in all probability would never have been worn by the helpless Henry. But the proverbial ingratitude of princes was fostered in the present case by other circumstances, the most cogent of all being, that the minister was rich and the king wofully in want of money. On a sudden, Hubert saw his old rival Peter des Roches, the Poictevin bishop of Winchester, re-appear at court, and he must have felt from that moment that his ruin was concerted. In fact, very soon after Henry threw off his faithful guardian and able minister, and left him to the persecutions of his enemies. The frivolens charges brought against Hubert almost lead to a conviction that he was guilty of no breach of trust or abuse of authority,of no real public crime whatever. Among other things, he was accused of winning the affections of the king by means of magic and enchantment.\* The fallen minister took refuge in Merton Abbey. His flight gave unwonted courage to the king, who vapoured and stormed, and then commanded the mayor of Loudon to force the asylum, and seize Hubert dead or alive. The mayor, who seems a strange officer to employ on such an occasion, set forth with a multitude of armed men; but the king being reminded by the Archbishop of Dublin of the illegality and sacrilegiousness of such a procedure, despatched messengers in a great hurry and recalled the mayor. In the cud, the Archbishop of Dublin, the only one among the great men who did not forsake Huliert, obtained for him a delay of four months, that he might prepare for his defence, the charges against him being daily in-For the interval, the king gave him a safe conduct. Relying on these letters-patent, De Burgh departed to visit his wife, the Scottish princess, at St. Edmunds-Bury; but he had scarcely begun his journey when the king, notwithstanding his plighted faith, listened to his enemies and sent a knight—one Sir Godfrey de Crancumb-with 300 armed men to surprise and seize him. Hubert was in bed at the little town of Brentwood, in Essex, when this troop fell upon He contrived to escape, naked as he was, to a parish church, where, with a crucifix in one hand and the host in the other, he stood firmly near the altar, hoping that his attitude and the sanctity of the place would procure him respect. His furious enemies, however, were not deterred by any considerations, and, bursting into the church with drawn swords, they dragged him forth, and sent for a smith to make shackles for him. The poor artisan, struck with the sad state of the great man, and moved with generous feelings, said he would rather die the worst of deaths than forge fetters for the brave defender of Dover Castle and the conqueror of the French at sea. But Sir Godfrey and his "black band" were not to be moved by any appeal: they placed the earl on horseback,

[BOOK IV.

girths, so conveyed him to the Tower of London.

CIVIL AND MILITARY TRANSACTIONS.

Chap. I.]

As soon as this violation of sanctuary was known, an ontery was raised by the bishops; and the king was in consequence obliged to order those who had seized him to carry the prisoner back to the parish church; but at the same time he commanded the

sheriff of Essex, on the pain of death, to prevent the earl's escape, and to compel him to an unconditional surrender. The sheriff dug a deep trench round the sanctuary,—erected palisades,—and effectually prevented all ingress or egress. Thus cut off from every communication, unprovided with finel and proper clothing (the winter was setting m), -and at last left without provisions, Hubert de Burgh came forth, on the fortieth day of his beleaguerment, and surrendered to the black band, who again carried him to the Tower of Loncularged, and to appear before the court of his peers; but it is said that this decent measure was not adopted until Hubert surrendered all bis ready money, which he had placed for safety in the hands of the Knights Templars. When Hubert appeared in court in the midst of his enemies, he declined pleading: some were nigent for a sentence of

A few days after, Henry ordered him to be death, but the king, who said with perfect sincerty that he was not food of blood, and would rather be reputed weak and negligent than a critel tyrant or a bloody man towards one who had long served him and his predecessors, proposed an award which was finally adopted by all parties. Hubert forfeited to the grown all such lands as had been granted hun in the time of King John, or been obtained by him, by purchase or otherwise, under Henry. He retained for himself and his hens the property be had inherited from his family, together with some estates he held in hef of mesne Thus clipt and shorn, the brave Hubert was committed to the eastle of Devizes, there to abide, in "free prison," under the custody of four knights appointed by four great earls. Within these walls, which had been built by the famous Roger, bishop of Sarum, whose adventures in some respects resembled his own, Hubert remained for nearly a year, when he was induced to adopt a desperate mode of escape by learning that the custody of the castle had just been given to a dependent of his bitter enemy the Porctevin bishop of Winchester. In a dark night he chmbed over the battlements, and dropped from the high wall into the mont, which was probably in part filled with water. From the moat he made his way to a country church; but there he was presently surrounded by an armed band, led on by the sheriff. Circumstances, however, were materially altered: several of the barons who had before been intent ou the destruction of the minister were now at open war with the king, and anxious to secure the cooperation of so able a man as De Burgh. A strong body of horse came down, released him from the hands of his captors, and carried him off into Wales,

where the insurgent nobles were then assembled.

Some eighteen months later, when peace was

himself at his expense, for the quarrel was made up on Hubert's presenting Hemy with four The Poictevin bishop, who succeeded to power on the first displacement and captivity of Hubert, soon rendered himself extremely odious to all classes of the nation. He encouraged the king's growing antipathy to the English barons, and to Magna Charta; he taught him to rely on the friendship and fidelity of foreign adventurers rather than on the meonstant affection of his own subjects; and he crowded the court, the offices of government, the royal fortiesses, with hosts of hungry Poictevins, Guscons, and other Frenchmen, who exhausted the revenues of the already impoverished crown, derided the national charters, invaded the rights of the people, and provoked the nobles by their insolence and their grasping at every place or honour in the state that fell vacant. The business of politics was as yet in its infancy: the nature of am opposition, constitutional and legal in all its operations, was as yet a discovery to be made; nor could men in their times and circumstances be expected to inderstand such things. The barons withdrew from parliament, where they were surrounded by armed foreigners, and took up arms themselves. When again summoned, they answered that unless the king dismissed his Poictevins and the other foreigners, they would drive both them and bim out of the kingdom. Peter des Roches averted his rimi for the present by sowing dissensions among the English nobles. Several battles or skirmishes, which dely anything like a clear narration, were fought in the heart of England and on the Welsh borders. Richard, Earl of Pembroke, the son of the virtuous Protector, to whom King Henry was so deeply indebted, was treacherously and most burbarously murdered, and, following up his temporary success, the Poictevin Inshop confiscated the estates of several of the English nobles without any legal trial, and bestowed them on adventurers from his own land. The last sting was given to revenge by the bishop's declaring, in his place at court, that the barons of England were inferior in rank and condition to those of France, and must not pretend to put themselves on the same footing. Edmund, the new Archbishop of Canterbury, who had succeeded Langton, and who was, like that

great churchman, a patriot and a statesman, took

up the national cause, and threatened the king with

excommunication if he did not instantly dismiss

Des Roches and his associates. Henry trembled

and complied: the foreigners were hanished, and

the archbishop for a short time governed the land

with great prindence, and according to the charters.

But Henry's dislike both of his native nobles and

. Matt. Par .- M. West .- Wykes-Chron, Dunst .- Holmshed.

restored, Hubert received back his estates and

honours : he was even re-admitted into the king's

council; but he had the wisdom never again to

aspire to the dangerous post of chief numister or

favourite. At a subsequent period the king again

fell upon him, but, it appears, merely to enrich

The of men and money, they resolutely refused both, telling the king that he ought to observe the truce prejudices or conciliate his affections, and he contiwhich had been continually renewed with France, and never broken (so at least they asserted) by

BOOK IV.

mued to repose all his confidence in foreigners. A. D. 1236, — Henry now married Eleanor,

daughter of the Count of Provence, who came to England with a numerous retinue, and was soon followed by a swarm of foreigners. These were mostly persons of higher rank than their precursors; they were Gascons and Provencals instead of Poictevins, but they were equally odious to the English nobility and people, equally insolent and quite as grasping. The Bisbop of Valence, the queen's maternal uncle, was made chief ini-

mster. Boniface, another uncle, was promoted to the see of Cunterbury; and Peter, a third uncle, was invested with the earldom of Richmond, and received the profitable wardship of the Earl Wa-The queen invited over damsels from Provence, and the king married them to the young nobles of England of whom he had the wardship, This was bad enough, but it was not all; the queen mother, Isabella, whom the nation detested, had now four sons by the Count of la Marche, and she sent them over all four, Gny, William, Geoftrey, and Aymer, to be provided for in England. The king heaped honours and riches upon these half-brothers, who were soon followed by new herds of adventurers from Guienne. Henry had resumed, with the pope's permission, nearly all the grants of estates he had made to his native subjects; but even the resources thus obtained were soon exhausted, and he found himself without money

and without credit. When he asked aids from the

parliament, the parliament told him that he must

dismiss the foreigners who devonred the substance

of the land, and they several tunes voted hun small

supplies, on the express condition that he should

so do, and also redress other grievances; but he

forgot his promises as soon as he got the money.

Gascons, who were in the habit of breaking every part of that charter, said with effrontery, "What signify these English laws to us?" \* A.D. 1242.—Isabella, the queen mother, added abke to the odmin in which she was held by the English, and to the embarrassments and unpopularity of her son, by hurrying him into a war with France. Other grounds were publicly assigned; but it appears that that woman's offended vanity was the chief cause of hostilities, which ended in a manner disgraceful to the English king. was now in the prime of manhood, and immeasurably superior in all eminent qualities to his rival He was loved and respected by his subjects;

English parliament was called upon for a supply

\* Matt. Par,-Chron. Dunst,-Ann. Waverl.

By means not recorded, but which were probably not very legal or very honourable, Henry contrived to fill thirty hogsheads with silver, and, sailing from Portsmouth with his queen, his brother Richard, and 300 knights, he made for the river Garonne. Soon after his landing, he was joined by nearly 20,000 men, some his own acknowledged vassals, some the followers of nobles who had once been the vassals of his predecessors, and who were now anxious, not to re-establish the supremacy of the English king in the south, but to render themselves independent of the crown of France by his means or at his expense.\* Louis met Henry with a superior force on the banks of the river Charente, in Saintonge, and defeated him in a pitched battle near the castle of Taille-The English king, after being saved from capture by the presence of mind and address of his brother Richard, retreated down the river to the town of Saintes, where he was beaten in a second battle, which was fought on the very next day. His mother's husband, the Count of La Marche, who had led him into this disastrous campaign, then abandoned him, and made his own terms with the French king. Henry fled from Saintes right across Samtonge, to Blave, leaving his military elest, the sacred vessels and the ornaments of his moveable chapel royal, in the hands of the enemy. A terrible dysentery which broke out in his army,

some scruples of conscience, and the singular mo-

deration of his own views, prevented Louis from fol-

lowing up his successes, and induced limito agree

to a tince for five years. Although their aidour

for foreign wars and conquests was marvellously

cooled for a season, the pride of the English was

much limit by these defeats.

The barons then bound him by oath, and Henry A.D. 1244,—When Henry met his parliament took the oaths, broke them, and acted just as before. this year, he found it more refractory than it had The great charter had provided for the banishment ever been. In reply to his demands for money, of mujust favourites without any process of law, and they taxed him with extravagance,-with his frethe king was frequently reminded of the clauses quent breaches of the great charter: they told him, relating to this subject; but the Poictevius and in short, that they would no longer trust him, and that they must have in their own hands the appointment of the chief justiciary, the chancellor, and other great officers. The king would conscart to nothing more than another ratification of Magna Charta, and therefore the parliament would only vote him twenty shillings on each knight's fee for the marriage of his eldest daughter to the Scottish king. After this he looked to a meeting of parliament as a meeting of his personal enemics, and to avoid it he raised money by stretching his prerogative in respect to fines, benevolences, purveyances, and the other undefinable branches of the ancient revenue. He also tormented and ransacked the Jews, acting with regard whereas Henry was despised by his. When the to that unhappy people like a very robber; and he

to castle,—until he obtained the reputation of being the sturdiest beggar in all England. But all this would not suffice, and, in the year 1248, he was again obliged to meet his barons in parliament. They now told him that he ought to blush to ask and from his people whom he professed to hate, and whom he shunned for the society of aliens; they reproached him with disparaging the nobles of England by forcing them into mean marriages with foreigners. They enlarged upon the abuse of the right of purveyance, telling him that the victuals and wine consumed by himself and his un-English household,—that the very clothes on their backs were all taken by force and violence from the English people, who never received any compensation; that foreign merchants, knowing the dangers to which their goods were exposed, shumed the ports of England as if they were in possession of parates; that the poor fishermen of the coast, finding they could not escape his hungry purveyors and courtiers, were frequently obliged to carry their fish to the other side of the Channel; and they added other accusations still more minute and humiliating.\* It has generally been conceived that there entered no small share of spite and exaggeration into this remarkable list of grievances; but if we consider the small sums doled out by parliament to Henry, who received less money in the way of grants than any of his immediate predecessors,—if we bear in mind that many sources of profit were narrowed or stopped altogether by the provisions of the national charter, and that the revenue formerly derived from the continental dominious of the crown had in great part ceased, ot will not appear improbable that this king and his rapacions ministers, who were retained by no pational sympathy,—by no sense of shame,—should have tried to make up these deficiencies in mean and irregular ways; and that the peaceful trader, the mass of the people, who had no arms wherewith to defend themselves, and no towers or castles wherein to take refuge, should have been sorely harried and oppressed. Another argument in support of this supposition may be derived from the well-known and lasting unpopularity of the king in London and the other great trading towns. Our old historians talk vaguely about the insubordination,-the mutinous spirit,-the proneness to riot-

reproof to which he had been obliged to listen. The king now racked his imagination in devising pretexts on which to obtain what he wanted. one time he said he was resolved to reconquer all the continental dominions of the crown; but, un-

ing,—of the Londoners; but, judging of those

citizens, not by later epochs when they were more

civilized, but by their conduct in carber and still

ruder times, we cannot believe that the excesses

complained of could have arisen under any other

than a vile and oppressive system of government.

In reply to the remonstrance of his barons, Henry gave nothing but fair promises which could no longer deceive, and he got nothing save the cutting Matt. Par,-Matt. West,-Chron. Dunst.

intention, and only wanted money to pay his debts and satisfy his foreign favourites. At a moment of urgent necessity he was advised to sell all his plate and jewels. "Who will buy them?" said he; his advisers answered,-" The entirens of London, of course." He rejoined bitterly,-" By my troth, if the treasures of Augustus were put up to sale, the citizens would be the purchasers! These clowns, who assume the style of barons, abound m all things, while we are wanting in common necessaries "\* This curious anecdote throws light upon more than one subject, and it is said that the king was thenceforth more inimical and rapacious towards the Londoners than he had been before. To annoy

them and touch them in a sensitive part, he esta-

blished a new fair at Westminster, to last fifteen days,

during which all trading was prohibited in London.

He went to keep his Christmas in the city, and let

loose his purveyors among the inhabitants: he

made them offer new-year's gifts, and shortly after,

ru spite of remonstrances, he compelled them to

pay him the sum of 2000l. by the most open vio-

lation of law and right.

fortunately, all men knew that Louis had departed

for the Fast, and that Henry, who had not shone

in the field, had contracted the most solemn obli-

gations not to make war upon him during his

ernsade He next took the cross himself, pretending to be anxious to sail for Palestine forthwith;

but here again it was well known he had no such

In a b. 1253, Henry was again obliged to meet his parliament, and this he did, averring to all men that he only wanted a proper Christian and that he might go and recover the tomb of Christ. If he thought that this old pretence would gain unbunited confidence he was deceived. The barons, who had been duped so often, treated his application with coldness and contempt; but they at last held out the hope of a liberal grant on condition of his consenting to a fresh and most solemn confirmation of their liberties. On the 3rd day of May, the king went to Westminster Hall, where the barons, prelates, and abbots were assembled. The bishops and abbots were apparelled in their canonical robes, and every one of them held a burning taper in his hand. A taper was offered to the king, but he refused it, saying he was no priest.

Then the Archbishop of Canterbury stood up before

the people and denounced sentence of excommuni-

cation against all those who should, either directly

or indirectly, infringe the charters of the kingdom.

Every striking, every terrific part of this ceremony

was performed: the prelates and abbots dashed

their tapers to the ground, and as the lights went

out in smoke, they exclaimed,-" May the soul

of every one who incurs this sentence so stink and be extinguished in hell!" The king subjoined,

on his own behalf,—"So help me God! I will

keep these charters inviolate, as I am a man, as I

am a Christian, as I am a knight, and as I am a king crowned and anointed!" His outward bethe impulse given him by his foreign favourites, he returned to his old courses, and thus utterly uprooted whatever confidence the nation yet had in With the money he thus obtained, he went to Gnienne, where Alphonso, the king of Castile, had set up a claim to the earldom, and induced many of the fickle nobles to revolt against the English crown. This expedition was less dishonomable than the former ones; indeed it was

plary; he held his hand on his heart, and made

successful on the whole, and led to a friendly alliance between England and Castile-Prince Edward marrying Eleanor, the daughter of Alphonso. But no cumning was too mean or low for Henry, who concealed these arrangements for some time, in order to obtain a fresh grant from the parhament, under colour of carrying on the war. During part of this expedition, in spite of the money he had carried with him, he had not wherewithal to feed his troops; and he despatched the prior of Newburgh with others into England, to cause provisions to be sent to him into Gascony; "and so," says an old historian, "there was a great quantity of grain and powdered flesh, taken up, and sent away, with all convenient speed." Henry returned pennyless; for the partial re-establishment of his authority in the south of France seems never to have benefited his exchequer. The expedients to which he had recourse in England, rendered hun more and more odious and contempt-When his fortunes were at this low ebb, he blindly embarked in a project which immersely increased his embarrassments. This project was no other than to raise one of his sons to the throne of the Two Sicilies. Frederick II., the son of Constance of Sicily, had died in the year 1250, after a reign which had been disturbed from its commencement to its close by the inveterate hostility of the court of Rome. He left a legitimate son, Prince Conrad; but Frederick had died in a state of excommunication, and Pope Innocent IV.

claumed the southern kingdom as forfeited to its feudal superior, the holy see. Conrad maintained his rights with an army, and as he was supported by the Neapolitan and Sicilian people, the pope had no chance of succeeding, unless he invited some new foreign host into the heart of Italy. He offered the kingdom to be held as a fief of the church to a variety of princes in succession, who all found some good reason for declining his proposals. After the pope had thus hawked the Sicilian crown through the continent of Europe, he turned his eyes towards England, where Richard, earl of Cornwall, the king's brother, attracted attention by his great wealth, which (it was reasoned at Rome), would enable him to bribe the Sicilian barons, and engage mercenaries of all Accordingly, the crown was offered to Matt. Par.-Matt. West.-W. Hemingford.

HISTORY OF ENGLAND. Book IV. Richard, but he wisely saw the difficulties that stood in his way, and declined the proffered kingdom, observing, that those who made the offer of it might just as well say, "I make you a present of the moon-step up to the sky and take it down." Soon after this, Innocent offered the crown to Henry hunself, for his second son, Prince Edmund; and the beggared and incapable king joyfully closed with the proposal, agreeing to march presently with a powerful army into the south of Italy, accepting an advance of money from the pope to enable hun to commence the cuterpuse, and proposing also to raise what more it might be necessary to horrow on the pope's security. Had the energy and the means of the English king at all corresponded with the activity and cumning policy of the Roman priest, there is little doubt that the prince might have obtained a dependent and precarious throne; but Henry was placed in circumstances in which he could do little-and, wavering and timid, he did nothing at all, except giving his son the empty title of "King of Sicily." The pope ordered the English clergy to lend money for the expedition, and even to pawn the property of their church to The clergy of England were not very obedient; but whatever sums were raised were dissipated by the king of the Roman legate, and, in the end, the pope brought a claim of debt against Henry, to the amount of more than 100,000%, which, it was alleged, had been borrowed on the continent, chiefly from the rich merchants of Venice and Florence. Henry, it appears, had never been consulted about the borrowing or spending of this money; but the pope was an imperative accountant - a creditor that could enforce payment by excommunication, interdict, and dethronement; and Henry was obliged to promise that he would pay, and to rack his weak wits in devising the means. Backed by the pope, he levied enormous contributions on the churches of England and Ireland. The native clergy were already disaffected, but these proceedings made them as openly hostile to the king as were the The wholesale spolution of the lay barons. church had also the effect of lessening the clergy's reverence for the pope, and of shaking that power which had already attained its highest pitch, and which was thenceforward gradually to When called upon to take, up some of the pope's bills, the bishop of Worcester told Rustan, the legate, that he would rather die than comply; and the Bishop of London said, that the pope and king were, indeed, more powerful than he, but if they took his mitre from his head, he would clap on a warrior's helmet. The legate moderated his demands, and withdrew, fully convinced that a storm was approaching, and that the Sicilian speculation had completed the ruin of the bankrupt king. \* As long as his brother Richard, the great Earl of Cornwall, remained in England, and in possession of the treasures he had hoarded, there was a powerful check upon insurrection; for \* Matt. CHAP. L.]

courses of the king, and had even been out in arms with the barons more than once; but he was averse to extreme measures, and, from his position, not likely to permit any invasion of the just prerogative of the crown. He had rejected one dazzling temptation, yet was be not proof against a second. The Germans were setting up their empare for sale, and Richard's vanity and ambition induced him to become a purchaser. spent immense simis, he was elected in the beginming of 1256 as "king of the Romans," which was considered the sure step to the dignity of emperor. But there was a schism among the electors, part of whom a few weeks later gave their suffrages to Alphonso, king of Castile. Richard, however, went over to the continent, was crowned at A)x-la-Chapelle, and left the crown of England to be dragged through the mire. a.r. 1258. A scarcity of provisions disposed the people to desperate measures. On the 2nd of May, Henry called a parliament at Westminster. The

barons, who had formed a new confederacy, went to the hall in complete armonr. As the king entered, there was a rattling of swords; his eye glanced tunudly along the maded ranks; and he said, with a fallering voice, "What means this? am I a prisoner?" "Not so," replied Roger Bigod, "but your foreign favourites and your own extravagance bave involved this realm in great wretchedness; wherefore we demand that the powers of government be entrusted and made over to a committee of bisbops and barons, that the same may root up abuses and enact good laws." One of the king's foreign half-brothers vapoured and talked loudly,

but as for himself, he could do nothing else than

give an unconditional assent to the demands of the

barons, who thereupon promised, that if he proved

sincere, they would help him to pay his debts, and

proscente the claims of his son in Italy. The par-

hament then dissolved, appointing an early day to

meet again at Oxford, where the committee of

government should be appointed, and the affairs of

the state finally adjusted.\* The present leader of the barons, and in all respects the most remarkable man among them, was the Earl of Leicester. It is evident that the monkish chroniclers were incapable of understanding or properly appreciating the extraordinary character of this foreign champion for English liberties; and those writers have scarcely left materials to enable us to form an accurate judgment. Simon de Montfort was the youngest son of the Count de Montfort in France, who bad gained an unhappy celebrity in the barbarous crusades against the Albigenses. In right of his mother, Amicia, he had succeeded to the earldom of Lei-

cester; but he appears to have been little known

in England until the year 1238, when he came

VOL. 1.

favour and authority; for Richard, carl of Cornwall, the king's brother, and many of the English barons, tried to prevent it, on the ground that it was not fitting a princess should be married to a foreign subject. But the earl had no sooner secored his marriage, and made himself known in the country, than he set himself forward as the decided opponent of foreign encroachment and foreign favourities of all kinds; and such was his ability, that he caused people to overlook the anomaly of his position, and to forget that he himself was a foreigner. He not only captivated the good-will of the English nobles, but endeared hunself in an extraordinary degree to the English people, whose worth and importance in the state be certainly seems to have been one of the first to discover and count upon. His devotional feelings—which upon no ground, that we can discover, have been regarded as hypocritical—gained him the favour of the clergy; his literary acquirements, so imusual in those times, increased his influence and reputation. There seems to be no good reason for refusing him the merits of a skilful politician; and he•was a master of the art of war as it was then understood and practised. The favour of the king was soon turned into a hatred as bitter as Henry's supme and not cruel nature was capable of: it seemed monstrous that a foreignes should be, not a courtier, but the popular idol-and Leicester was banished the court. He was afterwards entrusted with the government of

over from his native country, and married Eleanor,

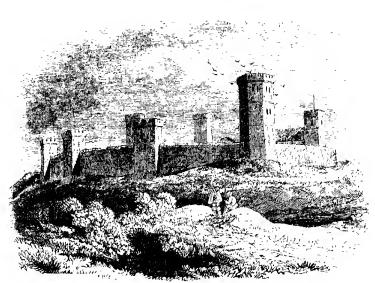

the countess downger of Pembroke, a sister of king

Henry. This match was carried by the royal

Guienne, where, if he did not achieve the impossibility of giving entire satisfaction to the unbulent and intriguing nobles, he did good service to the king, his master, and acquitted bimself with abolity and honour. Henry, however, was weak enough to listen to the complaints of some of his southern vassals, who did not relish the firm ride of the earl. Leicester was hasbly recalled, and his master called him traitor to his face. Thus insulted by a man he despised, the earl gave the he to his sovereign, and told him, that, but for his kingly rank, he would make him repent the wrong be had done him.\* This happened in 1252. Leicester withdrew for a season into France, but Henry was soon reconciled, in appearance, and the earl returned to England, where his popularity increased in proportion to the growing weakness and misgovernment of the king. He was one of the armed barous that met in Westminster-hall, and now he was ready to follow up those demonstrations at Oxford. It cannot be demed that measures beyond the ordinary course of the constitution were necessary to control so prodigal and injudicious a sovercign. The legal conrsc of the constitution, moreover, was not yet ascertanted and defined—all was experiment—a groping to the dark, and men, for the present, saw no impropriety in abridging the prerogative of a king who had constantly . Matt. Par.

promises, his most solemn vows, that it would have 1

abused it, and who had so repeatedly broken his | looked like fatuity to place the smallest trust in

Oxford Castle, as it appeared in the Fifteenth Century.

On the 11th of June the parliament, which the Royalists called the "Mad Parhament," met at Oxford. Having no rehance on the king, the great barons summoned all who owed them military service to attend in arms on the occasion. Thus secured from the attack of the foreigners in the king's pay, they proceeded to their object with great vigoni and determination. The committee of government was appointed without a murmur on the part of the timid Henry; it consisted of twenty-four members, twelve of whom were chosen by the barons and twelve by the king. The king's choice fell upon his nephew Henry, the son of Richard, the titular king of the Romans, upon Guy and William, his own half-brothers, the bishops of London and Winchester, the earls of Warwick and Warenne, the abbots of Westminster and St. Martin's, London, on John Mansel, a friar, and Peter of Savoy, a relation of the queen's. The members appointed by the barons were the bishop of Worcester, the earls Simon of Leicester, Richard of Gloucester, Humphrey of Hereford, Roger of Norfolk, earl marshal; the lords Roger Mortuner, John Fitz - Geoffrey, High Bigod, Richard de Grav, William Bardolf, Peter de Montfort, and Hugh Despencer. The Earl of Leicester was at the head of this supreme council, to the maintenance of whose ordinances the king, and afterwards his son Edward, took a solemn The parliament then proceeded to enact that four knights should be chosen by the votes of the freeholders in each county, to lay before the parliament all breaches of law and justice that might occur; that a new sheriff should be annually chosen by the freeholders in each county; and that

three sessions of parliament should be held regularly every year; the first, eight days after Michaelmas; the second, the morrow after Candlemassday; and the third, on the first day of June.

The benefits derived from the acts of this parliament were prospective rather than immediate, for the first consequences were seven or eight years of amarchy and confusion, the finits of insurcerity and disconfent on the part of the court, and of ambition and intrigue on the part of the great barons. Prince Edward, the heir to the throne, the Earl of Warenne, and others, took the oaths to the statutes or provisions of Oxford with unconcealed reluctance and ill-humour. Prince Henry openly protested that they were of no force tall his absent father, the king of the Romans, should consent to them. "Let your father look to hunself," cried Leicester; "if he refuse to join the barons of the kingdom in these provisions he shall not enjoy a foot of ground in England." Though their leaders were liberally included among the twenty-four guardians of the kingdom, the foreign faction was excessively dissatisfied with the recent changes, and said openly, and whereever they went, that the Acts of Oxford ought to be set aside as illegal and degrading to the king's majesty; which indeed they would have been had Henry had any character to degrade, and had it not been indispensable to adopt extreme precautions against the sovereign's well-known faithlessness and perfidy, or fatal facility of disposition. Irritated by their opposition and their secret intrigues, Leicester and his party scared the four half-brothers of the king and a herd of their relations and retainers out of the kingdom. The

departure of these foreigners increased the popularity of the barons with the English people; but they were seduced by the temptations of ambition and an easy triumph over all opposition; they filled up the posts vacated in the committee of government with their own adherents, leaving scarcely a member in it to represent the king; and they finally lodged the whole anthority of government in the hands of their council of state and a standing committee of twelve persons. This great power was abused, as all unlimited power, whether held by a king or an oligarchy, ever will be, and the barons soon disagreed among themselves \* A.D. 1259.—About six months after the meeting at Oxford, Richard, king of the Romans, having spent all his money among the Germans, was

CHAP. I.]

auxious to return to England that he might get more. At St. Omer he was met by a messenger from Leicester, who told him that he must not set foot in the kingdom inless he swore beforehand to observe the provisions of Oxford. Richard finally gave an inigracious and most unwilling assent: he took the oath, joined his brother, and unmediately commenced organizing an opposition to the committee of government. Soon after his arrival it was seen that flee barons disagreed more than ever. The Earl of Gloncester started up as a rival to Leicester, and a violent quarrel—the first of many--broke out between these two powerful lords. Then there was presented a petition from the knights of shares or countres, complaining that the barons had held possession of the sovereign authority for eighteen months, and had done no good in the way of reform. A few improvements, chiefly regarding the administration of justice, were then enacted; but their slender amount did not satisfy the nation, and most of the barons were more anxious for the prolongation of their own powers and profits than for anything else. By degrees two factions were formed in the committee: when that of Gloucester obtained the ascendancy, Leicester withdrew into France. Gloucester would have reconciled himself with the king; but as soon as Prince Edward saw this he declared for Leicester, who returned. managures and intrigues of party now become almost as unintelligible as they are uninterestingreconciliations and breaches between the Leicester and Gloucester factions, and then between the barons generally and the court—a changing and a changing again of sides and principles, perplex and disgrace a scene where nothing seems fixed except Leicester's dislike and distrust of the king, and a general but somewhat vague affection among the barons of both parties for the provisions of Magna Charta.

A.D. 1261.—Henry, who had long rejoiced at the division among the barons, now thought the moment was come for escaping from their authority. He had a papal dispensation in his pocket for the oaths he had taken at Oxford, and this set

reserving to himself the usual resource of breaking his compact as soon as circumstances should seem favourable. It is true his subjects had repeatedly exacted too much; but it is equally certain that he never made the smallest concession to them

without them. He then hastened to the Tower, which had recently been repaired and strengthened, and seized all the money in the Mint. behind those strong walls he ordered that the gates of London should be closed, and that all the citizens should swear fresh fealty to him. these unexpected proceedings the barons called out their vassals and marched upor the capital. Prince Edward was amusing himself in France at a tournament, and it was agreed by both parties to await his arrival, He came in haste, and, instead of joining his father in the Tower, joined the barons. In spite of this junction, or perhaps we ought rather to say, in consequence of it, many of the nobles went over and joined the king, who published the pope's bull of dispensation, together with a manifesto in which he set forth that he had reigned forty-five years in peace and according to justice, never committing such deeds of wrong and violence as the harons had recently committed. For a time he met with success, and Leicester returned once more to France, vowing that he would never trust the faith of a perjured king.\* A.D. 1263.—Another change and shifting of parts now took place in this troubled drama; the Earl of Gloucester was dead, and his son, a very young man, instead of being the rival, became for a while the bosom friend of Leicester. Prince Edward, on the other hand, veeted round to the court, and had made himself unpopular by calling in a foreign guard. In the mouth of March young Gloncester called his retainers and confederates together at Oxford, and the Earl of Leicester teturned to England in the month of April, and put himself at their head. The great earl at once paised the banner of war, and after taking several royal castles and towns, marched rapidly upon London, where the mayor and the common people declared for him The king was safe in the Tower: Prince Edward fled to Windsor Castle. and the queen, his mother, attempted to escape by water in the same direction; but, when she approached London-bridge, a cry ran among the populace, who hated her, of "Drown the witch!" and filth and stones were thrown at the barge. The mayor took pity on her, and carried her for safety to St. PanPs.+ The king of the Romans, who, though his hoarded treasures were exhausted, still possessed considerable influence, contrived to effect a hollow reconciliation between the barons and lns unwarlike brother, who yielded everything, -- only

his conscience quite at ease. On the 2nd of

February he ventured to tell the committee of

government that, seeing the abuse they had made

of their anthority, he should henceforward govern

in good faith, and with a determination of respecting it. Foreigners were once more banished the kingdom, and the enstody of the royal eastles was again entrusted to Leicester and his asso-This was done, and peace and amity were sworn in July, but by the month of October the king was in arms against the barons, and nearly succeeded in taking Leicester a prisoner. Thus new crisis was mainly attributable to a condition exacted by that great earl, that the anthority of the committee of government should not only last for the lifetime of the king, but be prolonged during the reign of his successor. Up to this point Prince Edward had pretended a great respect for his oath, professing to doubt whether an absolution from Rome could excuse perjury; and he had frequently protested that, having sworn to the provisions of Oxford, he would religiously keep that vow; but this last measure removed all his scruples, and denouncing the barons as rebels, traitors, and usurpers, he openly declared against them and all their statutes.

war some of the bishops induced both parties to refer their differences to the arbitration of the French king. The conscientious and justice-loving Louis IX. pronounced his award in the beginning of February: he insisted on the observance of the great charter; but otherwise his decision was in favour of the king, as he set aside the provisions of Oxford, ordered that the royal castles should be restored, and that the sovereign should have full power of choosing his own ministers and officers, whether from among loreigners or natives. The barons, who were better acquainted than

Louis with the character of their king, well knew

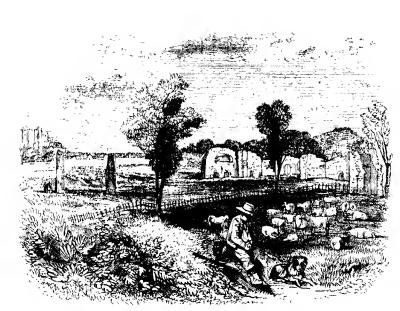

A. D. 1264. - To stop the horrors of a civil

that if the securities they had exacted (with too grasping a hand, perhaps) were all given up, the provisions of the national charters would be despised, as they were previously to the parliament of Oxford, and they therefore resolved not to be bound by the award, which they insisted had been obtained through the unfair influence of the wife of Lonis, who was sister-m-law to King Henry. The civil war was therefore renewed with more fury than ever. The strength of the royalists lay in the counties of the north and the extreme west,-that of the barons in the midland counties, the sontheast, the Ciuque Ports, and, above all, in the city of London and its neighbornhood. At the tolling of the great bell of St. Panl's, the citizens of London assembled as an armed host, animated by one daring spirit. In the midst of this excitement they fell upon the unfortunate Jews, and, after plundering them, massacred above 500, men, women, and children, in cold blood. In other parts of the kingdom the royalists robbed and murdered the Jews under pretext of their being friends to the barons, and the barons' party did the like, alleging that they were allied with the king, and that they kept Greek fire hid in their houses in order to

destroy the friends of liberty.\*

The opening of the campaign was in favour of the royalists, but their fortunes changed when they advanced to the southern coast and endeavoured to win over the powerful Cinque Ports. Lenester, who had remained quietly in Loudon organising his forces, at length marched from the capital with the resolution of fighting a decisive battle. He found the king at Lewes, in Sussex,—a bad position, in a hollows—which Henry, relying on his

ers, did not quit on the earl's should remain as hostages for their fathers, and that encamped on the downs about the whole quarrel should be again submitted to a

CIVIL AND MILITARY TRANSACTIONS.

superiority of numbers, did not quit on the earl's approach. Leicester encamped on the downs about two miles from Lewes. Whether in war or peace, he had always been an exact observer of the rites of religion: he now endeavoured (and, it should appear, with full success) to impress his followers with the belief that the cause in which they were engaged was the cause of Heaven, as well as that of liberty: the king, he said, was obnoxious to God by reason of his many perjuries: he ordered his men to wear a white cross on the breast as if they were crusaders engaged in a holy war; and his friend, the Bishop of Chichester, gave a general absolution to the army, together with assurances that all those who fell in battle would be welcomed in Heaven as martyrs. On the following morning, the 14th of May, leaving a strong reserve on the downs, he descended into the bollow. The two armes soon joined battle: on the king's side were the great houses of Bigod and Bohun, all the foreigners in the kingdom, the Percys with their warlike borderers, and from beyond the borders, John Comyn, John Bahol, and Robert Bruce,—names that were soon to appear in a very different drama. On the Earl's side were Gloncester, Derby, Warenne, the Despencers, Robert de Roos, William Marnion, Richard Grey, John Fitz-John, Nicholas Scagrave,

Godfrey de Lacy, John de Vesey, and others of noble

lineage and great estates. Prince Edward, who was

destined to acquire the rudiments of war in the slaughter of his own subjects, began the battle by

falling desperitely upon a body of Londoners, who

had gladly followed Leicester to the field. This

CHAP. I.]

burgher militia could not stand against the trained cavalry of the prince, who chased and slew them by heaps. Eager to take a bloody vengeance for the insalts the Londoners had offered his mother, Edward spurred forward, regardless of the manœuvres of the other divisions of the royalist army. He was as yet a young soldier, and the experienced and skilful leader of the barons made him pay dearly for his mistake. Leicester made a concentrated attack on the king, beat him most completely, and took him prisoner, with his brother the king of the Romans, John Comyn, and Robert Bruce, before the prince returned from his headlong pursuit. When Edward arrived at the field of battle, he saw it covered with the slain of his own party, and learned that his father, with many nobles besides those just mentioned, were in Leicester's hands, and shut up in the priory of Lewes. Before he could recover himself, he was charged by a body of horse, and made prisoner. The Earl Warenne, with the king's half-brothers who were again in England, fled to Pevensey, whence they escaped to the continent.\* The victory of the barons does not seem to have been disgraced by cruelty, but it is said to have cost the lives of more than 5000 Englishmen, who fell on the field. On the following morning, a treaty,

or the "Mise of Lewes," as it was called, was

concluded. It was agreed that Edward and his

cousin Henry, the son of the king of the Romans,

\* Matt. Par .- Wykes .- West .- Chron. Dunst.

assisted by the active sympatines of foreign princes, who saw in the proceedings of the English barons nothing but the degradation of a crowned head, she now lay at Damme, in Flanders, almost ready to cross over and renew the civil war. The steps taken by Leicester show at once his entire confidence in the good-will of the nation, and his personal bravery and activity; he summoned the whole force of the country, from castles and towns, cities, and boroughs, to meet in arms on Barham Downs, and, having encamped them there, he threw himself among the mariners of England, and, taking the command of a fleet, crused between the English and Flemish coasts to meet the invaders at But the queen's fleet never ventured out of port; her land forces disbanded, and that enterprise fell to the ground.

peaceful arbitration. But Leicester, who had now

the right of the strongest, kept both the king and his brother prisoners as well as their sons,

and, feeling his own greatness, began to be less

him and his party, the people regarded the sen-

tence with indifference, and many of the native

clergy, who had long been disgusted both with pope

and king, praised him in their sermons as the reformer of abuses, the protector of the oppressed,

the father of the poor, the saviour of his country, the avenger of the church. Thus supported, and

indeed carried forward by a boundless popularity, he soon forced all such barons as held out for the

king to surrender their eastles and submit to the

judgment of their peers. These men were condemned merely to short periods of exile in Ircland:

not one suffered death, or chains, or forfeiture, and the age was not so generally improved in humanity

as to have enforced this mildness, had the carl

himself not been averse to ernelty. Every act of

government was still performed in the name of the

king, whose captivity was made so light as to be

scarcely apparent, and who was treated with every outward demonstration of respect. The queen had

retired to the continent before the battle of Lewes,

and having busied berself in collecting a host of foreign mercenaries, in which she was greatly

Although the pope excommunicated

English and Flemish coasts to meet the invaders at sea. But the queen's fleet never ventured out of port; her hand forces disbanded, and that enterprise fell to the ground.

The ruin of Leicester was effected by very different means: confident in his talents and popularity, he ventured to display too marked a superiority above his fellows in the same cause: this exerted hostile feelings in several of the barons, whose jealousies and pretensions ware skilffully worked upon by

ventured to display too marked a superiority above his fellows in the same cause: this excited hostile feelings in several of the barons, whose jealousies and pretensions ware skilfully worked upon by Prince Edward, who had by this time been removed from Dover Castle, into which he had been thrown after the battle of Lewes, and placed with his father, in the enjoyment of considerable personal liberty, by the order of a parliament which Leicester had summoned expressly to consider his

case in the beginning of the present year (1265),

and which is memorable in the lustory of the con-

stitution as the first in which we have certain evi-

dence of the appearance of representatives from

the cities and boroughs. The Earl of Derby opened a correspondence with the prince, and the Earl of Gloucester set himself up as a rival to Montfort, and then, by means of his brother, Thomas de Clare, who had been placed about the prince's person, concerted a plan for releasing Edward. This plan was successful; and on Thursday in Whitsun week the prince escaped on a flect horse which had been conveyed to him, and joined the Eurl of Gloncester at Ludlow, where the royal banner was raised. The prince was made to swear that he would respect the charters, govern according to law, and expel foreigners; and it was upon these express conditions that Gloucester surrendered to him the command of the troops. This earl was a vain, weak, young man, but his jealous fury against Leicester could not blind him to the obvious fact that but few of the nobility would make any sacrifices for the royal cause unless their attachment to constitutional interty were gratified by such pledges.

About the same time Earl Warenne, who had escaped from the battle of Lewis, landed in

South Wales with one hundred and twenty knights and a troop of archers; and other royalist chiefs rose in different parts of the country, according to a plan which seems to have been suggested by the nulitary sagacity of Prince Edward. The Earl of Leicester, keeping good hold of the king, remained at Hereford, while his eldest son, Simon de Montfort, with a part of his army, was in Sussex. The object of the prince was to prevent the junction of these separated forces, and to keep the earl on the right bank of the Severn. Edward destroyed all the bridges and boats on that river, and secured the fords; but, after some skilful manœuvres, the earl crossed the Severn, and encamped near Worcester, where he expected his son would join him. But Simon's conduct in war was not equal to his father's, for be allowed himself to be surprised by night near Kemlworth, where Edward took his horses and treasure, and most of his knights, and forced him to take refuge, almost naked, in the castle there, the principal residence of the De Montfort family. The earl, still hoping to meet his son's forces, advanced to Eyesham, on

EVESHAM.

the river Avon: on the morning of the 4th of August, as he looked towards the hills in the direction of Kemlworth, he saw his own standards advancing:—his joy, however, was but momentary, for he discovered, when too late to retreat, that they were his son's banners in the hands of his enemies, and nearly at the same time he saw the heads of columns showing themselves on either tlank and in his rear. These well-conceived combined movements had been executed with unusual

precision,—the earl was surrounded,—every road was blocked up. As he observed the skilful way in which the hostile forces were disposed, he uttered the complaint so often used by old generals,—"They have learned from me the art of war," he exclaimed; and then, it is said, he added, "The Lord have mercy on our souls, for I see our bodies are Prince Edward's." He did not, however, neglect the duties of the commander, but marshalled his men in the best manner. He then spent a

was his wont, before going into battle. Having failed in an attempt to force the road to Kenil-worth, he formed in a solid circle on the summit resuming the sceptic, went to Warwick, where he

worth, he formed in a solid circle on the summit of a hill, and several times repulsed the charges of his foes, who gradually closed round him, attacking at all points. The king being in the earl's camp when the royalists appeared, was eneased in armour which concealed his features, and was put upon a war-horse. In one of the charges the imbecile old man was dismounted and in dauger of being slain, but he cried out, "Hold your hand, I am Harry of Winchester;" and the prince, who happened to be near, ran to his resene, and carried him out of the melée. Leicester's horse was killed under him, but the carl rose unburt from

the bravest and best of his friends fell in heaps around him, and at last the great earl lumself died with his sword in his hand.\* The hatred of the royalists was too much inflamed to admit of the humanities and usages of chivalry: no prisoners were taken; the slaughter, usually confined to the "meaner sort," who could not pay ransom, was extended to the noblest and wealthiest; and all the barons and knights of Leicester's party, to the number of one hundred and eighty, were despatched † The historians who praise the *elemency* of the loyal party, by whom "no blood was shed on the scaffold," seem to overlook the fact that all their dangerous encmies were butchered at Evesham, and that little blood was left to be shed by the executioner. Not even death rould save Leicester from their barbarous vengeance; they mutilated his body in a manner too brutal and disgusting to be described, and so presented it, as an acceptable spectacle, to a noble lady, the wife of the Lord Roger Mortimer, one of the earl's deadly enemies. "The people of England," says Holinshed cautiously, "conceived an opinion that the earl being thus slain fighting in defence of the liberties of the realm and performance of his oath, as they took it, died a martyr; which, by the bruited holiness of his past life, and the miracles ascribed to him after his death, was greatly confirmed in the next age:

his fall, and fought bravely on foot; a body of

Welsh were broken and fled, and the number of

his enemics still seemed to increase on all sides.

He then asked the royalists of they gave quarter?

and was told that there was no quarter for traitors:

his gallant son Henry was killed before his eyes,

who, with many other prisoners taken by Leicester at Lewes, now first recovered his liberty. Early in the next month, on the "Feast of the Translation of St. Edward," a parliament a-sembled at Win-Here it was seen that, even in the moment of success, the king could not venture to revoke any part of the great charter. His victory had been achieved by the arms of Engl 'b barons, who, generally speaking, had concurred in the former measures against his faithless government, and whose opposition to the Earl of Leicester's too great power, had in no sense weakened their love of constitutional safeguards, or their baticd of an absolute king. Led away, however, by personal animosities, the parhament of Winchester passed some severe sentences against the family and partisans of the late earl, and deprived the citizens of London of their charter. A desperate resistance was thus provoked, and successive insurrections broke out in different parts of the knigdam. Simon de Montfort and his associates maintained themselves for a long time in the isles of Ely and Axholm; the Chique Ports refused to submit; the castle of Kemlworth defied several royal armies; and Adam Gourdon, a most warlike baron, maintained himself in the forests of Hampshire. Prince Edward's valour and ability had full occupation for nearly two years, and at last it was found necessary to relax the severity of government, and grant easier terms to the vanquished, in order to obtain the restoration of interral tranquility. With this view, a committee

was appointed of twelve bishops and barons, and their award, called the "Dictum de Kemlworth,"

was confirmed by the king and parliament. The

Earl of Gloucester, whose personal quarrel with Leicester had been the clinef cause of the overthrow

of the baronial oligarchy, and the restoration of

was joined by his brother the king of the Romans,

Henry, quarrelled with the king, and once more took up arms, alleging, that even the Dictum de Kemilworth was too harsh, and that the court was seeking to infringe the provisions of Oxford, and breaking the promises given on the field of Eves-The dissatisfied Londoners made common cause with him, and received him within their walls, but losing heart at the approach of the king's army, Gloncester opened negotiations, and but the fear of the king's displeasure stayed the submitted, on condition of receiving a full parden people from hastily honouring him as a saint at this time, where otherwise they were inclined for himself. At the same time, the Londoners compounded for a fine of 25,000 marks. The greatly thereto, reputing him for no less in their conpope most laudably endeavoured to diffuse the science, as in secret talk they did not hesitate to spirit of mercy and moderation: he told the king, say." This popular reverence was not evanescent; who was not naturally inchied to that, or to any for many years after, when men could speak out without danger, they called the earl "Sir Simon other strong passions, that revenge was unworthy of a Christian, and that elemency was the best Contin. All this, with the determined 1 Some ten or a dozen knights who were found breathing, after the carnage, were permitted to live, or, at least, to have that chance of living which their wounds allowed. aspect of the people, whenever harsh measures were threatened, produced a salutary effect; and

the gallantry and generosity shown by Prince Edward, on one oceasion, did more in subduing opposition than a hundred executions on the scaf-

fold could have done. In a battle fought in a wood near Alton, the prince engaged Adam Gourdon hand to hand, and vanquished that redoubtable knight in fair single combat. When Adam was brought to the ground instead of despatching him,

HISTORY OF ENGLAND.

he generously gave him his life; on that very night he introduced him to the queen at Guilford, procured him his pardon, received him into his own especial favour, and was from that time forward most faithfully served by Sir Adam,\* A.D. 1267. On the 18th of November, two years and three months after the battle of Evesham, the king, in parliament at Marlborough, adopted some of the most valuable of the provi-

sions of the Earl of Leicester, and enacted other good laws. Thus all resistance was disarmed, and the patriots or the outlaws in the Isle of Ely, who were the last to submit, threw down their arms, and accepted the conditions of the Dictim of Kemlworth, which they saw had been faithfully observed with respect to others. As soon as the country was thoroughly tranquillised, Prince Edward and his cousin Henry, the son of the king of the Romans, took the cross; in which they ware followed by nearly one Immdied and fifty Enghsh lords and knights. Exhortation and example urged them to this step. Ottoboni, the pope's legate, who had been very instrumental in restoring peace in the land, had carnestly and eloquently recommended the crusade; and Loms IX., who was soon to be called "Saint Louis," had departed a second time for the East. Having taken many precantionary measures in case his father should die during his absence, and having most wisely obtained the grant of a new charter, with the restoration of their liberties, to the citizens of London, and a free pardon to a few nobles who still lay under the king's ban, Edward departed with his wife Eleanor, his cousin Henry, and his knights, in the month of July, 1270. Many of the choicest chivalry of England left their bones to bleach on the Syrian shore; but the fate of Henry d'Almaine, as they called the son of the king of the Romans, was more tragical as well as much more unusual. Being despatched back to England on a secret mission by his cousin Edward, he took the road through Italy, and loitered in the city of Viterbo, to witness the election of a new pope. One morning, at an early hour, as he was at his prayers in a church, he heard a well-known

voice exclaiming, "Thou traitor, Henry!—thou shalt not escape!" Turning round, he saw his two cousins, Simon and Guy de Montfort, who, with their mother, the Countess of Leicester, King Henry's own sister, had been driven out of England, and who considered the king of the Romans as the latterest enemy of their house. They were

in complete armour, and waved their naked swords

over their defenceless victim. He clung to the

\* Contin. Matt, Par.

into a golden shrine. According to his wish, they therefore carried his body to that stately church, and laid it in the very grave which the remains of his saintly predecessor had once occupied. Before his body was lowered to its last resting-place, the Earl of Gloucester, putting his bare hand upon it, swore fealty to the absent Edward; and the rest of the barons present followed his example. Hemy had lived sixty-eight years, and had been fifty-six years a king—at least in name. EDWARD I. SURNAMED LONGSHANKS. From the Abbey Church of Westminster the barons, who had attended his father's funeral, went to the new Temple and proclaimed the absent Edward by the style of "King of England,

holy altar before which he was kneeling, and

two priests threw themselves between him and

them. But nothing could save him from the fury

of his cousins; the two priests lost their lives in

their generous endeavours to protect him; and,

pierced with masy wounds, he was dragged out of

the church, when the murderers mutilated his

body in horrid revenge for the treatment of their father's corpse at Evesham. They then mounted

their horses and rode away, being protected, it is

said, by Count Aldobrandini, whose daughter had

been married to Guy, one of the assassms.\* That

vain old man, the king of the Romans, was re-

joicing in the possession or display of a young

German bride he had just married, and was still

flattering himself with the hopes of the imperial

crown, which had now deluded his imagination for

fifteen long years, when the melancholy catas-

trophe of his son reminded him of the vanity of

human wishes. He did not long survive the shock: he died in the month of December, 1271; and in

the following winter his brother, the king of Eng-

land, followed bim to the grave, expiring at West-

minster, after a long illness and great demonstra-

tions of picty, on the feast of St. Edmind, the 16th

church of St. Peter's from the foundation, and be

Lord of Ireland, and Duke of Aquitaine." This was on Sunday, the 20th of November, four days after the demise of Henry. A new great scal was made; Walter de Merton was appointed chancellor; Walter Gifford, archbishop of York, the Earl of Cornwall, a surviving son of Richard, king of the Romans, and the Earl of Gloucester, assumed conjointly the office of guardians or regents of the kingdom, and such wise measures were taken that the public peace was in no way disturbed; and the accession of Edward, though he was far away, and exposed to the chances of war and shipwreck, was more tranquil than that of any preceding king since the Conquest.

When Edward departed on the crusade he found that the French king, instead of sailing for

\* Rymer.--Wykes.--Muratori, Annali.

GREAT SEAL OF HOWARD I.

Syria or Palestine, had turned aside to attack the Mussulman king or bey of Tunis. The kings of Sicily had some old claims to tribute from this African state, and the Italian crown, after hovering over the heads of so many princes, had at last settled on that of Charles of Anjou, who, with the assistance of the pope, won it from Manfred, the illegitimate Suabian, at the battle of the Grandella, fought near Benevento, in the year 1266. This Charles was the ferocious, unworthy brother of the amiable Louis IX.; and it is generally supposed that, for his own selfish ambition and interests, he craftily induced the French king to turn his arms against Tunis; though it is also probable that the exaggerated accounts of the wealth of that city acted as a strong temptation with the crusaders in general. Louis landed on the African shore in the midst of summer, and took the camp and town of Carthage; but the excessive heat of the climate, the want of

EDWARD I. From a Statue in the Choir of York Minster.

HISTORY OF ENGLAND.

reinforcements.

provisions, and even of wholesome water, and pestilential masmata from bogs and swamps, soon caused dreadful maladies among his host. The king himself was attacked by a fatal dysentery, and he laid himself down to die among the rums and fragments of ancient Carthage. The superstation of this excellent man was the fault of the age in which he hyed; but the better part of his devotion, his resignation, and magnanimity, will have a claim to reverence in all ages. As long as he could act he submitted to every privation, encountered every risk, in order to alleviate the suff. ngs of his poorest followers, who died round Inm by hundreds. When he could no longer move, and when he was himself suffering agomes, he incessantly occupied his still unclouded intellect in devising means for mitigating the pains of others: with his dying breath he endeavoured to reanimate the counge of his family and of his friends," said he, "I have finished my course, - grieve not for me. It is natural that I, as your chief, should march off first. You mist all follow me in time,—keep yourselves ready for the When Prince Edward arrived he found that

officers, who were weeping about his bed. journey.''\* Louis was dead, and that more than half of his army had perished by disease. The survivors had, however, made advantageous terms with the Bey of Turns, and showed little inclination to leave that country and encounter fresh dangers in Pales-The English then re-crossed the Mediterranean to Sicily (a short voyage of 150 miles); but Edward would not renounce his project, or return home. He passed the winter at Trapian, vowing that, though all his soldiers should desert him, he would go to Acre attended only by Fowen, his groom. Early in the following spring he set sail from Sicily, and he landed at Acre, which was now almost the only residue of the cinsaders' conquests in the East, with a force which did not exceed a thousand men. But the fame of Richard was still bright on those shores; and, while the Mahomedans trembled, the Christians gathered round the standard of the successor of Lion-heart, to whom Edward was scarcely inferior in physical strength and conrage, while he was his superior in coolness and policy, and probably also in unhtary science. Bondocar, the sultan of Babylon, who had prepared to take that city by assault, immediately retreated from the vicinity of Acre, and, crossing the Desert, went into Egypt. Edward advanced, and obtained temporary possession of Nazareth, which was taken by storm. Eighty years had clapsed since Richard's massacres of Acre, and

· Le Suc de Joinville,

revived the glory of the national name; but, after all, the only other solid advantages gained were the capture of two castles and the surprise and partial plunder of a caravan. The Mahommedans were not strong enough to attack Acre, which, chiefly by Edward's means, was so strengthened as to be enabled to defythem for twenty years longer, when the Mamelukes of Egypt took it and drove the crusaders and their descendants from every part of the Holy Land. Edward on his side was always too weak to attempt any extensive operations. His presence, however, both annoyed and distressed the Tinks, and an attempt was made to get rid of him by assassination. The enur of Jaffa, under pretence of embracing the Christian religion, opened a correspondence with the English prince, and gradually gained his confidence. The emir sent letters and presents, till his messengers were allowed to pass and repass without exammation or suspicion. On the Friday of Whitsin week, about the hour of vespers, as Edward was recliming on a couch with nothing on him but a loose robe, the emir's messenger made his usual salam at the door of his apartment; he was admitted; and as he knelt and presented a letter with one hand, he drew a concealed dagger with the other, and aimed a blow at the prince's heart. Edward, though wounded, caught the murderer in his iron grasp, threw him to the ground, and despatched him with his own weapon. The prince's wound was not deep, but the dagger had been smeared with poison: when he learned this fact, he made his will, and gave himself up as lost. The English soldiers would have taken a horrid vengeance upon the poor Turks in their power, but he restrained their fury, and made them reflect on what might befal the helpless Christian pilgrims then at Jerusalem. Fortunately there was at Acre an English surgeon with skill and nerve enough to pare away the sides of the wound; and the grand master of the Templars sent some precious drugs to stop the progress of the venom. The piety, the affectionate attentions of his loving wife Eleanor may have contributed very effectually nearly two hundred since the first capture of to his cure, but there is no good ground for believ-Jerusalem by the Christians of the West; but the ing that she sucked the poison from her husband's crusaders had made little progress in humanity, wound.\* and the slaughter committed on the Moslems, under the eye of Edward at Nazareth, was only Henry had already implored his son to return less atrocious than the butchery at Jerusalem, \*Hemingford.—Chron. Pepini in Muratori.—Matt. West.—Wykes. The story of Eleanor's sucking the wound is not mentioned by any chronicler living near the time. It seems to be of Spanish origin, because the scene was more confined, and the and to have been first mentioned a century or two after the time.

long an absence, Edward had no anxiety to reach England.\* Instead of crossing the Channel,

he turned back from Paris, where he had stand

a fortinght, and went to Gineme. The mo-

tives generally assigned for his protracted stay

on the continent arc, his wish to await the deci-

sions of a general council of the church, which

the pope had summoned to meet at Lyons, and

the distracted state of Gnienne, which province

seems never to have been tranquil for a year at a

time. But it is pretty evident that the English

king entertained suspicious of Philip, who was a

far less conscientious sovereign than lins father,

Louis 1X., who had been severely blamed by the French, for not taking advantage of the weakness

of Henry to drive the English out of all their con-

tinental possessions. The dark shadows of some

deep and disgraceful intrigues are visible; and it

seems to us, that when the pope warned Edward

against the swords of assassins, he did not appre-

hend danger from the rumed and fugitive Giv 38.

Montfort, so much as from more prosperous and

more powerful agents. In the month of May,

1274, while the English king was in Guicine, he

received a challenge, couched in all the mee terms

and errenmlocations of chivalry, from the Count of

Chalons, to meet him lance to lance in a tourna-

ment. This fashion was then at its height, and

knights and nobles of high renown and princes

roval were accustomed to defy each other in the

name of God, of the blessed Virgin Mary, and of their respective samts and mistresses, and to

mvite one another out of love and reverence, to

joustings and tiltings, which often terminated in

sidered himself bound in honour as a true knight

to except the count's challenge, and, on the ap-

pointed day be entered the lists, as stalwart and

fearless a combatant as ever sat in saddle.

blood and death or fractured limbs.

to have little time to spare for the prosecution of hostilities on the coast. A truce was therefore concluded for ten years, and then Edward sailed again for Sieily. Theobald, Archdeacon of Liege, who

to England, and now Edward gladly listened to proposals of peace made by the sultan, who was so much engaged with other wars in the interior as

CIVIL AND MILITARY TRANSACTIONS.

had accompanied the prince to Palestine, had been recalled some months before from Acre to fill the vacant chair of St. Peter. At Trapani, Edward received an entrest invitation from his old companion and steadfast friend, now Gregory X., to visit him at Rome. The prince crossed the Faro of Messina to travel by land through the Italian peninsula. At a mountain village in Calabria he met messengers, by whom he was informed, for the first time, of the death of his father. He had recently lost an infant son whom Eleanor had borne him in Syria; and Charles of Anjou, who had now returned from Tunis, and had little tenderness for any one, expressed his surprise that he should giveve more for the death of his old father than for that of his own offspring. "The loss of my child," said Edward, " is a loss which I may hope to repair, but the death of a father is a loss irreparable!" By the month of February, 1273, he was at Rome, but his friend the pope being absent, he stand only two days in the Eternal City, and then turned aside to Civita Veechia, where the pope received him with honour and affection. Edward demanded justice on the assassins of Henry d'Almaine; but Simon de Montfort, one of them, had gone to account for his crimes before a higher tribunal; Aldohrandini was too powerful to be rigorously examined, and was not a principal in the nmider; and as Guy de Montfort had abscouded, the king of England was obliged to be satisfied with a very imperfect vengeance. Leaving the pontiff, he continued his journey through Italy, and be was received in trimmph at every town. The admiring Milanese presented him with some fine horses and purple mantles. His exploits in Palestine, limited as they had been, had gained lim the reputation of being the Champion of the Cross; the dangerous wound he had received (if he had died of it he would have been enrolled among saints and martyrs) created an additional sympathy in his favour, and, as if people knew he would be the last king to embark in the crusades, he was hailed with extraordinary enthusiasm. It was the bright, broad flash of the flame about to sink into the socket. In a few years the passion for the crusades, which had animated all Europe for more than two centuries, was utterly extinct. On crossing the Alps, Edward was met by a deputation from England. travelled on to Paris, where he was courteously received by his cousin, Philip le Hardi, and did homage to that king for the lands which he held of him in France.

Notwithstanding the tranquil state of the country, and the loyal disposition of his subjects, it must excite some surprise to see, that after so

was attended by a thousand champions; but the Count of Chalons rode to the spot with nearly two thousand. Whispers of bad faith on the part of the count had already been heard, and the sight of this unfair advantage probably confirmed the worst suspicions of the English. The image of war was converted into its stern reality- a sangninary battle ensued, in which the foot-soldiers took part as well as the knights. The English crossbowmen drove the French infantry from the field, and then mixing with the English horse, who were far outnumbered by their opponents, they overthrew many of the count's knights by stabbing their horses or cutting their saddle-girths-two operations against all rule, and deemed infamous in the code of chivalry. The count himself, a man renowned for his physical strength, after charging Edward several times with his lance, rode in, and grasping the king round the neck, endeavoured to • He had writen letters expressing some fear of the Londoners, and had several times commanded the "mayor, sheriffs, and commons" most carefully to keep the peace of the city. The measures adopted in consequence were more vigorous than legal. All persons an appeted of having been partisons of the Earl of Leicester were hunted down by every word, and, without form of treal or examination, thrown into frison all Edward's return.

unseat him. Edward sate like a rock, and gave the proper touch with the spur; -his war-horse sprang forward, the count was pulled out of his saddle, and burled to the ground with a dreadful shock. He was remounted by some of his knights; but, sorely bruised and stupified by his fall, he cried out for quarter. Edward was so chraged, that he kept hammering on the iron armour of his suppliant for for some time, and at last rejected his sword, and made him surrender to a common foot-soldier—an extremity of disgrace which the count, lad he been a true knight, would have avorent at the cost of life. The English had the best of the affray, taking many knights, who were obliged to ransom their persons, their arms, and their horses (where any were left abive), and slaming many of the French footmen-" because they were but rascals, and no great account was made of them." The whole affair was so fierce god sangumary, that it afterwards went by the name of the bttle war of Chalons. \*

A.D. 1274. Edward now turned lus thoughts towards England, and sent orders to prepare for his coronation. If these orders were obeyed, the coronation-feast must have been a sublune specimen of a well-loaded table; for 380 head of cattle, 430 sheep, 450 pigs, 18 wild boars, 278 flitches of bacon, and 19,660 capons and fowls were ordered by the king for this solemn occasion. † As he travelled through France, Edward stopped at the pleasant town of Montreuil, to settle some differences which had long existed between the English . Hearings, -West,-Trivet,-Holmshed.

and Flemings, and which had euriously committed the commercial interests of both countries. For several regus the counts of Flanders had been accustomed to let upon hire certain bands or troops of foot-soldiers to the kings of England. These contracts ceased altogether during the reign of Henry III.; but, some time before the death of that sovereign, Margaret, the reigning countess, claimed payment of a large sum as arrears, and pressed her chain so rudely, that she seized all the English wool-then our great article of exportthat could be found in her dominions. Henry retaliated, by seizing all the manufactured Flenish cloths in Eugland, and strictly forbade all trade between the two countries. He enticed over some Flemish clothicis, but their number was insufficrent; and it is said, that as the English were unskilled in the arts of dyeing cloths, they for some time were their coats of the natural colour of the flecce. The Flennigs stood in still greater need of our wool, wanting which their looms remained adle, and their artisans were beggared. The countess, who lost animensely by this stoppage of trade, now offered a public apology to Edward, and entreated that the commercial relations of the country might be renewed. The king, who, much to his credit, took the advice of some London merchants of good repute, immediately made up the quarrel; the countess agreed to certain repara-

On the 2nd of August, 1274, after an absence of more than four years, Edward landed at Dover, and on the 19th of the same month, "after the

tions, and the trade was renewed.

with his high-minded wife, in Westimuster Abbey. On their entrance into London they were "received with all joy that might be devised; the streets were lung with rich cloths of silk, arras, and tapestry; the aldermen and burgesses of the city threw out of their windows handfulls of gold and silver, to signify the great gladness which they had conceived of his safe return; the conduits ran plentifully with white wine and red, that each creature might drink his fill." The nation was proud of the valour and fame of their king, who was now in the prime of mature manhood, being in his thirty-sixth year; and the king had good reason to be prond of the affection, loyalty, and prosperity of the nation The government, however, was poor and emborrassed, and, in spite of all pretexts, this circumstance seems to have been the real whetstone of

CHAP. I.]

the animosity which Edward showed immediately after his accession to one class of his subjects,the unhappy Jews. The rest of the nation were now tolerably well protected from arbitrary spoliation by the great charter and the power of parhamcots; but the miscrable Israelites, considered unworthy of a participation in the laws and rights of a Christian people, were left naked to oppression, no hand or tongue being raised in their defence, and the mass of the people rejoicing in their min. As a zealous crusader, Edward detested all mobelievers, and his religious antipathies went hand-in-hand with his rapacity, and probably justified its excesses in his own eyes. The com had been clipped and adulterated for many years, and the king chose to consider the Jews as the sole or chief authors of this crime + To bring a Jew before a Christian Hilbural was almost the same thing as to sign his death-warrant: Two hundred and eighty of both sexes were bunged in London alone, and many victims also suffered in every other town where they resided. As it was so common, clipped money might be found upon every person in the kingdom; but once discovered in the possession of an Israelite, it was taken as an irrefragable proof of guilt. The houses and the whole property of every Jew that suffered went to the crown, which thus had an interest in multiplying the number of convictions. Even before these pudicial proceedings, the king prohibited the Jews from taking interest for money lent, from building synagognes, and buying lands or any free tenements. He put a capitation or poll-tax upon them, similar to the kharateli Which the grand-signior exacts from his Christian subjects: lie set & distinctive and odious hadge upon their dress, that they might be known little till others, -abuther Turkish custom, which in its time has been the cause of infinite suffering. Thirteen years later, when Edward was engaged in expensive foreign wars, and the parliament, in ill humour thereat, stinted his supplies, he ordered the seizure of every

king. Edward might have continued to make good use of them from time to time in this manner, as most of his predecessors had done, but his fanaticism overcame his avadity for money, or, probably, he wanted a large sum at once, for be-was now in the midst of his scheme for the subjugation of Scotland, and had just married two of his daughters. It was in the year 1290, soon after the sitting of a parliament at Westminster, that his proclamation went forth commanding all the Jews, under the penalty of death, to quit the kingdom for ever, within the space of two months. Then tee 4. number was considerable, for though long robbed and persecuted in England, they had, notwithstanding, increased and multiplied, and their condition in the other countries of Christendom being still worse than here, the stream of emigration had set pretty constantly from the opposite side of the Channel. Sixteen thousand five hundred and cleven individuals received the king's pass, with the gracious permission to carry with them as much of their ready money as would pay the immediate expenses of their voyage. Houses, lands, merchandise, treasmes, debts owing to them, with their bonds, their tallies and obligations, were all seized by the king. The mariners of London, and the inhabitants of the Cinque Ports generally, who were as bigoted as the king, and thought it no sin to be as rapacious towards the accursed Jews, robbed many of them of the small pittance left them, and drowned not a few during their passage. • To help to keep alive a wholesome abhorience of these detestable cruelties, we will mention one particular case, as recorded by Holmshed on the credit of a contemporary chroticle :- "Some of the richest of the Jews being shipped in a mighty fall ship which they lind hired, when the same was under sail, and had got thown the Thames towards the mouth of the fiver, the master mariner bethought him of a wife, and caused his men to cast anchor, and so totle at the same, till the ship, by obling of the stream, remained on the dry sands. The master then entired the Jews to walk out with him for recreation. And at length, when the Jews were on the sands, and he understood the tide to be conting in, he gat him back to the ship, whither he was drawn by a rope. The Jews made not so inucli little; because they were not aware of the dailger; but when they perceived how the matter stood, they cried to the master for help. He, however, told them that they ought to cry rather upon Moses, by whose guidance their fathers had passed through the Red Sea. They erred, indeed, but no succour appeared, and so they were swallowed up by the water." Some few mariners were convicted

women, and children,—every living creature in whose veins the ancient blood of the tribes was

known or supposed to flow,---were brutally arrested

and cast into loathsome dungeons. There seems

to have been no parity of justice on this occa-

sion, and the Jews purchased then enlargement by

a direct payment of the sam of 12,000% to the

691

and suffered capital punishment; for the king, to use the keen sarcasm of Hume, was determined to be the sole plunderer in his dominions.

Contemporaneously with these shameful proceedings against the Jews, Edward enacted many just and wise laws for his Christian subjects; and the additions and improvements which he made in the laws and the practices of the courts will be noticed in their proper place. The nature of his reforms shows the extent of the evil that had existed in 1299, all the judges of the land were indicted for bribery, and only two of the number were acquitted; the chief instice of the Court of King's Bench was convicted of instigating his servants to commit murder, and of protecting them against the law after the offence; the chief baron of the Exchequer was imprisoned and heavily fined, and so was Sir Ralph de Hengham, the grand justiciary. But perhaps in some of these cases we shall not greatly err if we deduct from the delinquency of The accused, and allow something for the arbitrary

will of the accuser. It is known that the king, who had just returned from a costly sojourn of nearly three years in France, was in great want of money, when, as the consequence of their condemnation, he exacted about 80,000 marks from the judges. In recevering, or attempting to recover, such parts of the royal domain as had been encroached upon, and in examining the titles by which some of the great barons held their estates, he roused a spirit which might have proved fatal to him had he not prudently stopped in time. When his commissioners asked Earl Warenne to show his titles, the Earl drew his sword and said,-"By this instrument do I hold my lands, and by the same I intend to defend them! Our ancestors, coming into this realm with William the Bastard, acquired their possessions by their good swords. William did not make a conquest alone, or for himself solely; our ancestors were helpers and participants with him!" Such title-deeds were not to be disputed; but there were other cases

EARL 'NARENNE JUSTIFFING HIS TITLE TO HIS ESTATES

CIVIL AND MILITARY TRANSACTIONS.

CHAP. I.]

where men wore less powerful swords, and where

country; and Edward seized some manors and estates, and made their owners redeem them by large sums of money. There was much bad faith in these proceedings, but as the king chose his victims with much prudence, no insurrection was excited. We must now retrace our steps, to take a regular view of this king's great operations in war. Edward was to the full as ambitious and fond of conquest as any prince of the Norman or Plantagenet line; but, instead of expending his power in foreign wars, he husbanded it for the grand plan of reducing the whole of the island of Great Britain under his immediate and undivided sway. He employed the claim of feudal superiority—a right most difficult to define, even if its existence had been admitted—with final success against Wales; and though, with regard to Scotland, it eventually failed, the rum of his scheme there did not happen until after his death, and he felt for a time the prond certainty of having defeated every opponent. If the acknowledgment of the paramount authority of the English kings, extracted from unsuccessful princes, justified a forcible seizing of territory against the wishes of the people, Edward may be acknowledged to have had that right over Wales. Setting aside the somewhat doubtful vassalage of the Welsh principalities to our Saxon kings, on which the Norman conquerors impudently founded a pretension, as being the lawful heirs to those kings, we have repeated instances of a seeming submission, when the princes purchased peace by engaging to pay certain tributes, and to recognise the suzeramty of the English throne. This feudal superiority, however, was liable to all sorts of variation, and was never really fixed by the written or understood law of the feudal system, though, in certain cases, the forms of that law could be applied in regard to it with an appearance of regularity and justice. When a weak state stood in this relation with a strong one, the feudal supremacy implied an almost unlimited right of interference and control; but when the relation existed between two states of equal power, it meant little or nothing beyond a mere ceremony. Thus the kings of England, as vassals to the sovereigns of France for their territories on the continent, had for a long time defied the authority of their liege lords, after making them tremble in Paris, their own capital. Those other nominal vassals, the great dukes of Burgundy, although they had no separate sovereignty like the Normans and Plantagenets, repeatedly followed the same course. The forfeiture pronounced against John was generally considered as an unjustifiable stretch of the rights of supremacy, but it was well timed-it was directed against one who had made himself universally odious, and whose continental subjects, for the most part, at this crisis, preferred a union

of a further examination-had no such claims existed he would have invented others—for he was determined on the conquest of the country, and internal dissensions and other circumstances favoured the enterprise. The expediency of the measure, and the advantages that have resulted from it, ought not to make us indifferent to the fate of a brave people who were fighting for their independence. The Anglo-Normans, who had been gradually encroaching on their territory for two hundred years, accused the poor Wolch of eruelty and perfidy—forgetting that they were themselves the aggressors, and had been guilty of treachery the most manifold, and of cruclues the most atrocious. Since the beginning of the reign of Henry II civilization had advanced in the rich champaign of England, and had, from the circumstances in which the country was placed, retrograded in Wales; but there are writers of the time who trace in that land the most interestmg picture of an hospitable and generous race of men, full of the elements of poetry, and passionately fond of their wild native music. According to their countryman, Giraldus Cambrensis, no people could well be more gentle and conricous m times of peace: notwithstanding the injuries constantly inflicted upon them by their neighbours, whenever an Anglo-Norman or Englishman visited them in their mountains without arms, and as a quict guest, he was received with the greatest kindness, and feasted at every house where he chose to stop. Such as arrived in the morning hours were entertained till the evening by the young women with the harp and songs. In every house there was a harp; and the company, seated in a circle round the harper, sang verses afternately—the verses being sometimes improvised, a At times, a challenge to improvisation was sent from man to man, or from a whole village to another village. Though chiefly a pastoral people, they were not rude or clownish. "All the Welsh," says Giraldus, " without any exception, from the highest to the lowest, are ready and free in speech, and have great confidence in replying even to princes and magnates." The mass of the nation, however, notwithstanding this partial refinement, was poor, and but rudely clad, as compared with their English contemporaries. One day, as Henry 11, rode through part of their country attended by his splendid chivalry, he looked with a contemptuous eye on the Welsh gentlemen riding on their rough ponies, and on the poorer sort who were clad in sheep or goats' skins. mountaineer approached the great king, and said, with a noble pride, "Thou seest this poor peoplebut such as they are thou never shalt subdue them -that is reserved alone for God in his wrath." And though this wrath may have been manifested,

and their country reduced by Heifty's great grand-

son, seldom has even a race of mountaineers made

a longer or more gallant stand for liberty. When

The nature of Edward's right is scarcely deserving

HISTORY OF ENGLAND.

their greater projects; and, at the critical moment which was to scal the fate of the whole country,

Rees-ap-Meredith, the prince of South Wales, was induced to join Edward and fight against Llewellyn, the ruler of the northern principality, and the representative of a rival family. Llewellyn, moreover, was opposed by his own brother David, who also rallied, with his vassals, round the standard of

[Book IV.

the English king. In the wars between Henry III, and the barons, the prince of North Wales had taken part with the latter, and had shown himself the steady friend of De Montfort A body of northern Welsh had fought for that great earl against Edward at the battle of Evesham; and when De Montfort was dead, and his family runed and scattered, Llewellyn still retained his old affection for the house, and agreed upon a martiage with Elipor de Montfort, daughter to the deceased carl. As that young lady was on her voyage from France to Wales, with Emeric her youngest brother, she was taken by four ships of Bristol, and was sent to King Edward's court, where both brother and sister were detained as prisoners. Angry feelings had existed before, but this seizure of his bride transported Llewellyn with wrath, and, bitterly complaining of the wrong and msult which had been done to him in a time of peace, he prepared for war. According to some accounts, he began hostilities by falling upon the English on his borders, killing the people, and burning their towns; but this is not quite certain, and, at all events, Edward bad long been employed in making preparations for conquest, and, what was equally notonous, and still more nititing to the unfortimate prince, he lad been intugining with Llewellyn's subjects and corrupting the Welsh chiefs with bribes and promises. As to the ground of quarrel chosen by Edward, it was quite true that Llewellyn had not obeyed the summons to do

a solemn treaty which had been concluded by the mediation of the pope. One of the clauses of this recent treaty had provided that neither party should harbour the enemies or revolted subjects of the other; and Edward, it was well known, had given shelter and encouragement to all the enemies of Llewellyn, and continued to receive the rebellious Welsh as personal friends. Llewellyn said, that under these circumstances, his life would be in danger if he ventured to the king of England's court, and he demanded a safe conduct, which was After the seizure of his bride his demands naturally rose: he asked for hostages and for the previous liberation of Elinor de Montfort, and then, he said, he would go to But Edward did not want him there: that resolute king had now matured his measures for

the subjugation of Wales. He had levied a fine army,-his parliament had pronounced the sentence

homage as one of the great vassals of the crown;

but he had acknowledged the duties of his vassalage, and excused his non-attendance, which he

said had solely arisen out of Edward's violation of

ings came, though, as less numerous and far more exposed, they had been less fortunate than the Scots, their valour entitled them to the same admiration and sympathy; and perhaps the high national character of the united kingdom of Great Britam may be in part owing to the fact, that no one portion of it fell an easy or degraded conquest to the other. At the time of Edward's aggression, the principality of North Wales, called by the Welsh the principality of Aberfraw, or Snauden, was still almost untouched by English arms; but the con-

querors had established themselves in Monmouthshire, and held a somewhat uncertain and frequently distinbed possession of a good part of South Wales. This occupation had been effected very gradually by the great barons who had made incursions at their own expense, and with their Jan retainers. These looks were rewarded with the lands they gained from the Welsh, and which they defended by erecting strong castles. advanced, they raised chains of fortifications, building their castles sufficiently near to communicate with, and support each other. Monmouthshire, a regular chain of fortresses was occupied on the banks of the Monnow, the Wye, and the Severn: these were Scenfieth, Grosmont, Monmonth, Trelech, perhaps Tintern, Chepstow, and Caldecot. A second line stretched diagonally from Grosmont on the Monnow to the banks of the Runney; these were Whitecastle, Tregaer, Usk, Langibby, Caerleon, and Newport; this diagonal line, with the strong castle of Abergavenny to the north of it, was intended to corb the mountaineers, who made perpetual incursions on their invaders.\* In addition to these strong fortresses, many smaller castles were constructed for the purpose of keeping the natives in awe. The more advanced posts were often re-taken, and the day when one of these castles was destroyed was held by the Welsh, who foresaw the consequences of this gradual advance, as a day of universal joy, on which the father, who had just lost his only son, should forget his mis-

fortune. But still the chains were drawn more and

more closely around them by the persevering

invaders; and, since the conquest of Ireland, extra-

ordinary pains had been taken to secure the whole

of the line through South Wales to Milford Haven,

the usual place of embarkation for the sister island.

In the wilderness of the Tivy, and in many of the

more maccessible moors, marghes, and mountains,

the invaders were still defied; and, except in Pembrokeshire, where the Flemish colony had

been settled by Hemy I., and in the lower part of Monmouthshire, the English were scarcely safe

beyond the walls of their castles, so fierce was the recollection of past wrongs, and so enduring the hope of the southern Welsh to recover all that they

had lost. But the jeulousies of their petty princes,

and the rancorous feuds of the claus, defeated all · Coxe's Monmouthshire,

CHAP. I.] CIVIL AND MILITARY TRANSACTIONS.

of forfeiture against Llewellyn as a rebel,—it had also voted a large supply,—and the church had excommunicated the Welsh prince.\* In A.D. 1277, after the feast of Easter, Edward departed from Westminster, and with a mighty force, which increased as he advanced, marched towards Chester. At Midsimmer be crossed the Dee, and, keeping between the mountains and the sea, took the two castles of Flmt and Rhuddlan. Cautions in the extreme, he made no further progress until he lad repaired these fortiesses and strengthaned their defences. At the same time his fleet, which was skilfolly managed by the manners of the Cinque Porfs, co-operated along the devoted coast, blockading every port, and enting off the supplies which Llewellyn had counted upon receiving from the Isle of Anglesey. On the hard side every ontlet was strongly guarded, and the Welsh prince, driven to the mountains was soon in want of provisions. Edward provi dently avoided a battle with desperate men, and, griding in the barren mountains, waited the effects of a smer and more dicadful destroyer than the sword. When winter made its approach the condition of Llewellyn was horrible, and it finally obliged him to throw limiself on the generosity of los enemy. On the 10th of November Edward

rent of one thousand marks t. The English king afterwards remitted the tremendons fine, which so poor a country could never have paid, and resigned his claim to the rent of Anglesey; but he showed no great alacrity in making these concessions, and he let nearly a year clapse before he performed his promise of releasing Llewellyn's bride. Such treaties as that imposed on this occasion upon the Welsh are never kept, and all Edward's art could not reconcile either the prince or people to the sense of degradation. He gratified Llewellyn's brother David, who had fought for him, by marrying him to the daughter of an English earl, and making him an English baron; but, when David stood among his native mountains, he forgot this and other honours; he cursed his own folly, which had brought ruin upon his country, and had excluded him from the hope of succeeding, either in his own person or in that of his children, to the principality. The English conquerors were not sufficiently refined to exercise their power with moderation; they derided the national usages, and insulted the prejudices of a susceptible and brave people. The invasion of their own demesnes, and the cutting down of the wood on the lands reserved

of his dying without issue male; and during his

won by the kindest treatment to be solicitous for the preservation of the peace, they would still have been forced into war by the mammous feeling of the Welsh people. Superstation albed itself with patriotism, and, in order to increase the popular confidence, certain old prophecies of bards and seers were revived under a happy coincidence of carcumstances which seemed to denote a speedy accomplishment. One of these asystic predictions imported nothing less than that the weight race should recover its traditional supremacy in the island, and that the Prince of Wales should be crowned king in Landon. On the night of Pilm Sunday, March the 22nd, of the year 1282, David surprised and took the strong eastle of Hawardine. belonging to Roger Chillord, the justiciary, "a right worthy and famous knight," according to the English;--a cruel tyrant, according to the Welsh. Several men who made resistance were killed, but the lord, who was caught in his bed, was ordy wounded, and then carried off as a prisoner. general insurrection ensued: the Welsle rushed in arms from their mountains, and Llewellyn, joining his brother, laid siege to the castles of Plud and dictated his harsh terms at Rhuddlan Castle. The These strong places held out, but treaty supulated that Llewellyn should pay fifty many of the new castles were taken and destroyed, thousand pounds,—that he should cede the whole and the English intruders were in some places of his principality as far as the river Conway, -- that driven across the marclas. Forgetting their own he should do homage, and deliver hostages. He criclities and oppressions of all kinds, the English was to retain the Isle of Anglesey; but even that accused the Welsh of great barbarity in this brief remnant was to revert to the English crown in case moment of success. When the news was carried to Edward, be affected surprise; but it has been possession he was to pay for it an annual tribute or suspected that he was not displeased with the opportunity, afforded by what had taken place, of making his conquest final and absolute. He was in want of money, and had no time to assemble a c parhament; he therefore had recomse to the very unconstitutional means of a forced loan, which was levied, not only on towns and religious establishments, but also on private individuals who were known to possess money. He then sent out commissioners to raise an army, and despatched such troops as he had in readiness to the relief of Flint and Rhuddlan. He soon followed in person, and having assembled nearly all his unbtary tenants and 1000 pioneers, he advanced into North Wales, leaving his fleet, which was still more formidable than in the preceding war, to act upon the coast, and reduce the Isle of Anglescy. His pioneers cut down woods, and opened roads into the very fastnesses of Smiwdon, whither the natives were again forced to retire. Some entrenched positions were carried, but not without a great loss; and in one affair, which appears to have been a regular battle, Edward was completely checked, if not defeated. But the means at his disposal made the struggle too unequal; reinforcements continually crossed the Dee, or came up from the coast, and he procured the services of foreign mercenaries, who were particularly well suited for mountain warfare.

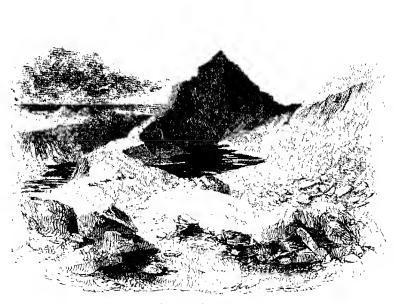

to them by treaty, exasperated both Liewellyn and

David; but it is perfectly clear that had these

princes been converted into subscrivient vassals, or

whose method of fighting, and whose general habits and manners differed little from those of the Welsh people, whom they were employed to limit down

hke blood-hounds. These foreign hordes acted where the regular troops of the English king could not;—accustomed in their own country to mountains far more rugged, they penetrated into every

SCHULL OF SOUND

independence was forced. Edward, chiefly by means of his fleet (the Welsh seem to have had no ships to oppose it), occupied Anglescy; but, in passing from that island to the main, a detachment of his forces sustained a severe loss. They had laid down a bridge of boats across the Menai Strait, at or near to the place where Telford's suspension-bridge, hanging in air, now affords a commodious communication between the opposite shores; and in the absence of Edward, who was at Abereonway, a party of English, with some Gascon lords and a body of Basques, crossed over before it was finished, making part of their way by wading through the water when the tide was out, The Welsh, who had thrown up some intrenchments near the spot, permitted them to land, and even to reconnoitre their works; but when the tide rolled in, and made deep water between them and the unfinished bridge of boats, they rushed down upon them, and drove them into the sea, where, loaded as they were with armour, many of them were drowned. Between the sword and the waves there perished thirteen knights, seventeen esquires, and several hundred foot-soldiers. When Edward learned this sad disaster, he vowed he would build a stone bridge at the place; but such an undertaking was soon found to be impracticable. This reverse at the Menai Strait happened on St. Leonard's day, the 6th of Novem-

part of Snowdon, and the last bulwark of Welsh

In another battle, Edward himself was worsted, being obliged to fly for protection to one of his castles, leaving the Lords Audley and Chfford dead on the field. Llewellyn was clated by these successes, and he fondly hoped that the severity of winter would force the English to retne; but Edward had collected a strong force in Pembrokeshue and Carmarthen, and he now sent it orders to advance through South Wales, and attack his enemy in the rear. Leaving his brother David to carry on the war in North Wales, his own principality, Llewellyn boldly turned his steps to the south, to meet the new invaders. This movement may possibly have been recommended by false friends; and there certainly is an appearance of treachery in what followed. He had reached Bualth, in the valley of the Wye, when the English, under the savage Earl of Mortimer, appeared suddenly on the opposite side of the river. A Welsh force was on the neighbouring heights; but the prince had been left with only a few followers. The English crossed the river and surprised him before he had time to put on his armour; he was murdered, rather than slain in battle. They cut off his head and sent it to Edward, who forwarded it to London, there to be placed on the Tower, with a crown of willow, in mockery of the prophecy of his coronation.

The struggle for liberty did not, however, end with this unfortunate prince. In spite of the sub-

treason.\*

Edward had far more patience and prudence

than was common to the warriors and conquerors

of his time; and he devised wise means for re-

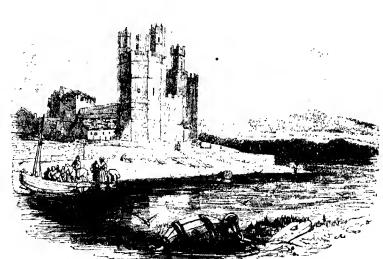

taining possession of what he had gained by force.

David still kept his sword in his hand, and for six months he wandered a free man over his native wilds. At last he was betrayed by some unpatrioue Welshinen, and with his wife and children carried in chains to the castle of Rhuddlan. In the month of September following, an English parliament assembled by Edward at Shrewsbury, pronounced the doom-not of the last champion of Welsh independence (for Madoc and others soon followed)—but of the last sovereign prince of one of the most ancient ruling families of Europe. He was sentenced—1st. To be dragged by a horse to the place of execution, because he was a traitor to the king, who had made him a knight. 2ndly, To be hanged, because he had unordered the knights in Hawardine castle. 3rdly. To have his bowels burned, because he had done the deed on Palmi Sunday, the season of Christ's passion. 4thly. be quartered, and have his limbs hung up in ferent places, because he had conspired the dealer of his lord the king in various parts. The sentence was executed to the letter, and it remained for many ages a revolting precedent in cases of high

mission of most of the Welsh chiefs, his brother

• Henningf-Chron. Donst,-Rymer,-Carte

He did not move from Wales until more than a year after the death of Llewellyn, and he spent the greater part of that time in dividing the country into shires and hundreds, after the manner of England, and restoring order and tranquillity. Immediately after the affair of Bualth, he published a proclamation, offering peace to all the inhabitants, giving them at the same time assurances that they should continue to enjoy all their lands, liberties, and properties as they had done He seems even to have lightened the taxes they paid to their native princes. Some of the ancient usages of the country were respected. but, generally speaking, the laws of England were introduced and enforced. He gave charters with great privileges to various trading companies in Rhuddlan, Cacruaryon, Aberystwith, and other towns, with the view of encouraging trade and tempting the Welsh from their mountains, and then wild, free way of living, to a more social and submissive state. When his wife Eleanor bore him a son in the castle of Caernaryon,

CAFRNARVON CASTLE,

he adroitly availed himself of that circumstance, by presenting the infant Edward to the people as their countryman, and telling them that he who was born among them should be their prince. The Welsh chiefs expected that this "Prince of Wales" would have the separate government of their country, for Alphonso, an

clder brother of the infant Edward, was then alive, and the acknowledged herr to the English crown. For some time they indulged in this dream of a restored independence, and professed, and probably felt, a great attachment to the young Edward; but Prince Alphonso died; the illusion was also dissipated by other circumstances, and, in the

HISTORY OF ENGLAND.

King Edward strongly fortified the two castles of Chemaryon and Conway, and built some other

fortresses, all which places he supplied with good gardsons and stores of provisions. To secure his conquest from the meursions of the people of Snowdon, he divided most of the lands at the foot of that mountain among his great English barons, and they again subdivided them among their officers and vassals, who held them in fiel, and built other castles and towers for their defence. But these tyranical lords and greedy retainers could not follow the example of the kmg's moderation; and their einel excesses and their insulting demeanour towards the Welsh, continually provoked hostilities, and kept above feelings which frequently vented themselves in deeds of a savage enough character, though scarcely more lawless

Thần the oppressions out of which they arose,

After the subjugation of Wales, Edward's ambi-

tion rested for about four years—three of which he

terests to take charge of what did not concern them; and the parliament at last refused him a supply which he had asked. The king then returned in haste, and, almost munchiately after, he involved hunself in the affairs of Scotland, which, with a few short intervals, entirely occupied him all the rest of his reign. Before proceeding, however, to this part of the story of the English king, it will be most convement to resume our Scottish narrative from the point to which we brought it down in the last Book 1

The reign of Alexander II., who succeeded to the fluore in 1214, will not detain us long. the death of John, the king of Scots continued to co-operate with Prince Louis of France and the confederated English barons; and he lumself, his whole army, and kingdom were, in consequence, excommunicated by the legate Gualo; but the sentence seems to have been very little minded cither by the people or their elergy. It was not even published by the latter till almost a twelvemonth had passed. In the mean time Louis made peace with Henry, without giving lumself any concern about his ally. On this, Alexander, who was on his march into England, returned home. after, however, effected his reconciliation both with town of Carlisle, of which, although not of the castle, he had made himself master, and did homage for the carldom of Huntingdon and his other honours and possessions in England. On the 25th of June, 1221, Alexander married the Princess Joan, Henry's eldest sister. A long period of uninterrupted peace and annty between the two countries was the consequence of these arrange-Some insurrections or disturbances in the as yet only half-subdued provinces of Argyle, Carthness, Moray, and Galloway, all of which were successively suppressed, are almost the only events that mark the history of the northern kingdom for the next twelve or thirteen years. The most serious of these provincial commotions was the t, which broke out in Galloway in 1233, upon death of Alan, constable of Scotland, the lord

1st of December, 1217, he received absolution

from the delegates of Gualo at Tweedmouth; and

at the same time he surrendered to Henry the

was willing to come forward as one of his compur-

CIVIL AND MILITARY TRANSACTIONS. to the counties of Northamberland, Cumberland, and Westmoreland, should receive lands in the two former of the yearly value of two hundred pounds in full satisfaction of all bis demands. The following year (4th March, 1238) Queen Joan, who had been long in a declining state, died at Canterbury. She had left no issue, and within little more than a year (15th May, 1239) Alexander married again: bis new queen was Mary, daughter of Ingelram de Conei, a great lord of Picardy. The chief bond that had attached the two kings was thus snapped; and Mary de Conci, whose family had been distinguished for its opposition to the English interests, is, besides, supposed to have exercised an unfavourable influence over the mind of her landband. It was some years, however fore the old friendship that had subsisted bet hun and Henry wholly gave way; even in 12. we find Henry, when about to set out on his expedition to France, confiding to Alexander the care of the northern borders. But in this same year an event occurred which is especially memorable tor the consequences attributed to it. An old feud had existed between the Bissets, at powerful family in the north of Scotland, and the House of Athole At a tournament held at Haddington, Patrick, Earl of Athole, a youth distinguished for his knightly accomplishments, manced to overthrow Walter Bisset. Within a day or two after the Earl of Athole was found mundered in the house where he lodged, which was also set on fire. Suspicion immediately fell upon the Bissets: the nobility, headed by the Earl of March, immediately raised an armed force, and demanded the life both of Walter and of his uncle William Bisset, the cluef of the family. It appears pretty certain that the latter at least was innocent of any participation in the murder: he urged, what seems to have been the fact, that he was not within fifty unles of Haddington when it was committed: he offered to maintain his innocence by the wager of battle; and, still further to clear himself, he had sentence of excommunication against the nunderers published both in his own chapel and in all the churches of the kingdom. It seems to have been against him, nevertheless, that the rage both of the connexions of Athole and of the people generally was chiefly turned; the savage notions of the period could not view what had taken place in any other light than us a ground for hunting to death the whole kindred of the supposed criminal; and the head of his family, as higher game, was naturally, in the spirit of this mode of considering the matter, pursued even with more eagerness than The king, however, seems to have felt the ministice of the popular clamour; he interposed for Bisset's protection; and even the queen, according to Fordun, offered to make oath that he had no part in devising the crime; that is to say, she was so convinced of his innocence that she

ness of character. String, possibly, with an indigment sense of the injustice he had experienced, he sought to avenge himself on his caemies at the expense not only of his rountry but of its king, to whose zealous and energetic interposition in his favour he owed his life. It is said that he made his appeal to the king of England against the judgment that had been passed on him, on the plea that "Alexander, being the vassal of Hemy, had no right to inflict such punishment on his nobles without the permission of his liege lord;" and that, at the same time, he further endeavoured to exeite Hemy against the Scottish king by describing the latter as devoted to the interests of France and quoting instances in which, as be affirmed, English traitors who had escaped. from prison were received and barbonicd at the northern court.\* These insidious representations may not improbably have had some part, along with other causes, in formenting the bostile disposition which Henry not long after openly showed. At length, having fully arranged his plans, he proclaimed war against Alexander in 1244, and assembling a unmerous army at Newcastle, prepared to invade Scotland. Some troops, which had been sent to the assistance of Alexander by his brother-in-law, John de Couci, had been intercepted by Henry, who had also organised a confederacy of Irish chiefs to aid him in his enterprise, by making a descent upon the Scottish coast; but the country, nevertheless, prepared to make a vigorous resistance. The contemporary English historian, Matthew Paris, has given us a description of the force with which Alexander marched to oppose the "His army," he says, "was numerous and brave; he had 1000 horsemen, tolerably mounted, though not, indeed, or Spanish or Italian horses; his infantry approached to 100,000, all \* Hailes, Ann. of Scot. i. 188-190, -Tytler, Hist. of Scot. i. 4-6.

gators, if the case should be submitted to that

mode of trial. The opposite party, bowever, seem

to have declined submitting the question to decision either by compargation or by combat: they insisted

that it should be brought before a jury; so that

this affair is remarkable, in addition to its other

points of interest, as a memorial of all the three

great forms of indicial procedure in criminal cases

which were then in use. Bisset refused the trial

by jury, "on account of the malevolence of the

people, and the implacable resentment of his ene-

imes." At last, by the exertions of the king, it

was agreed that he should be allowed to escape

with has life on condition of forfeiting has estates

and leaving the country. But he was still, not-

withstanding, in the greatest danger from the

secret iletermination of his enemies to have his blood; and it was only by remaining in conceal-

ment under the royal protection for about three

months that he was at last enabled to make his

escape to England. Whatever may have been

his minries, he now certainly showed little noble-

manimous, all animated, by the exhortations of their clergy, and by confession, courageously to fight and resolutely to die in the just defence of their native land." The sword, however, was not drawn, after all; a negotiation took place between the two kings, and a peace was concluded at Newcastle (13th August), by which Alexander agreed always to bear good faith and love to his dear and hege lord, Hemy King of England, and never to enter into alliance with the enemies of Henry or of his heirs, unless they should unjustly aggrieve The only event of the reign of Alexander which remains to be noticed, is a contest into which he

702

entered, in 1248, with Angus, Lord of Argyle, with the view of compelling that chief to transfer to the Scottish crown the homage which he had been wont to render for certain of the western islands to the king of Norway. The position of Angus was a very difficult one; he was the vassal of both sovereigns, for different parts of his possessions; and if he consented to the demand of Alexander, he was as sure to draw down upon lumself the vengeance of the Norwegian king as he was to incur Alexander's hostility if he refused. In these circumstances he seems to have considered it the most expedient, perhaps also the fairest and most reasonable course, to decline moving from his existing engagements. Alexander's first expedition against him seems to have proved misuccessful; but he ienewed the attempt the following year. He was engaged in this war when he was taken ill, and died in the island of Kerarry, near the Sound of Mull, on the 8th of July, 1249, in the lifty-first year of his age and thurty-lifth of his reign. "Alexander," says Matthew Paris, "was a devout, upright, and counteous person, justly beloved by all the English nation, no less than by his own subjects." It seems to have been to this general regard entertained for him by the English nobility and people that Henry's abandonment of his scheme of invading Scotland a few years before was in part owing; for it is said that the peace of Newcastle was brought about by the mediation of the Earl of Cornwall and other noblemen. Henry's barons could feel httle pride or interest in supporting the projects of their own imbecile sovereign against the Scottish king; and some of them also, no doubt, still remembered them old association of arms with Alexander against Henry and the tyrant, Alexander, like most of the other his father. Scottish kings of those times, stood up throughout his reign for the independence of the national church with great spirit. Although a favourer of the clergy, however, he does not appear to have gone into any extravagant expenditure for the

on the 4th of September, 1241, and was now consequently only in his muth year. There was reason to apprehend that the King of England anight endeavour to take advantage of this occasion to renew attempt against the independence of the king-; and, therefore, by the patriotic advice Zham Comyn, Earl of Menterth, no time was lost in proceeding to the coronation of the young The ceremony took place at Scone on the 13th of July, the Bishop of St. Andrew's knighting the king as well as placing the crown on his head. Some of the other forms that were observed are euriously klustrative of the chequered intermyture of the two opposite colours of nationality now contending with one another in Scotlaml—the old Celtic spirit and usages, and the recently imported Auglo-Norman evilization. After the coronation oath, for instance, had been administered to the king both in Latin and in French, the language of the nobility, he was placed upon the sacred stone of destroy, which stood before the cross in the eastern end of the church, and while he there sate, with the crown on his head, and the sceptre in his hand, a grey-headed Highland bard, stepping forth from the crowd, addressed to him a long genealogical recitation in the Gaelie tongue, in which, beginning, "Harl Alexander, king of Albion, son of Alexander, son of William, son of David," &c., he carried up the royal pedigree through all its generations to the legendary Gathelus, who married Scota, the daughter of Pharaoh, and was the contemporary of Moses. It may be doubted if Alexander understood a word of this savage pean, but he is recorded to have expressed his gratification

Dominicant or Black Frank; and Bocce supposes

that his partiality to these mendicants may have

been occasioned by his having seen their founder,

St. Dominic, in France, about the year 1217. "The sight of a living saint," observes Lord

Hailes, "may have made an impression on his

young mind; but perhaps he considered the mendieant from as the cheapest ecclesiastics: his

revenues could not supply the costly institution of

Cistertians and canons regular, in which his great-

son, Alexander III., who was born at Roxburgh

Alexander was succeeded on the throne by his only

grandfather, David I., took delight."

by hberally rewarding the venerable rhapsodist. It would serve no useful end to load our pages with any detail of the intricate, and in great part very imperfectly intelligible struggles of adverse factions that make up the history of the kingdom during this as during every other minority in those It is sufficient to state that at the head of one of the two great contending parties was the powerful family of the Comyns, of which name it is said there were at this time in Scotland no fewer than thirty-two knights, several of whom were barons; the Baliols, among others, were adherents of this party: among their most distinguished opponents were the Earl of March and Dunbar,

the Earl of Strathern, the Earl of Carrick, the

aggrandizement of their order. He founded, in-

<sup>•</sup> Nisi nos injuste gravent. Dr. Langard describes this treaty as "an arrangement by which, though he cluded the express recognition of tendad dependence, he (Absander) seems to have conceded to Henry the substance of his demand." In fact, "the express recognition of feudal dejendence." was not at all cluded by Alexander; it was made at the most distinct terms, but it was not made. for the kingdom of Scotland, and therefore it was frenry, not Alexander, who conceded the point in dispute.

Chap. J.]

leaders of that party soon after this contrived to

ment which had been entered into soon after the births of the prince and the princess. Although neither party was yet quite eleven years old, the impenals were celebrated at York with great maginfluence on the 26th of December, 1251. Matthew Paris assures us that six hundred oven, given by the Archbishop of York to furmsh part of the marriage feast, were all consumed upon the first course! Men were heroic eaters in those days, certainly; but it will probably be admitted to the lustorian has judged prindently in not enter into further particulars, lest, as he says, his narative "might become hyperbolical, and produce nony in the hearts of the absent." On this occasion Alexander, according to custom, did homage to Henry for his English possessions; but when the latter demanded homage also for the kingdom of Scotland, the young Scottish sovereign, with a spirit and firmness remarkable for his years, said, "that he bad been invited to York to marry the princess of England, not to treat of affans of state; and that he could not take a step so important without the knowledge and approbation of his parliament." It was agreed, however, that Hemy, in consideration apparently of his natural interest in the welfare of his son-mlaw, should send a person in whom he placed confidence to Scotland, who might act in concert with the Scottish guindrans of the young king. sent, accordingly, Geoffiev of Langley, keeper of the royal forests, a man who had already acquired the worst reputation in England by the severity with which he excreised the powers of his odious office; but the Scottish barons, finding his insolence intolerable, soon compelled lum to leave the In 1255, we find the English king despatching a new mission to Scotland, under pictorice of inquiring into certain grievances complained of by the queen, his daughter. At this time Robert de Ros and John de Bahol, two noblemen of the Comyn party, appear to have been at the head of the government under the name of Regents. Queen Margaret complained that she was confined in the castle of Ediuburgh,-a sad and solitary place,without veidure, and, by reason of its vicinity to the sea, unwholesome; that she was not permitted to make excursions through the kingdom, nor to

of the same faction, were appointed regents of the kingdom and guardians of the king and queen. This settlement appears to have been maintained for about two years; but, in 1257, a counter revolution was effected through the nunction with the Comyns of Mary de Couci, Alexander's mother, who had married John de Brienne, son of the titular king of Jerusalem, and had lately returned from abroad, ammated with all her old heichitary hatred of the English influence, and strengthened both by her new alliance and by the favour and countenance of the pope. The lately expelled faction now suddenly rose in arms, seized the king and queen at Knuoss, and so completely carried every thing before them that the principal adherents of the English interest all found it necessary to save themselves by instant flight. There can be no doubt that, with whatever justice or by whatever means, the Comyns contrived to make thens appear to be the patriotic cause, and to gain, at least for the moment, the popular voice. They probably made use of the old cry of independence, and worked upon the sensitive national jealousy of England with good effect. Even the king, now that he was in their hands, was of course compelled to act along with them, and to submit to be their instrument. They put him at the head of their forces, and marched towards the English border, where it would appear that the adherents of the late government had rallied and collected their strength. No contest of grins, however, took place; the dispute was eventually settled by negocration; and it was agreed that while the chief power should remain in the hands of the Comyns and the queen-dowager, to six regents of this party should be added four of the members of the late government. Mary de Coner and her husband were placed at the head of this new regency. The coalition thus formed seems to have substantially subsisted tell the king came of age, and took the management of affairs into his own hands although, shortly after the new government was established, the Comyns lost then great leader, Walter, Earl of Mentcitli, poisoned, as was suspected, by his countess: the unhappy woman was behaved to have choose her female attendants; and that, although

surprise the eastle of Edinburgh, and to get possession of the king and queen. They were im-

mediately conveyed to the north of England, where

Henry was with an army; and at last, in a meet-

ing of the two kings at Raxburgh (20th Septem-

ber, 1255), a new plan of government was settled,

to subsist for seven years, that is, till  $\Lambda$ lexande ${f r}$

both she and her husband had by this time combeen instigated to the commission of this crime by pleted their fourteenth year, they were still excluded a passion she had formed for one John Russell, an from each other's society. By a scheme concerted Englishman of obscure both according to Bocce, between Henry and the party opposed to the whom she soon afterwards married. In 1260, on Comyns, the Earl of March, Durward, and other the Queen of Scots becoming pregnant, she and her her delivery should take place in England. In the event of the death of Alexander, certain of the Scottish bishops and nobles were appointed to receive the child from the hands of Henry, and to convey it to Scotland; and in the list of these

appear the names of the principal persons of both the great national parties. In February, 1261, the Queen of Scots was delivered at Windsor of a daughter, who was named Margaret, and through whom, as she was her father's first-born, his short line was destined to have its latest prolon-The year 1263 is the most memorable in the reign of Alexander. The Earl of Ross and other northern chiefs had, at the instigation of the Scottish king, invaded the Hebrides, or Western Islands, which were under the dominion of Norway, and had signalised their descent, according to the Norwegian chromelers, by the most frightful excesses of savage warfare. Haco, the Norwegian king, immediately prepared for vengeance. Having collected a great fleet, he sailed from Herloversn the beginning of July The Orkney Islands, which although formerly belonging to Norway, had been lately compelled to acknowledge the sovereignty of Scotland, were his first destination. Anchoring in the bay of Ronaldsvoe (now Ronaldsay), the formidable armament remained there for some weeks, during which the inhabitants both of the islands and of the opposite main-land were compelled to supply it with provisions and to pay tribute. It is recorded in the Noise chronicle of the expededition, that while the fleet lay at Ronaldsvoe "a great darkness drew over the sun, so that only a little ring was bright round his orb;" and it is found that the remarkable phenomenon of an annular echipse must have been seen at Ronaldsvoe this year on the 5th of August. Such confirma-

tions seem to revivify the long-buried past, and make its history read like a parrative of events of our own day. Haco now sailed for the south, and being joined as he proceeded by his allies, Maginis, the Lord of Man, and various Hebridean chiefs, he found lumself at the head of a fleet of above a hundred sail, most of them vessels of considerable size. Dividing his force, he sent one powerful squadron to ravage the Mull of Cantyre; another, to make a descent of the Isle of Bute. The latter soon compelled the Scottish garrison of the castle of Rothsay, in that island, to surrender. In the mean time Haco hunself entered the Frith of Clyde, and anchored in the Sound of Kilbrannan, between the main-land and the Isle of Arran. Additional accessions had by this time increased his flect to a hundred and sixty sail. The Scottish government now attempted to avert the danger by negotiation: the ahandonment of all claim to the Hebrides was offered by Alexander; but to these

tageous to the Scots and detrimental to their invaders. It allowed the former to improve their preparations for defence; it embarrassed the latter by a growing difficulty in obtaining provisions, and it exposed their fleet, upon a strange coast, to the hazards of the stormy season of the year that was fast approaching Many of the inhabitants of the neighbouring country meanwhile had retreated for safety to the islets in Loch-Lomond There, however, they were soon attacked by a division of the invading force under the command of the King of Man, who, first sailing to the head of Loch-Lorg, and plundering the shores as they passed, then dragged their boats across the neck of land that divides the two lakes. "The persevering shielded warriors of the thrower of the whizzing spear, ngs a Norwegian celebrator of the exploit, tew then boats across the broad isthmus. Our rearless troops, the exactors of contribution, with flaming brands, wasted the populous islands in the take and the mansions around its winding bays."  $\Lambda$  devastating expedition into Stribngshire followed under another chief. But now the heavens began to fight against them. One gale destroyed ten of then ships that lay in Loch-Long; and soon after, on Monday, the 1st of October, a tempest of tremendons violence from the south-west attacked the main squadren lying under the command of Haco in the Clyde, and tearing nearly every ship from its bootings, after casting several of them on shore, drove the rest, mostly dismasted or otherwise disabled, up the channel. The Scottish forces collected in the neighbourhood immediately fell upon the crews of the vessels that were stranded; but the Norwegians defended themselves with great valour; and assistance having been sent to them by Haco, when the wind had somewhat abated, they succeeded in driving off their assailants. As soon as daylight appeared, Haco, who had collected his shattered ships off the village of Largs, landed at the head of a strong force for the protection of two transports that had been among the vessels cast ashore the preceding afternoon, and which the Scots had attempted to plunder during the night. This movement may be said to have commenced what is called the battle of Largs. The Scottish army, led by Alexander, the Steward of Scotland, now came down from the surrounding

high grounds; it consisted of a numerous body of foot, together with a troop of 1500 cavalry, who

are described as being armed from head to heel,

and as mounted on Spanish horses, which were

also clothed in complete armour. The handful of

Norwegians, drawn up in three divisions, one of

which occupied a small hill, while the other two

were stationed on the shore, were greatly out-

numbered by this force; and Haco, as the engage-

ment was about to commence, was, although with

much difficulty, prevailed upon by his officers to

row back to the ships for further aid. But he had

scarcely got on board when another furious storm

terms Haco would not listen. Some time however

was thus gained, which was in various ways advan-

where the ground favoured them. In this way, although still galled by the Scots hovering on their rear, they seem to have at length converted their flight into a slow and comparatively orderly retreat. Towards night, a re-enforcement from the slaps having, notwithstanding the storm, which still contimical, effected a landing by extraordinary efforts, the foreigners, if we may trust to their own count, even made a general attack upon the tish army, and, after a short resistance, succeeded in driving them back. They then re-embarked in then boats and regained the slops. But on the water the elements bad been doing their destinctive work even with more effect than human rage on land. Haco's magnificent navy was now reduced to a few sluttered vessels; most of those which the wrath of the former tempests had spaced, that of this disastrons that had dashed to pieces, and then fragments covered the beach. The Norwegian king sailed away to the island of Arran,

and from thence through a course of stormy weather to Orkney, which he dul not reach till the 29th of October. He proceeded no faither on his loroeward voyage. An illness serzed upon him, brought on probably by mental agony as nuch as by bodily exposure and fatigue, under which he Imagined for some weeks, and at last expired on the 15th of December \* The battle of Large is the great event of the reign of Alexander. The Scottish historians make 24,000 Norwegians to have fallen in the slaughter of that day; and although there can be no doubt that this is an enormous exaggeration, still the overthrow sustained by the foreigners was complete, and the victory was among the most important the Scots ever won. It was their last conflict with the pirate kings. After negotiations which lasted for nearly three years, a peace was concluded with Norway, by which both the Hebrides and the Isle of Man, and all other islands in the western and southern seas of which that power might have hitherto held or claimed the dominion, were made over in full sovereignty to Scotland. The Western Islands were never afterwards withdrawn from the

homage, according to custom, for his English possessions. In 1278, he performed this ceremony

a second time, declaring, according to the record

prescryed in the Close Rolls, that he became the

Scotland, as is conclusively proved, if there could be any doubt on the subject, by the seinel of the record, which expressly states that Edward "received it, saving his right and claim to homage for the kingdom of Scotland, when it shall please min to bring it forward " The slight notice taken by history of the course of events in Scotland for twenty years after the battle of Largs, is the best evidence of the tran-

quality and happiness of the country. We can collect little more than the general fact that the government of Alexander, after he took the management of affairs into his own hands, made him universally beloved by his people, and that peace and plenty blessed the land in his time. No foreign enemy assailed or threatened it; and the turbulence of its domestic factions seems also to have given way under the firm and pulicious rule of the king. The friendly relations, too, that were maintained with England, and the intercourse that subsisted between the two countries, must have been highly favourable both to the increase of wealth and the general improvement of the useful arts and the habits.

of social life in Scotland. But clouds and storms

Alexander had lost his queen, Margaret of Eng-

many years. By a singular succession of cala-

laml, m 1275; but, besides the daughter already mentioned, she had left him a son, named Ahrxamler, born at Jedburgh on the 21st of January, 1264: David, a younger son, had died in his boyhood. In 1281 the Princess Margaret was married to Eric, king of Norway; and the following year the Prince of Scotland, now a youth of eighteen, was imited to Margaret, ilanghter of Gny, Earl of Flanders. At this time the king hunself, as yet only in his forty-first year, niight reasonably have counted on a much longer reign; the alliances which he had formed for his children promised to enable him to transmit his sceptre to a line of descendants; and the people seemed entitled to look forward to the continuance of the present peace and prosperity of the country for

were soon to succred this simslime.

mitties all these fair hopes were, one after the other, rapidly extanguished. First, nother latter part of the year 1283, died the Queen of Norway, leaving only an infant daughter. The death of Queen

<sup>•</sup> See "The Norwegian Account of Huro's Expedition against Scotland," in 1standa and lagled, with notes; by the Rev James Johnstone, A.M.; 12mo, 1782; and "Observations on the Norwegian Expedition against Scotland, in the year 1263, and on some previous events which gave occasion to that Wai," by John Dilton, Lsq., in "Transactions of the Society of the Antiquaries of Scotland," the Exercise Section of the Society of the Antiquaries of Scotland," vol. n., 4to. might yet have, to acknowledge for their sovereign the Norwegian princess,—"the Maiden of Norway," as she is called by the old writers.

No time was lost by Alexander in taking the

measures for the settlement of the succession which

these events rendered necessary. On the 5th of

February the parliament was assembled at Scone,

when the estates of the kingdom solemply bound

themselves, failing Alexander and any children be

following year (15th April, 1285) Alexander maried Joleta, the young and beautiful daughter of the Count de Dreux. The nuptials were celebrated at Jedburgh with great magnificence and much popular rejoicing, the nation anticipating from this new innon the speedy restoration of all those prospects which the two recent deaths had overclouded. But death had not yet done all his work. Within a year after his marriage, on the 16th of March, 1286, as Alexander was riding in a dark night between Kinghorn and Burnt Island, on the northern shore of the Frith of Forth, his horse, on which he had galloped forward from his attendants, stumbled with him over a high chiff, at a place now known by the name of King's Wood End, when he was killed on the spot. The loss of this excellent king would in any circumstances have been a heavy calamnty to he country; but the blow could not have been received at a more imfortunate moment than the present A long minority was now the least evil the kingdom had to dread, and that evil was certain it a worse should not take its place. The life of an infant, in a foreign country, alone stood between the nation and all the sine confusion and inferies of a disputed succession. The furt proceeding of the Estates was to appoint a regency, at a meeting held at Scone on the 11th of April. But scarcely, it would appear, had the throne of Queen Margaret been thus set up, when it began to be undermined by plots and secret treason. The rule of a female sovereign was new to the country; the attempt to

transmit his crown to a daughter had already failed

in England, even when made in the most favour-

able circumstances, by Henry I.; there was every-

thing in the situation of the infant Maiden of

Norway to call forth, in its ntmost strength, all

both of prejudice and of reason that opposed itself

to so rigid and extreme an application of the prin-

ciple of legitimacy. Indeed, it must be confessed

that the refined view of the rule of succession

upon which Margaret's title, rested was much

hetter suited to times in which men have been long and thoroughly habituated to the advantages of

regular government, than to the circumstances of that rndc age and turbulent people; and it was therefore not to be expected that it should have been at once generally and unresistingly acqui-Surprise has semetimes been expressed that when the Scottish parliament, in 1284, settled the crown upon Margaret in failure of other children

cession. Had it not been for this, it is more than probable that the settlement in her favour would have been wholly disregarded after Alexander's death, with whatever solemuity it might have been made. The next hear if a male of mature age, and a native of the country, would at once have been preferred to the foreign temple infant. Even no matters stood, there was, it would seem, one party which had already formed the design of displacing peen Margaret in favoin of its own chief. Rober:  ${f Brus},$  or  ${f Bruce},$   ${f Iord}$  of  ${f Armwidghe}$  and  ${f Cleve}$ land, was the son of Isabella, one of the three daughters of David, carl of Huntingdon, the brotler of William the Lam. He and a mumber of his adherents, including some of the principal of the Scottish nobility, held a meeting on the 20th of September, 1286, at Tural erry Cartle, in Avishme, the scat of Bruce's son, Robert Brace. called Earl of Carnek in right of his wife, and there entered into an agreement, by which they bound themselves to adhere to one another on all occasions, and against all persons, saving their allegance to the king of England, and to him who should gam the kuigdom of Scotland as the right-

ful here of the late king,\* The intention of the

parties to this bond would appear to have been to

obtain the crown for Bruce, by the aid of the king

of England, whom, with that view, they were pre-

pared to acknowledge as Lord Paramount of Scot-

The man

posing in the affairs of the northern kingdone. It is known that two of the chief members of the regency, the Earl of Buchau and the Earl of Fife, died towards the close of the year 1288 (the Earl of Fife was murdered); and that from this time violent divisions arose in the government, and all things began to tend to confusion and anarchy. One account is, that the Estates of Scotland now made a formal application to the English king for his advice and mediation towards composing the troubles of the kingdom. But this statement does not rest upon any certain authority. In the end of the year 1289, however, Eric, king of Norway, opened a negotiation with Edward on the affairs of his infant daughter and her kingdom; and at

Edward's request the Scottish regency sent three of its members to take part in a solemn deliberation

which was appointed to be held at Salisbury. was here agreed that the young queen should be . Tytler, Hist of Scot. i. 65.

to deliver her, on demand, to the Scottish nation,

had the right of succession could be raised in such a case; the descendant of the elder daughter, however remote, would be preferred to the the contains of the younger daughter, however near; and, indeed, even in that age this rule, which flows directly and necessarily from the admission of the principle of primogeniture, seems to have been all but universally recognised by the authorities on this part of the law. Still the point was not so distinctly settled that a debate might not be raised on it, or that, supported by popular or party zeal, the one clama might not be put forward, and asserted to be that of law and right, with as much plansibility to the general understanding, and as fair a  $\varepsilon$ -hance of success, as the other.

When the death of the queen first became

known, it was probably doubtful how many com-

petitors might start up for the vacant throne, or

to what extent the controversy might be entangled

by their conflicting claims. It was certain, how-

the heir to the crown was to be sought for among

the descendants of his vonnger brother, David, Earl of Huntingdon. David, besides a son, who

died without issue, left three daughters; the eldest,

Margaret, marned to Alan of Galloway; the

second, Isabella, married to Robert Bruce; the

third, Ada, married to Henry Hastings. Marga-

ret's eldest daughter, Dervorgoil (she had no son),

marned John de Bahol, Lord of Bernard Castle,

by whom she had a son, John Bahol; Robert

Bruce, Earl of Carrick in right of his wife, was

the son of Isabella; John Hastings was the son of

Ada. Bahol, therefore, was the grandsor of the

eldest daughter of David, Earl of Huntingdon;

Bruce and Hastings were the sons of his two

younger daughters. According to the rule of

descent as now established, no question about who

707

ever, that a controversy there would be, and in all bkelihood a long and fierce one; and, also, that a state of circumstances had arisen in which everything was to be feared for the national independence from the ambition of the English king, and the ascendancy in Scottish affairs his artful mabagement and the course of events had already given him. The news, therefore, spread universal grief and consternation throughout Scotland. It seemed the heaviest as it was the last of the sitecession of sudden strokes of misfortune that had fallen upon the country, and the consummation of the public calamities.

According to one account, it was now that the embassy to Edward, coherting his advice and mediation, was sent by the estates of Scotland. From what namediately followed, it does appear probable that some such application may have been now made by the Scots. Upon this supposition we can most easily account for the myitation which Edward addressed to their nobility and clergy to meet him at Norham, a town on the English side of the Tweed, and the readmess with which they

obeyed his summons. The conference took place on the 10th of May, 1291. Here Edward dis-

with safety to her person. No mention was made in this convention of an English match for Margaret; but it appears that Edward had already obtained a dispensation from Rome for her marriage to her cousin, his eldest son. A report to that effect was very soon after spread in Scotland; wheremon the Estates immediately assembled at Bridgelmin, a village on the Tweed, and from thence addressed a letter to the English King, expressure in warm terms their gratification at the rumour that had reached them, and beseeching him to into us them if it was time. "If it is," they concluded, "we on our part heartdy consent to the alliance, not doubting that you will agree to such rea-onable conditions as we shall propose to your connect?" They wrote at the same time to the King of Norway, pressing him to send his daughter instantly to England.

Some month after this (one the 18th of July,

1200.) a treaty was concluded at the same place,

by which everything in regard to the proposed

marriage was finally arranged. Many strjulations were made for securing the integrity and nule-

rendence of the Scottish kingdom; and all points,

both of substance and of form, relating to that

matter, were regulated with elaborate scrupillosity.

But the event of a few weeks remered all the

pronstaling and oathtaking of no effect. The

Marden of Norway having at length set sail for

Britain, fell sick on her passage, and landing on

one of the Orkney islands, died there, about the

royal family of Scotland for about a century past

was certainly very remarkable. Within that period

it will be found that William the Lion and his pos-

termy had made no fewer than ten marriages, and

vet there was not now a descendant of that king

in existence. Of these ten marriages so many as

The tatality which seemed to have pursued the

and of September: she was in her eighth year.

six produced no issue; the remaining four produced only four males and five females; and all these rame persons were now dead. It probably would not be possible to find in history another case of ten related households, as we may call them, and these forming the entire branch to which they belonged, being thus swept away, in so short a space of time, without leaving a vestige behind them, unless by the sudden ravages of war, or pestilence, or some similar widely destructive casualty.\*

<sup>\*</sup> As this is a currons fact in statistic,, as well as in bistory, we subjoin a list of the ten marriages, with the issue of each -A D. 1186. William the Lion (a son and three daughters)

HISTORY OF ENGLAND.

determined that Baliol should have the crown, and that all the anxious and protracted deliberation he

affected to give to the subject was merely so much hallow and hypocritical formality. Of the other claimants who presented themselves along with Baliol and Bruce, most seem to have been brought forward only to throw a greater air of perplexity over the case, and to give some chance of dividing any opposition that might eventually be made to the successful candidate, or even, it may be, with the object of leaving the question of the succession to the Scottish crown still open, if any casualty should remove either of the two principal competitors before Edward's designs for the complete subjection of the country should be matured; for Edward's ultimate aim certainly went far beyond the assertion and maintenance of a mere fendal superiority over Scotland. The whole course of

his conduct leaves no room to doubt that he in-

tended to treat Scotland as he had treated Wales,

that is to say, to make it, to all intents and purposes,

a part of the dominions of the English crown.

This union of the whole island under one sceptre

was evidently the grand scheme upon which he

had set his heart, and which inspired and directed

his whole policy. At first he hoped to accomplish

his objects in so far as Scotland was concerned, by

the marriage of his eldest son with the queen of

that country; when the death of Margaret de-

feated this arrangement, he could not for the

present proceed to the attainment of his end by so

direct a path; but that end was still the same, and

was never lost sight of for a moment. At this very

meeting at Norham, the English chancellor pro-

tested, in the name and in the presence of the

[Book IV.

other unhtary tenants in the northern counties, commanding them to assemble at Norham on the 3rd of the same month with borses, arms, and all their powers. The meeting of the 2nd of June took place on a green plain called Holywell Hangh, near Upsettlington, on the north bank of the Tweed, opposite to Norham Castle, and within the territory of Scot-Among those present were no fewer than eight persons who, under various titles, laid claim to the crown. One of these was Robert Bruce,

tinctly announced that he proposed to regulate the

succession to the throne of Scotland as superior and

lord paramount of that kingdom, and insisted upon

their recognition of his title as such before any

doubt can be entertained that many of the persons

present were perfectly prepared for all this; but it

took a part of the assembly by surprise; and

at length one voice ventured to respond, that no

answer could be made to the demand that had been

addressed to them while the throne was vacant.

"By holy Edward!" cned the English king, "By

holy Edward! whose crown I wear, I will vin-

dicate my just rights or perish in the attempt!"

At last the meeting was adjourned till the morrow,

and from that day, on the Scots requesting a longer

delay, it was further adjourned to the 2nd of June.

Edward had already issued writs to his barons and

other business should be proceeded with,

Lord of Amnandale. Turning first to him, Robert Burnel, Bishop of Bath and Chancellor of England, demanded "Whether he acknowledged Edward as Lord Paramount of Scotland? and whether he was willing to ask and receive judgment from him in that character?" Bruce, says the official record of the proceedings, definitively, expressly, publicly, and openly, declared his assent. The other seven competitors afterwards did the same. Next day, John Baliol and another competitor, making ten in all, appeared, and followed their example. " The whole form of this business," as Lord Hailes remarks, "appears to have been preconcerted." There were probably few of the assembled nobility and clergy that were not the sworn adherents of one or other of the competitors; they were divided into the Bruce party and the Bahol party; and they were of course severally ready to follow in whatever direction their chiefs might lead them. With regard, again, to the two great claimants of the crown themselves, if either consented to subunit to the arbitration of Edward, it is obvious that his rival had no alternative but to acquiesce in the same mode of deciding the question, unless he were prepared to resign all hope and chance of success. The true explanation, however, of Baliol's absence on the first day of the meeting probably is, that he sought by this piece of management, perhaps in concert with Edward, to throw upon his opponent the odium of taking the first step in the unpopular course of thus surrendering the national indepen-There is reason to believe that, whether

swayed by his view of the justice of the case or by

other considerations, Edward had, from the first,

king his master, "that, although he now asserted his right of superiority with the view of giving judgment to the competitors, yet that he meant not to relinquish his right of property in the kingdom of Scotland, acclaimable hereafter in fit manner and time convenient."\* And the manner in which he treated Baliol after he had set him upon the throne as clearly indicates the same purpose, and indeed is only intelligible on that supposition. All this has been very strangely overlooked by some of the writers of this part of our instory. The proceedings at Norham, on the 3rd of June, were terminated by an unammous agreement that a body of 104 commissioners should be appointed to examine the cause and report to Edward; forty being named by Bahol, the same number by Bruce, and the remainder by Edward himself, who was, moreover, empowered to add to the commission as many more persons as he chose. On the 11th of the same month, the regents of Scotland made a solemn surrender of the kingdom into the hands of the English king, and the keepers of castles made a like surrender of their trusts; in both cases, however, on the condition that Edward should make full restitution in two months from the date of his award in the cause of the succession. Gilbert de Umfraville, Earl of Angus, alone

† Foedera ii. 551.

refused to deliver the eastles of Dundee and Forfar, which he held, without an obligation to indemnify hun from Edward and all the competitors. It was found expedient to comply with the terms thus insisted upon by "the only Scotsman," observes Lord Hailes, "who acted with integrity and spirit on this trial of national integrity and spirit." On the 15th of the same month Bruce and his son, Baliol, and many of the principal Scottish barons, swore fealty to Edward. One churchman only, the Bishop of Sodor, presented himself to perform the disgraceful ceremony. The peace of the King of England, as Lord Paramount of Scotland, was then proclaimed, and the assembly finally adjourned to the 2nd of August.\* Edward himself, in the mean time, made a progress through Scotland, in the course of which he visited Edinburgh, Dunfermline, St. Andrew's, Kinghorn, Linhthgow, and Stirling; wherever he appeared, calling upon persons of all ranks, from bishops and earls to bur-\* Hailes, i. 242-252.

gesses, to sign the rolls of homage as his vassals. Elsewhere officers were appointed to receive the oaths; whoever refused to take them being ordered to be seized and imprisoned.

When the commissioners met at Berwick, and proceeded to business in the presence of Edward, on the 3rd of August, twelve claimants of the crown in all presented themselves. Soon afterwards a thirteenth was added, in the person of King Eric of Norway. All of them, however, with the exception of Bahol, Bruce, and Hastings, withdrew their pretensions before any decision was pronounced. The rest, in fact,—some of them descendants from illegitimate daughters of William the Lion, others alleging a descent from some earlier king,—had none of them any ground whatever on which to come in before the posterity of David, Earl of Huntingdon.

The final decision of the cause did not take place till the following year. On the 2nd of June, 1292, the Commissioners reported that there ap-

HISTORY OF ENGLAND.

pointed by Edward to take place in a parliament which he summoned to meet at Berwick on the 15th of October Here Baliol and Brace were fully beard in defence of their respective claims; upon which the assembly came unanimously to the conclusion "that by the laws and usages of both kingdoms, in every heritable succession, the more remote in one degree lineally descended from the eldest sister, was preferable to the nearer in degree resuming from the second sister;"—this declaring, by implication, against the claim of Brace as

opposed to that of Bahol. In another meeting, on

the \*\*a of November, Edward formally prononneed his decision "that Bruce should take

nothing in the competition with Bahol." Bruce

and Hastings now demanded each a third of the kingdom, on the ground that it was a divisable

inheritance; but this doctrine the assembly unani-

mously rejected. Finally, on the 17th of the same

without hearing the better judgment of the prelates,

nobility, and other wise men of England. On this,

the further consideration of the question was ap-

trusts to the new king; and the same day the great seal that had been used by the regency was broken finto four parts, and the pieces deposited in the Treasury of England, "in testimony, to future ages, of England's right of superiority over Scotland." The next day Baliol swore fealty to Edward at Norham. On the 30th (St. Andrew's day) he was solemnly crowned at Scone. Soon after he passed into England, and on the 26th of December did homage to Edward for his kingdom at Newcastle: and thus finished the first act of this extraordinary drama. Events that unexpectedly arose now called away the English king to another scene. Edward's progress at home had not been viewed without scrious alarm abroad. The subjugation of Wales and Scotland, by leaving him master of the whole island of Great Britain, rendered him most formidable to all his confinental neighbours, and to none so dangerous as to France, where there was a source of dissension ever open, and where the English had a footing that enabled them at all times to carry the war into the heart of the country. On former occasions, several of the French kings had given countenance and encorragement,-if little or nothing more,—to both Scots and Welsh

the English from what was left of then continental dominion. The monient seemed favourable; Edward was absorbed by his great project; and as for the justice of the undertaking, had not Philip as good a right to gather up the scattered fragments of France, and to make of them a respectable whole,-a united and powerful kingdom,- as Edward had to seize and consolidate the ancient independent states of Great Britain in the same view? The English sovereign, however, was too politic not to see and provide for these schemes: he had long watched Philip with a jealous eye, and while he wisely kept his own armies at home, he had conrect alliances abroad, and laboured to raise barriers against Philip's ambition. In the south, by means of presents and flattering assurances, h had won over the powerful Count of Savoy : in the north, he had a good understanding with the

Emperor, whom he afterwards subsidized; he had married his daughter Margaret to Henry Count of

Bar, whose territories gave an easy access into

France on the east; and, at a later period, he made un alhance with Gny Earl of Flunders. The

thing to do was to exert all his strength and drive

[BOOK IV.

French, moreover, accuse him of opening and month, in the great half of the eastle of Berwick, Estward gave judgment, "that John Bahol should maintaining a correspo, dence in the interior of bave reisme of the kingdom of Scotland." But, France with the disaffected subjects of Philip, an aranu, at this, the termination, as a year and a half accusation which Edward retorted. Matters were in this state when a paltry broil gave use to sanbefore, at the commencement of these proceedings, guinary hostilities. Some English and some Northe English king solemnly protested "that the judgment he had thus given should not impair 🕍 🕏 man sailors met at a watering-place, in or near to claim to the property of Scotland." On the 19th the Port of Bayonne, and quarrelled about which the regents of Scotland and the governors of party should fill their casks first. An English mariner struck a Norman with his fist; the Norcastles were ordered to surrender their respective man drew his knife; his adversary closed with him, and, after a scuffle, threw him: in the fall the Norman, it was said, fell upon his own knife and was killed. The English sailor's comrades saved him from the fary of the opposite party, and, according to the French account, the anthorities of Bayonne, which city belonged to the English, refused the Normans proper satisfaction. Burning with revenge, for they maintained that then companion had been foully murdered, the Normans put to sea, and, lying in wait, they seized the first English slip of inferior force they encountered, and taking from it a merchant of Bayonne, they hanged him at the yard-arm, with a dog hung to his feet. Reprisals soon followed, and the marmers of the Cinque Ports pursued their vengeance with relentless fury, hanging nearly every Norman they could take upon the seas. The Normans called m the assistance of the Genoese and the French, for France was now beginning to have a considerable mercantile navy, and even a royal fleet, one of the immense advantages derived from expelling the English and clearing her sca-board. Our marmers at the same time procured the aid of those of Ireland, and Gascony, and Holland. Wherever these opposite parties met, they fought with deadly

rancour, carrying on a war on their own account, without any commission from their respective governments; for though it was known or suspected that Plnhp encouraged the French, he, as well as Edward, seemed for a time to remain indifferent spectators. A Norman effect of 200 or more vessels, of ail sizes, swept the English Channel, plundered the sea-coast of Gascony, hanging many marmers, and then returned with their booty and the cargoes of wine they had been to purchase to the port of St. Malie, in Brittany. They had scarcely cast anchor when an English fleet appeared. The marmers of the Cinque Ports, still acting under their own commission, had got ready some stout ships; they were only eighty in number, but they were of superior size, and manned with picked scamen. In an evil hour for themselves, the Normans accepted the challenge to a pitched battle, which was fought round a ship anchored near the coast, on a spot agreed upon by both pastees. After a desperate conflict, where every man fought as in a personal quarrel, the English gained a complete victory, taking every

one of the Norman ships, and killing or drowning nearly every marmer on board, for no quarter was given in this savage war. Thus the most ymdictive technigs were excited between the two nations before the kmgs took any open part in the hostilities that were carried on. \* But now Pluhp, emaged banself and borne forward to the accomplishment of his favourite project by the inniversal wrath of the nation, declared his determined enuity. By certainly a strained and exaggerated interpretation of his feudal rights and jurisdiction, he pretended that he could punish Edward as Duke of Aquatame, in which character he was a vassal of the French crown. He sent officers to seize some of Edward's estates, but these were driven back by John St. John, an English officer: he then caused a summons to be issued by his judges ordering the "Dake of Agintaine" to appear at Paris after the feast of Christinas, and answer for his offences against his suzcrain. Edward sent a bishop, and then his own brother Edmund, to negotiate. This Edmund appears to have been a very believing, simple personage; for, crediting Philip's assertion that he wanted no acquisition of territory, but merely a striking show of satisfaction to his own injured honour, he consented to surrender Gascony for forty days, at the end of which it was to be faithfully restored to the English king. Upon this surrender, which in some cases gave Philip a military possession of the province, the summons against Edward was withdrawn, and the French king declared limiself When the forty days had elapsed, Edward demanded repossession, which, as a matter of course, was refused to hun. Philip pleaded very triumphantly, in his own court, against some English advocates, and, with a bold contempt of appearances and of the recent agreement, pronounced a judgment of forfeiture because Edward

\* Walsing,-Heming.-Holinsh.

ful fleet and army; but he was detained for several weeks by contrary winds, and, while he lay at Portsmonth, the Welsh, who thought he was gone, broke out in a general insurrection, to which it seems probable that Philip was no stranger. Detained at home by this erromistance, Edward dispatched a small force to Gascony, and gave commission to his ships to plunder the richch coast, upon which a number of fierce sca-battles were fought, the victory falling almost invariably to the English, who were principally commanded by the lord John Botetourt, Sir William de Leyborne, and a "valiant knight of Treland," whose name is not mentioned. As for Edward himself, he turned with his usual rapidity and vigour against the Welsh, who had taken many eastles and towns, and driven the English across the marshes with dreadful loss. It took him some mooths to suppress this hold stringgle for independence, he carried on the war through all the severities of winter, suffering great hardships, and encountering many personal dangers; but in the following spring the Welsh once more fell beneath the mighty weight of his arms and policy: Madoc, their brave leader, starendered to the conqueror; the most dangerous of the chieftams were thrown into dungeons for life; and after the sacred summits of Snowdon had been again invaded, and the country again wasted with fire and sword, a mournful peace was restored. In none of the old accounts either of this or of the preceding conquest do we find any mention of Edward's banging the Welsh bards; the encomstance seems to have been first mentioned by a writer who lived some three centurnes after. The "rnthless king," however, though not wantonly cruel, was still not a man to hesitate at such an execution if he deemed it useful to his state views; and it is at least probable that many of the bards, who must have been hateful to him, as they cherished and gave enthusiasm to the people's love of independence, may have felt his rigour, and that popular tradition has only exaggerated and generalized a real fact.‡ When Edward rode a conqueror from the mountains of Wales, he thought that he should at last - asymer.
† See John Wynne, Hist of the Gwydn family.
2 We fluch the Welsh manstreis in very bas odear with the English government about a contary later. A statute of Henry IV. provides that "no waster, flucher, ministrel, or vagabond shall be suffered in Wales."

had not presented himself as a vassal ought. De

Nesle, the Constable of France, was sent to seize some of Edward's cities and towns, and he suc-

eccded in several instances because the nobles

declared against the English. Soon after the feast

of Easter, Philip again summoned Edward to

be allowed to proceed to France, and punish what he considered the execrable perfidy of Plulip; but the spirit of liberty was again awake in the mountams of Scotland, and he was once more compelled to forego his continental expedition. He, however, sent his brother Edmund with a small force to Gmenne, where the barons, who could never remain satisfied for a year with either the English or the French, were already tried of Philip. Edmund died soon after landing; but the Earl of Lincoln, who succeeded to his command, drove the French from most of the towns they had occu-

HISTORY OF ENGLAND.

Scotland.

finally expelled them from nearly all the country, with the exception of a few maritime towns. Edward's continental allies did nothing at the time in berelelince. A little later the Duke of Brittany raised an msignificant force, and joined a body of English that landed in his country; but this prince was as volatile as the Gascons, and changed sides three or four times in the course of as many years. His people paid dearly for his vacillating policy, being harried at each change either by the soldiers of Philip or the sailors of Edward. On one occasion an English fleet ravaged the whole coast of Brittany from Vannes to St. Malo, inflicting great mischief on the defenceless inhabitants, but in no way contributing to the recovery of Edward's lost dominions. Several attempts were made by Normans, Bretons, and French, to avenge these muries by attacks and surprises on the English coast, and on one occasion the town and priory of Dover were sacked and partially buint. As the men were absent, only the women and children were butchered; but, before the invaders could get back to their ships with their plunder, the men of Dover returned, and slew some hundreds of them. we must turn from this most savage yet desultory warfare on the English coast, to the interior of Scarcely lad Baliol been fairly scated on his vassal throne when he was made to feel all the dependence and degradation of his position. Even before the year had expired, on one of the last days of which, as related above, he had done homnge for his kingdom to his English lord paramount, Edward, in an angry altercation that arose out of an appeal brought by a citizen of Berwick ngainst a judgment of the Scottish courts, to defend which he had compelled Baliol to appear with his principal prelates and nobles in the royal chamber

These successes, however, were not lasting: Charles de Valois, Philip's brother, recovered those places; and the Count d'Artois, the king uncle, taking the command of a numerous and excellent army, beat the English in several encounters, and at Newcastle, frankly informed him that he should persist in hearing in England every cause regularly brought before him from Scotland, and that he would summon the king of Scotland to appear personally at the hearing of every such cause in which he should think his presence necessary. Nor did this prove an empty threat. In the course of the following year Baliol was repeatedry called upon

nity of thus appearing in the English courts to answer as a defendant in all sorts of causes. Such treatment could only have had one object, and, if it had been tamely acquiesced in, one effect,—to make the menial king utterly contemptible in the eyes of his subjects. A generous reluctance to join with the crowd in bearing hard upon one otherwise unfortunate, has prompted some modern writers to dispute the justice of the popular odium that rests on the memory of John Bahol, and to contend that he was by no means deficient in eminent and estimable qualities. Lord Harles attributes to him a high spirit, and speaks of him as having cried only in enterprising beyond his strength. After all, however, the estimate that seems to have been formed of him in his own day is perhaps most consonant with the entire course of his life, both while he sat on a throne, and after he descended from that elevation; on the whole, the name of Toom (that is, empty) Tabard, which be used to receive among his countrymen, seems to have aptly enough expressed his managnammous, meflicient At the commencement of Edward's rough usage he bore it with all submission. mediately after the declaration of the English king that has just been incutioned, he gave Edward a solemn discharge from all the obligations be had contracted by the treaty of Bridgeliam in 1290, which treaty was now the sole remaining security to his country for the possession of any national rights, and by which, in particular, provision was made against the very grievance, the galling humihation, under which he was now made to smart, by one of the chases which declared that no native of Scotland should be compelled to answer out of the knigdom in any legal cause, either civil or criminal. But the tyrauny was so unrelentingly persisted in, and carried so far, that if he had the spirit of a worm it must have roused him at last. An appeal respecting the succession to some lands in Fife was the case in which his patience gave way. In the first instance he ventured to take no notice of the usual order to present himself at the hearing of the cause. But he did not persist in this bold course. On receiving a second summons, he yielded obedience so far as to make his appearance in the English parliament on the day named, the 15th of October, 1293. When asked what defence he had to make to the appeal, he said, "I am king of Scotland. To the complaint of the appellant, or to aught else respecting my kingdom, I dare not make answer without the advice of my people."-" What means this?" cried Edward: "You are my liegeman; you have done homage to me; you are here in consequence of my summons." Bahol, however, would only repeat his first answer. He declined even to ask an adjournment of the cause. parliament then resolved that the king of Scots had offered no defence; that in his answer he had been guilty of a manifest contempt of the court, and of open disobedience; that the appellant should have damages of the king of Scots; and,

to submit to the annoyance and intolerable indig-

[BOOK IV.

and 500 cavalry, invaded Cumberland, and, laying

waste the country as they proceeded, marched to

Carlisle, and attacked that place. Here, however,

they were repulsed, and that with circumstances of

unusual disgrace, if we may credit the English

historians, who assert that the town having been

set on fire, and the citizens having left their posts

to extinguish the flames, the women flew to the

walls and compelled the besiegers to retire.

Another inroad, which they made a few days after

into Northumberland, was not more successful.

Meanwhile Edward himself, at the head of a great

army, was already at the borders. A pardon had

been proclaimed for all outlaws and materiators who should join the expedition; and the force

which now rolled on to pour upon the Scottish

rebels the vengeance of their English master, con-

sisted of 30,000 foot and 4000 horse. Its numbers

were farther swelled on its arrival methe north by

a body of 1000 foot and 700 horse, brought by

Anthony Beck, the warlike Bishop or Ducham.

Crossing the Tweed, the royal army marched direct

upon the town of Berwick, which either had never

been delivered by the Scots to the Bishop of Car-

lisle, according to their late promise, or had freed

itself again from his authority. A strong garrison,

composed of the men of Fife, now defended the

town, besides a smaller force that held the castle.

The English king commenced the attack at once

by sea and land; of his ships, three were burnt,

and the rest compelled to retire; but all resistance

one be pumshed in that which emboldens him to offend, that the three principal castles of Scotland, with the towns wherein they are situated, and the royal jurisdiction thereof, be taken immediately into the custody of the king, and there remain until the king of Scots shall make satisfaction for his contempt and disobedience." On the prayer of Bahol, however, Edward, before this sentence was publicly intimated, consented to stay all proceedings till the day after the Feast of the Trunty in the following year. Before that day arrived, war between England and France broke out on the seizure of Guicinic by Plulip; and in the new position of his affairs, Edward had his hands for the present too full of work in defending lumself against his own hoge lord to have leisure for the ' further lumiliation and oppression of the king of Scots. The opportunity, however, was too tempting a

one not to be seized by the latter for a streamous

effort to cast off the yoke. Hitherto the nation,

struck down by the incsistible course of events,

and descried by its natural leaders, had lain, as it

were, stunned and in despair. Its old spirit now

began to awaken as a new dawn of hope appeared.

The nobles themselves,—they whose \*selfish or

finally, "because it is consonant to law that every

factions ambition had laid their country at the feet ef the English king,-had many of them by this time been roused to a sense of the bondage into which they had fallen. Their first measures, however, were cautiously taken. A parliament, which met at Scone in the latter part of the year 1294, on pretence of lightening the public burdens, directed that all the Englishmen maintained at the court should be dismissed; and then appointed a council of four bishops, four earls, and four barons, without whose advice the king was restricted from performing any public act. These arrangements may have been made with Bahol's full concurrence; but it is more probable that they were dictated by a distrist of him. It is asserted indeed by English writers that Bahol was at this time kept by his subjects in a state very closely resembling capfivity. The suspicions of Edward were naturally enough excited by these proceedings. He required that

Berwick, Roxburgh, and Jedburgh should be delivered to the Bishop of Carlisle, to remain in his hands during the war between England and France. With this demand the Scottish government deemed it prudent to comply, although they were at the moment negotiating an alliance with the French This treaty,—" the groundwork," observes Lord Hailes, " of many more, equally honourable and rumous to Scotland," was signed at Paris on the 23rd of October, 1295. By it the King of Scots, "gricvously offended at the undutiful behaviour of Edward to the King of France, his liege lord," engaged to assist Philip in his wars with his whole power, and at his own charges. Towards the end of March, 1296, accordingly, a Scottish army, consisting of 40,000 foot soldiers

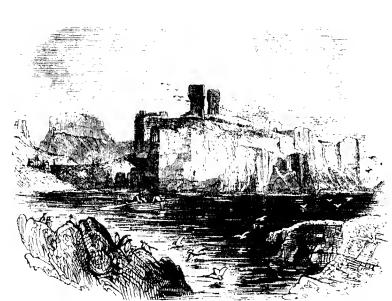

soon gave way before the impetuous onset of the soldiery; Edward himself, mounted on his horse Bayard, was the first who leaped over the dike that defended the town. In the devastation and carnage that followed no quarter was given; no pity, no human feeling, turned aside the sword from infancy, or womanhood, or grey hairs; the inhabitants, with the garrison, were indiscriminately butchered The numbers that perished are variously stated. but they undoubtedly amounted to many thonsands: the massacre was continued for two days, during which no one escaped whom the infuriated victors could reach. A party of thirty Flemings had posted themselves in a building called the Red Hall, which the resident merchants of their nation held by the tenure of defending it at all times against the English. They stood out gallantly till the evening of the first day; the building, which they would not surrender, was then set fire to, and they perished, every man of them, in the flames. Berwick was taken on the 30th of March. the 5th of April, a bold ecclesiastic, Henry, Abbot of Aberbrothock (otherwise Arbroath), arrived in the town a messenger from the Scottish king, and delivered to Edward Baliol's solemn remineration of his allegiance and fealty. "What a piece of madness in the foolish traitor!" exclaimed Edward, when the message had been delivered; "smee he will not come to us, we will go to him."\* A panse of a few weeks, to make the blow the surer, did not prevent

VOL. I.

Earl Warenuc was first sent forward with a chosen body of troops to recover the castle of Dunbar, which the Countess of March had delivered to the Scots, while her busband, by whom it was held, served in the army of Edward. The relief, when they were engaged by Warenne, and completely routed, with the loss of 10,000 men. This action was fought on the 28th of April. The castle then surrendered at discretion. On the 18th of May that of Roxburgh was given up by James

the Stewart of Scotland, who at the same time swore fealty to Edward and abjured the French alliance. The castles of Dimbarton and Jedburgh soon after surrendered. That of Eduiburgh stood a short siege, but it also soon capitulated: no attempt was made to defend that of Stirling. Thus, in the space of about two months, all the principal strongholds of the kingdom were in Edward's hand, and the conquest of the country was complete. A message (very different from bis last) now arrived from Baliol, offering submission and imploring peace. Edward, in reply, desired him to repair to the castle of Brechin, where the Bishop of Durham would announce to bim the terms on which his surrender would be accepted. Soon after, Bahol haid down his kingly state in a ceremonial of the last degree of baseness and humiliation. Divested of every ensign of royalty, he presented himself before the Bishop of Durham and an assembly of English barons, and standing with a white rod in his hand, went through a detailed confession of all the offences which, misled by evil and false counsel, as he affirmed, and through his own simplicity, he had committed against his liege lord-concluding the recital by an acknowledgment of the justice of the English invasion and conquest, and by therefore freely resigning to the English king his kingdom, its people, and their honinge. The old accounts differ as to the exact date, and also as to the scene of this penance; but it was most probably performed on the 7th of July, and, as the tradition of the neighbourhood still reports, in the churchyard of Strathkathro, in Angus.\* Edward was at this time at Montrose † He proceeded northward as far as Elgin—the nobility, wherever he passed, erowding in to swear fealty, and to abjure the French alliance. was on his return from this triumphant progress that he ordered the famous stone on which the Scottish kings had been wont to be erowned, to be removed from the abbey of Scoue, and conveyed to Westminster, in testimony, says an English contemporary chronicler, of the conquest and surrender of the kingdom. He appears to have been at St. Johnstone's, or Perth, on Wednesday, the 8th of August. By the 22nd, he was once more at Berwick; and on the 28th he held a parliament in that town, at which great numbers both of the Scottish laity and clergy presented themselves to take the ouths of fealty. He then pro-See Hailes, i. 293; Tytler i. 429, 430; and Chambers's Picture

! Hemingford.

of Scotland, n. 255,

were characterized by great prindence and moderation. He ordered the forfeited estates of the clergy to be restored. He even allowed most of the subordinate civil functionaries who had held office under Bahol, to retain possession of their places. He left the various jurisdictions of the country in general in the same hands as before. The chief castles in the southern part of the kingdom, however, he intrusted to English captains; and be also placed some of his English subjects in command over certain of the more innortant dis-

ceeded to finish his work, by settling the govern-

ment of the conquered country. Here his measures

CIVIL AND MILITARY TRANSACTIONS.

CHAP. I.]

country in general in the same hands as before. The chief castles in the southern part of the kingdom, however, he intrusted to English captains; and be also placed some of his English subjects in command over certain of the more important districts. Finally, he appointed John de Warenne, Earl of Surrey, under the name of governor, Hugh de Cressnigham as treasurer, and William Ormesby as justiciary, to exercise the supreme authority. A royal exchequer, on the model of the English, was established at Berwick. Thus ended in the itter extinction, for the present, of the national independence of Scotland, the most muscrably abortive attempt ever made by any people for the preservation or recovery of that first and most indispensable of national blessings.

of resistance. Within a few months after this settlement of the country it was again in insurrection. The last and all preceding attempts to throw off the foreign yoke under which the kingdom groaned had been made under the direction of the government; there was no longer any native government; but a great leader of the people had now stepped forth from then own ranks. This was the renowned William Wallace, the second son of a kinglit of

But although Edward had put down the rebel-

hop of the Scots, he had not subdued their spirit

William Wallace, the second son of a knight of ancient family, Sw Malcolm Wallace, of Ellerslie, in Renfrewshire. Wallace had all the qualities of a popular hero—a strength and stature corresponding to his daring courage, and also, it cannot be doubted from the known history of his career, as well as from his traditionary fame, many intellectual endowments of a high order,- decision, military genius, the talent of command, a stirring though rude cloquenec, and in every way a wonderful power of reaching the hearts of men, and drawing them along with him. Above all, an enthusiastic patriotism, and a fierec and unextinguishable hatred of the English dominion, were passions so strong in Wallace, that while he lived, be the hour as dark as it might, all felt that the cause of the national independence never could be wholly lost. It is his glorious distinction that, while all others despaired of that cause, he did not despair-that when all others submitted to the conqueror, he betook himself to the woods, and remained a freeman-that when there was no other to renew the struggle, he started up in that time of universal dismay and prostration, and showed, by an example precious to all time, that even in the worst circum-

Wallace is first mentioned in the month of May, 1297. At this time he was merely the captain of

spirit of hope and effort is not gone.

stances nothing is really gone for ever where the

That functionary, with difficulty, saved his life by flight; but much booty and many prisoners fell into the hands of the insurgents, and the English government was, in fact, by this bold and brilliant exploit, for the moment overthrown. For some time the neighbouring country was wholly at the mercy of the insurgents, who roved aver it, assaulting every place of strength that refused them admission, and massacrung every Englishman who fell into their hands. Many persons of note and distinguished rank now crowded to the once more uplifted standard of freedom and independence; the Stewart of Scotland and his brother, Robert Wisheart, Bishop of Glasgow, Alexander de Lindesay, Sir Richard Lundin, and Su Andrew Moray of Bothwell, are especially mentioned. But no accession was more important, or more gladly welcomed, than that of the young Robert Bruce, the son of Robert Bruce who had married the countess of Carrick, and the. grandson of bun who had been a competitor with Ballol for the crown. A few years before this, Bruce's father had resigned the earldom of Carrick, which he held in right of his wife, to his son; and the latter, by the possession of this lord-

ship, now commanded a territory reaching from the Frith of Clyde to the Solway. The course

taken by Baliol had Intherto naturally determined

the conduct and position of the rival family. So

long as Baliol stood even nominally at the head of

the patriotic cause, the Bruces were almost neces-

sarily on the other side. In the last days of Baliol's reign the Scottish government issued an

order confiscating the estates of all partisans of

England and of all neutrals, which was principally aimed at the house of Bruce; and a grant of their

estate of Annandale was made to Comyn, Earl of

Buchan, who actually took possession, in consequence, of the family eastle of Lochmaben. This

of course he did not long retain; but the wrong was not the less one, which in that fierce age

never could be forgiven. Allowance must be made for these personal resentments and rivalries,

and the opposition into which men were thereby

4 Y 2

a small band of marauders, most of them probably

outlaws like himself, who were accustomed to infest

the English quarters by predatory attacks. Their

numbers, however, rapidly grew as reports of their

successful exploits were spread abroad. Suddenly

we find the robber-chief transformed into the na-

tional champion, joined by some of the chief persons

in the land, and heading an armed revolt against the

government. The first person of note who joined

Wallace was Sir William Pouglas. He had commanded in the castle of Berwick, when it was taken

the preceding year by Edward; and after bis

surrender had been liberated upon swearing fealty

to the English king. Disregarding this oath, he

new armed his yassals, and openly went over to

Wallace. The united chiefs immediately marched

Ormesby, the justiciary, was acting as his heu-

upon Scone, the seat of the government. Earl Warenne was at this time absent in England, and

thrown, in passing judgment upon the conduct of many of the actors in this turbulent and bewildering drama. Bruce, eventually the great liberator of his country and restorer of the Scottish monarchy, makes his first appearance on the scene, soon after the fatal fight of Dunbar, in the unpatriotic part of a commissioner empowered by the conqueror to receive into favour the people of Carrick.\* He was at this time only in his twentysecond year. His heart, however, was probably already drawing lpim, through doubts and misgivings, to the cause which he was at a future day so gloriously to illustrate. Now that Baliol was removed, the time for Bruce to show himself seemed to have come. Edward, it would appear, was not without some suspicion of what his inclinations were. He, therefore, had summoned him to Carlisle, and made him renew, on the sword of Becket, his oaths of allegiance and fidelity. the national enthusiasm, however, excited by the first success of Wallace, he could restrain himself no longer. "I trust," he said, "that the pope will absolve me from oaths extorted by force;" and so, breaking from his bonds, he joined the

army of the patriots. But, in that eamp, jealousies and dissensions were already actively at work, and disorganizing everything. Edward was embarking for Flanders when he received intelligence of the new Scottish The military force of the kingdom to the north of the Trent was instantly called into array by the Earl of Surrey; and as soon as the men could be collected, Sir Henry Percy and Sir Robert Clifford were sent forward to meet the insurgents at the head of an army of forty thousand foot and three bundred horse. They found the Scots, in nearly equal numbers, posted in a strong position in the neighbourhood of the town of living, in Ayrshire. But no acknowledged leader controlled the irregular congregation of chiefs who had crowded with their retainers to the standard that Wallace had raised; his authority was disowned, or but reluctantly submitted to, by many of the prond knights and barons, who never before had obeyed a pleheian general; and there were probably as many conflicting plans of operation as there were competitors for the supreme command. In this miserable state of affairs, it appeared to all who had anything to lose, that the wisest plan was to make their peace with the government before it should be too late. All the chief associates of Wallace accordingly, including Bruce, the Stewart of Scotland, the Bishop of Glasgow, Sir Alexander Lindesay, Sir Richard Lundin, and even Sir Wilham Douglas, the first who had joined him, laid down their arms after a short negotiation, and, for themselves and their adherents, made submission to Edward. The instrument in which they acknowledged their offences, and agreed to make every reparation and atonement that should be required by their sovereign lord, is dated at Irvine, the 9th of July. † 'Only one barea, Sir Andrew • Hailes, i. 292. + Rymer, ii. 774.

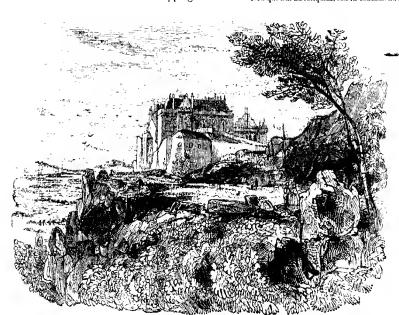

Moray of Bothwell, continued to adhere to Wallace. Many of the vassals, however, even of the lords and knights that had deserted him remained among his followers; and he withdrew to the north at the head of a force that was still numerous and formidable.

No farther effort seems to have been made by the government to put down the insurrection for several months. In the meanwhile, the army of Wallace was continually receiving accessions of The English historian, Knighton, numbers. affirms that the whole of the lower orders had attached themselves to him, and that, although their persons were with the king of England, the hearts of many of the nobility also were with Wallace, whose army, it is added, now grew to so immense a unditude that the community of the land obeyed him as their leader and prince. By the beginning of September, it appears that he had driven the English from the castles of Brechm, Forfar, Montrose, and most of the other strongholds to the north of the Forth, and was now engaged in besieging the eastle of Dundee. While there, he received information that an English army was marching upon Stirling. Leaving the siege to continued by the citizens of Dundee, he led his whole forec, amounting to forty thousand foot and a hundred and eighty horse, towards Stirling, and succeeded, by rapid marches, in reaching the banks of the Forth opposite to that town before the English had arrived. He immediately drew up his army so as to be partly concealed behind the neighbouring high grounds. Fitzalan had by this time been appointed by Edward chief governor of Scotland; but the Earl of Surrey still commanded the forces. The English army soon appeared on the other side of the river, it is said by Hemingford to have consisted of one thousand horsemen and fifty thousand foot. On its being perceived how Wallace was posted, at was resolved to offer him terms before risking an engagement; but he refused to enter into may negotiation. "Return," he said to those who came to him, "and tell your masters that we come not here to treat, but to assert our rights, and to set Seotland free; let them advance; they will find us prepared." That night, however, no movement was made. But Surrey's men impatiently called upon him to accept of Wullace's defiance; Cressingham, the treasurer, protested against the waste of the king's moncy m keeping up an army if it was not to fight; and to this passionate importunity the Enghish commander weakly yielded his own better judgment, and suffered his army to throw itself, not into a snare, for, if the common accounts of the affair may be relied upon, no stratagem or deception of any kind was employed by Wallace, but into obvious and certain destruction. Early the following morning (the 11th of September) the English began to pass over by the bridge,—a narrow wooden structure, along which, even with no impediment or chance of interruption of any kind to

retard them, so numerous a force could not have been led in many hours. The issue was what it is unaccountable should not have been forescen. Wallace waited till about half the English were passed over; then, detaching a part of his forces to take possession of the extremity of the bridge, as soon as he perceived the communication by this means effectually cut off, he rushed down upon the portion of the enemy who had thus put themselves in his power, as they were still forming, and in a moment threw them into inextracable confusion. thousands of the English were slain or driven into the water; Cressingham himself, who had led the van, was one of those who fell; he had, by the severity of his administration, made himself particularly hateful to the Scots, who now stripping

the skin from his dead body, cut it into small pieces to be preserved, not as relies, says Hemingford, hut for spite.\* Wallace laimself, it is affirmed, had a sword-belt made of part of it. No prisoners, indeed, seem to have been taken; and nearly all the English that had crossed the river must therefore have been destroyed. One knight, however, Sir Marmadake Twenge, putting spars to his horse, gallantly cut his way back through the force that guarded the bridge, and regained the opposite side in safety. Surrey himself had not passed over; but, after the fortune of the day became clearly irrecoverable, charging Twenge to occupy the eastle of Stirling with what remains of

Non quidem ad reliquias, sed in contumetras.

STIBLING CASTLE.

the army he could collect, he mounted his horse, and rode, without stopping, to Berwick. Even the portion of the army that had remained on the south side of the river seems to have been in great part dispersed. The loss of the Scots was triffing; the only man of note that fell was Sir Andrew A large quantity of spoil was taken. But the great result of the victory was nothing less than the almost complete liberation of the country once more from the English dominion. The eastles of Edinburgh, Dundee, Roxburgh, and Berwick, all immediately surrendered; and in a short time there was not a fortress, from one end of Scotland to the other, in the possession of the English king. Wallace soon after even invaded England, and for some time maintained his army in Cumberland, a movement to which he was partly induced by a severe famine that now arose in Scotland, where

unfavourable seasons had conspired with the waste of war to afflict the soil. He returned from this expedition about the end of the year; and it is said to have been then that, in an assembly of the principal nobility, held at the Forest Kirk in Selkn kslure, he was invested with the title of Guardian or Governor of the kingdom, and commander-in-chief of the armies of Scotland (Custos regni Scotize, et ductor exercitmum ejusdem), in the name of King John. The Scottish patriots, it is to be observed, had all along professed to act in the name of Baliol,—so general, notwithstanding all that had taken place, was the conviction that his was the legitimate right to the crown, or so strong the aversion to re-open the question of the succession, from which all the calamities of the country had sprung,

Thus was Scotland again lost by Edward even

more suddenly than it had been won. He was still detained in Flanders by the war in which he had engaged with the French king for the recovery of Guienne, while his conquest nearer home was thus wrested out of his hands. It appears that stremuons efforts were made by Philip to have the Scots included in the benefit of the treaty of peace, the truce preliminary to which was agreed upon in • 😭 tober of this year.\* But Edward would hear no terms for those whom he called revolted subjects and traitors. By letters addressed to all the earls and barons of England, he commanded that a general muster of the military force of the kingdom should take place at York on the 14th of January. A week after that day a mighty army, of a bundred thousand foot and four thousand cavalry, was on its march, under the command of Surrey, across the Scottish border. After this force, however, had proceeded as far as Berwick, of which they took possession, letters arrived from the king ordering them not to continue their advance till be should himself join them. On this Surrey sent home the greater part of the immense undititude, retaining only a body of twenty thousand foot and fifteen hundred horse.

Edward returned to England about the middle of March, 1298, and instantly summoned the barons and other military tenants to reassemble with their powers at York on the Feast of Pentecost. A still more numerous army than the last gathered at this new call, at the head of which Edward proceeded in the first instance to Roxburgh. From this point he advanced, in the beginning of June, along the east coast, a fleet with supplies for the army having been sent forward to the Frith of Forth; but for several weeks no enemy, scarcely even any inhabitants, were to be seen, and the invaders could only take a useless revenge in wasting an already deserted country The Scots meanwhile, under the direction of Wallace, had been collecting their strength in the interior; and many of the chief nobility, including Bruce, were now assembled again around the great national leader. The plan of Wallace, however, was to avoid for the present a general engagement, and only to watch, out of sight, the movements of the enemy, and hang upon his line of march, in readiness to take advantage of such favourable circumstances as might arise. Edward soon became involved in very serious difficulties: his ships were detained by contrary winds; and while he was waiting at Templeliston (now Kirkliston), a small town between Edinburgh and Linlithgow, till be should receive some intelligence of them before proceeding upon his design of penetrating into the west, an alarming mutiny broke out in the camp, originating in a quarrel between the English and the Welsh soldiers, the lutter of whom, amounting in number to 40,000, were at one time on the point of withdrawing and join ing the Scots. "I care not," said Edward, with his usual lofty spirit, when their intention was reported to him; "let my exemies go and

join my enemies; I trust that in one day I shall chastise them all." No news of the ships arriving, however, the scarcity of provisions soon became so distressing that a retreat to Edinburgh was resolved upon, when information was received that the Scottish army was encamped not far off in the wood of Falkirk. It is said that two noblemen serving in the Scottish eamp, the Earls of Dumbar and Angus, came privately at day-break to the quarters of the Bishop of Durham, and communicated this intelligence. "Thanks be to God!" exclaimed Edward, "who hitherto bath delivered me from every danger; they shall not need to follow me; I will forthwith go and meet them " That night the army lay in the fields, the king himself sleeping on the ground. A kick from his horse, which stood beside him in the might, broke two of his ribs, and in the first confusion occasioned by the accident, a cry arose that the king was seriously wounded or killed,—that there was treason in the camp. Edward immediately, 🖨 🕾 gards ing the pain he suffered, mounted his horse, and, as it was now dawn, gave orders to continue the march. The advanced guard of the enemy was first seen on the ridge of a hill in front, after they had passed Linhthgow. Soon after, the whole army was descried, forming, on a stony field, at the side of a small eminence in the neighbourhood of Wallace divided the infantry of his army, which was greatly inferior in numbers to that of the English, into four circular bodies, armed with lances, which the men protruded obliquely, as they knelt with their backs against each other; the archers were placed in the intermediate spaces: the horse, of which there were only 1000, were drawn up at some distance in the rear. Edward's cavidry were ranged in the front of his battle, in three The attack was made at the same time by the first of these, led by Bigot, Earl Marshol, and the Earls of Hereford and Lincoln; and by the second, under the leading of the bold Bishop of Durham. The shock was gallantly met by the Scottish infantry, and for some time they stood their ground firmly. The cavalry, however, whether dismayed by the immense disparity between the munhers of the enemy and their own, or, as has been conjectured, from treason on the part of their commanders, fled without striking a blow; and, thus left without support against the repeated charges of the English horse, the lancers and archers also at length gave way, and the ront The battle of Falkirk was became complete. fought on the 22nd of July, 1298. It is said that 15,000 of the Scots fell on this fatal day. English side the loss was inconsiderable. Wallace retreated with the remains of his army to Stirling, whither he was pursued by the English; but when they arrived, he was gone, and the town was found reduced to ashes. The victorious invaders now carried fire and sword through the country in all directions. The whole of Fifeshire was laid waste and given up to military execution. The city of

fire and burnt to the ground. Perth was burnt by the inhabitants themselves on the approach of the English. Edward, however, was speedily obliged to leave the country from the impossibility of finding

the means of subsisting his troops. He appears to have returned to England about the middle of September,—having, indeed, regained possession of the principal places of strength in the south or Scotland, but leaving the whole of the country to the north of the Forth still unsubdued. The expensive wars of Wales, Scotland, and Guichne, had caused Edward to oppress the English people with levies and taxes, in the raising of which he had not always respected the constitutional charter; while on some occasions he had recourse to artifices similar to those which had succeeded so badly with his tather, Henry III. At one time, he pretended that he had again taken the cross, and thus denoted the tenth of all church benefices for ix years. A few years after this, he seized the momes deposited in the churches and monasteries, and kept the greater part for his own uses, promisme, however, to pay it back some time or other. His financial proceedings with the church show that times were materially altered—for the man weight of taxation was thrown upon that hody. After obtaining a reluctant grant from the lords and knights of the shire of a tenth on lay property, he demanded from the elergy a half on their entire incomes. Here, for the first time, he reproducted a stern opposition on the part of the bishops, abbots, and common clergy; but they were bullied into compliance, being told, among other barsh things, that every "reverend father" who dared to oppose the king would be noticed as one who bad broken the peace. This was in 1294. In the following year, having obtained a very liberal grant from Parliament, he exacted a fourth from the churchmen, who again were obstipate, and obliged him, in the end, to be satisfied with a tenth. Besides these heavy burdens, the charch was sorely racked by the king's purveyors and commissaries, who, particularly during the more active parts of the Scotch war, continually emptied the store-houses, granaries, farm-yards, and larders, and carried off all the vehicles, horses, and other animals for the transport of army stores, in so much that the poor abbots and priors complained that they had scarcely a mule left in their stables upon which to go their spiritual rounds. At last they applied to the pope for protection, and Boniface VIII. granted them a bull, ordaining

that the clergy should not vote away their reve-

mues without the express permission of the holy

see. But the pope was engaged in many troubles; the bull, which applied equally to all Christian

countries, was strenuously opposed in France by

Plulip le Bel; and in the following year, 1297, he

found himself obliged to publish a second bull,

which explained away and stultified the first; for

it provided, that whenever the safety of the king-

bull arrived, the English clergy, fancying that they were well supported by the previous document, met, and boldly refused some of Edward's demands; upon which he outlawed the whole body, both regular and secular, and seized their goods and chattels, not leaving bishop, parish, priest, abbot, or monk, so much as bread to cat, or a bed to be upon. As there were no Beckets in the land, these measures produced a general submission to the king's arbitrary will, even before the arrival of the explanatory bull. A few recusants were supported for a season by the charity of their relatives and of the common people, but no popular movement took place in their favour, nor does their hard treatment appear to have created any great excitement.\* It was far otherwise when the king laid his greedy hand on the trading classes "stley had borne a great deal in the way of tallages and mcreased export duties; but when he seized all the wool and hides that were ready for shapping, and sold them for his own profit, a universal and lond outery was raised, notwithstanding his assurances that he would faithfully pay back the amount. The merchants assembled, the rich burghers, the landed proprietors of all classes consulted together; and their consultations were encouraged by some of the greatest of the nobles, who were not so blinded by the career of conquest and glory in which the king was leading them, as to be neglectful of their more immediate interests, or indifferent to those violent inroads on the national rights. the end of February, 1297, Edward-felt-the effect of these deliberations. He had collected two armies, one of which was to go to Guienne, the other into Flauders; when the Earl of Hereford, the constable, and the Earl of Norfolk, the marshal of England, both refused to quit the country. Turning to the marshal, the king exclaimed, "By the everlasting God, Sir Earl, you shall go or hang," "By the everlasting God, Sir King, I will neither go nor hang;" and, so saying, Norfolk withdrew with Hereford. Thirty bannerets and 1500 knights immediately followed the marshal and the constable, and the king was left almost An incantious step at this moment might alone.† have cost him his crown or his life, but Edward was a wonderful master of his passions when necessary, and his craft and policy were fully equal to his merits as a warrior. He knew that the Archbishop of Canterbury and the clergy gave great weight to the present opposition, and these he detached by blandishments and promises. He knew that his brilliant exploits in war had endeared him to the unthinking multitude, and he also knew how to touch their hearts. The measure he adopted was singularly dramatic: he stood forth before the people of London, mounted on a platform in front Rymer.—Brady.—Wykes.—Knight.—Heming.

dom required it, churchmen must pay their aids;

and it left to the king and his council the right of

deciding on the necessity. Before this second

any close union between England and Flanders,

and he resolved that the marriage should not take

place. After many secret intrigues,—which failed,

of Westminster Hall, nobody being near him save lns son Edward, the Archbishop of Canterbury, and the Earl of Warwick; he told them that nobody grieved more than he did for the burdensome taxes laid upon his dear subjects, but this builden was one of absolute necessity to preserve, not only his crown, but their blood from the Welsh, the Scots, and the French.\* Then, in the proper place falling into the pathetic, he said, "I am going to expose myself to all the dangers of war for your sakes. If I return alive I will make you amends for the past; but if I fall, here is my dear son, place him on my throne, his gratitude will be the rewarder of your fidelity!" Here he stopped, and let a few tears roll down his iron cheek. archbishop wept; the spectators were tenderly affected; and, after a brief pause, the air was rent with shouts of applause and loyalty. † This display of enthusiasm gave the king great encouragement, and having issued writs for the protection of church property, and appointed Ins former opponent, the Archbishop of Canterbury, chief of the council of regency under Prince Edward, he went to embark for Flunders with such troops as he had kept together. But a few days after, on August 12th, he was brought to a halt at Winchester, by reports of the hostile spirit of the nobles; and while, in that city, a remonstrance, in the name of the archhishops, bishops, abbots, and priors, the earls, barons, and commons of England, was presented to him. After stating in broad terms that they were not bound to accompany the king to Flanders,—a country where neither they nor any of their ancestors had ever done service for the kings of England; and that even if they were inclined to take part in that expedition, the poverty to which he had reduced them rendered them unable to do'so: they went on to tell him, in their bold remonstrance, that he had repeatedly violated their charters and liberties; that his "evil toll" (so they called the export duty on wool) was excessive and intolerable, and that his present expedition to the continent was ill-advised, seeing that his absence would leave the country open to the incursions of the Scots and Welsh. The king evaded any very direct answer, and relying on the favourable disposition of the common people, and the vigilance of his officers, he had the courage to depart in the very midst of these discontents.: He landed near Sluys in the end of August: his plans were concerted with his usual sagacity; but coalitions are faithless and uncertain things, and he had in Philip le Bel an opponent as crafty and, at the least, as unscrupulous as himself. These great kings had long struggled for possession of a young lady,—Philippa, daughter of Guy Count of Flanders. As early as the year

720

as both the young lady and her father were bent on the English union,—the French king invited Count Guy to meet hun at Corbeil that he might consult him on matters of great importance. The Count, who was a frank, honest old man, went, and took his countess with him: he was no sooner in his power than Philip harshly reproached him with the English treaty,—told him that no rassal of the French crown, however great, could marry any of his children without the king's license, - and then sent him and his wife prisoners to the tower in the Louvre. This arbitrary and treacherous measure excited great disgust, and the better feeling of the French peers, and the remonstrances of a papal legate, forced Philip to hierate the old count and his Before letting go his hold, however, he made Guy swear he would think no more of bar English alliance. The count contracted the forced obligation; but this was not enough for the French king, who had broken too many oaths himself to have much reliance on those of other people: he demanded that Philippa should be placed in his hands asea hostage; and when that young lady was brought to Paris—and not before—her parent: were liberated. Their parting was sad and tender As soon as the count reached his own dominions, he made an affecting appeal to the pope; the church entered with some zeal into the case; but notwithstanding repeated threats of excommunication, Philip le Bel persisted in keeping his innocent hostage, who was not more than twelve yearof age. At last, the old count formally renounced his allegiance, defied his suzeram, and entered heart and soul into a league with the English king, whose notion was, that France would be found more vulnerable on the side of Flanders than on that of Guienne. It was in consequence of this treaty, which was sworn to in the most solemn manner, that Edward went to Flanders, after preparing a formidable alliance. The other chief members of the coalition were, the emperor, the Duke of Austria-who had both been subsidized by Edward—and the Duke of Brabant and Count of Bar, who were his own sons-in-law by their marriage with the princesses Margaret and Eleanor of England. When the hired allies got Edward's money, they seem to have considered their part of the business as done; and no member of the coalition was very faithful or strenuous, except the unhappy Count Guy, whose cruel wrongs bound him firmly to Edward. But the whole expedition became a series of misadventures, some of which were sufficiently disgraceful to the English conqueror. He had scarcely landed at Sluys, when the mariners of the Cinque Ports, and those of Yarmouth and other ports-between whom there were many rancorous old jealousies-quarrelled, and then fought, as if they had been national enemies ranged under two opposite flags. On the Yai-

1294, Edward had concluded a treaty of marriage,

which was to unite the fair Fleming to the Prince

of Wales; but it was Philip's interest to prevent

<sup>•</sup> The descent at Dover had greatly inflamed the people against the French; and in the popular accounts of the savage warfare by sea, the atrocities of the turny above were dwelt upon.

† Henning.—Wals.—Kuyght.—Rymer.

also three of their greatest ships-part of the king's treasure being in one of them-were tolled forth into the high sea, and quite conveyed away."\* The king's land-forces were scarcely in a better state of discipline, owing probably to the absence of most of the great officers whom they had been accustomed to obey. The disorders they commatted did not tend to produce mammity in the country, which was already in "evil state, by reason that the good towns were not all of one mmd." The rich and populous cities of Fluiders were, in fact, as jealous of each other, and spht into almost as many factions as the little Italian republics of the middle ages. Philip had a strong party among them, and that active sovereign had greatly increased it, and weakened his encines, by marchaig into the Low Countries at the head of 60,000 men, and gaming a great victory at Furnes, before Edward could arrive. The French occupied many of the towns; and Lille, Courtrai, Ypres, Bruges, and Damme were either taken or given up to them soon after the landing of the English. Edward drove them with great loss ont of Damme, and might have done the same at Bruges, had it not been that his English and the Flemmgs, who were serving with them, fell into strife, and fought about the division of the spoils of the town, which they had not yet taken. Soon after this, he went into winter-quarters at Ghent, and there deadly fends broke out between the townspeople and his troops: seven hundred of the latter were killed in a tuniult, in which Edward's own life was endangered. The English footsoldiers, on their side, sacked the town of Damme, and killed some two hundred Flemings. It was not likely that such tender allies should do much against the common enemy; and all the efforts made by the king and Count Guy failed to reconcile these animosities. Spring approached, but it brought a.d. 129**8.** no news of the inactive members of the coalition; and as Edward's presence was much wanted at home, he eagerly listened to overtures from Philip concluded a truce for two years, and, leaving Count Guy to shift for himself, sailed for England.

mouth side, five-and-twenty ships were burnt and

destroyed in this wild conflict. One fact which

the chromelers mention looks almost as if the

fight had been for the money on board, and most

of the mariners little better than pirates; " and

Chap. I.]

It could not be denied that, after throwing away immense sums of money, he returned humbled and disgraced. But his English subjects had not waited for this moment of humiliation to curb his arhitrary power. As soon as he set sail for Flanders the preceding year, the Constable and Earl Marshal, with many other nobles, in presence of the Lord Treasurer and of the judges, forbade the officers of the Exchequer, in the name of the whole baronage of England, to exact payment of certain taxes which had been laid on without proper consent of parliament. The citizens of London and of the

\*Holinshed.

other great trading towns made common cause with the barons; and, after 1-sning some orders which the Exchequer durst not obey, and making some fruitless attempts at deception and evasion, Edward was obliged to send over from Glient instructions to his son and the council of regency\* to hend before a storm which there was no opposing; and, in the month of December, from the same city of Ghent, he was fam to grant, under the great seal, another confirmation of the two charters, together with a full confirmation of the important statute called "De Tallagio non Concedendo," declaring that henceforth no tallage or aid should be levied without assent of the peers spizitual and temporal, the knights, burgesses, and other freemen of the realm, which had been passed in a parliament held by Prince Edward in the preceding September. For many years parliament had exercised a salutary control in such matters, but this statute, for the first time, formally invested the representatives of the nation with the sole right of raising the supplies. Edward felt this as a painful state of dependence; he knew it would check his ambition, and probably prevent his foreign wars; and he had scarcely set foot in England when he betrayed his irritation and disgust. It is said that, among his confidential friends, he laughed at the restrictions attempted to be imposed upon him; but his subjects were resolute, and soon made him feel that the matter was neither to be treated as of light consequence nor set aside by subterfuges + In full parhament, which met at York in the month of May, some six weeks after his return, the Earl of Hereford, the Constable, and the Earl of Norfolk, the Marshal, demanded of him that he would ratify in person, and with proper solemnities, his recent confirmation of the charters. Edward, as if the ceremony could not have been performed in a few hours, or even then, at the moment, said, that it could not be now, as he must hasten to chastise the Scottish rebels; but he promised to do what was asked of him on his return from the North, and he pledged solemn oaths, recariously, the Bishop of

Durham and three lay lords swearing, by the soul of the king, that he should keep his promise. It will prevent confusion to bring these transactions to one point, without regard to the strict chronological order in which they occurred. In March, 1299, about ten months after the meeting at York, Edward met his parliament again at Westminster. The bloody laurels of Falkark were fresh on his brow: he had all the prestige of recent success; but, undaunted by his glory and might, the barons required the fulfilment of his promises. He was "nothing contented that this matter should be so earnestly pressed, for loth he was to grant their full request." He therefore endeavoured to gain time, putting off the question, and giving no direct answer one way or the other. When the lords

1 Heming .- Walsing.

put his seal to it in a loreign country.

Several members of this council, with the Archbishop of Canterbury at their head, were known to be favourable to the cause of reform.

† He pretended that the confirmation was not binding, as he had

HISTORY OF ENGLAND

followed him; and then the proud conqueror was

compelled to make mean and debasing excuses,

throwing the blame of his departure on the an of London, which, he said, did not agree with his

constitution. At last he granted the ratification so firmly demanded; but, with singular bad faith, he took parliament by surprise, and added a clause at the end of the document,—a saving of the right of the crown,-which niterly destroyed the value of the concession, and went to shake the very foundations of the Great Charter itself. Upon this the Earls of Hereford and Norfolk, with the mass of the barons, returned sullenly to their homes. Edward was alarmed at their hostile countenance, but fancying he could delude the plain citizens, he ordered the sheriffs of London to call a public meeting, and to read the new confirmation of the charters. The entizens met in St. Paul's Churchyard, and listened with anxious cars—at every clause, except the last, they gave many blessings to the king for his noble grants, but when that last clause was read, the London brighers understood its effect as well as the noble lords had done, and they caused as load and as fast as they had blessed before. Edward took warming: he summoned the parliament to meet again shortly after Easter, and then he struck out the detested clause, and granted all that was asked of him in the forms prescribed \* One of the muneduate benefits of these enactments was a proper definition of the lumits of the royal forests, which, it was decreed, should never again be cularged by encroachments on the subjects' lands. + But still Edward only considered these concessions as temporary sacrifices of his high prerogative, and, from the moment of granting them, he occupied the leisure which the Scottish war and his intrigues on the continent allowed him, in devising means to overthrow the power of parliament. Hereford, the Constable, died shortly after the ratification, but his principles had taken too deep and wide a root to be much injured by the death of any one many however great. In the course of three years, the king artfully contrived to punish, on other charges, and impoverish many of the barons who had most firmly opposed him; but this measure only convinced men more than ever of the vital necessity of restricting his power. In 1304, when he had triumphed, for the moment, over all opposition in Scotland, Edward arbitrarily sent to raise a tallage on all the cities and boroughe of his demesne; and in the following year he despatched secret envoys to the pope, to represent that the concessions he had made had been forced from him by a traitorous conspiracy of his barons, and to ask an absolution from his onths and the engagements he had so repeatedly and solemnly contracted with his subjects. Notwithstanding Edward's instanc-

· Hemingford.-Knyghton.

hand,—awed by the manumity of the barons on the other,—and then, once more embarrassed by a rising of the patriots in Scotland, who never left hum long in tranquil enjoyment of his usurpation, the mighty Edward was compelled to respect his engagements and the will of the nation, and to leave, as a part of the law of the land, those limitations on the power of future rulers which had been wrung from him, one of the most powerful, warlike, and skilful of kings. It required, indeed, in "intropid patriotism" to contend with and finally control such a sovereign, and England never has produced any patnots to whom she owes more gratitude than to Humphrey Bohim, Earl of Hereford, and Roger Bigod, Earl of Nortolk But Euglish historians have not borne sufficiently in mind the indirect obligation to the hardy patriots of Scotland who divided and weakened the strength of the tyrant, and, on more than one occasion, served the cause of liberty in England by distracting his attention at a critical moment, and giving full employment to his arms and resources in the North. If the Scots had been mean-spirited and submissive, the "Confirmation of the Charters" might have been animifed; and if the English had succeeded in custaving the Scots, they might have found that they had been forging fetters for themselves. The vision of the splendid inheritance of Eleanor of Aquitaine still haunted Edward's miagination. With such an opponent as Plulip le Bel he could scarcely hope to recover all those states which the divorced wife of Louis VII, conveyed to Henry II. of England; but he was resolved to get back at least the country of Guienne, the loss of which preyed on his mind and uritated his self-esteem, for Edward prided lumself as much on his policy as on his military prowess, and in that particular Philip had fairly, or rather foully, outwitted him. In the transactions which now took place, the two sovereigns ran a pretty equal career of baseness. Having experienced the expensiveness and uncertainty of foreign coalitions, and having no great army of his own to spure for continental warfare, Edward determined to obtain his end by treating diplomatically with the French king, and sacrificing his faithful ally, the Count of Flanders. In this he had more in view than the recovery of Guienne, for, as a price of his own treachery to Count Guy, he expected that Philip would be equally false to his treaty with the Scots, whom he had hurned into hostilities for his own purposes. swearing, however, that he would never abandon them. Since Edward's unfortunate campaign in Flanders, the arrogance and exactions of the French

had almost destroyed their party in that country;

and though they made a temporary conquest of it,

the burghers of Ghent, Lille, Bruges, and the other

free cities, gave them a signal defeat in the battle

Thus, but slightly encouraged to perpury on the one

CHAP. I.]

French yoke, and elected John of Namun to be their governor general, for Comit Guy had been once more entrapped by Philip, who kept him a close prisoner. The French king was as anxions to recover Flanders as Edward was to keep Scotland, and to get back Gmenne; and all the chivalry of France louged to wipe out the disgrace their arms had sustained at Courtrai from the "canadle of Flemings."\* It appears that the pope, who had been appealed to as mediator, first suggested, as a

proper means of reconciling the two kings, that Edward, who had been for some years a widower, should marry Margaret the sister of Philip; and that his eldest son, the Prince of Wales, should be affianced to Isabeau, or Isabella, the daughter of that sovereign. This double marriage had been for some time under discussion, and mace given scope to much mutual deception, Each of the kings impadently affected a delicacy of conscience about abandoning his allies, and Edward stated (what was perfectly true) that he had pledged his soul and honour to the marriage between the Prince of Wales and Philippa, the daughter of the infortunate Earl of Funders, and had stipulated that in case of that union being frustrated by the young lady's continued detention, or by her death, then the young prince should marry her sister;—that he, King Edward, had sworn upon the Gospels to make neither peace nor truce with France unless it were conjointly with his ally the Earl of Flanders, not even though the pope should demand it. Plulip le Bel, on his side, spoke of his allies, the brave, the unfortunate Scots, and of the solenm obligations he had contracted with them; but each gracious king must have laughed at the other, and probably at lumself, too, in making this interchange of scruples of conscience. Edward married Margaret of France, in September, 1299; and at the same time his son, who was thrteen years old, was privately contracted by proxy to Isabella, who was about six years old. A sort of congress, held at Montreuil, which preceded this marriage, had settled that there should be peace between the French and English crowns, that the King of England should make satisfaction for the many French ships which his marmers had illegally taken at the beginning of the war, and that the King of France should place sundry towns in Gascony in the custody of the pope, to be by him held till the Guienne question should be adjusted by peaceful negotiation. This treaty, however, had not been properly ratified; Plulip le Bel quarrelled with

but at last, on the 20th of May, 1303, the treaty of Montreul was ratified, a treaty of commerce was concluded between the two countries, and Edward recovered Gmenne, for which the Earl of Lincoln swore tealty and did homage in his name. In this treaty the Scots were not even mentioned: then envoys at the French court complained of

this disbonourable abandonment, and Philip sofemily promised to plead their cause like a warm and sincere friend in an interview which he was shortly to have with the English king. This personal application, he said, would have more effect than the discussing of clauses and provisos with ambassadors; and so it might; but Philip never made it, having, indeed, bargained with Edward to abandon Scotland if he would abandon Flanders. In part through inability to prevent it, Edward had permitted Philip to have his way with the Flenings ever since his infortunate

campaign and the truce of 1297, and now be wholly gave them up, by treaty, to their emaged enemies the French, who, a few months after, avenged then defeat at Comfrai by a frightful massacre of the borghers and peasants of Flanders m the battle of Monts-cn-Puelle, which was fought at a place so named, between Lille and Donni. The late of Count Guy and of his innocent daughter was sad in the extreme. After keeping him four years in close prison, Philip 4c. Bel. liberated the count in a moment of great difficulty, and sent him into Flanders to induce his own subjects to convert a truce they then had with the French into a lasting peace. The count went, and not succeeding in his mission, — for the Flemish citizens hoped to be able to cope with the French single-handed, he honourably returned, as he had promised to do in that case, to Philip, who again committed lum to prison, and caused lum to be treated with infamons severity. The poor old man died soon after at Compeigne, in the eightyfirst year of his age. But neither the battle of Monts-en-Puelle, nor a series of bloody engagements which followed it, could break the spirit of the free citizens of Flanders, whose wealth, the frint of commerce, gave them many advantages over the miserably poor aristocracy of France, and whose numbers, considering the limited extent of the country they occupied, were truly prodigious. After each reverse they rallied again, and the carnage of many battles left no perceptible dimi-

nution in their ranks. "By St. Denis," cried Philip, "I believe it rains Flemings!" At last he condescended to treat on moderate terms with the trading and manufacturing citizens whom he had once despised as incapable of "high deeds of arms;" and, about a year after the ratification of the treaty with Edward, he agreed to a truce for the arbiter, and even instigated Sciarra Colonna to arrest and ill-treat Pope Boniface. Other cirten years, on condition that the Flemings, while they preserved all their ancient liberties, should cumstances, besides the national antipathics of the acknowledge his feudal suzerainty, pay him one hundred thousand francs for the expenses of the war, and leave him in undisturbed possession of the cities of Lille, Douai, Orchies, and Bethune. 1 7 2

English and French people, which were already very strong, had prevented the accommodation; \* The nobles of France seldom condescended to give the industrious burghers of Flunders a better title.

leisure from his other affairs to set about pre-

parations for the prosecution of the Scottish war,

and the effort he then made ended in nothing; for

after an army had been assembled at Berwick in

Robert, the eldest son of Count Guy, was then liberated, and entered on possession of Flanders; the body of the octogenarian state-prisoner, which had been embalmed, was delivered up; and his younger son and many Flemish gentlemen recovered their liberty. But in this general enlargement the face Philippa, -the, at one time, affianced bride of Prince Edward of England, -was excepted; and she died of grief and captivity not long after, about two years before Edward of Cacmaryon completed his marriage with Isabella of France. events which rose out of this ill-fated marriage might have satisfied the manes of the most revengeful; and at could hardly happen otherwise than that they should be interpreted into a direct judgment of Heaven provoked by political perfidy. If she did not positively command the atrogious deed herself, Isabella was at least a main cause of the marder of her husband, and from her umon with the Plantagenet were derived those English claims to the French crown, in the prosecuting of which her native land was repeatedly wasted with fire and sword from one extremity to the other, and the spirit of cumity and hatred between the two countries—already a prevalent feeling—became so enveromed and deep-rooted that five hundred years have scarcely sufficed to remove it.\* All this while Edward had never ceased to be

724

occupied with his design of completing the subjugation of Scotland; but so long as he was embarrassed by having the French war on Ins hands at the same time, his operations in the north of Britain had been comparatively cramped and mefficient. Accordingly, the four years that followed the battle of Falknik were productive of no important results, although during the whole time the hostilities between the two countries never wore suspended except occasionally by a truce for a few months. Wallace disappears from the scene after his great defeat. In his room, the barons appointed William Limberton, Bishop of St. Andrews, John de Soulis, John Comyn the younger, and Robert Bruce Earl of Carrick, Guardians of the kingdom in the name of Bahol. This was indeed a strange union of all the great factions, Bruce acting in the name of Bahol, and associated in the same commission with Comyn, the only person who stood between him and the throne if Bahol should be set aside; for Comyn was the son of Baltol's sister Marjory, and, failing King John and his issue, the heir of right to the crown. John Baliol, who had remained a prisoner in the Tower since his abdication in 1296, was liberated by Edward on the intercession of Pope Boniface, in July, 1299, and conveyed to his ancestral estate of Balleul in Normandy, where, forgetting that he had ever been a king, he lived in quiet till his death in 1314. Edward Baliol, who had been his father's fellowprisoner, accompanied him to France; but of him we shall hear more in the sequel. It was not till November, 1299, that the English king found

November, his barons, alleging his continued evasion of the charters, peremptorily refused to advance, and he was obliged to return home. The consequence was the capitulation of the castle of Sturling to a Scottish force that had been for some time besieging it. In the summer of 1300, Edward made an incursion into Annandale and Galloway; but it was attended with no result except the devastation of the former of these districts, and the formal and useless submission of the latter. On the 30th of October, a truce with the Scots was concluded at Dumfires, to last till Whitsunday at the following year. It was during this interval that Pope Boniface VIII., in a letter to Edward, advanced the singular claim that the kingdom of Scotland belonged of right to the boly see. "But," added his holmess, "should you have any lactensions to the whole or any part of Scotland, send your proctors to me within six months. I will hear and determine according to justice. I take the cause under my own peculoa cognizance." To this impudent demand, a parliament, which met at Lincoln in February, 1301, returned a short and spirited answer. "At no time," said the English barons, "has the kingdom of Scotland belonged to the church. In temporal affairs, the kings of England are not amenable to the see of Rome. We have with one voice resolved that, as to temporal affairs, the king of England is independent of Rome; that he shall not suffer his independency to be questioned; and therefore that he shall not send commissioners to Rome. Such is, and such, we trust in God, will ever be our opinion!" A longer and more deferential epistle from Edward hunself, a few months afterwards, entered into an claborate examination of the question; and, in the end, Bourface found it expedient to profess himself convenced, or at least to act as if he had no longer any doubt of the English supremacy. He soon after addressed the Scottish clergy in terms of violent reproof for their opposition to Edward his "dearly-beloved son in Christ," and enjoined them to strive, by repentance and by most carnestly pressing the submission of their countrymen, to obtain forgiveness of God and man. Meanwhile, the truce having expired, Edward, in the summer of 1301, again marehed into Scotland. This campaign, however, was still more unproductive than the last; the Scots, adhering to the course that had hitherto proved most effective in ridding them of their invaders, as the English king advanced, laid the country waste before him, till at last, an early and severe winter coming on, he was compelled to retire into the town of Linlithgow. Here he built a eastle, and kept his Christmas. In January, 1302, by the mediation of France, he was induced to conclude another truce, with the Scots, to endure till the 30th of November (St. Andrew's Day). It is observable that the Scottish commissioners on

CHAP. I.]

CIVIL AND MILITARY TRANSACTIONS.

this occasion still professed to act in the name of Baliol, against whose title to be called a king, however, Edward protested. As soon as the truce had expired, he prepared to renew the war. This time, however, instead of proceeding to Scotland in person, he sent thither John de Segrave, upon whom he had lately bestowed the appointment of governor, at the head of an army of 20,000 men, mostly cavalry. The issue of this expedition was enumently disastrous. Segrave, advancing towards Edinburgh, was suddenly attacked early in the morning of the 24th of February, 1303, in the neighbourhood of Roslin, by the Scottish forces under the command of Comyn, the guardian, and Sir Simon Fraser, and sustained a total defeat. He had arranged his forces in three divisions, which appear to have been successively fallen upon by the Scots, and one after the other completely put to the rout. In the first fight, Segrave limiself, after being dangerously wounded, was made prisoner, along with sixteen kinghts and thirty esquires: his brother and son were afterwards taken; and it is said that the victors, on coming up with the second and third divisions of the English, were each time compelled to discucumber themselves for the fresh encounter by the slaughter of all their prisoners. Much sport was also taken; and the affair once more for the moment cleared the country of its invaders. But the termination of the dispute with France now left Edward free to turn with his whole power to the Scottish war. The treaty of Montrenil was radified at Paris, as above related, on the 20th of May; on the 21st of that month, the English king was with his army at Roxbingh, and, on the 4th of June, he had reached Echuburgh, his progress, in which he had encountered no opposition, having been marked at every step by fields laid waste and towns and villages set on fire. From Eduburgh he appears to have pursued his nnresisted and destructive course by Linlithgow and Clackmannan to Perth, and thence to Aberdeen and Kinloss in Moray. At the strong and extensive fortress of Lochendorb, built on an islet in the midst of a lake in the heart of Morayshire, he established his quarters for some time, while he received the homage and oaths of fealty of the northern barons. The tradition of the neighbourhood, after the lapse of more than 500 years, still connects the ruins of Lochendorb with the name of the great English king.\* From this remote point he returned southwards in the latter part of Octo-Of all the places of strength to which he came, the castle of Brechin alone shut its gates against him. It was commanded by Sir Thomas Maule, who, while the English were battering the fortresses with their engines, is said to have exhibited himself in deliance on the ramparts, with a towel in his hand, with which he contemptuously wiped off the dust and rubbish that fell upon him. The valuant knight, however, was at last struck by a missile; but even while expiring of his mortal

wound, he inveighed against his men as cowards when they asked him if they might now surrender the eastle. The garrison, however, capitulated the day after their commander ceased to breathe. Edward took up his winter-quarters in Dunfermline in the beginning of December. Here, according to the History attributed to Matthew of Westminster, the English soldiers levelled with the ground the magnificent abbey of the Benedictnics, a building so spacious, says this writer, that three kings with all their attendants might have been lodged convemently within its walls; But "the Scots," he adds, by way of apology, "had converted the house of the Lord into a den of thieves, by holding their rebellious parliaments there." The last remmant of the Scottish forces that kept the field now assembled in the neighbourhood of Stirling, with the view of protecting that fortress, the only place m the country that still held out. But the advance of Edward and his cavalry at once dispersed this little army. Shortly after, on the Oth of February, 1304, Comyn, by whom it had been commanded, and some other noblemen, made their submission to the commissioners of the English knig at Strathorde,\* in Fifeshnic. It was agreed that they should retain their lives, liberties, and lands, subject only to such fines as Edward might impose. The capitalation was to include all other persons who might choose to take advantage of it, with the exception only of Wisheart, Bishop of Glasgow, the Steward, and Sir John Soulis, who were to remain in exile for two years, and not to pass to the north of the Trent; of David de Graham and Alexander de Lindesay, who were to be banished from Scotland for six months; of Sumon Fraser and Thomas Bors, who were to be banished for three years from all the dominions of Edward, and also to be prohibited from passing into France; and, closing the honourable list, the illustrious Wallace, to whom it was significantly accorded that, if he chose, he might render himself up to the will and mercy of Edward. Not long after, about the middle of Lent, a purliament was assembled at St. Andrew's, in which sentence of outlawry was pronounced against Wallace, Fraser, and the garrison of Stirling, on their being summoned and failing to appear. All the persons above named eventually surrendered themselves on the terms offered to them; even Fraser at length gave himself up: Wallace alone stood out. The rhyming chronicler, Langtoft, relates that, from his hiding place in the forest of Dunfermline, the outlaw sent some of his friends to Edward, with a proposal to surrender himself on a written and scaled assurance of his life and heritage. But "full grim" was Edward, it is added, when this was reported to him: he cursed Wallace and all who supported him as traitors, and set a reward of 300 marks upon his head. On hearing this, Wallace, flying again to the moors and marshes, betook himself for subsistence to his old occupation of plunder,-" in mores and marcis with robberig him fedis." · Phis place, we believe, is not now known.

Scotland, however, was not yet completely sub-

dued so long as its chief place of strength, the eastle of Stirling, remained unreduced. To the siege of this fortress, therefore, Edward now addressed himself. The operations commenced on the 22nd of April. Sir William Oliphant, the

governor, had offered, if a cessation of hostilities were granted, to repair to France and there take the commands of Sir John Souhs, from whom he had received his charge. "Am I to wait for his orders?" exclaimed Edward; "defend the eastle if you will!" Thirteen warlike engines, according to Langtoft, the best in the kingdom, were brought to be used against the devoted walls; and the ample leaden root of the cathedral of St. Andrew's, Fordun tells us, was form off to assist in the construction of these formidable machines. Some of

them, Hemmgford says, threw stones of two and three hundred weight. Another species of engine that was used was the espringal, or springal, by which darts were projected, sometimes winged with brass instead of feathers. Edward himself directed every thing that was done, and "though far advanced in years," to borrow the expression of Lord Hailes, "exposed his person with the fire and temerity of a young soldier." He

was several times struck by stones and jayelms thrown from the eastle, and once an arrow shot at him from a sort of cross-bow stuck in his armour. After the siege had continued nearly a month, without much progress having been made, the sheriffs of York, Lincoln, and London were commanded to purchase all the bows, quarrels, and other warlike weapons that could be procured within their districts, and to send them to Stirling: and the governor of the Tower was also desired to send down immediately a supply from those under his charge. All the efforts of these assailants, however, were repelled for two months longer by Sir William Oliphant and his handful of gallant associates. They held out till their provisions were exhausted and the eastle was reduced almost to a heap of ruins. Then, on the 20th of July, when Edward would listen to no other terms, they surrendered at discretion. The governor and twenty-four of his companions of rank, all, except

two of them who were ecclesiastics, stripped to

their shirts and under garments, were led forth

from the castle, and presenting themselves before

Edward on their hent knees, with their hair dis-

hevelled and their hands joined in supplication,

acknowledged their guilt with trembling and the

semblance of shedding tears,\* and gave themselves

lives were spared, and they were sent to the Tower

of London and other English prisons. Besides

the twenty-five gentlemen, thirteen ladies, their

wives, and sisters, had shared along with them the

dangers and privations of their obstinate defence.

exacted from them for a chance of life.

Such was the ungenerous price

up to his merey.

consisted of no more than a hundred and forty

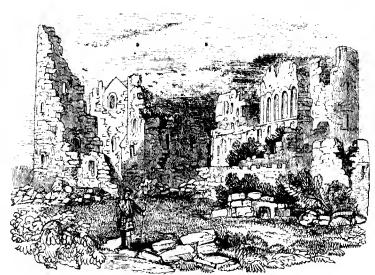

A few months after the fall of Stirling, the last enemy that Edward had to dread, and the last hope of Scottish independence, seemed to be ent off by the capture of Wallace. It appears that Edward had anxiously sought to discover his retreat, and that, tempted by the prospect of the rewards has baseness might earn for him, Ralph de Hahburton, one of the prisoners lately taken at Stirling, had proffered his services for that purpose. It is not clear, however, that it was by Hahburton's exertions that Wallace was actually taken; all that is certainly known is, that, upon being scized, he was conveyed to the castle of Dunbarton, then held under a commission from the English king, by Sir John Menterth, Menterth has been represented as the betrayer of Wallace, whose friend or intimate associate, moreover, to make his treachery the blacker, he is said to have been; but his part in the transaction seems to have gone no farther than the performance of the duty to which his trust bound him-of receiving the prisoner, and having him conveyed to England.\* He was brought to London, " with great immbers of men and women," says Stow, "wondering upon him. He was lodged in the house of William Delect, a citizen of London, in Fenchurch-street. On the morrow, being the eye of St. Bartholomew, he was brought on horseback to Westminster, John Segrave and Geoffrey, knights, the mayor, sheriffs, and aldermen, of London, and many others, both on horseback and on foot, accompanying him; and m the great hall at Westminster, he being placed on the south bench, crowned with laurel for that he had said in times past that he ought to bear a crown in that hall, as it was commonly reported—and being appeached for a traitor by Sir Peter Maloric, the king's justice, he answered, that he was never traitor to the king of England; but for other things whereof he was accused, he confessed them." These circumstantial and minute details, inartificially as they are put together, and homely or trivial as some of them may be thought, are yet full of interest for all who would call up a hving picture of the scenc. Wallace was put to death as a traitor, on the 23rd of August, 1305, at the usual place of execution—the Elms in West Smithfield. He was dragged thither at the tails of horses, and there hanged on a high gallows, after which, while he yet breathed, his bowels were taken out and burnt before his face. barbarous butchery was then completed by the head being struck off, and the body being divided into quarters. The head was afterwards placed on a pole on London Bridge; the right arm was sent to be set up at Newcastle, the left arm to Berwick, the right foot and limb to Perth, and the left to Aberdeen.

There is a very able and spirited vindication of Sir John Menteith in Mr. Mark Napier's late "Memors of John Napier of Merhiston," do. Edm. 1834, pp. 527, &c. See also, "Tracts Legal and Historical," by J. Riddell, Esq. 8vo. Edin. 1835, pp. 145—149. The admirable Hailes first pointed out the improbabilities and unfounded assumptions of the vulgar account, Annals, i. 243, 344.

A few weeks after the execution of Wallace, ten commissioners, elected by a council of the Scottish nation, which Edward had summoned to meet at Perth—namely, two bishops, two abbots, two earls, two barons, and two representatives of the boroughs, assembled in Loudon, and there, in concert with twenty commissioners from the English purhament, proceeded to settle a plan of government for the conquered country. The alterations made were not greater than might seem to be called for to secure the dependence of Scotland upon the English crown; but as was to be expected, a controlling power over all offices and appointments was left in the hands of the king. The whole arrangement, however, was suddenly overthrown ere it had been well established. Within six months from the death of Wallace, the Scots were again up in arms, around a new cham-

This was Robert Bruce. Bruce had again made

his peace with England some time before the capitulation of Comyn and his friends at Strathorde, which he was enabled the more easily to effect, inasmuch as he had not been present at the buttle of Falkirk, having previously shut himself up in the castle of Avr, and refused to join the Scottish army. Edward had since sought to secure his adberence, by treating him with especial favour and confidence. When his father, who had all along continued attached to the English interests, died, m the latter part of the year 1304, young Bruce was immediately permitted to take possession of the whole of his estates both in England and Scotland. At the settlement of the latter kinedom, in the following year, while his great rival, Comyu, was fined in three years' rent of his lands, Brince was entristed with the charge of the important fortress of Kıldrammic, in Aberdeenshire, by commission from the English king. It is never to be forgotten that, up to this time, whatever his uver-

RUINS OF KILDRUMMIE CASTLE

sion to the English domination may have been, there had been repelling circumstances of the strongest nature to prevent Bruce from taking part cordially and steadily with the patriotic party in his native land, who, although they were contending against England, acted in the name and chiefly under the conduct of the enemies of his house and person—of the family which he looked upon as having come between him and his splendid birthright, and by which also he must have been regarded as a natural rival and object of suspicion. Wallace might fight for Bahol; Bruce scarcely could. And as little, after Bahol might be considered to be set aside, could he ally himself with

Comyn, the near connexion of Baliol and the inheritor of his pretensions. Bruce, indeed, if he still retained a hope of seating himself on the disputed throne, must now have looked upon Comyn as the man of all others of whom it was most necessary for him to clear his path; and the same also no doubt were the feelings of Comyn in regard to Bruce. If either, by whatever means, could put down the other, the strong necessity of self-preservation would banish many scruples—for the one was scarcely safe while the other lived. It is probable enough that the favour of Edward was courted by each with the object of depressing or destroying his rival. The circumstances, how-

HISTORY OF ENGLAND.

surc), as a motto.

mable elements which only required to be brought together to produce such a catastrophe, are involved in much uncertainty; the real facts were probably never very generally known, and tradition naturally busied itself in embellishing so remarkable an event. It appears, that in June, 1305, after his last submission to Edward, Bruce had entered into

a secret league with William de Lamberton, bishop of St. Andrew's, by which the parties mutually bound themselves to stand by each other against ull persons whatsoever. This curious instrument is still preserved.\* There can be no doubt that what it chiefly contemplated was the assertiou, at some future day, of Bruce's claim to the crown. It is supposed that Comyn had obtained a knowledge of this agreement, and that thereupon a conference on the subject of their pretensions took place between him and Bruce, when Bruce is said to have proposed either that he should have the

erown and. Comyn his estates, or that he should have Comyn's estates and Comyn the crown. was agreed that Bruce's title to the crown should be supported by both. With whatever views Comyn may have entered into this negotiation, he eventually (so proceeds the story) communicated all that had taken place to Edward. Bruce received the first intimation of his danger from Edward's son-m-law, the Earl of Gloneester, who, by way of warning him to take instant flight, sent a messenger to him with twelve pence and a pair of spurs, under the show of restoring what he had borrowed. Early the next morning, Bruce set out for Scotland, taking the precaution to make his horse's shoes be reversed, that he might not be tracked in the snow, which had fallen heavily during the night. On his way he met a person on foot, whom he found to be the bearer of letters from Comyn to Edward, urging his death of immediate imprisonment. He slew this man, and, with the letters in his possession, pressed forward to his castle of Lochmaben, where he arrived on the seventh day after his departure from London. The most of this, it must be confessed, is more like fiction than fact. It is certain, however, that on the 10th of February, 1306, Bruce and Comyn met alone in the convent of the Mmorites at Dunifries, and that there a passionate alterention having arisen between them, Bruce drew his dagger, and stabled Comyn as they stood together beside the Hurrying from the sanctuary, he high altar. called "to horse!" and when his attendants, Alexander Lindesay of Crawfurd, and Roger Kirk-

\* See it printed in Hailes, 1. 342. .

patrick of Closeburn, seeing him pale and violently agitated, inquired the cause, "I doubt," he replied, "I have slain Comyn." "You doubt?" exclaimed Kirkpatrick; "1'll make sure." And, with these words, he rushed into the church, and gave the wounded man his death-stroke, despatching also his kinsman, Sir Robert Comyn, who tried to defend him. In memory of this deed, the descendants of Kirkpatrick still bear as their crest The boldest course afforded the only chance of safety. He immédiately called his friends around hmn—they were few in number; but, desperate as the hazard looked, there were some gallant spirits that did not shrink from setting their lives (which many of them lost) upon another east for the freedom of their country. The Bishops of St. Andrew's and Glasgow, the Abbot of Scone, Bucc's four brothers, Edward, Nigel, Thomas, and Alexander, his nephew, Thomas Randolph, his brotherin law, Christopher Seton, and some ten or twelve

a hand grasping a dagger distilling drops of

blood, with the words "I make sicker," (that is,

plans, there was no room for doubt or hesitation now.

Whatever might have been Bruce's previous

[Book IV.

others, mostly young men, gathered at the simimons. They met at Glasgow, and from thence rode to Scone, where Bruce was solemnly crowned on the 27th of March. Edward was at Winchester when the news of this revolution was brought to him. He mimediately sent forward the Earl of Pembroke, with the title of Guardian of Scotland, at the head of a small army to check the usurgents; and, advanced in years as he now was, proceeded to make ready, if it should become necessary, to follow in person. In preparation for the expedition, pro-

clamation was made that the Prince of Wales would be knighted on the feast of Pentecost; and all the young nobility of the kingdom were sammoned to appear at Westmuster to receive that bonour along with him. On the eye of the appointed day (the 22nd of May) two hundred and seventy noble youths, with their pages and retinues, assembled in the gardens of the Temple, in which the trees were cut down that they might pitch their tents; they watched their arms all night, according to the usage of chivalry, the prince and some of those of highest rank in the abbey of Westminster, the others in the Temple On the morrow Prince Edward was knighted by his father in the hall of the palace, and then proceeding to the abbey, conferred that honour on his companions. A magnificent feast followed, at which two swans covered with nets of gold being set on the table by the minstrels, the king rose and made a solemn vow to God and to the swans, that he would avenge the death of

Comyn, and punish the perfidy of the Scottish

rebels; and then addressing his son and the rest

of the company, he conjured them, in the event of

his death, to keep his body unburied until his successor should have accomplished this vow.

The next morning the prince with his companions departed for the borders; Edward himself fol-

lowed by slow journeys, being only able to travel in a litter. Meanwhile Bruce's adherents had been increasing in number, and he had already acquired such strength, that in several parts of the country the officers of Edward and the other English had fled in terror. He now marched upon Perth,

was rather a root than a battle; Bruce Imuself was in the greatest danger, having been three times unhorsed; Randolph and others of his friends were taken; and he with difficulty made good his retreat into the fastnesses of Atholi, with about five liquidical followers, the broken and dispurited remnant of his force. For many months after this, he and his friends were houseless fligitives; a price was set upon their heads; to make thea difficulties and sufferings the greater, they were joined after some time by a party of their waves and daughters; and as they penetrated farther and tarther into the depths of the Highlands, to avoid the English troops that scoured the courtry in rearch of them, their miscues, both from want of shelter and frequent want of food, as well While the Scottish king lay concealed here,

as from the mere using danger, became daily more pressing. On reaching the borders of Argyle, Bruce and his little band were set upon in a narrow defile by the Lord of Lord, who had married an aunt of Comyn, at the head of a thousand fullowers, and after a sharp but unequal encounter, with difficulty escaped with their lives. At last Bruce's queen and the other ladies were conducted by his brother Nigel to the castle of Kildrummie; and Bruce lumicif soon after found means to pass ever to the little isle of Rachrin on the northern coast of Freland. rum fell upon almost all the connexions and adherents he had left behind. The Bishops of St. Andrews and Glasgow, and the Abbot of Scone, had fallen into the hands of the English soon after the battle of Methyen; they were taken clad in armour, and were immediately sent, so attired and in fetters, to England, and there consigned to different prisons. Their sacred character alone saved their lives. Bruce's queen and his daughter Marjory having left Kildrummic, and taken refuge in the sanctuary of St. Duthac, at Tain, in Rossshire, were seized there by the Earl of Ross. The knights who were with them were put to death; and they themselves were sent to England, where they endured an imprisonment of eight years. The youthful Nigel Bruce, much beloved by the people for his gallantry and the graces of his person, was compelled to surrender the castle of Kildrummic, and, being sent in irons to Berwick, was there hanged, and afterwards beheaded, along with divers other knights and gallant men. Christopher Seton suffered a similar death at Dumfries, the Earl of Atholl and Sir Simon Fraser in London, and many others there and else-Thus did Edward make the best blood of Scotland flow in torrents in expiation of what he called the rebellion and breach of faith of the VOL. I.

him from the oath which he lad taken for maintaming the privileges of his people. But the Scots, without papal authority, violated their oaths, and were pumished as perpired men. It is a truth not to be disguised, that in those times the common notious of right and wrong were, in some sort, obliterated. Conscience, intoxicated with indulgences, or stupified by frequent absolution, was no longer a faithful monitor, amidst the temptations of interest, ambition, and national ammosities." Bruce, however, had not been idle in his writer retreat; and early in the spring of 1307 he passed over from Rachim to the isle of Arran, with a company of about three hundred men, embarked in thirty-three galleys, which, according to Fordun, he had been enabled to raise by the aid of a chieftamess, called Christiana of the Istes. venturing to the opposite coast, he despatched one of his followers to ascertain what were the dispositions of the people, with instructions, if he found appearances tayonrable, to light a fire on a certain day, on an eminence near the castle of Turn-This had been one of the chief seats of his own family, and the surrounding district was his ancestral territory of Carrick. When the appointed day arrived, Bruce looked anxiously for the expected signal: at length, when it was already past noon, he saw the fire; on which he quickly embarked with his associates, and they steered their course during the darkness by its light. When they approached the landing-place, Bruce's emus-ary stood on the shore. He told them that the English were in complete possession of Carnick; that Lord Percy, with a mimerous garrison, held the castle of Turnberry; and that there was no hope of a rising in favour of Bruce. "Traitor!" cried Bruce; "why did you make the signal?" "I made no signal," replied the man; "but, observing a fire on the hill, I feared that it might

A.D. 1307.—The death of Edward 1. was cau-

tiously concealed in the capital for many days, and Ralph de Baldoc, bishop of London and chancellor

of the kingdom, continued to put his great seal to

writs till the 25th of July. Edward 11., however,

had been peacefully recognised at Carlisle by the

death, made his son be called, and, in the presence

of his barons, made him swear upon the saints,

that as soon as he should have expired, he would

cause him to be boiled in a cauldron, till the flesle

should fall from his bones, and afterwards bury the flesh, and keep the bones, and that every time

the Scots rebelled, he would lead an army against

them, and carry along with him these dead relies

of his father. If this singular oath ever was

exacted, it must have been not when Edward was at the point of death, but before he set out from

unanimous consent of the peers and magnates present with the army there, on Saturday, the 8th of July, the day after his father's death.\* This prince had the outward appearance of many advantages: he was young, of an agreeable person, and cheerful on the 10th of May. Three days after, he attacked disposition; and the fame and greatness of his father another English force under the command of the endeared him to the English people, and cansed Earl of Gloucester; and this, too, he succeeded Inm to be respected abroad; but he had already in routing with great slaughter. Pembroke and betrayed weaknesses that would overthrow the Gloucester having both thrown themselves into the strongest throne, and had incurred the suspicion of vices which, when once proclaimed, were sure castle of Ayr, Bruce immediately laid slege to that singularly to irritate a manly nation. On his death-bed his father had implored him to eschew the company of favourites and parasites, and had forbidden him, under pain of his curse, to recal his chief minion, Gaveston, to England. Piers Gaveston was a remarkably handsome youth of Gascony, who had been brought up with the prince, over whose heart he obtained a disgraceful ascendancy. The stern old king had driven him from England; but, forgetful of his dying injunctions, and his own solemn oaths, Edward's first thoughts on his accession were to reeal this favonrite, and confer upon him the carldon of Cornwall, with other honours and immense estates. He was obliged, however, to make a semblance of reached the village of Burgh-upon-Sands, he there prosecuting the war in Scotland : he hastened from stopped once more for the might; and on the morning of the next day, the 7th of July, expired, in London; he marched as far north as Cumnock, on

places, and in some instanecs stripped of their property and thrown into prison. This fate particularly hefel the lord treasurer, Walter de Langton, bishop of Liehfield, and it was said for no other reason than his having reproved the prince, and refused him money for his extravagance during his father's life-time. In no case does any legal procedure appear to have been resorted to. Instead of fulfilling his father's solemn behest, Edward buried his bones in Westminster Abbey, at the head of Henry III., on the 27th day of October; and soon after he gave the money which the old

king had set apart for the Holy War to his insatiable favourite. Indeed, the whole of Edward's care seems to have been to disgust every feeling and prejudice of his barons, and to enrich and aggrandise Gaveston with a rapidity and to an amount unprecedented even in the shameful annals of favouritism. The great carldom of Cornwall, which had been appanage enough for princes of the blood, was not deemed sufficient for this Gaseon knight. Edward married him to his own nicee, Margaret de Clare, made him lord chamberlam, and gave him an extensive grant of lands 732

and houses of this overgrown minion. Nothing

was granted without his consent; and it was

reported, among many other things, that the king had said that he would leave hun his kingdom if When the infatuated Edward sailed France, in January, 1308, to marry the Princess Isabella, to whom he had long been contracted, he left Gaveston regent of the kingdom during his absence, and intrusted him with more absolute powers than had ever been conferred in such cases. The Princess Isabella, daughter to Philip le Bel, was reputed the most beautiful woman in Europe, -nne des plus belles dames du monde, according to Froissart. But Edward from the first was

rather indifferent to her person. They were married with great pomp in "our Lady Church of Boulogne," on the 25th of January; no fewer than four kings and three queens being present at the ceremony. Edward showed the greatest impatience to return to England: the usual rejoicings were cut short, and be embarked with his bride and a numerous company of French nobles whom he had invited to the coronation. Soon after their landing they were met by Gaveston and by the flower of the Euglish nobility, who came to salute their young and beautiful queen. At this moment, paying no attention to his wife, or his gnests, or to the rest of his subjects, Edward threw hunself into the arms of his favourite, hugged and kissed him, and called him brother. The whole "court was disgusted at this exhibition, and two of the queen's uncles, who had accompanied her ruto England, could not conceal their displeasure. the coronation, which was celebrated with great magnificence at Westminster on the 24th of Febrvary, nearly all the honours were allotted to the favourite, without any regard to the hereditary offices of the great barons. "None," says an old writer, "came near to Piers in bravery of apparel

or delicacy of fashiou" He carried the crown, and walked in procession before the king and queen; which things greatly increased the anger of the lords against him. Four days after the coronation the barons petitioned the king, and, without any ceremomous phrases, requested him to banish Sir Piers Gayeston immediately. Edward promised to give them an answer in parliament, which was to meet after the festival of Easter, and in the mean while he did all he could to disarm their resentment. But the favourite himself had no discretion; he continued to outslune all the nobles of the land, and being well skilled in those martial sports, he frequented all tournaments, and carried away many prizes. He unhorsed at different times the earls of Lancaster, Hereford, Pembroke, and Warenne; and these triumphs are supposed to have given a fresh edge to their hatred. When the parliament met Edward was obliged to part with his minion. Gaveston took an oath that he \* De la More.-Walsing.-Trivet.

ascertained that the exile had been appointed governor of all Ireland, and that he had established himself in that island with almost royal magni-From the time of his departure till that of his return, -a space of thirteen months, -the whole soul of the king seems to have been absorbed by this one subject: he employed every expedient to mitigate the animosity of his barons; he granted offices to his cousin the Earl of Lancaster; he made great concessions to Earl Warenne and others; he wrote to Rome for a dispensation for Gaveston from his oath; and having, as he fancied, removed all dangerous opposition to the measure, he sent to recal the favourite from Ireland. They met at Chester, with a wonderful display of tenderness on the part of the king. The parliament assembled at Stamford, and the promises of the king, and the affected boundity of Gaveston, obtained a formal consent to his re-establishment in England. The king was now happy; his court was tilled with bufloons, parasites, and such like permicious instruments, and nothing was seen there but feasting and revelry. At the same time the upstart favourite became much more arrogant and insolent than he had ever been before. The English people,

would never return to England, and the bishops

bound him to his oath by threats of excommunication. The king accompanied him to Bristol,

where he embasked; but a few weeks after it was

who despised him, would call him nothing but Piers Gayeston; upon which he caused the king to put forth a ridiculous proclamation ordering all men to give him the title of the Earl of Cornwall whenever they mentioned him. He indulged in rude witheisms and sarcasms at the expense of the English nobles, and he presumed to give contemptuous nicknames to some of the greatest barnus of the kingdom. Thus, he called the Earl of Lancaster the "old hog," or the "stage-player;" the Earl of Pembroke, because he was pale and tall, "Joseph the Jew:" the Earl of Gloncester "the enckold's bird:" and the Earl of Warwick "the black dog of Ardenue." The silly king laughed at this wretched wit, which was sure to travel beyond the applauding walls of the court. When the stern Earl of Warwick heard it, he vowed a terrible vow that he would make the minion feel "the black dog's teeth." Even the queen was so disgusted with this man's predominancy, that she sent complaints to the king her father, and conceived an aversion to her husband, which, though sometimes suppressed or concealed, was never afterwards removed. The grants voted by parhament were dissipated, and Edward was continually in great straits for money. The barons, before voting supplies, had several times made him promise a redress of grievances; but when he summoned a parhament to meet at York, in October, 1309, three months after the favourite's return from Ireland, most of the barons refused to attend,

alleging that they stood in fear of the power and

· Packington, in Leland's Collect.-Walsing.

wants obliged him to repeat his summons, but still they came not. The favourite then withdrew for a time; and at last the barons announced that they would assemble at Westminster. They met accordingly in the month of March, 1310; but every bearen came in arms, and Edward was compulately

CIVIL AND MILITARY TRANSACTIONS.

cordingly in the month of March, 1310; but every baron came in arms, and Edward was completely in their power. As they would no longer be anni ed by promises, be was obliged to consent to the immediate appointment of a committee of peers, who should have power to reform not only the state, but also the king's household. The committee was appointed by the primate, seven bishops, eight earls, and thirteen barons, who acknowledged under their signatures that this grant proceeded from the king's free will; that it was not to be considered as a precedent for trenching on the royal prerogetive; and that the functions of the committee should cease at the feast of St. Michael in the following year. The committee, called "ordamers," sate in London. The king, who considered them in the light of censors and harsh schoolmasters, burned away to the north, jactering even the tools of a campaign to a residence under their shadow. He was scarcely out of their sight when he was once more joined by Gayeston, upon whom he heaped fresh gifts,

honours, and employments. The two passed the

wnuter and the following summer at Berwick and the country about the Scotch borders, doing little

or nothing, while the cautious Bince was pre-

paring his measures for a final expulsion of the

obliged to meet his parliament at Westminster.

The barons were in a worse humour than ever:

In the month of August, 1311, Edwind was

malice of Gaveston. The urgency of the king's

CHAP. L.]

they recalled all grants made by the king to his favourite; they decreed that all made thereafter, without consent of parliament, should be invalid; that Gaveston should be banished, on pain of death in case of return; that the king should not leave the kingdom or make war without the consent of the baronage; that the baronage, in parliament assembled, should appoint a guardian or regent during the royal absence; and that all the great officers of the crown, and the governors of foreign possessions, should at all times be chosen by the baronage, or with their advice and assent in parliament. In later times these conditions were softened into the important principle that the con-

fidence of parliament is required to render the

choice of public officers agreeable to the consti-

tution.\* The king had once more confirmed the

great charter, the preceding year, before going

to the north, but now a new and important provision was introduced respecting the meeting of parliament:—" Forasmuch as many people be

aggrieved by the king's ministers against right, in respect to which grievances no one can recover

without a common parliament, we do ordain that

the king shall hold a parliament once a year, or twice if need be." More for the sake of his

· Sir James Mackintosh.

again with his royal master, who made him a new grant of all his estates and honours. But the career of the favourite was now drawing to its The barons, headed by the great Earl of Lancaster, the king's cousin, fell suddenly upon the royal party at Newcastle. Edward bad time to escape, and he sailed away on board a vessel with Gaveston, leaving his beautiful wife behind him with the greatest indifference. Lancaster caused the queen to be treated with all respect, and then marched to lay sugge to Scarborough Castle, into which the favourite had thrown himself, trusting to be able to hold out until the king, who had gone from thence to York, should return to bis rebef with an army. The castle was not tenable, and the favourite surrendered on capitulation on the 19th of May, 1312, to "Joseph the Jew," the Earl of Pembroke, who, with Lord Henry Percy, pledged his faith that no harm should happen to him, and that he should be confined in his own castle of Wallingford. From Scarborough be travelled, under the escort of Pembroke, as far as Dedington, near Banbury, and bere the earl left him for a night to pay a visit to bis countess, who was in that neighbourhoes. Gaveston appears to have had no foreboding of his fate: on the following morning he was ordered to dress speedily: he obeyed, and descended to the court-yard, where, to his confusion, he found himself in the presence of the "black dog of Ardenne," -the girm Earl of Warwick,-who was attended by a large force. They put bim on a mule, and carried hun, with shouts of trimingh, to Warwick Castle, where his entrance was announced by a crash of martod music. In the castle-hall a hurried council, composed of the earls of Lancaster, Hereford, and Arundel, and other cluefs, sate upon the prisoner. A proposal was made, or a limt was offered, that no blood should be shed; but a voice rung through the hall,-" You have caught the fox; if you let him go you will have to hunt him again." This death-note had its effect; the capitulation of Scarborough was foully disregarded, and it was resolved to put an end to the unhappy man in conformity with the ordinance passed by parliament for his last exile. He threw lumself at the feet of the "old hog,"—the Earl of Lancaster,—whom he now called "gentle lord;"

but there was no mercy there. They hurried him

made a show of resistance to several of these

ordinances, but he was compelled to yield, and he

affixed his signature to them all in the beginning

of October. On the 1st of November following,

after many tears, he took leave of Gaveston, who retired to Flanders, with royal letters warmly

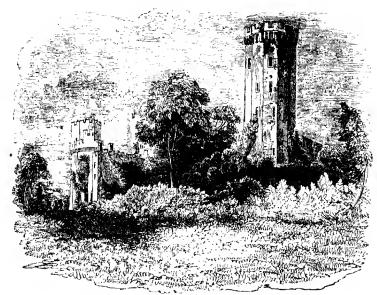

recommending him to the duke and duchess,

The king, who was not incapable of a certain

cuming, then dissolved the perliament, and,

without betraying his intentions, cantiously retired to the north, where he hoped to collect an army

that would stand for him. At York, in less than two months from his last departure, Gaveston was

at once to Blacklow-hill, a gentle knoll a mile or two from the eastle, on the edge of the road that leads from Warwick to Coventry, and there, in view of the beautiful windings of the placid river Avou, they struck off his head.

This tragedy, unusual in England even in those turbulent times, threw the king into an agony of grief; but when he dried his tears he thought of revenge. For six months Edward and his barons were in arms against each other, but no battle took place, and a temporary reconciliation was effected at the end of the year, the king postponing the gratification of his vengeance to a more suitable Two meetings of parliament (A.D. opportunity. 1313) confirmed and completed this treaty. The barons knelt before the king in Westminster Hall, ammestics were published, and the plate and jewels of the deceased favorite were surrendered to Edward. But when they asked him to declare Gaveston a traitor, he resolutely refused. ‡ This year Edward took the field in something like earnest, but he only marched to Scotland to add the disgrace of a defeat in regular war to the other reverses of his inglorious reign. While he had been occupied in England with a vain struggle to maintain his obnoxious favourite, the Scottish patriots had entirely undermined the fabric of his able father's ambition.

Ever since the death of Edward I., the English dominion in the greater part of Scotland had been little more than nominal. The progress of Bruce in liberating the country had been continued and steady; and, although something had on dif-

who now occupied the English throne to counteract his able and persevering efforts for the establishment and consolidation of his anthority. We must content ourselves with noticing briefly the principal events that had marked the contest up to the time at which we are now arrived. Edward, on returning home, in the autumn of 1307, had left the war to be conducted by the Earl of Richmond, upon whom he conferred the office of Guardian of Scotland, and who was supported by that part of the nation which was opposed to Bruce's assumption of the crown. The latter, therefore, had both an English and a Scottish, both a foreign and a domestic enemy, to contend with. The great body of his countrymen soon became warmly attached to his cause; but in some districts even the popular feeling was hostile, and a powerful faction of the nobility was arrayed in determined resistance to his pretensions. For the present at least, and until they should have attained their immediate object of putting him down, this party professed to be in the English interest, and acted in concert with Edward's officers. Most of the places of strength throughout the kingdom were also in the hands of the English. In these circumstances the course which Bruce appears to have laid down for himself was to avoid a general action as long as possible, to keep his enemies divided by constantly occupying their attention at various points at the same moment, and so to give himself the chance of eutting them off in detail, while in the mean time he overran and ravaged in succession those parts of the country that refused to submit to his authority, and seized every favourable opportunity of reducing the castles and other strongholds. Most

ferent occasions been attempted, little or nothing

had been done by the indolent and meapable prince

feeling in his favour, and it was by their occupation chiefly that the English had ever been enabled to maintain their power for any length of

time in the country. The severe bodily exertion and fatigue, and the still more trying accumulation of mental distresses to which he had been subjected since the coin-

mencement of his great enterprise, had been too much even for his heroic heart and iron frame, and had reduced Bruce by the spring of 1308 to a state of debility from which it had begon to be feared that he would not recover. On the 22nd of May the royal force was encountered near inverting, in Aberdeenshire, by a numerous force under the command of Mowbray, an Englishman, and John Comyn, the Earl of Buchan. At this time Bruce, it is affirmed, was not able to rise without assistance from his couch, but he nevertheless desired to be set on horseback, though he was only enabled to keep his scat by being supported on each side. In this state he led his men to the charge; the enemy was put to flight, and pursued with great slaughter for many miles; and if we may believe Bruce's poetical historian, Barbour, the king was restored to health by the excitement of this day. There is nothing in the story to entitle us to reject

Soon after this the people of Aberdeen rose and

stormed the castle there, put the English garnson

to the sword, and razed the fortress to the ground.

An English force immediately marched against the town, but the citizens finished their exploit by likewise encountering and defeating this new enemy. With the savage spirit which the character of the war had engendered, the victors gave no quarter, but slew every man who fell into their hands. Edward I., indeed, had already set the example of executing his prisoners, and it was not to be expected that the other side would fail to follow the same course. The capture of the castle of Aberdeen was speedily followed by that of the eastle of Forfar; it was surprised by escalade during the night; and here also the English by whom it was garrisoned, and of whom the number was considerable, were all massacred, and the fortifications destroyed.

it as incredible.

There were two districts of the kingdom where the opposition to Bruce was especially strong-that of Galloway, the turbulent inhabitants of which had never yet been thoroughly reconciled to the dominion of the Scottish kings, and were besides attached by a sort of national connexion to the Baliol family through their ancient lords; and the country of Lorn in Argyleshire, the chief of which, Allaster (or Alexander) Mac Dougal (often called Allaster of Argyle) had, as mentioned above, married an aunt of Comyn, whom Bruce had slain, and was consequently one of the fiercest enemies of

the latter. In the course of this summer both these

districts were overrun, and for the present reduced

Meanwhile the measures of the English government were characterised by all the evidences of distracted councils, and of the decay of the national spirit and power under the mefficient rule of the

735

new king. Almost every quarter of a year saw the substitution of a new guardian or chief governor for Scotland; but none of these changes brought any change of fortune to the English arms. The country generally was under subjection to Bruce; and whenever he encountered any military force, whether composed of Scots or of English, he was sure to put them to flight. At last, in the spring of 1309, a truce was arranged by the mediation of the king of France. Hostilities, however, were

not long suspended. The English charged the

Scots with having violated the truce; but it is pra-

bable that, in the embittered state of feeling be-

tween the two parties, irregular aggressions were

soon made by individuals on both rades. In the

end of the year, by a second intervention of the

French king, the negotiations were renewed, and

another truce appears to have been concluded in the

year 1310. But this also was soon broken by one

party or by both. In the state to which affairs were reduced, which threatened to sweep away the last vestiges of the English authority if some great effort were not made, Edward II. at last prepared to proceed to Scotland, and take the field in person against the insurgents. Probably, however, his principal motive, as has been huited above, for this apparent exertion of vigour was, that he might escape along with his favourite out of the observation of the Committee of Ordainers, which the parliament had recently set over him. He entered Scotland about the end of September, but, after leading his army about from place to place over the border counties for some weeks without achieving anything, he returned to Berwick, and, taking up his quarters there, remained mactive for nearly nine months Bruce and his adherents, he afterwards boasted in a letter to the pope, lay hirking in their coverts, all the time he was in the country, after the manner of foxes.\* Ale certainly, at any rate, did not set about unkermelling them with much urdenr. Edward returned to England in the end of July, 1311; and, as soon as he was gone, Bruce made an irruption into Durham, and suffered his soldiers to wreak their vengeance on that unfortunate district by a week of unrestrained plunder and the most mercaless devastation,

during the night, gallantly led by the king himself. He was, Barbour says, the second person that mounted the wall. Edward now attempted, but without success, to negotiate another truce, and even solicited the intervention of the pope. But, \* Ad instar vulpium,

Bringing them back loaded with spoil, he next led

them to attack the oastle of Perth, one of the most

important of the fortresses which the English still

held. After a siege of six weeks, it was taken

in the beginning of January, 1312, by an assault

although he was repulsed in an assault upon Carlisle, only consented to return across the border upon the four northern countres purchasing a truce

from him by a payment of two thousand pounds each. Not long after he succeeded in making himself master of the castle of Dumfnes, and of those of Butel and Dalswinton in Galloway, - the former a seat of the Bahols, the latter of the Comyns. On the 7th of March, 1313, the important eastle of Roxburgh was suddenly taken by assault, a party under the command of Bruce's friend Douglas having scaled the wall while the English garrison were enjoying the revelry of the

carmval. On the 14th of the same month that of Edmburgh, which had for some time been block-The castle was afterwards demolished.

aded by Bruce's nephew Randolph, now created earl of Moray, was taken in a similar manner by a party of thirty men, whom Randslph headed, and who made their way at midnight up the precipitons rock, on which the eastle stands, by a secret path, along which they were guided by a man who had resided in the fortress in his youth, and had been wont to descend by that intricate and perilous access to visit a girl with whom he was in love. When the assailants had by this means reached the foot of the castle wall, and had sat down to take breath, a soldier on the ramparts, calling out "Away! I see you well!" threw down a stone to the spot where they were; but they remained motionless; and the man walked away. In a few minutes Randolph and his men, having fixed their ladder of rope, were on the top of the wall. desperate conflict ensued; but the superior nuthbers of the garrison did not compensate for the confusion into which they were thrown by so sudden a surprise, and, after the governor himself had fallen in the melée, they surrendered at dis-It appears to have been throwise about this time, although the event is placed earlier in the common accounts, that the eastle of Linlithgow was surprised by a stratagem, which might almost be supposed to have been suggested by the classic tale of the Trojan horse, but of which the contrivance as well as the conduct is attributed to a poor countryman named William Binnock or Binny. A party of Scottish saldiers having been previously placed in ambush near the gate, Binny introduced eight men into the fort by concealing them in a waggonload of hay which he had been employed to bring in: as soon as the waggon had reached the middle of the gateway he cut the traces by which the oxen were fastened to it, when the men immediately leaped out; in an instant, while the position of the waggon prevented the portcullis from being let down, the guard was overpowered, and the drawbridge, which had been raised, was again lowered; the party of soldiers then rushing in, easily mastered the garrison, and put them to the for some weeks engaged in besieging that of Stirling, always of chief importance as the key to the whole northern part of the kingdom, and now almost the only considerable place of strength which the English still held in Scotland. After a gailant defence the governor, Philip de Mowbray, offered to surrender if not relieved by the Feast of St. John the Baptist (the 24th of Junc) in the following year; and this proposal Edward Bruce, without consulting his brother, accepted. It was an agreement, all the advantages of which seem to have been on one side; for it imposed an inaction of many months upon the Scots, during the whole

of which time the eastle would be in security, and the king of England would have abundant lersure to make the most efficient arrangements for its relief. Bruce expressed the highest displeasure when the freaty was made known to him, but be resolved, nevertheless, to abide by it. Every effort was now made on both sides in preparation for a crisis which it was felt would be decisive. King Edward, besides ordering a flect to be fitted out to act in concert with the land forces, summoned all the military power of England to meet hun at Berwick on the 11th of June, and also called to his aid both his English subjects in Ireland and many of the native Irish chiefs, That day, accordingly, saw assembled at the place of rendezvous perhaps the most magnificent army that our warlike had had ever yet sent forth; its numbers are asserted by the best authorities to have exceeded a hundred thousand men, including a body of forty thousand cavalry, of whom three thousand were clad in complete armour, both man and horse. At the head of this mighty array

Edward took his course into Scotland, advancing

by the east coast to Edinburgh, from which,

turning his face westward, he proceeded alon-

the right bank of the Forth towards Stirling. Bruce, meanwhile, had collected his forces in

the forest called the Torwood, midway between

that place and Falkirk; they amounted to scarce

forty thousand fighting men, nearly all of whom

were on foot. When the English approached, the

king of Scots drew up his little army immediately

to the south of Stirling, in a field then known by

the name of the New Park, which, partly broken with wood, was in some parts encompassed by a

marsh, and had running along one side of it the rivulet of Bannockburn, between woody banks of

considerable depth and steepness. He arranged

his men in four divisions, three of which formed a

front line facing the south-east, from which direc-

tion the enemy was approaching, so that the right

wing rested on the brook of Bannock, and the left

extended towards the town of Stirling. position chosen with consummate skill; for while obstacles, partly natural, partly artificial, secured either flank from being turned, the space in front was at the same time so narrow and impeded as to he calculated in a great measure to deprive a very numerous hostile force of the advantage of its numerical superiority. On his most assailable quarter, his left wing, or the north-eastern extremity of his line of battle, Brince had cansed a great many pits to be dug, about three feet in depth, and then to be covered over with brushwood and sod, so as not to be easily perceptible; they night, says Barbonr, be likened to a honeycomb; according to another account, sharp stakes were also fixed in the pits. Of the three divisions thus drawn up, Bruce gaye the command of that forming the right wing to his brother Edward; of that forming the left to Randolph, Earl of Moray; of the centre to Sn James Douglas and Walter the Steward; the fourth\_division, composed of the men of Argyle, the islanders, and his own vassals of Carrick, formed a reserve, which was stationed in the rear, and of which he himself took charge.

On Sunday, the 23rd of June, intelligence was

received that the English were at hand. Barbour

has painted the day as one bright with sunshine, which, falling upon the burnished armonr of King Edward's troops, made the land seem all in a glow, while banners right fauly floating, and permons waying in the wind, added to the splendour of the scene. When he came within sight of the Scots, and perceived how they were planted, Edward, detaching eight hundred horse, sent them forward under the command of Sir Robert Chifford to endeavour to gain the eastle by making a circuit on the other side of some rising grounds to the Thus sheltered north-east of Brace's left wing. from observation, they had already passed the Scottish line, when Bruce himself was the first to perceive them. "Randalph!" he cried, riding up to his nephew, "a rose has fallen from your chaplet,-you have suffered the enemy to pass !" It was still possible to intercept Clifford and Ins horse. Randolph instantly set out to throw himself at every hazard between them and the castle, to prevent this the English wheeled round and charged him; but he had drawn up his men in a circle, with their backs to each other, and their long spears protruded all round, and they not only stood the onset firmly, but repelled it with the slaughter of many of their assailants. Still they contended against fearful odds, for the English were not only mounted, but greatly superior to them in number; and, seeing the jeopardy of his friend, Douglas requested to be allowed to go "You shall not move from and succour him. your ground," replied Bruce; "let Randolph extricate himself as he best may." But at length Douglas could no longer restrain himself: "In truth, my liege," he cried, "I cannot stand by and see Randolph perish; with your leave, I must aid him;" and so, extorting from the king a re-

VOL. I.

luctant consent, he hastened forward. But, as he drew near, he perceived that the English were already giving way: "Halt!" he cried to his followers; "let us not diminish the glory of these brave men!"—and he shd not go up to his friend till the latter had, alone and unaided, compelled the English captain to retire in confusion with his shattered force, and relinquish his attempt. Meanwhile, before this affair had yet been decided, a bulliant achievement of Bruce hunself, performed in full view of both armics, had raised the hopes of his countrymen with another good omen. He was ruding in front of his troops on a little palfrey, but with his battle-axe in his hand and a crown of gold over his steel helmet, when an English knight, Henry de Bohun, or Boone, mounted on a heavy war-horse, and armed at all points, recognising the Scottish king, galloped forward to attack lum. Instead of retning from the unequal encounter, Brace tarned to meet his assulant, and, dexteronsly parrying his spear, in the next instant, with one blow of his battle-axe, cleft his skull and laid limi dead at lus feet. Although the two armies were so near, the

English did not venture upon the attack that night. But next morning, soon after break of day, their van, led by the earls of Gloncester and Hereford, advanced at full gallop upon the right wing of the Scots, while the main body of the army, which had been drawn up in nine divisions, followed in a long close column under the conduct of Edward himself. The shock did not break the Scottish line; and successive repetitions of the charge were more disastrons to the assarlants than to the firm phalanx against which then impetuous squadron was broken at every collision. From the advantages of their position, also, the other divisions of the Scots were soon enabled to take part in the contest. Randolph pushed forward with his men, till, as Barbour expresses it, their comparatively small body was surrounded and lost annulst the English, as if it had plunged into the sea; Douglas and the Steward also came up; and thus the battle became general along the whole length of the Scottish front line. Of the English army, on the other hand, the greater part appears never to have been engaged. A strong body of archers, however, by whom the attack of the cavalry was supported, did great execution, till Bruce directed Sir Robert Keith, the marshal, at the head of a small detachment of horse, to make a circuit by the right, and come upon them in flank. The bowmen, who had no weapons by which they could maintain a fight at close quarters, gave way before this sudden assault like an unarmed rabble, and spread confusion in all direc-Bruce now advanced with his reserve, and all the four divisions of the Scots pressed upon the confused and already wavering multitude of the The latter, however, still stood their ground; and the fortune of the day yet hung in a doubtful balance, when suddenly, on a hill behind the Scottish battle, appeared what seemed to be a new army. It was merely the crowd of sutlers and unarnied attendants on the camp; but it is

had been undertaken and entered upon by the

[Book\_IV.

probable that their sudden apparition was not made without the design of producing some such effect as it did, since they are said to have advanced with banners waving and all the show of unlitary array. The sight spread instant alarm among the English: at the same moment Bruce, raising his war-cry, pressed with new fury upon their failing ranks: his onset, vigorously supported by the other divisions of the Scottish army, was scarcely resisted by the unwieldy and now completely panie-struck mass against which it was directed; horse and foot, in spite of the most energetic exertions of their leaders to rally them, alike gave way, and fled in the wildest disorder. Many, trying to escape across the river, were driven into its waters and drowned; many more fell under the battle-axes of their pursuers. Among the slam were twentyseven of the rank of barons and bannerets, including the king's nephew, the Earl of Gloucester, and others of the clucf nobility of England. Of knights there fell two hundred, of esquires seven hundred, and of persons of inferior rank, according to some accounts, not fewer than thirty thousand. The slaughter in the fight and the pursuit together was undoubtedly very great. A vast amount of booty and many pusoners also fell into the hands of the victors. Edward himself with difficulty escaped, having been bothy pursued as **far as D**unbar, a place sixty unles from the field of battle, where he found refuge in the castle. But twenty-two barons and bannerets and sixty knights were taken; and according to one English historian, the chariots, waggons, and other carriages, loaded with baggage and military stores, that were obtained by the Scots would, if drawn up in a line, have extended for sixty leagues. On their side the loss of life, which was the only loss, was comparatively inconsiderable, and included only one or two names

cording to agreement. Bothwell Castle, in which the Earl of Hereford had shut himself up, capitulated soon after to Edward Bruce, when the Earl was exchanged for the wife, sister, and daughter of the king of Scots, who had been detained in England for the last seven years, and also for the Bishop of Glasgow and the Earl of Mar. Edward Bruce and Douglas, then entering England, ravaged Northumberland, exacted tribute from Durham, and, after penetrating as far as Appleby, returned home laden with plunder, time," says Walsingham, "the English were so bereaved of their wonted intrepidity, that a lumdred of that nation would have fled from two or three Scotsmen." Two other destructive incursions by the Scots into the northern counties of England followed in the autumn of 1314 and the summer On the latter occasion, they assaulted

both Carlisle and Berwick, but were defeated in

Meanwhile, however, a still bolder enterprise

both attempts.

at Carrickfergus with no less a design than that of winning himself a crown by the conquest of Ire-The force which he brought with him consisted of only six thousand men; but he was joined, on landing, by a number of the native chiefs of Ulster, with whom he had had a previous understanding. The invaders and their allies immediately began to ravage the possessions of the English settlers; and no attempt to oppose them seems to have been made for nearly two mouths, in the course of which time they plundered and burnt Dundalk and other towns, and wasted the surrounding country with merciless barbarity. At length, about the end of July, Richard de Burgh, Earl of Ulster, assisted by some of the Connaught chiefs, marched against them. The Scots at first retreated, but suddenly halting near Coyners, (or the 10th of September,) they turned round upontheir pursuers and put their completely to the rout, taking Lord William Burk, and many other persons of distinction, prisoners. Soon after this, a small reinforcement of five hundred men arrived from Scotland; and the invaders now proceeded to penetrace into the heart of the country. They advanced through Meath into Kildare, and their (on the 26th of January, 1316), encountering the English army commanded by Edmund Butler, the Justiciary of Ireland, gained another brilliant victory over an enemy greatly superior to them in numerical strength. A severe famine, however, now compelled them to return to the North. On their way they were met at Kenlis, in Meath, by Roger Lord Mortimer, who thought to cut off then retreat; but this numerous force also was defeated and dispersed, and Mortimer himself, with a few attendants, was glad to take refuge in Dublin. The Scottish prince now assumed the government This great victory, in effect, liberated Scotland. of Ulster. On the 2nd of May, 1316, at Carrick-The castle of Stirling immediately surrendered acfergus, he was solemnly crowned King of Ireland; and from this time he actually reigned in full and undisputed sovereignty over the greater portion of the northern province. The castle of Carrickfergus, after a long siege, at last capitulated in the beginning of winter. By this time the King of Scots himself had come over to take part in the war: the force which he brought with him is said to have raised the entire numbers of the Scottish army to twenty thousand men. Thus strengthened the invaders again set out for the South, advancing right upon the capital. They failed, however, in their attempt to reduce Dublin: the citizens, after setting fire to the suburbs, which might have sheltered their assailants, set about their defence with such determination, that after some weeks the Scots raised the siege. It is probable that the want of provisions compelled them to remove. As they had already, however, wasted the country behind them, they proceeded in their course southwards, till at length, plundering and destroying as they proceeded, they had penetrated as far as the

CIVIL AND MILITARY TRANSACTIONS.

town of Limerick. Perhaps they hoped that they

might here be joined by some of the chiefs of Munster and Connaught; but if they entertained

any such expectation, it does not appear to have

been gratified. The difficulties of their position must now have been very serious; they were a

handful of foreigners, with many miles of a hostile

Kilkenny to oppose their passage, they contrived to extricate themselves from all these perils and

embarrassments, and, by the beginning of May, 1317, the two brothers had made their way back

to Ulster, after having thus overrim the country

from nearly one extremity to the other, without encountering any effective opposition either from

the native Irish or their English musters.

The English, however, had taken advantage of the absence of the King of Scots from his own dominions to make several attempts to renew the war there. In the South, the Earl of Arundel, a Gascon knight, named Edmond de Carland, who was governor of Berwick, and Sir Ralph Neville, were successively defeated by Sir James Douglas. Soon after, a force, which had made a descent at Inverkeithing, on the coast of Fife, was driven back by the gallantry of Surchar, Bishop of Dunkeld, "the Kmg's Bishop," as he used afterwards to be called, in memory of Bruce's expression when he was told of the exploit, "Sinclair shall be my bishop " The pope now interfered, and attempted to compel a truce between the two countries; but as he evaded giving Bruce the title of king, the latter would enter into no negotiation; and when the papal truce was proclaimed, he declined paying any regard to it. On the 28th of March, 1318, the important town of Berwick fell into the bands

of the Scots: they were admitted into the place by

the treachery of one of the English guards. The castle, also, soon after surrendered to Bruce, who

followed up these successes by two invasious of

England, in the first of which his army took the

castles of Werk, Harbottle, and Mitford, in North-

umberland; and, in the second, penetrated into Yorkshire, burnt Northallerton, Boroughbridge,

Searborough, and Skipton, and forted the people

of Rippon to buy them off by a payment of a thon-

sand marks. They then returned home laden with booty, and, as the chroniele of Lancreost expresses

CHAP. I ]

it, "driving their prisoners before them like flocks In the latter part of this year, however, the career of Edward Bruce in Ireland was suddenly brought to a close. Seareely anything is known of the course of events for a period of about a year and a half; but on the 5th of October, 1318, the Scottish prince engaged the English at Fugher, near Dundalk, and sustained a complete defeat. about four thousand of them being slain, including three hundred churchinen, wearing their surplices over their armon. In allmon to the presence of so many shaved crowns, this battle used to be termed the Chapter of Mitton. The Scots then continued their devastation of the country unopposed. It appears, from a record in the Fædera, that no fewer than eighty-four towns and villages

He himself was one of two thousand Scots that

were left dead upon the field. Only a small rem-

nant, consisting principally of the men of Currick, made good their escape to Scotland This is said

to have been the mileteenth battle which Edward

Bruce fought in the country, and till now, according to Barbour, he lad been always victorious;

but one hour sufficed to destroy all that three years

had set up: the fabric of the Scottish dominion in

Ireland passed away wholly and for ever, leaving

make another effort on a great scale for the reduc-

tion of Scotland. Having assembled a numerous

army at Newcastle, he marched thence upon Ber-

wick, and, after much preparation, made his first attack upon that town at once by land and sea on

the 7th of September. He was, bowever, gallantly

withstood by the garrison and the inhabitants, under the command of the Steward of Scotland, and, after

a long and fierce contest, repulsed at all points.

The attempt was afterwards repeatedly renewed, and always with the same result. Barbour has

given a minute and highly curious account of this

siege, in which all the resources of the engineering science of the age were called into requisition on

both sides. Meanwhile, Randolph and Douglis,

at the head of a force of fifteen thousand men,

passing into England by the West Marches, made a dash at the town of York, with the hope of car-

rying off Edward's Queen; but a prisoner, whom the English took, betrayed their scheme just in

time to prevent its success. The Scots then

ravaged Yorkshire with a fury as unresisted as it

was unsparing, till, on the 28th of September, they

were encountered by a very numerous, but in all

other respects very mefficient, force, mostly com-

posed of pearantry and ecclesiasties, under the

command of the Archbishop of York and the

Bishop of Elv, at Mitton on the Swale. This almost undisciplined rabble was routed at once,

In the summer of 1319, Edward determined to

scarce a trace that it had ever been.

two nations, which it was hoped might lead to a permanent peace. We now return to the course of domestic affairs. Edward could not live without a favourite; and

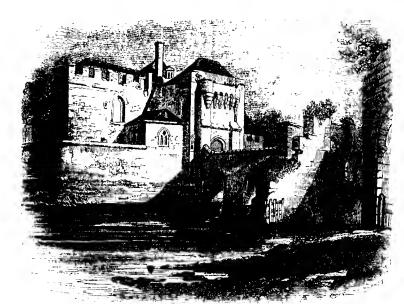

in Yorkshire were the next year excused from the usual taxes, in consequence of having been burnt and pillaged by Douglas and Randolph in this destructive expedition. At length, Edward, raising the siege of Berwick, marched to intercept them; but they succeeded in chiding han, and got back to Scotland in safety. On the 21st of December, a truce for two years was concluded between the almost the whole of the remainder of his reign is occupied by another long struggle for the support 5в2

of a minion. Soon after the death of Gaveston, he conceived the same unbounded affection for Hugh Despenser, a young man who was first placed about the court by the Earl of Lancaster. Hugh was an Enghshman born, and the son of an Englishman of ancient descent; he was accomplished, brave, and annable; but all these circumstances, which, except that of his birth, Gaveston had held in common with him, did not rescue him from the deadly hatred of the barons when they saw him suddenly raised above them all. Edward married him to the daughter of the late Earl of Gloncester, and put him in possession of immense estates, including the county of Glamorgan and part of the Welsh Marches. Through the favour of the son, the elder Despenser obtained as much or more, and all the avenues to favour and promotion were stopped by this one family. In 1321, after long heart-burnings, an imprindent exercise or abuse of anthority, armed all the lords of the marches against the two Despensers, whose castles were taken and burnt, and their movable property car-Soon after this outbreak, the Earl of Lancaster, who, as a prince of the blood, had considered himself dishonoured by the promotion of Hugh, his poor dependent, marched from the north, and joined the Welsh insurgents with thirty-

four barons and knights, and a host of retainers.

Having bound them by an oath not to lay down their arms till they had driven the two Despensers beyond sea, the great earl led them to St. Alban's, whence he despatched a peremptory message to his cousin, the king. Edward again made a show of resistance; and he took up legal ground when be asserted that it would not be proper to punish the Despensers without form of trial. Lancaster marched upon London, and occupied the suburbs of Holborn and Clerkenwell. A few days after, a parliament having assembled at Westminster, the barons, with arms in their hands, accused the Despensers of usurping the royal power, of estranging the king from his nobles, of appointing ignorant judges, of exacting fines; and they pronounced a sentence of perpetual banishment against both father and son. The bishops protested against the irregularity of this sentence, but the timed king confirmed it. As an instance of the contempt in which the royal authority was at this time held, it is related that, when Queen Isabella, passing on a journey by the Lord Badlesmere's eastle of Leeds, in Kent, desired a night's lodging, she was not only refused admittance, but some of her attendants were fallen upon and killed.

Suddenly, however, the position of the two contending parties was reversed. The Despensers had been banished in the month of August,

In October they returned to England, encouraged by a bold move of the king, who took and hanged twelve knights of the opposite party. The Earl of Lancaster retired to the north, and opened a correspondence with the Scots, who promised to send an army across the borders to his assistance. This force, however, did not appear

in time; but meanwhile the sceret of the application for it transpired, and inflamed the hearts of the English against the earl-for the national animosity was at its highest and they were deemed traitors who could think of calling in the Scots to interfere in an English quarrel.

In 1322, Lancaster and his confederates were

Despenser family were reversed: the father was

created Earl of Winchester, and the estates of the attainted nobles were lavished on him and on his

son, who became dearer to his royal master, and

more prevalent in all things than he had been

into prison; others escaped to France, where they

laid the groundwork of a plan which soon involved

the king, his favourite, and adherents in one com-

mion rum.\* The arrogance of the younger De-

spenser, upon whom the lesson of Gaveston was

thrown away, the ill success of an expedition into

Scotland, and then the mroads of the Stots, who

nearly took the king prisoner, and who swept the

whole country as far as the walls of York, kept up

a continual nritation, and prepared men's minds

for the worst. On the 30th of May, 1323, Ed-

ward wisely put an end to a ruinous war which had lasted for twenty-three years. He agreed with

Bruce for a suspension of arms, which was to last

thrateen years, and which was not to be interrupted

by the death of either or of both of the contracting parties; but the inestimable blessing of peace was

not unaccompanied by a sense of national disgrace,

for, ever since the successes of Edward I., the hopes

of the English had been high and absolute, and

after such namense sacrifices, they now saw them-

selves obliged to recognise, in fact, if not in express terms, the independence of the Scots.

Soon after the conclusion of this treaty, the king

was alarmed by a conspiracy to cut off the elder Despenser, and then by a bold attempt to liberate

some of the captives made at Boroughbridge from

their dangeons. This attempt failed; but the

most important of those prisoners effected his escape by other means. This was Roger Mor-

timer, who had twice been condenined for treason,

and who was then lying under sentence of death in

the Tower of London. His adventure resembled that of Ralf Flambard, in the time of Henry I.

He made his guards drink deeply of wine, into

which he had thrown some narcotic drug; while

they slept a sound sleep, he broke through the

wall of his dungeon, and got into the kitchen,

where he found or made a ladder of ropes; he climbed up the chimney, lowered himself, and

Many of the partisans of Lancaster were thrown

before his expulsion.

of the river with a superior force. The Earl of Hereford charged on foot to clear the passage; but a Welshman, who was concealed

suddenly met at Boroughbridge, by Sir Simon Ward and Sir Andrew Harelay, who defended

the bridge, and occupied the opposite bank

CIVIL AND MILITARY TRANSACTIONS.

CHAP. I.]

under the bridge, put his lance through a hole in the flooring, and thrust it into the bowels of the earl, who fell dead. Lancaster then attempted a ford, but his men were driven back by the enemy's archers, who gathered like clouds in all directions. Night interrupted the unequal combat, but in the morning the Earl of Laneaster was compelled to surrender. He retired into a chapel, and looking on the holy cross, exclaimed, "Good Lord, I render myself to thee, and put me into thy mercy." Many knights were taken with hun; and besides the Earl of Hereford, five kinghts and three esquires were killed. The "common sort" are neither named nor enumerated. But the more fearful part of the battle of Boroughbridge was not yet over. Edward's opportunity for revenge had arrived, and he determined that many

others, besides his cousin Lancaster, whom he always suspected of being a principal mover in Gaveston's death, should perish by the bands of the executioner. A court was convoked at Pontefract, in the earl's own castle, about a mouth after the battle. It consisted of six earls and a number of barons of the royal party: the king presided. Lancaster was accused of many treasonable practices, and especially of calling in the Scots, "He was told that his guilt was so well proved to all men, that he must not speak in his defence, and the court condemned him, as a felon traitor, to be drawn, langed, and quartered. Froissart says, that the accusation had no other foundation than the malice of Hugh Despenser; but the existence of original documents fully proves the earl's intelligence with the Scots. Out of respect to his royal blood, Edward remitted the ignominious parts of the scutence; but his ministers heaped every possible insult on the earl, and the mob were allowed to not him with mad and taunt him as he was led to execution, mounted on a wretched pony without saddle or bridle. "He was," says Proissart, " a wise man, and a holy, and he did afterwards many fine miracles on the spot where he was beheaded." This reputation for sanctity is mentioned by several contemporary English writers; and it is easier for a modern historian to call the caff's devotion hypocrisy than to prove it such. In his character, adventures, and fate, Lancaster bore a striking resemblance to the Earl of Leicester, the leader of the barons in the time of Henry III. Fourteen bannerets and fourteen knights-bachelors were drawn, hanged, and quartered; one knight was "Never did English earth, at one time, drink so much blood of her nobles, in so vile

fiscation of their estates and inheritances. parliament held at York, the attainders of the

contrived to pass the sentries without being observed. Under the Tower walls he found a wherry, and this enabled him to cross to the opposite side of the Thames, where some faithful servants were in attendance with good horses. He rode with all speed to the coast of Hampshire, and there he embarked for France.

Charles le Bel, a brother to Isabella, queen of England, was now seated on the French throne. Differences had existed for some time between him and his brother-in-law, Edward; and the intrigues of the suffering Laneaster party contributed to drive

manner shed as at this;" and their enemies, not \* Rymer.-Knyghlon.-Walsing -Froissait. -Speed.-Palgrave. contented with their blood; procured also the con-Chron. Abstract,

<sup>+</sup> In thirteen years, three brothers of Babell, occupied, in succession, the Freach throne—Louis X., Philip V., and Charles IV., or Le Bel, who succeeded in 1392.

HISTORY OF ENGLAND. prince for protection: the Lord Mortimer was now

matters to extremities. The manifestos of Charles scarcely merit attention-as far as the two kings were concerned, it was the quarrel of the wolf and the lamb; and after Edward had made apologies, and offered to refer matters to the arbitration of the pope, Charles overran a good part of the territorics on the continent that still belonged to the English, and took many of Edward's castles and towns. Isabella, who had long been auxious to quit the kingdom, persuaded her husband that she was the proper person to be deputed to France, as her brother would yield to fraternal affection, what ambassadors and statesmen could not procure from lum. The sample king fell into the snare; and in the mouth of March, 1325, Isabella, accompamed by a splended retinue, landed at Bonlogue, whence she repaired to Paris, being most honourably entertained on her journey.\* The treaty she concluded was most dishonourable to her husband; but the weak Edward found himself obliged to

ratify it, and to promise an immediate attendance in France, to do homage for the dominions he was allowed to retain on the continent. A sickness, real or feigned, stopped him at Dover. At the suggestion of Isabella, the French court intimated that if he would cede Guienne and Ponthien to his son, then that boy might do homage instead of his father, and everything would be arranged in the most peaceful and liberal manner. Edward again fell into the snare, or, what is more probable, was driven into it with his eyes open by the Despenders, who dreaded, above all things, the being separated from the king, and who direct not venture with him into France, where their enemies were now so mimerous and powerful. Edward, therefore, resigned Guienne and Ponthien, and the Prince of Wales went and joined his mother. The game on that side was now made up. When Edward pre-sed for the return of his wife and son, he received evasive answers, and these were soon followed by horrible accusations and an open defiance of hmu and his authority. Isabella reported that "Messire Hugh" had sown such discord between her and her husband, that the king "would no longer see her, nor come to the place where she was;"† that the Despensers, between them, had seized her dower, and kept her in a state of abject poverty and dependence. The modern historian can scarcely hint at certain parts of Isabella's complaints; but, to finish the climax, she accused the odious favourite of a plot against her life and the life of her son Edward. The king's reply was mild and circumstantial; but it did not suit the views of a harshly-treated and vindictive party to admit of any part of his exculpation; and, making every rational abatement, we believe that it must remain undisputed, that the king had most justly earned the contempt and hatred of his wife; nor will the derelictions of Isabella at all plead in his excuse. This scandalons quarrel occupied the attention of all Europe. During the lifetime of the Earl of Lancaster, the queen seems to have leant on that \* Froissart,

triguing, and not more moral than the generality of knights. Isabella was still beautiful and young -she was not yet twenty-eight years of age-and it was soon whispered that the intimacy of these parties went for beyond the limits of a political friendship. When Isabella first arrived in France, ber brother promised, by "the faith be owed to God and his lord St. Denis," that he would redress her wrongs; and he continued to protect ins sister even after her connexion with Mortimer was Hugh Despenser, bowever, sent over rich presents to the ministers of the French king, and even to the king limiself, and thus prevented the assembling of an army on the French coast. He made his master, Edward, write to the pope, . imploring the holy father to interfere, and induce Charles le Bel to restore to him his wife and son; and he sent, by "subtle ways," much gold and silver to several cardinals and prelates who were " nearest to the pope," and so, by gofts and false representations, the pontiff was led to write to the King of France, that unless he sent his sister, the Qacen Isabella, back to England and to ber busband, he would excommumeate him.\* These letters were presented to the King of France by the Bishop of Samtes, whom the pope sent m When the king had seen them, he caused it to be intimated to his sister, whom he had not spoken to for a long time, that she must hastily depart his kingdom, or he would drive her out with shame. † This anger of Charles le Bel was only feigned-it appears to have been a mere sacrifice for the sake of appearances; and when his vassal, the Count of Hainault, gave shelter to Isabella and the Lancastrian party, the count probably knew very well that he was doing what was perfectly agreeable to his liege lord. The more to bind this powerful vassal to her interests, the queen allianced the young Prince of Wales to Philippa, the second daughter of the count. The countess treated the fugitive queen with the greatest respect, considering everything that was said against her as a calumny; but no one embraced Isabella's cause with such enthusiasm as John of Hainault, a young brother of the count, who would not listen to those who warned him of the dangers of the enterprise, and told him how jealous the English were of all kinds of foreigners. gentle knight constantly replied, that there was only one death to die, and that it was the especial duty of all knights to aid with their loyal power all • Froissart.

† Id. Charles le Bel was awkwardly situated. He and his two brothers, Louis and Philip, had, a few years before, shut their wives up in dangeous on suspicion of irregularity of conduct. Louis, on ascending the throne, caused hir wite to be strangled privately in Château Gailhad; Philip was reconciled to his; but the wife of Charles was still pluing m prison. It was held amonstrous that so rigid a moralist with respect to his wife should be so toleran with record to his sister. regard to his sister.

learning her arrival—the circumstances and neces-

sities of her position threw Isabella continually in

los society. Mortimer was gallant, handsome, in-

[Book IV.

CHAP. I.] dames and damsels in distress \* In a short time, a little army of 2000 men gathered round the banner of Messire John. The English exites were both numerous and of high rank, scarcely one of them being less than a knight. The active and enterprising Roger Mortimer took the lend; but the Farl of Kent, King Edward's own brother, the Earl of Richmond, his consin, the Lord Beaumont, and the Bishop of Norwich, all joined the queen in the Low Countries, though they had been sent by Edward as his trusty ambassadors into France, Nor had Isabella any want of partisans in England to make her way casy and straight. leader of these was another bishop—Adam Orleton -who had been deprived by the king, or by Hugh Despenser, of the temporalities of his see of Hereford for his devotion to the Earl of Lancaster. By Orleton's means, a general ontery was raised against the personal vices of Edward-every tale of the court was divulged to the people -- the fleet was won eyer, and a reconciliation effected between the Lancastrian party and the barons, who of late had supported the royal cause, but who were equally convinced of the king's dements, or easily led to join in the enterprise by a common hatred of the favourite. After a stormy passage, Isabell: with her little army and her son Pringe Edward, to whom all men already looked up, landed on the 24th of September at Orewell, in Suffolk, and was immediately received as the deliverer of the king-The fleet had purposely kept out of her way; and a land force detached to oppose her landing joined her banner, and hailed the young prince with rapturous joy. The queen and the prince staved three days in the abbey of the Black Monks at St. Edmunds Bury, where they were joined by many barons and knights. The Archbishop of Canterbury sent her money, and three bishops offered their services in person, being accompanied by the Earl of Norfolk, the other brother of the king. † Thus wife, son, brothers, cousin, were all in hostile array against Edward, who suon found that he had not a party of any kind in his favour. Never was king so thoroughly abandoned and despised: his weak father had always a strong party in the worst of times-even the miscreant John, his grandfather, could always count on a certain number of knights, English or

citizen, one John le Marshal, because he had been a friend of the king's favourite; and, falling upon the Tower, they got possession of it, and liberated all the state prisoners, who appear to have been very numerous. Before Edward fled, he had issued a proclamation, offering the reward of a thousand pounds to any one that would bring him the head of Mortimer; but he was soon reduced to such straits, that he knew not where to put his own head for safety. Even the Welsh, among whom he was born, rejected the hapless fugitive, who was at last compelled to take shipping with his favourite.\* For a time, the views commonly expressed among the nobles and prelates, who had all, with very few exceptions, joined the queen, were, that the wife ought to be reconciled to the husband,- that the king should be compelled to govern according to the will of his parliament,—and that messures of extreme rigour should be adopted only against the Despensers; but Adam Orleton, the Bishop of Hereford, seems to have had no difficulty in convincing them that the king was not entitled to the society of his wife, and that it was impossible that the queen could ever again trust herself in the power of so faithless and vindictive a man. bishop produced instances of former brutality; and, false or true, exaggerated or not, no one, at the time, seems to have doubted his solemn assertions; and Edward was never again seriously spoken of as king. The elder Despenser had thrown himself into

street the Bishop of Exeter, whom he had appointed

governor. They afterwards murdered a wealthy

days he was obliged to surrender at discretion. The rail was brought to a trial before Sir William Trussel, one of the Lancastrian exiles; and, as was usual in those times, and as had been the course taken with the Earl of Lancaster, he was condemned to die the death of a traitor, without being heard in his defence—the triumphant party, in their savage fury, brooking no delay. Old age had not moderated his eager grasping after the honours and estates of others, which seems to have been his capital offence; and his venerable grey hairs inspired neither pity nor respect. They dragged him to the place of execution a little beyoud the walls of Bristol; they tore out his bowels, then hanged him on a gibbet for four days, and then cut his body to pieces and threw it to the dogs. As he had been created Earl of Winchester, they sent his head to that city, where it was set on a pole. From Bristol, the barons issued a proclamation, summoning Edward to return to his proper post. This document was merely intended to cover and justify a measure upon which they had now unanimously determined.

Bristol; but the citizens rose against him as soon

as the queen approached their walls; and in three

On the 26th day of September, the prelates and According to some accounts, he meant to escape to Irchard, according to others, merely to the Isle of Lindy, in the Bristol chan-

foreign; but round the banner of Edward of Caernarvon there rallied not one. When he appealed

to the loyalty of the citizens of London, they told

him that their privileges would not permit them to follow him into the field; and they added that

they would honour with all duty the king, the queen, and prince, and shut their gates against the

foreigners. Upon this, Edward fled, and there

were none to accompany him save the two De-

spensers, the Chancellor Baldock, and a few of their

retainers. He had scarcely ridden out of London,

when the populace rose and tore to pieces in the

therefore appointed the Prince of Wales Guardian of the kingdom in the name and by the hereditary right of his father. In the mean time the imbappy fugitive found the winds and waves as adverse as his family and his subjects. After tossing about for many days in a tempestuous sea, he was driven on the coast of South Wales, where he was forced He concealed himself for some weeks in the mountains, near Neath Abbey in Glamorgan-

shire; but an active and a deadly enemy was in pursuit of him; and the country people, if they did not betray him, betrayed his favourite and his chancellor, for gold. Despenser and Baldock were seized in the woods of Lantressan, and immediately after their airest, Edward, helpless and hopeless, came forth and surrendered to his pursuer, who was his own cousin, but also brother to the Earl of Lancaster, whom he had put to death at Pontefract. The wretched king, for whom not a banner was raised, not a sword drawn, not a bow bent in any part of his kingdom, was sent by way of Ledbury to Kenilworth, where he was put in sure keeping in the eastle. Despenser found his doom at Hereford, where the queen was keeping the festival of All Saints "most royally." He had the same judge as his father, and his trial was scarcely more rational or legal; for in those times, even when men had good grounds upon which to proscente to conviction, their blind passions almost invariably harried them into irregular courses. William Trussel pronounced his sentence in a rage, ordering that, as a tobber, traitor and outlaw, he should be drawn, hanged, embowelled, beheaded and quar-The sentence was executed with a number observance of its revolting details; and the gallows upon which the favourite was hing was made fifty feet high. His confidential servant, one Simon de Reding, was hanged some yards below his master. The Earl of Arundel, who was closely connected with the Despensers by marriage, and who had been forward in voting the death of the Earl of Lancaster, was belieaded; two other noblemen shared the same fate; but here the task of the executioners ceased. Baldock, the chancellor, was a priest, and as such secured from the scaffold and the gallows; but a ready death would perhaps have been more mereiful than the fate he underwent, and he died not long after a prisoner in

On the 7th day of January, 1327, a parliament, summoned in the king's name, met at Westminster. Adam Orleton, the Bishop of Hereford, after an able speech, proposed this question,—whether, under circumstances, the father should be restored to the throne, or that the son should at once occupy that throne? The critical answer was deferred till the morrow, but no one could doubt what that answer would be. The citizens of London crowded \* Knyght.-More.-Walsing.-Loland, Collect.-Rymer.-Tyrrel,

barons, with most of the prelates, took the oath of fealty; but the Archbishop of York and three bishops refused. The proceedings were followed by an act of accusation, which surely ought to bave preceded them. Five days after declaring the accession of the young king, Stratford, the Bishop of Winchester, produced a bill, charging the elder Edward with shameful indolence, meapacity, cowardice, cruelty and oppression, by which he had "done his best to disgrace and rum his country." Out of delicacy to his son, probably, certain specific charges were suppressed, and the young Edward

was present in parliament, and scated on the throne,

when the articles were read and admitted as sut-

ficient grounds for a sentence of deposition. If this was a plot or conspiracy, as some writers have

laboured to prove, it was certainly a conspiracy in which the whole nation took a part. Again not a

voice was raised for Edward of Caernaryon, and

agam all classes harled with joy the ammuciation

that he had ceased to reign. The queen alone thought fit to feigh some sorrow at this sentence of the nation, though she soon afterwards took pains to confirm it, and to prevent a possibility of her being ever restored to her husband. On the 20th of January, a deputation, consisting of bishops, earls, and barons, with two knights from each county, and two representatives from every borough in the kingdom, waited upon the royal prisoner at Kemlworth, to state to him that the people of England were no longer bound by their oath of allegiance to him, and to receive his resignation of The unfortunate king appeared in the the crown. great hall of the eastle, wrapped in a common black At the sight of Bishop Orleton, he fell to the ground. There are two accounts of a part of this remarkable interview, but that which seems most consistent with the weak character of the king is, that he, without opposition or protest,which would have been of no avail, -formally renounced the royal dignity, and thanked the parliament for not having overlooked the rights of his son. Then Sir William Trussel, as Speaker of the whole parliament, addressed him in the name of the parliament, and on behalf of the whole people of England, and told him that he was no longer a king; that all fealty and allegiance were withdrawn from him, and that he must henceforward be considered as a private man without any manner of royal dignity. As Trussel ceased speaking, Sir Thomas Blount, the steward of the household, stepped forward and broke his white

wand or staff of office, and declared that all persons engaged in Edward's service were discharged and

freed by that act. This ceremony, which was one

the boldness to denonnce from the pulpit the con-

nexion existing between the queen and that lord,

and even to speak of forcing Isabella to cohabit

with her imprisoned husband, regardless of the

decision which parliament had given on that head.

The indiscreet zeal of these preachers, and some

plots which were at last formed, not so much in

favour of Edward as against Mortimer, seem to

have limited on a fearful tragedy. The Earl of Lan-

caster, though he had the death of a brother to

avenge, was less cruel than his colleagues; the

spectacle of his cousin's miseries touched his heart, and he treated the knig with infldness and ge-

nerosity. It was soon whispered to Isabella that

he favoured her husband too much, and more than

consisted with the safety of herself and her son.

The deposed king was therefore taken out of Lam-

caster's hands and given to the keeping of Sir

John Maltravers, a man of a fierces disposition,

who had suffered cruel wrongs from Edward and

his favourites. Maltiavers removed the captive

from Kemlworth Castle, and his object seems to

have been to conceal or render uncertain the place

of his residence, for he made him travel by night

and carried him to three or four different castles in

the space of a few months. At last he was lodged in Berkeley Castle, near the river Severn; and the

Lord Berkeley, the owner of the castle, was joined

with Maltravers in the commission of guarding The Lord Berkeley also had some bowels, and he treated the captive more courteously than was desired; but, falling sick, he was detained away from the castle at his manor of Bradley, and during his absence the care of Edward was in-VOL. I.

trusted, by command of Mortinier, to Thomas Gourney and William Ogle, -" two hell-hounds, that were capable of more villanous despite than became either knights or the lewdest varlets in the world." Que dark night, towards the end of September, horrible screams and shricks of anguish

Castle, and were heard even in the town, " so that

many being awakened therewith from their sleep, as they themselves confessed, prayed heartily to God to receive his soul, for they understood by those cries what the matter meant."\* On the following morning the gates of Berkeley Castle were thrown open, and people were freely admitted to behold the body of Edward of Caernaryon, who was said to have expired during the hight of a sudden Most of the knights and gentlemen hving in the neighbourhood, and many of the citizens of Bristol and Gloncester, went to see the body, which bore no ontwind marks of violence, though the countenance was distorted and horrible to look upon. The corpse was then carried to Gloncester, and privately buried in the Abbey

ernelly imirdered by Gourney and Ogle, who had thrust a red-bot non-mito his bowels through a fin pipe; and there were many who had beard with their own ears his "wailful noise" at the dead of night; but still the nation continued in its imrelenting indifference to all that concerned this most wretched king † Edward was forty-three years old: counting from the date of his recognition to that of his deposition, he had worn a degraded crown innetect years and six months, wanting some days. It was during this unhappy reign that the great

Order of the Knights Templars was abolished.

It was soon rumouted that he had been most

church, without any tuniult or any

whatsoever.

These knights, from a very humble beginning in 1118, when muc poor crusaders took upon themselves the abligation of protecting the faithful at Jerusalem, had attained immense wealth and Their association included men of the ablest birth,—natives of every Christian country. Their valour in battle,—their wisdom in council, had long been the admiration of the world; but, after the loss of the Holy Land, they forfeited much of this consideration, for they did not, like the Hospitallers or Knights of St. John, secure an establishment in the East, !- a real or fauciful bulwark to Christendom against the Mohammedans. Their hixnry and pride increased, or became more obvious, in their state of inactivity at home; and in most of the countries where they had houses and commanderies an outcry was gradually raised against It was in France that the first blow was struck at their existence: Plulip le Bel, of whose resolute and unscrippilons character we have given several examples, was involved in great pecuniary difficulties by his wars with the English and his other neighbours; and when he and Enguerrand de Marigni, a minister as unscrupulous as himself, had exhausted all other sources of revenue, they cast their eyes on the houses and lands and tempt-

really was,—and in a short time the knights were accused of monstrous and contradictory crimes by a host of witnesses, whose depositions were either bought or forced from them by threats, or unprisonment, or the actual application of the rack. soon as the French Templars were aware of these accusations they applied to the pope, begging him to investigate the matter: this petition was repeated several times; but Clement V., who had been raised by French interest, and who had transferred the seat of the popedom from Rome to Avignon, in France, was a subservient ally to Philip le Bel, and had consented to leave the trial and fate of the kuights in his lainds. On the 13th of October, 1307, Philip took possession of the Palace of the Temple in his capital, and threw the grand master and all the knights that were with him into prison. At the same time,—at the very same hour,—so incely was the plot regulated, the Templars were, seized in all parts of France. Every captive was loaded with chains, and otherwise freated with great barbarity. An atrocious inquisition forged letters of the grand master to criminate the cider, and applied the most horrible tortines to the knights: in Paris alone thirty-six knights died on the rack, manutaining their innocence to the last; others, with less capability of enduring exquisite anguish, confessed to the charges of crimes which were in some cases impossible; at least, at the present day few persons will believe that the Templais invited the devil to their secret orgies, and that he frequently attended in the form of a tom-But even the knights, whose firmness gave way on the rack, recanted their confessions in their dungeous, and nothing remained incontradicted except the revelations of two members of the community,-men of infamous character, who had both been previously condemned to perpetual imprisonnent by the grand-master, and who both came to a shameful end subsequently, though they were now liberated and rewarded. Two years of a dreadful captivity, with infernal interludes of torture, and the conviction forced on their minds that Philip le Bel was fully resolved to annihilate their order and seize their property, and that there was no hope of snecour from the pope or from any other power upon earth, broke the brave spirit of the Red-cross Knights. Even Jacques de Molai, the grand-master, an heroic old man, was made to contess to crimes of which he never could have been guilty. He afterwards, however, retracted his confession, and, in the end, perished heroically at the stake. The particulars of the long history would fill many pages, but the whole of the proceedings may be briefly characterised as a brutal mockery of the forms of justice. The grand execution took place on the 12th of May, 1310-when fifty-four of the knights who had confessed on the rack, and then retracted, all they had said in their dungeons, were burnt alive as " relapsed heretics," in a field behind the abbey of St. Antoine at Paris. In sight of the flames that were to consume them,

they proceeded to form a conspiracy,-for such it

ing wealth of the Red-cross Knights. Forthwith

Holmsh. J. Morac—Knyght—Rymer—Holinch.
 The Knights of St John, it will be remembered got possession of the island of Rhodes, and when they lost Rhodes in the lifteenth. century, of Malta and Gozo,

they were offered the king's pardon if they would again confess that they were guilty; but there was not one of them who would thus purchase life, and they all died singing a hymn of triumph, and protesting their innocence. Penal fires were lit in other parts of France, and all the surviving knights who did not retract their plea of not guilty were condemned to perpetual imprisonment,

After a show of dissatisfaction at Philip le Bel's precipitancy, the pope had joined in the death-cry; and, in the course of the years 1308 and 1309, he addressed bidls to all the sovereigns of Christendom, commanding them to inquire into the conduct of the knights. He afterwards declared that seventytwo members of the order had been examined by his cardinals and other officers, and had all been found guilty, but in various degrees, of irreligion and immorality, and he threatened to excommunicate every person that should harbour, or give connect and show favour to any Templar. Without waiting for these paped bulls, Plulip, as soon as he had matured his plans, had endeavoured to stiundate his son-in-law, Edward of England, to similar measures; but the English court and connest, while they engaged to investigate the charges, expressed the greatest astonishment at them, and two months later Edward wrote to the kings of Portugal, Castile, and Arragon, implained them not to credit the accusations which had most malicionsly been licaped upon the Red-cross Knights—The also addressed the pope in their favour, representing them as an injured and cabiministed body of men. Our weak king, however, was never firm to any purpose except where his favourate was concerned: he forgot the old friendship which had existed between the English kings and the Kinghts Templars; and the barous, on their side, forgot the day when Almeric, the master of the English Templars, stood with their ancestors on the field of Runnymead, on advocate for the nation's liberties. The rum of the order was therefore resolved upon; but, thank God! their suppression in England was unaccompanied by atrocious cruelties.

In 1308, the second year of Edward's reign, after the feast of the Epiphany, one of the royal clerks was sent round with writs to all the sheriffs of counties, ordering each and all of them to summon a certain number of freeholders in the several countres,-" good and lawful men,"-to meet on an appointed day, to treat of matters touching the king's peace. \*The sheriffs and freeholders met on the day fixed, and then they were all made to swear that they would execute certain scaled orders which were delivered to the sheriffs by king's messengers. These orders, when opened, were to be executed suddenly. The same conspiracy-like measures were adopted in Ireland, and in both countries, on the same day, -- nearly at the same hour-all their lands, tenements, goods, and all kinds of property, as well ecclesiastical as temporal were attached, and the knights themselves arrested.

The number of Templars seized was about 250. Of these about

The Templars were to be kept in safe custody, but not "in vile and hard prison." They were confined more than eighteen months in different towers and castles. In the month of October, 1309, courts were constituted by the Archbishop of Canterbury, at London, York, and Lincoln. Forty-seven of the kinghts, the noblest of the order in England, who were brought from the Tower before the Bishop of London and the envoys of the pope, boldly pleaded their innocence: the evidence at first produced against them amounted to less than nothing; but the courts were appointed to convict, not to absolve, and, in spite of all law, they sent them back to their prisons to wait for tunid minds and fresh evidence. The witnesses, even in France, where they had been well drilled, went through their duties in a most awkward manner; but in Eugland, those first summoned became altogether restive; and the majority of them, both by and clergy, candidly confessed their ignorance of the secret principles and practices of the order, and bore strong testamony to the general good conduct and character of the knights The pape then censured the king for not making use of torbue "Thus," he wrote, "the knights have refused to declare the truth. Old my dear sou, consider whether this be consistent with aonom and the safety of your kingdom." The Archbishop of York inquired of los clergy whether ortare, which had litherto been unheard of m England, neight be employed on the Templars: be added that there was no machine for forture in the band, and asked whether he should send abroad for one, in order that the prelates might not be chargeable with negligence.\* From the putting of such ? questions we may suppose that this archbishop was one who would not hesitate at cruelty; but it appears pretty evident, whether his queries were negatived or not by his suffragans, that the tortume was not used on this occasion in England. The Templars were worn down by poverty and long noprisonment, and then the threat of punishing as heretics all those who did not plead guilty to the charges brought against them produced its effect. The fimid yielded first: some of the corrupt were bought over by the court, and, finally (more than three years after their arrest) the English Templars, with the exception of William de la More, their grand prior, whom no threats, no sufferings could move, and two or three others who shared his heroic firmness, made a vague confession and most general remunciation of heresy and erroneous opinious, upon which they were sent into confinement in various monasteries, the king allowing them a pittance for their support out of their immense revenues. In the 17th year of Edward's reign it was ordained by the king and parliament that the Hospitallers, or Knights of St. John of Jerusalem, should have all the lands of the late Templars, to hold them as the Templars had held them.

30 were arrested in Ireland. It appears that only two knights were

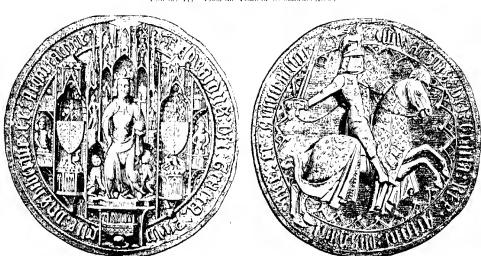

setzed in Scotland.

GREAT SEAL OF EDWARD III.

## EDWARD HI.

A.D. 1327.—When Edward was proclaimed king, about eight months before his father's murder, as he was but fourteen years of age, parliament decreed that a regency should be appointed, "to have the rule and government;" and to this end twelve of the greatest lords of the realm, lay and ecclesiastic, were named. These noblemen were the archbishops of Canterbury and York; the bishops of Winchester, Worcester, and Hereford;

the earls of Kent, Norfolk, and Surrey; and the lords Thomas Wake, Henry Percy, Oliver Lighani, and John de Roos. The Earl of Lancaster was appointed guardian and protector of the young king's person. The same parliament reversed the attainders which had been passed in 1322 against the great Earl of Lancaster and his adherents; confiscated the immense estates of the Despensers; granted a large sum of money to Isabella, the queen-mother, to pay her debts; and voted her a jointure of twenty thousand pounds a year,—a

maternally contributed to secure her ascendancy. Nearly the whole power of government was indeed monopolised by her and Mortimer, who now assumed the state and magnificence of a king.

Although Edward was excluded from political duties, he was not considered too young for those

duties, he was not considered too young for those of war. It is said that his martial spirit had abeady declared uself; but it is probable that Mortimer at least would be glad to see him thus occupied at a distance from the court, where the death of his unhappy father was already beginning to be agitated. The Scots had suffered too cruelly not to be anxious for revenge; and the existing time was not sufficient to make them resist the temptation of what they considered a favourable opportunity, --- the true king of England, as they deemed, being shut up in prison, and a buy intinded on the throne. Nor were there wanting plausible reasons to cover a breach of the treaty; for if the truce had been concluded for thirteen years, and to last even in case of the death of one or both kings, the Scots, on the other hand, could argue that Edward II, who made the treaty, was not dead; that Edward III was no legitimate king; and that, in making war, they attacked a country that had no lawful government which could claim the benefit of former treaties. In whatever way they might reason, the Scots acted with great vigour; and all nations in their circumstances would have been equally regardless of the tince About St. Margaret's tide, February 3, they began to make unoads into England, and these lorder forays were soon succeeded by the march of regular names. Age and declining health had no effect on the valour and activity of Robert Bruce, who seems to have hoped that he should be able, under circumstances, to convert the truce into an honourable peace, if not to recover the northern provinces of England which the Scottish kings had possessed at no very remote date. He summoned his vassals from all parts-from the Lowlands, the Highlands, and the Isles; and twenty-five thousand men assembled on the banks of the Tweed, all animated with the remembrance of recent wrongs and cruel sufferings. Of this host about four thousand were well armed and well mounted; the rest rode upon mountain pomes and galloways, which could subsist upon anything, and support every fatigue. Froissart, who has left us a most graphic description of young Edward's "first ride against the Scots,"\* gives some curious details respecting the nimble activity and hardihood of these children of the mist and the mountain. A force better suited for sudden attack and rapid retreat could scarcely be conceived. "They earry with them," says the Chronicler of chivalry, "no provision of bread or of wine, for their usage is such in time of war, and such their sobriety, that they will do for a long time with a little meat half raw, without bread, drinking the water of the rivers, without wine. And they have no need

a big of meal, in order that, when they have eaten so much flesh as to feel uncomfortable, they may put this plate upon the fire, and, heating it, bake thereon oatmeal cakes wherewith to comfort their stomachs." "And therefore," continues the chromeler, rather oddly, "it is no wonder that they make so much longer marches than other Bruce intrusted the command of this army of invasion to Randolph Earl of Moray and the Lord James Douglas. Crossing the Tweed, these chiefs marched through Northumberland and Durhum, and penetrated into the richer country of York, without meeting any valid resistance. The mountaineers phindered and burnt all the villages and open towns that lay on the road, and serzed so many fat beeves that they hardly knew what to do with them. At the first breath of this invasion a powerful army, said to have amounted to sixty thousand horse and foot, had gathered round the standard of young Edward; but his movements were retarded by a famous quartel which broke out between the native English archers and the foreign troops of Isabella's knight errant, John of Hamault. These allies fought in the streets and submbs of York, where many lives were lost on both sides. The fiercest combatants among the alish were the bowmen of Lincolnshite, whose acteriumed ammosity sorely disqueted the knights and men of Hannahlt, who otherwise were wellcentent with their service in a land of such plenty, that the passage of a large army raised neither the price of wine nor that of meat.\* When these differences were composed, Edward marched to the north, and soon came in sight of the smoke of the fires which the Scots had lit. Instantly the cry to arms ran through the English force, and horse and foot, knights and squires, with a tremendons body of archers, formed in order of battle, and so marched on, "even till the vesper hour," m search of the Scots. But the unequal force of Bruce retired, and not a Scot was to be seen anywhere, though the flames of burning villages, far and then further off, marked the line of their retreat. From Froissart's account, it appears that the Scots did not move directly towards the Tweed, but withdrew towards the west, among the mountains and moors of Westmoreland and Cumberland, " savage deserts, and bad mountains and valleys," as he calls them. The English, fatigued by the pursuit, and in order to wait for their supplies of provisions, which were not so portable as those of the enemy, encamped for the night, and so lost all

chance of ever coming up with the fleet Scots.

After much useless labour, it was determined, in a

council of war, that Edward should move northward in a straight line, and, crossing the Tyne,

executed with rapidity, the troops making at least

one night march; but when the English got to the north of the Tyne, they found the country so entirely wasted that they could procure neither

forage nor provisions, and, after staying there several days in vain expectation of intercepting the enemy with their booty, they recrossed the Tyne and retraced their steps towards the south, in a perplexing state of ignorance as to the movements of the Scots. Edward ordered it to be cried through camp and country that he would give a beritage worth a hundred pounds a-year, together with the honours of knighthood, to any man that would bring him certain reformation of the place where he might find the enemy. The preze was won by one Thomas of Rokeby, who came riding very hard to the king, and brought intelligence that the Scots, who, he said, were equally ignorant of the whereabout of the English, were creamped on a hill not more than three leagues off. Edward confessed, ordered a number of masses, and then manching, soon came he sight of the enemy, who were advantageously posted on the right bank of the Wear The river was rapid and daugerous to pass, and there was no other way of getting at the Scots. As the latter showed themselves in order of battle, the young king sent a herald to challenge theneto meet him like soldiers, on a fair and open field, offering them the undistribed passage of the river it they would go over to fight him on his side. The Scots were not so clavalrously melmed; the fair Douglas, indeed, was nettled at the defiance, and would fam have accepted the challenge, but he was overruled by the better prindence of Moray. night the English lay on the bare ground on the lest bank of the river, facing the Scots, who lit a prodigious number of faces along their strong position, and, from dark till dawn, kept " horning with their horns, and making such a noise that it seemed as if all the great devils from hell had come thather."

Thus passed the might, which was the night of St. Peter ad Vincula, in the beginning of August, and in the morning the English lords heard noss. In the course of the next day, a few kinghts and men-at-arms, who had strong horses, swam the river and skirmished with the enemy; but these were idle brayadoes that cost many lives and produced no effect. For three days and nights the English lay on the river side: it is said that the Scots were suffering from want of provisions and of salt, and that Edward expected that their necessities would force them to ahandon their position; but, from Froissart's account, it should appear that the English, less accustomed to privations, were suffering from severe want, and that their army was dwindling away. On the morning of the fourth day, when the English looked towards the hill on the right bank, they saw no army, for the Scots had secretly decamped in the middle of the night. It was presently ascertained that they had only

responding movement on the other bank, and encamped on another hill, immediately opposite, the river between them as before. The young kmg, whose patience was exhausted, would have forced the passage and marched to the attack of the Scottish position, but he was restrained by Mortimer, who was afterwards accused of treachery for thas step, though it seems to have been dictated only by proper military prindence. For eighteen days and nights the two bosts thus lay facing each other and doing nothing but only suffering great discomfort. One night, however, Douglas made a sudden onslaught, which had well-nigh proved fatal to young Edward Towards undought, he took about two hundred of his best men, and, marching silently up the river, crossed at a considerable distance above the English position, and then turning with equal caution, cidered the Engfish camp without being discovered. Then he made a desperate ansle towards the spot where the king lay, shorting as he went, "A Douglas 1 you stedt die, ve English thieves!" and be and for cone paraons Killed more than three broadred before they left off. He came before the royal tent, still shoutrng, "A Douglas", a Douglas!" and he cut in tware reveral of the cord of the tent; but Edward's attendants, round from their sleep, made a gallant stood, and, his chaplain and his chamberlain baying sacrificed then lives for his safety, he escaped in the

[Book IV.

Mis neg the king, Douglas fought his way back, and contrived to return to his friends on the opposite hill with but little loss. At last the Scots advantored this second position, taking the Eng list, it is said, again by surprise, and marching away indicard and imsecu at the dead of night. If this account be true, the English were sadly wanting in proper nalitary vigilance; but it appears more than probable that they were as anxious to be red of the Scots as the Scots were to be quit of them, and that Edward's officers were glad to be able to cross the Wear without fighting at disadvantage for the passage. At all events it was determined that, as the enemy had got the start of them, it would be useless to follow them any farther; and soon after, fording the river, Edward marched straight to York, where the army was disbanded.\* The Scots, after their extraordinary campaign, got back to their own country with much booty. The young king, " right pensive," returned to London, breathing nothing but fresh wars and vengeance: as yet, however, he had no power, and both Mortimer and his mother, who controlled his destiny, were, for their own private interests, desirous of peace, and, soon after, they opened negotiations with Robert Bruce, who, on his side, labouring under his "heavy malady," and seeing that his son who was to succeed him was still an infant, was anxious to terminate the war by a definitive and honourable treaty, which he fondly hoped · Proiseart.

QUEEN PRITITION. From the Tomb in Westminster Abbey.

would secure peace to his country when he should no longer alive to protect it with his consummate ability.

Before this treaty was concluded, young Edward was married to Philippa of Hamault, to whom his mother had contracted him during her scapade on the continent. This young lady, who proved an excellent and loving wife, was brought over to England by her uncle, John of Hamault, a little before Christmas. She was received at London with great pomp,-" with jousts, tournaments, dance, carols, and great and beautiful repasts," - and, on the 24th of January following, (A. D. 1328), the marringe ceremonies were completed at York. few months after, about the Feast of Whitsuntide, the parliament met at Northampton, and there, "by the cyil and naughty counsel of the Lord Mortimer and the queen-mother," as it was afterwards maintained, they put the last hand to the peace with Bruce, concluding what the English called both an improfitable and dishonourable treaty. The basis of this treaty was the recognition of the complete independence of Scotland. One of its leading articles was, that a marriage should take place between Prince David, the only son of Robert Bruce, and the Princess Joanna, a sister of King Edward. In spite of the tender age of the parties (for the bride was in her seventh and the bridegroom only in his fifth year), this part of the treaty was carried into almost immediate effect: the queen-mother Isabella carried her daughter to Berwick, where the marriage was solemnised, on the day of Mary Magdalen, the 22nd of July.

With the princess, whom the Scots surnamed Joan Makepeace," were delivered up many of the jewels, charters, and other things which had been taken out of Scotland by Edward I. In return for these and the other advantages of the compact, Bruce acreed to pay to the king of England the sum of thirty thousand marks in compensation for the damages done by the Scots in their recent invasion. The great Bruce, who had taised his country from the depth of despair and servitude to this glorious enfranchisement, did not

Survive the peace, dying at his little eastle of Cardross on the 7th of June in the following year. He was barred under the payement of the choir in the abbey church of Dunferminic.

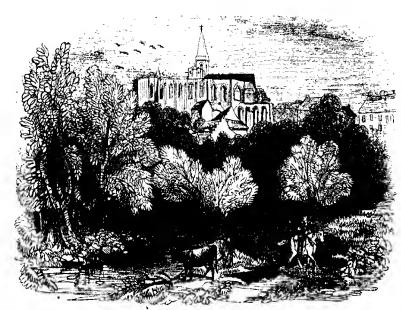

The position occupied by Mortinier inevitably exposed him to envy, yet he continued to grasp at ffesh power and honours, and to show that he would hesitate at no crime to preserve what he got. In the month of October, parliament met agam at Salisbury, and then Mortimer was created Earl of March, or Lord of the Marches of Wales. The conneil of regency was in a manner displaced, and the whole government seemed more than ever to be shared between him and the queen-mother. His expenses knew no bounds, and he caused an immoderate quantity of provisions to be taken up in the name of the queen, "at the king's price, to the sore oppression of the people." This abuse of the right of purveyance caused great discontents, and popular odium, arising from other causes, was added to the grudge of the hobles. The Earl of Lancaster was the first to attempt to make head improbable story.\*

against this new favourite; but, though he was guardian of the young king, Edward remained with Mortimer and his mother, and after a show of force at Winchester, the earl was obliged to retreat. Mortaner fell upon his estates and plundered them, as if he had been fighting in a foreign country. The young king's uncles, the Earls of Kent and Norfolk, who were equally disgusted with the favourite's arbitrary ascendancy, joined Lancaster; but, from some cause or other, they abandoned him almost mimediately after, upon which the carl was compelled to submit to ask pardon in a humiliating manner, and to pay an immense fine. Blind to the fact that young Edward was every day approaching that age when he would act for himself, Mortmer still pursued his wild career of ambition. It was said at the time that he entertained a design of destroying the king and placing himself on the throne, but there is no proof of this

A.D. 1330.—The Earl of Kent was now made to pay an awful price for his levity in joining and then deserting Lancaster. He was surrounded by the artful agents of Mortimer and the queen, and led to believe a story which was then widely circulated, that his brother Edward II., in whose deposition he had taken so active a part, was not dead but living. The body exhibited at Berkeley Castle and afterwards buried at Gloucester (so went the legend) was not that of the deposed king, who was actually shut up in Corfe Castle. Some monks urged the Earl of Kent to release his captive buttler, and restore lum to the throne, assuring him that several bishops and nobles, whose mes-

ng - Knyght -- Wals - Rymer - Holm-h

sengers they were or pretended to be, would aid him in this meritorious enterprise. The earl even received letters from the pope, exhorting him to pursue the same course. These letters appear to have been forgeries, but they imposed upon the credulous earl, who even went the length of writing to his dead brother, which letters were delivered to Sir John Maltravers, one of the suspected assassins of the late king. These strange epistles were put into the hands of Isabella and Mortimer, who, considering them proofs sufficient of treasonable practices, immediately summoned a parhament to try the The Earl of Kent was invergled to Winchester, and there a parliament, consisting solely of the partisans of Isabella and Mortimer, met on the 11th of March. The Earl of Kent, who had been seized as soon as he was in their power, was produced as a prisoner; and, on the 16th, he was convicted of high treason, for having designed to ruse a dead man to the throne; at least nothing else was proved or attended to be proved against him; and thus this trial is entitled to a place among the curiosities of purisprudence. The earl's accomplices were all liberated, with the exception of one Robert de Touton, and a poor London friar who had told the Earl of Kent that he had rased a spirit in order to be more fully assured that Edward II, was really hving. This monk was kept in prison till he died. On account of his royal birth it was not expected that the sentence against the earl would be carried into execution; but people had not taken the proper measure of Mortimer's andacity :—on the 19th, the son of the grent Edward was carried to the place of execution outside the town of Winchester; but when he reached the spot, nobody could be found

DUNFERSLINE ABBRY, FIFE; the Burial Place of Bruce,

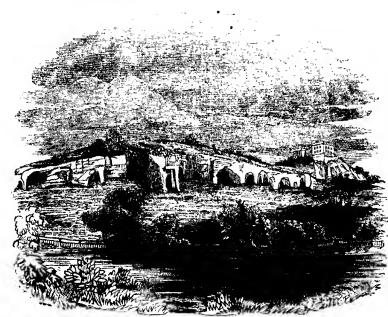

that would perform the office of headsman. For four hours the life of the earl was painfully prolonged by this popular scruple: at last a convicted felon took up the axe, on condition of a free pardon, and the head was struck off. His death was the less lamented, "because of the insolence and rapaciousness of his servants and retinne, who, riding abroad, would take up things at their pleasure, neither paying nor agreeing with the parties to whom such things belonged." From which statement it should appear, as also from complaints in parliament, that all the princes of the blood, and occasionally other great lords, were accustomed to consider the oppressive privileges of purveyance as part of their ways and means, or, in other words, to plunder the defenceless portion of the people of such stock and provisions as they wanted. But the iniquity of the sentence was apparent, and attributed by all to the malice and jealousy of Mortimer and Isabella. The young king, it is true, had confirmed the sentence and sent his own uncle to the block; but Edward was not considered a free or competent agent.\*

About three months after the execution of the Earl of Kent, Philippa, the young queen, was dehvered, at Woodstock, of her first child,—the Prince Edward, afterwards so celebrated under the title of the Black Prince. A father, and eighteen years of age, the king now thought it time to assert his authority; and, though their party was strong, the nation was most willing to assist him in overthnowing the usurpation of his mother and her daring lover. The immorality of the connexion had long been a

theme of popular outcry: some had believed, or affected to beheve, that scandal had exaggerated indiscretions, but now it was generally reported and credited that Isabella was with child by Mor-At first, however, no person about the court was bold enough to declare bimself; and when Edward opened his mind to the Lord Montachte, it was with the most eirchmspeet secreev, and the first steps taken in conjunction with this prudent nobleman were cautions in the extreme. Probably to make it be thought that his mind was still occupied by the trivial pleasures with which Mortimer had long contrived to amuse him. Edward held a joust in Cheapside, where he, with twelve others as challengers, answered to all knights that appeared in the lists. This "solemn jonst and tourney" was held in the month of September, and lasted three days. The young queen presided; and the interest felt in her favour, already high, was heightened among the people by a perilous accident. A stage or platform, on which she was seated with many other beautiful dames, broke down; "but yet, as good hap would, they had no hurt by that fall, to the rejoicing of many that saw them in such danger."\* In the month of October following the parliament met at Nottingham: Edward with his mother and Mortimer were lodged in the castle: the bishops and barons who attended took up their quarters in the town and the neighbourhood. Mortnier never moved without a strong body-guard; and the knights m his splendid retinue were known to be devoted to his interests. On the morning of the 19th Edward

ANCIERT CAVES MEAR NOTTINGHAM CASTLE-supposed to communicate with the Castle.

had a private conference with the Lord Montacute, who immediately after was seen to ride away into the country with many friends and attendants. the afternoon Mortimer appeared before the council with a troubled countenance. The plot was made up, but it was well nigh being defeated when at the point of execution; for the favourite, by some means or other, had obtained a vague hint of what was going on. This was a nervous moment for the young king: Mortimer proclaimed to the members of the connecl that a base attempt was making against him and the queen-mother, and that Edward himself was privy to the conspiracy. Edward denied the charge; but the favourite treated him as a har. At the dead of the night the Lord Montacute and his associates returned quietly to Nottingham. The strong castle was not a place to be taken by assault or surprise. A proper military guard was kept, and the keys of the great gates were carried every evening to Isabella, who laid them by her bed-side. But the conspirators had taken measures to defeat all these precautions: Montacute had won over the governor of the castle, who had agreed to admit them through

a secret subterraneous passage, the outlet of which, concealed by brambles and rubbish, opened at the foot of the castle hill. It was near the hour of undinglit when Montacute and his friends crawled through this dismal passage: when within the castle walls, and at the foot of the main tower, they were joined by Edward, who led them up a silent staircase into a dark apartment. Here they heard voices proceeding from a hall which adjoined to the queen-mother's chamber; they were the voices of Mortaner, the Bishop of Lincoln, and other adherents, who were sitting in late and anxious consultation. The intruders burst open the door, killing two knights who tried to defend the entrance. The guilty Isabella rushed from her bed, and in tears and in an agony of grief implored her "sweet son' to spare "her gentle Mortimer," "that worthy knight, her dearest friend, her well-beloved cousin." The favourite was not slaughtered there, which, considering the barbarity of the times and the violent excitement against him, was rather extraordinary; but he was dragged out of the castle, and committed to safe custody. the following morning Edward issued a proclamation informing his lieges that he had now taken

the government into his own hands; and he summoned a new parliament to meet at Westminster

on the 26th of November.\* Before this parliament the fallen favourite was arraigned: the principal charges brought against him were, his having procured the death of the late king, and the judicial murder of the Earl of Kent; his having "accroached" or usurped the power which lawfully belonged to the council of regency, and appropriated to himself the king's moncys,especially the twenty thousand marks recently paid by the king of Scots. His peers found all these articles of impeachment to be "notoriously true, and known to them and all the people;" and, as his proper judges in parliament, they sentenced him to be drawn and hanged as a traitor and enemy of the king and kingdom.† Edward, who was present in court during the trial, then requested them to judge Mortimer's confederates, but this they would not do until they had protested in form that they were not bound to sit in judgment on any others than men who were peers of the realm, like Sir Simon Bereford, Sir John Malthemselves.

were condemned to death as accomplices, but three of these individuals had escaped. Mortimer was accompanied to the gallows only by Bereford. They were hanged, at "the Elms," on the 29th of November. The queen-mother was deprived of her enormous jointure, and shut up in her castle or manor-house at Risings, where she passed the remaining twenty-seven years of her life in obscurity. Edward, however, paid her a respectful visit at least once a year, and allowed her three thousand, and afterwards four thousand pounds, for her annual expenses. In this same parhament a price was set upon the heads of Gourney and Ogle, the reputed numberers of the late king. Gourney was arrested in Spain, and delivered over to an English officer, who, obeying secret instructions, cut off his head at sea, without bringing him to England for trial. From this and other circumstances it has been imagined that there were persons who still retained their influence at court, to whom silence upon all that regarded this hornd subject was particularly convenient. What became of Ogle does not appear; but it is probable that he died abroad before the murder of Gourney. Sir John Maltrayers was taken and executed, but on a different charge, namely, for having sided Mortimer in musleading the Earl of Kent by false reports of the late king's The Lord Berkeley, in whose eastle the deed had been done, demanded a trial, and was fully acquitted by a jury; nor does there appear to be any good reason for questioning the propriety of this verdict. Edward was now his own master, and accountable for the good and evil of his government. His

first transactions are not very honourable to his character; but it might be said in justification of an older head and better heart than his (and his was not a bad heart), that he was carried away by the general feeling of the nation, whose pride was hurt by the last treaty with the Scots, and who eagerly longed for a fresh war. On the borders, indeed, this war had scarcely ceased, having been prolonged in an irregular manner by the vindictive spirit of the people on both sides. We have noticed the death of the great Bruce, which happened in 1330: in the following year his brave companion in arms, the Lord James Douglas, was killed by the Moors in Spain as he was carrying his master's heart to the Holy Land; and in the month of July, 1332, Randolph, Earl of Moray, who had been appointed regent of the kingdom of Scotland and guardian of Prince David, died sud-The Earl of Moray was succeeded in the regency by Donald, Earl of Marr, a man inferior to him in prudence and ability. An article in the last treaty of peace had stipulated that a few English noblemen should be restored to estates they held in Scotland. This article was faithfully observed with regard to Henry de Percy; but, for various reasons, it was disregarded with respect to the lords Wake and Henry de Beaumont, and these two noblemen resolved to obtain redress by

came over the borders to join him. Edward felt, or pretended to feel, many scruples, -for the infant oneen of Scotland was his own sister, and he had also sworn to observe the trenty. Proclamations were issued prohibiting the gathering of any army of invasion on the borders; but this did not prevent-nor was it intended to prevent-Bahol and the lords Wake and Henry de Beaumont, with their associates, from getting ready a small fleet and army on the shores of the Humber. In the beginning of August this expedition sailed from Rayenspur: entering the Frith of Forth, the army landed at Kinghorn, on the coast of Fife, on the 6th, and five days after won one of the most astonishing vactories recorded in history. Edward Bahol, -- we use his name because he was first in dignity, though it is evident the campaign was directed by some bolder and abler mind than his, -on finding himself suddenly in presence (or nearly so) of two Scottish armies,-the one commanded by the regens Marr, the other by the Earl of March,boldly threw himself between them, and encamped at Forteviot, with the river Earn running between. hun and the forces of the regent. At the dead of might he crossed the Earn by a ford, and fell upon the sleeping Scots, who were slaughtered in heaps before they could get ready their arms or ascertain the force of the assailants. As day dawned, the regent blushed to see the insignificant band that had done all this mischief; he was still in a condition to take vangeance, but, in his blind fury, he engaged in a wretched pass where his men could not form; and his own life, with the lives of many of the Scottish barons, and of nearly all the menat-arms, paid forfeit for his military blunder. Thirteen thousand Scots, in all, are said to have fallen, while Baliol, who had not three thousand when he began the battle, lost but a few men. From Duplin Moor, where this victory was gained, Edward Baliol ran to Perth, being closely pursued the whole way by the Earl of March, at the head of the other strong division of the Scots. He had just time to get within that city, and throw up some barrieades. March besieged him there; but there were both scarcity and treachery in the Scottish camp; their fleet was destroyed by the English squadron which Baliol had ordered round to the mouth of the Tay; the ancient followers of his family, with all those who had forfeited their estates for their treasons under Bruce, with all who were in any way disaffected, or who hoped to 5 n 2

rights of Edward Baliol, the son and heir of the

miscrable John of that name, whom Edward I.

had crowned and uncrowned, they went into the

counties near the borders, where they were pre-

sently joined by other English lords who had claims similar to their own, though they had not had the

address to get their estates in Scotland, tacked to a treaty. In those northern districts the elements of

war and havoe were rife and ready; and when

Edward Bahol came over from Normandy, and

[BOOK IV. Darcy followed up with a horde of Irish kerns who were employed as auxiliaries. Between the battle and the flight the loss was prodigious: never, say the old writers, had Scotland sustained such a defeat or witnessed such slaughter. The young

king, David Bruce, with his wife, Edward's inno-

standard of the Pretender, who was crowned King of Scotland, at Scone, on the 24th of September. Edward Bahol had thus gained a crown in some seven or eight weeks, but he lost it in less than three Having secretly renewed to the English king all the forms of feudal submission imposed on his father by Edward I., and having stupified his opponents in Scotland by the rapidity of his success, he retired with an inconsiderable force to Annan, in Domfriesshire, where he intended to pass his Christmas. On the night of the 16th of December he was surprised there by a body of horse commanded by the vonng Earl of Moray, Sir Archibald Douglas, and Sir Sumon Frazer. He got to horse, but had no time to saddle, and, nearly naked himself, he galloped away on a bare back, leaving his brother Henry dead behind him. He succeeded in crossing the borders into England, where Edward re-ceived him as a friend. There was probably not a man in Scotland but knew that the English king

had secretly countenanced the whole expedition: the greatest exasperation prevailed, and, with or without orders, the people near the Tweed and the Solway Frith made incursions into England, carrying fire and slaughter with them. Edward had applied to his parliament, assembled at York, to legalize, or at least to justify in the eyes of the English, his ambitious projects on Scotland; but the prelates, barons, and commons were much divided in opinion, and gave no direct answer. The inroads of the Scots, however, gave Edward a colourable pretext for declaring that they had mfringed the treaty of peace, and he prepared for war,-the parliament then engaging to assist him to the utmost.\* In the month of May, 1333, Berwick was invested by a powerful English army; and on the 16th of July, Sir William Keith, the governor of that important town, was obliged to treat and to promise that he would surrender on the 20th at sunrise, if not previously relieved by Lord Archibald Douglas, who now acted as regent of Scotland. On Monday, the 19th, after a fatiguing march, Donglas came in sight of Berwick, and found Edward's main army drawn up on Halidon Hill, about a mile to the north-west of the This clevation was in part surrounded by bogs and marshes; yet, in spite of all these advantages, the Scots, whose heads were heated, resolved to attack them. As they moved slowly through the hogs they were sorely galled by the English bowmen: when they got firm footing they rushed up the hill with more rapidity than order: their onslaught, however, was tremendous, and for a moment seemed to be successful: but the English, who were fresh, and admirably posted, repelled the attack: the regent Douglas was killed in the melee; many lords and chiefs of elans fell around him; and then the Scots fell into confusion, and fled on every side. Edward spurred after them with his English cavalry,—the Lord

· Fordan.-Knyght.-Heming.-Rymet.

756

cent sister, was conveyed into France, and Edward Baliol was again scated on a dishonoured throne. The price which Edward exacted for this service was immense, and the readiness with which Baliol paid it incensed the nation against him, and even estranged many of his former partisans. openly professed homage and feudal service in its full extent to the king of England; and he not only made over the town of Berwick, which surrendered the day after the battle of Halidon Hill, but ceded in perpetuity the whole of Berwickshire, Roxburghshire, Selkirkshire, Pecbleshire, and Dumfriesshire, together with the Lothians,-in short, the best part of Scotland. Edward left his mean vassal an army of Irish and English to defend him in his dismembered kingdom; but soon after his departure the indignant Scots drove Baliol once more across the borders, and sent to request assistance from the king of France, who hospitably entertained their young king and queen in the Chateau Gaillard. Edward, on his side, reinforced Baliol, who returned to the south of Scotland, and maintained himself there among English garrisons, though he could make no impression north of Edinburgh. In 1335, Edward, having still further reinforced his vassal, marched with a powerful army along the western coast of Scotland, while Baliol advanced from Berwick by the eastern. In the

month of August these two armies formed a junetion at Perth, and, as they had met with little opposition, it was thought that the spirit of the Scots was subdued; but no sooner had Edward turned his back than the patriots fell upon Baliol from all quarters, and harassed his forces with continual skirmishes and surprises. In the following summer Edward was again obliged to repair to the assistance of his creature, and having scoured the country as far north as Inverness, and burnt several towns, he flattered himself that he had at last subdued all opposition. During this eampaign, which was marked with more than usual cruelty and waste, the Scottish patriots, who had not been able to procure any aid from France. kept themselves in inaccessible mountains and wilds, but, again, as soon as the English king had erossed the borders, they fell upon Baliol. obliged Edward to make a second campaign that same year: he marched to Perth in the month of November, and, after desolating other parts of the country, he returned to England about Christmas, once more buoyed up by the confident hope that he had mastered the Scots. As long as he was thus supported Baliol contrived to maintain a semblance of authority in the Lowlands; but the nation regarded him with that hatred and contempt which will ever be, or ever ought to be, the recomCHAP. I.] CIVIL AND MILITARY TRANSACTIONS. the succession rested with the son of Joan, queen

pense of an intrusive king imposed on a free people by foreign arms. Affairs were in this uncertain state in Scotland when Edward's attention was withdrawn, and his mind filled by a wilder dream of ambition,—the plan of attaching the whole French kingdom to his domi-The idea was not altogether new,—it had been suggested several years before; but Edward's youth, and other circumstances, had then prevented the pressing of his absurd claims by force of arms. It would occupy a volume to discuss at length the grounds of this dispute, and many volumes have been written upon the subject; the main facts of the case may be stated in short compass, Charles IV., the last of the three brothers of Isabella, the queen-mother of England, died in 1328, in the second year of Edward's reign: he had no children, but left his wife encemte. regency was appointed, and the crown was kept in abeyance; if Joan should be delivered of a son, then that infant was to be king; but in due time she gave birth to a daughter, and, by an ancient interpretation of a portion of the Salic law, and by the usages and precedents of many ages, it was held that no female could reign in France. daughter of the last king was set aside without debate or hesitation; and Philip of Valois, cousingerman to the deceased king, ascended the throne, taking the title of Philip VI. Edward's mother, Isabella, with the state lawyers of England and some foreign jurists in English pay, pretended from the first that Edward had a preferable right; but it was deemed unsafe to press it at the time: and when Philip of Valois demanded that the king of England should, in his quality of Duke of Aquitainc, go over to France and do homage to him, threatening to dispossess him of his continental dominions if he refused, the young king of England was obliged to comply, though he rendered the homage in vague terms, and, according to one account, entered his protest against the measure, not before Philip or his ambassadors, but before. his own council in England, the majority of whom, it is said, advised this base but childish subterfuge. Putting aside the incapacity of females, Edward certainly was nearer in the line of succession; he was grandson of Philip IV. by his daughter Isabella, whereas Philip of Valois was grandson to the father of that monarch, Philip III., by his younger son Charles of Valois. Philip traced through males, and Edward only The latter, however, mainthrough his mother. tained that, although by the fundamental laws of France his mother, as a female, was herself excluded, he, as her son, was not; but Philip and all France insisted, on the contrary, that a mother could not transmit to her children any right which she never possessed herself. The principle assumed by Edward was a startling novelty,—it had never been heard of in France: but, even if he had been able to prove it, he would have proved a great deal too much, and would have excluded himself as well as Philip of Valois; for by that very principle

the province or territory, and when they could not do this,—as happened more than once,—the injustice of their procedure formed but a bad precedent for others. It was in every sense with a peculiarly bad grace that the English set themselves up as authorities in the laws of royal succession: by no people had such laws been more thoroughly disregarded at home: from the time of William the Norman, who was an usurper by conquest, four out of ten of their kings had been usurpers, or were only to be relieved from that imputation by the admission of the principle that the estates of the kingdom had the right of electing the king from among the members of the royal family. The present question would have been at once decided by leaving this same right of election to the French, who were unanimous in their support of Philip of Valois. The peers of the kingdom had voted that the erown belonged to him; the Assembly of Paris had decreed the same thing; and the States General afterwards confirmed their judgment: and not only the whole nation, but all Europe, had recognized Philip. Edward himself, in 1331, had repeated his homage to him in a more satisfactory way than on the former occasion; and it was not till 1336 that he openly declared that the peers of France and the States General had acted rather like villains and robbers than upright judges; and that he would no longer submit to their decision, or recognise the French king, who had now reigned in peace more than seven years. † But the plain truth was, that Oan was married in 1310, during the reign of her first uncle, Philip V.; she was then only six years old, and certainly had not borne a son four years after (1322), when her second uncle, Charles IV., ascended the throne.
† Rymer.—Froisart.—Villaret, Hist. Fr.—Gaillard, Hist. de la Rivalté de la France et de l'Angleterre\*—Edward repeatedly offered to give up his glaims if Philip would abandon the cause of the king

of Navarre, who was the daughter of Louis X., the

eldest brother of Isabella, as also of Philip V. and

Charles IV, who had, in default of issue male,

succeeded the one after the other; and if this son

of the queen of Navarre had been born a little

earlier than he was, then, by this same principle,

Charles IV., the last king, must have been an

usurper; \* and the same king, from the moment

that the boy really was born, must have occupied

an unsteady throne. Such a principle was con-

trary to the maxims of every country in Europe,

and repugnant alike to the practice in public and in

private inheritances; the latter of which had been

pretty clearly defined. The French, moreover,

who ought to have been the only judges in this

ease, maintained it to be a fundamental law, that

no foreigner could reign in France, and contended

that one of the principal objects of the so-called

Salic law was to exclude the husbands and children

of the princesses of France, who generally married

foreigners. It is very true that, when it suited

their own interests, the French kings insisted on a

different law of succession in some of the great

fiefs of the crown; but here they tried to cover

themselves with local laws or usages particular to

758 Edward had not been able to shape his intrigues and make his preparations earlier; and now several concurring circumstances hurried him on. Philip There was not a sovereign in Europe

had not only given an asylum to David Brace, but was actually beginning to aid the Scottish patriots with ships, arms, and money. Edward, on his side, bad given shelter to Robert of Artois, who was descended from the blood royal of France, who had married king Philip's sister, and who was supposed to have a strong party in France. account of a disputed succession to the great fict of Artois, this Robert had been involved in a quarrel, that entailed disgrace on both parties, with his brother-in-law of France, who eventually had driven him into exile and hanged some of his adherents. Robert was a man of violent passions; his rage against the French king was boundless; and it is said that, before raising him up a formidable rival in the person of Edward of England, he had attempted his life by spells and witchcraft, and by the serer agency of the assassin's dagger. He was also gifted with great eloquence or powers of persuasion; he was skilful alike in the cabinet and the field, few princes enjoying a higher military reputation. Philip, who foresaw the consequences of his stay in England, threatened to full upon Guienue, where, in fact, he had seized several castles, if Edward did not immediately dismiss him. so little likely to bear this insulting threat as the powerful English king, who sent over a commission, bearing date the 7th October, 1337, to the Earl of Brabant and others, to demand for him the crown of France as his indisputable right. nation went along with the king; the coming war with France was most popular with all men; and having obtained subsidies, tallages, and forced loans,-having seized the tin in Cornwall and Devoushire, and the wool of the year all over the kingdom,—having even pawned the jewels of the crown, and adopted almost every possible means of raising money to subsidize his allies on the continent, Edward sailed from Orewell, in Suffolk, with a respectable fleet, and a fine but not large army, on the 15th of July, 1338. Four days after he landed at Antwerp, where he had secured himself a friendly reception. The Earl of Flanders was bound to his rival Philip; but this prince had scarcely a shadow of authority in the country, where the democratic party had triumphed over the nobles, and the inhabitants of the great trading cities had placed themselves under the government of James Von Artaveldt, a brewer of Ghent, who was in fact in possession of a more than sovereign authority in that rich and populous country, -an authority which he exercised rigorously enough, but on the whole with great wisdom. "To speak fairly," says Froissart, whose sympathies were enlisted on the other side, and who was all for knights and chivalry, "there never was in Flanof Scots, and restore some places he had seized in Gascony. See Rymer—Philip thought the claims too ridiculous to be worth any sacrifice of honour, and he was not captivated by Edward's pro-

posal of intermarrying their children.

prosperity had wonderfully increased. The king of France was hated by the Flemings, as the declared enemy of this state of things, and the avowed protector of the expelled or humbled nobles; and when Edward, doing violence probably to his own feelings, did not hesitate to court their plebeian alliance, they forgot some old grudges against the English, and engaged to assist heart and hand in their wars. Edward's other albes were the emperor of Germany, the dukes of Brabant and Gueldres, the archbishop of Cologne, the margus of Juliers, the counts of Hamault and Namur, the lords of Fanquement and Bacquen, and some others, who, for certain subsidies, engaged to assist him with their forces. The English king, like his grandfather, Edward I., soon found how httle rehance is to be placed on such coalitions. At the same time Plulip of France allied himself with the kings of Navarre and Bohemia, the dukes of Brittany, Austria, and Lorranie, the palatine of the Rhine, and with several of the inferior princes of Germany. For the present, however, the operations in the field did not correspond with the magnitude, of these preparations. The whole of this year, 1338, was passed in mactivity; and after granting trading privileges to the Flemings and Brabanters, and spending his money among the Germans, all that Edward could procure from them was a promise to meet him next year in the month of July. But it was the middle of September, 1339, ere the English king could take the field, and then only fifteen thousand men-at arms followed him to the siege of Cambray. On the frontiers of France the counts of Namur and Harnault abandoned him. Edward thanked them for their past services, and then advanced to Peronne and St. Quentin, burning all the villages and open Here the rest of his allies halted, and refused to go farther. Edward then turned towards the Ardennes, and, as Philip avoided a battle, he found himself obliged to retire to Ghent, having spent all his money and contracted an enormous debt, without doing anything except inflicting ruin on some unoffending citizens and miserable French The pope, Benedict XII., made an attempt to restore peace; but Edward, unaffected by his failure, turned a deaf car to his remonstrances, and immediately afterwards, by the advice, it is said, of Von Artaveldt, publicly assumed the title of king of France, and quartered the French lilies in his arms.\* About the middle of February, 1340, he returned to England to obtain fresh resources, and the parliament, still sharing in his madness, voted him immense sup-Before he could return to Flanders he was informed that Philip had collected a tremendous fleet, in the harbour of Sluys, to intercept him. Until he assumed the title of lawful king of France, many, even

BOOK IV.

among the turbulent Flemings, had scruples; they cared nothing for Philip or his authority, but as vassals (nominal at least) they respected the name of king of France.

His conneil advised him to stay till more ships could be collected; but he would not be detained, and set sail, with such an English fleet as was ready, on the 22nd of June. On the following evening he came in sight of the enemy, who, on

the morning of the 24th, drew out to the mouth of the harbour of Shuys. As Edward saw this movement be exclaimed—"Ha! I have long desired to fight with the Frenchmen, and now I shall fight with some of them by the grace of God and St. George."\* The battle soon joined; stones were cast and arrows discharged from the decks; and then fastening their ships together with grapplingirons and chains, the enemies fought hand-to-hand with swords, and pikes, and battle-axes. English gained a complete victory; nearly the whole of the French fleet was taken, and from ten to fifteen thousand of their mariners were killed or drowned. So dreadful was this disaster in the eyes of all of them, that none of Philip's ministers or courtier daired to break the news to him. This task was left to his buffoon "The English are but cowards," said the fool. "How so?" inquired the king; "because they had not the comage to

Shivs," replied the fool. After this frightful loss of human life (and, besides the French, four thousand English had perished), Edward went to church to say his prayers and return thanks; and in the letter which he wrote to the bishops and clergy of England, he told them how, by heavenly grace and mercy, he had won so great a victory. This splendid success, and, still more, the great sums of money he carried with hum, brought his allies trooping round his standard.

lcap note the sea like the French and Normans at

Two hundred thousand men, in all, are said to have followed him to the French frontier; but again the mass of this incongruous host broke up without doing anything, and after challenging the French king to single combat, and spending all his money, Edward was obliged to agree to an armistice. The pope again laudably interfered, and endeavoured to convert the truce into a lasting peace; but Philip would not treat with his rival so long as he bore the lilies in his arms and took the title of King of France. Edward could not chastise his lukewarm allies, but he resolved to vent his spite on his ministers at home, who, he pretended, had not done their duty. One night, in the end of November, he appeared suddenly at the Tower of London, where no one expected him, and where there were very evident signs of a culpable negli-The next morning he threw three of the judges into prison, displaced the chancellor, the treasurer, and the master of the rolls, and ordered the arrest of several of the officers who had been

irregularly applied to other purposes, the supplies voted by parliament for the king's use. The archbishop replied by a circular letter, exonerating himself, and stating that the taxes raised were mortgaged for the payment of debts contracted by the king in the preceding year. Edward rejoined, but as he fell into a violent passion in his letter, it has been fairly concluded that he had the worst of the argument; and in the end of this long quarrel, he was fairly beaten on constitutional grounds by the archbishop.\* The king was now greatly distressed for money, and acting on that wise system, from the observance of which it has happened that the liberties of England have been purchased rather by the money than by the blood of the subject, parliament refused to pass the grants he wanted, maless he gave them an equivalent in the shape of a reform of past abuses and a guarantee against future ones. • In the course of the year 1341, the French king allowed David of Scotland, who had now attained his eighteenth year, to return to his own dominions. David, with his wife, landed at Inverbervie on the 4th of May, and was received with enthusiastic joy. Long before his coming the patriot. had triumphed; they had taken castle after castle, and, in 1338, had again drīven Baliol into England. effect of the arms of his native English, and circumstances soon opened him a new road into France, and enabled him to change the seat of the war from the Flemish frontier to Normandy, Brittany, and Poieton, the real scenes of his military glory. It was another disputed succession that occasioned the renewal of the war. John III., Duke of Brittany, died in 1341, and left no children though he had had three wives.

Of his two brothers, Guy and John de Montfort, Guy, the elder, had died sometime before him,

BOOK IV.

This demand convinced John that the

judgment of the French court would be against

him; -he saw, or suspected, preparations for

arresting him, and leaving his parchments and

most of his friends behind him, he fled from Paris

in disguise. A few days after his flight, sentence

was pronounced in favour of his opponent. As Voltaire has remarked, the two parties here might

be said to have changed sides: the King of Eng-

land, who claimed the French crown through a

female, ought to have sustained Jane and the rights

of women; and the King of France, who was so

deeply interested in the support of the Salie law,

ought to have sided with De Montfort.\* But law

or right of any kind had little to do with these de-

cisions, and neither Edward nor Philip was likely

duchy to Edward as lawful King of France.

thousand men.

the same time Charles de Blois did homage to

Philip, who furnished him with an army of six

prompt; but De Montfort, relying on the affection

of the people of Brittany, returned to make head

against the French invaders. Soon after, he was taken prisoner by treachery, and sent to Philip,

who committed him to close confinement in the

Tower of the Louvre. Charles de Blois then got possession of Nantes and other towns, and thought

that the contest was over; but De Montfort's wife

was still in Brittany, and the fair countess had "the courage of a man and the heart of a lion.";

With her infant son in her arms, she presented

herself to the people, and implored their assist-

ance for the only male issue of their ancient

line of princes. Such an appeal from a young

and beautiful woman made a deep impression,

and by eloquent discourse, by promising, and

giving, she reanimated the courage of her party.

As if expressly to refute the argumentations

of her husband, she put her hand to the sword,

put a steel easque on her head, and rode from castle to eastle,-from town to town,-raising

troops and commanding them like a hardy knight.

She sent over to England to hasten the succour

Charles de Blois. Within the walls she had the worst of enemies in a cowardly old priest, the Bishop

of Leon, I who was incessantly expatiating to the

two competitors : as soon as his brother was dead, he rode to Nantes, and caused his claim to be recognised by the majority of the bishops and nobles; he got possession of the treasures of the late duke, besieged and took Brest, Vannes, and the other chief fortresses, and then crossed over to England, privately, to solicit the eo-operation of Edward,

leaving only a daughter, Jane, surnamed La

being well assured that, with or without reference to the old laws of Brittany, Philip would protect his nephew. Charles de Blois, in effect, went to Paris with his wife, and having no party in Brittany, threw himself upon the protection of Philip, who received him in a manner that left no doubt as to his decision. John de Montfort soon returned from England, and when summoned to attend a court of peers and other magnates (all of them French) which Philip had convoked to try this great cause, he went boldly to Paris, accompanied by four hundred gentlemen of Brittany. fort's pleadings, which have been preserved, are remarkable specimens of the taste, the law, and the spirit of the times. The divine law, the natural law, the Roman law, and the foudal law, the canons of the church, and the ancient customs of Brittany were all put in requisition. He maintained, or his lawyers maintained for him, that the Sahe law, excluding females, which obtained in France, must now be the law of Brittany, which was a fief of France,—that he was nearer in blood to the late duke, his brother, than Jane, who was only the daughter of another brother; hut what was evidently considered the strongest ground of all was, the incapacity of females, and on this particular point heathen philosophers, Moses, and the Christian apostles were cited in most admired confusion. "We have," said he, "the example of the Blessed Virgin Mary, who never succeeded her son either in temporal or spiritual government; and it ought

to appear that women cannot succeed to peerages, for the peers are eounsellors of the king, and are

bound at his coronation to put their hands to the

sword; and what in sooth would become of us if all the peers of France were females?" To all

this Charles de Blois replied, that Jane, his wife,

had all the rights of her father,-that she was the

last shoot of the elder branch, -that females had repeatedly inherited the duchy,-and that her sex

did not exclude her from holding a French peerage,

seeing that the Countess of Artois had shortly

before been preferred to her nephew Rohert, who

Philip, however, was so far right that, by the old usages of Brittany, women had succeeded; but then the other party could assert and prove that this had only been the case in default of males, or when there was no sear male blood relation of the was a question where interests had more weight reigning family.

† Froissart.

1 It is not quite clear whether this bishop was coward or traitor: he had a brother in the service of Charles de Blois.

assault, and showing them how predent it would be to capitulate; but the young countess constantly visited all the posts, showed herself upon the lamparts, where the arrows of the enemy fell thickest, and repeatedly headed sorties against the besiegers. They could not be men who were not animated by this spectacle;—the women of the place caught the spirit of their chieftainess, and, without distinction of rank, dames, demoiselles, and others, took up the pavement of the streets and earried the stones to the walls, or prepared pots full of quicklime to throw over the battlements on the assadants. One day, during an assault which had lasted nearly ten hours, the fair countess ascended a lofty tower to see how her people defended themselves: looking beyond the walls, she saw that Charles de Blois had brought up nearly all his forces to the attack, and that his camp was hadly guarded. She descended and, "armed as she was," mounted her war-horse; three hundred brave knights and squires sprang into the saddle to follow her, and assuing through a gate on the side opposite to that where the French were fighting, she galloped round, under cover of some hills and woods, and fell upon the eamp, where she found none but horse-boys and variets, who instantly fied. She set fire to the tents, and caused a wonderful disorder. When the lords of France saw their lodgmgs burning and heard the alarum, they ran back to the camp crying out, "Treason! treason!" and aobody remained to carry on the assault. Having thus relieved the town, the countess would have returned into it, but the besiegers threw themselves across her path, and obliged her to fly for safety into the open country. Louis d'Espagne, who was marshal, pursued the enemy without knowing that she was among them, and he killed several of her men-at-arms that were not well mounted; but the countess " rode so well " that she and a great part of her three hundred companions escaped unburt, and soon after threw themselves into the eastle of Anlray, which, according to the tradition of the Bretons, had been built by King Arthur. When the French knew that it was the countess who had done them all that mischief, they marvelled greatly. Within Hennebon it was not known for five whole days what had become of the hrave lady; some thought she must be slain, and all were ill at ease on her But the wife of De Montfort had made good use of this time; she summoned her friends in the neighbouring country, and managed so well, that instead of three hundred, she had five hundred or six hundred companions, armed and well mounted. Leaving Aulray at midnight, she appeared at sunrise on the sixth morning under Hennebon, and dashing between the besiegers' camp and the ramparts, she got safely to a gate which was opened for her, and entered the town with the triumphant sounds of trumpets and horns, at all which the French host marvelled mightily, and then went to arm themselves.\* Froissart, VOL. J.

At last, a scarcity of provisions began to be felt

days passed. On the morrow, the garrison was wholly dishcartened, the bishop again communicated with the enemy, and the French were coming up to take possession, when the countess, who was looking over the sea from a casement in the tower, suddenly cried out with great joy, " The English, the English! I see the succours coming." And it was, indeed, the English fleet she saw crossing the line of the horizon. It had been detained forty days by contrary winds, but it now came merrily over the waves with a press of sail. The people of Hennebon crowded the seaward rampart to enjoy the right. All thoughts of surrendering were abandoned; in brief time the English ships, "great and small," shot into the port, and landed a body of troops, under the command of Sir Walter Manny, as brave a soldier as ever drew sword. The fair countess received her deliverers with enthusiastic gratitude, and with a refinement of courtesy. For the lords and captains she dressed up chambers in the castle with fine tapestry, and she dined at table with them. On the following day, after a good dinner, Sir Walter Manny said, "Sits," have a great mind to go forth and break down this great battering engine of the French, that stands so near us, if any will follow me." Then Sir Hugh of Tregnier said that he would not fail him in this first adventure; and so said Sir Galeran. The knights armed, and the yeomen of England, who really did the business, took their hows and arrows. Manny went quietly out by a postern with three hundred archers, and some forty men-at-arms. The archers shot " so thick together," that the French in charge of the engine could not stand it; they fled, and the machine was destroyed. Manny then rushed on the besiegers' tents and lodgings, set fire to them in many places, smiting and killing not a few, and then withdrew with his companions "fair and casily." The countess, who had seen the whole of this gallant sortie from the high tower, now descended, and came forth joyfully and kissed Sir Walter Manny and his comrades one after the other two or three times, like a brave lady.\* The French now despaired; and the very morning after this affair they raised the siege of Hennebon, and carried the war into Lower Brittany, where they took several towns. But soon after, they suffered a tremendous loss at Quimperle, where an army, under the command of Don Louis d'Espagne, was ent to pieces almost to a man, by the English and the people of the countess. Some months after, however, Charles de \* Froissart.

within these well-defended walls, and still the suc-

cours of Edward did not arrive. Day after day,

anxious eyes were cast seaward, and still no fleet

mal croaking, and at length was allowed to pro-

pose a capitulation. The countess, however,

entreated the lords of Brittany, for the love of God,

to conclude nothing as yet, and told them she was

sure she should receive great help before three

Blois re-appeared in great force before Hermebon, and began a fresh siege. Encouraged by the recollection of their former defence, and by the presence of their heroic countess and Sir Walter Manny, the people in the town cared little for the number of the besiegers, to whom they cried in mockery, from the walls, "You are not numerous enough yet; you are not enough! go, and seck your companions who sleep in the fields of Quimperlé." Another brilliant sortie, headed by

762

Sir Walter, put an end to this second siege—the French retreating with disgrace. The wife of De Montfort then went over to England to press for further reinforcements which had been promised. Edward furnished ber with some chosen troops, which were placed under the command of Robert of Artors, and embarked in forty-six vessels, most of which were small and weak. Off Guernsey, the ships encountered a French fleet of thurty-two tall ships, on board of which were a thousand men-atarms, and three thousand Genoese crossbow-men. A fierce fight ensued, during which De Montfort's wife stood on the deck with a "stiff and sharp sword" and a coat of mail, fighting menfally; but the combat was interrupted by the darkness of night and a tremendous storm, and the English, after suffering some loss, got safely into a bittle port between Hemichon and Vannes. Robert of Artois landed the troops, and proceeded with the countess to lay siege to Vannes, which had been taken for Charles de Blois — Vamoes was carried by a night assault, and then the lady returned to Hennebon. Soon after, Vannes was retaken by an immense host, led on by Ohvier de Classon and De Beaumanon. Robert of Arrors escaped with difficulty through a postern gate, but he was sorely wounded, and obliged to return to London, where, within a few weeks, he finished his stormy career, to the infinite joy of his loving brother-inlaw the French king. Edward then determined to head the war in Brittany himself, and sailed to Hennebon with twelve thousand men. He marched to Vannes, and established a siege there; he then proceeded to Rennes, and thence to Nantes, wast-

hım. But Charles de Blois was reinforced by the Duke of Normandy, the cldest son of the French king, and then Edward retraced his steps to Vannes, which has captains had not been able to take. When the Duke of Normandy followed him with a far superior force he intrenched himself in front of Vames, and then the French formed an intrenched camp at a short distance from him. Here both parties lay inactive for several weeks, during which winter set in. The Duke of Normandy dreaded every day that Edward would be reinforced from England; and it appears that an English fleet was actually on the way. On the other side, Edward dreaded that he should be left without provisions before it arrived. At this juncture, two legates of the Pope arrived at the hostile camps, and, by their good offices, a trace was con-

ing the country, and driving the French before

English departed, boasting that the cardinals had saved the city of Vannes-the French vannted that the truce had saved Edward.\* Never was a truce less observed. One of the \*\*

conditions of it was, that Philip should release John de Montfort; but Philip kept him in closer imprisonment than before, and answered the remonstrances of the pope with a miserable quibble. The war was continued against the Bretons, who still fought gallantly under their countess, and hostilities were carried on, both by sea and lami. between the French and English. The people of both nations were so exasperated against each other, that they seldom missed an opportunity of fighting, caring nothing for the armistice which their princes had sworn to. A savage deed threw an odium on King Philip, and roused the empity of many powerful families. During a gay tournament, he suddenly arrested Ohvier de Clisson, Godfrey d'Harcourt, and twelve other Inights, and " had their heads cut off in the undst of the Halles, or market-place of Paris. He sent the head of De Clisson into Brittany, to be stuck up on the walls of Nantes. Other nobles were disposed of in the same summary manner in Normandy and elsewhere. They were all said to have been guilty of a treasonable correspondence with England; but not one of them was brought to trial, or subjected to any kind of legal examination. A cry of horror ran through the land. The lords of Brittany, who had supported Charles de Blois, instantly went over to the countess; other lords, fearing they might be suspected, fled from the court, and then really opened a correspondence with Edward, and doomed Philip to destruction. But of all the enemies created by this atrocious act, none was so ardent as Jane de Belville, the widow of the murdered De Chsson—a daring woman, who soon rivalled the exploits of the Countess de Montfort, to whom she presented her son, a how of seven years, that he might be brought up with the young Soon after these events, John de De Montfort. Montfort, who had been a captive for three years, and who now probably feared for his life, contrived to escape in the disguise of a pedlar, and to get over to England. Having renewed his homage to Edward, he received a small force, with which he repaired to Hennebon. The joy of his heroic wife was of short duration—for De Montfort sickened and died shortly after, appointing by will the king of England guardian to his son. Charles de Blois returned into the country, and renewed the war with greater ferocity than ever; but he had no chance of success, and Brittany remained an efficient ally of Edward. Whether he carried the war into Normandy or Poictou, it covered one of his flanks, and remained open to him as a place of retreat in case of a reverse. For some time, both he and Philip had been preparing for more ex-

tended hostilities. The latter had adulterated the

coinage, had impoverished France with all manner

the monopoly of salt. Edward declared that his rival now, indeed, reigned by salic law; Philip retorted by calling Edward a wool merchant.\* A. D. 1345. Sharing in the popular feeling, the English parliament recommended war, begging, however, that the king would not suffer himself to be duped by foreigners, and expressing their hope that he would finish the contest in a short time by battle or by treaty. An army was sent into Ginemic, where the French had seized many towns, under the command of Edward's consin, the brave and accomplished Earl of Derby. The earl fell like a thunderbolt among the French; beat them in a decisive battle near Auberoche; took many of their nobles prisoners, and drove them out of the country, leaving only a few fortresses in their hands. About the same time Edward went in person to Shive, to treat with the deputies of the free cities of Flanders. As Louis, the Count of Flanders, hough deprived of nearly all his revenues, and left with scarcely any authority, still refused to acknowledge the rights of the English king to the crown of France, Edward endeavoured, rather prematurely, to persuade the Flornings to transfer their allegiance to his own son. His old ally, James Von Artaveldt, entered into this view; and his exertions for Edward cost him his life. Many of the cautious burgomasters opposed this extreme measure, and set intrigues on foot; and Von Artaveldt's long and great power, however wisely used, in the main, for the good of the country, had raised him up manerous enemies. Bruges and Ypres assented to his proposals, but Ghent was in the worst of humours. As he rode into the town he saw the people, who were wont to salute him cap in hand, turn their backs upon him. Doubting some mischief, he got to his house, and made fast his gates. Scarcely lad he done this, when the street in which he dwelt was filled from one end to the other by a furious mob, who presently proceeded to force his doors. With the help of his trusty servants he defended his house for some time, and killed and wounded several of the assailants; but the mob still increased, the mansion was surrounded, was attacked on all sides,—further resistance was hopeless. Then Von Artaveldt presented himself at a window bare-headed, and spoke with fair words. "Good people," said he, "what aileth you, and why are you so troubled against me?" "We want to have an account of the great treasures of Flanders which you have sent out of the country without any tittle of reason," cried the multitude as with one voice. Von Artaveldt replied very mildly, "Certes, gentlemen, of the treasures of Flanders never have I taken anything: return quietly to your homes, I pray you, and come here to-morrow morning, when I will

without our assent; for which thing you must die." When Von Artaveldt heard these words he joined his hands together, and began to weep very tenderly, and said, "Gentlemen, what I am, you yourselves have made me: in other days you swore to defead me against all men, and now you would kill, me without reason: do it you can, for I am but one man against so many. Take counsel of yourselves, for God's love, and remember the past. You would now render me a sorry reward for all the good I have done you. Do you not know how trade was rained in this country, and how I recovered it. After that I governed you in so great peace; so that in time of my governing ye have had all things as you could wish—corn, oats, money, and all other merchandizes; by the which yon have restored yourselves, and got into good condition." But the fury of the mob was unabated by this touching appeal, though the truth it contamed was undemable: they cried out, "Come down, and do not preach to us from such a height;" ant they renewed their attack. Then You Artaveldt shut the window, and intended getting out of his house the back way, to take shelter in a church adjoining; but his hotel was already broken into on that side, and more th**an** four hundred fierce men were there calling out for him. At last he was seized, and slain without merev: his death-stroke was given by a saddler who was named Thomas Denys. Thus, James Von Arayeldt finished his days;—the brewer of Ghent, who, in his time, had been complete muster of Flanders. "Poor men first raised him, and wirked men killed hun,"\* The news of this great event gave great joy to the Count of Flanders, and great grief to King Edward, who sailed away from Sluys, vowing

the treasury, and sent the money into England

mmdered his steady friend and most valuable ally. The free towns fell into great consternation, -their prosperity depended on their trade; their trade in a great measure depended on England. If Edward should shut his ports to their manufactured goods, r prohibit the exportation of English wool, they knew that they would be little better than ruined. Bruges, Ypres, Courtray, Oudenarde,-all the chief towns except Ghent, - sent deputies to London to soften the dangerous wrath of the English king, and to vow that they were guiltless of the murder. Edward waved his claim to the formal cession of Flanders to his son, and contented himself with other advantages and promises, among which was one that the Flemings would, in the course of the following year, pour an army into France, while Edward attacked that kingdom from another quarter. In 1346 Edward collected a fine army, consist-

vengeance against the Flemings who had thus

ing solely of English, Welsh, and Irish, and landed with them on the coast of Normandy, near Cape la Hogue, about the middle of July. That

reason be satisfied." But they eried "Nenny!

been expected to fall upon the south. In the latter direction the Duke of Normandy had fallen upon the gallant Earl of Derby, and was endeavouring, with the flower of the French army, to drive the English from Guienne. One of Edward's principal objects was to create an alarm which should draw the French ont of that province, and, by crossing the Scine, to join lus allies, the Flemings, who had actually passed the French frontier. Having taken Carenton, St. Lo, and Caen, and plundered and wasted the country, be marched to the left bank of the Seme, intending to cross that river at Roucn; but, when he got opposite that town, he found that Philip was there before him, that the bridge of boats was removed, and that a French army, in numbers far superior to his own, occupied the right bank. The English then ascended the river towards Paris by the left bank, the French manœuvring along the right, breaking down all the bridges, and preventing the enemy from passing the river. Edward burnt the villages, sacked the towns of Vernon and Mantes, and at last came to Poissy, within eight or nine miles of Paris. Here there was a good bridge, but it had been partially destroyed by order of Philip, who was as anxious to keep his enemy on the left bank as Edward was to get to the right. The English marched from Poissy to St. Germann, which they burnt to the ground; by seizing some boats on the river they were enabled to do still further mischief; and St. Cloud, Bourg-la-Reme, and Neully were reduced to ashes. Still, however, Edward's situation was critical; he was separated from his auxiliaries, and Philip was reinforced Edward struck his tents, and advanced as if he would attack Paris, and his van really penchated to the suburbs of that capital. This movement obliged the French to march over to the opposite

Having examined the bridge at Poissy, bank, to the relief of that city. This was what Edward wanted: he then wheeled round, cleared the remains of the bridge of Poissy by means of his bowmen, repaired it, and crossed to the right bank with little loss. From the Seine he continued his way, by forced marches, towards the river Somme, burning the suburbs of Beauvais, and plundering the town of Pois. Philip now determined to prevent his crossing the Somme: by rapid movements he got to Amicus on that river, and sent detachments along the right bank to destroy the bridges and guard every ford. The English attempted to pass at Pont St. Remi, Long, and Pequigny, but failed at each place. Meanwhlle, Philip, who had now one hundred thousand men, divided his force, and while one division was posted on the right bank to prevent the passage of the English, he marched with the other along the left, to drive them towards the river and the sea. So close was he upon his enemy, that he entered Airaines. where Edward had slept, only two hours after his departure. That evening the English reached Oisement, near the coast, where they found them-

and promised liberty and a rich reward to any one of them that could show him where he, his army, and waggons might cross without danger. A common fellow, whose name was Gobin Agace, told bim that there was a place, a little lower down, called Blanche-Taque, or the White Spot, which was fordable at the cbb of the tide. "The King of England," says Froissart, "did not sleep much that might, but, rising at midnight, ordered his trumpets to sound." Instantly the baggage was loaded, and everything got ready. At the peep of day the army set out from the town of Oisemont under the guidance of Gobin Agace, and soon came to the ford of Blanche-Taque; but Edward had the mortification to find not only that the tide was full, but that the opposite bank of the river was lined with twelve thousand men under the command of a great baron of Normandy called Sir Godemar du Fay. He was obliged to wait till the hour of "primes," when the tide was out. This was an awful suspense, for every moment he expected Philip in his rear. The French king, however, did not come up, as he certainly ought to have done; and as soon as it was reported that the river was fordable, Edward commanded his marshals to dash into the water, "in the names of God and St. George." Instantly the most doughty and the best-mounted spurred into the river. Half way across they were met by the cavalry of Sir Godemar du Fay, and a herce conflict took place in the water. When the English had overcome this opposition they had to encounter another, for the French still occupied, in battle array, a narrow pass which led from the ford up the right Among others posted there, was a strong body of Genoese crossbow-men, who galled them sorely; but the English archers "shot so well together," that they forced all their opponents to give way, npon which Edward cleared the bank of the river; and while part of his forces pursued Du Fay, he encamped with the rest in the pleasant fields between Crotoy and Creey. Philip now appeared on the opposite side of the ford, where Edward had so long waited; but he was too latethe tide was returning and covering the ford; and, after taking a few stragglers of the English army who had not crossed in time, he thought it prudent to return up the river, to cross it by the bridge of Abheville. On the following day Edward's marshals rode to Crotoy, in the harbour of which they found many vessels laden with wines from Poictou, Saintonge, and La Rochelle: the best of the wines they carried off as a seasonable refreshment to the army—the town they burnt. the frontiers of Flanders, but nothing was seen or

was six times more numerous than their whole

force. The marshals of the army were again sent

to see whether there were any ford, but they again

returned with the sad news that they could find

Edward then assembled all his prisoners,

[BOOK IV.

Edward was now within a few days' march of

-or there might have been other strong motives with which we are unaequainted to induce him to stay where he was and fight the whole French army, with what, to most men, would have appeared a hopeless disparity of numbers. When

told that Plnhp would still pursue him, he merely said, "We will go no farther; I have good reason to wait for him on this spot; I am now upon the lawful inheritance of my lady-mother,—upon the lands of Ponthieu, which were given to her as her marriage portion; and I am resolved to defend them against my adversary, Philip de Valois." As he had not the eighth part of the number of men that Philip had, his marshals selected an advantageous position on an eminence a little

behind the village of Creey. There the army set about brightening and repairing their armournand the king gave a supper that evening to the earls and barons,—and he made good cheer. supper he entered his oratory, and, falling on his knees, prayed God to bring him off with honour if he should fight on the morrow. Rising at early dawn, he and his son Edward heard mass, and

communicated: the greater part of his people confessed, and put themselves in a comfortable state of mind. They had not been harassed for many hours; they had fared well; they had had a good night's rest, and were fresh and vigorous. After mass the king ordered the men to arm and assemble, each under his proper banner, on spots which had been carefully marked out during the preceding day. In the rear of his army he enclosed a large park near a wood, in which he placed all his baggage-waggons and all his horses; for every one, man-at-arms as well as archer, was to fight that day on foot. Then his constable and marshals went to look to the three divisions. The first division was under the command of his young son, with whom were placed the earls of Warwick and Oxford, Sir Godfrey d'Harcourt, Sir John Chandos, and other experienced captains; it consisted of about eight hundred men-at-arms, two thousand archers, and one thousand Welsh foot. A little behind them, and rather on their flank, stood the second division of eight hundred men-atarms and twelve hundred archers, who were commanded by the earls of Northampton and Arundel, the lords De Roos, Willoughby, and others. The third division stood in reserve on the top of the hill; it consisted of seven hundred men-at-arms and two thousand archers. The archers of each division formed in front, in the shape of a portcullis or harrow. When they were thus arranged, Edward, mounted on a small palfrey, with a white wand in his hand, and a marshal on either side of him, rode gently from rank to rank, speaking to all his officers, exhorting them to defend his honour and his right; and he spoke so gently and cheerfully that those who were discomforted were comforted on hearing him and looking into his

drank very comfortably: and when that was over, they sate down, in their ranks, on the ground, with ther helmets and bows before them, so that they might be the fresher when their enemies should After his march and counter-march, on the day of Blanche-Taque, Philip rested at Abbeville, and he lost a whole day there, waiting for reinforcements, among which were a thousand lances of the Count of Savoy, "and," says Froissart, "they ought to have been there, as the count had been well paid for them at Troyes in Champaign three months in advance." This morning, however, the French king marched to give battle, breathing fury and vengeance: his countenance was clouded,—a savage silence could not conceal the agitation of lus soul, - all his movements were precipitate, without plan or concert. It seemed as if the shades of de Clisson and his murdered companions flitted before his eyes and obscured his vision. He marched rapidly on from Abbeville, and when he came in sight of the well-ordered divisions of Edward, his men were tired and his rear-guard far behind. By the advice of a Bohemian captain, he agreed to put off the battle till the morrow, and two officers immediately rode, one along the van and the other towards the rear, crying out, "Halt, banners, in the name of God and St. Denis!" Those

that were in front stopped, but those behind rode

on, saving that they would not halt until they were

as forward as the first. When the van perceived

the rear pressing on them they pushed forward,

and neither the king nor the marshals could stop

confident countenance. This courageous screnity

was one of the greatest advantages that Edward

had over his rival. At the honr of three he

ordered that all his people should cat at their case

and drink a drop of wme; and they all ate and

765

them, but on they marched without any order until they came near the English, when they stopped fast enough. Then the foremost ranks fell back at once in great disorder, which alarmed those in the rear, who thought there had been fighting. There was then room enough for those behind to pass in front had they been willing so to do: " some did so, and some remained very shy." All the roads between Abheville and Creey were covered with common people, who, while they were yet three leagues from their enemy, drew their swords, bawling out, "Kill! kill!" and with them were many great lords that were eager to make a show of their prowess. "There is no man," says Froissart, "unless he. had been present, that can imagine or truly record the confusion of that day, especially the bad management and disorder of the French, whose troops were innumerable." If all these circumstances are borne in mind, the most marvellous parts of the story will be reconcileable to probability and truth. The kings, dukes, earls, barons, and lords of France, advanced each as he thought best. Philip was carried forward by the torrent, and, as soon as he came in sight of the

English, his blood began to boil, and he cried out,

766

HISTORY OF ENGLAND.

" Order the Genoese forward, and begin the battle, in the name of God and St. Denis!" These Genocse were famous crossbow-men, under the command of a Doria and a Grimaldi: according to

Genor- Archer, winions up or bending his Cross how.

Froissart, they were fifteen thousand strong

they were quite fatigued, having that day murched six leagues on foot, completely armed and carrying their heavy cross-bows. Thus they told the cou-

screaming over both armies. About five in the afternoon, the weather cleared up and the sun shone forth in full splendour. His rays darted full in the eyes of the French, but the English had the sun at their backs. When the Genocse had made their approach, they set up a terrible shout to strike terror into the English; but the English veomen remained motionless, not seeming to care for it: they sent up a second shout, and advanced, but still the English moved not; they shouted a third time, and advancing a little, began to discharge their cross-bows. Then the English moved, but it was one step forward, and they shot their arrows with such rapidity and vigour "that it seemed as if it snowed." These well-shot arrows pierced shield and armour; the Genoese could not stand them. On seeing these auxiliaries waver and then fall back, the King of France cried out in a fury, " Kill me those scoundrels, for they stop our way without doing any good!" and at these words the French men-at-arms laid about them, killing and wounding the retreating Genoese. All this wonderfully increased the confusion; and still the Eng-Having got free from the rabble-rout, d'Alençon and the Count of Flanders skirted the English archers and fell upon the men-at-arms of the prince's battalion, where they fought fiercely

stable that they were not in a state to do any great

exploit of battle that day. The Count d'Alençon,

King Philip's brother, hearing this, said, "See what we get by employing such scoundrels, who fail

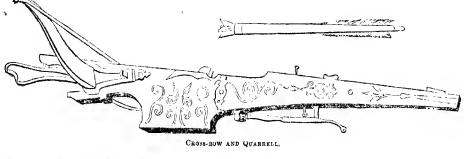

ns in our need." The susceptible Italians were not likely to forget these hasty and insulting words, but they formed and led the van. They were supported by the Count d'Alençon, with a numerous

things were passing, a heavy rain fell, accompanied by thunder; and there was a fearful eclipse of the sun: and before this ram a great flight of crows, the heralds of the storm, had hovered in the an,

cavalry, magnificently equipped.

[BOOK IV.

While these

lish yeomen kept shooting as vigorously as before into the midst of the crowd: many of their arrows fell among d'Alençon's splendid cavalry, and, killing and wounding many, made them caper and fall among the Genoese, "so that they could never rally or get up again." Many of these knights were despatched by Cornishmen and Welshmen, who had armed themselves with long knives for the purpose, and who erept through the ranks of the English archers and men-at-arms to fall upon the French, among whom they spared no one, killing earls and barons, knights and common men

for some time. The second division of the English moved to the support of the prince. The King of France was eager to support d'Alençon, but he could not penetrate a hedge of English archers which formed in his front. But without the king's forces, d'Alençon, with whom fought French, Germans, Bohemians, and Savoyards, seemed to all eyes more than a match for the prince. At a CHAP. I.]

replied, "No, Sire, please God, but he is hard beset." "Then," said the king, "return to those who sent resolved, if it please God, that this day be his, and

moment when the conflict seemed doubtful, the

Earl of Warwick sent to request a reinforcement

from the reserve. Edward, who had watched the

battle from a windmill on the summit of the hill,

and who did not put on his helmet the whole day,

asked the knight whether his son were killed, or

wounded, or thrown to the ground? The knight

that the honour of it be given all to him and to those to whose care I have intrusted him." When Sir Thomas Norwich reported this message, they were all greatly encouraged, and repented of having ever sent him. Soon after this, d'Alençon was killed, and his battalions were scattered. The King of France, who certainly showed no deficiency of comage, made several brilliant charges, but he was repulsed each time with great loss; his horse was killed under him by an English arrow, and the best of his friends had fallen around him. Night now set in, but not before he had lost the battle. At the hour of vespers he had not more than sixty men about him of all sorts. John of Hainault,\* who had once remounted the king, new said,-"Sire, withdraw, it is time; do not sacrifice yourself foolishly: if you have lost this time, you may win on some other occasion," and so saying, he laid hold of his bridle-rein and led him away by force, for he had entreated him to retire before this, but in vain. The king rode away till he came to the castle of La Broye, where he found the gates shut, for it was dark night. He summoned the châtelain, who came upon the battlements and asked who called at such an hour. The king answered, " Open, open, châtelain, it is the fortune of France !" The governor knew the king's voice, descended, opened the gates, and let down the bridge. The king and his company entered the castle, but he

had with him only five barons. After drinking a cup of wine, they set out again about midnight, and rode on, under the direction of guides who knew the country, until daybreak, when they came to Amiens, where the king rested. On the side of the English, matters went on much more joyously: the soldiers made great fires, and lighted torches because of the great darkness of the night. And then King Edward came down from his post, and, in front of his whole army, took the prince in his arms, kissed him and said, "Sweet son! God give you good perseverance! You are my true son, for loyally have you acquitted yourself this day, and worthy are you of a crown." Young Edward bowed very lowly, and, humbling himself, gave all the honour to the king his father. + Such was the memorable battle of Crccy: it was

day. When this destructive detachment returned to head-quarters, they found King Edward coming from mass, for during all these scenes of carnage, he never neglected the offices of religion. He then sent to examine the dead, and learn what French lerds had fallen. The lords Cobham and Stafford were charged with this duty, and they took with them three heralds to recognize the arms, and two secretaries to write down the names. They remained all that day in the fields, returning as the king was sitting down to supper, when they made a correct report of what they had seen, and told him that they had found the bodies of eleven princes, eighty bannerets, twelve hundred knights,

767

fought on Saturday the 26th day of August, 1346.

That night, however, Edward was scarcely aware

of the extent of his victory; and on the following

day he gained another, if that could be called u

victory where there was no resistance made, the

French falling like sheep in the shambles. On the

Sunday morning a fog arose, so that the English

could scarcely see the length of half an acre before

them. The king sent out a detachment of five

lumdred lances and two thousand archers to re-

connoitre and learn whether there were any bodies

of French collecting near him. This detachment

soon found themselves in the midst of a body of militia from Beauvais and Rouen, who wholly

ignorant of what had happened, had marched all

night to overtake the French army. These men

took the English for French, and hastened to join

them.\* Before they found out their mistake, the

English fell upon them and slew them without

mercy. Soon after, the same party took a different road, and fell in with a fresh force, under the Arch-

bishop of Ronen and the Grand Prior of France.

who were also ignorant of the defeat of the French,

for they had heard that the king would not fight

till the Sunday. Here began a fresh battle, for

those two spiritual lords were well provided with

stont men-at-arms. They could not, however,

stand against the English; the two lords were

killed, and only a few of their men escaped by

flight. In the course of the morning the English

found many Frenchmen, who had lost their road

the preceding evening, and had lain all night in

the open fields, not knowing what was become of

the king or their own leaders. All these were put

to the sword; and of foot soldiers sent from the

minicipalities, cities, and good towns of France,

there were slain this Sunday morning more than four times as many as in the great battle of Satur-

On Monday morning, the King of England ordered the bodies of the great knights to be taken from the ground, and carried to the monastery of Montenay, there to be buried in holy ground: and he made it known to the people of the country that he gave them three days' truce, that they might clear the field of Creey and inter all the dead. He then marched off to the north, keeping near the

and about thirty thousand common men.

<sup>•</sup> This press chevalier of Queen Isabella had quitted the English service, and entered the French, some time before. When first applied to by Philip, he urged that he had spent the flower of his youth in fighting for England, and that King Edward had always treated him with affection;—but he was not proof against a promise of increased pay. Froiseart.

Some old French writers say that the English heisted French colours, and st decoyed the militia.

coast, and passing through Montreuil-sur-mer. Among the princes and nobles that fell were Philip's own brother, the Count d'Alençon, the Dukes of Lorranic and Bourbon, the Counts of Flanders, Blors, Vaudemont, and Aumale. But the most remarkable victim was John de Luxembourg, King of Bohemia: he was old and blind, but on hearing that his son was dangerously wounded and forced to abandon the field, and that nothing could resist the Black Prince, he resolved to charge himself; and placing himself between two knights, whose bridles were interlaced on either side with his, he charged and fell. His crest, three ostrich feathers with the motto "Ich dien" (I serve), was adopted by Prince Edward, and has ever since been borne by the princes of Wales.\*

On Thursday the 31st of August, five days after the great battle of Creey, Edward sate down before Calais and began his famous siege of that strong and important place,—a siege, or rather a blockade, which lasted nearly a year, and which was enlivened by many brilliant feats of arms. An immediate consequence of his victory at Creey was the withdrawing of the Duke of Normandy from Guienne, where the Earl of Derby was almost reduced to extremities notwithstanding the gallant assistance of Sir Walter Manny, who had removed a small hody from Brittany to Gascony. As soon as the French army had cleared the country, Derby, with an inconsiderable force, left Bordeaux, and crossing the Garonne and the Dordogne, laid waste the land even as far as the walls of Poictiers, which rich city he took by storm and plundered. After these exploits, he returned loaded with booty to Bordeaux.

While Edward was occupied at Calais, Philip resorted to measures which he hoped would create such a confusion in England as to oblige his im-Ever since his guest mediate return thither. David Broce had been reseated on the throne he had kept up an active correspondence with Scotland, and three successful inroads on the English frontier had arisen, not less from his suggestions than from the eagerness of the Scots for revenge and plunder. His commonications were now more frequent, and, in the month of September, King David himself marched from Perth at the head of three thousand regular cavalry and about thirty thousand others, mounted on galloways. It is said that he was confident of success, seeing that nearly the whole chivalry of England was absent. He rode into Cumberland, took the peel, or eastle, of

Liddel on the 2nd of October, and then marched into the bishopric of Durham. While he lay at Bearpark, near the city of Dorbam, the English assembled an army in Auckland Park. Queen Philippa, according to Froissart, mounted a horse and rode among these troops, discoursing like a heroine, and recommending to their courage the safety of their country, and the honour of their absent king. She did not, however, he admits, like the Countess of Montfort and the other heromes in Brittany, take a part in the battle, but after recommending them to God and St. George, she withdrew to a safe place. But no old English writer mentions the presence of Philippa on this occasion; and we fear the story, however onuamental, must be reckoned among the fabulous embellishments of history. The Scots were ignorant of all the movements of the English: Douglas, the famous knight of Liddesdale, who had scorred the country as far as Ferry Hill, was intercepted on his return by the English at Sunderland Bridge. He cut his way through them, but lost five hundred of his best men. David, though taken by surprise, immediately formed his troops, and a decisive battle was fought at Nevil's Cross. The English counted among their forces three thousand archers, and these men as usual decided the affair. the Scottish horse were crowded together, they let fly at them from under cover of hedges, and choosing their aim, they soon unhorsed many of their best knights. On this occasion David showed much of the courage of his father, but that great man's prudence and generalship were altogether wanting. After being twice wounded, and still disdaining to flee or sorrender, he was forcibly made prisoner by one Copland, a gentleman of Northumberland, who carried him off the field to his tower of Ogle. Three earls and forty-nine barons and knights shared the fate of the king. The Earl of Monteith, who had accepted office under Edward, and the Earl of Fife, who had done homage to Edward Baliol, were condemned as traitors without any form of trial, by the king in council at Calais. Monteith was barbarously executed, but Fife was reprieved on account of his relationship, his mother having been niece to Edward I. King David was soon carried to London and safely lodged in the Tower. The battle of Nevil's Cross, which wonderfully elated the English, was fought on the 17th of October.\*

In the meantime Edward's ally, the Countess of Montfort, continued to defend the inheritance of her infant son, being well supported by an English force of one thousand men-at-arms and eight thousand foot, under the command of Sir Thomas Dagworth. On the night of the 18th of June, 1347, while her bitter enemy, Charles de Blois, was lying before Roche Derrien, which he was hesieging with fifteen thousand men, he was suddenly attacked by the English. In the confusion of a nocturnal battle, Sir Thomas was twice taken prisoner, and twice released by his brave followers.

<sup>•</sup> Freissart. He says that he had his accounts of the battle of Creey, not only from Englishmen engaged, in it, but also from the geople of John of Hainauit, who was near the person of the King of France the whole day. A contemporary writer, (flowann') Viland, in his 'History of Florence,' relates that cannon were used by the English at the battle of Creey, and that four of these newly invented engines which Edward planted in the front of his sarny did great execution. This circumstance is not mentioned by Froissart; nor is his account very coosistent with the supposition that cannon were used. It seems unlikely, too, that he should have omitted so results and a supposition of the continuous translations. It appears to be extrain, however, that the use of cannon was introduced some years befure the hattle of Creey. Ducauge (art. Bombarda') shows that the French employed cannon at the siege of Puy Guillaume, in 1338; and a species of fire-arms at least, which Rarbour in his 'Life of Bruce, calls' creaky sof war,' was tused by the English in the expedition against Scotland, in 1327.

Снар. [.]

garrison began to fail them, and they wrote to

King Philip that they had eaten their horses, their

dogs, and all the nuclean animals they could procure, and that nothing was left for them but to gat

one another. This letter was intercepted by the

English; but Philip knew the straits to which they were reduced, and resolved to make a great

effort to save this important place. The "Ori-

flamme," the sacred banner of France, which was

not to be used except against infidels, was unfurled; the vassals of the crown were summoned

from all parts; and, in the month of July, Philip marched towards Calais. That town, however,

was only approachable by two roads-the one

along the sea-shore, the other over bogs and

marshes and Edward guarded both-the one with

his ships and boats, which were crowded with

archers; the other by means of towers, fortified

bridges, and a great force of men-at-arms and

archers, under the command of the brave Earl of

Derby, who, as well as Sir Walter Manny, had

come from • Gascony for this great enterprise.

Philip was not bold enough to attempt either

passage; and after a fruitless attempt at nego-

flation, and an idle challenge, he withdrew his

army, and left Calais to its fate. When the

faithful garrison had witnessed his departure, they

hung out the flag of England, and asked to capi-

tulate. Edward, enraged at their obstinate resist-

ance, and remembering, it is said, the many acts

of piracy they had formerly committed upon the

English, refused them any terms, saying that he

Walter Manny, and many barons who were then

present, pleaded in favour of the men of Calais.

"I will not be alone against you all," said the

six of the notable burgesses must come forth naked

in their shirts, bare-legged, with halters round

their necks, and the keys of the town and eastle

in their hands. On these I will do my will, and

the rest I will take to my mercy." When Sir

Walter Manny reported this hard condition to

John de Vienne, that governor went to the market-

place and ordered the church hells to be rung: the

people-men, women, and children-repaired to

the spot, and, when they had heard Edward's

message, they all wept pitcously, and were inca-pable of forming any resolution. Things were in

this state when the richest burgess of the town,

who was called Messire Eustace de St. Pierre, rose

up and said, before them all, - "Gentlemen, great

and little, it were great pity to let these people

perish,—I will be the first to offer up my life to

save theirs." After him another notable burgess,

a very honest man, and of great business, rose and

"Sir Walter, you will tell the captain that

would have an inconditional surrender.

CIVIL AND MILITARY TRANSACTIONS.

to England, to add another royal captive to those already in Edward's power: he was confined in the Tower of London, as his Myal, de Montfort, had been confined in the Tower of the Louvre. The affairs of Charles were hereby ruined; but his wife, Joan the Lame, fought some time for her captive husband, as the wife of de Montfort bad fought for hers when he was a prisoner at Paris. This has been well called the age of heroines; in Brittany alone there were three ladies showing the firmness and valour of men; but, in the end, the Countess Joan was foiled, and the Countess of Montfort preserved the dominion for her son, who afterwards held the country, and transmitted it to

Charles de Blois was taken prisoner, and sent over

his children.\* Edward, meanwhile, pressed the blockade of Calais, the garrison and inhabitants of which were neither won by his promises nor intimidated by his threats. As it was a place of incredible strength, he wisely resolved not to throw away the lives of his soldiers in assaults, but to reduce it by famine. He girded it on the land side by intrenchments, and he built so many wooden houses for the accommodation of his troops, that his encampment looked like a second town growing round the first: the old French writers, indeed, call it La Ville de Bois. At the same time his fleet blockaded the harbour, and cut off all communication

by sea. John de Vienne, the governor of Calais, could not mistake Edward's plan, and, to save his provisions, he determined to rid himself of such as are called, in the merciless language of war, " useless months." Seventeen hundred poor people, of both sexes and of all ages, were turned out of the town and driven towards the English Edward gave them all a good dinner, and then dismissed them into the interior of the conntry, even presenting them with a little money to supply their immediate wants. As provisions waxed low the governor made a fresh search for "useless mouths," and five hundred more of the inhabitants were thrust out of the town: but this time Edward was not so merciful, and all of them are said to have perished miserably between his lines and the town walls, as the governor would not re-admit them. A few Norman vessels cluded the vigilance of the English fleet, and conveyed some victuals into the town; but from that time the mouth of the port was quite blocked up, and the Earl of Warwick, with eighty "tall ships," constantly swept the Channel. Fresh squadrons of English ships were sent to sea from time to time, till at length their united number was prodigious. † A French fleet, attempting to relieve

After nine years' captivity. Charles de Blois was liberaled on a ransom, which he never paid; and he was killed in 1364, at the battle of Aulray, or Auray, where the young Count do Montfort, and his English allies gained a great victory.

Hakluyt has printed the roll of these fleets, extant, in his time, in the king's great waxdrobe. The south fleet consisted of 493 sail, and 9530 men; the north of 217 sail, and 4521 men. There were 38 foreign ships, among which was included 1 from Ireland; thu

VOL. I.

said that he would accompany his compeer, Messire Eustace; and this one was named Messire Jehan others were, 15 from Bayonne, 7 from Spain, 14 from Flanders, and 1 from Guelderland. Most of these vessels must have been very amall; but there were some carrying crews of 100 to 200 men each,—Hackluyt, Southey's Nav. Hist.

d'Aire. After him rose up Jaques de Wisant, who was very rich in goods and lands, and said that he would accompany his two consms, as did Peter Wisant, his brother: then the fifth and the sixth offered themselves, which completed the number the king demanded. The governor, John de Vienne, mounted a small hackney, for his wounds prevented him from walking, and conducted them to the gate. The English barriers were opened, and the six were admitted to the presence of Edward, before whom they prostrated themselves, and, presenting the keys, begged for mercy. All the barons, knights, and others who were there present, shed tears of pity, but the king eyed them very spitefully, for much did he hate the people of Calais; and then he commanded that their heads should be struck off. Every Englishman entreated him to be more merciful, but he would not hear Then Sir Walter Manny said, "Ha! gentle sire, let me beseech you to restrain your wrath! You" are renowned for nobleness of soul, —do not tarnish your reputation by such an act These worthy men have, of their own free will, nobly put themselves at your mercy, in order to save their fellow-eitizens." Upon this the king made a grimace, and said, "Let the headsman be summoned." But the Queen of England, who was far advanced in her pregnancy, fell on her knees, and, with tears, said, "Ah! gentle sire! since I have crossed the sea with great danger, I have never asked you anything . now, I humbly pray, for the sake of the son of the Holy Mary and your love of me, that you will have mercy of these six men." The kmg looked at her, and was silent awhile: then he said, "Dame, I wish you had been somewhere else; but I cannot refuse you-I put them at your disposal." Philippa caused the halters to be taken from their necks, gave them proper clothes and a good dinner, and then dismissed them with a present of six nobles each.\*

QUEEN PHILIPPA INTERCEDING FOR THE BURGESSES OF CALAIR-Bird.

On the following day, August 4th, 1347, the king and queen rode towards the town, which they entered to the sound of trumpets, drums, and all

kinds of warlike instruments. They remained there until the queen was delivered of a daughter, who was called Margaret of Calais; and after that they rearried to Enigrand, Edward having agreed to a truce with Philip, which was gradually prolonged for six years. The French king's finances were completely exhausted; but it appears that neither he nor his rival would have suspended hostilities had it not been for the juterference of the pope, who had never ceased to implore for peace.

Encouraged by his brilliant successes, the parhament had hitherto voted grants to the king with great liberality, but now the weight of taxation began to be felt, and people, as usual, wearied of the war for which they had been so eager. The wealth brought into the country by the plunder of France was probably far from being equal to that which was taken out of it, though, in numerous instances, the scenes of the Conquest were reversed, and men who went "poor wights" ont of England returned rich lords; and though, what with prizes made by sea and pillages by land, the country was stocked with French goods and furniting of all The siege of Calais had cost immense sums, and Edward on his return was greatly in want of money. On the 14th of January, 1348, he asked the advice of his parliament touching the prosecution of the war with France. The commons, suspecting that this was but a prelude to the demand of a subsidy, declined giving any answer. When the parliament met again, on the 17th of March, the king told them that the French were making mighty preparation to invade England, and he demanded an aid on that account. In real truth, there was no danger whatever; but, after bitter complaints of taxation, and consequent poverty, three fifteenths were voted to be levied in three years. In the course of this year, an attempt made by the French to recover Calais, by bribing the governor, gave Edward an opportunity of displaying his personal valour and generosity; and in the following year he commanded in a naval battle against the Spaniards belonging to the ports of the Bay of Biscay, who had given him many causes of discontent by joining the French and by plundering his trading vessels. The battle was fought within sight of the hills behind Winchelsca, whence the queen's servants watched it with an anxious eye. Edward and the Prince of Wales were never in such danger; the king's ship was sinking, when the brave Earl of Derby, recently created Duke of Lancaster, came to his assistance, and in the end they gained a brilliant victory, taking fourteen of the Spanish ships, but not

truce, which, however, was but indifferently observed, the English and French frequently fighting at sea, in Brittany, and in the south of France.

As if in mockery of the petty carnage of men, who, doing their most, could only sacrifice a few thousand lives at a time, and on a given spot, the

plague now invaded Europe, destroying its hundreds of thousands, and depopulating hundreds of towns

without great loss of knights and men. About

this time Philip of France died, and was succeeded

by his son, the Duke of Normandy, now John I. This new king gladly consented to prolong the

Germany, France, and at last embraced the western coast of England, whence it soon spread all over the land. It appeared in London in November, 1348, and there committed the most frightful ravages. According to some historians one-half of the whole population of England was swept away, and the dreadful malady affected the cattle in an equal degree. The poor suffered most; and, at the end of the great postilence, there were not hands enough left to till the soil.

Edward repeatedly complained to his parliament of the bad faith of the French, and got money from them to provide against their reported preparations for a renewal of the war; but this money was not

and cities at one and the same time. From the

heart of China, this pestilence, sweeping across

the desert of Cobi and the wilds of Tartary, found

its way through the Levant, Egypt, Greece, Italy,

thrown away, for at nearly every grant some concession favourable to the liberty of the subject was asked and obtained from this warlike bring. In part probably from a desire to reduce the Scots, who maintained their independence in spite of the captivity of their king, he several times made offers of peace to John of France, on condition of renouncing his pretensions to the French crown in exchange for the absolute sovereignty of Guienne, Calais, and the other lands which had been held as fiefs by the former kings of England. The pride of the French people, however, revolted at this notion; and after their king had committed his honour, and promised, at the congress of Guisnes, to accede to Edward's propositions, they drove him into a most unfortunate war.\* In 1355, Prince Edward opened the campaign in the south of France with an army of sixty

thousand men, only a small part of whom were English. From Bordeaux he marched to the foot of the Pyrences, burning and destroying: from the Pyrenees he turned northward, and ravaged the country as far as Tonlouse; he then proceeded to the south-cast, to the wealthy cities of Carcassome and Narbonne, both which he plut dered and burnt. Loaded with booty, his destructive columns got safely back to Bordeaux. A simultaneous movement made by his father in the north of France proved a failure; for the country was cleared of everything before his approach, King John, though at the head of a minerous army, would not fight, and Edward was obliged to turn back upon Calais through want of provisions; and there he was amused by a sort of challenge to a general buttle, to take place some day or other, till the Scots retook their town of Berwick, and rushed across the borders in hopes of reseuing their captive king, or of retrieving the honour they had lost at Nevil's At this news Edward hurried to meet his parliament, which assembled on the 23rd of November, and promptly voted him supplies for this emergency. It was the middle of January, 1356, before Ed-

It was the middle of January, 1356, before Edward could appear at Berwick; but, at his ap• Rymer.—Mezeray.

proach, as the Scots had only got possession of the town, and not of the castle, they withdrew. Edward was now fully resolved to put an end to the interruptions which the Scottish wars had so frequently offered to his wars in France, and to effect a final conquest of the kingdom. His army was immense, and composed in great part of tried soldiers, men clated by the many victories they had obtained on the continent. As if nations were to be bought and sold, and made over by sheets of parchment, he purchased, at Roxburgh, on the 20th of January, all Edward Baliol's rights to the Scottish throne for 5000 marks, and a yearly annuity 8f 2000/.-- a vast deal more than they were worth—for Bahol had no rights acknowledged by the nation, which had thoroughly expelled and renounced him ever since the year 1341. With these parchments in his chest, the King of England marched through the Lothians, burnt Haddington and Edinburgh, and wasted the neighbouring country. But here again he was compelled to retreat, by want of provisions: the Scots, who could not meet him m the field, harassed his retiring forces, and inflicted a dreadful vengeance on the rear, and on all stragglers, for the horrible devastations they had committed. The Scots called this inroad the "burnt Candlemas;" and many an English village afterwards was made to blaze for the fires which Edward had kindled. From this time Edward Baliol drops ont of notice, and he died a childless and a childish old man, at

Doncaster, in the year 1363. From causes which are not explained, but at which it is not difficult to guess, Edward neither measured the war in Scotland, nor reinforced his son in France; for the Black Prince,\* as late us July in the following year, took the field with only twelve or fourteen thousand men, few of whom were English, except a body of archers, the rest being chiefly Gascons. The prince's plan seems to have been merely to repeat the plundering, devastating expedition of the preceding year. By rapid marches, he overran the Agenois, the Limousin, and Auvergne, and penetrated into Berri, in the very heart of France, burning, destroying, and plundering. He advanced so far, that he "came to the good city of Bourges, where there was a grand skirmish at one of the gates." He found Bourges, and afterwards Issodun, too strong for him, but he took Vierson by storm, and burnt Romorantin, a town about ten leagues from Blois. The King of France advanced from Chartres, and, crossing the Loire, at Blois, made for the city of Poictiers. Edward, it appears, had so exasperated the French by his destructive proceedings, that not a man could be found to give him information of John's march; and, in utter ignorance, he turned to the south-west, and marched also for Poictiers. On the 17th of September, the English van came unexpectedly upon the rear of the great French army

• It appears to be now that the younger Edward was first called the "Black Prince," from the colour of his armour, which, says the Perc d'Orleans," gave celat to the fairness of his cor plexion, and herelet to his bonne mine."

at a village within two short leagues of Poictiers; and Edward's scouts soon after discovered that the whole surrounding country swarmed with the enemy, and that his retreat towards Gascony was cut off. "God help us!" said the Black Prince; "we must now consider how we can best fight them." He quartered his troops for the night in a very strong position, among hedges, vineyards, and bushes. On the following morning, Sunday, the 18th of September, John drew out his host m order of battle: he had, it is said, sixty thousand horse, besides foot; while the whole force of the Black Prince, horse and foot, did not exceed ten thousand men. But Edward had chosen a most admirable position, and the issue of this battle, indeed, depended on his "military eye" and on "the sinewy arms of the English bowmen." f When the battle was about joining, a legate of the pope, the Cardinal Talleyrand, arrived on the field, and implored the French king to avoid the carnage which must inevitably ensue. John re-Inctantly consented to let the cardinal-legate go to the English camp, and represent to the English prince the great danger in which he stood. "Save my honour," said the Black Prince, " and the honour of my army, and I will listen to any reasonable terms." The cardinal answered, "Fair son, you say well, and I will endeavour to procure you such conditions." If this prince of the church failed, it was no fault of his; for all that Sunday he rode from one army to the other, exerting himself to the utmost to procure a truce. The prince offered to restore all the towns and castles which he had taken in this expedition, to give up all his prisoners without ransom, and to swear that he would not, for the next seven years, bear arms against the king of France. But John, too confident in his superiority of numbers, would not agree to these terms, and, in the end, he sent, as his ultimatum, that the prince and a hundred of his best knights must surrender themselves prisoners, or he would not allow them to pass. Neither the prince nor his people would ever have agreed to such a treaty. All Sunday was spent in these negotiations. The prince's little army were but badly off for provisions and forage; but, during the day, they dug some ditches, and threw up some banks round their strong position, which could only be approached by one narrow lane. They also arranged their baggage-waggons so as to form a rampart or barricade, as had been done at Creey. On the following morning, Monday, September 19th, the trumpets sounded at earliest dawn, and the French again formed in order of battle. Again Cardinal Talleyrand spoke to the French king; but the Frenchmen told him to return whence he eame, and not bring them any more treaties or pacifications, lest worse should betide him. cardinal then rode to Prince Edward, and told him he must do his best, for that he could not move the French king. "Then God defend the right," said Edward, preparing with a cheerful counte-\* Sir J. Mackintonh.

CHAP. I.] CIVIL AND MILITARY TRANSACTIONS. 773

nance, like his father at Creey, for the unequal conflict. A mass of French cavalry charged along the lane to force his position, but such a flight of French, "Sire, surrender!" The king, who found

the lane to force his position, but such a flight of arrows came from the hedges, that they were soon brought to a pause, and at last were compelled to turn and flee, leaving the lane-choked up with their dead and wounded and their fallen horses.

Of the two marshals of France who led this attack, Arnold d'Andreghen was wounded, and taken prasoner; and Clermont, the other, was killed, by the stout bowmen of England. After this success, Edward became the assailant. Six hundred English bowmen making a circuit, suddenly showed their green jackets and white bows on the flank

hish bowmen making a circuit, suddenly showed their green jackets and white bows on the flank and rear of John's second division. "To say the truth," quoth Froissart, "these English archers were of infinite service to their army, for they shot so thickly and so well that the French did not knew which way to turn themselves." The second division searcely waited to feel the points of their arrows: the knights becoming alarmed for their horses, which they had left in the rear, quitted their bannets. Eight hundred lances were detached to excort the French princes from this scene of danger, and presently after the whole division dispersed in shameful disorder. At this pleasant with the knights and preparation under the Block

ther banners. Fight unidred lances were delached to escort the French princes from this scene of danger, and presently after the whole division dispersed in shameful disorder. At this pleasant right the knights and men-at-arms under the Black Prince, who had as yet done nothing but look on, mounted their horses. As soon as they were mounted, they gave a shout of "St. George for Guienne!" and Sir John Chandos said to the prince, "Sire, ride forward, the day is yours! let us address ourselves to our adversary, the King of France; for in that part lies all the strength of the enterprise. Well I know that his valuancy will not penint him to flee, and he will remain with us, please God and St. George." Then the prince said to his standard-bearer, "Advance banners, in the name of God and St. George!" They went through the lanc,—charged across the open moor where the French had formed their battalia,— and the shock was dreadful. The Constable of France stood firm with many squadrous of horse, his knights and sonires shouting. "Mountioy. St.

enterprise. Well I know that his valuatey will not permit him to flee, and he will remain with us, please God and St. George." Then the prince said to his standard-bearer, "Advance banners, in the name of God and St. George!" They went through the lane,—charged across the open moor where the Freuch had formed their battalia,— and the shock was dreadful. The Constable of France stood firm with many squadrons of horse, his knights and squires shouting, "Mountjoy, St. Denis!" but man and horse went to the ground, and the duke was slain, with most of his knights. The Black Prince then charged a body of German cavalry, who were soon put to flight. But even here it seems to have been rather the arrow of the English veomanry than the lance of the knight that gained the advantage. A strong body of reserve, under the command of the Duke of Orleans, fled without striking a blow. But Chandos was not mistaken as to the personal bravery of John; that king led up a division on foot, and fought desperately with a battle-axe; and when nearly all had forsaken him, his youngest son, Philip, a boy of sixteen, fought by his side. John received two wounds in the face, and was beaten to the ground; but he rose and still strove to defend himself, while the English and Gascons pressed

him," At last John was removed out of a situation of great danger (for the English had taken him by force from Sir Denis, and were quarrelling with the Gascons) by the Earl Warwick and the Lord Cobham, who saluted him with profound respect, and conducted him, with his youngest son Philip, to the Prince of Wales. Edward received his illustrious captive with the greatest modesty and respect, treating him with all the courtesy of the most perfect chivalry. He invited him to supper, waited on him at table as his superior in age and dignity, soothed his grief, and praised hus matchless valour, which had gained the admiration of both armies. The day after this victory, Edward continued his march; he passed through Poictou and Saintonge without meeting with any resistance, for the French no where rallied to rescue their king, and, coming to Blaye, he

crossed the Garoune, and presently came to the

good city of Bordcaux, where he safely lodged all

his prisoners. He then concluded a truce for two

years with the Dauphin Charles, now appointed

Lieutenant of France, and in the spring he returned

to England, taking King John and Prince Philip with him. Their entrance into London (24th

April, 1357) was magnificent; the King of France

was mounted on a cream-coloured charger, richly caparisoned; the Prince of Wales rode by his side,

as his page, on a small black palfrey; but the

former could scarcely be flattered by being made the principal figure in such a procession. The

King of England received John with all the honours due to a crowned head; and yet, if Edward's pre-

tensions to the French crown were well founded,

what was John but a rebel and usurper? The

truth, however, seems to be that, even in his own

eyes, these pretensions, as also those to the crown

of Scotland, appeared, if not unreasonable in them-

selves, at least surrounded by too many difficulties of execution, and Edward soon showed an inclina-

tion to renounce his French scheme, and to follow up the Scottish project by other means than those of

conquest. As early as the year 1351, he had opened

lumself in desperate case, said, "To whom shall I

surrender? Where is my cousin, the Prince of Wales?" "He is not here," uplied Sir Denis;

"but surrender to me and I will conduct you to him." "But who are you?" said the king.

"Dems de Morbecque," he answered, "a kinght

of Artois; but I serve the king of England because

1 cannot belong to France, having forfeited all I had there." King John then gave him his right-

hand glove, and said, "I surrender to you." There

was much crowding and struggling round about the

king, for every one was cager to say—"I took

received two wounds in the face, and was beaten to the ground; but he rose and still strove to defend himself, while the English and Gascons pressed upon him, crying, "Surrender, or you are a dead man!" They would have killed him, but a young

HISTORY OF ENGLAND.

.774 travagantly high; in 1354, these negotiations were renewed, and the Scots consented to pay ninety thousand marks in nine years; but their allies, the French, induced them to depart from this agreement, and, leaving their king a prisoner, they prepared to mivade England. Edward's "burnt Candlemas" and the victory over their allies at Poictiers made them willing to treat again, and the English king, in spite of those successes, was not in a condition to renew a war in the north. On the 3rd of October, 1357, a treaty was concluded, the Scots agreeing to pay one limdred thousand marks in ten years, and to give hostages as security for such payments; and in the month of November, David, after a captivity of eleven years, recovered his liberty and returned to Scotland.\* It was soon made to appear that his long residence in England and his intunate association with Edward had produced their effect on the weak mind of David Bruce, and that Edward, in discontinuing the struggle by arms, had not renounced his ambitious hopes. 1362, David's wife died childless, and, in a parliament held at Scone in the following year, David coolly proposed that they should choose Lionel Duke of Cambridge, Edward's third son, to fill the throne in the event of his dying without issue. this time the next heir in the regular line was the Stewart of Scotland, the son of David's clder sister. David hated his nephew, and this feeling may have had a great share in influencing him to make this strange proposal, and it also appears probable that Edward had bound him by some secret compact before he consented to his release. parliament of Scotland rejected the project with in-The death of Edward Bahol without cliffdiren, which happened soon after this conference at Scone, made David less careful in his proceedings: he went to London and agreed, in a secret conference with Edward, that, in default of the King of Scots and his issue male, the King of England for the time being should succeed to the throne of Scotland. Edward could not be blind to the difficulties that stood in the way of this project, and the unworthy son of the great Bruce was instructed to sound the inclinations of his people, and to keep Edward and his council informed of the The king of England took advantage of the debt owing to him for David's ransom to trouble and insult the Scots on many occasions, and the intrigues of his agents added to the unhappiness of that people; but David remained steady to his purpose, and, probably to escape the reproaches of his subjects, spent a good deal of his time in Eng-When Edward was engaged abroad, the Scots breathed more freely: in 1365, it was agreed that the truce between the two countries (for it had been repeatedly renewed, and as yet there was no treaty of peace) should be prolonged till 1371; and four years later a reduction was made on the amount of the money due for the ransom. King David died in February, 1371, and his project died with him: his nephew, the Stewart of Scotland, Rymer, Hailes.

ascended the throne without opposition, taking the title of Robert II.; and though Edward at one moment seemed inclined to undertake another Scottish war, old age, the loss of his son the Black Prince, and other misfortunes, prevented his so Of all his conquests in Scotland, none were permanent except that of the town of Berwick. The house of Stewart held the independent crown of Scotland for two hundred and thirty-two years, and then James VI. succeeded by inheritance to the throne of England, thus laying a better foundation for the happy union between the two countries than could ever have been effected by conquest. Edward's proceedings with his other kingly captive may be briefly related. Two legates of the pope followed John and the Prince of Wales to London, where they laboured to promote an amicable arrangement between England and France. Edward readily consented to waive his absurd claim to the French crown, and to liberate John, on condition of receiving an enormous ransom, and the restoration of Normandy, of the heritage of Eleanor of Aquitaine, and of all the provinces which had belonged to Henry II., to be held in separate sovereignty without any feudal dependance on the French king.\* John hesitated and tried to gain time, but time only increased the wretchedness and weakness of his kingdom, which fell into a frightful state of The king of Navarre, who descended from the royal family of France, defied the authority of Charles the Dauphin, and was in close alliance with the citizens of Pans, who were engaged, as they had been for some years, in a landable attempt to put constitutional checks on the arbitrary power of their kings. These men acted imprudently and impetuously: after being led into bloody excesses, they were betrayed and abandoned by the King of Navarre and their other royal and noble allies; but still their original project was worthy of all praise; its unfortunate failure delayed for centuries the march of a rational liberty in France, and the English writers who denounce the attempt as altogether base and treasonable, must have been ignorant of the subject, or void of sympathy for the glorious struggle which had taken place in their own country. By breaking their faith with the people, the Dauphin and his nobles provoked the excesses of which they afterwards complained, and John himself had left behind him a mass of unsatisfied revenge by certain illegal executions resembling those of his father Philip. The streets of Paris ran with blood; and, on the 22nd of February, 1358, Stephen Marcel, the provost of the merchants, killed two of the Dauphin's counsellors, Robert de Clermont and John de Conflans, so near that prince that their blood sprinkled his robes; and at the same time the people obliged the Cardinal de la Forest, chancellor and chief minister, to resign his places and flee for his life. The nobles, not excepting those who had been in

the league, grew jealous of the citizens; and then

the peasants, or serfs, who had been treated like Rymer.

heart was touched; but it was a terrific tempest of

thunder, lightning, wind, hail, and rain, which he

encountered near Chartres, and which reminded

him of the day of judgment, that completely subdued his resolution. "Looking towards the church

of Notre-Dame, at Chartres, he took a vow; and

he afterwards went devoutly to that church, con-

fessed himself, and promised (as he afterwards

said) that he would grant peace; and then he went

to lodge at a village near to Chartres called Bre-

May, 1360, the great peace was concluded by the treaty of Bretigny. " The King of England,

Lord of Ireland and of Aquitaine," as Edward

was now content to style himself, renounced his

pretensions to the crown of France, and his claim

to Normandy, Anjou, and Maine, with some other

territories that had belonged to his ancestors: he

restored all the conquests made by himself and his

son, with the exception of Calais and Guisnes, and

reserved to himself Guienne and Poietou, with their

dependencies Saintonge, Agenois, the Limonsin,

Perigord, Thouars, and other districts in the south,

and the county of Ponthicu in the north-west, the

inheritance of his mother. The Dauphin of France+

agreed that Edward and his heirs for ever should

have full and free sovereignty of the countries

ceded by this treaty; that three million erowns of

gold should be paid in six years as John's ransom,

and that sixteen of the prisoners taken at Poicticrs,

twenty-five French barons, and forty-two burgh

chosen in the richest cities of France, should be con-

stituted hostages for the faithful fulfilment of the

articles. In July, John was sent over to Calais that he might ratify the treaty. Three months were spert

in explanations and attempts at unitual deception,

and then this treaty was ratified at Calais on the

absurd condition that the really important clauses should remain in suspense and not be executed till

the Feast of the Assumption, or that of St. Andrew,

in the following year. On the 24th of October,

An armistice was arranged, and, on the 8th of

and massacred the nobles, men, women, and children, wherever they could find them. This horrible Jacquerie,\* which was but Afintly imitated in

CHAP. I.]

England during the next reign (by Wat Tyler and Jack Straw), lasted the greater part of the years 1357 and 1358, and was not suppressed without slaughter equally atrocious on the part of the government. On one occasion, the Danphin killed more than twenty thousand peasants: the Sire de Conci made such a butchery of them in Picardy and in Artois that the country was soon cleared of They were cut down in heaps,—crushed to death,-slaughtered like beasts, by the knights and men-at-arms. No quarter was given; no prisoners were taken except a few hundreds to furnish an exhibition and expire in horrible tortures. dreadful state of things conquered the pride of John, and he signed the treaty of peace as dictated by Edward; but the French nation, divided as it was, unanimously rejected it. Edward, enraged at what he termed the bad faith of the enemy,—for he thought that the signature of a king was everything, and the will of the nation nothing, -passed over into France in the autumn of 1359 with an army more numerous than any which he had hitherto employed on the continent. From his

convenient landing-place at Calais, he ponred his

arresistible forces through Artois and Picardy, and

laid siege to Rheims, with the intention, it is said,

of being crowned King of France in that city,

where such ceremony was usually performed. But

the winter season and the strength of the place

baffled his efforts: after losing seven or eight

weeks, he raised the siege, and fell upon Bur-

gundy. The duke was forced to pay fifty thousand

marks, and to engage to remain nentral. While Edward was in Burgundy, a French fleet took and

plundered the town of Winchelsea, committing

great barbarities, which the English soon after

retaliated on the French coast. From Burgundy Edward marched upon Paris, and, on the last day

of March, 1360, the English encamped in front of

challenge to come out and fight; and in the month of April, a want of provisions compelled Edward to lead his army towards Brittany + His route was So called from Jacques Bon-homme, or James Good man, a name applied in derision to the French peasantry.
 Petrarca, who visited Parts about this time (in 1360), has left a + Petrarca, who visited Paris about this time (in 1360), has left a lumentable picture of the state of the country, the consequence of the Enghait war, and of internal anarchy. I could not believe, says the Italian poet, "that this was the same kingdom which! had once seen so tola and flourishing. Nothing presented itself to my eyes but a fearful solitude, an extreme poverty, lands uncellivated, houses in ruins. Even the neighbourhood of Paris manulested everywhere marks of destruction and conflagration. The streets are deserted,—the roads overgrown with weeds;—the whole is a vast solitude." According to Mozeray, the French bore all these calamities with their usual light-hoartedness,—"Misfortunes did not correct them,—omps and games and tournaments continued all the while. The French danced, so to speak, over the dead bodies of their relations; they seemed to rejoice at the burning of their castless and houses, and at the death of their friends. While some were getting their throats cut in the country, others amused themselves in the towns. The sound of the violin was not interrupted by the blast of the trumpet;

that capital. He, however, was not strong enough 1360, there was a solemn interchange of oaths in the church of St. Nicholas at Calais: King John to besiege Paris; the Dauphin wisely declined a with twenty-four French barons swore to be true to the treaty, and Edward swore to the same effect with twenty-seven English barons. On the following day, King John was set at liberty, and Edward returned to England. John, with all las faults and vices (and these were so numerous that we wonder how he ever

obtained the surname of "the good"), was sensitive on the point of honour, and a scrupulous observer of his word, but the impoverished condition of his country, and the decided opposition of

and the voices of those who sang and rejoiced at balls and festivals, and the piteous cries of those who perished in the flames, or by the edge of the sword, were heard at one and the same time."

Froissart.—Knyght.—Hymer,

John, as a prisoner, was at first no party to the compact, but when he went to Calais, on parole, he was considered as a free agent.

That is, the 15th of August or the 30th of November, 1561.

—fled into France.

Among his many recent

his sons and great nobles, prevented his fulfilling any of the important parts of the treaty. There was no money to pay the heavy ransom, and, whenever he mentioned the renunciation of the suzerainty of his crown over the provinces ceded to Edward, he encountered a violent opposition. is not so written in the annuls of France, but it appears to us pretty evident, that the uncomfortable life he led in his own dominions had a good deal to do with what followed. The Duke of Anjon dishonourably broke his parole, and, flying from Calais, where he was living as one of the hostages, repaired to Paris. His father was much affected by this breach of honour, and he felt that part of his own conduct since his return required explanation. It is said that he also hoped to obtain some modification of the treaty of Bretigny, and to speak with Edward about a new crusade. The French courtiers laughed at his semples, but, to their astonishment, he went over to Lomlon, where Edward received him with every token of affection. It was then said, in France, that it was his violent love for an English lady, and not his honour, that induced him to put himself again in the power of his enemy. John quietly took up his old quarters in the Savoy; but soon after his arrival, and before any business was transacted, he fell dangerously He died at London in the month of April, 1364, much regretted, it is said, by Edward and

of Bretigny in the same state of suspense, and complained bitterly of the ravages committed in his dominions by the "companies of adventure" which had been in the service of the Black Prince. The truth was, that many of these lawless bands had been in the pay of France, so that Edward was not accountable for the whole of the mischief. The "free companions," as they called themselves, were mercenaries, vagabonds, and adventurers, from nearly every country in Europe, who sold their services to the best payers, and as Edward was by far the wealther of the two kings, he certainly had the greater number of them. peace was concluded between the sovereigns, they associated together, chose skilful captains, took or retained castles which they had been paid to garrison, and carried on a war on their own They defeated a royal army led against them by John de Bourbon, who was mortally They made Charles wounded in that action. tremble in Paris, and the pope at Avignon. † Edward engaged to clear the country of them, but Charles had no wish to see another English army in his territory. Events in Spain afforded opportunities of getting rid of the marauders. Pedro IV., called the "Cruel," was then legitimate king of Castile, but his atrocities provoked an insurrection. He was, however, strong enough to defeat the insurgents, who fled for refuge to the king of

murders, Pedro the Cruel had poisoned his wife, a French princess. It occurred to Emique of Trastamara, or probably it was suggested to him by the French court, that he might collect among the veteran "companies" such a force as would give him a decided superiority over his half-brother The king of France gave money; the pope gave more;\* and thirty thousand of the adventurers put themselves under the command of the celebrated warrior Dugueschn and of Don Emique, and, marching across the Pyrenees, drove the tyrant from his throne. Don Pedro, who had not even the satisfaction of fighting a battle in his defence, fled through Portugal to Coruña, where he embarked in the first ship he found, and sailed with his daughters for Bordeaux. The Black Prince, to whom his father had ceded all his donnnions in the south, was residing at Bordeaux, and there gave the tyrant a most friendly reception, considering him as an unfortimate legitimate sovereign, and his half-brother Don Enrupic as a nsurper. His father took the same view; and it was soon determined to restore the fugitive king by force of arms. Charles of France at the same time took measures to support Don Enrique; but his means were very limited. The Black Prince had been married some time to a beautiful widow, -his second cousm, -Joan, Countess of Kent, t who had been familiarly and endearingly called "the Fair Maid of Kent;" but the arrival of Pedro's daughters was not without its effect; and the marriage of two of them to Edward's brothers, the Duke of Lancaster and the Earl of Cambridge, which took place a few years after, gave rise to the claim of an English prince to the throne of Castile, -a ridiculous claim, like many others of those times, but which did not the less cost England some blood and treasure. For the present the fair Spaniards remained at the gay and splendid court of Bordeaux, while their father and the Black Prince and the Duke of Laneaster raised their banners of war. Among the adventurers who had taken service under Don Enrique, there were several English captains; and such was Prince Edward's popularity among the companions gene-At first the pope wanted Dugneschi to remain satisfied with his blessing, but the bold adventurer assured his holiness that the conpanies could make shift without absolution, but not without money.—See Illat Dugneschi, a very curious old book.

† The history of this fair lady, the mother of the unfortunate Richard II., as of an elder brother (Edward) Who died in unfaney, is rather curious. She was daughter and heiress to the Earl of Kent, uncle to Edward III., who had been put to death at the beginning of the present reign, by Mortimer and Isabella. She was married when very young to Montacute, Earl of Saliebury, from whom she when very young to Montacute, Earl of Saliebury, from whom she was divorced; she then esponsed Sir Thomas Holland, who assumed in her right the title of Earl of Kent, and was summoned to patinent as such. By this second husband she had two sons,—Thomas Holland, who laherited the honeaus of his father, and John Holland, who was afterwards crested Earl of Huntingdon and Duke of Exeter. They will both appear in the sequel—John as the perpetuator of a savage murder. Her second husband had scarcely been dead three months when she married the Black Prince.

the arms of the tyrant, who made war upon him;

and then the Castilian exiles, among whom were

two illegitimate half-brothers of Pedro, -- Enrique,

Count of Trastamara, and Tello, Count of Biscay,

 On one occasion a troop of these banditti, commanded by Arnaldo di Cervola, forced the pope to redeem himself in Avignon by the payment of 40,000 crowns.

while the English were losing it; he was now

almost ready for an open war, and he bound Enrique

by treaty to assist him as soon as he should declare

Navarre, and entered into a secret understanding

with the disaffected lords, vassals of the Black Prince, whose lands lay near the Pyrences. For seven years the treaty of Bretigny had been little

more than a dead letter: John's ransom had never

been paid; many of the hostages, breaking their parole, had retinized to France; some of the terri-

tory stipulated bad never been ceded; the sovereign title to the whole had been withheld by

Charles, who had watched with a keen eye the

decaying vigour of King Edward, now an old man,

and the shattered health of the Black Prince, who,

melancholy and spirit-broken, was evidently sinking to a premature grave. The expedition for

Don Pedro proved a curse in more ways than one,

—it so embairassed the prince that he was obliged

to impose additional taxes upon his subjects of

Guierme, in order to obtain the means of paying his army. Upon this the Count of Armagnac, and

other Gascon lords, already in the interest of France, went to Pans, and appealed to the King

of France, as the lord paramount. Charles had

waited patiently for years, but he now thought that

circumstances, and, above all, the deplorable state of the prince's health, would allow him to declare.

lumself. He summoned Edward, as Prince of

Agritaine and his vassal (which he was not since

the treaty of Bretieny), to appear in his court at Pars to answer to the complaints of the Gascon

lords. The prince knew what this meant; and he replied that he would go, indeed, to Paris, but it

should be at the head of sixty thousand men. His father, however, was less violent, or probably

At the same time he conciliated the King of

rally, that as soon as they knew what was preparing, twelve thousand men, under the command of Sir John Calverly and Sir Robert Knowles, abandoned their new master, and returned with all speed to join Edward in Guienne. As Pedro's promises were most liberal, and the fame of Edward so prevalent, they soon morehed with

CHAP, I.]

speed to join Edward in Guienne. As Pedro's promises were most liberal, and the fame of Edward so prevalent, they soon marched with thirty thousand men. The king of Navarie, who was master of that pass of the Pyrences, was bought over; and in the midst of winter, snow storms, and tempests, the Black Prince led his army in safety through Roncesvalles, the famed scene of the "dohorous rout" of Charlemagne and is paladims—the deep and dangerous valles, which, at the distance of four centimes and a half, was threaded in a contrary direction by a victorious English army under the Dinke of Wellington.

On the 3rd of April, 1367, Don Emique met the invaders in the open plants between Navarete and Najara, with an army which is represented as

being three times as immerous as that of Prince Henry and Don Pedro. The Lattle was begin by the young Duke of Lancaster, who was enmious of the unlitary fame of his brother Edward, and who probably entertained already the hope that the plants over which be was charging would one day acknowledge him as their king. Where the Black Prance charged Don Tello, the brother of Don Enrique, that prince wheeled about, and fled in disorder with his whole division, without striking a blow. After this, Edward advanced against the mann division, which was commanded by King Empore in person: and now the fight began in The Castilians had slings, with which they threw stones with such force as to break belinets and skull-caps: the English archers, "as was their wont," shot briskly with their bows, "to the great annovance and death of the Spamiards," who, feeling the sharpness of the English arrows, soon lost all order. In the end the Black Prince gamed a complete victory; Euroque fled, and Don Pedro re-ascended the throne.\* Mistortune had not taught him mercy; Pedro wanted to massacre all his prisoners, but this Prince Edward prevented. Now came the time for the tyrant to show his gratitude; but he was alike unable and unwilling to keep his engagements; and after being half-starved in the country be had won for another, and contracting beavy debts and a unilady from which he never recovered, Edward was obliged to lead his army with all haste back to Guicnie, where he arrived in the month of July, 1367. Pedro, however, had soon cause to deplore his departure: in a bttle more than a year his bastard half-brother returned to Castile, and defeated him in battle. A conference was arranged,

only better acquainted with the increasing difficulties of raising money in England for such purposes; and, lowering his claims, the elder Edward, setting aside some territory which had been included in the treaty of Bretigny, said he would content himself with the separate sovereignty of Guienne and Poicton, with the adjoining provinces, which he actually possessed. But Charles took this moderation as a certain proof of weakness, and, declaring the Prince of Aquitaine to be contumacious, he poured his troops into his territories. In Poictou, and still more in Guienne, his arms were assisted by the people, who never had been steady to either party: when united with the French they complained of an arbitrary and excessive taxation, and of checks put upon the freedom of trade; and when united with the English they complained of the insolence and arrogance with which they were treated by the proud islanders. but it seems to us that chivalry had nothing to do with it. Pedrowas, not only by treaty, but also by blood, unally of England, but what still more powerfully urged. King Edward and his son was Enrique de Traslamana's throwing himself into the French interests. Had there been no French interference, it is probable that Edward would never have undertaken to restore the tyrbut.

\* It appears that Edward received about a fourth of the sum promised.

but, as soon as the two brothers met, they flew at

each other with the fury of wild beasts, and in the

struggle Don Enrique killed Pedro with his dagger. The bastard, who was still supported by Charles of France, again took possession of the throne.

<sup>+</sup> Frotssart. - Wilsing. - Mariana. - Edward's assisting the mouster Don Pedro has been attributed to a defect in chivalious morality;

sight of such gallantry. Three of the French

knights, looking at their swords, said, "We are

yours-you have conquered-treat us according to

the laws of arms." Edward relented; and, instead

of being massacred, they were received as prisoners, and their biges were spaced in the midst of

that universal butchery. But no mercy was shown

to any of the meaner soft—the whole city of

Linioges was ransacked, and then burnt to the

ground.\* The massacre of Lamoges was the last unlitary exploit of the Black Prince. Hoping that

the an of his native country niight benefit his ringed constitution, he returned to England, leaving

the command in the south to his brother John of

having now married the Lady Constance, eldest

daughter of Don Pedro, assumed in her right the

arms and title of King of Castile and Leon, and

improdent step, which complicated the difficulties of the English, for Pedro's bastard Inother, Don

Enrique, who was firmly scated on the throne,

drew the bonds of his alliance with France still closer, and prepared to take an active part in the

war. In the month of June, 1372, when the Earl

of Pembroke came off Rochelle with a fleet carry-

ing reminecements to the duke, he found a Spanish

flect, consisting of ships for larger than his own,

and furnished with engines, - probably cantions, --

lying between La Rochelle and the Isle of Rhé. The inhabitants of the town and coast, though they

were as yet subjects of the English, assisted the Spanands in every possible manner. Penibroke

either could not or would not avoid a battle: he

fought desperately the whole day, and renewed the

unequal combat on the morrow; but at last, his

ship was grappled by four Spanish ships at once, and boarded on every side; he was made prisoner,

and not a single sail of his fleet escaped. Many of

them went down with their flags flying; and a ship

carrying the military chest, with 20,000/. in

it, sank with the rest. This was a heavy blow to

Soon after his departure the Duke of Lancaster,

Gannt, the Duke of Lancaster.

quer them with his good sword. He sent tem-

at the same time despatched his other brave son, the Duke of Lancaster, with a gallant army from Calais. The duke marched through the morthwestern provinces, but the French would not risk an engagement with linn; and, while he laid waste the open country, Charles gradually extended his conquests in the south, where some towns and castles were taken, and still more delivered up by the garrisms and mhabitants. The Black Prince was sick almost to death, but when he heard that the dukes of Anjou and Berri were marching against him from opposite points, he roused lumself and took the field. The royal dukes had not heart to meet him, -they both retreated with precipitation; and, after garrisoning the places they had acquired, they disbanded their army. Limoges, the capital of the Limonsin, had been betrayed to the dukes by the bishop and the inhabitants; and the prince was the more sensible to this treachery, as it was a place upon which he had conferred many honours and benefits, so that he had counted on the grantade and affection of the people. • Fig. swore, by the soul of his father, that he would have the town back again, - that he would not move or attend to any other thing until be got it, -and that, then, he would make the traitors pay dearly for their perfidy. He was now so all that he could not mount his horse, but he caused himself to be carried on a litter from post to post, and he pressed the siege with a savage fury which had not Intherto been observed in him. After a month's labour a part of the works was undermined, and a wide breach made in the walls, appagently by the explosion of guipowder, the besiegers inshed through the breach, with orders. which were but too faithfully obryed, to massacre all they found. Men, women, and children threw themselves on their knees before the prince, crying "Mercy! Mercy!" but he would not hear them;

forcements to the Black Prince in the south; and although, as the chronicler remarks, most of the poor and lumible class could have had nothing to do with the betraying the town to the French. They were all mandered, upwards of three thousand. "God have mercy on their souls!" says Froissart, with more feeling than usual, "for they were veritable martyrs." John de Villemur, Hingh de la Roche, and the other knights whom the dukes had thrown into Linguages, in all about eighty persons, retreated to one of the squares, placed themselves with their backs to an old wall, and with their banners before them, resolved to sell their lives dearly, as good knights ought. English knights, as soon as they saw them thus, dismounted, and attacked them on foot. French fought with the courage of despair against very superior numbers. The prince, who came

the king and to the whole nation, who had already begin to consider the sen as their proper element. And from this time, one ill success followed another with amazing rapidity. Charles V., who not without reason was called "the Wise," had determined not to hazard a general battle with the Euglish; and he did not alter this resolution when he appointed Diigneschi, that consummate general, to be constable of France and leader of his armies. The war became a succession of surprises and sieges, the French general advancing slowly and methodically, but surely, leaving no strong fortress in his rear, and retreating whenever the English showed themselves in force. Charles established the same system everywhere, and Edward, in his old age, was often heard to say, that he had never known a \* The Bishop of Limoges, the real offender, escaped death through the management of the Duke of Lancaster.

† The daughters of Don Pedro were illegitinate; but after the death of their mother, the celebrated Maria Padilla, he took an oath that he bad been married to her, and he deciand for daughters his up in his litter, looked on with admiration at their heirs ‡ Froissart, feats, and he became mild and merciful at the

Sn Robert Knowles swept the whole of France from Calais to the walls of Paris, which he insulted; and the Duke of Lancaster marched through France from one end to the other without inceting any opposition; but they found all the important fortiesses and great towns well gnaided, and they both lost many men from want of provisions, while every straggler from their army was cut to pieces. Benon, Surgère, Saint Jean, d'Angely, and Saintes were taken by the constable. The fortune of the war seemed to be for some time within the walls of Thouans, but after an unsuccessful attempt made to relieve it, that place fell before the arms and engines of Dugueschn; and Niort, Amsiy, and other towns soon shared the same fate. The Duke of Lancaster marched and counter-marched, but could rever bring the Freuch to a bottle. He concluded a truce with the Duke of Anjou, and departed for England; but as soon as he had gone Charles broke the armistice. Of all Edward's allies none proved time to him except young De Montfort, and ke had enough to do to maintain hunself in Brittany, where there was a strong French party, headed by de Classon. A D 1374 The pope had never ceased his endeavours to proceace a lasting peace, his legates

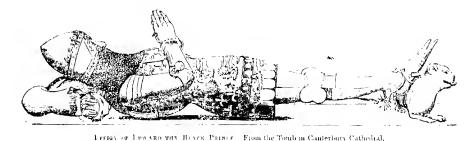

had followed the army of the Duke of Lancaster road? his last campragn, and other envoys were constantly about the court of Charles. When the French had graned almost all they could hope to get, and when Edward's confidence in his own resources was broken by long disappointment, the arrangement for a treaty was commenced at the town of Bruges, wheher the Duke of Burgmdy, who negotiated for France, carried some of the real blood of on `avioni to give greater solemnity to the contract.\* After months of negotiation, a truce was concluded tor one year only; but this was subsequently renewed, and lasted till the death of Edward. At this time all that the English king retained of his contmental dominous was Bordeaux, Bayonne, a few towns on the Dordogne, and his own important conquest of Calais, with a strip of territory round it. On his return to England, the Black Prince em-

braced a course of popular opposition in parliament, and if he irritated his old father thereby, he had the good fortune to please the nation, whose idol he had ever been. But the state of his health obliged him to seek quiet and retirement, and then his unpopular brother, the Duke of Lancaster, monopolized all the authority of government, for the king had become indolent and reckless, and, like other heroes in their old age, a slave to a young and beautiful woman. In the spring of 1376 the Black Prince rallied and took part in public affairs, or at least it is supposed that he directed the mensures now adopted by parliament. Peter de la Mare, as Speaker of the Commons, complained of taxation, venality, and corruption, and impeached nearly all the ministers, who were little more than agents of the Duke of Lancaster. The Lord

Latimer was expelled from the king's council and thrown into prison; the Lord Nevil was deprived of all his employments; and certain farmers of the customs were arrested and put at the king's mercy. Not stopping here, the Commons raised then youce in accusation against the royal mistress. Philippa, Edward's excellent wife, had died seven year's before, and the fortimes of her husband were overcast from the day of her death. Alice Perrers, a married woman, whose wit is said to have equalled her beauty, and who had been a lady of the bed-chamber to the open, so captivated Edward that he could refuse ber nothing, and was never happy except when he was in her company. Among other presents, he gave her the late queen's jewels, and these Alice was vam enough to show m public. She soon became an object of popular outgry; but the Commons stopped short with this significant ordinance,—" Whereas complaints have been laid before the king that certain women have pin sucd causes and actions in the king's courts by way of maintenance, and for hire and reward, which thing displeases the king, the king forbids that any woman do it for the future, and in partienlar Africe Perrers, under the penalty of fortesting all that she, the said Alice, can forfeit, and of being banished out of the realm." It is said that the mistress was removed from about the king's person; but the reformers do not appear to have carried their s verity so far: -at all events, she was with him at this last moments if a revolting story be true, But the nation lost all thoughts of Alice Perrers

in the great event which now took place: the Blick Prince died on Trimty-Simday, the 8th <del>da</del>ŷ of June, 1376. It will appear, from our miadorsed narrative of facts, that this extraordinary man, though generally both merciful and generons, was not wholly exempt from the vices and barbanty of his times; but it is clear, from the universal popularity which he emoved at home, and from the frequent praises extorted from his bitterest enemies abroad, that he had endearing qualities, and many victors beside those of gallautry and courage, in which he was probably never surpassed by a mortal being. So entirely had the nation heep accustomed to look up to him, that though the metancholy event had long been expected, his death seemed to toll the knell of the country's glory. "The good fortune of England," says a contemporary, "as if it had been inherent in his person, flourished in his health, languished in his rickness, and expired in his death; for with him died all the hopes of Englishmen; and during his life they had feared no invasion of the enemy nor encounter in hattle." † His hody was carried in a stately herse, drawn by twelve horses, to Canterhury, the whole court and Parliament attending it in mourning through the city, and he was buried with great pomp on the south side of the cathedral near to the shrine of St. Thomas Becket.

5 g 2

The nation seemed well included to transfer all their affection to Prince Edward's only surviving legitimate son, Richard of Bordeaux, who was only in his tenth year; and a few days after the funeral, Parliament petitioned the king to introduce the young prince unong them, that he might receive the honours due to him as heir to the crown, dishke of Prince Richard's uncle, the Duke of Lancaster, who was suspected of anning at the throne, no doubt hastened this measure. With the full consent of the old king, the Archbishop of Canterbury presented the young prince to the two houses as "the fair and perfect image of his father," and the successor to all los rights. easter, however, resumed all his former power; and as soon as the Black Prince was dead, the whole efficacy of the parliamentary opposition which he had directed ceased. Sir Peter de la Mare, the speaker of the Commons, was arrested, and William of Wickham, the eclebrated Bishop of Winchester, was deprived of his temporalities without trial, and dismissed the court. In the next parliament, which met on the 27th of Jamiary, 1377, the duke had a strong majority; and Sir Thomas Hungerford his steward was appointed speaker of the Commons. It appears to have been the object of Lancaster to conciliate the doating king and the royal mistress; for parliament drew up a petition, imploring that the Lord Late mer, Alice Perfers, and others, might be freed from the censures and restrictions passed upon them, and restored to their former state. Although forming a very weak minority, there still existed an opposition with spirit enough to speak and remonstrate; and while the Commons demanded, in right of the great charter, that Sir Peter de la Mare should be liberated or put upon his trial, the bishops demanded the same thing in behalf of their brother of Winchester. Wycliffe, a poor parish priest, the precursor of Huss, Lather, Calvin, and the great men who effected the Reformation, had long been preaching and writing against the abuses of the Catholic clergy, and his party, though small, already included some persons of the highest rank in England. It is generally stated that the Duke of Lancaster took up the cause of Wyeliffe, who was lying under a dangerous proscention, merely to spite the bench of bishops. On the day of trial, when the English reformer stood up to read in the great church of St. Paul's, before

Courtenay, bishop of London, he was accompanied and supported by the duke, and by his friend, the Lord Percy, in irshal of England. These two great laymen were so ardent, that a violent altercation ensued in the church between them and the bishops: Langaster, it is said, even threatened to drag the prelate out of the church by the hair of his\_head. The Londoners horly resented the insult offered to their bishop. On the following morning a mob broke open the Lord Marshal's house, and killed are unlucky priest whom they mistook for Earl Percy in disguise: they then proceeded to the Savoy, the duke's palace, and gutted it. The duke and Percy, who were dinning at the time in the house of a great Flemish merchant, ran to the water-side, got into a boat, and rowed themselves over to Kennington, where young Prince Richard and his mother were residing. The Bishop of London put down the riot by his admonitions; but to show their hatred, the people reversed the duke's arms as those of a traitor. \* The rot was so terrible that it interrupted the debates in Parliament; and one of the last audiences of the great Edward was given at Shene (now Richmond) to the lord mayor and aldermen of the city of London, who were brought there to submit themselves to the duke, and crave pardon for their grievous offence. But neither their submission nor their protestations of mnocence saved them from Lancaster's wrath; they were all " ensted," and creatures of the Duke put into their places.

When parliament resumed business, they took into consideration the circumstance that the tince with France was on the point of expiring; and to provide for a renewal of the war, which seemed probable, they granted an aid in the shape of a poll-tax—a disastrons precedent. All beneficed elergymen were taxed at a shilling a head, and all other individuals in the kingdom, male or female, above the age of fourteen-common beggars excepted-were to pay fourpence a head. In the month of February the king had completed the fiftieth year of his reign, and he published a general amnesty for all minor offences-from which, however, the Bishop of Winchester, who seems to have committed no offence at all, was excepted by name.† This was Edward's last public act: he

t lu the month of June, the bishop got back the tevennes of his see, by making a rich present to the mistress.

<sup>\*</sup> Walsing - Murim. - Stow.

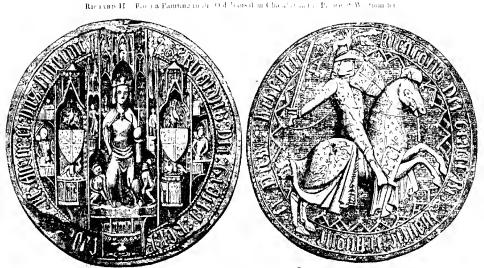

spent the remaining four mouths of his life between Eltham Palace and the beautiful manor of Shene. Decay had fallen alike on body and spirit; he was incapable of doing much, and he did nothing. The ministers and countgrs crowded round the Diske of Lancaster or round Prince Richard and his mother: the old man was left alone with his mistress; and even she, it is said, after drawing his valuable ring from his finger, abandoned him in his dying moments. What followed was

not musual—indeed it seems generally to have happened at the deunse of a king;—his servants left his chamber to plunder the house; but a priest was not unmindful of his duty, he went to the deserted bed-side, presented a crucifix, and stood there till the great sovereign was no more. Edward died at Shene, on the 21st of June, 1377, in the sixty-fifth year of his life, and the fifty-first of his reign.\*

GHYAT SEAL OF RICHARD 11.

HISTORY OF ENGLAND.

782

father; on which day the great seal was delivered to the king, and by bim intrusted to Sir Nicholas Bomle until the return of the Bishop of Ely, the chancellor, who was engaged or business beyond sea, but who returned on the 26th of the same month, and opened the purse containing the scal and divers letters patent in his chapel at his house in Fleet-street, London \* The funeral obseques of the late king occupied some time, but on the 16th of July Richard was crowned in Westiamster Abbey. The ceremony was unusually splended, but the fatigue and excitement were too much for

the royal box, who, after being anomited and crowned, was so completely exhausted that they were obliged to carry him in a litter to his apartment. After some rest he was summoned to the great hall, where he created four carls and muc knights, and partook of a magnificent banquet, which was followed by a ball, minstielsy, and other somewhat turbulent festivities of the time # Considerable pains were taken to spoil this young king from the first; such adulation and prostrations had not been seen before in England; and it the bishops and courtiers did not preach to the boy the "divine right," they seem to have made a near approach to that doctime; and they spoke gravely of the intuitive wisdom and of the heroism of a child not yet eleven years old. These men were indisputably answerable for much of the inisclinef that followed; but now the beauty of the young king's person, and the memory of his father, endeared him to his people, and a long time passed before they would think any ill of the son of their idol, the Black Prince. The Duke of Lancister, the titular king of Castile, more popularly known under the name of "John of Chunt," I had long been suspected of the project of supplanting his nephew; but his unpopularity was notorions, and he vieliled with tolerably good grace to the force of circumstances. As if on purpose to exclude the duke, no regular regency was appointed; but the morning after the coronation the prelates and barons chose, "in aid of the chancellor and treasurer," twelve permanent counsellors, among whom not one of the king's uncles was named, John of Gannt withdrew to his eastle of Keinlworth, and, it is said, in some discontent with the advisors of the young king, who had taken from him the castle of Hereford. But nothing could remove the popular belief that the dake aimed at the throne, and prophecies were affoat which probably beloed to work then own fulfilment a few years later,

when his son, Henry of Bolingbroke, dethroned his consin Richard. The French were not slow in trying to take the usual advantage of a minority. The truce expired Rot P.ol.—Sn 11 Nicolay Chron, 11st.

whomcod Gaunt), the place of his birth.

and his fallenc, however unfairly, added to the unpopularity of the Lancastran party. In this very parliament, the first which Richard held, and before the Earl of Buckingham took the command of the fleet, it was made evident how much the Duke of Lanca ter had declined in power. The majority of the house of commons consisted of the very men who had driven his party from office in 1376, and the new speaker was lits old enemy. Sir Peter de la Mare, whom he had arbitrarily thrown into prison soon after the death of the Black Prince. When the Archbishop of Canterbury, who had been made chancellor, requested the advice of the commons as to how the enemies of the kingdom might be opposed with the least expense and the most honour, the commons replied that they could not of themselves answer so great a question; and they asked for the aid of twelve peers, with "my Lord of Span" at their head. The dake complanned of the reports circulated against him, and said that the commons had no claim on him for advice or assistance. They had charged him, the most loval of men, with that which amounted to treason; but let his accusers declare themselves, and he would meet them as if he were the poorest knight of England, either in single combat or in any other way. After a great ferment, the hishops and lords declared that no living mortal would credit the scandalous reports; the commons asserted their belief of his innocence; and a reconciliation took place without any immediate increase of Lan-\* Not long after several places on the coast of Sussex and Kent were plandered. A fleet even ascended the Blances, and bouned the greater part of the town of Gravesond. These retuting circumstances were recent at the time of Wat Televis rebellion (as it is called), and they helped to hasten that terrible outbreak.

[Book IV.

before the death of Edward, and Charles refused

to prolong it. In close union with Henry of Trastamara, who was provoked by the Duke of Lan-

caster continuing to assume the title of king of

Castile, he got together a formidable fleet, and monified the English coast before Richard had

been a month on the throne. In August the whole

of the Isle of Wight, with the exception of Carrsbrook Castle, was plundered and wasted, and the

town of Hastings was burnt, as that of Rye had

been a short time before. The town of Winchelsea

made a good resistance, and at Southampton the French and Spaniards were repulsed with great

los by the Earl of Anusdel But the combined

fleets, which were occasionally joined by marauders

of other nations, were strong enough to interrupt

the foreign commerce of the country, and, as this

had become consulciable, the injury was a viry serious one \* A parliament was assembled while

the impression of these natures was fresh; and in order to obtain supplies of money (the treasury

being exhausted) it was stated that the realin was

in greater danger than it had ever been. Supplies were voted, and, by borrowing greater sums of the

merelauits, government was enabled to put to sea

a considerable first under the command of the

Earl of Buckingham, one of the Duke of Lanca -

ter's brothers. Buckingham met with little success,

CHAP. I.]

the command of the fleet, with nearly all the money which had been voted. He iletached a squadron under the earls of Armadel and Salisbury, who, is crossing the Channel, fell in with a Spamale flect, and suffered considerable loss. The two carls, hexever, succeeded in their main object, and took possession or the town and port of Cherbonig, on the coast of Normandy, which were ceded to England by the king of Navaire, who was again engaged in a wee with the French king, and who was glad to purchase the resistance of England at any price. Nine large sheps, which the duke had bired at Bayonne, on their way to England, met a Spanish fleet of merchantmen, and took fourteere slopes laden with wine and other goods. In the month of July the duke saled with the great fleet for the coast of Brutany, where the compacts of the French had reduced another ally of England almost to despan. The Duke of tany, the son of the heroic Countess of Montfort, coiled to the English the important town and harbour of Brest, which Lancaster sermed with a good garrison. The duke then invested St. Malo, but the Constable Dugueschi marched with a very superior force to the rehef of that place, and compelled the duke to return to his ships: the great fleet then came home. The possession thus obtained of Cherbourg and of Brest was an immense advantage; it deprived the French of two ports, whence they could best attack England, and it gave the English two other keys to France; but the places had been given up by friendly treaty, and not gained by arms; and the people, who were evidently dismelined to allow Lancaster any merit, said that he had wasted the money and done nothing. A striking circumstance which had occurred did not tend to brighten the duke's lau-

The Scots receiving their impulse from

Scots, French, and Spaniards, came to Scarborough, and made prize of every ship in that port. Upon learning the injuries done, and the still greater damage apprehended from these sca-rovers, John Philpot--" that worshipful citizen of London"-lamenting the negligence of those that should have provided against sucle inconveniences, equipped a small fleet at his own expense, and, without waiting for any commission from the goversment, went in pinsuit of Mercer. After a fierce battle, the doughty addramm took the Scot prisoner, captured fifteen Spanish slips, and recovered all the vessels which had been taken at Scarborough. On his return, Philpot was received in trimingh by his fellow-citizens; • but he was harshly bandled by the council of government for the unlawfulness of acting as he had done without authority, he being but a private man. The alderman, who was backed by the people, replied very boldly according to an old historian, "he meuried the hard censure of most of the noblemen, from whom he seemed to have snatched, by this his fortunate attempt, the native cognizance of true nobility;" but the council dated not proceed further than a reprinand.\*

In the month of October, the parliament met at Gloncester, and in a very bad humour: the go-

vernment wanted money -- the commons a reform

of abuses. The disputes ended in a compromise the commons being allowed to inspect the accounts

of the treasurers, which was granted as a matter of favour, but not of right, nor were they to ; consider

France, renewed the war, surprised the castle

of Berwick, made incursions into the northern

counties, and equipped a number of ships to cruize against the English. Betwick was recovered soon

after by the Earl of Northmasberland; but one

John Mercer, who had got together certain sail of

it as a precedent: they also obtained copies of the papers, showing how the momes they had voted had been raised; but this also was granted as if proceeding from the king's good pleasure. In the end, they granted a new aid by laying additional duties on wool, wool-fells, ludes, leather, and other merchandize. John de Montfort, the Dake of Brittany, had been driven to seek refage in England, and the French king annexed his dominions to the crown of France. This premature measure reconciled all the factions in the country; and John was recalled by the unanimous voice of the Bretons. Leaving his wife, an aunt of King Richard,† in England, he embarked with one hundred knights and men-at-arms, and two hundied archers. St. Malo opened its gates at his approach; the nobles, including even many who had helped to expel him, rushed into the water chindeep to meet him; the people hailed his return with transports of joy; and the States, meeting at Rennes, wrote respectfully to the king of France, for per-

<sup>\*</sup> The commons had petitioned that eight new counsellors, the great officers of state, the chief justices, and all the household of the king, should be named by the bards in concurrence with the commons, -o., at least, it was asked that the fords should certify all such appointments to the commons in parhament. The bards, in the king's name, appointed a new council, consisting at nue persons of different ranks,—three bislams, two earls, two bannerets, and two kinglist bardelois, who were to continue in office for one year; to these the louis indied eight others, at the request of the ommons. The lords reserved to themselves the appointment of the chancellor, chamberlain, and steaped of the household, during the minority Even by this arrangement nearly the whole executive government was transferred to the 'even houses of parliament.—Hallam, Mid. Ages,—Lingard, Hist.—Not. Parl.

mission to retain their native prince. \* Instead of | tax-gatherers, had it not been for other circum-

French army into Brittany, and then the duke implored the assistance of a force from England. considerable army was raised, and sent to his relief, under the command of the Earl of Buckingham, one of the king's uncles. Buckingham landed at Calais, which the English had rendered stronger than ever; and from Calais he marched through Artors, Picardy, Champagne, and other inland provinces of France, plundering and devastating the open country. The progress was watched by far superior forces, but, firm to the system which the cautions Charles had adopted, the French would not risk a battle, and the English, after a circuitous march, reached the frontiers of Brittany without meeting any resistance. But the Earl of Buckingham was scarcely there when the King of France died, and the Bretons, who knew that a boy was to ascend the throne, thinking that they should no longer stand in need of their assistance, began to entertain as much jealousy and hatred of the English as they had hitherto done of the French. De Montfort, though certainly inclined to maintain his close alliance with England, was unable to resist the wishes of his subjects, and as the nucles of the young King Charles VI., who formed the regency, were willing to treat and to recognise his restoration, he concluded a peace with France, and engaged wholly to abandon the interests of England. Buckingham owed his safety only to the brave men be bad about him and to the supplies of provisions he received from home, and he returned in the following spring, glad to escape from the bostday of the Bretons. The English complained of the treachery c.1. misteadness of the Bretons; the Bictons complained of the profe and rapacity or the English. These proceedings, though they were considered as failures, had certainly given the French occupation in their own country, and had kept them from our shores; but they had cost large sums of money, and the nation was sorely harassed by taxation, or by the way in which the taxes were levied. In an evil hour, parliament passed a capitation tax: this was a repetition of the tax imposed in the last year of the preceding reign, but slightly modified, so as to make it fall less heavily on the poor. Every male and female of fifteen years of age was to pry three groats; but in cities and towns the aggregate amount was to be divided among the inhabitants according to their abilities, or in such a way that no individual should pay less than one great, or more than sixty groats for himself and his wife. Where there was little or no registration, the fixing of the age was sure to lead to disputes: the collectors might casily take a boy or girl of fourteen to be fifteen, and poverty would induce many of the poor knowingly to make a mis-statement of the opposite kind. But the levying of this awkward

consenting, Charles instantly prepared to send a

European society. The peasantry had been gradually emerging from slavery to freedom, and began to feel an ambition to become men, and to be treated as such by their superiors in the accidental circumstances of rank and wealth. this transition state there were "mistakes and atrocious crimes committed by both parties; but ignorance may be particularly pleaded in exculpation of the people, while that very ignorance and the brutalised state in which they had been kept were crimes and mistakes on the part of the upper classes, who had now to pay a horrible penalty. The enfranchisement of the peasantry, which was the real motive of the movement, for the rest was an after-thought, begotten in the madness of success and the frenzy inspired in unenlightened minds by the first consciousness of power, was so sacred an object that nothing could disgrace or eventually defeat it "Their masters in some places (we believe in all) pulled them back too violently; they were themselves impatient of the time which such an operation requires. Accidental provocations—malignant incendances—frequently excited them to violence; but in general the commotions of that age will be found to be near that point in the progress of slaves towards emancipation when their bopes are roused and their wrongs not yet redressed. \*\* In Flanders, notwithstanding that there the more respectable burghers took a share in the insurrection, many frightful excesses lad been committed upon the aristocracy, and in France the recent Jacqueric had been little clse than a series of horrors. The attempt of the French peasantry offered a discouraging example to their neighbours in England; but the democratic party had had a long triumph in Flanders; and at this very moment the son of Von Artaveldt, the brewer of Ghent, with Peter du Bois, was waging a successful war against their court, their nobles, and the whole aristocracy of France. From the close intercourse between the two countries. many of the English must have been perfectly acquainted with all that was passing in Flanders, and may have derived encouragement therefrom. A new revolt had also commenced in France headed by the burghers and inhabitants of the towns: it began at Rouen, where the collectors of taxes and duties on provisions were massacred, and it soon spread to Paris and other great cities. Many of our historians have attributed part of the storm which was now gathering in England to the preaching of Wyclifle's disciples, but their original authorities seem to have been prejudiced witnesses against the church reformer. The convulsion is sufficiently accounted for by the actual condition of the people of England at this period. considered in connexion with the particular point in its progress at which society had arrived. That

condition, though far superior to the state of the

stances involved in the mighty change which had

gradually been taking place in the whole body of

[Book IV.

tax might have passed over with nothing more

serious than a few riots between the people and the

French people, was sufficiently wretched and galling. A considerable portion of the peasantry were still serfs or "villains," bound to the soil, and sold or transmitted with the estates of the nobles and other landed proprietors. With the exception of some of the lower order of the secular elergy, there were but few persons disposed to consider or treat them as fellow-creatmes. The discontents and sufferings of the classes immediately above these serfs,—the poor towns-people on the coast, more particularly, who had been plundered by the foreign fleets,-no doubt contributed to hurry on the sanguinary crisis; but it was the poll-tax that was the proximate cause of the mischief. At first the tax was levied with mildness; but, being farmed out to some courtiers who raised money upon it from Flemish and Lombard merchants, it was exacted by their collectors with great severity, and this severity increased as it became more and more evident that the receipts would in no case come up to the amount calculated. But the obstruct of the people kept pace with the harshness of the collectors; many of the rural districts refused payment. The recusants were handled very sorely and uncourteensly, "almost not to be spoken," in various places in Kent and Essex, "which some of the people taking in evil part, secretly took counsel together, gathered assistance, and resisted the exactors, rising against them, of whom some they slew, some they wounded, and the rest fled." Alarmed at these proceedings, government sent certain commissioners into the disturbed districts. One of these commissioners, Thomas de Bampton, sat at Brentwood in Essex: the people of Foblung, on being summoned before him, said that they would not pay one penny more than they had done, "whereupon the said Thomas did grievously threaten them, having with him two scrieants-atarms of the king." These threats made matters worse, and when Bampton ordered his serjeants to arrest them, the peasants drove him and his menat-arms away to London. Upon this Sir Robert Belknape, Chief Justice of the Common Pleas, was sent into Essex to try the offenders; but the peasants called him traitor to the king and realm, forced him to flee, and chopped off the heads of the jurors and clerks of the commission. They stuck these heads upon poles and carried them through all the neighbouring townships and villages, calling upon all the poor to rise and join them. Sir Robert Hales, prior of the knights of St. John of Jernsalem, who had recently been created Lord Treasurer of England, was an especial object of the popular fury. He had a goodly and delectable manor in Essex, "wherein were ordained victuals and other necessaries for the use of a chapter-general, with great abundance of fair stuff of wines, arras, cloths, and other provisions for the knights brethren." "The commons of England" (for so the peasants called themselves, and were called by others) ate up all the provisions, drank all the wine, and then destroyed the house. Nothing was wanting but a leader, and this they soon found in the person of a

One of the collectors of the poll-money went to the house of one Walter the Tyler, in the town of Dartford, and demanded the tax for a young maiden, the daughter of Walter. The mother maintained that she was but a child, and not of the womanly age set down by the act of parliament: the collector said he would ascertain this fact, and he offered an intolerable insult to the girl; " and in many places they made the like trial." The maiden and her mother eried out, and the father, who was tiling a house in the town, ran to the spot and knocked out the tax-gatherer's brains. The neighbours applanded the deed, and every one prepared to support the Tyler. About the same time Sir Simon Burley\* went to Gravesend with an armed force, and claimed an industrious man living in that town as his escaped bondsman. A villam, according to the law, acquired his freedom by a residence of a year and a day in a town; but in this case Burley demanded the great sum of thee lumdred pounds of silver for the surrender of his claim to the man; and when this was refused, he carried him off a prisoner to Rochester Castle. The commons of Kent now rose as one man, and being jumed by a strong body of the men of Essex, who crossed the Thames, they fell upon Rochester Castle, and either took it or compelled the gardson to deliver up Sir Simon's serf with other prisoners. In the town of Mandstone, the insurgents appointed Wat the Tyler their captain, and then took out of prison, and had for their chaplain or preacher, "A wicked priest called John Ball," who had been several times in confinement, and who was then under prosecution by the archbishop for irregularity of doctrine. On the Monday after Trinity Sunday, 1381, Wat Tyler entered Canterbury, denouncing death to the archbishop, who, however, was absent : after terifying the monks and the elergy of the cathedral, he forced the mayor, aldermen, and commons of the town to swear to be true to Richard and the lawful commons of England: then beheading three rich men of Canterbury, Wat marched away towards London, followed by five hundred of the poor towns-folk. On his march recruits came to him from all quarters of Kent and Sussex; and by the time he reached Blackheath (11th June) there were, it is said, one hundred thousand desperate men obeying the orders of Wat Tyler. While at

HISTORY OF ENGLAND.

priest of Kent, kept then, to their purpose by long orations or sermons, in which he insisted that all men were equal before God, and ought to be so before the laws, -- and so far he was right; but it appears that he went on to recommend an equality of property, which is impracticable, and a destruction of all the upper clases, which was monstrous It has been suspected, and not without probability, that Ball's real views may have been somewhat misrepresented by his enemies, but the nature of his discourses may be collected from his standing text, which was-When Adam delved, and Eve spin, (Vho was then a gentleman? His eloquence had such an effect on the multitude, that, forgetting his own doctrines of equality, they yowed that they would make him primate and

chancellor of England. They occupied all the roads, killed all the judges and lawyers that fell into then hands, and made all the rest of the massengers swear to be true to King Richard and the commons, to accept no king whose name was "John," and to pay he tax except the fifteenths which had been paid by their forefathers. The young king with his mother, with his constit Henry of Bolingbroke, with Sanon, archbishop of Cauterbury and chancellor, Sir Robert Hales, Geasurer, and some other members of the government, threw Timself into the Tower of London. The Dake of Lancaster was in Scotland negotiating a peace, and Gloneester and York, the other uncles of the king, were absent. Some of the council were of onifinon that Richard should go and speak with the insurgents, but the archbishop and the treasurer strongly objected to this measure, and said that nothing but force should be used "to abate the pride of such vile rascals " On the 12th of June, however, Richard got into his barge, and descended the river as far as Rotherbithe, where he found a vast multitude drawn up along shore, with two banners of St. George and many pennons. "When they perceived the kmg's barge," says Proissart, "they set up shouts and cries as if all the devils from hell had come into their company." Startled and terrified, the persons with the king put about the boat, and, taking advantage of the rising tide, rowed back with all speed to the Tower. The commons, who had always professed the greatest attachment to Richard's person, now called aloud for the heads of all the ministers; and marching

all the records and books in the palace of the primate. At the same time the men of Essex advanced along the left bank of the river, and after destroying a mansion of the lord treasurer's at Highbury, threatened the north-eastern part of London. Walworth, the mayor, caused the moveable part of London-bridge to be drawn up, to prevent the men of Kent from crossing the river; but on the following day a passage was yielded to them through fear, and the insurgents entered the city, where they were presently joined by all the rabble, At first their demeanour was most moderate; ---"they did no hirt, they took nothing from any ment, but bought all things they wanted at a pist price" But the madness of drunkerness was soon added to political fury. The neb citizens, hoping to conciliate the mob, had set open their wine-cellars for them, to enter at their pleasure, and, when the peasants had once tasted of this rate bixing, they thought they next; could have enough of it, and seized it and other strong dranks by force wherever they could find them. excited, they went to the Savoy, the house of the Duke of Lancaster, "to which there was none in the realm to be compared in beauty and stateline's." 'They broke into this palace, and set fire To show that plunder was not their object the leaders published a proclamation ordering that none, on pain of death, should secrete or convert to his own use anything that might be found there, but that plate, gold, and jewels should all be detroyed: and so particular were they on this head, that a fellow who hid a silver cup under his clothes was thrown into the Thames, cup and all. It would have been well lad the prohibition extended to the duke's wines; but they drank there numoderately, and thirty-two of the rioters, engazed in the cellars of the Savoy, were too drunk to remove in time, and were buried under the smoking rights of the house. Newgate was then demolished; and the prisoners who had been confund there and in the Fleet joined in the work of The Temple was burnt, with all the books and ancient and valuable records it contained; and about the same time a detachment set fire to the priory of St. John of Jerusalem, in Clerkenwell, which had been recently built by Sir Thomas Hales, the prior of the order, and treasurer of the kingdom. They now also proceeded to the shedding of blood; to every man they met they put their watchword—"For whom holdest thou?" the answer was-" With King Richard and the true commons:" and whosoever knew not that watchword, off went his head. They probably felt that antipathy to foreigners common to uneducated people; but against the Flemings, who it was popularly said fattened on their miseries, they bore the most deadly rancour. The sanctuary of the church was disregarded, and thirty Flennings were dragged from the altar into the streets, and beheaded amidst shouts of triumph and savage joy; thirty-two more were scized in the Vintry,

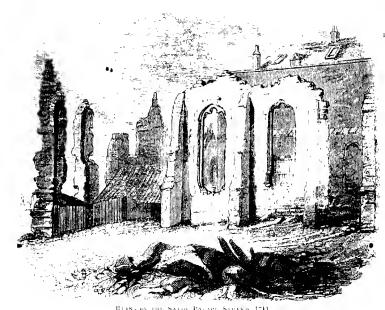

and King's Bench, and burned the furniture and

BOOK IV.

\* John was an unhappy name in English history: and John of Gaunt, Duke of Lancaster, the king's nucle, was held guilty of all the oppressions the people had recently suffered. The notion, moreover, of his having designs on the crown was as prevalent as

along the right bank of the river to Southwark.

and then to Lambeth, destroyed the Marshalsea

and underwent the same fate. Many of the rich citizens were massacred in attempting to e-cape : those who remained did nothing for the detence of the city; and all that might London was involved in fire, murder, and debauchery.

On the morning of the 14th at was re-olved to try the effect of concession, and of promises which the court had no intention of keeping, nor had it the power of so doing, had the will been ever so strong. A proclamation was issued to a multitude that crowded Tower-hill, preventing the autroduction of provisions into the fortress, and clamonring for the heads of the chancellor and treasurer; and they were told that, if they would retire quietly to Mile End, the king would meet them there, and grant all their requests. The gates were opened, the drawbridge was lowered, and Richard rode forth with a few attendants without arms. The commonalty from the country followed the king: "but all did not go, nor had they the same objects in view." On the way Richard's half-brothers, the Earl of Kent and Sir John Holland, alarmed for their own safety, put spurs to their horses, and left him. On arriving at Mile End, Richard saw himself surrounded by upwards of sixty thousand peasants; but their demeanour was mild and respectful, and they presented no more than four demands, three of which were wise and moderate, and the exceptionable one, which went to fix a maximum for the price of land, was not more absurd than an act of their rulers in the preceding reign, which fixed the maximum price of agricultural labour. These four demands of the peasants were-1. The total abolition of slavery for themselves and their children for ever. 2. The reduction of

the cent of good land to fourpence the acre. 3. The full liberty of buying and selling, like other men, in all fairs and markets. 4. A general pardon for all past offences. The king, with a gracious countenance, assured them that all these demands were granted, and, returning to town, be employed upwards of thirty clerks to make copies of the charter containing the four clauses. In the morning these copies were scaled and delivered, and then an numerise body of the insurgents, consisting elnefly of the men of Essex and Hertfordshire, quietly withdrew from the capital; but more dangerous men remained behind. The people of Kent, who had been joined by all kinds of miscreants, had commutted some atrocrous deeds on the preceding day, while the king was marching to Mile End. Almost as soon as his back was turned, with a facility which exertes a suspicion of trenchery or disaffection on the part of the garrison,\* they got into the Tower, where they cut off the heads of the Archbishop of Canterbury, the chancellor; Sir Robert Hales, the treasurer; Wilham Apuldore, the king's confessor; Legge, one of the farmers of the tax, and three of his associates. The Princess of Wales, who was in the Tower, was completely at their mercy; but the ci-derant " Fair Maid of Kent" was again quit for a few unsavoury kisses. The horror of the scene, however, overpowered her; and she was carried by her ladies in a senseless state to a covered boat, in which she was rowed across the

<sup>\*</sup> There were six loundred men attains, and as many archers, in the Tower. The rebels or insurgents were unserably armed and equipped. "Of those commons and husbandmen," says Holmshed, "many were weaponed only with streks................................. Among athoushed, that kind of persons ye should not have seen one-well armed."

river. As soon as he could the king joined his mother, who had been finally conveyed to a house called the Royal Wardrobe, in Carter-lane, Bernard's Castle Ward.

Wat Tyler and the leaders with him rejected the charter which the men of Essex had so gladly accepted. Another charter was drawn up, but it equally failed to please, and even a third, with still larger concessions, was rejected with contempt.\* The next morning the king left the Wardrobe, and went to Westminster, where he heard mass and paid his devotions before a statue of "our Lady" in the abbey, which had the reputation of performing many miracles, particularly in favour of English kings. After this he mounted his horse, and with a retinue of barons and knights rode along the "causeway" towards London. On coming into West Smithfield, he met Wat Tyler, who was there with a great multitude. The mayor and some other city magistrates had joined the king, but his whole company, it is said, did not exceed sixty persous, who were all on horseback. In the front of the Abbey of St. Bartholomew, Richard drew rein, and said that he would not go thence until he had appeased the rioters. Wat Tyler, on seeing him, said to his men, "Here is the king! I will go speak with him. Move not hand or foot

• According to Knyghton, Wat Tyber masted on the total repeal of the forest or game laws, and that all warrens, waters, parks, and woods should be common, so that the puor as well as the rich might freely fish in all waters, hunt the decr in forests and parks, and the hate in the field.

unless I give you a signal," Wat, who had procured arms and a horse, rode boldly up to Richard, and went so near that his horse's head touched the flank of Richard's steed. "Kmg!" said be, "dost thou see all those men there?" "I see them," replied the king, "why dost thou ask?" "Because they are all at my will, and have sworn by their faith and loyalty to do whatsoever I should bid them." During this parley the Tyler played with his dagger, and, it is said by some, laid hold of Richard's bridle. It is probable that this imeducated man, intoxicated by his brief authority, was coarse and insolent enough; but to suppose that he intended to kill the king is absurd. Some say that Richard ordered his arrest; others that John Walworth, the lord mayor, thinking that he intended to stab the kmg, rode up, and plunged a short sword into his throat without any orders. All accounts agree in stating that, whether with sword, dagger, or mace, it was the mayor that struck the first blow. Wat Tyler thrugd his horse's head to rejoin lus men, but Ralph Standish, one of the king's esquires, thrust his sword through his side, " so that he fell flat on his back to the ground, and beating with his hands to and fro for a while, gave up his unhappy ghost." When the men of Kent saw his fall they cried out, "We are betrayed! They have killed our captain and guide!" and the foremost men in that disordered array began to put their arrows on the string. The personal intrepidity of the royal boy-for Richard was only in his

According to Holinshed the whole number of exeentions amounted to 1500.

When parliament assembled, it was seen how little the upper classes of society were prepared for that recognition of the rights of the poor, to which

in the present day no one could demur without incurring the suspicion of insanity. In truth, it

your king, and I will be your captain and guide." On hearing these words, many slipped away-

CIVIL AND MILITARY TRANSACTIONS.

others remained; but, without a leader, they knew not what to do. The king rode back to his lords, and asked what steps he should take next, " Make for the lields," said the lord mayor: "if we attempt to retreat or flee, our rum is certain; but let us gain a httle time, and we shall be assisted by our good friends in the city, who are preparing and arming with all their servants." The king and his party made for the northern road, and the mob, wavering and incertain, followed lim to the open fields about 1-lington. Here 1000 men-atarms (Froissart says from 7000 to 8000) joined the king, under the command of Sir Robert Knowles. The insurgents now thinking their case hopeless, either ran away through the corn fields, or, throwing their bows on the ground, knelt and unplored for mercy. "Sir Robert Knowles was in a violent rage because they were not attacked and slam in a heap, but the king would not consent, saying that he would have his full revenge on them in another way, which in truth he afterwards had." While these events were passing in London and its neighbourhood, the servile war had spread over a great part of England—on the southern coast, as far as Winchester, on the eastern as far north as Scarborough. As the nobles shut themselves up in their strong castles, but little blood was shed. Henry Spencer, the bishop of Norwich, despised this safe course; he armed his retainers, collected

confessed his captives, gave them absolution, and sent them straight to the gibbet of the black.\* Soon after the death of Wat Tyler, Richard found himself at the head of 40,000 horse, and then he told the villains that all his charters meant nothing, and that they must return to their old l ondage. The men of Essex, whose conduct had been the mildest and most rational, made a stand, but they were defeated with great loss. Then courts of commission were opened in different towns to condemn rather than to try the chief offenders. Jack Straw and John Ball, the strolling preachers, Lister and Westbroom, who had taken to themselves the titles of kings of the commons in Norfolk and Suffolk, with several hundred more, were executed. At lirst they were beheaded: afterwards they were

hanged and left on the gibbet, to excite horror and

terror; but their friends cut down the bodies, and

carried them off; upon which the king ordered that they should be hanged in strong iron chains. †

Fromsart — Knyghton, — Walsingham. — Stow. — Holinshed.
 Thus is behaved to be the first introduction of this disgusting

his friends, and kept the field against the insur-

gents of Norfolk, Cambridge, and Huntingdon. He surprised several bodies of peasants, and cut

them to pieces: others he took prisoners. Then,

putting off the complete armour which he wore, and laying down the sword, he took up the crucifix, would have belied all history and all experience if the victorious party in such a contest should have immediately followed up their success by giving in to the demands of their opponents. The king had annulled, by proclamation to the sheriffs, the charters of manumission which he had granted to the insurgents, and this revocation was warmly approved by both lords and commons, who, not satisfied with saving that such enfranchisement could not be made without their consent, added, that they would never give that consent, even to save themselves from perishing altogether in one day. There was a talk mdecd about the propriety and wisdom of abolishing villainage; but the notion was scouted, and the owners of serfs showed that they neither doubted the right by which they held their fellow-creatures m a state of slavery, nor would besitate to increase the severity of the laws affecting them. They passed a law by which "riots, and rumoms and other such things," were turned into high treason,\* a law most vaguely expressed, and exceedingly likely to involve those who made it in its fangs. But this parhament evidently acted under the impulses of panic and of revenge for recent injuries. The commons presented petitions calling for redress of abuses in the administration: they attributed the late insurrection to the extortions of purveyors, to the venality and rapacity of the judges and officers of the courts of law, to the horrible doings of a set of handitti called Maintainers, and to the heavy weight of recent taxation; but they said not a word about that desire for liberty which was in fact the main torrent in that inundation, the others being but as tributary streams swelling its waters. When the king demanded a supply, the commons refused, averring that a new tax would provoke a new insurrection. When the commons, in their turn, asked for a general pardon, not for the insurgents, but for themselves and others, for illegal acts committed by them in putting down the rebels, the king gave them to understand that the commons must make their grants before he dispensed his favours. This discussion was curious: when the king pressed again for money, they told him that they must have time for consideration; and then the king told the commons that he too

burnt Elchin, a town in France, and laid siege to the strong fortress of Oudenarde; but in the

commons again declined; many towns submitted,

and Ghent was besieged or threatened, but without

English force, whose main object it was to assist the free burghers of Ghent. The Bishop of Nor-

wich led his little army to Gravelines, which he stormed and took: he next defeated an army of

the Count of Flanders, took the town of Dunkirk,

and occupied the whole coast as far as Shivs, he

then marched with an impetuosity which astonished more regular warriors to lay siege to Ypres,

where he was joined by twenty thousand of the

men of Ghent. Meanwhile, the count implored

the protection of the young King of Trance, who,

convoking the ban and the arriere ban, sent a

splendid army, in which were counted twenty-six

thousand lances, across the frontier. The bishop

made one furious assault; but, on the approach of the French, he can back to the coast more rapidly

than he had advanced from it. A part of his

army got back with considerable booty to Calais;

the bishop, with the rest, threw biniself into Grave-

lines—where the French were glad to be rid of

hum, by permitting him to destroy the fortifications of the place, and then embark with bag and bag-

excellent princess, who deserved a better and a A few days after the marriage, on January the 24th, parliament re-assembled, and Laneaster, yearning after his knigdom of Castile, proposed carrying an army into Spain. He only

wanted sixty thousand pounds, but after a warm debate, the dake was defeated. At this time there were two popes, Urban VI., an Italian, and Clement VII., a Prenchman. When there was no schism, the pope was generally a peace-maker; but on occasions like the present, each of the rival pontiffs tried to arm Europe in his cause. France, Scotland, Spain, Sicily, and Cyprus were for Clement; England, Flanders, and the rest

of Europe for Urban, who, on good grounds, considered France his greatest enemy. The Italian pope, after looking about for a brave and sure champion, fixed his eyes on the warlike Bishop of Norwich, who had so lately distinguished himself in the servile' war of England. At the same time, the Flemings, who were devoted adherents of Urban, were sorely pressed by the French; and they renewed their applications to England for assistance. After preaching a sort of crusade, the Bishop of Norwich asked in the pope's name a tenth on church property, obtained the produce of a fifteenth on lay property, and raised two thousand five hundred of the best lancers in the land, and about an equal number of archers, and so passed over the Channel to make war, "for he was young and adventurous, and loved the profession of arms above all things." † The war in which this unbtary churchman engaged, presented two aspects: under one, it was a sacred crusade for the pope, but under the other, it was a conflict waged in umon with, and for the rights and independence of the burghers and commons of Flanders against the anstocracy. He was so fond of war, that he probably cared little how he indulged in it. After the murder of James Von Artiveldt, the cause of democracy declined; and thirty-six years after that event, the Flenings were almost reduced to extremities. In this state they fixed all their hopes on Von Artayeldt's son, who had been named Philip, after his godmother Philippa, the wife of Edward III. Philip Vou Artaveldt, warned by his father's fate, had passed his life in a quiet and happy retirement; and in 1381 he was dragged, with his eyes open to the worst consequences, to

ment of two hundred thousand florins, a debt of Edward III., which

they asserted had been due to them forty years.

head the council and lead the armes of the dispirited people. His character and his fate form one of the most interesting episodes in the history of modern Europe. For about fifteen months, which included the whole of his public life, his career was as brilliant as a romance: he forced the enemy to raise the siege of Ghent, the centre and soul of the confederacy; with the weavers and other artisans of Ghent he defeated the French, the count, and

issue of the expedition was owing to his own folly and precipitation; but in England his failure was attributed to the jealousy of the Dake of Laneaster. The bishop, on his return, was prosecuted by parliament, and was for some time deprived of his temporalities. At the same time, four of his principal officers were condemned for having sold stores and provisions to the enemy. A.D. 1384. In her jealousy of the powers of his uncles, the Princess of Wales had surrounded her son with ministers and officers who were chiefly men of obscure birth and fortune. Richard, who hyed almost entirely in the society of these individuals, contracted an exclusive affection for them, and, as soon as he was able, he began to heap wealth and honours upon them. Hence there arose a perpetual jealousy between the favorrites and the king's uncles, and a struggle in which both parties seem to have resorted to the most nefarious proceedings. A dark mystery will for ever hang over most of these transactions. Once the Duke of Lancaster was obliged to hide himself in Scotland, and he

would not return until Richard publicly proclaimed his conviction of his innocence, and allowed him to travel always with a strong body-guard. In the month of April of this year, just after the duke had done good service against the Scots, the \*, I roiss.-Barante, Hist. des Ducs de Bourgegne.

Holland.

parliament met at Salisbury. One day during the session, John Latimer, a Carmelite friar, a native of Heland, gave Richard a parcliment, containing the particulars of a conspiracy to place the crown on the head of his micle. The king communicated the contents to Lancaster, who, swore that they were all utterly false, soffered to fight in proof of his mnocence, and insisted that his accuser should he placed in safe custody to be examined by the council. The monk was accordingly committed to the care of John Holland, the king's halfbrother, who is said to have strangled bim with own hands during the night. The km friends asserted that the friar had killed himself. The Earl of Buckingham swore that he would kill any man that dared to accuse his brother Lancaster of treason. The Lord Zouch, whom the from had named as the author of the memorial, declared upon his oath that be knew nothing about it, and the matter dropped. Some suspicions, however, hurared in the mind of Richard, and an attempt was made some time after to arrest Lancaster. But the duke threw hunself into his

strong castle of Pontefract, and stayed there till

by the Duke of Lancaster, were prolonged till the

Truces with Scotland which had been negotiated

month of May, 1385, when the French, in order to bong about the renewal of hostilities, sent John de Vienne, loid admiral of France, with one thousand men-at-arms, and forty thousand francs in gold, and other supplies to induce the Scots to make an arroad into England. The French knights soon complained bitterly of the pride of the Scots, the poverty of the land, and the lack of annusements, such as banquets, balls, and tournaments. The common soldiers were not sufficiently respectful to the women; and, on the whole, these allies agreed very badly. At last, however, the French and Scots broke into Northumberland; but Richard, who now took the field for the first time, came up from York, and forced them to retire. With eighty thousand men, Richard crossed the borders, burnt Edinburgh, Peith, and other towns; but then he was obliged to retreat for information was brought that John de Vienne had crossed the Solway Frith, and was besieging The French and Scots marched off by the west, and returned towards Edinburgh, boasting that they had donc as much mischief in England as the English had done in Scotland. Richard then disbanded his army, without ever having had an opportunity of measuring swords with the enemy. During this campaign, the royal quarters had been disgraced by a vile murder, and by frequent quarrels between the king's uncles and his favourites. At York, during the advance, Sir John Holland assassinated one of the favourites, and the grief, shame, and anxiety, caused by this event broke the heart of the Princess of Wales, who died a few days after. On the retreat from Scotland, Sir Michael de la Pole, another of the favorrites, who was then chancellor, excited some fresh jealousy in the mind of Richard, who thereupon had a violent and indecent alterestion with his uncle Lancaster. After the campaign the king made great promotions to quiet the jealousy of his relations;—honom's fell upon them, but these were nothing compared to the honours and grants conferred on the king's minions. Henry of Bolingbroke, Lancaster's son, was made Earl of Derby; the king's ancles, the Earls of Cambridge and Buckingham, were created Dirkes of York and Gloucester; Michael de la Pole was created Earl of Suffolk; and Robert de Vere, a still-more mfluential favourite, Marquis of Dublin, receiving, at the same time, the extraordinary grant of the whole revenue of Ireland, out of which he was to pay a yearly rent of five thousand marks to the king. He was soon after made Duke of Ireland. As Richard had no children, he dechared at the same time that his lawful successor would be

Roger, Earl of March, the grandson of Lionel,

Duke of Clarence.\*

Soon after these arrangements, the Duke of Lancaster was enabled to depart to press his claim to the throne of Castile by force of arms. A disputed succession in Portugal, and a war between that country and Span, scenned to open a road for lum. The king was evidently glad to have him out of England. Parliament voted supplies, one half of which were given to the duke; and in the month of July, he set sail for the Pennisula, with an army of ten thousand men. Lancaster landed at Cornña, opered a road through Gallicia into Portugal, and formed a junction with the king of that country, who married Philippa, the diske's eldest daughter by his first wife. At first, the duke was everywhere victorious; he defeated the Spamards in a pitched-battle, and took many towns; but, in a second campaign, his army was almost annihilated by disease and famine; and his own declining health forced bin to retire to Ginenie. In the end, however, he concluded an advantageous treaty. His daughter Catherine, the granddaughter of Peter the Cruel, was married to Henry, Prince of Asturias, the heir of the reigning King of Castile. Two hundred thousand crowns were pand to the duke for the expenses he had incurred; and the King of Castile agreed to pay forty thousand florms by way of annuity to the Duke and Duchess of Lancaster. The issue of John of Gaunt reigned in Spain for many generations.

Encouraged by the absence of the duke with so many choice warriors, the French determined to invade England. Never had that nation made such mighty preparations. Upwards of a hundred thousand men, including nearly all the chivalry of France, were encamped in Flanders, and an immense fleet lay in the port of Sluys ready to carry them over. This fleet was composed of ships collected in all maritime countries from Cadiz to Dantzic. Charles VI., who determined to take a part in the expeditional stresser.—Walsing.—Knyght.—Rot. Pat.—Rymer.

determined (not unwisely, perhaps) that the expedition should not take place. There were other

impediments and causes of delay, and in the end

the army was disbanded. The fleet was dispersed

by a tempest, and many of the ships were taken

in these preparations were enormous, and ground

the people who had to pay them to the very dust.

That country indeed was so exhausted by the outlay

that there was no fear of its making any such

absence of Lancaster, whose vonuger brother, the

Duke of Gloucester, was far harsher than John of

Gaunt had ever been. At the meeting of parlia-

ment, in the month of October, the Duke of

Gloucester headed an opposition which determined

to drive Richard's favourites de la Pole and de

who, after a weak attempt to save him, was dis-

missed. \* After his expulsion, the commons

impeached limi of high crimes and misdemeanors, and he was sentenced to pay a heavy fine and to

be imprisoned. Gloucester and his party then

said that no good government could be expected

until a permanent council was chosen by parlia-

ment to reform the state of the nation—a council

Richard gained no increase of comfort by the

great attempt for many years to come.

by the English

Vere from office.

The expenses mentred by France

They began with de la Pole,

London. The favourites instantly took to flight. De la Pole, the condemned chancellor, who had

returned to court, and seemed dearer than ever to

his master, succeeded in reaching France, where

he died soon after; de Vere, the Duke of Ireland,

liable to capital punishment; that all who sup-

ported it were by that act guilty of high treason; and in short, that both lords and commons were

traitors. On the 11th of November following, the

king, who had returned to London, and who seems thus early to have formed the absurd idea of

governing the country by a junta or conned of bis

own choosing, was alarmed by the intelligence that

his uncle Gloucester and the Earls of  $\Lambda$ rundel and

Nottingham, the constable, admiral, and marshal

of England, were approaching the capital with

40,000 men. The decision of the judges had been

kent secret, but one of the number betrayed it to a

friend of Gloucester. As soon as Richard's cousin

the Fail of Derby, Lancaster's son and heir,

learned the approach of his uncle of Gloncester, he

quitted the court with the Earl of Warwick, went

to Waltham Cross, and there joined him. The

members of the Council of Eleven were there

BOOK IV.

said he would never consent to any such measure, and threatened to dissolve the parliament. The commons then coolly produced the statute by which Edward 11, had been deposed; and while he was agitated by this significant hint, one of the lords reminded him that his life would be in danger if he persisted in his refusal. Upon this Richard yielded, and the government was substantially vested for a year in the hands of eleven commissioners, bishops and peers, to whom were added the three great officers of the crown. At the head of all was placed his uncle Gloucester, whom from that moment he hated with an intensity which seems almost incompatible with his light, frivolous character.+ The king was now twenty years of age, but he

was reduced to as merc a cipher as when he was but eleven. In month of August in the following year, 1387, acting under the advice of De la Pole and Tresilian, the chief justice, he assembled a council at Nottingham, and submitted to some of the judges who attended it this question,-whether the commission of government appointed by parliament, and approved of under his own seal, were legal or illegal? These judges certified under their hands and scals that the commission was illegal, and that all those who introduced the measure were

got to the borders of Wales, where he received like those which had been appointed in the reigns of John, Henry 111., and Edward 11. Richard royal letters authorizing him to raise an army, and begin a civil war. He collected a few thousand men, but was met on the banks of the Isis, near Radcot, and thoroughly defeated by Gloucester and Henry of Bolingbroke. He then fled to Ircland and afterwards to Holland, where he died about four years after. The Archbishop of York was seized in the north, but was allowed to escape by the people: he also finished his days not long after, in the humble condition of a parish priest in Flanders. Tresilian and Brember remained coucealed in or about London. After the defeat of his army under de Vere, Richard, who was only eourageous by fits and starts, lost all heart, and retired into the Tower. His uncle Gloncester, who believed on pretty good grounds that the king and the favourites had intended to arrest him secretly and put him to death, showed little mercy. He drove every friend of Richard, even down to his confessor, away from the court, and threw some ten or twelve of them into prison. The "wonderful parliament," which met in the beginning of the year 1388, earried out the impeachments he had made, and gave him their full support. The five obnoxious councillors were found guilty of high treason, their property was confiscated, and Tresilian and Brember the mayor, who were discovered, were executed, to the joy of the people. With the cause of Brember's great unpopularity we are not acquainted; but the chief justice had made himself odious by his "bloody circuit" against the peasants who had been engaged in

• According to Knygkton, when Richard first received the massage of Parliament, requesting that De la Pole Earl of Suffolk and chan-cellor might be removed, he replied with boyish petulance, that he would not for them remove the meanest scullion from his kitchen.

+ Rot, Parl.

the insurrection. The judges who had signed and scaled the answer at Nottingham were next impeached. Their only plea was, that they had acted under terror of the king and the favourites: they were capitally convicted; but the bishops interceded in their behalf, and, instead of being sent to the scaffold, they were sent into exile for life to Ireland. Blake, however, who had drawn up the questions at Nottingham, was executed, and so was Usk, who had been secretly appointed under-sheriff to seize the person of the Duke of Gloucester. The king's confessor, who swore that no threats had been used with the judges at Nottingham, was also condemned to exile in Ireland. It was hoped that the shedding of blood would stop here, but such was not the intention of Gloucester. After the Easter recess he impeached four knights, and these unfortunate men were all convicted and executed. Of these, the fate of Sir Simon Burley excited most sympathy: he had been the much-esteemed friend of Edward III. and the Black Prince; he had acted as guardran to Richard; had negotiated his marriage; and was tenderly loved both by the king and the queen. Richard was not so base as to abandon this worthy knight without making an effort; but his micle Gloucester told him that his keeping the crown would depend on the immediate execution

of this individual. The young queen—the "good Queen Anne," as she was called by the people—in vain begged on her knees that he might be spared: in vain Henry of Bolingbroke, who had been Gloucester's right hand in this enterprise, added his most carnest solicitations. The iron-hearted Gloucester had a violent quarrel on this occasion with his nephew Henry, who never forgave him.\*

For about twelve months Richard left the whole power of government in the hands of his uncle and of the council or commission. It was during this interval that the battle of Otterbourne, famous in song under the name of Chevy Chase, was fought (15th August, 1388) between the Scottish Earl Douglas, and the Lord Harry Percy, the renowned Hotspur. Douglas was slain, but the English were in the end driven from the field, after both Hotspur and his brother, Lord Ralph Percy, had been taken prisoners. At length Richard gave a proof of that decisive promptitude which visited his mind at uncertain intervals. In a great conneil held in the month of May, 1389, he suddealy addressed his uncle—" How old do you think I am?" "Your luglmess," replied Gloucester, "is in your twenty-second year." "Then," added the king, "I am surely of age to manage Rot, Parl .- Knyght.

FIELD OF THE BATTLE OF CHEVY CHARK,-Bird.

my own affairs. I have been longer under the control of guardians than any ward in my dominions. I thank ye, my lords, for your past services, but I want them no longer." Before they could recover from their astonishment he demanded the great seals from the archbishop, and the keys of the Exchequer from the Bishop of Hereford; and within a few days he drave Gloucester from the conneil, and dismissed most of the officers he had appointed without meeting with any opposition. He informed the people, by proclamation, that he had now taken the rems of government into his own hands; but, in fact, this was far from being the case. Richard had not the needful application to business, and the elnef administration of affairs was left to another nucle, the Duke of York, and to his cool-headed and calculating cousin, Henry of Bolingbroke, Earl of Derby. For some years this government was undistribed

and the nation trangual; but Richard was evi-

dently simulating or dissimulating the whole time.

Laneaster returned from the continent after in

absence of more than three years, and, from ear-

eumstances with which we are not sufficiently

794

acquainted, he became all at once exceedingly moderate and popular. He conducted his brother Gloucester and the nobles of lns party to court, where an affecting reconciliation took place, the king playing his part so ably that nobody seems to have doubted the supecrity with which he embraced his "dear uncle" Gloncester. The duke was readmitted into the council; Lancaster was created Dake of Aquitaine for life, and intrasted with the negotiation of a peace with France, the parliament voting a liberal sum to defray his expenses at a sort of congress held at Annens. Hostilities had been suspended by a succession of armistices, and in 1394 a truce was concluded for four years. This truce also embraced Scotland, the king of which country, Robert 11., had died the 19th of April, 1390, leaving the crown to his cldest son John, Earl of Carrick, who took the name of Robert III.‡ A D. 1394.—After the death of the good Queen Anne, which happened at Shene, on Whit Sunday, the kmg collected a considerable army, and crossed over to Ireland, where the native chiefs had been

for some time making head against their English oppressors, and where some of the English themselves had revolted. This campaign was a bloodless one: the Irish chiefs submitted; Richard entertained them with great magnificence, knighted some of them, and, after spending a winter in the country, and redressing some abuses, he returned home, and was well received by his subjects. Although the council was divided on the matter, Richard at last decided on contracting a matrimonial alliance with France; and in the month of

\* Walsing .- Knyght .- Rot. Parl.

† This grant was subsequently recalled,
‡ The same popular prejudice against the name of John, at least
for a king, which we have seen displayed by the English followers of
Wat Tyler, was also entertained at this time by the Scots. It is
commonly traced to the unfortunate reigns of John of England, John
of France, and John Baliol.

-a princess, a miracle of beauty and of wit, according to Froissart, but who was little more than seven years old. The blessing of a peace, or at least of a truce, for twenty-five years, was the consequence of this union, and yet the marriage was decidedly impopular in England. The Duke of Gloncester had always opposed it; and the people, whose favour he had never forfeited, now considered him in the light of a champion for the national honour. "Our Edwards," said the duke, "struck terior to the heart of Paris, but nuder Richard we court their alliance, and tremble at the French even in London". It is said that the duke's declamations were the more vehement, because he suspected what would follow to limiself, and it is certain that Richard asked assistance from Charles V1 , to be given in case of need, and that this alliance with France gave him courage to undertake a scheme which his deep revenge had nourished for many years. The year after his marriage, in the month of July, Richard struck his blow with consummate treachery , after entertaining limi at dinner, in his usual bland manner, he arrested the Earl of Warwick. Two day after he craftily induced the primate to bring his brother, the Earl of Arundel, to a friendly conference; and then Arundel was arrested. had thus got two of his victims: to entrap the third, and the greatest of all, he went with a gay company to Pleshy Castle, in Essex, where his uncle Gloucester was residing with his family. The duke, suspecting no moschief, came out, with all his household, to meet the royal guest, and, while Richard cutertained the duchess with friendly discourse, Gloncester was seized by the earl manshal, carried with breathless speed to the river, put on board ship, and conveyed to the castle of Calais. A report ran that the duke was murdered: to quiet the agitation, Richard issued a proclamation stating that the recent arrests had been made by the assent of the chief officers of the crown, and with the knowledge and approbation of his uncles of Lancaster and York, and his cousin Henry, Earl of Derby.\* A few days after Richard went to Nottingham Castle, and there, taking his uncles Lancaster and York, and his consin Henry, by surprise, he made them, with other noblemen, put their scals to a parchment, by which Gloucester, Arundel, and Warwick were "appealed" of treason in the same

and married Isabella, the daughter of Charles VI.

manner that they (with Henry of Bolingbroke among them) had appealed the king's favourites ten years before. A parliament was then summoned to try the three traitors, for so they were now called by men, like Henry of Bolingbroke, who had been partakers in all their acts, and by others who had supported them in their boldest measures. These men can only escape the suspicion of being a set of fickle and unprincipled scoundrels by our admitting that many circumstances remain untold; and Rot. Parl.—Rymer.

indeed the contemporary accounts of the transac-

tion are unusually vague and insatisfactory. One

great key to the secret might be found in the terror

inspired by Richard's masterly craft and his dis-

play of nultary force. On the 17th of September,

he went to parliament with six lumdred men-atarms wearing his hvery, and a body-guard of choice archers. The Commons, who had received their lesson, began by impeaching Thomas Armidel, Archbishop of Canterbury, of high treason. Fearing the primate's eloquence, Richard artfully prevented his attending in the Lords, and he was, at the king's will, banished for life. On the following day his brother, the Earl of Arundel, who offered to prove his innocence by wager of battle, who challenged a trial by jury, and who at last pleaded a general and particular pardon, was condenned and immediately beheaded on Tower Hill. On the 21st of September, a writ was issued to the Earl Marshal, governor of Calais, commanding hum to bring the body of his prisoner, the Duke of Gloncester, before the king in parliament, that he might answer to the lords who had appealed him of treason. On the 24th (and three days were probably then scarcely enough for a king's messenger to travel to Calais and back) an answer was returned to the Lords, that the Earl Marshal could not produce the duke, for that he, being in enstody in the king's prison in Calais, had died there. This parhament, which was assembled to procine his death, cared little how he had died, and made no inquiries. The Lords appellants demanded judgment; the Commons seconded their demand, and the dead duke was declared to be a traitor, and all his property was confiscated to the kmg. On the next day a document, purporting to be Gloucester's confession taken by Su William Rickhill, one of the justices who had been sent over to Calais in the preceding month for that sole purpose, as was pretended, was produced and read in parliament.\* On the 28th, Gloncester's friend, the Earl of Warwick was brought before the bar of the House; the earl pleaded guilty, but his sentence was commuted into perpetual imprisonment in the Isle of Man. In passing sentence on these nobles, there were many who condemned themselves. The Duke of York, the Bishop of Winchester, and Sir Richard Scroop had been members of the commussion of eleven; the Earl of Derby and the Earl of Nottingham had been two out of the five who entered London in arms and appealed the favourites of treason. After their recent experience of the king, nothing but faturty could make them repose confidence in any of his assurances, or in the steadiness of parhament; but for want of any better security, they extracted from Richard a declaration of their own unocence in regard to all past transactions. This declaration • Rickhill saw the Dirke alive, at Calais on the 7th of September. The real object of his mission, and the real circumstances of Glou cester's death, are involved in a mystery never likely to be cleared up. But it seems that the universal impression, not only in England but also on the continent, was correct, land that he was secretly mutdered, and it a mainer not to disfigure the corpse, which was alterwards delivered to his family.

was made in full parhament. After this the king, who was very fond of high-sounding titles, and a great conferrer of them, made several promotions of his nobles. Among these, his consin Henry Bolingbroke was created Duke of Hereford; Mowbray, the Earl of Nottingham, Duke of Norfolk; and the king's half-brother, John Holland, who had committed the murder at York, was made Duke of Exeter.\*

Gloncester's "wonderful" parhament of 1386

bad taken an oath that nothing there passed into law should be changed or abrogated; and now the very same men, with a few exceptions, took the same oath to the decisions of the present parliament, which unded all that was then done. The answers of the judges to the questions put at Nottingham, which had then been punished as acts of high treason, were now pronounced to be just and legal. It was declared high treason to attempt to repeal or overturn any judgment now passed; and the issue male of all the persons who had been condemned were declared for ever incapable of sitting in parliament or holding office in council. "These violent ordinances, as if the precedent they were then overturning had not shielded itself with the same sanction, were sworn to by parliament upon the cross of Canterbury, and confirmed by a national oath, with the penalty of excommunication denonneed against its infringers. Of those recorded to have bound themselves by the adjuration to Richard, for the greater part had touched the same relics for Gloucester and Arundel ten years before. and two years afterwards swore allegiance to Henry of Laucaster." Before this obsequious parliament separated, it set the dangerous precedent of granting the king a subsidy, for life, upon wool; and a commission was granted for twelve peers and FIX commoners, "all persons well affected to the Fing," to sit after the dissolution, and examine and determine certain matters as to them should seem These eighteen commissioners usurped the entire rights of the legislature: they imposed a perpetual oath on prelates and lords to be taken before obtaining possession of their estates, that they would maintain the statutes and ordinances made by this parhament, or afterwards by the lords and knights, having power committed to them by the same; and they declared it to be high treason to disober any of their ordinamers. Thus, with the vote of a revenue for life, and with the power of parliament notonously usurped by a junto of his creatures, Richard was not likely soon to meet his people again, and he became as absolute as he could wish. Some people, admitting the follies and extravagances of this king, profess to be blind to any serious state erime in him that can justify the contempt and batred in which he was held by his subjects; but we think that the few preceding lines are sufficient to clear their vision in this respect.

Richard was elated with his success, and he

Rot Parl.—Froiss-Knyght, Haliam. Midd. Ages, in: 115.

assure Hereford (what must have been unnecessary) that there was no trust to be put in Richard's promises or oaths, or demonstrations of affection, and that he knew of a certainty that he and his minions were then compassing the deaths of the Dukes of Lancaster, Hereford, Albemarle, and

Exeter, the Marquis of Dorset, and of himself. Henry then said, "If such he the case, we can

who exhorted him to do what he list: he kept in his wages ten thousand archers, who watched over him day and night". This high and absolute bearing was, however, of short duration. people, a share of whose attachment or respect had been preserved by Gloncester even in his worst moments, because he always showed a concern for the public interest, were soon disgusted with Richard, who appeared only to crave power and money that he might lavish them on his minious and indulge himself in an indolent and luxurious life. His grandfather, Edward III., had maintained a magnificent court; but his was a homely affair compared to that kept by Richard. Never had the nation seen—nor did it see for long after—such gorgeonsness in furniture and apparel, such pageants, such feasting, and such Apician extravagance and delicacy in repasts. Putting aside the tailors, the drapers, and the hosts of servants, all clad in costly liveries, Richard's cooks and adjutants of the kitchen alone formed a little army. In some respects his taste and magnificence might have benefited the nation, but they were carried to excess, and the spectators of his riotous living were but too often a beggared and a starving people. A general murmur was soon raised against the late parliament: people said that it had not been freely chosen; that it had with bad faith as d bar-

had overthrown all apposition. He began to reign

much more fiercely than before. "In those days,"

says Froissart, "there was none so great in Eng-

land that durst speak against anything that the

king did. He had a council suitable to his fancies,

barity revoked former pardons and connived at illegar exactions; that it had been a party to the shameful impumity of the murderers of Gloueester; and that it had assisted the king in destroying the liberties of the kingdom. Matters were approaching this state when the mutual distrusts of two great noblemen, and the fears they both entertained of the canning and vindictive spirit of the king, hurried on the catastrophe. Henry of Bolingbroke, now Duke of Hereford, and Mowbray, now Duke of Norfolk, were the only two that remained of the five appellants of 1386. To all outward appearance they enjoyed the favour and confidence of the king; but they both knew that their original sin had never been forgiven. The Duke of Norfolk, who, much to his honour, had shown a rehictance to join in the prosecution of his former friends,

broke asked "For what?" and Mowbray said,

" For the affair of Radcot bridge." "How can

that be after his pardon and declaration in parlia-

Mowbray, " and our fate will be like that of others

before us. It is a marvellous and treacherous

never trust them;" to which Mowbray rejoined, "So it is, and though they may not be able to do it now, they will contrive to destroy us in our houses ten years bence."\* This reign, as abounding in dark and treacherous transactions, is rich in Instolical doubts. It is not elear how this conversation was reported to Rochard, but the damming suspicion rests upon Henry of Bolingbroke. When parliament met, after the recess, in the month of January, 1398, Hereford was called upon by the king to relate what had passed between the Duke of Norfolk and himsel and then Hereford rose and presented in writing the whole of the conversation as we have related it. Norfolk did not attend in parbament, but he surrendered on proclamation, called Henry of Lancaster a har and false traitor, and threw down his Richard ordered both parties into gamotlet. enstody, and instead of submitting the case to parliament, referred it to a court of chivalry, which, after many delays, awarded that wager of battle should be joined at Coventry on the 16th of September. As the time approached, Richard was heard to say, " Now I shall have peace from henceforward;" hut, on the appointed day, when the combatants were in the lists, and had couched their lances, throwing down his warder between them, he took the battle into his own hands. After consulting with the committee of parliamentthe hase eighteen (who had just been appointed)to the surprise and bewilderment of all men, he condemned Hereford to banishment for ten years, and Norfolk for life. Hereford, apparently confident in his abilities and many resources, went no farther than France: Norfolk made a pilgrimage to Jerusalem, and not long after died brokenhearted at Vennee. On the death of the Duke of Laneaster, which happened about three months after the exile of his son Hereford, Richard seized his immense estates and kept them, notwithstanding his having, before his departure out of England, granted letters patent to Hereford, permitting seems to have been the more alarmed or the more him to appoint attorneys to represent him and take communicative of the two. Overtaking the Dake possession of his lawful inheritance. † The illegality and dishonour of this proceeding did not preof Hereford, who was riding on the road between Windsor and London, in the month of December, vent the court lawyers from justifying it. But now during the recess of parliament, Mowbray said, there was no law in the land except what pro-"We are about to be ruined." Henry of Bolingceeded from the will of Richard, who, after ridding himself, as he fancied, for ever, of the two great peers whom he feared and hated, set no limits to his despotism. He raised money by forced loans; ment?" "He will annul that pardon," said Rot. Parl. This is the account which Hereford gave in par-

infinite joy of the people, who had clamoured for

their deaths. Henry then marched towards Ches-

are made to bear the blame of this omission, but it

is probable that some of the messengers had proved

unfaithful. When he received the astounding in-

telligence, his first remark was, that he sorely regretted not having put Henry to death, as he

might have done. From Dublin he disputched the Earl of Salisbury with part of his forces, and then

he repaired laniselt to Waterford, with the intention of crossing over with the rest. Salishery landed

at Conway, and was remforced by the Welsh; but

the king did not appear so soon as was expected, and the earl was soon deserted by his whole army,

both Welsh and English. A few days ofter, when Richard at last arrived at Milford Haven, he was

stimmed by bad news of every kind; and on the

second day after his landing, the few thousands of troops which he had brought with him from Ireland described him almost to a man. At midnight,

disguised as a priest, and accompanied only by his

For three weeks Richard remained ignorant of all that was passing. Contrary winds, and storms,

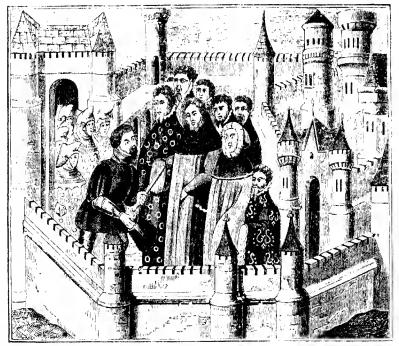

ter, but York stopped at Bristol.\*

plots and conspiracies were forming against him; but the infatuated man treated them with contempt, and chose this very moment for leaving England. In the end of the month of May, 1399, he sailed from Milford Haven with a splendid fleet, which however conveyed more conructs and parasites than good soldiers. After some delay he took the field against the Irish on the 20th of June, and a fortught after his consin, the Duke of Hereford, landed at Ravenspur in Yorkshire. The duke had not escaped from France without difficulty, and all the retinue he brought with him consisted of the exiled Archbishop of Canterbury, the son of the late Earl of Arundel, fifteen knights and men-atarms, and a few servants. But the wily Henry was strong in the affections of the people he knew by the grief shown when he set out on his exile that many thousands would be glad to see him back; and both he and the archbishop had many personal friends among the nobles. As soon as he landed, he was joined by the great Earls of Northumberland and Westmoreland; and as he declared that he only came for his right, or for the estates belonging to his father, he was speedily reinforced by many who did not foresee, and who, at that stage, world not have approved his full and during scheme. He marched with wonderful rapidity towards the capital, and arrived there at the head of sixty thousand men. His nucle, the Duke of York, having no confidence in the Londoners, quitted the city before his approach, and, as regent of the kingdom during Riehard's alisence, raised the royal standard at St. Alban's. The Londoners received Hereford as a deliverer, and still further strengthened his army. A general panic prevailed among the crea-

the Earl of Wiltshire, Bussy, and Green were found in the castle, and executed, without trial, but to the

tures of Richard, some of whom shut themselves up in Bristol Castle. The Duke of York, with such forces as he could collect, moved towards the west, there to await the arrival of Richard, to whom messengers had been dispatched. After staying a few days in London, Henry of Bolingbroke marched in the same direction, and so rapid was his course that he reached the Severn on the same day as the regent. The Duke of York had discovered before this that he could place no reliance on his troops: he was himself a man of no energy, and probably his resentment for the mnrder of his brother Gloucester was greater than his affection for his nephew Richard. Henry of Bolingbroke was also his nephew, and when he agreed to meet that master-mind in a secret conference, the effect was inevitable. York joined his forces to those of Henry, turned aside with him, and helped him to take Bristol castle. Three members of the standing committee of eighteen,

two half-brothers, Sir Stephen Scroop, his chancellor, the Bishop of Carlisle, and nine other indivictuals, he fled to Conway, to seek refuge in the strong castle there. At Conway he found the Earl of Salisbury and about one hundred men, who, it appears, had already consumed the slender stock of provisions laid up in the fortress. Richard then dispatched his two half-brothers to Chester, Henry's head-quarters, to ascertain what were his intentions. Henry put them under arrest. Soon after sending them, Richard rode to the castles of Beanmaris and Caernaryon: they were beth bare of provisions, and he returned in despair, and probably in hunger, to Couway Castle. A romantie and touching story is usually told, on the faith of two anonymous mamiscripts, according to which, Richard was bired from his stronghold by the ingenious treachery of the Earl of Northumberland; but we are inclined to believe that famine drove him from Conway castle, and that, in a hopeless state, he surrendered to Northumberland, who, however, very probably offered him delusive terms + At the castle of Flint, Henry of Bahngbroke met him, and bent his knee, as to his sovereign. "Fair consin of Lancaster," said Richard, uncovering his head, "you are right welcome." "My lord," answered Henry, "I am come somewhat before my time; but I will tell you the reason. Your people complain that you have ruled them harshly for twenty-two years; but if it please God I will help you to rule them better." The fallen king replied, "Fuir cousin, since it pleaseth you, it pleaseth me well." The trumpets then sounded to horse, and, mounted on a miserable hackney, Richard rode a prisoner to Chester. \* Walsing.
† It is said that the sea was open to him, and that he might have escaped to Guienne; but it is by no means clear that, at this moment, he had either a ship or provisions for such a voyage. Besides, after such repeated descritons, he may well, have feared trusting himself in the hands of a few saiders. And then, again, he knew that quiting his klagdom at this moment would be equivalent to an abdication.

MED 1189 OF BEHAND AND BOTTON GOOD AT IT INTO CASE IF.

one appeared to pity his fate; and if we tile to believ. Froissart, his very dog left lds side to fawn upon his destroyer. At Lachfield, while on the way from Chester to the capital the king chided the vigilance of his guards, and escaped out of a whidow; but he was retaken, and from that time treated with greater severity. On their arrival in London, Richard was cursed and reviled by the populace, and thrown into the Tower. Henry was received by the mayor and the principal citizens; while at Chester, writs were is ucd in Richard's name for the meeting of parliament on the 29th of September. On the day of that meeting, a deputation of lords and commons, which included the Archbishop of Canterbary, the Earl of Northumberland, two justices, two doctors of laws, with many others, ecclesiastics and laymen, waited on the king in the Tower, who there, according to the reporters,

From the Harlean MS 1319, a History of the Deposition of Richard 11, in French verse, probessing to be "composed by Preach gentleman of mark, who was in the same of the said king, with permission of the King of France" "The several filaminations contained in this book," says a MS note by Biolog Percy, appended to the volume, "are extremely valuable and currons, not only for the exact display of the dresses, 8c. of the time, but on the hinshed portions of so many ancient characters as are presented in them." These interesting and beautiful illuminations are sixteen in number; our copies of three of them, which have been carefully traced from the originals, will convey some notion of the style of minute and high finish in which they are executed. The whole have been engined in the 20th volume of the Archeologia, where the poem is printed with an English translation, and ample explanatory notes, by the Rev. John Webb, MA, F.A.S., Rector of Treitre, in Herefordshure; pp. 1–423.

made, "with a cheerful countenance," a formal resumeration of the crown, acknowledged his unfitness for government, absolved all his subjects from homoge and fealty, gave his royal ring to his consin-Henry, and said, that he of all men should be his successor, if he had the power to name one. Whether all this passed as thus stated by the traimplant party of Lancaster is of little consequence, and Henry was too sagacions to rest his title to the crown upon what could never be considered in any other light than that of a compulsory resignation. The only right that Henry could pretend, was a concise and obvious one; but in his "abundant caution, and to remove all scruple," he determined to prop himself with all sorts of devices, and to heap title upon title. Of these accumulated pretensions, some were nugatory or conflicting, and in reality weakened instead of strengthening his claim; but the lawyers were gratified, and possibly some delicate consciences were tranquillized by each of the clauses. On Tuesday, the 30th day of September, the parliament having met in Westminster Hall, the resignation of Richard was read. All the members then stood up, and signified their acceptance of it, and a great concourse of people outside the hall shouted with joy. Thirty-three articles of impeachment against Richard were afterwards read, and being declared guilty on every charge, his deposition was pronounced; thus a deposition was

ROLL GURDER LOND FINO RICHARD II AND LONDON HAIL MS 1319

added to an act of abdication. Only one voice was rused in his favour. Thomas Merks, Bishop of Carlisle, spoke manfully in vindication of his character; but as soon as he sate down, he was airested and removed to the abbey of St Albans.\*

 Among the many doubts that beset this remarkable part of history, it is doubted whether Bishop Merkels sporch be not a fabrica During these proceedings Henry remained scated in his usual place near to the throne, which was empty, and covered with a cloth of gold. As soon as eight commissioners had proclaimed the sentence of deposition, he rose, approached the throne, and flaving solemply crossed limiself, said, "In the name of God the Father, Son, and Holy Ghost, I, Henry of Lancaster, challenge this realm of England,

#### CHAPTER II.

## THE HISTORY OF RELIGION.

HE papal dominion in Europe reached its height about the beginning of the thirteenth century, and maintained itself with hittle outward evidence of decline nearly throughout the century. Bomface VIII. was as an iogant an assertor of the supremacy of the successor

of St. Peter over all other earthly powers and principalities, as his predecessor Innocent III., but he was not so fortunate in the time and circumstances in which he attempted to compel submission to his high pretensions. In truth, it was not m the nature of timigs that such a dominion should last; it was thrown up, as it were, into the air, by a violent, volcame force; and the greater the height it had attained, the nearer it was to the commencement of its descent and downfal. The very success of Innocent, by the extravagance of the assumptions to which it gave rise in himself and those who came after him, and the dream of security in which it fulled them, was more fatal than anything else could have been to the stability of their colossal sovereignty; its pressure, thus aggravated, awoke and gradually diffused a spirit of resistance both among kings and people; till at length Philip le Bel began, and Wycliffe, nearly a hundred years later, carned forward, the great rebellion, which after little more than another hundied years was to be fought out triumphantly by Lather. But for nearly a century before the time of Philip le Bel the causes which were preparing this conflict were in active though hidden operation, and the proud pontificate of Innocent may be properly fixed upon as the culmination of the papacy—the point at which it both attained its highest rise and commenced its decline. From the time of Boniface the decline became apparent, and has been progressive to our own day. "Slowly," as it has been finely said, "like the retreat of waters, or the stealthy pace of old age, that extraordinary power over human opinion has been subsiding for five centuries."\*

In no country were the exactions and encroachments of the Roman pontiffs, in the thirteenth century, carried to a more exorbitant extent than in England. The good nature of the people, and Hallam, Muddle Ages, 15, 329.

something perhaps of a turn for superstition in their temper or their habits, their insular separation from the rest of Enrope, and their wealth, which even at this period was considerable, concurred with the political circumstances of the country, which from the latter years of Henry II. had been emmently favourable to the spread of this foreign usurpation, in making England the great field of papal imposition and plunder. Throughout this century the bishoprics were filled either by the direct nommation of the pope, or, what was perfectly equivalent, by his arbitration in the case of a disputed election. The course that was maken in regard to this matter may be illustrated by the history of the succession of the archbishops of Canterbury. On the death of Cardinal Langton, in 1228, the chapter chose as his successor one of their own number, Walter de Hemesham; but both the king and the bishops of the province having appealed to Rome against this election, the pope annulled it, and appointed Richard le Grand, or Wenthershead, chancellor of Lincoln, to be archbishop. Le Grand died in 1231, on which three successive elections were made by the chapter and set aside by the pope; and at last Edmond Rich, treasurer of Salisbury, whom the pope recommended, was chosen and consecrated. Archbishop Edmund died in 1242, when King Henry first compelled the chapter by threats, and almost by force, to nominate Boniface of Savoy, the queen's uncle, and then purchased the confirmation of the election at Rome. On occasion of the preceding vacancy the pope had made no seruple in setting aside the original selection of the chapter, although the king had concurred in it. On the death of Bondace, in 1270, William •Chillenden, their sub-prior, was elected by the chapter; but the pape nonmated Robert Kirwarhy, and he became archbishop. Exactly the same thing was repeated in 1278, when Kilwarby resigned on being made a cardinal; the monks cleeted Robert Burnel, bishop of Bath and Wells, but John Peckham, a Franciscan friar, was nevertheless appointed to the see by the pope of his own authority. The next time the chapter at once elected the person who it was understood would be agreeable to the pope, namely, Robert Winchelsey, who succeeded Peckham in 1293, and fought the battle of the clergy against the crown with great valour during a twenty years' occupation of the see. The right of nominating to inferior benefices was seized in a still more open manuer. been a frequent practice of the popes to request

exaction and dramage, that was constantly flowing

In 1376, the commons, in a remonstrance to

the king against the intolerable extortions of the court of Rome, affirmed that the taxes yearly pand

to the pope out of England amounted to five times as much as all the taxes paid to the crown. A

considerable portion, indeed, of the revenue thus

[Book IV.

thence into the papal treasury. The entire taxation or tribute annually paid, under a variety of names, by England to Rome, must have amounted to an immense sum. Gregory IX. is said to have, in one way and another, extracted from the kingdom, in the course of a very few years, not less than nine hundred and fifty thousand marks, -a sum which Mr. Hallam estimates as equivalent to fifteen millions at present.\*

distinctly avowed to be of an authoritative character. Even that pape claimed, in words, no more than the right of nominating one clerk to a benefice in every church. But he and Innocent IV, are asserted to have, in fact, placed Italian priests by then mandatory letters in all the hest benefices in England. In the three last years of Gregory IX, it is said that three hundred Italians were sent over to this country to be provided for in the church. It was solemnly stated by the English envoys to the conneil of Lyons (held in 1245) that Italian priests drew from England at this time sixty or seventy thousand marks every year—a sum greater

than the whole revenue of the crown these foreigners even spend their incomes in the country. Most of them continued to reside at Rome, or elsewhere in Italy, where, in general, they held other preferments: it is affirmed that in some cases fifty or sixty livings were accumulated in the possession of one individual. At length the univer al right of nonimation to church livings was asserted in plant terms by Clement IV., in a bull published in 1266. Nor was even this the ntmost extent to which the claim was carried. By what was called a reservation, the pope assumed the power of reserving to himself the next presentation to my benefice he pleased which was not at the time vacant; or by another instrument, called a provision, he at once named a person to succeed the present facumbent. In this way all the benefices in the kingdom, both those that were vacunt and those that were not, were turned to account, and made available in satisfying the herd of camourous sintors for preferment and dependants or the hile see. In a letter addressed to the pope by the kere, the prelater, and barons of England, in 1246, complant is made that the foreigners by a whom hyangs were thus bestowed not only dat sot to rie in the country, nor understand its language, but, even in their absence and incompethany, appointed no substitutes to perform their dones—In the numerous churches filled by them. it is declared there was neither abusgiving nor hospitality, nor any preaching or care of souls whotever. The Italians, it is moreover affirmed, were invested with their livings without trouble or charges, whereas the English were obliged to prosecore their rights at Rome at a great expense. The letter also touches upon some of the other vexatious modes by which the holy see laborred to extend its power or to gratify its rapacity, partien-Larly the great greenance of drawing all causes of importance to be heard and decided at Rome, This was a material part of the scheme for bringing the civil under subjection to the ceclesiastical power, which had been pursued with such pertino my from the time of Anselm and the first Henry. It was also a means of drawing much

extracted by the Roman pontiff was levied directly from the elergy themselves, in the form of Peterpence, annates, or first-fruits, fees upon institution to benefices, &c.; but it did not the less on that account come ultimately out of the property and industry of the nation. The church was but the vast conduit or instrument of suction by which the money was drawn from the country. is calculated, from a statement of the historian Knyghton, that in the early part of the fourteenth ecutury the annual revenue of the clurch amounted to the enormous sum of seven hundred and thurty thousand marks, which was more than twelve times the amount of the whole civil revenue of the kingdom in the reign of Henry III.+ Very nearly one-half of the soil of England was at this period in the possession of the church. At the same time, as we have seen, all the richest benefices were in the hands of foreigners. Where a cure thus held by a non-resident meumbent was served at all, it was intrusted to a curate, who appears to have been usually paid at the most wretched rate. In his account of the great pestilence of 1349, Knyghton observes, that before that plague a curate might have been hired for four or five marks a-year, or for two marks and his board; but that so many of the elergy were swept away by it, that for some time afterwards no one was to be had to do duty for less than twenty marks or pounds a-year. To remedy this evil a constitution or edict was published a few years afterwards by the anthority of the Archbishop of Canterbury, forbidding any menmbent to give, or any curate to demand, more than one mark a-year above what had been given to the curate of the same church before the plague. The extensive and more systematic form given to the canon law in the course of the thirteenth cen-

tury considerably aided the pope and the church in their contest with the civil power. We extract from Mr. Hallam the following summary of the additions made during this period to the Decretum of Gratian, originally the great text-book of that " Mid Ages, ii. 306. † Macpherson, An. of Com. i. 519.

of Decretals to be published by Raimond de Pennafort in 1234. These consist almost entirely of rescripts issued by the later popes, especially Alexander HI, Innocent III., Honorius III., and Gregory himself. They form the most essential part of the canon law, the Decretion of Gratian being comparatively obsolete. In these books we find a regular and copious system of jurisprindence, derived, in a great measure, from the civil law, but with considerable deviation, and possibly improvement. Bomface VIII, added a sixth part, thence cated the Sext, itself divided into five books, in the nature of a supplement to the other five, of which it follows the arrangement, and composed of decisions promulgated since the pontificate of Gregory IX." "The canon law," proceeds Mr. Hallam, "was almost entirely founded upon the legislative authority of the pope; the decretals are in fact but a new arrangement of the bold epistles of the most usurping pontiffs, and especially of Innocent III., with titles or rubries comprehending the substance of each in the compiler's language. The superiority of ecclesiastical to temporal power, or, at least, the absolute independence of the former, may be considered as a sort of key-note which regulates every passage in the canon law. It is expressly declared that subjects owe no allegiance to an exemummeated lord, if after admonition be is not reconciled to the church. And the inbrie prefixed to the declaration of Frederic II.'s deposition in the Council of Lyons asserts that the pope may dethrone the emperor for lawful causes. These inbries to the decretals are not perhaps of direct authority as part of the law; but they express its cense, so as to be fairly cited instead of it. means of her new jurispundence, Rome acquired in every country a powerful body of advocates, who, though many of them were lavmen, would, with

jm sprudence.\* "Gregory IX. caused the five books ]

Chap. II.]

authority gave sanction."† But a still higher power assumed by the popes than even that of declaring or making the law was that of dispensing with its strongest obligations in any particular case at their mere will and pleasure. They assumed and exercised this power in particular in regard to the canonical impediments to marriage, and in regard to oaths. By the ancient laws of the church, marriages were forbidden both between blood relations and relations by affinity within the seventh degree. "It was not until the twelfth century," says Mr. Hallam, "that either this or any other established rules of discipline were supposed liable to arbitrary dispensation; at least the stricter churchmen had always denied that the pope could infringe canons, nor had he asserted any right to do so. But Imocent III, laid down as a maxim, that out of the plenitude of his power he might lawfully dispense with the law; and accordingly granted, among other instances of this prerogative, dispensations from impediments of Mid. Ages, il, 289.

the usual bigotry of lawyers, defend every preten-

sion or abuse to which their received standard of

did not become usual for some ages. The fourth Lateran Council, in 1215, removed a great part of the restraint, by permitting marriages beyond the fourth degree, or what we call third consus; and dispensations have been made more easy when it was discovered that they might be converted into a source of profit. They served a more important purpose, by rendering it necessary for the princes of Europe, who seldom could many into one another's houses without transgressing the canonical limits, to keep on good terms with the court of Rome, which, in several instances that have been menfromed, fulurmated its censures against sovereigns who lived without permission in what was considered an incestious union."\* And as imeanomeal umons could be legalized by the pope, so it was held, and equally to the benefit of the holy see, that any illegitimacy of birth could be cutriely removed by the same authority. With regard to ouths, again, it was expressly laid down as the law, not only that any eath exterted by fear might be annulled by ecclesustical authority, but that an oath disadvantageous to the church was essentially, and from the first, without any force, whether it were formally dispensed with or not. These convenient principles required very little ingenuity to be so applied as to get rid of the obligation of any oath whatever. As in preceding ages, new monasteries still cortinued to be founded, and additions to be made, by the gifts and bequests of the pions, to the landed property of the clergy; although in England the zeal which displayed itself in these ways perhaps rather declined after the twelfth century. •Indeed, independently of the restraints which, as we shall presently see, the law now began to place upon the disposition to make over estates to the church, both the motive and the means of that kind of liberahity were of course diminished by the extent to which it had been already carried. When the clergy were in possession of nearly half the land of the

marriage to the Emperor Otho IV. Similar in-

dulgences were given to his successors, though they

kingdom, it must have appeared to the most excited devotee less necessary than it formerly might have been to impment their endowments. But the rise in the thateenth century of the new religious orders of the Mendicant Finals amply compensated for any falling off to the old rate of increase of the houses of the regular monks. The Dominicans or Black Friars (called also Friar Preachers), instrtuted by St. Dominic de Guzman, and the Franciscans or Gray Frans (called also Cordeliers), founded by St. Francis of Assisa, were formally established by the authority of Pope Honorius III., in 1216 and 1223. Of many other orders which soon sprung up in initation of these, all were eventually suppressed except two, - the Carmelites, or White Friars, and the Augustines, also known, as well as the Franciscans, by the name of Gray Friars, from the colour of their cloaks. The success of this novel mode of appeal to the religious passions of · Mid. Ages, 296,

DOMINICAN, OR BLACK FRIAR,

I BANCISCAN OR GREY PRIAR.

the time was prodigious. The profession of poverty, the peculiar distinction of the Mendicant Frians, evas well calculated to work a powerful effect, thus exhibited in contrast with the wealth and grasping spirit of the other clergy of all degrees and kinds—secular and regular, priests and monks, ahke. It is true the poverty of the Mendicants like the same vow of the elder orders of monks, in no long time became, in so far as the community of the brethren was concerned, a profession merely, and their establishments gradually accumulated extensive estates and ample revenues; but it served its purpose in the first instance, as well as if it never was to give way to this corruption. And the individual friar mendicant always continued, it is to be remembered, to present the show, and, it must be admitted to a great extent, the reality, also, of destitution and a hard rule of life. The very name of the mendicants was a standing proclamation of their sympathy with the humbler and more numerous classes, and their indifference to the pomp and pre-eminence which appeared to be so much coveted by the other clergy. Meanwhile their activity in preaching, and in all the ministrations of religion, and the pains they took to win the favour of the multitude, completely distanced whatever had been before attempted in the same line. Nor must it be omitted, that among the means of influence of which they availed themselves, while some were perhaps less creditable, others were of

the highest and most legitimate description; for it was not long before the Franciscans and Dominicans became the most distinguished of the elergy in all the learning of the age, and numbered in their ranks the most eminent names in every department of such scholarship and philosophy as were then in vogue. With all these arts and real merits, it was impossible that, with the support of authority, the concurrence of favouring circumstances, and wise management in the direction of their proceedings, they should have failed to be at once taken up and borne along by a gale of popular enthusiasm. Accordingly we find the historian, Matthew Paris, in the middle of the thirteenth century, already complaining that nobody confessed except to these new-fashioned monks-errant, and that the parish churches were deserted. But in course of time, many of the parochial cures came to be served by mendicant friars, to whose communities the advowsors of the livings had been made over by admirers of the order. So rapidly did the members of these new orders increase, that in less than ten years after the institution of that of the Franciscans the delegates to its general chapter formed alone a multitude of more than five thou-"And by an enumeration in the sand persons. early part of the eighteenth century, when the Reformation must have diminished their amount at least one-third, it was found that even then there were twenty-eight thousand Franciscan nuns in CHAP. ascendancy.

in their whole interests and affections to the church, not only by then voluntary vows, but by the strong incorporating tie of celibaey, the practice of which, in conformity to what had certainly been the distinctly-declared law of the church from very early times, was now also enforced upon all descriptions of the clergy with a strictness greatly beyond what it had heretofore been found possible to maintain. In the reign of Henry I, it is stated that more than half the English clergy were married; but after the twelfth century, although a few occasional violations of the rule may have still occurred, cehbacy was certainly the general practice as well as the law of the church. The rise of the Mendicant orders probably more than made up to the church for the destruction of the Templars in the beginning of the next century; it was the substitution of a force strong with the inspiration of a new principle, and happily

adapted to the time, for another, the first vigour of which, as well as its fit occasion, was in a great degree worn ont. And as to the era of the Templars belonged the Crusades, so with the Mendicant Frans appeared the Inquisition, of which, indeed, St. Domme is commonly reputed the founder, or at least the first suggester. The crusades which took place in this age were animated by little or nothing of the old spirit. In the preceding Book we noticed the fourth, which was undertaken in 1203, but which was eventually diverted from an expedition against the infidels in Palestine to a war with the Greeks in Constantinople. Both this and the fifth crushde (a.d. 1218) were undertaken at the instigation of the energetic Innocent HI.; but even his breath was impotent to blow up again into a blaze the dying fire. As Gibbon observes, "except a king of Hungary, the princes of the second order were at the head of the pilgrins; the forces were inadequate to the design; nor did the effects correspond with the hopes and wishes of the pope and the people." Of the sixth and seventh crusades, both conducted by St. Louis, the former (which set out in 1248) issued in the captivity, the latter (in 1270) in the death of the enthusiastic monarch: and ere the century had closed the Christians were driven for ever from their last narrow footing in the Holy Land. Meanwhile, in the midst of these abortive attempts to

· Southey, Book of the Church, i. 325.

manageable and subservient allies of the papal power which they were at first; when certain questions came to be debated between the church and the people, the constitution and position of these bothes mevitably led them to a great extent to side with the latter. But especially the various usurpations and extravagant assumptions of the church, whatever temporary advantages may have accrued from them, all proved incumbrances and sources of debutty in the long run, and, by the magner in which they outraged the natural feelings and common sense of men, became the main provocatives of the alicnation and hostility under which this once sovereign power in human affairs gradually sunk. Excommunications, interdicts, dispensations, the inquisition, the arrogant pretensions of the ecclesiastical courts, the oppressive exactions of the popes, the enormous wealth of the elergy, and their still unsatisfied rapacity, had all been long preparing the elements of the mighty ex<del>pl</del>osion to which indulgences and Luther at last set the match. Meanwhile many less violent efforts were made to shake off the voke, or at least to initigate its pres-In our own country, as we have already seen, from the time of Henry 1, and more especially from

Here, then, was exactly the object of the Inqui-

sition, to which, therefore, these expeditions may be regarded as the natural transition from the ori-

ginal crusades. Both the crusades and the inqui-

sition equally operated, though in different ways,

soil of human society. Nor did the Mendicant

orders themselves always continue to be the same

It was in the nature, however, of most, if not

that of Henry II., both the crown and the parliament had repeatedly attempted, with various success, to check the encroachments of the ceclesinstical power. In the course of the period now under review some important measures were adopted against the more glaring and intolerable cvils of this foreign tyranny. Even during the feeble reign of Henry III. considerable progress was made in restraining the jurisdiction of the ecclesiastical tribinals. "The judges of the king's courts," says Mr. Hallam, " had until that time been themselves principally ecclesiastics, and consequently tender of spiritual privileges. But now, abstaining from the exercise revive crusading in the East, a new species of of temporal jurisdiction, in obedience to the strict crusades, as they were also called, was introduced injunctions of their canons, the clergy gave place in the West,—namely, military expeditions against to common lawyers, professors of a system very discordant from their own. These soon began to the unconverted heathens in various parts—against assert the supremacy of their jurisdiction, by issuing the Jews, against the Albigenses, and other herewrits of prohibition whenever the ecclesiastical trities; the object being in each case to extirpate inbunals passed the boundaries which approved use differently either the misbelief or the misbelievers. had established. unreservedly admitting the right of the King's

Bench to issue probibitions. The question was

finally settled in the thriteenth year of Edward L, by the statute entitled 'Circumspecte agatis,' which, under the form of an order to the judges to respect the privileges of the spiritual jurisdiction, in fact restrained them, by express emaneration, within certain specified limits Ten years before this, by the statute of Westminster the First, it had been provided that elerks charged with felony should be first indicted by solemn inquest in the King's Court, and that, being then delivered to the ordinary, if found guilty by such inquest, they should in no \* Middle Ages, it 3.7.

which were afterwards construed to mean that their property, both real and personal, should be forferted to the crown. In the seventh year of this reign, also, as will be more particularly noticed in the next chapter, the making over of lands to religious persons or societies was for the first time effectually restrained, by what is commonly called the first statute of mortmain. By another statute, passed in the thirty-fifth year of his reign, Edward prohibited all abbots, priors, or other religious persons of whatsoever condition, from henceforth sending any money, under any name or pretence. whatsoever, as a payment to their superiors beyond the sea. It is also stated that one of this king's subjects having obtained a bull of excommunication against mother, Edward ordered him to be executed as a traitor, according to the ancient law and was only induced to commute the punishment mto banishment out of the realm on a representation made by the chancellor and treasurer, on their knees, that the law in question had not for a

hament against Edward II, on his deposition, was, that he had given allowance to the bulls of the see of Rome. "But Edward III.," says Blackstone, "was of a temper extremely different; and to remedy these inconveniences first by gentle means, he and his nobility wrote an expostulation to the pope; but receiving a menacing and contemptuous answer, withal acquainting him that the emperor,

and also the king of France, had lately submitted to the holy sec, the king replied, that if both the emperor and the French king should take the pope's part, he was ready to give battle to them both in defence of the liberties of the crown. Hereupon more sharp and penal laws were devised against provisors, which enact, severally, that the court of Rome shall not present or collate to any bishopric or living in England; and that whoever by virtue of a papid provision, such provisor shall pay fine and ransom to the king at his will, and be imprisoned till be renounces such provision; and the same punishment is inflicted on such as cite the

king, or any of his subjects, to answer in the court of Rome. And when the holy see resented these proceedings, and Pope Urban V. attempted to revise the vassalage and annual rent to which King John had subjected his kingdom, it was immimously agreed by all the estates of the realm in

parliament assembled, 40 Edw. 111., that King John's donation was mill and void, being without the concurrence of parhament and contrary to his coronation oath; and all the temporal nobility and commons engaged, that it the pope should endeavour, by process or otherwise, to maintain these usurpations, they would resist and withstand him with all their power.\* By subsequent statutes, passed in the reign of Richard II., it was enacted that no alien should be capable of being presented to any ecclesiastical preferment, and that all begemen of the king accepting of a living by any foreign provision should forfeit their lands and goods, and be banished from the realm, and the benefice made It was also provided that any person bringing over any citation or excommunication from beyond sea, on account of the execution of the above-mentioned statutes, should "be taken, arrested, and put in prison, and forfeit all his lands and tenements, goods and chattels, for ever, and ment the pains of life and of member." Finally, by the famous statute commonly called the Statute of Præmunire,† passed in 1392, it was "ordained and established," in still more comprehensive terms, that any person purchasing in the court of Rome or elsewhere, any provisions, excommunications, bulls, or other instruments whatsoever, and any person bringing such instruments within the realm. or receiving them, or making notification of them, should be put out of the king's protection; that then lands and goods should be forfeited; and that they themselves, if they could be found, should be attached and brought before the king and council, there to answer for their offence. The popes maintained the struggle for some time, even after the passing of this statute, continuing at least to present, as before, to all English benefices the incumbents of which had died at Rome; but the king and the parliament were resolute and steady in their resistance; in no instance were these foreign presentations permitted to have effect; and at last, although the Roman pontiff still formally conferred many of the chief benefices by presentations and provisions, these instruments were issued only in favour of persons who had been previously nomi-

nated by the crown. The victory, therefore, \* See Blackstone, iv. 111.
† This statule (the 16th Rich 11 c, 5), and also the offence against which it is directed, are so called from the words. "Premounite," or "Premounite," of "Premounite," of "Premounite leavis," used to (wand a cutation of the party in the witt for the execution of this and the preceding statutes respecting provisions. It does not clearly appear that the statute of Primaunite was ever regularly passed by the parliament; but it has been repeatedly recognised as a statute by subsequent acts of the legislature These efforts of the legislature, however, were

obtained by the civil over the ecclesinstical power, in this great buttle, was complete. only one of the forms in which a spirit expressed itself that was now extensively diffused over the While the king, lords, and commons were repelling the encrosebments of the papal power by the statutes of provisors and præmunare, a secal reformer and his disciples were shaking the church at once in its doctime, its discipline, and the whole tabric of its polity. This was John de Wychiffe, whom we have already had occasion to mention in the preceding Chapter. He was born about the year 1324, in the parish from which he takes his name, in Yorkshire; and having previously distinguished himself at Oxford by an extraordmary proficiency in almost every brauch of learning their cultivated, he had so early as 1356, in a treatise entitled 'Of the Last Age of the Church,' assailed the high-flown notions then commonly held on the subject of the authority of the pope. A few years later he began to direct his attacks against the Mendicant orders; but it was not long before the climich in general, and all orders in it, became the subject of his inspirring and indiscriminate invective. In one of his works we find him enumerating twelve classes of religious persons, beginning with the pope and ending with the mendicant friais, all of whom he denomees as anti-Christs and the proctors of Satur. general corruption of the church Wycliffe traced chiefly to the profusion of wealth with which it had been endowed in later times; his favourite topic was the recommendation of the poverty of the first teachers of the Gospel; and by his own example, and that of a body of disciples whom he called his poor priests, and who, like bimself, went about preaching lus doctrines barefoot and clothed in the consest attire, he gave the strongest evidence of the reality of his convictions, and made

a prodigious impression upon the popular mind The coincidence of many of his views, also, with the objects of one of the political parties which divided the state, obtained for him the conutenance and support of some of the greatest of the nobility. We have already related the circumstances of his appearance before the Bishop of London at St. Paul's, in the last year of the reign of Edward III., on which occasion he was supported by personages of no less consequence than the Duke of Laucaster, and Percy, the Lord Marshal.\* A paralytic stroke terminated the stormy career of Wycliffe on the 31st of October, 1384, at his rectory of Lutterworth, in Leicesteishire. During his life, those of las novel views that made the greatest apparent impression and progress were those respecting the constitution of the church, and the subject of ecclesiastical autho-When he latterly began to attack the doctrines of the church, he seems to have met, in the first instance, with less success even among the common people, and his pations among the higher

\* See aute, p. 780.

ranks generally declined supporting him in that new course. But here, also, it was eventually found that he had awakened a spirit of inquiry by his preaching and his writings which did not die when he limself was taken from among men. What the opinions of Wycliffe really were on many points of theology has been matter of much disputation; and his own writings, volummous as they are, seem scarcely to afford the materials for a complete and consistent exposition of his creed: lus views enlarged or varied as he prosecuted his inguines; and much that he has written is so obscure as to defy any very precise or satisfactory interpretation. But, whatever became of some of his peculiar notions, the principle of his mode of investigating the triths of Christianity took root and flomished, and in no long time came to hear abundant fruit. Wychffe's fundamental position was, that the knowledge of the revealed will of God was to be found in the Scriptures only, and, moreover, was to be found there, not by the church alone, or its recognised heads, but by every private individual who should carnestly and humbly address himself to the search. English translations of many parts, perhaps of the whole, of the Scriptures existed before the time of Wychille, but they appear to have been entirely unknown to the great body of the people. In his writings and discourses the paramount authority of the Holy Books was acknowledged and meulcated in the most ex-

pheit terms; whatever he advanced he endeavoured

to rest upon their testimony; and he at once famiharized the popular ear to many passages of the word of God to which it had never before listened, and excited, by these quotations, the anxious curiosity of men to obtain access to the whole of the sacred volume. It is Wycliffe's highest title to the gratitude of his countrymen and to everlasting renown, and at the same time the most conclusive vindication that now remains of the snicenty of his professions, as well as our best evidence of the true learning and laborious industry of the man, that, like his great successor Luther, he devoted several years of his life to the completion of a translation of both the Old and New Testaments into his native tongue. This is the oldest English version of the Scriptures that as now extant, - the next that has come down to us after the partial Saxon version attributed to Alfre Many copies of this translation are said to have been dispersed by the care of the author and his disciples; and the effects which it, had produced became very perceptible not many years after the death of Wychffe, when, under the new name of the Lollards, the inheritors of his opinions, in fermidable numbers, again awoke the cry of refor-The history of the Lollards, however, must be reserved for the next period, to which

 Wycliffe's translation of the New Testament has been twice printed; first in folio, under the cure of the Rev. J. Lewis, Lon. 1731, secondly, in 4to, edited by H. H. Baber, Lon. 1840. The translation of the Old Testament still remains in manuscript.

chiefly it belongs.

### CHAPTER III.

# HISTORY OF THE CONSTITUTION, GOVERNMENT, AND LAWS.

period of the commencement of the authentic legislative records of England, chaeted by the great national conneil or parliament. Of the formation of the parliament, or rather of its settlement into the form which it still retains, we must first speak; though, while engaged with that part of our subject, we must still continue our course in comparative darkness.

As we have already seen, the Commune Concilinm, or great council of the realm, was, in the first ages after the Conquest, composed only of the tenants in chief, or immediate vassals of the king. Of these, one portion consisted of the bishops and abbots, or heads of religious houses holding immediately of the crown. It has been the opinion of the most emment English lawyers that these spiritual lords sat in parliament by virtue of their baronies. From this opmon Mr. Hallam dissents. "I tlink," says he, carrying his view back to the Saxon Witenagemote, "that this is rather too contracted a view of the rights of the English hierarchy, and, indeed, by implication, of the pecrage. For a great council of advice and assent in matters of legislation or national importance was essential to all the northern governments. And all of them, except perhaps the Lombards, invited the superior ecclesiastics to their councils; not upon any feudul notions, which at that time had hardly begun to prevail, but chiefly as representatives of the church and of religion itself; next, as more learned and enlightened counsellors than the lay nobility, and in some degree, no doubt, as rich proprietors of land. will be remembered, also, that ecclesiastical and temporal affairs were originally decided in the same assembles, both upon the continent and in England. The Norman Conquest, which destroyed the Anglo-Saxon nobility, and substituted a new race in their stead, could not affect the immortality of church possessions. The hishops of William's age were entitled to sit in his councils by the

general enstom of Europe, and by the common law of England, which the Conquest did not overturn. Some smaller arguments inight be urged against the supposition that their legislative rights me merely baronnal; such as that the gnardian of the spiritualities was commonly summoned to parliament during the vacancy of a bishopile, and that the five sees created by Henry VIII, have no baronies annexed to them; but the former reasoning appears less technical and confined."\*\*

The lay portion of the great council consisted of the earls and barons, meaning by the latter those holding of the king. It is agreed that the only baromes known for two centuries after the Conquest grose from the termine of land held mimedistely of the grown. As to the exact nature, however, of these baromes, the opinions of some of the most emment legal antiqueries vary; Selden holding that every tenant in capite, or in chief, by knight service, was a parhamentary baron by reason of his tenure; Madox, on the other hand, that tenure by knight's service in chief was always distinct from that by barony, but in what the disfraction consisted he has not clearly explained. "The distinction," says Mr. Hallam, "could not consist in the number of kingle's fees, \$a the barony of Hwayton consisted of only three, while John de Baliol held thurty fees by mere knight service. Nor does it seem to have consisted in the privilege and service of attending parliament, since all tenants in chief were usually summoned, But whatever may have been the line between these modes of tenure, there seems complete proof of their separation long before the reign of John, Tenants in chief are emimerated distinctly from

earls and barons in the charter of Heiny I."†

It is evident, however, from a passage in the Great Charter of King John, that by that time at least all tenants in chief were entitled to a simmons; the greater barons by particular writs, the rest through a writ directed to their sheriff;—without a summons a baron certainly could not sit by mere right of his tenure. It is not ascertained how long the inferior tenants in chief continued to sit personally in parliament; but the attendance of these, some of whom were too poor to have received kinghthood, became intolerably vexations to themselves and was not agreeable to the king. This led at last to the complete establishment of a practice from which the most important results were

representation which have been collected, the most

Among the few cartier instances of apparent

really great immovation is the appearance of the burgesses in the nation dissembly an innovation destined to exercise a most momentous influency on the future destinies not only of England and Enrope, but of the world Before the Norman Conquest several of the towns had been populous, rich, and of considerable importance. Immediately after that great revolution, as we have had occasion to show in a former Chapter,† a considerable decay scens to have taken place

in most of them. The languesses were grievously oppressed by the tallages and other exactions to which they were subjected by the king or other hird who was held to be the proprietor of the towis Although some of these payments were of fixed amount, others appear to have been levied at the discretion of the lord, and from such of the burgesses as he chose to select. "One of the earliest and most important changes in the condition of the burgesees," says Mr. Hallam, "was the conversion of the individual tributes into a perpetual rent from the whole

borough. The land was then said to be affermed, or let in fre-farm to the burgesses and their successors for ever." This was called burgagetenure, which is said by Littleton to be "tenure the citizens the right of choosing their own sberiff and justice, to the exclusion of every external purisdiction. The right of choosing magistrates began to be more generally given from the reign of John In the mean time, however, the voluntary incorporations of the burgesses, which had existed in the Saxon times under the name of guilds (from

quildan, to pay or contribute), had gradually ac-

quired innie and more of the character of asso-

custions for the protection and regulation of trade. From the middle of the twelfth to that of the thrateenth century the trading towns greatly mcreased in prosperity. London was distinguished above the rest for the number and wealth of its citizens, who were remarkable for their free and msingent spirit. They bore a part in deposing William Longehamn, the chancellor and justiciary of Richard I, as well as in the great stringle for Magna Chafta, in which the privileges of their city are specially confirmed; and the mayor of Limiton was one of the twenty-five barons to whom the maintenance of its provisions was delegated. Nevertheless, until the date of the writs above mentioned, of Simon de Montfort, Earl of Leicester, namely, the 12th of December, 1264,--we have no clear

evidence that the cities and boroughs had any regu-

lar place in the national councils. At the same time it is remarkable that no writer of the time notices the

calling of the burgesses to pathament by De Mont-

fort as an innovation, nor are the writs so expressed

as to lead us to suppose that the practice was then

introduced for the first time.

possess."

But though the trading part of the communaty held from this time a regular place in the national council, they appeared there at first in a very humble and unimportant character, scarcely daring to raise their eyes in presence of the haughty prelates and nobles. "To grant money," says Mr. Hallam, "was the mam object of their meeting; and if the exigencies of the administration could have been relieved without subsidies, the citizens and burgesses might still have sat at home, and obeyed the laws which a council of prelates and barons enacted for their government. But it is a difficult question, whether the king and the peers designed to make room for them, as it were, in legislation, and whether the purso drew after it immediately, or only by degrees, those indispen-

legislative body, we shall proceed to give an account of the legislation itself during the present period of

liament was divided into two houses, we extract the following passage from Mr. Hallam -- "It has been a very prevailing opinion that parliament was not divided into two houses at the first admission of the commons. If by this is only meant that the commons did not occupy a separate chamber till some time in the rengi of Edward III, the proposition, true or talse, will be of little importance. They may have sat at the bottom of Westminster Hall while the lords occupied the upper end; but that they were ever intermingled no voting appears inconsistent with hkelihood and cothority. The usual object of calling a parliament was to impose taxes; and these, for many years after the introduction of the commons, were laid in different proportions upon the three estates of the renim. Thus, in the twenty-third of Edward I, the carls, barons, and knights gave the king an eleventh, the elergy a tenth, while he obtained a seventh from the citizens and burgesses in the twenty-fourth of the same king the two former of these orders gave a twelith, the last an eighth: in the thirty-third year a thrifieth was the grant of the barons and knights and of the clergy, a twentieth of the cities and towns. In the first of Edward 11, the counties paid a twentieth, the towns a fifteenth: in the sixth of Edward 111, the rates were a fifteenth and a tenth. These distinet grants imply distinct grantors; for it is not to be imagined that the commons intermeddled in those affecting the lords, or the lords in those of the commons. In fact, however, there is abundant proof of their separate existence long before the

seventeenth of Edward III., which is the epoch

assigned by Carte, or even the sixth of that king,

which has been chosen by some other writers

Thus the commons sat at Acton Burnell in the eleventh of Edward I, while the upper house was

at Shrewsbury. In the eighth of Edward II, 'the

commons of England complain to the king and his

council, &c. These must surely have been the

commons assembled in parlament, for who else

could thus have entitled themselves? In the

nineteenth of the same king we find several p ti-

tions, evidently proceeding from the body of the

commons in parlament, and complaining of public

grievances. The roll of I Edward III., though

mutilated, is conclusive to show that separate peti-

tions were then presented by the commons, according to the regular usage of subsequent times; and,

om Instory. The principal legislative nets worthy of notice in the reign of Henry III, are his confirmation of the Great Charter and of the Charter of the Forest, "These," observes Sir Matthew Hale, "were the great basis upon which the settlement of the English laws stood in the truce of the lang and his son. There are also some additional laws of thus king yet extant which much pulished the common law, -namely, the statutes of Merton and Marlbridge, and some others," ( To this reign belongs Bracton's Treatise, of which Sn Matthew Hale gives the following account = " It yields us a great evidence of the growth of the laws between times of Henry II, and Henry III. If we the but compare Glanville's book with that of Bracton, we shall see a very great advance of the law in the writings of the latter over what they are in Glanville. It would be needless to instance particulars. Since of the writs and processes do, indeed, in substance agree, but the proceedings are much more regular and settled as they are an Bracton above what they are in Glanville. The book it elf, in the beginning, seems to begrow its method from the civil law. But the greatest part of the substance is, caher or the course of proceed mgs in the law known to the author, or of resoluthus and decisions in the convis of king's Bench and Common Bench, and before justice atmerant; for now the inferior courts began to be of little use or esteem " There are one or two statutes or ordinances of Henry III., upon which, though not acts of parlie-

though generally given as a statute of 51 Henry III., is printed in the Record Commission edition of the Statutes as of uncertain date, what is usmarkable is, that to the parhament or council at which it was passed, held at Winchester, were called not only "comnex magnites ferrae," all the great men of the land, but "onnies usures comtum et baronum qui in bello occisi fuerunt, vel captivorum," -- that is, all the wives of the earls and barons who were slam in battle or captive § The Statutum de Scaccarro, the Statute of the Exchequer, which is usually attributed to the fiftyfirst year of Henry III., though printed by the Record Commission among the statutes of uncertain date, is remarkable, if we assume the common date, as being the first in the French language, and

just two centuries after the Conquest. Barrington

language,-namely, that it was the will of the conquering Normans,—is by no means satisfactory; and be conceives the practice to have arisen from there "being a standing committee in parliament to receive petitions from the provinces of France which formerly belonged to the crown of England." "This conjective," he adds, " seems to be strongly confirmed by the statutes having continued to be

in English from the time in which we fortunately were dispossessed of the French provinces, as most of the statutes in the reign of Henry VI. continue to be in Freuch." "Another reason," he proceeds, "for the statutes being in French arose from the general affectation which prevailed at this time of speaking the French language, insomuch that it became a proverb, that Jack would be a gentleman if he could speak French. It

Barrington further says—"I cannot conclude these observations without taking notice that the present statute of Henry III., in French, is inserted between others in Latin; and that, during the same session of parliament, there is an instance in the statute of Westminster the Second (which is, properly speaking, a Capitularium)+ of French chapters being inserted in the same law, preceded and followed by chapters to Latin. From a very diligent, and attentive pernsal of the Statute-Book, the best general rule which can be given with regard to an act of parliament being in Latin or French is, that where the interests of the clergy are coarticularly concerned the statute is in Latin. I do not, however, pretend to say that this rule is without exceptions." ! We may add to what has been said on this subject the following remark in the Introduction

to the edition of the Statutes by the Record Com-

mission: -" Nothing is known with certainty on

this subject; and at the present day it is utterly

impossible to account, in each instance, for the appearance of the statute in French or in Latin.

It seems, on the whole, to be highly probable that,

for a long period of time, charters, statutes, and

other public instruments were drawn up indiscri-

minately in French or Latm, and generally trans-

was very corrupt indeed, and therefore Chancer

says [of his Phoress, in the Canterbury Tales,-

political or constitutional nature—2. Those that regard the rights of private property and the administration of justice between man and mm. And we shall be guided in our notice of them not portance.

so much by the mere chronological order, as by what may appear their relative degree of mi-1. The first in importance in the first class are the several confirmations of the Great Charter and of the Charter of the Forest.; In the thirteenth

year of this reign the king was entreated by the parlaunent to confirm all former charters, a form of inspeximus and confirmation was accordingly agreed upon. In the twenty-fifth year there was a more solemn confirmation of the Great Charter in the statute called Confirmatio Chartarum. statute ordained that the Charters of Liberties and of the Forest should be kept in every parish; and that they should be sent under the king's seal as well to the justices of the Forest as to others, to all sheriffs and other officers, and to all the cities in

them to publish the said charters, and declare to the people that the king had confirmed them in all points. All justices, sheriffs, mayors, and other ministers were directed to allow them when pleaded before them; and any judgment contrary thereto was to be null and void. The charters were to be sent under the king's scal to all cathedral churches throughout the realm, there to remain, and to be read to the people twice a-year. It was ordained that all archbishops and bishops

the realm, accompanied by a writ commanding

 Dugd Ong. 38. The Charter of the Forest was first granted in the 9th of Henry III. (a|D. 1224.) f That is, an inspection and ratification of the former corbation.

Снар. 111.]

should pronounce sentence of excommunication against those who, by word, deed, or counsel, did contrary to the aforesaid charters. It was likewise ordained that such aids and tasks as had been granted to the king by the people of his realm "beforetime towards his wars and other business, of their own grant and good will, however they were made," should not be drawn into custom or precedent. Moreover, the king granted for him and his heirs, that no aids or prises should be taken but by consent of the realm, saying the ancient ands and prises due and accustomed. Mr. Reeves remarks\* that this is the first mention in the Statute-Book of a remunciation of right to levy money on the subject without consent of parliament. There had been a like declaration in the charter of John, but it was omitted in that of Henry III. Further, because there had been a particular outcry against a tax of forty "soudz" + upon every sack of wool, it was declared that this should not be again levied without the "common assent and good will of the commonalty of the realm."

The next notice of the two charters of liberties is in the preamble to the statute De finibus Levalus, 27 Edw. I., where the king refers to the former confirmations of them, and again solemnly rathles them. In this ratification, however, there is a somewhat ournous clause, "saving always our oath, the right of our crown, and our exceptions and challenges, and those of all other persons."

In the next year something more was done for

the confirmation of the charters in the statute of Articuli super Chartus, 28 Edw. 1. This Act mentions that the charters, notwithstanding the several confirmations of them, were not observed, and this is attributed to there being no specific penalty prescribed for the violation of them. To remedy this the charters are directed to be delivered to every sheriff in England, under the king's seal, to be read four times a-year before the people in the full county For the punishing of offenders it is enacted that "there shall be chosen, in every stare court, by the commonalty of the same shire, three substantial men, kraghts, or other lawful, wise, and well-disposed persons, which should be justices sworn and assigned by the king's letters patent under the great seal, to hear and determine without any other writ, but only their commission, such plaints as shall be made upon all those that commit or offend against any point contained in the foresaid charters, in the shires where they be assigned, as well within frmehises as without, and as well for the king's officers out of their places as for others; and to hear the plaints from day to day without any delay, and to determine them, without allowing the delays which be allowed by the common law. And the same knights shall have power to pumsh all such as shall be attainted of any trespass done contrary to any point of the foresaid charters, where no

\* 4 This word is put shiftings in the translation, but it could hardly be that; it was more probably 'pence' or 'halfpence, --sous.

remedy was before by the common law, as before is said, by imprisonment, or by ransom, or by amerciament, necording to the trespass." The statute expressly declares that this special proceeding shall only be in cases where there was no remedy before by the common law. If the three commissioners could not attend, two were declared sufficient. The king's sheriffs and bailiffs were to be attendant on these commissioners.

The next public Act upon the subject of the

charters is the Ordinatio Forestee, 33 Edw. I., containing some regulations respecting the purheus of the forests. In the following year there was another "Ordinance of the Forest."

The famous statute de Tallaquo non concedendo was first passed in the year 1297 (the 25th of Edward I.), but in more explicit terms, and in the form in which it was always afterwards referred to, in 1306, the last year but one of the reign. This statute was occasioned by the question about levying money for foreign wars. In its latter and more complete form it declares that no tallage or and (which Mr. Reeves thinks \* included those

feudal aids that had been excepted in the statute of Confirmatio Cartarum) should be imposed or levied by the king or his heirs without the will and assent of the archbishops, bishops, carls, barons, knights, burgesses, and other freemen of the land. Nothing was to be taken by way of male-tolt † of sacks of wool. In regard to purveyance, it was declared that no officer of the king should take any corn, leather, cattle, or other goods, of any one without the consent of the owner. The following general declaration was also made in favour of the liberties of the subject: "That all men, both clerks and laymen, should have their laws, liberties, and free customs, as largely and wholly as they had used to have the same at any time when they had them best; and if any statutes had been made by the king, his ancestors, or any enstoms brought in contrary to them, or any manner of article contained in the present charter, that such manner of statules and customs should be void and frustrate for evermore." Finally, all archbishops and bishops, for ever, were directed to read the statute in their cathedral churches, and openly pronounce a curse against all those who violated it in any point. The king put his scal to this statute or charter, as did the archbishops, bishops, and others, who all voluntarily swore to observe the tenor of it, - a sanction attended with the same solemnities as the several confirmations of the charters of liberties.

Of the same nature with the political statutes already mentioned were the Statuta Waltia, 12 Edw. I., by which Wales was in a great measure put on the same footing as England with respect to its laws and their administration.

<sup>\*</sup> Hist, Eng. Law, vol. ii. p. 105.
† Otherwise male-tent, and male toute. It is supposed by some to have been a kind of excise: by others, an impost laid on by the royal authority without consent of Parlament. Others conceive that the male told was a duty upon mult—a notion which the act mentioned in the text is sufficient to confute.

II. The other statutes of this king relate more particularly to the administration of justice between subjects; and though they contain many chapters and clauses which may be considered as bearing

upon the general or political interests of the country

at large, as indeed in a certain sense all law may

be viewed as doing, yet it will be convenient to

chapters on a variety of subjects, and was made,

says the preamble, "because the state of the

holy climich had been evil kept, and the prelates and religious persons of the land grieved many

ways, and the people otherwise intreated than

they ought to be, and the peace less kept,

and the laws less used, and the offenders less

814

class them under a separate head, as we previously intimated. Of these the principal are, the Statute of Westminster the First, Statute of Gloneester, Statute of Westminster the Second, of Westminster the Third, and Articuli super Chartas.

The statute 3 Edw. 1, or of Westminster the First (so called to distinguish it from subsequent statutes, likewise named from parliaments held at Westminster in this reign), contains fifty-one

HISTORY OF ENGLAND.

it in like manner.

punished than they ought to be." The collection of statutes, though usually termed the 'Statute of Westminster the First,' is, in fact, as we before observed, not one law but a body of laws, made at Westminster in Edward's first parliament. The same remarks will apply to the other capitularia, called the Statutes of Westmuster, as well as to other documents, each of which is not a statute but a body of statutes, each chapter being a distinct law, generally on one subject, though sometimes the same chapter refers to different subjects. Technically, however, all the Acts passed in any one session of parliament are considered as forming only one statute, of which they are severally the chapters. A few of the subjects treated in the Statutes of Westminster the First more especially demand our attention here. Chapter V. is as follows:-- "And because elections ought to be free, the king commandeth, upon great forfeithre, that no man by force of arms, nor

free election." It has been supposed by some that this law referred rather to the election of sheriffs, coroners, and other officers, than to any representatives of the people in the parliament. However, it is admitted by the same parties that, as it is in general words, it may have a construction which will extend it to elections that have been appointed since for any purpose whatever. Concerning wrecks of the sea, it is agreed, says Chapter IV., that when a man, a dog, or a cat escape quick (alive) out of the ship, such ship or barge, or anything therein, shall not be adjudged wreck; but the goods shall be saved and kept by view of the sheriff, coroner, or king's bailiff, and dehvered into the hands of such as are of the town where the goods were found; so that, if any within

by malice, or menacing, shall disturb any to make

arose out of it. The words of the Chapter are, "That notorious felous, and which openly be of evil name, and will not put themselves in enquests of felouies that men shall charge them with before the justices at the king's sint, shall have strong and haid imprisonment (prison forte et dure), as they which refuse to stand to the common law of the land: but this is not to be understood of such prisoners as be taken of light suspicion ""

Britton describes this penance in the following terms:—" If they will not put themselves upon the country, let them be put to their penance until

they pray to do it; and let then penance be thus; that they be bare-footed, unguided, and bare-headed,

in their cont only, in prison upon the bare ground,

continually, night and day; that they cat only

bread made of bades and bran; that they drink

shall remain to the king; and where wreck he-

longeth to another than to the king, he shall have

ation on account of the discussion to which it has

[BOOK IV.

not the day they eat, nor eat the day they drink; nor drink anything but water the day they do not eat; and that they be fastened down with more."} Lords Chief Justices Coke | and Hale § have both given their opinion, that the perior forte et dure,—the punishment of pressing to death,—was anciently a prinishment by the common law, and not such as any judges could have framed upon the general direction of this Act. But they both seem to have supposed that, though the statute could not, from the generality of its terms, have established that terrible punishment, it referred to that punuslument already established and well known, which is proved by Barrington, from a record in Rymer, not to have been the case, the statute meaning nothing more than confinement after the mode above described by Britton, as the word prison

As to the mode in which the prine forte

et dure arose out of it, Barrington has the follow-

ing ingemons conjecture :- "I should concerve,

upon the whole, that the words in the mescut

statute, which have occasioned these observations,

namely, prison forte et dure, have been miscon-

strued, by substituting in the room of prison the

word peyne. The record cited from Rymer proves

beyond a possibility of doubt that, soon after this

statute, the punishment was merely imprisonment,

and an injunction to the officers, in whose custody

the crimmal was, not to provide him with any

Chapter IV., that when a man, a dog, or a cat escape quick (alive) out of the ship, such ship or barge, or anything therein, shall not be adjided wreck; but the goods shall be saved and kept by view of the sheriff, coroner, or king's bailff, and dehvered into the hands of such as are of the town where the goods were found; so that, if any within a year and a day suc for them, and prove them to be his, or his lord's, and that they perished in his, keeping, they shall be restored; if net, they

had been forty days in this close confinement. It seems likewise clear that, whatever this punishment might have been by the common law, this statute hath superseded it; and it is a presumption (against even such great authorities as Lord Chief Justice Coke and Lord Chief Justice Hale) that there was no such punishment by the common law, as it is admitted that a traitor cannot receive this punishment, because the words of the statute confine it to the case of telons; the argument is also very strong, that, if telons were subjected to this

sentence, traitors would still less have escaped it."\*

The judgment of peine forte et dure, which, as

latterly administered, consisted in pressing the prisoner to death by loading him with heavy weights,-a sharp stone, or piece of timber, being also sometimes, by way of favour, laid under his back, to accelerate the extraction of life, was submitted to with the object of avoiding the corruption of blood and escheat of lands which would have followed conviction after a plea. Instances of the application of this torture, or of the prehiminary and warning process of tying the thumbs together with whipcord, which appears to have been introduced in later times, from motives of humanity, without any statutory sanction, occur down to a comparatively recent period. A passoner was forced to plead at the Old Barley, by tying his thambs together, in the year 1734. At last, however, the perne forte et dure was in effect abolished by the statute 12 Geo. HI. c. 20, which chacted that every prisoner who, being arraigned for felony, should stand mute or not answer directly to the offence, should be convicted of the same, and the same judgment and execution thereupon awarded as if he had been convicted by verdict or confession of the crime.

chapters, most of which relate to the amendment of the common law as then practised. One of its chapters (the 8th) enacts that the cause of action in the king's superior courts shall amount at the least to forty shillings.

In the next year was passed the famous statute 7 Edw. 1., entitled De Viris Religiosis, and com-

The Statute of Gloncester consists of fifteen

monly referred to as the first statute of mortmain. The object of this law was to enforce and to extend a provision of Magna Charta, which prohibited all gifts of land to religious societies without the consent of the lord of the fee. Notwithstanding that provision, religious men continued to appropriate lands, wherehy services due for such lands were withdrawn and the incidents of tenure were diminished. The statement of Baker in his Chronucle, even allowing for a little exaggeration, that the number of monasteries built in the reign of Henry I. was so great that almost all the labourers of the country became bricklayers and carpenters, conveys an idea of the extent to which this had proceeded. It was now ordained, in the most comprehensive expressions that could be devised, that no person, religious or other, should buy or . Obs. on Stat. pp. 61, 62.

fictitious title to the land which they wished to have, and brought an action to recover it against the tenant, who by fraud and callusion made no defence, and thereby judgment was given for the religious house, which then recovered the land by sentence of law upon a supposed prior title. "And thms," observes Blackstone, "they had the honour of inventing those fictitious adjudications of right which are since become the great assurance of the kingdom under the name of Common Recoveries." † This was also again defeated by another provision in 13 Edw. I. c. 32. Another provision was made, by statute 35 Edw. 1., to check the waste suffered by religious possessions being drained into foreign countries. It is thereby ordained that no abbot, prior, master, warden, or other religious person of whatsoever condition, shall convey any tax imposed by them or their superiors upon their respective religious houses out of the kingdom under heavy penaltics. We now come to the famous collection of laws passed in the 13th of Edward L, commonly known by the name of the Statete of Westminster the Second, The first chapter of this, entitled *The Dones Condi*tionalibus, has given rise to more discussion perhaps than any other chactment in the Statute Book. conditional fee was a fee or gift restrained to some particular heres, to the exclusione of others. "It was called a conditional fee," says Blackstone, "by reason of the condition expressed or implied in the donation of it, that, if the donce died without such particular hears, the land should revert to the donor." "Now," he proceeds, "with regard to the condition annexed to these fees by the common law, our ancestors held that such a gift (to a man and the hens of his body) was a gift upon con-

sell, or under the colour of any gift or lease, or by

any other "craft or engine," appropriate to himself

any lands or tenements, so as such lands should anywise come into mortman, under pain of

forfeiture of the same. Notwithstanding the care

with which this statute was worded, a method of evad-

ing it was soon discovered by the ecclesiastics; for,

as the statute extended only to gifts and conveyances

between the parties, the religious houses set up a

dition that it should revert to the donor if the

donee had no hears of his body; but if he had, it

should then remain to the donce. They there-

fore called it a fee-simple on condition that he

had issue; so that, as soon as the grantee had any

issue born, his estate was supposed to become

absolute by the performance of the condition, at

least for three purposes:-1. To enable the tenent

to alien the land, and thereby to bur not only his "In" morbiam manum,"—leterally, into a dead leand. Lands made over to corporate hodies of any description, whether clerical or civil, are now said to go not morbinant, but the term seems at first to have been used only in reference to religious bodies, which indeed were formerly the only comporations. As religious or professed persons were considered dead in law, lands coming to them were said to pass into dead hands. In the presemble to the present statute the reference is exclusively to religious corporations, and the effect of lands passing into their possession is described to be that thereby "the services that are due of such fees, and which at the beginning were provided for defence of the realm, are wrongfully withdrawn, and the chief lords do lose their escheate of the same,"

own issue but also the donor of his interest in the reversion; 2, to subject him to forfeit it for trea-

HISTORY OF ENGLAND.

816

than for his own life, lest thereby the inheritance of the issue, and reversion of the donor, might have been defeated; 3, to empower him to charge the land with rents, commons, and certain other incumbrances, so as to bind his issue. However, if the tenant did not, in fact, alien the land, the

son, which he could not do till issue born longer

course of descent was not altered by this performance of the condition; for which reason, in order to subject the lands to the ordinary course of descent, the donees of these conditional fee-simples took care to alien as soon as they had performed the condition by having issue, and afterwards repurchased the lands, which gave them a feesimple absolute, that would descend to the heirs general, according to the course of the common law." Now the fendal aristocracy, to put a stop to this practice, obtained the chapter De Donis in the statute of Westminster the Second, which enacted that thenceforth the will of the donor be

observed; and that the tenements so given (to a

man and the hens of his body) should at all events

go to the issue, if there were any; or, if none,

should revert to the donor. "Upon the construc-

tion of this Act of parliament," proceeds Blackstone, "the judges determined that the donce had no longer a conditional fee-simple, which became absolute and at his own disposal the instant any issue was born; but they divided the estate into two parts, leaving in the donee a new kind of particular estate, which they denominated a feetail;† and vesting in the donor the ultimate feesimple of the land, expectant on the failure of issue, which expectant estate is what we now call a reversion." "The perpetuities," 'says Barrington, " established by this statute, in process of time, had so much contributed to the mercase of power in the great barons that, about two centuries afterwards, it was in a great measure evaded by the invention

of what is called a common recovery" (of which

we shall speak in the proper place): "" it was im-

possible for the crown to procure a repeal of the law in the House of Lords, and therefore the judges had probably an intimation that they must, by astutia, as it is called, render a statute of no effect, which the king could not extort an alteration of from one part of the legislature." # Barrington adds, in a note, that the statute of Westminster the Second, in reference to Chapter I, of it, has been called the Statute of Great Men. A considerable portion of this statute, which

consists of fifty chapters, treats of improvements in the administration of justice, as far as the jurisdiction of the courts and the course of proceeding are concerned.

The 30th chapter contains the law respecting the justices of nisi prius, which has since been called the Statute of Nisi Prius. It ordained that two

 Com. il. 110, 111, From the French tailler or the barbarous Latin taliace, to cut. Obs. on Stat. p. 92,

justices sworn should be assigned, before whom only, associated with one or two of the discrectest knights of the shire into which they came, should be taken all assizes of novel disseisin, mortdauncestor, and attaints. It was also ordained that no inquest should be taken before any of the justices of the bench, *unless* a certain day and place were appointed in the county, in presence of the parties, and the day and place inserted in a judicual writ, in certain prescribed words, declaring that the inquest should be taken at Westminster unless (nisi) certain persons named (namely, the judges of assize) should come to those parts before a certain day,—by which day the said judges, bowever, were sure to be there. Thus, the trial in the county was in later times, from the clause in the writ, said to be at misi prints (unless first), though in the form given in the statute the word prine is not inscribed, as it now is, and indeed was usually at that time. It is proper here to add, that these justices have, by virtue of several statutes, a crimigial jurisdiction These indges of assize and near print superseded the ancient justices in eyie, justitiarie in itinere.There were other improvements made in the

[Book IV.

administration of justice by this statute, such as an execution given against land by the writ called Begit, the introduction of bills of exception, and the proceeding by scire facias, to revive a judgment of a year's standing. These we shall only name, partly because our space is limited, and partly because a satisfactory explanation of them would be difficult, if not impossible, in a popular The mere mention of them, however, will help to convey some idea of the importance of this statute of Westminster the Second in the history of English law. The next statute of this year, 13 Edw. I., is the

Statute of Winchester, containing some provisions for enforcing the ancient police, and ordaning some new regulations. This statute throws considerable light on the state of society then existing. The preamble recites, that when robberies, nurders, &c. were committed, the inhabitants of the county were more willing to excuse the offender than to punish for the unnry to a stranger; and that if the felon was not himself an inhabitant of the county, yet the receiver of the stolen goods frequently was so, which produced the same partrality in juries, who did not give proper satisfaction in damages to the party robbed.\* To remedy this, a penalty is established by the statute, making the people of the county answerable for the felonies done among them. It further directs that cries, that is the huct and cry, should be solemnly made in all counties, hundreds, markets, &c., so that none might excuse himself by ignorance. It also directs that the walls of the great towns shall be shut from sun-setting to sun-rising, and that watch-

and therefore that hue and cry will mean pursuit and cry.;

We give this preamble from Harrington, who observes in a note,
 I have given the substance of this preamble, which is absolutely numbelligible in the common translation.
 HBarrington thinks that have comes from the word have to purtue;

men shall be set; that the highways shall be cleared of wood to the breadth of two hundred feet, in order to prevent the felon's concealing himself; and that every man, according to his substance, shall have arms in his house, in order to pursue the felon effectually.

The statute called Quia Emptores, from the two first words of it, belongs to the 18th Edw. I. was occasioned by the consequences of the restraint imposed on the alienation of land. "For-as-much," says the Act, "as purchasers of lands and tenements of the fees of great men and other lords have entered into their fees, to the prejudice of the lords, the trecholders of such great men having sold their lands and tenements to be holden in fee of their feoffors, and not of the chief lords of the fees, whereby the same chief lords have many times lost their escheats, marriages, and wardships of lands and tenements belonging to their fees," at is ordained, "that from henceforth it shall be lawful to every fracman to sell at his own pleasure his lands and tenements, or part of them, so that the teoffee shall hold the same lands or tenements of the chief lord of the same fee, by such service and customs as his feoffor held before." This, therefore, was a permission to alienate in such a manner that the new holder of the land became the immediate vassal of the chief lord, but a prohibition of submicudation, by which the new holder of the land became the immediate vassal of the former tenant, who thus constituted binaself what was called a mesne, that is, an intermediate, lord.

Another Act usually printed as of this year, though inserted by the Record Commission among the statutes of uncertain date, is the Modus lerandr Fines, stating the course to be pursued in levying a fine. "A fine," says Blackstone, "is sometimes said to be a feoffment of record, though it might with more accuracy be called an acknowledgment of a fcoffment of record; by which is to be understood that it has at least the same force and effect with a feofinient in the conveying and assuring of lands, though it is one of those methods of transferring estates of freehold by the common law, in which livery of seisin is not necessary to be actually given, the supposition and acknowledgment thereof in a court of record, however fictitious, inducing an equal notoriety. But, more particularly, a fine may be described to be an amicable composition or agreement of a suit, either actual or fictitious, by leave of the king or his justices, whereby the lands in question become, or are acknowledged to be, the right of one of the parties. In its original it was founded on an actual suit, commenced at law for recovery of the possession of land or other hereditaments; and the possession thus gained by such compositions was found to be so sure and effectual that fictitious actions were, and continued to be, every day commenced, for the sake of obtaining the same security."\*

A fine (from the Latin fines, an end) is so called, says the statute 18 Edw. I., because it puts an end to all suits concerning the matter in question. The statute 18 Edw. I., Modus levandi Fines, did not originate fines, but declared and regulated the manner in which they should be levied or carried on. Upon the detail of these technical minutiae, however, we cannot enter here; but we shall have occasion to return in a future chapter to the subject of fines, which makes an important figure in the history of English tenures.

It remains to give some account of the jurisdic-

tion of the various courts in this reign.

The different courts are mentioned by Fleta in

the following order: I. The High Court of Parliament, of which, having already spoken, and having again to speak, we shall not say more 2. The Court of the Scheschal, Dapifer, or Steward of the Household, who is described by Fleta\* as filling the place of the chief justiciary (an office, as was before observed, aboushed in the last reign), who used to determine the king's own causes, and administer justice without writ. The jurisdiction of this court both before and after the passing of the statute, may be learned from the 3rd chapter in the statute, Articule super Chartas, 38, Edw. 1., expressly made to limit it. It is thereby ordained that this court " from henceforth shall not hold plea of freehold, neither of alebt nor of covenant, nor of any contract made between the king's people, but only of trespass done within the house, and of other trespasses done within the verge, and of contracts and covenants that one of the king's house shall have made with another of the same house, and in the same house, and none other where. And they shall plead no plea of trespass, other than that which shall be attached by them before the king depart from the verge where the trespass shall be committed; and shall plead thence speedily from day to day, so that they may be pleaded and determined before that the king depart out of the limits of the same verge where the trespass was done. And if it so be that they cannot be determined within the limits of the same verge, then shall the same pleas cease before the steward, and the plaintiffs shall have reconrse to the common law." The verge or bounds of the household contained twelve miles, + which enenit or space, was called the virguta regia, because it was within the government of the marshal, who carried a virga (rod) as the badge of his office. Before the passing of the statute above quoted, the steward of the household appears to have exercised a very considerable portion of the powers of the chief justiciary, and to have been virtually the high steward (of which officer we hear little or nothing, he being, for the reasons mentioned in last Book, probably considered as m a state of abeyance). The judicial functions which, as shown in last Book, the chief justiciary had borrowed from the steward on the extinction of the

818 HISTORY OF ENGLAND. office of the former, appear to have returned again

to the latter. 3. The next court of the king mentioned in Fleta, is that held in his Chancery, over which,

says Fleta, was set some discreet person, as a bishop, or other dignified ecclesiastic; and to him was committed the keeping of the great scal.

4. After this, he places a court held before anditors specially appointed a latere regis, as it was called,

that is, from the persons usually in attendance upon the king. The business of these auditors was, not to determine, but to report to the king what they had heard. 5. His justices, before whom, and no others, (except himself and his council, or special auditor,) false judgments and errors of justices were reversed and corrected. 6. Next to these, are ranked "the justices sitting at the Exchequer;" and 7, those in banco at Westminster. 8. The justices of gaol-delivery. 9. Those assigned to take assizes, jurors, inquisitions, certificates, and 10. The justices itinerant or in cyre, attaints. "appointed to the first assizes for hearing and determining all pleas criminal and civil." justices itinerant for pleas of the forest. All these were the king's courts. There were, besides, the county, town, and hundred courts; those in the king's manors, and those in cities and boroughs.

Some account has already been given in last Book of the trial by jury, or rather of what it originally was. It appears from Fleta and Britton, that at the time of which we are now writing, the inrors were still considered as witnesses; and to call witnesses before them would have been contrary to the supposition by which they sat as jorors, viz., that they knew more about the matter in question than any other equal number of men. Coming from the vicinage where the fact took place, they were better able than any others to speak the truth, as they were sworn to do, and that from their own knowledge, and not from testimony brought before them in court. When the condition of society was so changed, that, notwithstanding the supposition of their personal knowledge of the fact, they were in reality wholly ignorant of it; and it was necessary that evidence should be brought before them, before they could pronounce on the guilt or innocence of the party; then the old proceeding became productive of injustice and oppression, till it was at length reformed by the calling of witnesses to furnish the twelve jurors with the necessary information. But this last improvement was not thoroughly effected till the time of Edward VI. and Queen Mary. The first evidence admitted consisted of written evidence; such as depositions, informations, and examinations, taken out of court: this led gradually to a

books known by the names of Fleta, the Murror, Britton, and Thornton, he says that, by comparing them with Bracton, "there appears a growth and a perfecting of the law into a greater regularity and order." Lord Chief Justice Coke observes, that " in the reign of Edward II., Edward I., and upwards, the pleadings were plain and sensible, but nothing curious; evermore having chief respect to the matter, and not to forms of words "§

[BOOK IV.

when a defendant insisted upon it as his right;

which could only be in an appeal. Should there

be any ship in the proceedings of which the de-

fendant had omitted to avail himself, the judge was ex officio to examine and point it out, in order to

stop the duel. Fleta says that this was a trial not

to be resorted to rashly, if by any possible means

it could be avoided. Another alteration in our

criminal proceedings was, that the eyre was no

longer to be a time of limitation for the prosecution

of oflenders; but they might be prosecuted at any distance of time."\* The eyres were every seven

years, and sometimes at shorter intervals: no one

could be indicted for anything done before the

the law in this reign with some remarks by Lord Chief Justice Hale, on various points not included

in what has preceded. With regard to the rolls of judicial proceedings, especially those in the King's

Bench and Common Pleas, and in the eyes, he

says, "I have read over many of them, and do generally observe—1. That they are written in an

excellent hand. 2. That the pleading is very

short, but very clear and perspicuous; neither loose

or uncertain, nor perplexing the matter either with

impropriety, obscurity, or multiplicity of words:

they are clearly and orderly digested -- effectually

representing the business that they intend. 3. That

the title and the reason of the law upon which they proceed (which many times is expressly de-

hyered input the record itself) is perspections, clear,

and rational. So that their short and pithy pleadings

and judgments do far better render the sense of the

business, and the reasons thereof, than those long,

intricate, perplexed, and formal pleadings, that

VERY 6000, but VERY BRIEF. Either the judges

then spoke less, or the reporters were not so ready-

handed, as to take all they said. Some of these

reports, though broken, yet the best of their kind,

are in Lincoln's Inn library." With respect to

the law treatises written in this reign, such as those

With regard to the reports, he says, "they are

oftentimes of late are unnecessarily used."+

We shall conclude our account of the state of

preceding cyre.

We have mentioned the title of Capitalis Justitiarius (or chief justice) as having been borne by the chief of the King's Bench, in the latter part of the reign of Henry III. The first mention of capitalis justitiarius of the bench (Common Pleas) is in the first year of Edward I.

• Fleta, 66. † Reeves's Hist, of Eng. Law, vol. ii. p. 271.

"The inclination in favour of juries," says Mr.

Reeves, "had gone so far in this reign, that there seemed a backwardness to allow the trial by duel, ,

sparing use of oral testimony.

\* Reeves, 8 Hist. of Eng. Law, vol. ii. p. 272. † Hist. of Com. Law, c. 7. † Hist. of Com. Law, c. 7. § 1 lust. 304 a.

In the reign of Edward II. begin the yearbooks, so called because they were published annually from the notes of certain persons who were paid a stipend by the crown for the work, These contain reports of cases adjudged from the beginning of this reign to the end of Edward III., and from the beginning of Henry IV, to the end of Henry VIII. It may be useful to add a short explanation of the technical meaning of the terms "report" and "record." A record is a concise entry of all the effective steps made in a judicial proceeding. A report is a short note of the progress towards making those steps; of the debate in court concerning some of them; the decision and the grounds on which it is supported. We may here notice the compilation entitled the

'Mirror of Justices,' about the antiquity of which much difference of opinion has existed; some pronouncing it older than the Conquest - others ascribing it to the time of Edward II.; both which opinions may be partly right. A work as old as the earlier date may have been taken up in the reign of Edward II., and worked into the present form, which partakes somewhat of the marvellous, or even the monstrous. "This book," observes Mr. Reeves, " should be read with great caution, and some previous knowledge of the law as it stood about the same period; for the author certainly writes with very little precision. This, with his assertions about Alfred, and the extravagant punishments inflicted by that king on his judges, has brought his treatise under some suspicion."\* Mr. Reeves gives the following account of the

foundation of Luncoln's Inn:-"There is nothing but a vague tradition to give us any trace of the places where the practisers and students of the law bad their residence before the reign of this king. But in the reign of Edward 11. we are informed that such places were called hostels, or inns of court, because the inhabitants of them belonged to the king's courts. It is reported that William, Earl of Lincoln, about the beginning of this reign, being well affected to the study of the laws, first brought the professors of them to settle in a house of his, since called Lincoln's Inn. The earl was only lessee under the bishops of Chichester; and many snecceding bishops, in after times, let leases of this house to certain persons, for the use and residence of the practisers and students of the law; till, in the 28th year of the reign of Ucnry VIII., the Bishop of Chichester granted the inheritance to Francis Sulyard and his brother Eustace, both students; the survivor of whom, in the twentieth year of Queen Elizabeth, sold the fee to the benchers for 5201."†

Since the separation of the Chancery from the Auta Regis, the rolls and records of the former had been kept separate, and of late they had greatly multiplied. To relieve the chancellor of that duty, a particular officer was appointed for the keeping of them. • With the consent of the

chancellor, John de Sandale, William de Armyn was appointed keeper, or master of the rolls, in the twentieth year of this reign.\*

the twentieth year of this reign.\* As we have before observed, the reign of a single weak prince interpolated here and there in the course of a long line of princes, most of whom are energetic and able, will finally be found to advance the liberty of the subject. Thus, compare the state of things under Henry II. or Richard I., with that under Edward I., and we find the effect of the interpolation of the two feeble princes John and Henry III. The royal prerogative had deelined considerably from Henry II. to Edward I.: and when we again compare the reign of Edward III. with that of Edward I., we are struck with the change, produced no doubt in great part by the feeble reign of Edward II. When we come to look at the state of things under Edward III., notwithstanding his vigorous and warlike character, and notwithstanding even his great victories over the French, and the prestige of military glory attached to his name, we find the royal prerogative sensibly declining, as exemplified in the statutes respecting purveyance, the jurisdiction of the steward's and marshal's courts, the power of alienation accorded to the king's tenants in capite, &c. The Great Charter and the Charter of the Forest were confirmed no less than fifteen times in this This has by some, indeed, been taken as an indication rather of the king's disposition to break them than of anything else. However, it also indisputably showed a power in the parliament, to which the king deemed it convenient to mamfest a semblance of respect. To these two charters was sometimes added a confirmation of all franchises and privileges enjoyed by cities, boroughs, or individuals. Besides this, particular parts of Magna Charta were especially re-enacted. Thus, it was declared by stat. 5 Edw. III. c. 9, that no man should from thenceforth he attacked on any accusation, nor forejudged of life or limb, nor his lands, tenements, goods, nor chattels, seized into the king's hands, against the form of the Great Charter and the law of the land; and again, by stat. 28 Edw. 111. c. 3, that no man, of what estate or condition soever, should be put out of land or tenement, nor taken, nor imprisoned, nor disinherited, nor put to death, without being brought in to answer by due process of law. It may be presumed to have been in the same spirit that the stat. 4 Edw. III. c. 14 was made, ordaining that "a parliament should be holden every year once, and more often if need he;" which enactment was renewed by stat. 86 Edw. III. st. I, c. 10. true that these constant renewals of important laws which we meet with in our earlier reigns, show very lax notions as to the binding force of laws; and, indeed, our earlier kings do not seem to have considered any laws of their predecessors which seemed against their own interests binding on them till they had specially confirmed them; and moreover did not scruple to use the meanest subterfuges to evade them. But sincerity and love of truth

820

are among the last virtues learned by civilized men; and it is vain to look for them in the earlier stages of any people's social progress.

"The statutes now," (14 Edw. III.) observes Barrington, "begin to appear in a new and more regular form; the titles henceforward are almost always English;" (though the body of the statutes continues to be in the Freuch language;) "and the session of parliament is generally held at Westminster, whilst the preamble in every instance makes express mention of the concurrence of the

commons, "\* The most important statute of this reign—at least that which most demands notice in a work like the present—is the Statute of Treasons, the 25th Edw. III. st. 5, c. 2.† It defines far more particularly than had been done before what should be considered as treason. The treasons declared are under the following heads:—To compass or imagme the death of the king, queen, or that of their eldest son and heir; to violate the king's companion, or the king's eldest daughter immarried, or the wife of the king's eldest son and hear; to levy war against the king in his realm, or be adherent to the king's enemies in his realin, given to them aid and comfort in the realm, or elsewhere; of which a man minst be provably attainted of open deed by people of his own condition; to counterfert the king's great or privy seal, or his money;

to bring into the realm false money counterfeit

to the money of England, or the money called

Lushburgh, or other, like to the money of England, knowing it to be false, to merchandise, or make

payment in deceit of the king and his people; to

slay the chancellor, treasurer, or the king's justices

of the one bench or of the other, justices in cyce or

of assize, or my other justices assigned to hear and

defermine, being in their places, doing their offices. All the above cases, says the statute, shall be judged treason that extends to our lord the king and his royal majesty; and of such treasons the forfesture of the escheats belongs to the king, as well of lands and tenements holden of another as of himself. Moreover (the statute goes on to say), there is another manner of treason, viz.—when a servant slays his master, a wife her husband, or when a man, secular or religious, slays his prelate, to whom he owes faith and obedience: in these treasons the forfeithre is to go to the lord of the fee. And thus this act divides treasons into high and *petit*—the distriction by which they have since been known.

There have been many comments on the words compass and imagine; and it does not seem probable that any comments would be able to render Mr. Barrington observes, them very precise.

Europe on this head, which in general are much more loosely worded than the present statute."\* By the statute 36 Edw. III, stat. 1, c. 15, it

was ordered that henceforth pleas should be pleaded in the English tongue, and inrolled in Latin. The reasons stated for this alteration we shall give in the words of the statute (with which reasons, by the by, the French, in which the statute is worded, seems strangely at variance): †-" Because it is often showed to the king by the prelates, dukes, carls, barons, and all the commonalty, of the great mischiefs which have happened to divers of the realm; because the laws, customs, and statutes of this realm be not commonly holder and kept in the same realm, for that they be pleaded, showed, and indged in the French tongue, which is ninch unknown in the said realm; so that the people which do minicad, or be impleaded, in the king's courts, and in the courts of other, have no knowledge nor understanding of that which is said for them or against them by their serjeants and other pleaders," and because the king, the nobles, and others who have been in divers acgions and countries have observed that they are better governed, because their laws are in their own tongue. The same enactirent contains the following clause:-"That, by the ancient terms and forms of the declarations, no man be prejudiced, so that the matter of the action be fully showed in the declaration and

ments and decisions was henceforward to be Euglish, the uritten language of the laws still continued French, and so continued for some Moreover, many significant terms and phrases of that language were still retained in debate and conversation upon topics of law. The history of the courts of justice throws more

Though the language of the courts in all argu-

in the writ."

light perhaps than the discussion of any other question, on the subject of constitutional law. is for this reason that we have already devoted so much attention to the investigation of the real position and character of the great officers of the king's court :--and, for the same reason we shall continue throughout to devote as much of our space as we can spare to the discussion of the nature and jurisdiction of the respective courts.

In the earlier stages of its history, the parliament appears to have partaken considerably more of the character of a supreme court of judicature than it afterwards did; for not only were suits depending in the courts below brought into parliament by petition of the parties, but also on the motion of the judges themselves, who, in cases of difficulty, would rather take the advice of the parliament than hazard their own judgment.

Obs. on Stat. p. 192.

<sup>+</sup> Barrington says, with regard to this, "I shall take a very extraordinary liberty with regard to the title of this statute, which I have altered from the Statute of Purveyors, to that of the Statute of Treasons?—Stat. p. 211. The first chapter related to purveyonce as well as the fifteenth.

<sup>\*</sup> Obs. on Slat. p. 213.
† In 18 Edw. Hi. stat. 2, there is a slift more striking instance of this. The Nench preamble of this statute recites that the French king "s'afforce tant come il poet a Sestruir notre dit seigneur le roi, ses allez, et subgitz, letres et lieus, et la LANGE D'ENGENTERE (enloreth himselfas much as he may to destroy our said sovereign lord the "king, and his allies, subjects, lands, and places, and the second of the lands." tongue of England).

upon their own conceptions of the case, but should take the opinion of the parliament. Towards the latter end of this reign the commons first began to appear as prosecutors, and,

in this spirit that the statute of treasons (25 Edw.

III.) ordains, that when any new case of supposed

treason should arise, not expressly within the

terms of that act, the judges should not proceed

courts."\*

CHAP. III.]

among their other petitions, to exhibit accusations for crimes and misdemeanors against offenders who were thought to be out of the reach of the ordinary course of the law. In these prosecutions the king and lords were considered as judges. Thus began prosecution by impeachment of the commons.

The tribunal next in authority to the parliament

was the council. As the parliament was often

called by this name, much difficulty has arisen in

distinguishing them. The king had a coincil which consisted of all the lords and peers of the readm. This was called the *quand council*, as well as the parhament (being probably the original commune concilium regni, before the commons were summoned thither), and was thereby distingnished from the other council, which the king had most commonly about him for advice in matters of law. This last conneil (corresponding somewhat to what has since been called the  $P_{IIIII}$ Council) consisted of the treasurer, chancellor, justices, keeper of the rolls, justices in cyre, &c. The method of address to the two councils was,

sequence of the jealousy entertained of the arbi-

trary anthority of these conneils of the king, several

statutes were made in this reign to regulate and

check it. But, as we shall see in the sequel, it was not to be effectually checked yet for several

centuries.

the English government and constitution were gradually assuming, than the decline of the court of the steward and marshal--a tribinal which, when the king was everything, and the nation and the law nothing, was of great power and importance; but now, that there were other powers in the country than that of the king, and when the common law had attained a considerable degree of perfection, was sinking both in jurisdiction and importance. This might be not altogether because lawyers did not preside in this court (for Littleton

was at one time steward or judge of this court!),

but rather from an idea that the rules of decision

of the court were framed more upon the king's

pleasure than the rules of law.

• Reeves's Hist of Eng. Law, vol. u. p. 415.
† Coke says (2 Inst 548), that "the steward of the court of the marshalsea of the household is ever a professor of the common law;" and that in the statute Articuli super Charles, c. 3, the words "dessenes hals et marshals," are to be "understood of the steward of the law of the beauty of the law and all and a state of the law and all and a state of the law and a law and a state of the law and a law and a state of the law and a law and a state of the law and a law and a state of the law and a law and a state of the law and a law and a state of the law and a law and a state of the law and a law and a state of the law and a law and a state of the law and a law and a state of the law and a law and a state of the law and a la sours that's et marshals," are to be "understood of the steward of the control the marshalses of the household, and not of the steward of the king's household." This, we apprehend, is incurrect. Various expressive call that officer "steward of the king's house" (seneschal del hostiel le roi) in the singular. Indeed, in the Record Commission edition the statutes, seneschal is singular, not plural, in the passage commented on by Coke in the Art. sup. Chart. c, 3. In point of

originally the deputy of the marshal of the king's household, who was originally the same as the earl \*narshal, as appears from a passage of Britton quoted in the preceding Book of this History. In this reign several regulations were made for the keeping of the peace. Statute 4 Edw. III. c. 16, ordained, " for the better keeping and maintenance of the peace, that in every county, good men and lawful, that were no maintainers of evil,

or barrators in the county should be assigned to keep the peace." Three years after, these officers

were intrusted with greater powers, having the ad-

empowered to hear and determine felonics and

trespasses done against the peace in the same

counties, and to inflict purishment according to

law and reason, and the circumstances of the fact.

The statute 34 Edw. 111. c. 1, enacts, that in

every county there should be assigned for the keeping of the peace, one lord, and three or four

of the most worthy in the county, with some learned

HISTORY OF ENGLAND.

of his palace; at other times he went from place to place personally soliciting contributions almost in the fashion of one asking alms. The reign of Edward 1. is an important era in the history of English taxation. The popularity of this monarch's Scottish wars long induced the parhament to be liberal in their supplies, and even made the nation submit without much murmaring

that, as well as of the other acts of a similar tendency by which it was preceded, an account has already been given in the preceding Chapter. The subject of the royal revenue now becomes more closely connected than in earlier times with that of the constitution and government, inasmuch as in the present period the king came to be dependent for his income chiefly upon parliamentary grants. The several charters of liberties had considerably curtailed the ancient pecumary resources of the crown, by the abridgment of the prerogative; and the greater part even of the hereditary estates that survived the reigns of Richard and John was dissipated by the weak profusion of Hemy 111. This prince was reduced by his own folly, and the circumstances in which he was placed, to the most pituable state of destitution. From the terms on which he stood with his barons, their assistance in raising money was very gradgingly afforded; and the only extraordinary aids levied by him during his long reign were two-fifteenths, one-thirtieth, and one-fortieth for himself, and one-twentieth for the relief of the Holy Land. According to Matthew Paris, his entire income did not amount, 🖛 an average for the whole reign, to more than 24,000 marks, or about 16,000*l*, per annum. His principal resource in his later years was the plunder of the clergy, which lie was enabled to effect through the assistance of his friend Pope Alexander IV. In 1256, a tenth part of all ecclesiastical benefices was ordered to be paid for five years into the royal exchequer. The Jews were another still more defenceless class of his subjects from whom he repeatedly extorted larger sums of money. Matthew Paris records that, in the year 1241 alone, they were forced to pay no less than twenty thousand marks; and scarcely a year seems to have passed in which they were not subjected to exactions of the like arbitrary character, though not perhaps to the same amount. One individual, Aaron of York, from whom four thousand marks had been wrung in 1243, was again, in 1250, con-

demned, on pretence that he had been guilty of

the Jews.

to many arbitrary exactions. The church and the Jews (till they were finally expelled from the kingdom in 1290) continued to yield large returns to the royal exchequer. It was upon the liberality of his parliament, however, that 19 lward wisely placed his chief rehance; this assembly, by the complete establishment of county, and borough representation, was now become a national organ; and when the statute De Tallagio non Concudendo was passed in 1297, the first decided step may be considered to have been taken towards the great constitutional object of subjecting the public income and expenditure to the public control. It was not, however, till after a long stringgle that this object was practically accomplished even to the extent to which it was aimed at by the present statute. The concession of the statute was extorted from Edward, and he made repeated attempts to evade a restriction to which he never had intended to yield further compliance than the pressure of the moment might render convenient. One source of revenue which was greatly improved in the reign of Edward I, was that afforded by the customs on the export and import of goods. Edward considerably raised the rate of these ancient duties by his own authority, and also imposed certain additional duties upon foreign merchants, which came to be distinguished by the name of the new or alien customs. But Edward did not satisfy himself with mere taxation. On pressing emer generics he did not hesitate openly to serve the goods of merchants and the property of his other subjects whenever he could lay his hands upon Forced loans formed another of his ocea-In short, although the founsional resources. dations of parliamentary taxation were laid in this reign, by the establishment of the practice of regularly summoning to parliament representatives of the slures and boroughs, and by the passing of the statute De Tallagio, most of the old urbitrary modes of raising money by the crown continued to be exercised throughout the whole of it, in the face, indeed, of considerable dissatisfaction and outery, but without encountering, except in a few instances, any effectual resistance. The old method of taxation by scutages fell into disuse in

CONSTITUTION, GOVERNMENT, AND LAWS.

withstanding the heavy expenses of his military operations, never was reduced to anything resembling the pecuniary difficulties that his father had suffered. The vigour of his character and his general popularity enabled him, in addition to his arbitrary exactions, to obtain vastly more ample supplies from parhament than had been granted to Henry; and in one way and another the amount of money which he raised, in the course of his long reign, must have been very great. At his death he is said to have left a hundred thousand pounds of accumulated treasure, which he had intended to devote to the prosecution of the Scottish war. One benefit which the country reaped from the

feeble and otherwise calamitous rule of Edward II.

was a great reduction of taxation. The law,

CHAP. III.]

called the New Ordmances, enacted by the parliament which met in August, 1311,\* altogether abolished the new customs. Very few grants were made by parhament in this reign. The fifty years of the reign of Edward III., on the contrary, were a period both of parliamentary taxation on a large scale, and also of many illegal imposts. The grants by parliament, indeed, now

became almost animal, being generally in the form of a certain portion, varying from a fiftieth to a seventh, of the value of the moveable property of persons of all ranks. These repeated grants tended no doubt to establish the practice of the crown coming for supplies to parhament; but Edward also resorted to many arbitrary methods of raising money. Besides granting monopolies, a practice which he is said to have been the first to introduce, and compelling all persons having estates of a certain value to accept of knighthood, he renewed the old practice of imposing tallages on cities and boroughs; he extorted money from the clergy and others by what were called forced loans; he even made direct seizures of merchandise and other property on some occasions, just as his grandfather had done. In 1339 he restored, by his own anthority, the new customs which had been abolished in the preceding reign; and all the opposition of the parliament could not prevail upon him to renounce the right he claimed to collect these duties, although he at last consented not to continue them longer than two years. They were maintained, in fact, for a considerably longer period. Another duty which was now regularly levied was that afterwards called the tonnage and poundage duty, being an assessment of two shillings on every tun of wine imported, and of sixpence on every pound of other merchandise either imported or exported, which was originally granted, not by the full parliament, but by annual vote of

was afterwards raised to one hundred and sixteen shillings on each. \* It was also in this reign that the first poll-tax was granted. A pell, or exchequer roll, of the year 1347, makes Edward's entire revenue for that year to have amounted to 154,139t. 17s. 5d. It is probable, however, that this sum does not include many irregular payments. Notwithstanding his numerous resources, Edward was constantly in want of money and oppressed by debts. The straits in which he was involved were occasionally so extreme as to force him to the most painful and degrading expedients. At one time Queen Philippa was obliged to pawn her jewels; on another occasion the crown itself was given in pledge, and remained unredeemed for eight years. A tax imposed in the second year of the reign of Richard II, is said to be the first that was distinguished by the name of a Subsidy, which afterwards became the common name for a parhamentary grant to the erown. It was in fact a poll or eapitation tax, graduated according to the rank and property of each individual. This was followed the same year by the famous poll tax which occasioned the marriection of Watt Tyler. This, also, was to be regulated according to each person's ability, it being arranged that no one should pay for himself and his wife less than one groat, or more than sixty. The entire sum proposed to be raise was 160,000*l*. Richard's expenditure, in the latter part of his reign, was extravagantly lavish, and was sustained by various arbitrary exactions, and also by liberal grants almost annually made by a servile parliament. Much of what he thus obtained was wasted in the mere maintenance of his household, which is affirmed to have consisted of ten

the representatives of the cities and boroughs only.

From 1373, however, it came to be granted by

both houses in the usual form. The first parlia-

mentary grant of a specific sum is said to have

been made in 1371, when a subsidy of 50,000l.

was voted to be raised by an average assessment of

## CHAPTER IV.

## HISTORY OF THE NATIONAL INDUSTRY.

HE history of English commerce during the thirteenth and fourteenth centuries is in great part the record of a course of legislative attempts to annul the laws of nature, such as probably never was outdone in any other country. A full detail, it our limits would allow us to give it, would serve

no useful purpose here; but a few samples will be found both currons and instructive.

A term which makes a great figure in the commercial regulations of this period is that of the Staple. The word, m its primary acceptation, appears to mean a particular port or other place to which certain commodities were obliged to be brought to be weighed or measured for the payment of the customs, before they could be sold, or in some cases exported or imported. Here the king's staple was said to be established. articles of English produce upon which customs were anciently paid, were wool, sheep-skins, or woolfels, and leather; and these were accordingly denominated the staples or staple goods of the kingdom. The persons who exported these goods were called the merchants of the staple: they were incorporated, or at least recognized as forming a society with certain privileges, in the reign of Edward H., if not earlier. Hakluyt has printed a charter granted by Edward 11., the 20th of May, 1313, to the mayor and council of the merchants of the staple, in which he ordains that all merchants, whether natives or foreigners, bnying wool and woolfels in his dominions for exportation, should, instead of carrying them for sale, as they had been wont to do, to several places in Brabant, Flanders, and Artois, carry them in future only to one certain staple in one of those countries, to be appointed by the said mayor and conneil. It appears that, upon this, Antwerp was made the staple. But although the power of naming the place, and also of changing it, was thus conferred upon the society, this part of the charter seems to have been very soon disregarded. In subsequent times the interferences of the king and the legislature with regard to the staple, were incessant. In 1326 it was, by the royal order, remo.ed altogether from the continent, and fixed at

certain places within the kingdom. Cardiff, in Wales, a town belonging to Hugh Despenser, is the only one of these new English staples the name of which has been preserved. It may be noted, also, that the is now mentioned as one of the staple commodifies. In 1328 (by the statute 2 Edw. 111. c. 9.) it was enacted, "that the staples beyond the sea and on this side, ordained by kings in times past, and the pains thereupon provided, shall cease, and that all merchant strangers and prove (that is, foreigners and natives) may go and come with their merchandizes into England, after the tenor of the Great Charter." In 1332, however, we find the king ordaning, in the face of this act, that staples should be held in various places within the Acts of parliament, indeed, on all kinds of subjects were as yet accustomed to be regarded by all degrees of people as little more than a sort of moral declarations or preachments on the part of the legislature—expressions of its sentiments—but scarcely as laws which were compulsory like the older laws of the kingdom. Most of them were habitually broken, until they had been repeated over and over again; and this repetition, rather than the exaction of the penalty, appears to have been the recognized mode of entoreng or establishing the law. In many cases, indeed, such a way of viewing the statute was justified by the principle on which it was evidently passed; it was often manifestly, if not avowedly, intended by its authors themselves as only a tentative or experimental enactment, the ultimate enforcement of which was to depend upon the manner in which it was found to work. The Act of parliament was frequently entitled, not a statute, but an ordinance; and in that case it seems to have been merely proposed as an interim regulation, which was not to become a permanent law until some trial should have been had of it, and such amendments made in it as were found by experience to be necessary.\* In other cases, again, and those of no rare occurrence, the law was of such a nature that it could not be carried into execution; it was an attempt to accomplish what was impossible. These considerations may account for the numerous instances in which our old laws are merely confirmations, or in other words, repetitions of some preceding law, and also for the extraordinary multiplication which we find of fluctuating or contradictory laws. this latter description, those relating to the staple afford an eniment example. In 1334, all the lately established staples were again abolished by

• Sec on this subject Hallam's Middle Ages, in 72-75.

heforehand.

and worsted stuffs, for seven years. All the former inhabitants of Calais, with the exception, it is said, of one priest and two lawyers, had been removed, and an English colony, of which thirty-six merchants from London were the principal memhers, had been settled in their room. In 1353, by the statute called the Ordinance of the Staples (27 Edw. III. st. 2, c. 1), the staple for wool, leather, woolfels, and lead, was once more removed from the continent by act of parhament, and ordered to be held for ever in the following places, and no others—namely, for England, at Newcastle-upon-Tyne, York, Lincoln, Norwich, Westminster, Canterbury, Chichester, Exeter, and Bristol; for Wales, at Carmarthen; and for Ireland, at Dublin, Waterford, Cork, and The "for ever" of this statute re-Drogheda. manied in force for ten years, and no longer. From the preamble of the statute 43 Edw. III, it appears that it had been ordained, for the profit of the realm, and case of the merchants of England, that the staple of wools, woolfels, and leather, should be holden at Calais; and that there accordingly it had been holden since the 1st of March, 1363. By this last-mentioned act, however, passed in 1369, it was again, in consequence of the renewal of the war with France, fixed at certain places within the kingdom—being for Ireland and Wales the same that have been just mentioned, but with the substitution in the case of England, of Hull, Boston, Yarmouth, and Queenburgh, for Canterbury, York, Lincoln, and Norwich. In 1376 nevertheless, on the complaint of the inhabitants of Colars, that their city was declining, the staple was restored to that place; and it was now made to comprehend, not only the ancient commodities of wool, woolfels, and leather, and those more recently added, of lead, tin, worsted stuffs, and feathers, but also cheese, butter, honey, tallow, peltry (or skins of all kinds), and what are called "ganlæ," which have been supposed to mean osiers for making baskets; these different articles probably comprehending all the ordinary exports from the kingdom. But this restriction of the whole export trade to one market was soon relaxed. In 1378 (by the 2nd Rich. II. stat. 1, c. 3), it was cuacted, that all merchants of Genoa, Venice, Cataloma, Arragon, and other countries toward the West, that would bring their vessels to Southampton, or elsewhere within the realm, might there freely sell their goods, and also recharge their vessels with

wools, and the other merchandises of the staple, on

paying the same customs or duties that would

have been payable at Calais; and in 1382 (by the

5th Rich. II. stat. 2, c. 2), all merchants, whether

foreigners or natives, were permitted to earry wool,

leather, and woolfels, to any country whatever,

except France, on payment of the Calais duties

the staple was re-established by a royal act at

Bruges, in Flanders. In 1348, again, after the

capture of Calais, that town was made the staple

for tin, lead, feathers, English-made woollen cloths,

CHAP. IV.]

it was brought back to the same English towns in which it had been fixed in 1353. The very next year, however, it was enacted, that instead of these towns, the staple should be held at such others mpon the coast as the lords of the council should direct; and it would even appear (from the 15th Rich. II. c. 8), that, at least for a part of the year, the staple of wool and also of tin was still at Calais. "Staples and restraints in England, and a second staple and other restraints at the same time on the continent!" exclaims the historian of our commerce, in noting this fact: "the condition of the merchants who were obliged to deal in staple goods was truly pitiable in those days of perpetual changes."\* It is not quite clear, however, that the English staples were still continued; it is perhaps more probable tbut they had been abolished when the staple was restored te, Calais. However this may be, it appears from the statute 21 Rich. II. c. 17, passed in 1398, that at that time Calais was the only staple; and such it continued to be from this time till it was recovered by the French in 1538, when the staple was established at Bruges. The old staple laws, however, had been considerably relaxed in the course of that long interval. The history of the staple is an important part of the history of ome arrly foreign commerce, of which it is some degree illustrates the growth and gradual extension from the progressive development of the resources of the country, as well as the artificial bonds and incumbrances against the

c. 16), it was ordered to be fixed once more at

Calais; but in 1390 (by the 14th Rich, H. e. 1),

pressure and entanglement of which the principle of that natural growth had to force its way. We now proceed to quote some further instances of the perplexities, the blunders, and the generally oppressive or amoying character of our ancient commercial legislation.

One of the prerogatives assumed by the crown in those days, somewhat similar in its nature to that of fixing the staple of the foreign trade of the kingdom, was the right of restricting all mercantile dealings whatever, for a time, to a certain Thus, Matthew Paris tells us that, in the year 1245, Henry III. proclaimed a fair to be held at Westminster, on which occasion he ordered that all the traders of London should shut up their shops, and carry their goods to be sold at the fair, and that all other fairs throughout England should be suspended during the fifteen days it was appointed to last. The king's object, no doubt, was to obtain a supply of money from the tolls and other dues of the market. What made this interference be felt as a greater hardship was, that the weather, all the time of the fair, happened to be excessively bad; so that not only the goods were spoilt, exposed as they were to the rain in tents \* Macpherson, Annals of Com. 1, 604.

perfect indifference whether these merchants, shipowners, and bankers or other capitalists, be natives

or foreigners. Not so, however, thought our an-

cestors in the infancy of our foreign commerce.

only covered with cloth, and that probably imperfectly enough; but the dealers themselves, who were obliged to eat their victuals with their feet in the mud, and the wind and wet about their ears, suffered intolerably. Four years afterwards the king repeated the same piece of tyranny, and was again seconded by the elements in a similar fashion. This time, too, the historian tells us, scarcely any buyers came to the fair; so that it is no wowler

the unfortunate merchants were loud in expressing

their dissatisfaction. But the king, he adds, did

bewildered both the legislature and the popular

There was nothing that more troubled and

not mind the imprecations of the people.

understanding, during the whole of this period, than the new phenomena connected with the increasing foreign trade of the country. The advantages of this augmented intercourse with other parts of the world were sensibly enough felt, but very imperfectly comprehended; hence one scheme after another, to retain the benefit upon terms wholly inconsistent with the necessary conditions of its existence. Of course, in all exchange of commodities between two countries, besides that supply of the respective wants of each which constitutes the foundation or sustaining element of the commerce, a certain portion of what the consumer pays must fall to the share of the persons by whose agency the commerce is carried on. It is this that properly forms the profits of the commerce, as distinguished from its mere advantages or conveniences. The general advantages of the commerce, apart from the profits of the agents, are nlone the proper concern of the community: as for the mere profits of the agency, the only interest of the community is, that they shall be as low as possible. From the course, however, that

the popular feeling has at all times taken, it might

be supposed that the very contrary was the ease; for the cry has constantly been in favour of

making this agency, as far as possible, a monopoly in the hands of the native merchants, although the effect of the exclusion of foreign competition, if it could be accomplished, really could be nothing else than an enhancement of the profits of the agency, and consequently of the charge upon the consumer. In fact, if the exclusion were not expected to produce this effect, it never would be sought for by the native merchants. should be sought for by them is natural enough, but that they should be supported in this demand by the community at large is only an instance of popular prejudice and delusion. In all commerce, and especially in all foreign commerce, a body of intermediate agents, to manage the exchange of the commodities, is indispensable; the goods must be brought from the one country to the other, which makes what is ealled the earrying trade; they must be collected in shops or warehouses for distribution by sale; even their original production, in many eases, cannot be efficiently accomplished without the regular assistance of a third class of persons,—namely, dealers in money or in credit.

The commerce itself was sufficiently acceptable; but the foreigners, by whose aid it was necessarily in part curried on, were the objects of a most intense and restless jealousy. Whatever portion of the profits of the commerce fell to their share was looked upon as nothing better than so much plunder. This feeling was even in some degree extended to the whole of the foreign nation with which the commerce was carried on; and in the notion that all trade was of the nature of a contest between two adverse parties, and that whatever the one country gamed the other lost, the inflammation of the popular mind occasionally rose to such a height that nothing less would satisfy it than an abjuration of the foreign trade altogether. But it never was long before this precipitate resolution was repented of and revoked. In the wars between Henry III, and his barons, the latter endeavoured to turn to account against the king the national jealousy of foreigners, which his partiality to his wife's French connexions had greatly exasperated. In 1261 they passed a law which may be regarded as the first attempt to establish what has been called, in modern times, the manufacturing system. It probibited the exportation of wool, the chief staple of the country, and ordained that no woollen cloths should be worn except such as were manufactured at home, Whatever may be thought of the policy of nursing the infancy of domestic manufactures in certain circumstances by protections of this description, the present attempt was undoubtedly premature, and its authors confessed as much by appending to their prohibition against the importation of

that wealth had hitherto contributed to sustain and feed, would suffer depression.

It would appear that, either from want of skill or a scareity of woad, in consequence of the usual importations from the continent being cheeked, dyed cloths could not be obtained in sufficient quantity in England a few years after this time; for it is recorded that many people were now wont to dress themselves in cloth of the natural colour of the wool. Simon de Montford, it seems, professed to

foreign cloth an injunction or recommendation that all persons should avoid every superthuty in dress.

What were thus denounced as extravagant super-

fluities were evidently those finer fabries which

could not yet be produced in England. The effect

of this law, in so far as it was enforced or obeyed,

could only have been to add to the general distress,

by embarrassing more or less all classes of persons that had been ever so remotely connected with the

foreign trade, and above all others the chief body

of producers in the kingdom. If the wool was

not to go out of the country, much wealth both in

money and in goods would be prevented from

coming in, and all the branches of industry which

was accustomed to maintain that foreign commerce was unnecessary, the produce of the country being fully sufficient to supply all the wants of its inhabitants. And so no doubt it was, and would be still, on this principle of rigidly eschewing all superfluities; but that is the principle of the stationary and savage state, not of civilization and progressive improvement.

The prohibition against the importation of foreign cloth, however, appears to have been soon

be an admirer of this plaimess of apparel, and

CHAP. IV.]

or weeks.

repealed. In 1271, when disputes broke out between Henry and the Countess of Flanders, we find it renewed in terms which imply that the trade had for some time previous been carried on as usual. This second suspension, also, was of short duration; and on various subsequent occasions on which the attempt was made to break off the natural commercial intercourse between the English producers and the Flemish manufacturers, the result was the same; the inconvenience was found to be so intolerable to both countries that it

never was submitted to for more than a few months

Absurd regulations, however, were from time to

time imposed on the trade earned on by foreigners, the temper and principle of which would, if carried out, have led to its complete extinction, and which, half measures as they were, could only have had the effect of diminishing its natural advantages. In 1275, for instance, an order was issued by Edward I., obliging all foreign merchants to sell their goods within forty days after their arrival. If foreigners continued to resort to the country in the face of the additional risks created by this law,—risks of inadequate returns if they complied with it, of detection and punishment if they at-

tempted to evade it,—we may be certain they exacted a full equivalent in the shape of higher

prices for their goods; or, if they failed to do this,

they must soon have been forced to give up the trade altogether, for there was no other way by

which it could be made to yield its usual profits.

No foreign merchants were in those days allowed to reside in England except by special license from the king; and even under this protection, they were subjected to various oppressive liabilities. It was not till 1303 that a general charter was granted by Edward I., permitting the merchants of Germany, France, Spain, Portugal, Navarre, Lomhardy, Tuscany, Provenee, Catalonia, Aquitaine, Toulouse, Querey, Flanders, Brabant, and all other foreign countries, to come safely to any of the dominions of the English crown with all kinds of merchandize, to sell their goods, and to reside under the protection of the laws. But even this general toleration was clogged with many restric-The goods imported, with the exception of spices and mercery, were only to be sold wholesale. No wine was to be carried out of the country with-

out special license. Above all, no relaxation was

granted of the ancient grievous liability under

which every resident stranger was placed of being

records of the Exchequer that, in 1306, a number of foreign merchants were committed to the Tower, and there detained until they consented severally to give security that none of their number should leave the kingdom, or export anything from it, without the king's special license. Each of them was at the same time obliged to give in an account of the whole amount of his property, both in money and goods. Security against being subjected to this kind of treatment had been accorded in a few particular instances; but it was not till the year 1353 that the law was formally altered by the Statute of the Staple already mentioned, and the ancient practice was not wholly discontinued till long afterwards. The general charter of 1303 was followed within

four years by a still more extraordinary attempt

than any that had yet been made to control the

every other foreign resident. It appears from the

natural course of commerce. In 1307, Edward issued an order prohibiting either coined money or bullion to be carried out of the kingdom on any account. The merchants, therefore, who came from other countries, were now reduced to the necessity of either directly bartering their com- modities for the produce of the kingdom, or, if they sold them for money in the first instance, of investing the proceeds in other goods before they eould be permitted to return home. This was a restriction so thoroughly opposed to every commercial principle that it could not be rigidly maintained; the very year following its promulgation. an exemption from it was accorded to the merchants of France by the new king, Edward 11., and similar relaxations of it were afterwards per-\*mitted in other cases. But, although from its nature it did not admit of being strictly enforced, it long continued to be regarded as the law of the country, and repeated attempts were made to secure its observance. In 1335, by the 9th Edw. III. st. 2, it was enacted that no person should henceforth carry out of the kingdom either money or plate without special license, upon pain of forfeiture of whatever he should so convey away. Sworn searchers were appointed to see that the law was observed at all the ports; and it was further ordered that the inn-keepers at every port should be sworn to search their guests: the fourth part of all forfeits was assigned as the reward of the searchers. In 1343, by the 17th Edw. 1H., nearly the same regulations were repeated, the

principal variation being that, to induce them to

do their duty more diligently, the reward of the

searchers was now raised to a third part of the

forfeits, and penalties were provided for their neglect or connivance. We may gather from all

this that the law had been extensively evaded. At

length permission was given generally to foreign merchants to carry away one half of the money

for which they sold their goods; the law is thus

stated in the 14th Rich. II. c. 1, passed in 1390,

fBook IV.

by the former of these statutes that every alien bringing any merchandise into England shall find sufficient sureties before the officers of the enstoms to expend the value of half of what he imports, at the least, in the purchase of wools, leather, woolfels, lead, tin, butter, cheese, cloths, or other com-The ignorance and misconception from which all

828

modities of the land, this legislation proceeded, are exhibited in a striking point of view by the fact that the above-mentioned original order of Edward I., prolubiting the exportation of money, expressly permuts the amount of the money to be remitted abroad in bills of exchange." And at all times, while the exportation of money was forbidden, the remittance of bills seems to have been allowed. But a bill of exchange remitted abroad is increly an order that a certain party in the foreign country shall reecive a sum of money which is due to the drawer of the bill, and which would otherwise have to be sent to the country where he resides; if no such money were due, the bill would not be negotiable; every such bill, therefore, if it did not corry money ont of the country, produced precisely the same effect by preventing money from coming in. was fit and natural enough, however, that this simple matter should fad to be perceived in times when it was thought that a great advantage was gamed by compelling the foreign merchant to sell his goods for produce instead of for the money which the produce was worth; indeed it may be 'barly said, in tead of tor less money than the produce was worth, for all restraints of this description megatiohy operate to enhance the price of what is prevetted from being openly bought and sold on

mercial legislation of those times was to impose a certain measure upon all foreign cloths brought to the country. By the Act 2 Edw.-HL c. 14, passed in 1328, it was ordered that, from the Feast of St, Michael ensuing, all cloths that were imported should be measured by the king's authagers, and that all those that were not found to be of a certain specified length and breadth should be forfeited to the king. The dimensions fixed by the statute were, for cloth of ray (supposed to mean striped cloth), 28 yards in length by 6 quarters in breadth; and for coloured cloth, 26 yards in length by 6½ quarters in breadth. The regulation of weights and measures within the kingdom was a proper subject of legislation, and had necessarily engaged attention long before this date; although at a period when science was miknown, the methods resorted to were necessarily very inartificial, and sometimes singular enough; Henry I., for example, soon after he came to the throne, in ordaning that the ell or yard should be of miform length throughout the kingdom, could find no better standard for it than the length of his own arm. It might also have been found expedient, both for fiscal and

the terms that would be naturally agreed upon

Another strange attempt of the English com-

between the parties themselves.

Such a law, in so far as it was enforced, could only have the effect of diminishing the supply,—in other words, of raising the prices of foreign goods. But like most of the other absurd restrictions of the same character, the maintenance of this regulation was soon found to be impracticable': if it bad been rigorously insisted upon, it would have excluded the mamfactured goods of certain foreign countries from the Euglish market altogether; and accordingly, after giving a great deal of uscless annovance both to foreign merchants and their Finglish customers, and after special excorptions from it had been granted to several nations, it was at last repealed by the 27 Edw. III, st. 1, c. 4, passed in 1353, which provided that, "whereas the great men and compions have showed to our lord the king how divers merchants, as well foreigners as denizens, have withdrawn them, and yet do withdraw them, to come with cloths into Eugland, to the great damage of the king and of all his people, because that the king's aulnager surmiseth to merchant strangers that their cloths be not of assize," therefore no foreign cloths should in future be forfeited on that account, but when any was found to be mider assize, it should simply be marked by the animager, that a proportionate abatement might be made in the price, This was also the era of various statutes against the supposed muschiefs of forestalling. The statute "De Pistoribus" (attributed by some to the 51st year of Hen, HL, by others to the 13th of Edw. L) contams the following empassioned description and denouncement of this offence: "But especially be it commanded, on the behalf of our lord the king, that no forestaller be suffered to dwell in any town, which is an open appressor of poor people, and of all the commonalty, and an enemy of the whole shire and country; which for greedmess of his private gains doth prevent others in buying grain, fish, herring, or any other thing to be sold coming by land or water, oppressing the poor and deceiving the rich; which carrieth away such things, intending to sell them more dear; the which come to merchants strangers that bring merchandise, offering them to buy, and informing them that their goods might be dearer sold than they intended to sell, and an whole town or a country is deceived by

such craft and subtlety." It might be supposed

from all this that the forestaller bought the commodity for the purpose of throwing it into the sea

or otherwise destroying it; it seems to have been

forgotten that, like all other dealers, he bought it

only that he might sell it again for more than it cost him, that is to say, that he might preserve it

for a time of still higher demand and greater

necessity. But for him, when that time of greater

specified dimensions; regulations to that effect

have at least been usual down to our own day.

But it was to stretch legislation on such matters

beyond all reasonable limits to attempt to fix a

measure for the cloth made in all foreign countries.

if the people were pinched now, they would be starved then. The forestaller is merely the economical distributor, who, by preventing waste at one time, prevents absolute want at another; he destroys nothing; on the contrary, whatever he reserves from present consumption, is sure to be reproduced by him in full at a future day, when it will be still more needed. Were it otherwise, forestalling would be the most losing of all trades, and no law would be required to put it down, The English laws against forestalling, regrating, and engrossing, however, cannot well be made a reproach to the thirteenth century, seeing that they were formally renewed and extended in the sixteenth, \* and were not finally removed from the Statute Book till towards the end of the eightcenth.+  $\Lambda$  still more direct attempt to derange the natural balance of supply and demand was made by parliament in 1315, when, with the view of

scarcity came, there would be no provision for it;

relieving the people from the pressure of a severe familie, it was enacted that all articles of food should be sold at certain prescribed prices. It was strangely forgotten that the cycl did not lie in the high prices, but in the scarcity, of which they were the necessary consequence. That scarcity, of course, the act of parliament could not cure. In fact, food became more difficult to procase than ever; for even those who had any to sell, and would have brought it to market if they could have had a fair price for it, withheld it rather than dispose of it below its value. What was sold was for the most part sold at a price which violated the law, and which was made still higher than it would otherwise have been by the trouble and risk which the illegality of the transaction involved. Butcher-meat disappeared altogether; poultry, an article of large consumption in those times, became nearly as scarce; gram was only to be had at enormous prices. The result was, that the king and the parliament, after a few months, becoming convinced of their mistake, hastened to repeal the

The same thing in principle and effect, however, was repeated not many years after, by acts passed to fix the wages of labourers,—in other words, the price of the commodity called labour. In 1349 (the twenty-third of Edward I.), after a pestilence which had carried off great numbers of the people, was issued (apparently by the anthority of the king, although it is printed as a statute) "an ordinance concerning labourers and servants;" which directed, first, that persons of the class of servants should be bound to serve when required; and secondly, that they should serve for the same wages that were accustomed to be given three years before. This ordinance, indeed, further proceeded to enjoin that all dealers in victual should be bound to sell the same "for a reasonable price," and inflicted a penalty upon persons offending

against that enactment-although it did not presume expressly to fix a maximum of prices. next year, by the 25 Edw. III., st. 2,\* after a preamble, declaring that servants had had no regard to the preceding ordinance, " but to their ease and singular covetise," the parliament established n set of new provisions for effecting its object: this act, however, contains nothing on the subject of the prices of provisions. The statute of labourers was confirmed by parliament in 1360 (by the 34 Edw. 111. c. 9), and its principle was long obstinately clung to by the legislature, notwithstanding the constant experience of its melliciency, and indeed of its positive mischief, and its ducct tendency to defeat its own proposed object; for a law is rarely barmless because it is of impracticable execution; the imskilful surgery of the body politic, as of the body natural, tears and tortures when it does not enre, and fixes deeper and more firmly the burb which it fails to extract. By the 13 Rich. II. st. 1, c. 8 (passed in 1389-90), it is ordained that, " forasmuch as a man cannot put the piece of corn and other victuals in certain," the justices of peace shall every year make proclamation " by their discretion, according to the dearth of victuals, how much every mason, carpenter, tiler, and other oraftsmen, workmen, and other labourers by the day, as well in harvest as in other times of the year, after their degree, shall take by the day, with meat and drink, or without meat and drink, and that every man obey to such proclamations from time to time, as a thing done by statute." It is also ordered that victuallers "shall have reasonable gains, according to the discretion and limitation of the said justices, and no more, upon pain to be grievously punished, according to the discretion\_of the said justices." Finally, provision is made for the correct keeping of the assize (or assessment from time to time) of the prices of bread and The earliest notice of an assize in England is found in the rolls of parliament for 1203, the 5th of John; but the first nitroduction of the practice is probably of older date. The most ancient law upon the subject that has been preserved is that entitled the Assisa Panus et Cervisiae, commonly assigned to the 51st Hen. 111. (A.D. 1266.) The assize of bread and ale, it is to be remembered, determined the prices of these commodities, not arbitrarily, but by a scale regulated according to the market prices of wheat, barley, and oats, so that the prices that were really fixed were those of baking and of brewing. The assize of bread was re-enacted so lately as the beginning of the last century, and was only abolished in London and its neighbourhood about twenty years ago: in regard to other places, although it has fallen into dishie, the old law still remains unrepealed. But various other articles, such as wine, fish, tiles, cloths, wood, coal, billets, &c., have at different times been made subject to assize; and in the case of most of these the assize was a perfectly arbitrary determination of the price. The present period . Commonly entitled Statute the First.

and envy, increase upon other, and if one proffer forty shillings, another will proffer ten shillings more, and the third sixty shillings, and so every one surmounteth other in the bargain, and such proffers extend to more than the price of the herring upon which the fishers proffered it to sell at the beginning," The ordinance promulgated with the intention of keeping down the price of herrings, had actually raised it. Wherefore "we," concludes the new statute, " perceiving the mischiefs and grievanees uforesaid, by the advice and assent of our parhament, will and grant, that it shall be lawful to every man, of what condition that bemay be, merchant or other, to buy herring openly, and not privily, at such price as may be agreed betwixt him and the seller of the same herring." This failure, however, did not deter the parliament two years after from fixing a price for poultry (by the stat. 37 Edw. III. c. 3); but the next year, that also was repealed by the 38 Edw. 111. \*st. 1, c. 2, which ordained that all people, in regard to buying and selling and the other matters treated of in the preceding statute, should be as free as they were before it passed, and as they were the time of the king's grandfather and his other good Notwithstanding, however, the impediments and embarrassments occasioned by all this blind and contradictory legislation, English commerce undoubtedly made a very considerable progress in the course of the space of nearly two centuries included within the present period. The directing property of the magnet, and its application in the marmer's compass, appear to have become known in Europe towards the end of the twelfth century, and the instrument was probably in common use among navigators soon after the middle of the thirteenth. Both Chaucer the English, and Barbour the Scottish poet, allude familiarly to the compass in the latter part of the fourteenth century. Barbour tells us that Robert Bruce and his companions, when crossing, during the night, from Arran to the coast of Carrick, in

furnishes us with a curious example of the manner

ordinance issued in 1357 (commonly called the

31 Ed. 111. st. 2), it was directed that no berrings

should be sold for a higher price than forty shil-

lings the last. But, in 1361, we find the king

and his council, in a second ordinance (commonly

ealled the statute 35 Edw. III.), frankly confess-

ing that the effect of the attempt to fix prices in

this case had been, "that the sale of herring is much decayed, and the people greatly endainaged,

that it to say, that many merchants coming to the

fair, as well labourers and servants as other, do

bargain for herring, and every of them, by malice

in which some of these attempts operated.

830

1307,\* steered by the light of the fire they saw on the shore,—" for they na needle had nor stane:" the words seem to imply rather that they were by accident without a compass, than that the in-

strument was not then known. Chaucer, in his · See ante, p. 729.

prose treatise on the Astrolabe, says that the sailors reckon thirty-two parts (or noints) of the horizon; evidently referring to the present division of the eard, of which the people of Bruges are said to have been the authors. Gioia, of Amalfi, who flourished in the beginning of this century, is supposed to have been the first who attached a divided card to the needle; but his card seems to have had only eight winds or points drawn The contemporary chroniclers have not recorded the effects produced by the introduction of the compass on navigation and commerce; but it must have given a great impulse to both.  $\Lambda$  few interesting facts, however, connected with English slipping during the present period have been pre-Henry III, appears to have had some ships of his own. One of the entries in the Liberate Roll of the tenth year of his reign is as follows:-"Henry, by the grace of God, &c.-Pay out of our treasury to Reynold de Bernevall and Brother Thomas, of the Temple, twenty-two marks and a half, for repairs, &c. of our great slip; also pay to the six masters of our great slip, to wit, to Stephen le Vel, one mark ; Germanus de ta Rie, one mark; John, the son of Sampson, one mark; Coleio de Warham, one mark; Robert Gaillard, one mark; and Simon Westlegrei, one mark. Witness ourself at Westminster, the 17th day of May, in the tenth year of our reign. For the mariners of the great ship."\* The vessel here referred to is, we suppose, the large slop ealled the Queen, which, in 1232, Henry chartered to John Blancbally, for the life of the latter, for an annual payment of fifty marks.† In an order of the same king to the barons of the Cinque Ports, in 1242, mention is made of the king's galley of Bristol, and of the king's galleys in Ireland. Edward I. probably had a

much more numerous navy. When he was pre-

paring for his war with France, in 1294, this king

divided his navy into three fleets, over each of

which he placed an admiral, this being the first

time that that title is mentioned in English history.

We are not, however, to suppose that all the ships

forming these three fleets were the property of the

king; the royal navy was still, as it had heretofore been, chiefly composed of vessels belonging to

private merchants which were pressed for the

public service. The names of the following king's

ships are mentioned in an Issue Roll of the ninth

of Edward II.:—the Peter, the Bernard, the Marion, the Mary, and the Catherine; all of

Westminster. In the reign of Edward III, we

find many ships belonging to Yarmouth, Bristol,

Lynne, Hull, Ravensere, and other ports, distin-

guished as ships of war; but this designation does

not seem to imply that they were royal or public

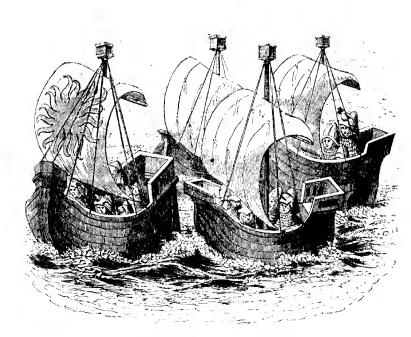

property.

Issues of the Exchequer from Henry III. to Henry VI. inclusive.
 By Frederick Devon 4to, Lon 1837.
 Mattax's Hist of Excheq., c. 13, § 11.
 Issues of Excheq., at supra. The editor adds—"The names of other ships are also mentioned."

The dominion of the four seas appears to have been first distinctly claimed by Edward III. At this time the Cinque Ports were bound by their charter to have fifty-seven ships in readiness at all times for the king's service; and Edward also retained in his pay a fleet of galleys, supplied, according to contract, by the Genocse. By far the greater number, however, of the vessels employed in every considerable naval expedition of those times consisted, as we have said, of the The English mercantile private merchantmen. mavy was now very considerable. When Henry III., in 1253, ordered all the vessels in the country to be seized and employed in an expedition against the rebel barons of Gascony, the number of them, Matthew Paris tells us, was found to be above a thousand, of which three bundred were large ships. The foreign as well as the English vessels, however, are included in this enumeration; the former as well as the latter were subject to be thus pressed. According to an account given in one of the Cotton manuscripts of the flect employed by Edward III, at the siege of Calais, in 1346, it consisted of 25 slaps belonging to the king, which carried 419 marmers; of 37 foreign ships (from Bayonne, Spain, Flanders, and Guelderland), manned by 780 mariners; of one vessel from Ireland, carrying 25 men; and of 710 vessels belonging to English ports, the crews of which amounted to 14,151 persons. merchantmen were divided into the south and the north fleet, according as they belonged to the ports

south or north of the Thames. Among the places that supplied the greatest numbers of ships and men were the following: -- London, 25 ships with 662 men; Margate, 15 with 160; Sandwich, 22 with 504; Dover, 16 with 336; Winchelsea, 21 with 596; Weymonth, 20 with 264; Newcastle, 17 with 414; Hull, 16 with 466; Grimsby, 11 with 171; Exmouth, 10 with 193; Dartmouth, 31 with 757; Plymouth, 26 with 603; Looe, 20 with 325; Fowey, 47 with 170; Bristol, 24 with 608; Shoreham, 20 with 329; Southampton, 21 with 572; Lynne, 16 with 482; Yarmouth, 43 with 1095; Gosport, 13 with 403; Harwich, 14 with 283; Ipswich, 12 with 239; and Boston, 17 with 361. These, therefore, it may be assumed, were at this time the principal trading towns in the kingdom.

It will be perceived that the vessels, if we may judge from the numbers of the men, were of very various sizes; and none of them could have been of any considerable magnitude. A ship, manned by thirty seamen, which the people of Yarmouth fitted out, m 1254, to carry over Prince Edward, afterwards Edward I, to the continent, is spoken of with admiration by the writers of the time for its size as well as its beauty. Some foreign ships, however, were considerably larger than any of the English at this period. Thus, one of the vessels which was lent by the Republic of Vennce to St. Louis, in 1270, when he set out on his second crusade, measured 125 feet m length, and carried 110 men. But this was

SHIPS OF THE TIME OF RICHARD II, TIGH MS, 1319

Mediterranean.

to Southampton, laden with wool and other merchandise, was taken by some Scottish and Norman privateers in the mouth of the Thames; and in the

following year, a numerous fleet of ships and gal-

leys equipped by the Scots, attacked and plundered

Guernsey and Jersey, and captured several English vessels lying at anchor at the Isle of Wight.

In the autumn of 1357, again, three Scottish ships

of war, carrying 300 chosen armed men, are stated

to have cruised on the cast coast of England, and

greatly annoyed the trade in that quarter, till the

equinoctial gales drove them, along with a number of English vessels, into Yarmouth, where they

were taken. These appear to have been unantho-

rised private adventurers—there being at this time

a truce between the two comptries. The bold

enterprise of the Scottish captain, John Mercer, in

1378, till a stop was put to his career by the pub-

lic spirit of a citizen of London, John Philpot, has

[Book **1**♥,

for arresting all the vessels in the kingdom for an expedition against France, directed that the largest ships should carre 40 mariners, 40 armed men, and 60 archers. A ship which was taken from the French in 1385, is said to have been, a short time before, built for the Norman merchants in the East comtry at a cost of 5000 francs (above 830l. sterling), and to have been sold by them to Clisson, the constable of France, for 3000 francs. This was one of eighty vessels of various kinds, ships, galleys, cogs, carracks, barges, lines, balingars, &c., which were captured this same year by the governor of Calais and the seamen of the Cinque Ports. "There were taken," says the historian Walsingham, " and slain in those ships, 226 scamen and mercenaries. Blessed be God for all things." One ship taken by the Canque Port vessels was valued--her cargo no doubt included--at 20,000 marks. But half a century before this, we read of Genoese galleys', loaded with wool, cloth, and other merchandise, which were reckoned to be worth 60,000% and 70,000% in the money of Genoa. Some notices that have been preserved of the shipping of Scotland during this period prove its amount to have been more considerable than might be expected. Indeed, that country seems to have

had some reputation for ship-building even on the Matthew Paris relates that one of the great ships in the fleet that accompanied St. Louis on his first crisade, in 1249, had been built at Inverness, for the Earl of St. Paul and Blots. The historian calls her " a wonderful ship," mallesion, apparently, to her magnitude. Mention is made in an anoient charter, of one ship which belonged to the Scottish crown in the reign of Alexander 111, who died in 1286; and Fordin states that, at this time, the King of Man was bound to furnish his hege lord, the King of Scots, when required, with five warlike galleys of twenty-four oars, and five of twelve oars; and that other maritime vassals contributed vessels in proportion to their lands. One of Alexander's commercial laws was of a singular character, if we may believe this historian. consequence of several merchant vessels belonging to his subjects having been taken by pirates or lost at sea while voyaging to foreign parts, he prohibited the merchants of Scotland from exporting any goods in their own vessels for a certain time. The consequence, it is affirmed, was, that before the end of a year, numerous foreign vessels arrived with goods of all kinds; and the kingdom obtained a cheaper and more abundant supply of the pro-

duce of other countries than it had ever before

enjoyed. If any such effect as this was produced,

the law, at the same time that it restrained the

native shipowners from importing goods, probably

removed some restrictions that had previously been

imposed on the entry into the kingdom of foreign

merchants. In the wars between England and

Scotland, in the reign of Edward III., the latter country frequently made considerable naval exer-

been mentioned in a former page.\* Mercer is said to have been the son of a burgess of Perth, one of the most opulent merchants of Scotland, who, the year before, when returning from abroad, had been driven by stress of weather upon the English coast, and there seized and confined for some time in the castle of Scarborough.—It was to revenge this injury that the son fitted out his armament. A few years after this, some privateers of Hull and Newcastle captured a Scottish slup, the cargo of which, according to Walsingham, was valued at 7000 marks. The most ancient record, which presents a general view of the foreign trade of England, is an account preserved in the Exchequer of the exports and imports, together with the amount of the customs paid upon them, in the year 1354. The exports here mentioned are, 31,651½ sacks of wool at 6l. per sack; 3036 cwt. (120 lbs.) of wool at 40s. per cwt.; 65 woollels, total value 21s. 8d.; hides to the value of  $89l, 5s.; 4774l_2$  pieces of cloth at 40s, each; and 80611 pieces of worsted stuff at 16s. 8d. each: -total value of the exports, 212,3381. 5s., paying customs to the amount of 81,846t. 12s. 2d. Wool, therefore, would appear, by this account, to have constituted about thirteenfourteenths of the whole exports of the kingdom. The customs would seem to have been almost cutirely derived from wool; the amount paid by the hides and cloth exported amounts only to about The duty on the export of wool exceeded 40 per cent. on the value. The imports mentioned

are, 1831 pieces of fine cloths, at 6*l*. each;  $397\frac{3}{4}$ cwt. of wax at 40s. per cwt.; 1829½ tuns of wine at 40s. per tun; and linens, mercery, grocery, &c., to the value of 22,943l. 6s. 10d.:—making a total value of 38,383l. 16s. 10d. The great excess, according to this statement, of the exports over the imports, has been regarded as evincing the moderation and sobriety of our aneestors. "But when we look at the articles," it has been well observed, . See ante, p. 78"

which constitute so great a part of the modern imports, there was not one single article imported, and that, on the other hand, the exports consisted

almost entirely of the most valuable raw materials, and of cloths in an unfinished state, which may, therefore, also be classed among raw materials, we must wknowledge that it affords only a proof of the low state of manufactures and of commercial knowledge among a people who were obliged to allow foreigners to have the profit of manufacturing their own wool, and finishing their own eloths, and afterwards to reprinciple both from them in the form of finished goods."

\*\* This account is probably to be considered as comprehending only those articles from which the

revenue of the customs was derived. We know that several other articles besides those mentioned were, at least occasionally, exported. A demand for the tar of Britam, for instance, appears to have indeed, who had been bardshed from les native country, is said to have, in the year 1211, discovered some mines of tin in Germany, the produce of which was so abundant that the inetal was even imported into England, by which the price in this country was considerably reduced. But this competition certainly did not permanently destroy cither the domestic or the export trade in British tm. In 1338 we find Edward III, ordering all the tur in Cornwall and Devonshire, including even what might have been already sold to foreign merchants, to be seized and sent to the confinent, there to be sold on his account, the owners being obliged to accept of a promise of payment in two years. In 1318, it is recorded that the merchants and others complained to the parliament that all the tin of Cornwall was bought and exported by Tidman of Lumburgh, so that no Englishman could get any of it; they therefore prayed that it might be freely sold to all merchants; but they received for answer that it was a profit belonging to the prince, and that every lord might make his profit of his own. Cornwall had, in 1337, been erected into a duchy in favour of the Black Prince, and settled by Act of parliament on the eldest son of the king, as it still remains. The export of tin is mentioned, in 1390, in the statute 14 Rich. H. c. 7, which declares Dartmonth the only port at which it shall be shipped; and also in the following year, in the 15th Rich. H. c. 8, which repeals the last-mentioned Act, and allows the exportation of the commodity from any port, but provides that it shall be carried only to Calais, so long as wool shall be carried to that place. Lead, butter, and cheese are likewise, as we have seen, enumerated among the "commodities of the land," in which foreign merchants were compelled, by the 14th Rich. H. c. 1, to invest half the money which they should receive for the commodities they imported. The exportation of lead in particular is repeatedly alluded to in the regulations respecting the staple,

and other acts of parliament; and considerable quantities of that metal are supposed to have been now obtained from the Welsh names. It may be presumed, also, that non was oceasionally exported during this period, from the statute 28 Edw. 111. c. 5 (passed in 1354), which enacts that no iron, whether made in England or imported, shall be carried out of the country. Salted fish, and especally herrings, formed another article of export, at least from the commencement of the thuteenth century, and probably from a much carber date. Corn appears to have been sometimes exported, sometimes, imported, but apparently never without the special becase of the crown. Thus we find Edward 111., in 1359, granting liberty to the Flemings to trade in England, and to export corn and other provisions from the country on obtaining his special beense and paying the customs. 1376, on the other hand, a permission is recorded to have been granted to import 400 quarters of comfrom Ireland to Kendal in Westinoreland. 1382 a general proclamation was issued, prohibitmg, under penalty of the confiscation of the vessel and cargo, the exportation of corn or malt to any foreign country, except to the knig's territories in Gascony, Bayonne, Calais, Brest, Cherbonig, Berwick-upon-Tweed, and other places of strength belonging to the king. But twelve years afterwards, by the statute 17 Rich 11, c. 7, all English subjects were allowed to export corn to any country not hostile, on paying the due enstoms; a power, however, being still reserved to the king's council to stop the exportation if necessary. The extroduction of the use of coal as an article both of foreign trade and of domestic consumption is pro- bably to be assigned to this period, though some have been disposed to carry it farther back. The earliest authentic document in which coal is disfinetly mentioned is an order of Henry III.9 in 1245, for an imprisition into trespasses committed in the royal forests, in which mighty is directed to be made respecting sea coal ("de carbone maris") found in the forests. This expression appears to miply that coals had before this time been brought to London by sea, and probably from Newcastle. Sca-coal Lane, between Skinner Street and Farringdon Street, is mentioned by that name in a charter of the year 1253. Regulations are laid down for the sale of coals in the statutes of the guild of Berwick-upon-Tweed, which were established in 1284. There is extant a charter of William of Obervell, in 1291, granting liberty to the monks of Dunfermhne, in Scotland, to dig coals for their own use in his lands of PattenericI, but prohibiting them from selling any. It is probable, however, that this description of fuel was not as yet much used for domestic purposes; for the smoke, or smell, of a coal fire was at first thought to be highly noxious. "This same year (1306)," says Martland, in lus History of London, " sea-coals being very much used in the suburbs of London by brewers, dyers, and others requiring great fixes, the nobility and gentry resorting thither

833

834

them, long continued to be imported in considerable quantities. The 47741 pieces of cloth exported in 1354 were evidently, from their muce, of the old coarse fabric of the country. Large

endangering of the health of the inhabitants; wherefore a proclamation was issued, strictly forbidding the use of that finel. But little regard

being paid thereunto, the king appointed a commission of Over and Terminer to inquire after those who had continuacionsly acted in open dehance to his proclamation, strictly commanding all such to be pumshed by pecuniary mulets; and for the second offence, to have their kilns and furmaces destroyed," What would these sensitive planmists of the fourteenth century have said if they could have been informed that the day would come when London should have constantly some ten or twelve tons of coal-dust suspended over it? The prejudice against coal fires, however, seems to have, in no long time, died away. In 1325 we find mention made of the exportation of coals from Newcastle to France; and the first leases of coalworks in the neighbourhood of that town of which there is any account are dated only a few years later. They were granted by the monks of Typemonth to various persons at annual rents, varying from two to about five pounds. Ten shillings' worth of Newcastle coals are recorded to have been purchased for the coronation of Edward 111. in Before the end of the fourteenth century there is reason to behave that an active trade was carried on in the conveyance of Newcastle coal by \*sea to London and elsewhere. Wool, however, was, during the whole of this period, as for a long time afterwards, the great staple of the kingdom. In 1279, in a petition to Edward I., the nobles asserted that the wool produced in England, and mostly exported to Flanders, was nearly equal to half the land in value. Eng-

lish wool appears also to have been in great request in France, in which country, as well as in Flanders, the manufacture of woollen cloth was early established. Lattle cloth, as we have already had occasion to observe, was made in England, and that little only of the coarsest description, till the wise policy of Edward III., by a grant dated in 1331, invited weavers, dyers, and fullers, from Flauders, to come over and settle in the country, promising them his protection and favour on condition that they should carry on their trades here, and communicate the knowledge of them to his subjects. The first person who accepted of this invitation was John Kempe, a weaver of woollen cloth; he came over with his goods and chattels, his servants and his apprentices. Many of his countrymen soon followed: a few years later other weavers came over from Brabant and Zealand; and thus was established certainly the first mamifacture of fine woollen cloths in England. It was many years, however, as we have seen, before this rufant manufacture was able even to supply the

domestic demand, far less to maintain any export

trade in woollens. The cloths of the continent,

in spite of various legislative attempts to exclude

statute 14 Rich. 11. c. 4, passed in 1390, that no demzen of England should buy wool except of the owners of the sheep, and for his own use; in other words, the entire export trade in the commodity was made over to the foreign merchant, and he was at the same time confined to the export trade. The object obviously was to seeme to the grower not only his proper profits, but in addition those of the wool-merchant and retailer, in so far as regarded the domestic consumption. besides the injury to the native merchant by his exclusion from the export trade, it was strangely forgotten that the monopoly of that trade second to the foreigner must have deprived the grower of perhaps half his customers, - namely, of all the English dealers who would have purchased the article fer exportation; and must thus, by dumnishing competition, have tended to depress prices instead of raising them. Such, accordingly, is stated to have been the effect produced. The contemporary historum Knyghton tells us that, in consequence of this prohibition of the export of wool by English merchants, the article lay musold in many places for two and three years, and many of the growers were reduced to the greatest distress. In 1391, however, although the quantity of wool exported is affirmed to have been that year much less than formerly, the customs on it amounted to 160,000l. According to Robert of Avesbury, who is supposed to have died about 1356, the annual exportation of wool from England had, in his day, reached to above a bundled thousand sacks; the customs on which, at the duty of 50s, on the sack, would produce a revenue of above 250,000l. This estimate, however, is very inconsistent with the official account already quoted of the entire exports and imports for 1354. If it is to be at all received, it ought probably to be assigned to a date considerably later than that at which Avesbury is commonly assumed to have The principal society of foreign merchants at this time established in England appears to have been that of the merchants of Cologne. They had a hall or factory in London called their Gridhall,

quantities of the English wool also continued

nanually to go abroad. With the view of keeping

up the price of the article,\* it was enacted by the

for the saisine (or legal possession) of which they paid thirty marks to the crown in A.D. 1220. "It seems probable," says Macpherson, "that this Gildhall, by the association of the merchants of other cities with those of Cologne, became in time the general factory and residence of all the German merchants in London, and was the same that was afterwards known by the name of the German Gildhall (Gildhalla Teutonicorum). appears that the merchants of Cologne were bound · Por meutz garder le haut pris des leyns,

to make a payment of two shillings, probably a reserved annual rent (for we are not told upon what occasions it was payable) out of their Gildhall, besides other customs and demands, from all which they were exempted in the year 1235, by King Henry III., who moreover gave them permission to attend fairs in any part of England, and also to buy and sell in London, saving the liberties of the city."\* The principal part of the foreign tride, however, seems to have been in the hands of the merchants of the Staple, otherwise called the Merchants of England, who, as noticed above, were incorporated at least as early as the year 1313. This society was composed of native merchants. It has also been affirmed that there existed, so

early as the middle of the thirteenth century, an assosiation of Fighish merchants for trading in foreign parts, called the Brotherhood of St. Thomas Becket of Canterbary, from which originated the afterwards aclebrated company of the Merchant Adventurers of England; but this story does not rest on any sufficient authority. The historian Walsingham has preserved the

record of a remarkable proposal which was made in 1379 to Richard II, by an opulent merchant of Genoa. This foreigner, it is said, submitted to the English king a plan for raising the port of Southampton to a pre-connence over every other in the west of Europe, by making it the deposit and mart of all the oriental goods which the Genoese used to carry to Flonders, Normandy, and Bretagne, which countries would thenceforth be supplied with these commodities from England. All that the Genoese merchant asked, according to Walsingham, was, that he should be allowed to store his goods in the royal castle of Southampton. It is probable, however, that this was only one of the mmor features of his plan, which must have been cluctly dependent for its success upon the resources. and connexions of its author, the spirit with which it was taken up and supported by the English king, and the natural aptitude of the port of Southampton to serve as a reservoir of the oriental trade. As vet, it is to be remembered, no direct trade existed between India and Europe; all the produce of the former that found its way to the latter was procured by the merchants of Venice, Genoa, and other cities of Italy, from the emporia in the eastern parts of the Mediterranean, of which the principal at this time were Acre, Constantinople, and Alexandria. It is not very obvious what advantage the Italian importers were to expect from bringing all their goods in the first instance to Sonthampton, instead of proceeding with them directly to the continental markets. Walsingham says it was expected, if the plan had been carried into execution, that pepper would have been sold in England at four pennies a pound, and other spices at a proportionably low

Silk was now manufactured, and the silkworm reared, in Italy and other countries of the south of Europe, and little, if any, was brought from Asia; so that spiccries and fruits seem to have been the principal commodities which were received from the castern trade. The cargo of a Genoese slap, which was driven ashore at Danster, in Somersetshire, in 1380, consisted of green ginger, ginger cured with lemon-pince, one bale of arguinetta,\* dried grapes or raisms, sulphur, 172 bales of wadde (perhaps woad), 22 bales of writing paper, white sugar (perhaps sugar-candy), 6 bales of empty boxes, dried prunes, 8 bales of risa (probably rice), 5 bales of cimnamon, 1 pine "pulveris salvistii," the meaning of which is unknown, and 5 bales of bussus (probably fine Egyptian flax). Some Genoese cogs and carracks, however, bound for Flanders, that were seized on the coast of Kent in 1386, are said to have been laden, not only with spices, but with wines, stuffs of gold and silk, gold, silver, precious stones, &c. The scheme of the Genoese merchant with regard to Southampton was put an end to by its author being murdered in the streets of London by assassins, whom some English merchants are charged with having hired, in the apprehension that his proposal was caloulated to be imprious to their interests. It seems to have been one of those bold designs which have more in their character of the prophetic than of the practical; it was a conception that shot ahead of the age, and the attempt to realise it at that time would probably, in the most favourable circumstances, have proved a failure; but this election of Southampton for a great European en forum in the fourteenth century may be regarded as in some degree an anticipation of the project which promises to be accomplished in the ninetecnth, of bringing that place within two or three homs' distance of London by means of a railway, and thus turningthe natural advantages of its position to full account by making it one of the ports of the me-

tropolis. A few facts remain to be added respecting the commerce of Scotland during this period, in additron to those that have already been incidentally noticed. The chief scat of the Scottish foreign ∢rade continued to be at Berwick till the capture of that town by Edward I. in 1296. A society of Flemish merchants, similar, apparently, to the Teutome Gildhall of London, was established in that place: the gallantry with which they defended a strong building, called the Red Hall, which was their factory, has been mentioned in the account of the siege. † Berwick, before this catastrophe, is described in the contemporary chronicle of Lancrcost as a second Alexandria, for the number of its inhabitants and the extent of its commerce. The sea, it is added, was its wealth; the waters were its walls; and the opulent citizens were

Both Anderson and Macpherson quote this term from the original statement in the Redera (vir 233), without either explanation or question. We have not been able to decover the meaning of the \* Anuals of Com , i 383. + See Wheeler's Treatise of Commerce, pp. 10 and 14; and Mac pherson, 1, 397 and 500.

ander III by a neerchant of Gascony for 2197/. 8c, a sum which would in those days have bought about 16,000 quarters of wheat. "By the agency of the merchants of Berwick, the wool, bides, woolfels, and other wares, the produce of Roxburgh, Jedburgh, and all the adjacent country, were shapped for foreign countries, or sold upox the spot to the Flemish company. The exportation of salmon appears to have been also a considerable branch of their trade, as we find it some time after an object of attention to the legislature of England, and the regulation of it entinisted to the great officers of the government. When Edward 111, wanted two thousand salmon for his own use in the year 1361, he sent orders to procure them for him at Berwick (then belonging to England) and Newcastle—no doubt the piaces wick, however, never recovered from the blow

timed does to the present day," Mr. Macpherson observes, as at least as old as the times now imder our consideration; for we find a letter of safe conduct granted (12th Jameny, 1359) to Andrew Moray and Alan Ersking, two Scottish drovers, with three horsemen and their servants, for travelling through England or the king's joreign dominions for a year, with horses, oven, covs, and other goods and merchandise "+ An act of the Scottish parliament in 1367 orders the strict levying of the diffics formerly imposed of forty pennies in the pound on the price of all horses, and twelve pennes on that of all oven and cows carried out of the country. Both corn and malt were often nuported into Scotland at this period from England, and other countries. From Ireland there was now a considerable exportation both of raw produce and of manufactured goods. In the records of the Exchequer for the first year of Edward I. a notice occurs of some

cloth of Ireland having been stolen, at Winchester m the preceding reign, along with some cloth of Abingdon, and some cloth of London called burrel. Mention has already been made of the supplies of corn that appear to have been occasionally obtained from Ireland. It seems to have been exported to the continent as well as to England, till an ordinance was issued in 1288, prohibiting corn and other victuals and merchandise from being carried from Ireland anywhere except to England and

+ Ibid., 1, 561,

. Macpherson, 1, 446.

wheat, oats, malt, and ale were brought to him, and mostly by the merchants of Ireland and m' Irish vessels. In 1322, we find Edward H., when preparing to march into Scotland, giving orders for 9000 quarters of wheat and other grain to be sent from Ireland. By the statute 3f Edward III c. 17, 18, passed in 1360, liberty was given to all merchants and others, whether aliens or natives, to trade freely to and from Ireland, on paying the ancient customs and duties. "At this time," says Macpherson, "there were some considerable manufactures in Tieland. The stuffs called sayes made in that country were in such request, that they were unitated by the manufacting is of Cataloma, who were in the practice of making the finest woollen goods of every kind; they were also esteemed in Italy, and were worn by the ladies of Florence, a city abounding with the richest mannfactores, and in which the luxury of dress was carried to the greatest height. The annual revemue derived from Ireland, which amounted to nearly 10,000/, gives a very respectable idea of the balance drawn into that country by its commerce and manufactures, though we know next to nothing of the particular nature of them, unless we suppose a great part of the money to have been drawn from the names, for which, I believe, there is neither authority nor probability "... This year King Edward, understanding, as the record in the ' Fædera' says, that there were various inmes of gold and silver in Ireland, which might be very beneficial to limiself and the people of that comtry, had commissioned his numsters there to order a search for the mmes, and to do what would be most for his advantage in the matter. The statute 50 Edw. III. c. 8 (a.v. 1376) makes incution of cloth called frise as being made in Ireland, and also of cloth manufactured in England from Trish The denominations and relative values of the different kinds of English money continued the same in this as in the preceding period. The comage had been greatly corrupted, partly by chipping, partly by the issue of counterfeits, in the early part of the reign of Henry III.; in consequence of which

merchants mentioned as being in the ports of

Edward I was in Scotland, the people of Drog-

heda sent limi a present of eighty tims of wine to

Kirkendbright in a vessel belonging to their own port; and the same year several cargoes of Irish

that king, in the year 1247, called in the old com, and issued a new penny of a different stamp. the exchange a deduction of thirteen pence in the pound was made from the nominal value of the old coin, which occasioned great complaints; but the new coin was not depreciated, or made of a less quantity of silver than formerly. The penmes of Henry III, are very common, and there also exist silver halfpence and farthings of his coinage. the money was now made round. It is also said . Ibid., i. 562, where the authorities are quoted.

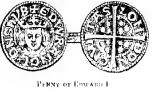

that, in 1257, Henry issued a gold coin of the weight of two silver pennies, which was ordered to pass for twenty pennics of silver. It was however soon recalled, on the complaint of the citizens of London that gold was rated above its value, in being thus made equal to ten times its weight in silver; and no specimens of this carliest English comage of gold are now known to exist.

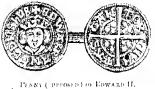

Soon after the accession of Edward I, the country

was again found to be immdated with base or light money, consisting chiefly of pieces fabricated on the continent, and known, from their impresses, by the names of untres, homnes, pollards, crockards, rosaries, staldings, steepings, and cagles, some being unitations of English money, others professing to be foreign coins. Vacious laws were made both against the importation of shis counterfeit money, and against the clipping of the proper conside of the realin. The severity with which these crimes were visited upon the Jews in particular has been already recorded ' Edward himself, however, in the latter part of his reign began the permicions practice of depreciating the coin by diminishing its legal weight. In 1301 he issued a comage of pennics, of which 243 (instead of 240, as formerly) were comed out of the pound of silver. In 1279 Edward had issued a new silver. com in initiation of one which had been introduced in France, being of the value of four pennies, and called a gross or groat, that is, a great peinty. This comage of groats seems to have been a small

No coins of Edward II, are certainly known to exist, though it is possible that some of those that have been attributed to his father may be of his comage; for it was still usual to omit on the legend the immerical distinction of the king's

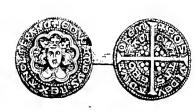

Edward III., in 1344, issued no fewer than ix different gold coins, -namely, by one coinage, pieces marked with two leopards to pass for six shillings, others of half that weight and value marked with one leopard, and others marked with a helmet, of half the value of the last; and by a second, nobles of the value of six shillings and eight pence, and balves and quarters of pobles. The second comage was made necessary by the refusal of the people to take the coms first issued at the value placed upon them. This long also carried the depreciation of the cour much faither than his grandfather had done, by an issue this same year of silver pennies, of which 266 were made out of the pound. Two years after he coiled 270 pennies ont of the pound of silver; and in 1351 he issued a new groat to be current at the ald rate of fourpeace, although it scarcely weighed

with those last comed by his grandfather. sometimes difficult to distinguish his silver money, from the want of the numerals, from that of Richard III.

pence, and halfpence, are of the same real values

The Scottish money was deteriorated in the course of this period to a still greater extent than the English: the parliament in 1367 having ordered 352 pennies should be made out of the pound liver. It is supposed that gold money was first comed in Scotland in the reign of Robert 11. (A.D. 1371—1390). There were repeated comages of money in Ireland; but in 1339 we find a species of coin of inferior quality, and apparently of, foreign fabrication, authorised to pass current

in that country, on the ground of the insufficient

amount of good money. These base pieces were ealled turneys, or black-money, or sometimes blackmail, from the French word maille, anciently used for a piece of money. Even the legal coins of this period are generally rude in workmanship, and by no means of uniform

weight. The standard of weight at this time was scarcely more artificial than that which Henry 1. established for measures of length, when he ordered that the cll should be as long as the royal arm. The statute called the Assize of Weights and Measures, which is attributed, in some copies, to the reign of Henry III., in others to that of Edward I., states that, "by consent of the whole realm, the king's measure was made so that an English penny, which is called the sterling, round without clipping, shall weigh thirty-two grains of wheat dry in the midst of the ear." This is the origin of the weight still called a pennyweight, though it now contains only twenty-four grains. The proccss of coining was equally rude. First, the metal, as appears from an entry in the Red Book of the Exchequer in the reign of Edward I., "was cast

from the melting-pot into long bars; those bars were cut with shears into square pieces of exact weights; then with the tongs and hammer they were forged into a round shape; after which they were blanched, that is, made white or refulgent by nealing or boiling, and afterwards stamped or impressed with a hammer, to make them perfect money. And this kind of hammered money contimued through all the succeeding reigns, till the year 1663, when the milled money took place.''\*. The various necessary and useful arts continued

in much the same state throughout the present as in the previous period. With regard, however, to the state of the important art of agriculture in particular, we now derive from various authentic sources much more detailed information than we have hitherto possessed. Sir T. Cullinn, in a history of the parish of

Hawsted, in Snffolk, has, from books of accounts, inquisitions, and other documents, given as complete a view of the ancient practices of husbandry in England as can be expected, considering the difficulties of such an inquiry; and we shall now proceed to extract some of the most material statements from his work. In the reign of Edward I, there were fifty messuages or houses in the parish, being only two less than in 1784. Two-thirds of the land in the parish was held by seven persons, and the maining third was occupied by twentysix persons. In 1831, when the last census was taken, the number of occupiers in the same parish was only eleven, being one-third only of the number five centuries before. Several of the ancient occupiers were apparently merely labourers, for whom there was no continuous employment, but who, by this occupancy of a small piece of land, were chabled to eke out a subsistence. The traces of enliquation which have been most probably left Leake's Historical Account of English Money, 2nd Edit. p. 77.

NATIONAL INDUSTRY.

comprised three gardens and two court-yards. A pageon-house, fish-ponds, and a rabbit-warren were the usual appendages of a manorial residence.

The calculation arguments and extended bot only feed, but me

The rabbit-warren supplied not only food, but maternals of dress in common use; and on fast-days the fish-ponds were a valuable resource. two successive surveys of the manor of Hawsted which are recorded within the present period, it appears that a change was taking place in the proportion of meadow and arable land, the former Tems to the latter as 24 to 1, at the time of the first survey, and only as about 11 to 1 at the time of the second. This effect is to be attributed to the increasing value of wool, which rendered sheep a profitable stock. The quantity of woodland was only 68 acres in the whole parish of Hawsted; but it is surnsed that the hedge-rows and borders of the fields were broad, and interspersed with tim-Ler, and also contained patches which furnished a considerable addition to the quantity of fodder.

by this class of the rural population are still visible

CHAP. IV.]

572 acres of arable and 50 of meadow land; pasture for 24 cows, 12 horses, and as many oxen; and 40 acres of woodland. The live stock consisted of 10 horses and 10 oxen, 1 bill, 20 cows, 4i heiters, 6 calves, 92 sheep, 200 two-yearold sheep, 5 geese, 30 capons, 1 cock, and 26 hers. The number of tenants who did suit and service in the manorial court was 32. formed various services in husbandry, according to the tenme under which they occupied their land, and received from the lord payments in kind and in money, but chiefly in the former. One tenant occupied only three acres, and his condition prohably bore a strong resemblance to the Irish cottier of the present day. Plenty was, at least, to be found in the manor-house, and it was occasionally dispensed with a liberal hand. In the reign of Edward II, the estate of the elder Spenser was ravaged by his enemics, who are asserted to have carried away, among other things, 28,000 sheep, 1000 oxen and herfers, 1200 cows with their calves for two years, 500 eart-horses, and 2000 The diet of the labourers in husbandry usually consisted, in harvest, of hernings, a loaf of bread, The principal meals were two—dinner at nine, and supper at five. In the parish of Hawsted the allowance of food to the labourer in harvest was, two herrings per day, milk from the manor dairy to make cheese, and a loaf of bread, of which fifteen were made from a bushel of wheat. Messes of pottage made their frequent appearance at the rustic board. When the crops were harvested, the

portions of the produce to which each tenant was entitled would be distributed, and the quantity

which he obtained at this period was intended to

both in towns and in rural districts, the inhabitants

In ancient valuations,

last until the next harvest.

The lord of the manor retained in his own hands

preceding period arose in a great measure from the improvident consumption which ensued immediately after harvest. In 1317 the harvest was all secured by the 1st of September, and wheat fell to one-twelfth of the price at which it had been sold a few weeks before. In the poem called the 'Visions of Pierce Plowman,' written in the time of Edward III., it is said that when the new corn began to be sold,— Would no beggar out broad that in it beaues were, But of cockit and clemantyne, or else clene whete." Draget and siligo were common crops. mer consisted of a mixture of oats and barley, and the latter was a light description of wheat, about one-half the price of wheat. Many documents relating to the occupancy of land during this period do not contain any clauses binding the tenant to pursue a particular course of husbandry, but in some of them a stipulation is made that the landlord shall not interfere with the mode of culture. There was much jealousy on both sides, each party surrounding himself with various precautions. Two days of grace were various precautious. allowed for the payment of the rent, and if it were not made within a fortnight the landlord could distrain; and if the rent remained unpaid a month after becoming due, he could re-enter upon the possession of the land. There are records extant showing the value of estates; but as the vices of the tenantry were included, the price of the land alone cannot perhaps be accurately determined.

Those who purchased corn would do so

immediately after harvest; but grain was not an

object of internal commerce to any great extent.

The famines which occurred during this and the

Sir T. Cullum supposes 4d. an acre to have been about the average rate at which land was let towards the close of the thirteenth century; and that the average price of wheat per quarter was 4s. 6d., and the average produce about twelve bushels per Attention appears to have been paid to the quality of the seed; and an item occurs in one year of 3s. 4d. for exchange of barley seed. A century earlier, according to the law-book entitled 'Fleta,' which contains various notices on agricultural affairs, land often yielded only three times the quantity sown. At a later period, 61 acres in the manor of Hawsted produced 70 quarters of wheat, on an average of three years. The cows belonging to the manor of Hawsted (26 in number) were let to a dairyman for 8l. per annum; and even the lactage of the gwes was let at  $1\frac{1}{2}d$ . each for the season. The milk was mixed with that of the cows, and made into cheese. In 'Fleta' directions are

given for the collection of manure, the value of

which was generally appreciated; but the fertile

properties of the soil were most likely exhausted

by taking off successive crops of the same kind.

The tenants on many manors were not permitted

to fold their flocks on their own enclosures, but were compelled to drive them on the lord's demesne

land. On a manor in Norfolk all copyholders were

gether obsolete. A list of the various trades and handlerafts of the time will afford as good an idea of the general state of the useful arts as more detailed notices of the minute operations of each. Before the 50th Edward III. (1376), the "mysteries," or trades of London, who elected the common conneil of the city, were thirty-two in number, but they were increased by an ordinance of the above year to forty-eight, which were as follow: -- Grocers, masons, ironniongers, mercers, brewers, leatherdressers, drapers, fletchers, armomers, feshmongers, bakers, butchers, goldsmiths, skinners, cutlers, vintuers, guidlers, spairiers, tailors, stamers, plumbers, saddlers, cloth-measurers, wax-chandlers, webbers, fisherdashers, barbers, tapestry-weavers, braziers, painters, leather-sellers, salters, tamers, joiners, cappers, pouch-makers, pewterers, clandlers, hatters, woodmongers, fullers, shuths, pamers, curners, horners.

The incorporation of several of the great city companies took place in this period. Many of them had long subsisted as gilds and fraternioes, but now obtained additional powers for regulating then respective cratts. To the goldsmiths, for instance, was assigned the assaying of metals; to the vintners the gauging of wines; and to the fishmongers the inspection of fish. In 1298 the trades of London got up a pageaut in bonour of the return of Edward III, from Scotland; and at all times when the honour and dignity of the city was concerned, they took from this time a most inportant share in the proceedings. In the reign of Edward III, there were but two earls and one bishop amongst the honorary members of the Merchant-Tailors' Company; but in the following reign there were four royal dukes, ten earls, ten barons, and five bishops enrolled in the company. Edward III, became a member of the fraterinty of linen-armourers, a sort of tailors, who made the padding and lining of armour.\*

A large portion of the trade of the country was transacted at fairs and markets. The tradesmen of London had shops in the Cheap, which resentbled sheds, and many of them had simply stalls; and travelling occasionally from place to place, they may be considered as having been pedlers as well as tradesmen. The mercers dealt in toys, drugs, spices, and small wares generally; their stocks being of the same miscellaneous description as that which is kept at a village-shop in the present day. The station of the mercers of London was between Bow Church and Friday-street; and here, around the old cross of Cheap, they sold their goods at little standings or stalls, surrounded by those belonging to other trades. The scene would resemble a market or fair. The places at which they transacted their business were let at rates varying from 11s, to 28s, per year.† The trade of

obliged to have sheep in their lord's fold from Pentecost to St. Martin. The tenants who enjoyed the right of foldage were of a superior class. Many

of the smaller tenants bad no pasture or meadow land, and could therefore scarcely keep any live stock unless where common rights existed. Under these cucumstances they would with difficulty derive the means of a scardy subsistence from then allotments. On the manonal farms the case would be somewhat better. In 1386, the produce of the Hawsted manor farm was 69 pps, of wheat, 51 qrs. of barley, 11 qrs. of peace, 29 qrs. of haras (horses' food), and 65 grs, of oats. In 1387 the quantity of land sown with wheat was 66 acres,

2 bushels to an acre; barley 26 acres, 4 bushels to

the acre; pease 25 acres; baras 25 acres, oats 62

the steward, the bailiff, the head harvest-man,

order of agricultural labourers. The steward beld the manor-courts, and saw that the manorial privileges did not become obsolete. He kepf accounts of the farming-stock and of the consumption of the family, and the domestics were under his care The steward's accounts for the manor of Hawsted are regularly audited, and written out in Latin, probably by the auditor, who, it is supposed, was an ecclesiastic. The bailiff was next in authority, and was, in fact, a practical farmer, who superintended the cultivation of the demesne. The head harvestman was, in the manor of Hawsted, annually elected by the tenantry from amongst themselves, and was presented by them to the lord. During the year of his appointment he enjoyed ar exemption from various services, and obtained other privileges. He had his meals at the ford's table, if he kept house, and if not, a livery of corn, and a horse was kept for him in the lonf's stable. In 1283, when 'Fleta' was written, the ploughdriver was accustomed to sleep in the same building with his cattle. Women took part in the lighter labours of husbandry. For winnowing corn and tending the young cattle, as also the geese and poultry belonging to the Hawsted manor-farm, for fourteen weeks, a woman received eight bushels of siligo. It has been already observed, that the

labours of the field did not proceed so uninter-

raptedly as at a later period. Except in seed-time,

the weeding season, and the hav and corn barvests,

there must have been a real lack of occupation. It

seems to have been an object to finish harvest in

the shortest possible time; and the business of

seed-time must have been conducted with equal

rapidity. There are items in the Hawsted ac-

counts showing that sixty persons were paid for

one day, at 2d. each, to weed the corn. Harvest

was a scene of still greater animation. In one

year, 520 persons were hired for one day; in ano-

ther year, 533; and in a third, 538; and yet the

number of acres to be reaped did not exceed 200.

The old and young of both sexes must have been

\* Herbert's Hist, of the Livery Companies of London.

the modern grocer was preceded by that of the pepperer, which was often in the hands of Lombards and Italians, who dealt also in drugs and spices. The drapers were originally manufacturers of cloth: to drape signified to make cloth. The trade of the fishmonger was divided into two branches, the persons belonging to one of which dealt chiefly or altogether in salted fish, then a common article of diet. The skinners were incorporated during the present period. They were in the habit of attending the fairs, particularly those of Stamford and Winchester. The goldsmiths were also incorporated about the same time. existed previously as a gild; and all those who were members of the fraternity had their shops in the street of Cheap; but fraudulent traders set up shops in obscure lanes, where they endeavoured to sell goods of inferior inetal. of the goldsmiths were foreigners. Tailors were employed in making women's garments. haberdashers dealt in a great number of articles. The dealers in hats were called haberdashers of hats; and those who sold ribbons, &c., haberdashers of small wares. They dealt in articles of dress brought from Milan; and a distinct branch arose out of this trade, the persons engaged in it being called milliners. The vintuers were anciently known as the Merchant Vuntuers of Gascony; and the retail dealers in wine as the Wine-tunners. The division of employments was most complete in

In the provincial towns, trade was of course conducted on a smaller scale than in London. The exchange of commodities was effected to a great extent at the fairs and at the markets, and they

connexion with the woollen manufacture.

gave an air of animation and life which would strongly contrast with the dulness by which they were preceded and followed. In the reign of Edward III. Colchester contained 359 houses, some built of mud, others of timber, and none having any but latticed windows; and yet there were only about nine towns in England of greater importance. The number of mhabitants was about 3000. In the year 1301 all the moveable property of the town, including the furniture and clothing of the inhabitants, was worth only 5181. Colchester was the centre of resort for a large district, and the trades carried on in it were the twenty-nine following :- baker, barber, blacksunth, bowyer, brewer, butcher, carpenter, carter, cobbler, cook, dyer, fisherman, fuller, furrier, girdler, glassseller, glover, linendraper, mercer and spice seller, miller, mustard and vinegar seller, old clothes' seller, tailor, tanner, tiler, weaver, wood-cutter, and wool-comber. The tools of a carpenter at Colchester consisted of a broad-axe, white 5d.; another 3d.; an adze 2d.; a square 1d.; a navegor (probably a spoke-shave) 1d.; making the total value of the maplements of his art only 1s. The thols and stock of a blacksmith were valued at only a few shillings, the highest sum being 12s. The stock in trade and household goods of a tanner were estimated at 9l. 17s. 10d. A mercer's stock was valued at 3/.; his household property at 21. 9s. The mustard and vinegal seller was a necessary trade when so much meat was eaten in a salted state. Several trades, including those of the brewer. the baker, and the miller appear to have been carried on by women as well as by men.\*

## CHAPTER V.

## THE HISTORY OF LITERATURE, SCIENCE, AND THE FINE ARTS.

FTER the detailed account given in the last Book of the various branches of science and learning cultivated in the eleventh and twelfth centuries, a very few additional remarks will suffice to indicate the state of knowledge in the thriteenth and fourteenth. The study our nearly alterethet

of elegant literature was now nearly altogether abandoned in the passion which everywhere raged Almost the only for metaphysical disputation. writer of this period who can be regarded as belonging to the same class with the numerous Latin poets of the preceding age, is William the Breton, the author of the epic on the actions of Philip Augustus, to which we have more than once referred. In the University of Paris, and it was doubtless the same elsewhere, from the beginning of the thirteenth century, the ancient classics seem nearly to have ceased to be read; and all that was taught of rhetoric, or even of grammar, consisted of a few lessons from Priscani. The liabit of speaking datur correctly and elegantly, which had been so common an accomplishment of the scholars of the last age, was now generally lost; even at the universities, the classic tongue was corrupted into a base jargon, in which frequently all grammar and syntax were disregarded. This universal revolt from the study of words and of aesthetics to that of thoughts and of things is the most remarkable event in the intellectual history of the species. Undoubtedly all its results were not evil. On the whole, it was most probably the salvation even of that learning and elegant literature which it seemed for a time to have overwhelmed. excitement of its very novelty awakened the minds Never was there such a ferment of intellectual activity as now sprung up in Europe. The enthusiasm of the crusades seemed to have been succeeded by an enthusiasm of study, which equally impelled its successive inundations of devotees. In the beginning of the fourteenth century there were thirty thousand students at the University of Oxford; and that of Paris could prahally boast of the attendance of a still vaster multitude. This was something almost like a universal diffurion of education and knowledge. The studies

laborious course of preparation, and the culture of the taste to the most deheate degree of refinement, were essentially unsuited either to produce such a state of things or to satisfy its demands after it was produced; it required something of a coarser or homelier fabric, something that tasked rather the native vigour of men's minds than their artificial resources and accomplishments, and appealed to passions or senses of a much lower and more common order than those connected with the imagination or the taste. The new studies at once tempted men's curiosity and flattered their vanity; they seemed to promise a positive accession of knowledge and power, instead of a mere barren intellectual gratification. And they did undoubtedly tend to sharpen and strengthen various faculties which were searcely at all called into exercise by the old mode of education and mental culture. was no doubt a barbarons mistake to assume that nothing was worth studying except things and notions,—of the three great departments of the mtellectual world, the physical, the metaphysical, and the imaginative, to overlook altogether the widest and highest-not to speak of the very partial view that was taken of the two others. But essentially defective and perishable also was the opposite system, which left both the latter wholly unregarded. The brief revival of elegant literature in the twelfth century was a premating spring, which could not last. The preliminary processes of vegetation were not sufficiently advanced to sustain any general or enduring efflorescence; nor was the state of the world such as to call for or admit of any extensive diffusion of the kind of scholarship then cultivated. The probability is, that even if nothing clse had taken its place, it would have gradually become feebler in character, as well as confined within a narrower circle of cultivators, till it had altogether evaporated and disappeared. The excitement of the new learning, turbulent and in some respects debasing as it was, saved western Europe from the complete extinction of the light of scholarship and philosophy which would in that case have ensued, and kept alive the spirit of intellectual culture, though in the mean while imprisoned and limited in its vision, for a happier future time when it should have ampler scope and full freedom of range,

of the former age, exacting as they did a long and

Almost the only studies now cultivated by the common herd of students were the Aristotelian logic and metaphysics. Yet it was not till after a struggle of

the year 1214, and died in 1292. His writings

that are still preserved, of which the principal is

that entitled his Opus Majus (or Greater Work), shows that the range of his investigations included

theology, grammar, the ancient languages, geo-

metry, astronomy, chronology, geography, music, optics, mechanics, chemistry, and most of the

established in the schools. The most ancient statutes of the University of Paris that have been preserved, those issued by the pope's legate, Robert

some length that the supremacy of Aristotle was

de Courçon, in 1215, prohibited the reading either of the metaphysical or the physical works of that philosopher, or of any abridgment of them. This, however, it has been remarked, was a mitigation of the treatment these books had met with a few years before, when all the copies of them that could be found were ordered to be thrown into the fire.\* Still more lement was a decree of Pope Gregory IX. in 1231, which only ordered the reading of them to be suspended until they should have undergone correction. Certain heretical notions in religion, promulgated or suspected to have been entertained by some of the most zealous of the carly Aristotelians, had awakened the apprehensions of the church; but the general orthodoxy of their successors quieted these fears; and in course of time the anthority of the Stagyrite was universally recognised both in theology and in the profane sciences. Some of the most distinguished of the scholastic

doctors of this period were natives of Britain. Such, in particular, were Alexander de Hales, styled the Irrefragable, an English Franciscan, who died at Paris in 1245, and who is famous as the master of St. Bonaventura, and the first of the long list of commentators on the Fonr Books of the Sentences; the Subtle Doctor, John Duns Scotus, also a Franciscan and the clief glory of that order, who, after teaching with unprecedented popularity and applause at Oxford and Paris, died at Cologne in 1308 at the early age of forty-three, leaving a mass of writings, the very quantity of which would be sufficiently wonderful even if they were not marked by a vigour and penetration of thought which, down to our own day, has excited the admiration of all who have examined them; and William Occam, the Invincible, another Franciscan, the pupil of Scotus, but afterwards bis opponent on the great philosophical question of the origin and inture of Universals or General Terms, which so long divided, and still divides, logicians. Occum, who died at Munich in 1347, was the restorer, and perhaps the most able defender that the middle ages produced, of the doctrine of Nominalism, or the opinion that general notions are merely names, and not real existences, as was contended by the Realists. The side taken by Occam was that of the nunority in his own day, and for many ages after, and his views accordingly were generally regarded as heterodox in the schools; but his high merits have been recognised in modern times, when perhaps the greater number of specu-

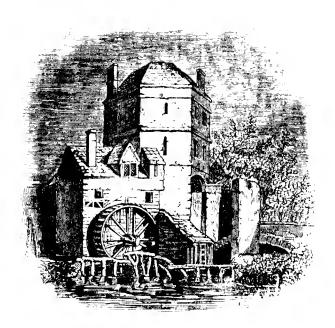

lators have come over to his way of thinking. In the mathematical and physical sciences, Roger Bacon is the great name of the thirteenth century, and indeed the greatest that either his country or Europe can produce for some centuries after this time. He was born at Heliester about · Crevier, Histoire de l'Univ. de Paus, 1 313.

other branches of experimental philosophy. In all shose sciences he had mastered whatever was then known; and his knowledge, though necessarily mixed with much error, extended in various directions considerably farther than, but for the evidence of his writings, we should have been warranted in believing that scientific researches had been carried in that age. In optics, for instance, he not only understood the general laws of reflected and refracted light, and had at least conceived such an instrument as a telescope, but he makes some advances towards an explanation of the phenomenon of the rambow. It may be doubted whether what have been sometimes called his inventions and discoveries in mechanics and in chemistry were for the greater part more than notions he had formed of the possibility of accomplishing certain results; but even regarded as mere speculations or conjectures, many of his statements of what niight be Hone show that he was familiar with mechanical principles, and possessed a considerable acquaintance with the powers of natural agents. appears to have known the effects and composition of gunpowder, which indeed there is other evidence for believing to Inive been then known in Enrope. Bacon's notions on the right method of philosophizing are remarkably enlightened for the times in which he lived; and his general views upon most subjects cyince a penetration and liberality much beyond the spirit of his age. With all his sagacity and freedom from prejudice, indeed, he was a behaver both in astrology and alchemy; but, as it has been observed, these delusions did not then stand in the same predicament as now: they were " irrational only because unproved, and neither impossible nor unworthy of the investigation of a philosopher, in the absence of preceding experiments."\* Another eminent English cultivator of mathematical science in that age was the celebrated Robert Grostête, or Greathead, Bishop of Lincoln, the friend and patron of Bacon. Grastête, who died m 1253, is the anthor of a treatise on the sphere, which had been printed. A third name that deserves to be mentioned along with these is that of Sir Michael Scott, of Balwirie, in Fife, famous in popular tradition as a practitioner of the occult sciences, but whom his writings, of which several are extant and have been printed, prove to have been possessed of acquirements both in science and literature, of which few in those times

could boast. He is said to have been born about

the beginning of the thirteenth century, and to have survived till the year 1290. Like Roger Bacon,

Scott was addicted to the study of alchemy and

A Tower which formerly stood on the Bridge at Oxford, traditionally known as Roofer Bacon's Study,—the "Bacon's mansion" alluded to by Johnson in his "Vainty of Human Wishes,"

itatural philosophy. Among other works, a Treatise on Physiognomy and a History of Ammali are ascribed to him. He is said to have translated several of the works of Aristotle from the Greek into Latin, at the command of the Emperor Frederic H. He is spoken of as having been crainently skilled both in astronomy and incideine; and a contemporary, John Bacon, himself, known by the title of Prince of the Averroists, or followers of the Arabian Doctor Averroes, celebrates him as a great theologian.\*

These instances, however, were rare exceptions Metaphysies and logic, togeto the general rule. r with divinity—which was converted into little else than a subject of metaphysical and logical, contention-so occupied the crowd of intellectual inguirers, that, except the professional branches of law and medicine, searcely any other studies were generally attended to. Roger Bacon hunself tells ns that he knew of only two good mathematicians among his contemporaries---one John of Leyden, who had been a pupil of his own, and another whom he does not name, but who is supposed to have been John Peckham, a Franciscan triar, who afterwards became archbishop of Canterbury. Few students of the science, he says, proceeded farther than the fifth proposition of the first book of Euclid-the well-known asses' bridge. The study of geometry was still confounded in the popular understanding with the study of magic—a proof that it was a very rare pursuit. In arithmetic,

had found its way to Enrope before the middle of the fourteenth century, they do not appear to have come into general use till a considerably later date. Astronomy, however, was sufficiently cultivated at the University of Paris to enable some of the members to predict an eclipse of the sun which happened on the 31st of January, This science was indebted for part of the attention it received to the belief that was umversally entertained in the influence of the stars over human affairs. And as astrology led to the cultivation and improvement of astronomy, so the other imaginary science of alchemy undoubtedly aided the progress of chemistry and medicine. Besides Roger Bacon and Michael Scott in the thirteenth century, England contributed the names of John Danstein, of Richard, and of Cremer, abbot of Westminster, the disciple and friend of the famous Raymond Lully, to the list of the writers Lully himself on alchemy in the fourteenth. visited England in the reign of Edward I., on the invitation of the king; and he affirms in one of his works, that in the secret chamber of St. Katherine in the Tower of London, he performed in the royal presence the experiment of transmuting some crystal into a mass of diamond, or adamant as he calls it, of which Edward, he says, caused some little pillars to be made for the tabernacle of God. It was popularly believed, indeed, at the time, that the English king had been furnished by Lully

CHAR. V.] with a great quantity of gold for defraying the expense of an expedition he intended to make to the Holy Land. Edward III. was not less credulous on this subject than his grandfather, as appears by an order which he issued in 1329, in the following terms:-" Know all men, that we have been assured that John of Rous and Master William of Dalby know how to make silver by the art of alchemy; that they have made it in former times, and still continue to make it; and, considering that these men, by their art, and by making the precious metal, may be profitable to us and to our kingdom, we have commanded our well-beloved Thomas Cary to apprehem! the aforesaid John and William, wherever they can be found, within liberties or without, and bring them to us, together with all the instruments of their art, under safe and sme custody." The earliest English writer on medicine, whose works have been printed, is Gilbert English (or Anglicus), who flourished in the thirtreath centure; and he was followed in the next century by John de Gaddesden The practice of medicine had now been taken in a great measure out of the hands of the clergy; but the art was still in the greater part a mixture of superstition and quackery, although the knowledge of some useful remedies, and perhaps also of a few principles, and been obtained from the writings of the Arabic physicians (many of which had been translated into Latin) and from the instructions delivered in the schools of Spam and Italy. The distinction between the physician and the apothecary was now well inderstood. Surgery also began to be followed as a separate luanch: some works are still extant, partly printed, partly in manuscript, by John Ardem, or Arden, an enuneut English surgeon, who practised at Newark in the fourteenth century. A lively picture of the state of the surgical art at this period is given by a French writer, Guy de Cauliac, in a system of surgery which he published in 1363: "The practitioners in surgery," he says, " are divided into five sects. The first follow Roger and Roland, and the four nusters, and apply poultices to all wounds and abscesses; the second follow Brunns and Theodoric, and in the same cases use wine only; the third follow Sahecto and Lan-

franc, and treat wounds with outments and soft plasters; the fourth are cluefly Germans, who attend the armies, and promisenously use charms, potions, oil, and wool; the fifth are old women and ignorant people, who have recourse to the saints in all cases. Yet the true method of philosophising, by experiment and the collection of facts, was almost as distinctly and emphatically laid down in this age by Roger Bacon, as it was more than three centuries afterwards by his illustrious namesake. Much knowledge, too, must necessarily have been accumulated in various departments by the actual application of this method. Some of the greatest of the modern chemists have bestowed the highest praise on the manner in which the experiments of the alchemists, or hermetic philosophers, as they

another field, namely, in that of geography, and the institutions, customs, and general state of distant countries, a great deal of new information must have been acquired from the accounts that were now published by various travellers, especially by Marco Polo, who penetrated as far as to Tartary and China, in the latter part of the thriteentle century, and by our countryman, Sir John Mandeville, who also traversed a great part of the East about a hundred years later. Roger Bacon has inserted a very curious epitome of the geographical knowledge of his time in his ' Opins Magns.' About the middle of the thirteenth century, both in England and elsewhere, the Universities began to assume a new form, by the erection of colleges for the residence of their members as separate communities. The zeal for learning that was displayed in these mumficent endowments is the most honourable characteristic of the age, - Within the present period the following colleges were founded at Oxford: -- University Hall, by William, archdeacon of Durham, who died in 1249; Bahol College, by John Baliol, the father of King John of Scotland, about 1263; Merton College, by Walter \*Merton, Bishup of Rochester, in 1268, Exeter College, by Walter Stapleton, Bishop of Exeter, about 1315; Oriel College, originally called the Hall of the Blessed Virgin of Oxford, by Edward II, and his almoner, Adam de Brom, about 1324'; Queen's College, by Robert Eglesfield, chaplain to Queen Philippa, in 1340; and New College, iff 1379, by the celebrated William of Wykeham, Bishop of Winchester, the minimisent founder also of Winchester College. In the Hinversity of Cambridge the foundations were, Peter House, by High Balsham, sub-prior and afterwards Bishop of Ely, about 1256; Michael College (afterwards incorporated with Trimity College), by Herby de Stanton, Chancellor of the Fxchequer to Edward H., about 1324; University Hall (soon afterwards birnt down), by Richard Badew, Chancellor of the University, in 1326; King's Hall (afterwards united to Trimty College), by Edward III.; Clare Hall, a restoration of University Hall, by Elbec= both de Clare, Countess of Ulster, about 1347; Pembroke Hall, or the Hall of Valence and Mary, in the same year, by Mary de St. Paul, widow of

Aymer de Valence, Earl of Pembroke; Trimty Hall, in 1350, by William Bateman, Bishop of Norwich; Gonvil Hall, about the same time, by Edmond Gonvil, parson of Terrington and Rushworth, in Norfolk; and Corpus Christi, or Benne# College, about 1351, by the United Guilds of Corpus Christi and St. Mary, in the town of Cambridge. The crection of these colleges, besides the accommodations which they afforded in various ways both to teachers and students, gave a permanent establishment to the universities which they scarcely before possessed. The original combition of these celebrated seats of learning in regard to all the conveniences of teaching appears to have

THE SCHOOL OF PYTHAGGRAS, CAMBRIDGS

An ancient Hoslel, said to have been used for the residence of Students, tefore the foundation of Colleges.

been humble in the extreme. Great disorders and scandals are also said to have arisen, before the several societies were thus assembled each within its own walls, from the intermixture of the students with the townspeople, and their exemption from all discipline. But when the members of the University were counted by tens of thousands, discipline even in the most advantageous circumstances must have been nearly out of the question. The difficulty would not be lessened by the general character of the persons composing the learned moh, if we may take it from the quaint historian of the University of Oxford. Many of them, Anthony à Wood affirms, were mere "variets who pletended to be scholars:" he does not scruple to charge them with being habitually guilty of threving and other enormities; and be adds, "they lived under no discipline, neither had any tutors, but only for fashion sake would sometimes thrust themselves into the schools at ordinary lectures, and when they went to perform any mischiefs, then would they be accounted scholars, that so they might free themselves from the jurisdiction of the burghers." To repress the evils of this state of things, the old statutes of the University of Paris, in 1215, had ordained that no one should be reputed a scholar who had not a certain master. Another of these ancient regulations may be quoted in illustration of the simplicity of the times, and of the small measure of pomp and circumstance that the heads of the commonwealth of learning could then flect. It is ordered that every master reading

lectures in the faculty of arts should have his cloak or gown, round, black, and falling as low as the heels, "at least," adds the statute, with amusing naïveté, "while it is new." But this famons seminary long continued to take pride in its poverty as one of its most honourable distinctions. There is something very noble and affecting in the terms in which the rector and masters of the faculty of arts are found petitioning, in 1362, for a postponement of the hearing of a cause in which they were parties: "We have difficulty," they say, " in finding the money to pay the procurators and advocates, whom it is necessary for us to employwe whose profession it is to possess no wealth."\* Yet when funds were wanted for important purposes in connexion with learning or science, they were supplied in this age with no stinted liberality. We have seen with what alacrity opnlent persons came forward to build and endow colleges, as soon as the expediency of such foundations came to be In almost all these establishments more or less provision was made for the permanent maintenance of a body of poor scholars, in other words, for the admission of even the humblest classes to a share in the benefits of that learned education whose temples and priesthood were thus planted in the land. It is probable, also, that the same kind of liberality was often shown in other ways. Roger Bacon tells us himself that, in the twenty years in which he had been engaged in his experiments, he had spent in books and instruments no less a sum than two thousand French livres, an amount of silver equal to about six thousand pounds of our present money, and in effective value certainly to many times that sum. He must have been indebted for these large supplies to the generosity of rich friends and patrons.

Notwithstanding the general neglect of its eleganeies, and of the habit of speaking it correctly or grammatically, the Latin tongue continued throughout this period to be in England as elsewhere the common language of the learned, and that in which books were generally written that were intended for their perusal. Among this class of works may be included the contemporary chronicles, many of which were compiled in the monasteries, and the authors of almost all of which were churchmen.

MATTHEW PARIS. From a drawing by himself, in a MS, of the "Historia Major."

The most eminent English historian of the thirteenth century is Matthew Paris, who was a Bencdictine monk of the monastery of St. Alban's, and was also much employed in affairs of state during the reign of Henry III. He died in 1259; and his principal work, entitled 'Historia Major,' (the Greater History,) begins at the Norman Conquest and comes down to that year. The portion of it, however, extending to the year 1235 is said to be eopied from a work by Roger Windsor, or Wendover, a manuscript of which is in the Cottonian Library. Matthew Paris is one of the

most spirited and rhetorical of our old Latin historians; and the extraordinary freedom with which he expresses himself, in regard especially to the usurpations of the court of Rome, forms a striking contrast to the almost uniform tone of his monkish Nor does he show less boldness in animadverting upon the vices and delinquencies of kings and of the great in general. These qualities have in modern times gained him much admiration among writers of one party, and much obloquy from those of another. His work has always been bitterly decried by the Catholics, who at one time, indeed, were accustomed to maintain that much of what appeared in the printed copies of it was the interpolation of its Protestant editors. This charge has now been abandoned; but an eminent Catholic historian of the present day has not hesitated to denounce the narrative of the monk of St. Albans as "a romanec rather than a lustory," on the ground of the great discrepancy which he asserts he has found between it and anthentic records or contemporary writers, in most instances when he could confront the one with the other.\* 'Historia Major' has been continued to the death of Henry III., by William Rishanger, a monk, as it is supposed, of the same abbey. † Among the other contemporary chroniclers of this period who wrote in Latin, the principal are, Thomas Wykes (in Latin, Vicanus or Wicelus), a canon regular of Osney, near Oxford, whose Chronicle extends from the Conquest to 1304; Walter Henningford, a monk of Gisborough in Yorkshire, the author of a valuable history from the Conquest to 1347; Robert de Avesbury, register of the court of the Archhishop of Canterbury, whose History of the reign of Edward III. is esteemed for its accuracy, but comes down only to 1356; Nicholas Trivet, prior of a Dominican monastery in London, who wrote a history of national affairs under the title of 'Annals' from 1180 to 1307; Ralph Higden, a monk of St. Wesburg in Chester, whose 'Polychronicon,' which ends in 1357, was translated into English by John de Trevisa, a Cornish divine, before the end of the fourteenth century; Henry Knighton (or Cintton, as he himself spells the name), a canon of Leicester, the author of a History from the time m King Edgar to 1395, and also of an account of the Deposition of Richard II.; and Adam Merimuth, a canon regular of St. Paul's, whose annals commence in 1302 and extend to 1380. To these may be added various monastic registers, such as those of Mailros, ending in 1270; of Margan, ending in 1232; of Burton, ending in 1263; of Waverley, ending in 1291, &c. John Fordun, the earliest of \* Dr. Hingard, Hist. of Eng. iii. 160. Edit. of 1837.

other editors, or in the collections of Gele and Twysden. See ante, p. 614.

Dr. l'ingard, Hist. of Eng. in. 169. Edit. of 1837.
4 The History of Matthew Paris was first punited at London in 1571, in folio. The subsequent editions, also, all in folio, are Zurich, 1696; London, by Dr. W. Wats, 1649; Paris, 1644; and London, 1684. To the latter editions are appended some other historical pieces of the author, nuder the title of 'Addiamenta' There also exists, in manuscript, an abridgment of Matthew Paris's History, drawn up by limself, and generally referred to as the 'Historia Minot,' or the 'Chronica,' which last appears to have been the original title. original title. 1 All these have been published, either separately by Hearne and

HISTORY OF ENGLAND. the Scottish regular chroniclers, also flourished in

the fourteenth century. His Scotichronicon brings down the lustory of Scotland to the year 1385. Latin was also, throughout a great part of this period, the usual language of the law, at least in

writing. All the charters of liberties are in Latin. So is every statute down to the year 1275. The

first that is in French is the Statute of Westminster the First, passed in that year, the 3rd of Edward I. Throughout the remainder of the reign of Edward they are sometimes in Latin, sometimes in French, but more frequently in the former language.

French becomes more frequent in the time of Edward I.I., and is almost exclusively used in that of Edward III. and Richard II. Still there are statutes in Latin in the sixth and eighth years of the last-mentioned king. It is not improbable that, from the accession of Edward I., the practice may have been to draw up every statute in both languages. Of the law treatises, Bracton and Fleta are in Latin; Britton and the Miroir des Justices, Latin was the language in which not only

in French. all the scholastic divines and philosophers wrote, but which was also employed by all writers on geometry, astronomy, chemistry, medicine, and the other branches of mathematical and natural All the works of Roger Bacon, for example, are in Latin; and it is worth noting that, although by no means a writer of classical purity, this distinguished cultivator of science is still one of the most correct writers of his time. He was indeed not a less zealons student of literature than of science, nor less anxious for the improvement of the one than of the other: accustomed himself to read the works of Aristotle in the original Greek,. he denounces as muschievous impositions the wretched Latin translations by which alone they were known to the generality of his contemperaries: he warmly recommends the study of granknar and the ancient languages generally; and deplores the little attention pand to the Oriental tongues in particular, of which he says there were not in his time more than three or four persons in western Europe who knew anything. It is remarkable that the most strenuous effort made within the present period to revive the study of this last-mentioned learning proceeded from another eminent cultivator of natural science, the famous Raymond Lully,

half philosopher, half quack, as it has been the

fashion to regard him. It was at his instigation

the Council of Vienne, published a constitution, rdering that professors of Greek, Hebrew, Arabic, and Chaldaic should be established in the universities of Paris, Oxford, Bologna, and Salamanca. He had, more than twenty years before, urged the same measure upon Honorius IV., and its adoption then was only prevented by the death of that pope. After all, it is doubtful if the papal ordinance was ever carried into effect. There were, however, professors of strange, or foreign, languages at Paris a few, years after this time, as appears from an 1325, in which the latter is enjoined to keep watch over the said professors, lest they should introduce any dogmas as strange as the languages they taught.\* French, which had been the language of the court and of the nobility in England from the

epistle of Pope John XXII. to his legate there in

BOOK IV.

Conquest, and in some measure, indeed, from the accession of the Confessor, was now also extensively employed in literary compositions. There were at this time two great dialects of the French tongue, which were familiarly distinguished as the Langue d'oc and the Langue d'oyl, from the two words for yes, which were oc in the one, and oy/, afterwards oy or out, in the other. The Langue d'oc was the popular speech of the southern; the Langue d'oyl, of the northern provinces; Thoulouse being accounted the capital of the former, Parson the latter; and the river Lone forming (though by no means with strict accuracy) the general line of division. The French which was brought over to England by the Norman conquerors was, of course, a dialect of the Laugue d'oyl, and sucleaccordingly our law French always contimued to be. But the annexation to the English crown of Poitou and Aquitame, on the accession of Henry 11", immediately established as intimate a connexion between this country and that of the Langue d'oc, as had existed for a century before with that of the Langue d'oyl. The fornier had already for some time received a literary cultivation, and had been made to flow in song in the compositions of the troubadours, or professors of the  $q_{tt\eta}$ science, as the Provençal poets called themselves Duke William 1X, of Aquitame, the father of Henry's Queen Eleanor, had himself been one of the most distinguished of these sires of the minstrels. of modern Europe, from whom sprung alike Dante and his successors, the cultivators of the Linguis volgare of Italy, and the trouveurs, or first metrical writers in the dialect of northern France. It appears, at least, to be most probable (although some eminent authorities have maintained a different opinion) that the latter dialect was not made use of for poetical composition till a considerable time after

that of the south had begun to be so employed;

but it is certain that long poems were already

written in it before the close of the twelfth century;

Cievier, Hast, de l'Iliniv de Paris, fi. 112 and 227. The Langue d'oc is also often called the Provencal tongue; and to the Langue d'oyl exclusively it has been usual to apply the name of the old French and the Romance, though the latter, at least, really of the old French and the Romainer. Though the latter, at least, really belongs as rightfully to the Langun d'oe, meaning, as it does, nothing more than the Romain or Latin dialect, as the provincial Latin of Gaul was denominated, in contradistinction to the original Celtic language of the people. Both the Langue d'oy, and the Langue d'oy, therefore, were, properly speaking, Romainer. They were also equally French in every respect except one, namely, that it is from the Langue d'oy), certainly, that the modern Freuch has been principally formed. In the proper sense of this term, however, it is applicable to neither; the Freuch, or Franks, were a Teutonic people, speaking a parely Feutone tongue, resembling the German, or more nearly the Flenish; and this tongue they continued to speak for several centuries after their conquest of Gaul. This old Teutomo French and the modified by philologists the Frankish or Francie, and it is altogether of a different family from the modifier French, which has come to be so called only from the accident of the country in which, jit was spoken having been conquered by the French or Franks,—the conquered, and bestowing upon it their own name. that Clement V., in 1311, with the approbation of

Chap. V.] LITERATURE, SCIENCE, AND THE FINE ARTS.

and, various circumstances now contributing to the depression of the Provençal troubadours, the poets of the Langue d'oyl ere long came to be still more famous than those of the Langue d'oe, and the former to be even generally accounted the idiom the most happily adapted for paetry. Most of these early poets in the language of the north of France were Normans or Englishmen. Yet the Provençal poetry, too, was undoubtedly well known and in high favour in England, especially after the accession of Richard Cœur de Lion. Of the principal poem attributed to that king,\* there are two versions, one (that commonly given) in Provençal, the other in Norman; and it is disputed in which dialect it was originally composed.†

dialect it was originally composed.†.

In speaking of the French literature of this period, it would be impardonable to omit noticing its most remarkable product, or that at least of all its remains which has the most of an English interest, the Chronicle of the inimitable Sire Jean Froissart. Froissart was a native of Valenciennes, where he appears to have been born about 1337; but the four books of his Chronicle, which relate principally to English affairs, though the narrative embraces also the course of events in France, Flanders, Scotland, and other countries, compre-

Flanders, Scotland, and other countries, comprehend the space from 1326 to 1400, or the whole of the reigns of our Edward III. and Richard II. Froissart, however, is rather of authority as a painter of manners than as an historian of events; for his passion for the marvellons and the decorative was so strong that the simple fact, we fear, would have little chance of acceptance with him in any case when it came into competition with a good story. In his own, and in the next age, accordingly, his history was generally reckoned and designated a romance. Caxton, in his 'Boke of the Ordre of Chevalrye or Knighthood,' classes it with the romances of Lancelot and Percival; and indeed the 'Roman an Chroniques' seems to have been the title by which it was at first commonly known. On the other hand, however, it is fair to remember that a romance was not in those days held to be Froissart's Chronicle is necessarily a fiction. certainly the truest and most lively picture that any writer has bequeathed to us of the spirit of a particular era; it shows "the very age and body of the time his form and pressure." a higher than the literal sense, the most apoeryphal incidents of this most splendid and imaginative of gossips are full of truth; they east more light upon the actual men and manners that are described, and bring back to life more of the longburied past than the most careful details of any other historian. The popularity of Froissart's Chronicle has thrown into the shade his other productions; but his highest fame in his own day was as a writer of poetry. His greatest poetical work appears to have been a romance entitled 'Meliader, or the Knight of the Sun of Gold; and he

also wrote many shorter pieces, chants royaux, hallads, rondeaux, and pastorals, in what was then called the New Poetry, which, indeed, he cultivated with so much success that he has by some been regarded as its inventor.\* On his introduction to Richard II., when he paid his last visit to England in 1396, he presented that monarch, as he tells us, with a book beautifully illuminated, engrossed with his own hand, bound in crimson velvet, and embellished with silver bosses, clasps, and golden roses, comprehending all the pieces of Amours and Moralities which he had composed in the twentyfour preceding years. Richard, he adds, seemed much pleased, and examined the book in many places; for he was fond of reading as well as speaking French. But while Latin was thus the language of the learned, and French of the noble, the body of the people kept to the expressive Teutonic speech of their ancestors—the Saxon or English. Notwithstanding the circumstances which even before the Norman conquest, and more especially after that event, operated to establish the partial use of the French tongue, it is certain that French never made any progress towards becoming the vernacular language of this country. On the contrary, It seems, from the first, to have lost rather than gamed ground in the effort to maintain itself in competition with the Saxon, even as a separate speech. Although, however, it neither supplanted the Saxon in the mouths of the general population, nor even, as has been asserted, acquired the predominance in the mixture or fluctuation of the two ·languages, it unquestionably did, in course of time, infuse itself largely into the vocabulary of the old But the essential forms and national tongue. structure of that tongue it does not seem to have at all affected. So much of it as was received into the body of the Saxon was assimulated in the pracess, and converted into one substance with the soil which it enriched. The Saxon, however, even in its forms, underwent, undoubtedly, a very considerable change in the course of the eleventh and twelfth centuries. " But that these mutations," says a late able and learned writer, " were a consequence of the Norman invasion, or were even accelerated by that event, is wholly ineapable of proof; and nothing is supported upon a firmer principle of rational induction, than that the same effects would have ensued if William and his followers had remained in their native soil. The substance of the change is admitted on all hands to consist in the suppression of those grammatical intricacies occasioned by the inflection of nouns, the scemingly arbitrary distinctions of gender, the government of

[BOOK IN.

lessen the amount of nice distinctions, and detect, as it were, a royal road to the interchange of opinion.\* The change here described may be considered as having been the first step in the passage of the Anglo-Saxon into the modern Euglish; the next was the change made in the vocabulary of the language by the introduction of numerous terms borrowed from the French. Of this latter innovation, however, we find little trace till long after the completion of the former. For nearly two centuries after the Conquest the Saxon seems to have been spoken and written with scarcely any intermixture It only, in fact, began to receive such intermixture after it came to be adopted as the speech of that part of the nation which had previously spoken French. And this adoption was plainly the cause, and the sole cause, of the inter-So long as it remained the language only of those who had been accustomed to speak it from their infancy, and who had never known any other, it might have gradually undergone some change in its internal organization, but it could scarcely acquire any additions from a foreign source. What should have tempted the Saxon peasant to substitute a Norman term, upon any occasion, for the word of the same meaning with which the language of his ancestors supplied him? As for things and occasions for which new names were necessary, they must have come comparatively little in his way; and, when they did, the capabilities of his native tongue were abundantly sufficient to furnish him with appropriate forms of expression from its own resources. The corruption of the Saxon by the intermixture of French vocables must have proceeded from those whose original language was French, and who were in habits of constant intercourse with French customs, French literature, and every thing else that was French, at the same time that they spoke Saxon. And this supposition is in perfect accordance with the historical fact. So long as the Saxon was the language of only a part of the nation (though that was always infinitely the most considerable part in respect of numbers), and the French, as it were, struggled with it for mastery, it remained unadulterated;—

when it became the speech of the whole people, of the higher classes as well as of the lower, then it lost its old Teutonic purity (though only in its vocabulary, not in its forms or its genius), and received a large alien admixture from the alien lips

relieve themselves of that precision which chooses a fresh symbol for every shade of meaning, to With the exception of several songs and other short poetical pieces-one of the most remarkable of which is a ballad in eclebration of Simon de Montfort's victory at Lewes in 1264—a few metrical chronicles and romances, for the most part translated from the French, constitute the only compositions now remaining that can be said to be written in the English, as distinguished from the Anglo-Saxon language, before the end of the reign of Edward I.\* The Chroniele of Robert of Gloncester, being a history of England from the landing of Britus to the accession of Edward 1., is a metrical, but anything rather than a poetical, version of the Latin History of Geoffrey of Monmouth. It is supposed to have been written about the year The similar performance of Robert Mannyng, often called Robert de Brunne (from bis mounstery of Brume, or Bourn, in Luicolnshire), which was produced about twenty years later, is scarcely of any higher order of merit It is translated from two French chronicles, one itself a translation from Geoffrey of Monmonth (and the same that Layamon had already translated into Saxon), by Wace of Jersey, who flourished in the middle of the twelfth century, the other written by Peter Langtoft, a monk of Bridlington in Yorkshire, who lived not long before Mannyng himself. † The language appears in these works in almost the rudest possible state, though Mannyng's style is somewhat less harsh and confused than that of his predecessor. Some improvement, however, is discermble in the next reign in the devotional poems, dull as they are, of Adam Davy, and still more in the romance entitled 'The Life of Alexander,' which has been improperly attributed to that writer. But of all the writers before Chaucer, the one in whose hands the language seems to have made the most remarkable advance in flexibility and correctness, was Laurence Minot, who flourished in the carlier part of the reign of Edward III., and wrote a series of poetical pieces on the warlike achievements of that king, which have gained for him, from an eloquent modern critic, the title of 'the Tyrtæus of his Towards the close of the reign of Edward III.

<sup>\*</sup> The celebrated romance of the Geste of King Horne, generally quoted as the earliest English romance, must be considered (whether it be translated or original) as rather a Saxon than an English poem, even in the form in which we now possess it. Its language appears to be of the same date with that of the Saxon translation of Wace's Le Brnt, by Layamon, or the paraphrase of the Gospel histories, entitled 'Ormulum,' both of which are assigned to the reign of Henry H. The romance of Sir Tristem, again, which has been supposed to be the production of the Scottleth poet Thomas of Erril down, or the Rymer, who lived to the thirteenth century, is now generally considered not to be, in its present form, of that antiquity.

4 Hearne published Robert of Gloucester's Chronicle in 2 vols. Svo. Oxford, 1724; and the second part of Mannyng's under the tule of 'Peter Langioft's Chronicle,' 2 vols, Svo., Oxford, 1725. Mannyng acunded under the name of Langiota. The first part of Mannyng's Chronicle has never been printed.

I Essay prefixed to Specimens of the British Poets, by T. Campbell, Esq.

resources of its art.

Robert (or, as he ought more probably to be called, William) Langland wrote his singular poem entitled 'The Visions of (that is, concerning) Pierce

CHAP. V.]

Plowman,' in a diction and fashion of versification both of which seem to have been intended as imitations of a Saxon model. The lines here are constructed upon the principle, not of rhyme, but of all teration; and instead of the introduction of any new words or forms of expression, the aim of the anthor evidently is to revive as many as possible of those that had become obsolete. In vigour, animation, and general poetical merit, however, Langland far excels any of the writers that have yet But he does not distance his predecessors nearly

so far as he is himself distanced by his immortal contemporary, Geoffrey Chaucer, the true father of our English literature. Compared with the productions of this great writer, all that precedes is barbarism. It is curious that at the very time when the author of the 'Visions of Pierce Plowman' was labouring to reinvigorate the language by the restoration of its lost forms, another mind should have entered upon the work of ats renovation by the opposite process, of moulding it to a spirit and manner of expression different, in various respects, from what it had ever before known. Yet it was no doubt the same feeling of dissatisfaction with its existing state that prompted the endeavours of both. The mightier genius, however, undoubtedly chose the wiser course. To Chancer

our language principally owes the foundations of its still enduring constitution, as well as the whole body of our poetry much of its peculiar and characteristic spirit. He is the father of our literature in a much higher and truer sense than in that of ulletmerely standing formally and by accident at its head. It has been made in great part what it is through the example which he set to his successors, and the influence and inspiration of the works which he bequeathed to them. But for two hundred years Chaucer had no successor; in that carly morn of his language he produced compositions which the most gifted of his countrymen were searcely able to appreciate, far less to rival, till after the commencement of altogether a new era of civilization. Nor has there even yet arisen among us any poet, Shakspeare alone excepted, surpassing, in the entire assemblage of his various qualities, this wonderful minstrel of the fourteenth century. Spencer's is a more aërial, Milton's a loftier song; but the poetry of neither of these displays anything of the rich combination of contrasted excellencies that gives so much life and splendour to that of Chaucer—the sportive fancy, painting and gilding everything, with the keen, observant, matter-of-fact spirit that looks through whatever it glances at,the soaring and creative imagination, with the homely sagacity, and healthy relish for all the realities of things, the unrivalled tenderness and pathos, with the subtlest humour and the most exuberant merriment,—the wisdom at once and the wit,—the all that is best, in short, both in poetry

genius is evidenced by the very diversity of the springs of inspiration to which he resorted. The Provencal tronbadours, the Norman romancers, the bright array of the stars of the young poetry of Italy, were all sought out by him, and made to yield light to his "golden urn." His works comprise translations or imitations of his predecessors or contemporaries, the restorers of poetry, in all these languages, and in all the various kinds of composition which they had made famous. writer has taken a wider range in respect of subject and manner, or has evinced a more trumphant mastery over the whole compass of the lyre. ' Canterbury Tales' alone, indeed, include nearly every variety of gay and serious poetry; in this crowning work his matured genius revels in the

and in prose, at the same time. The comprehen-

siveness and manifold character of Chancer's

century that has survived, the most remarkable specimens are Trevisa's translation of Higden, mentioned above, and Wycliffe's franslation of the Scriptures. The Bible is said to have been also translated by Trevisa. An indenture, dated in 1,343, has been referred to as the earliest known legal instrument in English. Although Edward 111, ordered the pleadings in courts to be carried on in English in 1362, the earliest instance that occurs of the use of the language in parliamentary proceedings is in 1388.

Gothic architecture, which prevailed throughout the greater part of Europe from the twelfth century to the sixteenth, presents itself to our inquiries in a constant state of progression. One change is only a transition to another. It is also variously modified by the several countries which adopted it, and considerable differences occur even in the manner of its original transition from the Roman-csque. The threeenth century is the period of its nearest approach to general uniformity. It then diverges into different national characteristics, which are nowhere more strongly or distinctively

marked than in England; and, finally, when a classical style of building is revived, as if by common consent among nations, each arrives at its

object by a different path.

In no country has Gothic architecture produced more numerous or remarkable results than in Great Britain; for although our later style may want something of the grace and luxuriance of the Norman Gothic, and our religious and other public edifices may not equal the vastness of some of the German cathedrals, yet we possess structures displaying architectural combinations peculiarly our own, and pre-eminent in decorative effect and boldness of execution.

Gothic must not be considered merely as differing from classical architecture. It is diametrically opposed to it upon principles no less fixed and consistent than its own. In the two preceding Books we have traced the gradual disappearance of every distinguishing feature of regular architecture as it became applied to new purposes, and its parts formed into new combinations; and in this state architecture remained, destitute of any real principle, until the forms necessarily resulting from the

general introduction of vaulted roofs, appear to have suggested the predominance of the vertical line as the principle of composition. Gothic architecture consists in the perfect deve-

construction of the Christian Basilica, and the

lopment of this principle. It was in gradual pro-

gress during the last modification of the Romanesque, and was soon carried to its utmost extent: the pillars were clustered throughout to assimilate with the lofty and slender shafts supporting the vaulting of the nave; the capitals reduced, and their salient angles suppressed so as to produce the least possible interruption to the eye in its progress The same tendency was observed in pointing the arch; and the distinct and deeply-cut mouldings which replaced the ancient archivolt, were calculated to continue the impression produced by the vertical lines of support. The buttress became an important feature both in composition and construction, being spread toward the base, and carried above the walls, in order to resist the thrust of the main vaulting, through the medium of the

thing buttress—the boldest combination of strength and lightness ever imagined. Every horizontal member was reduced to comparative insignificance.

is based upon this general principle, but the modifications in its subordinate and decorative forms are such as unciringly to distinguish the Gothic of one period from that of another. Three styles ansing from such modifications have been discrinumated\* in that peculiar to Great Britain, of which two appeared and passed away nearly within the limits of the historical period now under consideration, viz.—the Lancet, or Early English Gothic, extending through the reign of Edward I, and the. Decorated English extending to nearly the end of the fourteenth century. +

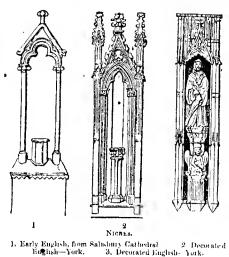

1. The early English style, of which Salisbury Cathedral (founded in 1220 by Bishop Poore, on

In every step of its progress Gothic architecture

the removal of the see from Old Sarum) is the most complete and extensive example, maintains great simplicity in its composition. Piunacles are little used, being confined to the principal angles of the edifice; and the buttresses, with which they were afterwards principally combined, finish with a triangular pediment. Arched painelling is still. nsed abundantly; and to this mode of decorating the walls we owe the introduction of niches and canopies, which make an early appearance in the west front of Salisbury, and are still farther advanced in the contemporary façade of Wells. yet, however, they consist only of a deepened arch surmounted by a pediment, and a corbel, or very small pedestal, for the figure. Detached and banded shafts are a peculiar characteristic of the columns of this period. They are also much used in doorways, of which the larger sort are planned with a

· Rickman.

deep arch, composed of an immense cluster of mouldings, forming several planes of decoration,

and inclosing a double entrance. These entrances \*are not always arched, but sometimes turned into a

form peculiar to the period, being a square head with small rounded haunches. This sort of open-

the triforium of the south transcpt at York, and a depressed arch with a knee, are also very generally in use where a high pitch might be inconvenient. The latter occurs in the doorway to the south transept of Westminster Abbey.

The windows of this style, in its early stage, are tall and narrow, without any division or tracery, ,but generally combined in groups of two, three, five, or seven openings; thus, as in the beautiful example of the north transcept of York, opening the whole compartment of the building in a manner analogous to the spacious windows shortly afterwards introduced.

This simple form was not long maintained; and the enlargement of the windows, their division into two or more lights within a single external arch, . and the introduction of tracery, form a second division in the carly English architecture. early double window occurs in the south transept of York, founded in 1227; but in Westmuster Abbey, begun by Henry 111., in 1245, the plain lancet window is nearly laid aside, the openings being for the most part divided by a shaft, and the head of the arch occupied by a feathered circle. In the triforium of the same building the tracery is to be observed coinciding with the mouldings of the arch, differing in this respect from the earlier

<sup>\*\*</sup> Rickman.

As the world have agreed to understand the term Gothic, it has a good claim (to whatever objections it may be open) to be used until a better shall be established. Mr. Whewell has advanced good reasons for its use in a generic sense. The term English as applied to a species of Gothic is perfectly delimite.

examples of York and Salisbury, where the openings are all merely independent quatrefoils, pierced through the blank space in the spandrils of the arcbes,—a certain indication of an early date.

854

Tracery in circles, varied only by multiplying its parts, may be followed down to the end of this period, when the increased breadth of the window, and the number of its subdivisions, led to a more minute and complicated manner of laying out the space above the springing of the arch.

With regard to the decorations of this period, the trefoil and quatreful were introduced and freely used in its earliest stage; but the most characteristic ornament, and one almost peculiar to the English Gothic, is the indentation known as the dog's tooth. This was soon improved into a sort of pyramidal four-leaved flower, in which shape it is used in the most extraordinary profusion, as in the south transept of York, where it not only fills most of the hollow mouldings inside and out, but

toward that magnificent style of roofing peculiar to

the English Gothic, by the addition of interinediate ribs to the aiches and cross-springers of the carly vaulting. In the continental Gothic the vanlting seldom advances beyond these simple elements—a circumstance which gives an appearance of hallness and want of consistency to some of its most splendid examples. This early improvement in the style of vanlting may be connected with the introduction of polygonal chapter-houses, in which it branches out in a rich cluster of moulded ribs from a central column. That of Lincoln is one of the earliest examples, exhibiting the lancet-window and the toothed ornament. It was followed by many others, particularly those of Westminster, Salisbury, York, Southwell, and Wells: the lastmentioned, however, is of a later style. The complete quadrangular cloister is another improvement made at this date, of which Sahsbury remains among the earliest and most perfect examples.

In the general arrangement of the greater churches of this period, the suppression of the apsis must be noticed as one of the points in which the English style already diverged from that of the continent, where the apsis was always retained. It was caused probably by the innovation of adding the lady chapel to the eastern extremity of the building. Parish churches are numerous in the early Eng-

It is probable that many of those crected before the Conquest may have fallen into

follows the line of the pediments, the angles of the buttresses, and even the shafts which decorate the window-jambs. It appears to have been laid asule about the middle of the thirteenth century—being used more sparingly in the north transcrt, and not occurring in any part of Westminster Abbey. The Early English foliage is more easily understood from prints than from description. A treforl leaf of peculiar character enters largely into its compo-It is always deeply cut, and in capitals turns over, so as frequently to resemble a volute One great characteristic of this period is, the careful manner in which all the decorations are exe-There is much of the other styles (as M1. Rickman observes), which appears to be the copy by an inferior hand of better workmanship elsewhere: this is remarkably the case in Perpendicular work, but is hardly anywhere to be found in the early English style.

The first step was made during this period

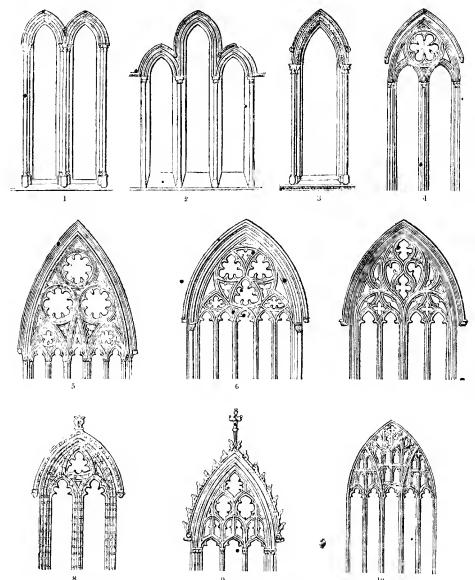

decay, and been replaced about this time. The ancient plan of a nave and chancel without side ailes is still retained in those of the smaller class

We must not unit this style without noticing the spire, which was introduced at a very early date. In fact, an example remains at Sleaford, in Lincohishire, which evidently belongs to the transition. In its first form the spire retains something of its original character of a pointed roof, rising immediately from the projecting cornice of the tower; but though this form runs occasionally far into the succeeding style, a more graceful mode of construction was soon adopted by placing the spire within the parapet of the tower, and grouping it with the pinnacles at the angles, as in that of Chichester Cathedral, which may be assigned to this period, though perhaps completed somewhat later.\* The spire of Old St. Paul's, rising to the height of 520 fect, was added to that structure as early as 1222.4 It was, however, of timber, covered with lead.

II. The reign of Edward II. brings with it the Decorated English style, of which the most striking characteristics are furnished by the tracery of the windows. The great east and west windows were introduced into churches at this period-another striking deviation from the continental Gothic, in which the decoration of the west front is centred in its lofty and gorgeous portals, and wheel-windows. This latter form is comparatively rare in English churches, and, where it does occur, is confined to

· Rickman, ' † Stowe.

the transepts, as in the cathedrals of York and Lincoln, which afford fine examples both of the Early and Decorated styles. The earliest style of tracery at this epoch is that known by the name of Geometrical, from its formation in regular figures, trefoils, quatrefoils, &e., instead of a combingtion of circles alone, though the latter figure is by no means abandoned, and frequently forms the

leading line in the head of the window. Of this

description are the windows of Exeter Cathedral, the work of the early part of the fourteenth century; but they are not without a mixture of compound eurves, harmonizing the abrupt junction of the more formal geometrical shapes, in a manner which forms a natural transition to the flowing and ramified tracery of the time of Edward III. latter style is displayed in its ultimate form in the magnificent nave and west front of York Cathedral,

856 HISTORY OF ENGLAND.

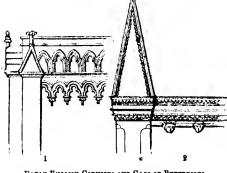

and, if considered as analogous to the Gothique flamboyant of Normandy, it must be admitted to have been but imperfectly developed in this comparity; and it presents varieties which it is not always easy to reconcile or assimilate. It speedily passed into a transition ending in the Perpendicular style, in which the English Gothic finally diverged from that of the continent. The peculiarities of the latter style are strongly infused into the choir of York Cathedral, begun as early as 1361, though not completed till the beginning of the lifteenth century.

completed about 1330. But its reign was short,

The other characteristics of the Decorated English may perhaps be best understood by a comparison with those of the preceding period. The buttresses are now finished by punnacles, and their gradations marked by pediments highly curiched with crockets. In the early part of this style the

2. Southwell Minster.

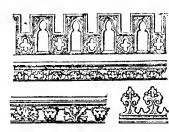

pediment is greatly increased in height and decorated with tracery; but, at a later period, the prevalence of the flowing line effects another revolution in its shape and proportion, and it is lowered and curved into the form of an ogee. During this transition the two pediments were frequently used one within the other, as in the abbey gateway at Bury St. Edmunds.

The shafts of the piers are no longer detached from the main columns, but are worked in the

[Book IV.

same stone, the whole forming an integral clustered pillar. The capitals are more varied than in the earlier style, and the form of the abacus alters from a circle to an octagon. The arch mouldings become bolder, and, in the latter part of the style, are often continued uninterruptedly down the column alternating with the shafts. Shafts are still used in the decoration of doors and windows, hut in the composition of ornamental pannelling they begin to be superseded by slender buttlesses and pinnacles. Niches make great progress early in this style, being much increased in size and The screen to the west front of ım portance. Exeter Cathedral, composed entirely of niches and tabernacles, is the work of Bishop Grandisson in In another stage of improvement, the canopics were"thrown out beyond the face of the building, terminated with lofty finials, and decorated with clusters of pinnacles.

The cornices of this period are composed with a hollow moulding, in which large flowers, grote-que heads, and other forms are placed at intervals. Open parapets came at this time into use, but were gradually superseded by battlements, either plant or pierced with tracery, as the building is more or less decorated.

The foliage of this period is extremely rich and in a more natural style than the stiff, curled forms of the Early English. The ornament called "the ball flower" is altogether peculiar to this style. It is described by Rickman as "a small round bud of three or four leaves, which open just enough to show a ball in the centre." It is sometimes used in the same profusion as the toothed ornament in the Early English, and is a no less certain indication of the period to which it belongs. The vaulting continues to advance in decoration. At Excter the spandrils of the roof have three intermediate ribs on each side, between the cross springers, forming a pendentive of great richness of effect, though without complication. In the nave of

the period.

York, the mouldings begin to be crossed and interluced, a system which, in the choir of Gloucester, vaulted by Abbot Boyfield at the very close of the

CHAP. V.]

period, is carried to the point of confusion. The choir of Tewkesbury is an excellent specimen of this age and of the first step in the transition to fan-tracery. The two styles occupying the present period contributed greatly to our national monuments of ecclesiastical architecture. Salisbury is, indeed, the only cathedral, built entirely and uniformly in the early English Gothic, but important additions were

made in that style to several others. The presbytery at Winchester is to be noticed as one of the earliest examples of unmixed Gothic, being the work of Godfrey de Lucy, who held that see from 1189 to 1205. The transcpts at York have already been mentioned incidentally. They are further deserving of attention as exhibiting two

gradations of the style, the south having been

begun at an early period and continued by Archhishop Grey in 1227, and the north being the

work of John le Romayne about the middle of the century. To these examples may be added the pres-

bytery of Ely and the nave and choir of Lichfield,

both creeted about 1235; the nave and choir of

Wells, dedicated by Bishop Joseelin about 1240; and the nave of Durham, erected by Prior Melson-

by between 1242 and 1290. Of Westminster

Abbey, the eastern part only was completed by Henry III., and its subsequent continuations, on a uniform design, furnish an interesting study of the progressive changes in detail. In Scotland, the Early English style prevails in the cathedrals of Glasgow and Aberdeen, in the magnificent ruins of Eigm, and the abbey of Holyrood. Of the Decorated English style there are early examples in the ruins of Croyland and Tintern, and in Excter Cathedral, already noticed. The nave of York was the work of forty years, and was completed in 1330. The south isle of Gloncester Cathedral, remarkable for the peculiar tracery of its windows and the profusion of the "ball-flower," dates from 1320. A great part of the cathedral of Bristol, including the tower, was erected between 1320 and 1363. The choir of Lincoln, 1324, is one of the most magnificent works of the age, but rather peculiar in style, and retaining in an unusual degree some characteristics of an earlier date. The chapel of St. Stephen, at Westminster, begun in 1330, was remarkable as a complete work of the period, and also for the transcendent splendour of The unrivalled lantern of Ely was its decorations. begun in 1328; the nave of the cathedral of Beverley, the choir of that of Rippon, and the east

end of that of Carlisle, all date between 1330 and

1370, during the period when ramified tracery was

in its greatest perfection. The great window in

are mimerous and splendid, particularly in Lincolnshire, where ecclesiastical architecture appears to have floarished in an especial manner during the fourteenth century. The foregoing list of examples might be greatly increased, but instead of extending a catalogue of names, we have endeavoured to comprise everything that can interest the general reader in a progressive series of examples selected from the buildings best known and most easily referred to.\* There is little to record respecting castellated and domestic architecture during the Early Eng- lish period. Castle building had received a check at the accession of Henry II. by the cuactment

that no subject should fortify his residence without a license from the crown. Of domestic architecture there are fewer remains of the thirteenth eentury than of any other period since the Conquest, and those few (to use Walpole's words) still imply the dangers of society rather than its sweets. ditions, bespeaking some advance in refinement, began indeed to collect round the sullen keeps of the Norman cra; and we find a precept from Henry III. for the erection of an apartment within the castle of Guildford for the use of his daughterin-law, Eleanor of Castile, consisting of a chamber with a raised hearth and chimney, a wardrobe, and other conveniences, and an oratory; and it is particularly specified that the windows are to he glazed. But with the reign of Edward I. a new era commences, and the castles raised by that monarch for the security of his new dominion in Wales are among the first which combine the fortress and the palace in an integral structure.

ing castles, new architectural features are naturally developed, of which the most striking is the grouping of the numerous and variously-shaped towers, those flanking the gateway being usually conspicions by their size and lofty proportion. grand and picturesque combinations of which this style of building is susceptible were not overlooked by the architects of a later date, and the castellated outline, especially in the gateways, was retained in our baromal residences long after every essential point belonging to a fortress was given up.

Strength, however, was still an object in the majestic structures of the fourteenth century, among which it may be sufficient to cite the castles of Alnwick, Raby, Bolton, and Warwick. In the last, Gay's Tower, the work of Thomas Beau-

GUY'S TOWER, WARWICK CASTEE.

champ, Earl of Warwick, in the reign of Richard II., is perhaps one of the latest constructed with Norman solidity and for the real purposes of dcfence. The magnificent hall and other buildings

Edward III, to the extent of at least the whole upper ward as it now exists, though its original features have long been obliterated. It must not be omitted that the architect of this proud pile was William of Wykebam, afterwards the munificent Bishop of Winchester. The machecoulis, a contrivance for casting missiles on the head of an assaulting enemy by projecting the parapets upon corbel-stones with openings between, is an innovation of the time of

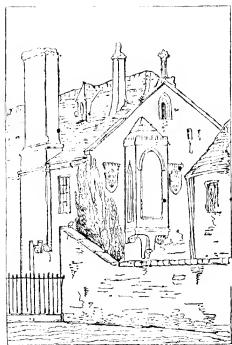

Edward I. It was used in its boldest form in gateways, as in that of Lancaster Castle, and was retained as a picturesque ornament long after it ceased to be of use. The gradual improvement of domestic architecture at a period when security was not to be disregarded, combined probably with the jealous restrictions imposed upon the erection of domestic

fortresses, a produced, towards the close of the thirteenth century, the embattled and moated house. Stokesay, or Stoke Castle, in Shropshue, may be described \* as the type of a very numerous class of manor-houses in the fourteenth and fifteenth Laurence de Lodelow had license to embattle this house in 1291, and with this date the architectural details are perfectly consistent The building is a parallelogram, inclosing a court of 130 feet by 70, and is protected by a most The house and offices, with the entrance tower and gateway, occupy three sides of the court; the fourth is inclosed by a wall only. The hall, 54 feet long and 32 wide, is lighted by four arched windows on one side, and three on the other. It has no chimney, and the massive rafters of the high-pitched roof are blackened with the smoke from the hearth in the centre. The hall communicates at one end with the great chamber, and at the other with the offices. A large polygonal tower, rising at one of the angles, and surmounted by an embattled parapet with loop-holes, gives a castellated appearance to the edifice. This tower contains three large rooms, in as many stories, communicating by a spiral stair. A similar tower at the opposite angle appears to have been left incomplete: it is planned in smaller divisions belonging to the offices. Markenfield Hall, in Yorkshire, is a building of the same class, and of nearly the same date; embattled, but not, properly speaking, fortified, and without any towers except a stair-

ease turret. The mere domestic style of this period is very simple, consisting of plain gabled outlines, combined, when the extent of the building renders combination necessary, without much attempt at general effect. Northborough Hall, in Northamptonshire, is a quadrangular house of this description; it is nevertheless executed with much architectural luxury. The decorations are elegant and

\* See Britton's Architectural Antiquities, vol. iv.

highly finished; and the free use of the ball-flower places it in the first half of the fourteenth century. Another example of later date remains near the cathedral at Lancoln, and is remarkable for a very early pendant oriel, a form which figures so conspicuously in the architecture of the next century. It was soon carried to perfection, and a highly enriched specimen survives in the palace erected in the same city by John of Gaint about 1390.

HOUSE OF THE FOURTHENIH CENTURY, AT LINCOLN. The Roof, Chimney Shafis, and Square Windows, are Modern.

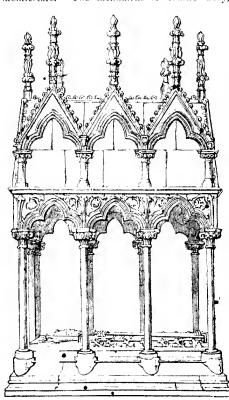

Little change took place in the principles of domestic architecture in the north; \* but the fortalices of this period, both in Scotland and on the border, are marked by the introduction of overhanging turrets at the angles, seldom seen in the castellated buildings of England.

Great alterations took place during the Early English period in the style of sepulchral monuments, which must thenceforward be considered under the head of Architecture. The first change was the general adoption of the altar-tomb, a flat, raised table, on which the recumbent effigy is placed. This form soon became general even when there was no effigy. The altar-tomb of William Longspee, Earl of Salisbury, in the cathedral at that place, is one of the earliest: he died in I226. † Both the tomb and effigy are of wood, painted and gilt. The effigy of William de Valence, Earl of Pembroke, at Westminster, who died in 1296, is also of wood,

but plated with copper, and enamelled in colours; an art supposed to have been introduced about this time from Constantinople. The sides of these tombs are pannelled and filled up with shields of arms, a mode of decoration never afterwards laid aside, but niches, containing effigies of the family of the deceased, were added before the end of the thirteenth century, and afterwards carried to a lugh pitch of decoration.

The flat grave-stone, with the inscription deeply cut and filled with metal, was also introduced very early in the thirteenth century, so that the coffin en dos d'àne became generally superseded.

The next great feature in mommental architecture is the canopy, probably suggested by the catafalque, still used in funeral ceremonies abroad, and sometimes on extraordinary occasions in our own country. This being united with the altartomb, in which the body was deposited above ground, the mode of sepulture (as King observes) hecame a sort of perpetnal lying in state. The most magnificent of these emopied tombs are detached; many more are engaged in the walls. They continued in vogue long enough to survive the style which gave them birth, and were executed with all the hixury of art initil the seventeenth century, varying in their details with the march of The monument of Walter Grey, architecture.

Archbishop of York, who died in 1225, and those of Aymer de Valence, Earl of Pembroke, at West-

minster (1334), and Hugh le Despenser, Earl of

of architecture in the thirtcenth and fourteenth centuries.

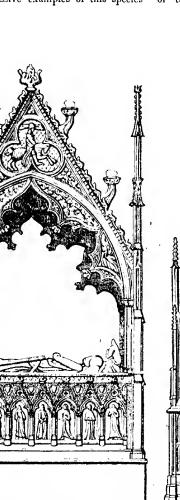

The higher branch of sculpture advanced greatly during the thirteenth century. Monumental effigies of this period are numerous and interesting.

TOMB OF AYMER DE VALENCE-Westminster Abbey.

MONUMENT OF HUGH LE DESPENSER, EARL OF GLOUCESTER, AND HIS COUNTESS-Tewkesbury Cathedral. of Evc, that among many compositions on this subject by Giotto, Buonamico, Buffalmacco, Ghiberti, and Michel Angelo, this is certainly the oldest, and not inferior to many others. He further observes of these sculptures in general, that though, owing to the disadvantages under which such works were produced in that age, they are necessarily illdrawn and deficient in principle, "yet in parts there is a beautiful simplicity, an irresistible sentiment, and sometimes a grace excelling more modern productions." He argues, from the contemporary state of the arts in Italy, that these sculptures are

Among the earliest works of this class the figure of Lord de Ros, in the Temple church, displays both grace and spirit. Basso-relievo was also It is often introduced upon flat surfaces, as in the spandrils of the arches at Worcester and the Chapter House of Salisbury, and before the middle of the century the sculptures on the front of Wells Cathedral, representing the history of the Old and New Testament, were executed. These sculptures possess, sufficient merit to have excited the admiration of Flaxman, who pronounces especially upon the relievo representing the creation

notice the curious portrait of Richard II., preserved

in the Jerusalem Chamber at Westminster. In its

style it is merely an enlargement of the miniature painting which was cultivated at this period with

great success. Numerous manuscripts are extant,

illustrated by compositions displaying the most

brilliant colours and the utmost delicacy of exe-

eution, whatever their deficiencies may be in other

respects. Several specimens from a metrical his-

tory of Richard II. have been given in the fore-

going pages of this work, and will convey the best idea that mere lines can afford of this branch of

entirely due to native artists.\* There is certainly no reason to suppose that foreigners were employed upon any work of importance in England until a later period, when the tomb of Henry III. and the shrine of Edward the Confessor are known to have been executed by Italian hands. With regard to the statues of Eleanor of Castile, on the crosses erccted to her memory, Flaxman, after praising their simplicity and delicacy, observes that they partake of the grace particularly cultivated in the school of Nicolo Pisano, and might possibly be

CHAP. V.]

executed by some of the travelling pupils from his school. Be this as it may, sculpture by no means maintained the same high tone during the fourteenth century; and though we have many effigies of the greatest value as portraits, which their strong character of individuality warrants them to be, none are comparable to those of Queen Eleanor as works of art. But the works of this period are very unequal. There is no comparison between the graceful weepers on the tomb of Aymer de Valence and those on the later monument of Edward 111.; and it is impossible to avoid the conclusion that the superior skill of foreigners was

The state of painting during this period offers

little to detain us. Numerous records are, indeed,

occasionally employed.

extant† relative to the painting of the palace of Westminster and other royal houses during the reign of Henry III., who seems to have been a liberal patron of the art; but the works of the period, as far as we have the means of judging, are not worthy of much investigation on the score of merit; neither do they possess the interest attached to the early efforts, perhaps equally imperfect, of Italy, since they led to no parallel results, and contribute nothing to the history of the art. The reader may, however, be carrious to know upon what subjects the painters employed by this king exercised their pencils; and we learn from these documents that they executed the figures of our Lord and the Four Evangelists, with St. Edmund and St. Edward, in the chapel at Woodstock; the Last Judgment, for that of St. Stephen, in the palace of Westminster; the History of Antioch (conjectured to be some feat of the Crusades), for the room called the Antioch Chamber, in the same palace; and the History of Alexander, for the queen's chamber in Nottingham Castle. paintings executed in St. Stephen's Chapel, after

Lazarus in glass at Nottingham • Castle. style of executing such works at this period was in small medallions of different forms, inlaid upon a sort of mosaic ground in various patterns and the most brilliant colours. Windows of this date were sometimes surrounded by elaborate borders, and ntay be further distinguished by the predominance of a rich deep blue. This style was continued to the end of the thirteenth century. In that which succeeded the compartments are still small, but of more simple forms, among which a pointed egg shape is common, and they are often filled by a single figure. The ground is no longer disposed in mosaic, but drawn with beautiful scroll or arabesque work. In the middle of the fourteenth century, and during the period of the zenith of the Decorated English style, figures of larger size were represented, occupying the whole breadth of the light, standing in a niche, decorated with canopies, columns, and buttresses. These figures generally relate to benefactors of the church, and their names and deeds are recorded by inscriptions, and illustrated by their armorial bearings. The west window of York Cathedral is glazed in this style, and the indenture entered into with the artist, of which the particulars are preserved,\* fixes the date of its excention to the year 1338. Robert, a glazier, contracted to glaze and paint the said

window at the rate of sixpence per foot for plain, and twelve pence for coloured glass. The history of English Music, so far as it can be traced by any ancient musical compositions extant, does not commence within the period at which we are now arrived. The art, indeed, as has been already shown, appears to have been generally cultivated in this country from a very early date; but we are strongly inclined to suspect that for many

 From a passage in Bede, referred to in the last Book, and indeed from other statements, it appears, that among the Anglo-Saxons an essential qualification for admission into the upper classes of society was a certain degree of skill on the harp; that is, we suppose, a power of accompanying on that instrument the musical delivery of the popular poems of the day. By the laws of Wales, a harp-or, as we presume, a practical knowledge of the instrument-was one of the three qualifications necessary to constitute a gentleman: \* none but the king, his musicians, and freemen, was allowed to possess a harp; and he who played on it was legally a gentleman. According to Gualdus Cambrensis, the people of York, and those beyond the Humber, sang in two parts, treble and base. He also tells us that the Welsh practised vocal harmony in many parts; but perhaps he mistook some such rude chorus as we now occasionally meet with at numerously-attended festive entertainments, for singing barmoniously in several parts.

The ancient national habits that have been de-Leges Wallice, p. 301.

HAND ORGAN OR DESCRIPER, AND VIOLAN. ROSAL MS, 14 E. III.

scribed continued to be kept up in later ages. "In the statutes of New College, Oxford, given about the year 1380, the founder orders his scholars, for their recreation on festival days in the hall after draner and supper, to entertain themselves with songs, and other diversions consistent with decency."\* A manuscript roll of the officers of Edward III.'s household contains a list of performers on the trumpet, oboe, clarion, dulcimer, tabret, violin, flute, &c. To these may be added several instruments mentioned by Chaucer in his 'Canterbury Tales' and 'House of Fame.' The same poet, too, in 'The Romaunt of the Rose,' speaks of a lady's singing, in language which implies much vocal ability and great practical knowledge :-

" Well coud she sing, and lustily None halfe so well and semily? And cothe make in song such refraining. It sate & her wondn well to sing.

Refrain, the burden of a song, or return to the first part. § Bycume.

Her voice full clear was, and full swete; She was not rude, ne yet unmete, But couthe a moughe for soche doing As longith unto karolling.

Yet no remains are to be found, up to the fifteenth century, of what can properly be called a British musical composition; not so much as a simple melody; for the intonations of the church at that period exhibit nothing that comes under the denomination of air, at least in the modern sense of the term: and after much research, we are satisfied of the correctness of what is asserted by one of the most eminent of our musical antiquaries, that, prevalent as dancing was in this country from the earliest times, no appearance can be discovered of the notation, or the name, of even an English dance-tune before the year 1400.† 'Sellinger's (or St. Leger's) Round' may be traced back to nearly the reign of Henry VIII.; nothing beyond.

This is the more remarkable because there were some good English writers' on music during the thirteenth and fourteenth centuries, whose works

4 Sir J. Hawkins, Hist. of Music. · Knew.

<sup>·</sup> Warton's Hist, Eng. Poet.

Hand-Bitts Royal MS 15 D. ut

are to be found in manuscript in the British Museum, the Bodleian, and other libraries. Of these works we shall only notice one, entitled 'De Speculatione Musices,' by Walter Odington, preserved in Corpus College, Cambridge. This excellent but almost unknown author, was a monk of Evesham during the early part of the thirteenth century, and is mentioned by Stephens, the translator and continuator of Dugdale's Monasticon, as "a man of facetions wit, who used at spare hours to divert himself with the decent and commendable diversion of music, to render himself the more cheerful for other duties." Odington was the

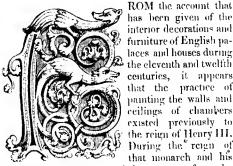

author of other learned productions besides this.\*

Of his present Treatise it has been said, and justly, that if all other musical tracts, from the time of Boethius to that of Franco, were destroyed, we should sustain little loss were the MS. of Odington saved. Not one specimen, however, of the invention of his countrymen, either in melody or harmony, is given by this Benedictine monk; and we must patiently wait till we advance into the fifteenth century ere we shall be enabled to name a single composition, even of the most trivial kind, from the pen of a British musician.

· See Tanner, Moren, &c

## CHAPTER VI.

## THE HISTORY OF MANNERS AND CUSTOMS.

ROM the account that has been given of the interior decorations and furniture of English palaces and houses during the eleventh and twelfth centuries, it appears that the practice of painting the walls and ceilings of chambers existed previously to the reign of Henry III. During the reign of

immediate successors, the fashion seems, from the frequency of the royal orders concerning it, to have obtained considerably, and almost if not entirely to have superseded the more costly and laboriouslyexecuted bangings of needle-work, of which in several instances the paintings are directed to be neade in imitation. The principal subjects were selected from the Holy Scriptures, or from the numerous lays and fabliaux of the thirteenth century, and the incidents were surmounted by scrolls inscribed with the text or the legend as it might be. The well-known "Painted Chamber" at Westminster obtained its name from this style of deco-The remaining part of its eurious Dictures executed during the reign of Edward I. was dcstroyed on the enlargement of the old House of Commons; but, fortunately, not before accurate drawings had been made of them by the late Mr. Charles Stothard. In the romance of 'Arthur of Little Britain,' written in the reign of Edward IL, we read of a chamber in which there was no manner of history nor battle "sinec God first made mankind," but in that chamber it was portrayed with gold azure and other fresh colours, as quickly (to the life) adorned that it was wonder to behold."

As early as the reign of Henry III, we read of the painted glass windows in domestic buildings; and from the above-mentioned romance we learn that, in the fourteenth century, they were made with lattices to open and shut. Strutt has engraved a beautiful specimen of the chairs of the time of Henry III., from a MS. copy of Matthew Paris.\* He has also given one of the latest specimens of the squarebacked chairs of the thirtcenth century,† at the

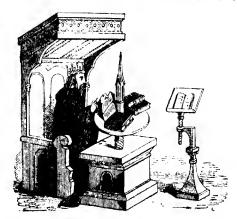

close of which they began to be fashioned after the pointed style of architecture then just introduced One of the most interesting specimens now existing is the coronation chair, called St. Edward's,

M. Willemin, there is an ornamental specimen from a MS, copy of the 'Roman de Lancelot du Lac,' in the Royal Labrary at Paris.

An elegant bedstead, chair, and reading-desk of

the fourteenth century are also given in that work, which deserves to be better known in England. We have a splendid description of a bedstead in the romance of 'Arthur' before mentioned. which stood in the midst of the chamber surmounted in beanty all others; for the "utterbrases" thereof were of green jasper, with great bars of gold set full of precious stones, and the crampons of fine silver bordered with gold; the posts were of ivory with pomels of coral, and the staves closed in buckram covered with crimson The sheets were of silk, with a rich covering of crimine and other cloths of gold, and four square pillows wrought amongst the Saracens. The curtains were of green sendal (silk), ornamented with gold and azure; and round about the bed there lay on the floor carpets of silk "poynted and embroidered with images of gold" (one of the earlest notices of carpets);\* and at the head of the bed stood an image of fine gold, having a bow of ivory in his left hand, and an arrow of fine silver in his right.

Another bed in the same romance is described as being furnished with a rich quilt wrought with cotton, covered with crimson sendal, stitched with threads of gold, and sheets of white silk, and over all a rich fur of ermines. In front of this bed there stood a bench with great "brases' (arms) of ivory. Our readers must take into consideration that this is from a romance, but it nevertheless is a description founded upon facts, and exaggerated only with regard to the materials. We learn from it, in conjunction with the pictorial representations of the period, that the bedsteads of that day resembled the modern crib used for children in England, and

Matthew Paris tells us that Eleanor of Castile, wife of Edward L., followed the example of Sinchius, Bighop of Toledo, who, in 1255, covered his floor with topestry, at which there was much sneering.

VOL. I.

for every body in Germany, being a sort of long box, the sides or railing of which was called the outer bras. The posts at the corners sometimes only rose a little above this railing, and were surmounted with panels, at others they supported a tester.\* But the wills of our sovereigns and chief nobility prove that, during the fourteenth century, the beds of personages of distinction were magnificent enough almost to reheve the romancer of the suspicion of exaggeration. Agnes, Countess of Pembroke, in 1367, gives to her daughter a bed, "with the furniture of her father's arms." Willam Lord Ferrers of Groby, in 1368, leaves to his son his green bed, with his arms thereon, and to · his daughter his " white bed and all the furniture, with the arms of Ferrers and Ufford thereon." Edward the Black Prince, in 1376, bequeaths to lus confessor, Sir Robert de Walsham, a large∳ed of red camora, with his arms embroidered at each corner, also embroidered with the arms of Hereford; and to M. Alayne Cheyne "our bed of eamora, powdered with blue eagles." His widow, in 1385, gives "to my dear son the king (Richard 11.) my new bed of red velvet, embroidered with ostrich feathers of silver, and heads of leopards of gold, with boughs and leaves issuing out of their mouths." Beds of black satm, of blue, red, and white silk, and of black velvet, all more or less richly embroidered with gold, silver, and colours, are mentioned in the wills of Edmond Earl of March, 1380; Richard Earl of Arundel, 1392; and John Duke of Lancaster, 1397.

Chaucer, in his Dream (v. 255), says—

Of downe of pure dove's white I wol give him a feather bed, Rayed with gold and right well chal In him black softfund outremere, And gonny a pillow, and every here Of cloth of Raynes, to slepe on soft.

Cloth of Raynes (Rennes in Britanny) was mucl

In the will of Lady Neville, 1385, we find mention of a coverlet or counterpane (''convrehtz"), and a lester of double worsted; also of a white-convreht and tester, powdered with populpays.

HISTORY OF ENGLAND. esteemed during the middle ages, and is mentioned Henry III. does not appear to have differed essenas early as the twelfth century. It was used for tially from that worn during the reign of Richard

manufacture. Clocks that struck and chimed the hour are mentioned as early as the close of the thirteenth century, as part of the furniture of a mansion, by the authors of the 'Roman de la Rose':— " Et puis fact sonner ses orloges Par ses salles et par ses loges

sheets, and seems to have been linen of very fine

A roes frop subtillements De pardurable mouvements The word clock, however, was used to signify the

bell only till the time of Henry VIII., the French word horloge being used for the entire machine before that period. A cupboard of plate in the thirteenth century is described as consisting of a cup of gold covered, six quart standing pots of silver, twenty-four silver

bowls with covers, a bason, ewer, and chasoir of

silver.\* The wills of Sir John Devereux, 1385, of Sir William de Walworth (the celebrated lord mayor of London, who also died in 1385), and of Alice de Nerford, Baroness Neville, of Essex, 1394, contain repeated notices of silver and silver-gilt plate, consisting of dishes, chargers, basons, ewers, salt-cellars, and spoons. Sir William leaves a dozen silver spoons to his brother Thomas Walworth, twelve dishes and twelve salt-cellars, two chargers, two basons, with a silver lavatory, and six pieces of plate with two covers. In Lady Neville's will mention is made of silver spice-plates and hanaps (hanapes), with covers or lids to them. Hanaps are also mentioned amongst the articles of plate in

the inventory of Charles V., of France.

of these hamps were splendidly chased, and orna-

mented with eagles, herons, &c.; and one is described as "a hanap with a leopard;" the figure

of one being probably upon the "convercle."

the same will, napkins and towels ("towailles"), manufactured at Paris and Dinant, are mentioned amongst the household linen. A pair of knives, with sheaths of silver, enamelled, and a fork of crystal, are mentioned in the wardrobe accounts of Edward I.; and forks are said to have been used in Italy as early as 1330, but they were not introduced at tables here till the seventeenth century. The one above mentioned, from the very material of which it was made, must evidently have been an object of curiosity rather than an article for use. Fire-screens, with feet and stands, occur in 1383; and fire-dogs, or andirons, are mentioned in the wardrobe accounts

The civil costume in England in the reign of

who attended at the marriage of Henry's daughter with Alexander, king of Scotland, in 1251, "were attired," says Matthew Paris, "in vestments of silk, commonly called cointises." Mantles lined with ermine are first mentioned during this reign: two are ordered for Henry and his queen; and Matthew Paris mentions the doubled or lined winter garments of the king and his courtiers. As an exterior ornament, however, furs do not make their appearance till the reign

of Edward I. In the Harleian MS., 926, is an

initial letter in which is represented the coronation

of that monarch, and his mantle of state is not only

[Book IV.

and John. The tunic, with sleeves tight to the

wrist, the chausses, or tight pantaloons, with shoes

or short boots, the toes being long and pointed,

form the ordinary dress of the middle classes.

Caps of singular and varied shapes are more fre-

quently met with, but the cowl or the conf is the general head-gear of the traveller. A large cloak

with sleeves, and a capitchen or cowl attached to

it is mentioned as a garment for foul weather, under the name of "super-totus," or over-all, and

a similar, if not the same, habit, called a balan-

drana, is amongst others forbidden to be worn by

the monks of St. Benedict at this period. Robes and mantles continued to distinguish the higher

orders, and the materials of which they were com-

posed appear to have been of the most costly description. Velvet is mentioned by Matthew Pans

under its Latin name of villosa (from whence the

French villuse and relows), and two very splended

sorts of gold and silk stuff manufactured at Baldeck and in the Cyclades were introduced here about

this period. The first, called cloth of Baldckins,

was used to form the vestments in which William

de Valence was arrayed when knighted by Heury in 1247, and the second gave its name to a super-

tunic, or surcoat, which opened up the front to the

waist, and was called, after it, Cyclas, or Ciclaton. The whomsical fashion of indenting, escalopping,

and otherwise cutting the edges of garments, which had provoked a legislative prohibition as early as

the reign of Henry II., appears to bave raged more

than ever towards the close of Henry III.'s reign.

William de Loris, who died in 1260, describes the

dress of Mirth in his 'Roman de la Rose,' as

P En maint lien incissée Et decoppée par conteste;"\*

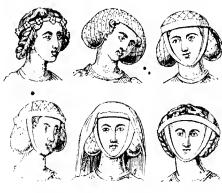

and robes so "slyttered," as Chaucer describes

them, were thence called cointises. The nobles

being-

lined with ermine but has the broad cape or collar of the same fur which has ever since been worn by sovercign princes. • That is, tastefully, or with funciful elegance. The old French verb se cointier is rendered se parer comme one coquette, and the substantives feminine, cointies, contene, genillesse, manuscros eliquates, points. Landais, Dictionnaire General, Sc. Paris, 1-34. Qualities. and quinteuse signifies whimsual or fantastical, and Chaucer translates

<sup>•</sup> Matt, Paris, 269.
† The word hamper has generally been explained as meaning a basket with hambers, and derived from hend-hamper. It is evident, from the document now quoted, that in the fourteenth century the term was applied to vessels of silver; as I we think the true derivation of the word to be from the Saxon and German word hand and napp—the latter signifying a bowl, bason, or poringer (nap in Duich, and large) in Italian), and that having a hid (converole) to it as well are handles, its appearance world be that of a soup-bason. " All to slyttered for quaintise,"cut all to slits or pieces for whim's sake, or in a fanlastical manner.

Ladies' Head Deesser. Royal MS, 15 D. n

The principal change in the female dress of this

period took place in the fashion of wearing the hair, which, instead of being plaited as previously, was turned up behind, and entirely enclosed in a caul of net-work composed of gold, silver, or silk thread, over which was worn the peplum or veil; and sometimes, in addition, a round hat or cap. Garlands, or chaplets of goldsmith's work, were also worn by the nobility over or without the canl; and wreaths of natural flowers formed a still more elegant summer head-dress, attamable by all classes. The wimple or headkerchief continued to cover the grey hairs of age, and give a conventual appearance to the costume of the matron and the widow. This piece of attire was increased in size and rendered still more unbecoming, towards the close of Henry's reign, by the introduction of a neckcloth called the gorget. Jean de Meun, the continuator of Lorris's 'Roman de la Rose,' describes it in the reign of Edward I., as being wrapped two or three times round the neck, and

LADIES' COSTUME, TIME OF EDWARD I. Sloane MS., 3983.

then fastened with a great quantity of pins, on either side of the face, higher than the cars. "Par Dieu!" he exclaims, "I have often thought in my heart, when I have seen a lady so closely tied up, that her neckcloth was nailed to her chin, or that she had the pms booked into her flesh "—In the Sloane MS., 3983, are some figures perfectly illustrating this tirade of the poet.

The extravagance and foppery which disgusted Matthew Paris during the reign of Henry III., was partially checked by the personal example of Edward L., who despised "the foreign aid of ornament," and answered those who inquired his reason for not wearing richer apparel, that "it was absurd to suppose he could be more estimable in fine than in simple clothing." He never wore his crown after the day of his coronation, " saying, merrily, that crowns do rather onerate than honour princes."\* Buttons, very closely set from the wrist almost to the elbow of the sleeve of the under time, form the most remarkable distinction of the civil dress of Edward's reign. The fashion is particularly alluded to in a MS, poem written before 1300†:---" Botones azard (azure) everilke ane

From his elboth to his hande."

and it is represented in the illuminations and effigies of the time. Gloves were more generally worn; and the harr appears to hang in waved locks lower than the ears, and to have been curled with great precision.

The ladies are cruelly attacked by the poets of

the day on account of their whimsical head-tires and extravagantly long trains. By one writer they are compared to peacocks and pies, having "long tails that trail in the dirt," a thousand times longer than those of such birds. The authors of the 'Roman de la Rose' indulge also in Invectives against certain head-dresses, which, however, are not very clearly described, and have been improperly considered to mean the horned head-dress of a much later date. The figures already alluded to in the Sloane MS., 3983, and the heads in a royal MS., marked 15 D. ii., will better illustrate the female costume of this period than pages of description. The pernicious system of tight lacing already alluded to under the reign of Henry 1, is continually mentioned in works of this date. The damsels in 'The Lay of Sir Launfal,' are described as being

" Lacies moult estreitment."

Their kirtles were of light blue silk; their mantles of green velvet, richly embroidered with gold, and furred with "gris and gros" (i. e. the finest grey fur and vair distinguished from the minevair), their heads attired with kerchiefs well cut, and rich gold wire, and surmounted by coronets, each adorned with more than sixty precious gems. A girdle of beaten gold, embellished with emeralds and rubies, is mentioned in another poem as worn by a lady "about her middle small."

Camden, Remains, p. 259. The original authority is John of London, who wrote a "Communicatio," addressed to Edward's widow, Queen Margaret, and now in the Cotton collection, marked Nero, D. n

HISTORY OF ENGLAND. [Book, IV.

MALE COSTUME, TIME OF LOWARD II. Royal MS. E. in. Sloane, MS, 346.

The reign of Edward II. presents us with the party-coloured habits so fashionable during the two following centuries, and the sleeves of the surcoat, or super-tune, terminating at the elbow in tippets or lappets, which became long narrow streamers reaching to the ground in the reign of Edward III. They are visible in the effigy of

Extrov of Edward II - Glogoster Cathedral.

Edward II. in Gloucester Cathedral. An approach is made also to the picturesque chaperon or hood

of the close of the fourteenth century, by the curious fashion, apparently, of twisting or folding the capuchon or cowl into fanciful shapes, and bearing it, little more than balanced, seemingly, on the head,

as the women of the Pays de Basque wear their scarlet hoods in summer, to this day. The ladie-wore it so as well as the men, and, we may presume, secured it by pins to the hair; but the mode of fastening is not apparent in the illuminations. In one of the accompanying examples a female is seen with an apron, which Chaucer afterwards calls a barmt, or lap-cloth.

FEMALE DRYSS, TIME OF EDWARD IL. Sloane MS 346.

The close of the thirteenth century is chiefly remarkable in the history of costume, as presenting us with some particular distinctions in the attire of the legal classes. Lawyers were originally priests, and consequently wore the tonsure; but, on the clergy being forbidden to meddle with secular affairs, the lay lawyers discontinued the practice of shaving the head, and wore the coif for distinction's sake. It was first made of linen, and afterwards of white silk: its shape is the same as that of the coif worn by travellers and huntsmen in the reign of Henry III., and has a very undignified and unbecoming appearance, resembling an exceedingly scanty child's nightcap tied under the chin. Some judicial personages wear caps and capes of fur,

and have a peculiarly shaped collar of the latter, or of some white stuff round the neck of their long priest-like robes. The fur lining of the robe is generally either white lambskin or vair.

The ecclesiastical costume in England was at this time so sumptuous as to exerte the admiration and avarice of 1 mocent IV. Some of the sacerdotal habits were nearly covered with gold and precious stones, and others claborately embroidered with figures of animals and flowers: their shape will be best undestood from our engravings. The mitre

had assumed its modern form by the reign of Edward I. The red hat is said to have been given to the cardinals by Pope Innocent VI. at the council of Lyons, in 1245; and De Curbio says they first wore it in 1246, at the interview between the pope and Louis IX. of France. Its shape at the commencement of the fourteenth century may be seen in the subjoined ent. The reign of Edward III. presents us with an

entire change of costume. The long robes and tunics, the cyclases and cointises of the preceding reigns vanished altogether. A close-fitting garment called a cote hardie, buttoned down the front, and confined over the hips (which it barely covered) by a splendid girdle, was the general habit of the male nobility. It was composed of the richest materials, magnificently embroidered, sometimes party-coloured, the sleeves occasionally terminating at the clbow, from which depended the

MALE COSTUME, TIME OF EDWARD III. Royal MS. 19 D. ii., and Street,

Englishmen in this reign " haunted so much unto the folly of strangers, that every year they changed them in diverse shapes and disguisings of clothing -now long, now large, -now wide, now strait, and every day clothings new and destitute and divest of all honesty of old array or good usages; and another time to short clothes, and so strait waisted, with full sleeves and tippets of surcoats and of hoods over long and large, all so nagged and kinb on every side, and all so shattered and also buttoned, that they seemed more like to tormentors in their clothing and also in their shoeing and other array than they seemed to be like men." The extravagance of these fashions induced the commons to present a complaint on the subject in parliament, A.D. 1363; and various restrictions were promulgated in a sumptnary law passed on that occasion. Long hose frequently of two colours, and pointed shoes of cloth of gold richly embroidered, with a capuchon or cowl attached to a cape, having a long tail behind, and being closely buttoned up to the chin in front, completed the strange ha-Long beards came again into fashion during this reign; and on the door of St. Peter's church at Stangate were fastened one day the following lines, which had been made by the Scots in ridicale of their southern enemics:-" Longbeards hertiless, Peynted boods witless, Gay cotes geneeless Maketh Englonde thriftless." Beaver hats are spoken of about this time, probably manufactured in Flanders, as in the next reign we find Chancer mentioning "a Flaundrish beaver They are sometimes worn over the capuchon. The knight's chapean, as still borne on coats of arms, is seen in some illuminations, and various other caps, some of which are for the first time decorated with a single feather worn straight up in front; but its occurrence is so rare, and in such particular instances, that we are inclined to believe it worn, not as a fashion, but as a royal badge-

long white tippets or streamers before mentioned. In such cases the sleeve of an under garment is

visible, ornamented with a close row of buttons

from the wrist upwards, as in Edward L's time.

A mantle exceedingly long, lined with silk or furs,

and fastened upon the right shoulder by four or

five large buttons, was worn over this cote upon

state occasions, the edges indented, or cut in the form of leaves in the most elaborate and sometimes

a very elegant manner. A monk of Glastonbury

named Dowglas, in a work of which there is a MS. in the Harleian collection, informs us, that the

\* The unfortunate fact puts the interesting legend of the Bohe mian plume (the supposed origin of the "Prince of Wales,

feathers") into extreme peril, even without the additional evidence of the seal of John to prove that the crest co Bohemia was an entire wing or pinion, or as it is represented on the tombs of the Bohemian monarchs at Piagae, two wings endorsed, Vide Hoyal MS, 19 D. ii.

period is a sort of sideless gown with very rull skirts, worn over the kirtle in such a manner as to give the appearance of a jacket to that portion of it which is visible. This gown is generally bordered with fur or velvet, and sometimes has a kind of stomacher of the same materials, ornamental with jewels, thereby increasing the illusion; but it is almost impossible to give the reader an idea of this garment by description, and we must therefore refer him to the annexed engraving, from the effigy of Blanch de la Tour, daughter of Edward III, in Westminster Abbey, and others from illuminations of the period. We have not been able to ascertain the name allotted to this most peculiar habit,

Knighton tells us, that at tournaments the ladies rode in party-coloured tunics, with short hoods and liripipes (that is, the tippets, or long tails of the hoods,) wrapped about their heads like cords. Their girdles were richly decorated with gold and silver, and they wore small swords, "commonly called daggers," stuck through pouches before them—a fashion observable amongst the beaux of the opposite sex at this time.

Mourning habits are first distinguished on the monuments and in the illuminations of this reign. Sometimes the mourners are clothed entirely in On the tomb of Sir Roger de Kerdeston, who died A D. 1337, his relations are seen wearing the mourning-cloak over their ordinary coloured clothes.

MOURNING HABITS. From the Tomb of Sir Roger de Kerdeston,

Richard II. set his subjects an example of foppery which they required very little inducement Knighton assures us that all distincto imitate. tion of ranks and classes was soon lost in the general extravagance and rage for magnificent clothing that now prevailed. Chaucer, in his 'Parsons's Tale,' and the author of the 'Eulogium,' cited by Camden, both inveigh loudly and in the same strain against the inordinate waste and excessive cost of the apparel of all classes down to the menial servants, whom Harding describes as arrayed in silk, satin, damask, and green and searlet cloth. The old fashion of cutting the edges of garments into the

shape of leaves and other devices was carried now to the greatest extreme. Letters and mottoes were embroidered upon the gowns or mantles; and the sleeves of the former were so long and wide, that they trailed upon the ground, and are searcely distinguished in some instances from the ample folds of the main portion of the garment. Jackets indecently short were also worn by many, as though rejoicing only in extremes; and Chaucer's Parson butterly reprobates the party-coloured hose which

MALS COSTUME, TIME OF REGISTED II Royal MS, 20 B. M., and Harielan MS, 1319. were generally attached to them. The short jacket

when itself of two colours is, we presume, the habit alluded to by the name of courtepie—an appellation it retained even when composed of one colour only. The shoes had enormously long-piked toes, sometimes crooking upward in the Polish fashion, and called "Crackowes," probably from the city of Cracow, in Poland, whence the fashion may have been imported by the followers of Richard's queen, Anne, whose grandfather had incorporated the kingdom of Poland with that of Bohemia. The author of the 'Enlogium,' beforementioned, says they fastened the toes to their

FEMALE COSTUME, TIMPOF RICHARD II. Royal MS. 16 G. v., and Harleian MS. 4379.

knees with claims of silver; but this curious custom has not been illustrated by any pictorial representation that we have yet met with.

Hats and caps of various singular shapes are worn. One cap, a tall muff-looking affair, is seen frequently in illuminations of this date. worn by the Duke of Lancaster in the illuminations of the Harleian manuscript history of Richard 11., in French verse, of which an account has been given in a former page,\* and is painted black, but of what material does not appear. The hoods, of which many specimens are portrayed in the same manuscript, are still of a most inexplicable shape. They appear more like a bundle of cloth upon the head than a regular article of apparel: some are decorated by a single feather. The gowns, in the same numeratures, exactly answer to the description of the author of the 'Eulogaim'-"a garment reaching to the heels, close before, and strutting out at the sides; so that at the back they make men seem like women." Beards seem to have come again into fashion, and were worn forked as in the old Anglo-Saxon time. The hair was worn long, and carefully curled. The ecclesiastical costume preserved its sump-

nous character to the end of this period. From a record in the Lord Treasurer's Remembrancer's Office, in the Exchequer, we find that the mitre of Alexander de Neville, Archbishop of York, in the time of Richard II., was pledged to Sir W. Walworth, Lord Mayor of London, for the sum of 193t. 6s. 8d., and was valued at ten marks more than that sum "at least;"—a tolerable proof of its inagnificence.

The armour of the reign of Henry III. is gene-

rally to be recognised by the admixture of plate with the various sorts of mail worn from the time of the Conquest. It is confined, however, to caps for the knees and protections for the shoulders and elbows. In some instances, but rarely as yet, greaves are seen, but the hands and feet are still covered by mail. The quilted or padded armour of silk, buckram, &c., which we have before spoken of, came still more into use, and, from its style of ornament, was called pour point of coun-.terpoint. Cham-mail, properly so called, is supposed to have been introduced during this reign from Asia, where it is worn to this day; but it is not clear to us that it had not been known to the Anglo-Saxons and Danes, as we have already remarked under that period. From the commencement of the thirteenth century, however, there is no doubt of its use in Europe; and the interlacing of the rings themselves, in heu of stitching them either flat, or in layers one over the other, upon leather or cloth, was a decided improvement on the clumsy hauberk of the carly Norman cra. Over the shirt of chain was worn the surcoat, blians, or cyclas, of silk or rich stuffs, and occasionally perhaps emblazoned.† It descended to the

See ante, p. 798.

† The fashion of emblacoming the surroat did not however become general till the reign of Edward I.

middle of the leg, and the edges were frequently indented or escalloped, like the cointise and other

civil garments we have previously described. this period are some military figures on the exterior of Wells Cathedral, and also the drawings in Matthew Paris's 'Laves of the Two Oflas.' f A very heavy and ngly-shaped beliet, of f abarrel form, with an aperture for sight cut in the

HISTORY OF ENGLAND.

transverse bar of a cross, covered the head entirely and rested on the shoulders. Skull-caps of various forms, with and without misals, were worn by men-at-arms, esquires, &c. In Matthew Paris's 'Lives of the Two Offas,' written and illuminated about this period, the archers are seen in mail-jackets or haubergeous, with sleeves reaching to the elbow, over which are vests of leather, defended by four ercolar iron plates. Round targets and iron mails, or martels de fer, appear to have been used by knights even in this reign (the effigy of one is to be seen in Great Malvern church, Worcestershire); but the emblazoned shield, the sword, and the lance, were the most general appointments of knighthood. The rowelled spur is first met with during this reign, but it is not common till that of Edward I., who, simple and unostentations as he was in his private or civil attire, and regardless of personal finery upon most occasions, nevertheless seems to have encouraged a taste for splendour and display amongst his companions in his favoorite pursoit of arms.

Armous of the period, exhibited in the Espisy of John of Eltham, from his Tomb in Westminsler Abbey.

The armorial bearings of the knight were now fully emblazoned on his banner, shield, surcoat, and the housings of his horse. His war-helmet, improved in shape, was surmounted by the heraldic erest, and additionally adorned by a kerchief or scarf, cut and slashed like the fashionable tunics of the previous reign, and like them, and for the same reason, called a cointise. To the offensive weapons we find added the fatchion, a peculiarlyshaped broad-bladed sword; the estoc, a small stabbing-sword; the anclas or anclace, a broad dagger tapering to a fine point; the could or contelas (whence entlas); the mace, and perhaps the cimetar; both the latter being of Oriental origin.

[Book IV.

the hauberk terminate at the wrist, leather gauntlets are worn, but not yet defended by plate. Flat shields of the triangular or heater form now The banner is oblong; and the pennon, a triangular standard, is mentioned. It was generally charged with the crest, badge, or war-cry of the kinght; the banner being distinguished by the arms only. The general military costume of this period, with the shape of the banner, may be seen in the

The mail-gloves are about this time first divided

into lingers; and in instances where the sleeves of

drawing of the Conqueror on making a grant of land to his nephew, the Duke of Brittany, copied in a preceding page.\* The original document from which Mr. Kerrich copied this drawing is preserved in the College of Arms; although representing William the Conqueror and his great officers, it is the work of some illuminator of the thriteenth century.

Towards the close of the reign of Edward 1. a curious ornament of the military dress appears in the form of a pair of plates fastened to the shoulders, sometimes square, sometimes oblong, and occasionally, but more rarely, round; emblazoned like the shield and the surcoat with the arms of the wearer, or with a plant St. George's cross. They were called, from their situation and appearance, ailettes, or little wings. They came generally into fashion, and afterwards disappeared altogether during the reign of Edward II.; the principal alterations in which consisted of the increase of plate-armour, not only greaves for the front of the legs, but brassarts and vanbraces, or avant bras, being worn on the arms. Two round plates also, called, from their position, reamalieres, were fastened on the breast over the sureoat or cyclas, and from them depended chains to which the helmet and the sword of the knight were attached; the helmet being now worn rarely except during the actual shock of battle, when it was placed over the usual head-piece called a baseinet, the successor of the old chapel de fer, which, with its nasal, disappears in this reign-

The sureoat was sometimes much shorter in front than behind; and the hauberk, instead of having a hood of mail attached to it, now termi-\* See ante, p. 566.

nated at the collar, a neck-guard of chain, called the camail, being fastened to the edge of the baseinet, and falling down upon the shoulders over the surcoat, leaving a shield-shaped opening for the A vizor was occasionally attached to the baseinet, in which case the holmet was dispensed with. The pole-axe was wielded by leaders, and several scythe-bladed weapons, varieties of the bill and the guisarm, are seen in illuminations of the period.

During the reign of Edward III. plate-armour began to supersede the chain-mail on almost every part of the body. The legs and arms were soon entirely defended by plate, gassets of mail being only worn under the arm and at the bend of it. The fect were gnarded by pointed shoes of overlapping steel plates called sollerets, and the leathern gauntlets were similarly cased with steel and provided with steel tops. On the knuckles were placed small spikes, knobs, or other ornaments, called gads or gadlings. Those on the gauntlets of Edward the Black Prince, preserved at Canterbury, are made in the form of hons. A breast-plate, called a plastron, kept the chain-shirt, divested of its sleeves, from pressing on the chest, or a pair of plates for back and breast rendered the shirt of mail altogether immedessary, and a short apron of chain hung merely from the waist over the hips. The surcoat was gradually discarded for an upper garment called a jupon or guipon (a name sometimes given to the under one of leather, which supported either the breast-plate or the bauberk), made of velvet, and richly embroidered with the arms of the wearer. It fitted the body tightly, and was confined over the hips by a magnificent belt, to which on the right side was attached a dagger, and on the left a sword. In the reign of Richard H., little alteration, if

of that of Edward III. The most remarkable feature is the moveable vizor which was attached to the basemet, now always worn in war, the more ponderous helmet, with its crest and wreath, being used only for the joust and the tournament. The shape of this said vizor may be best understood from an engraving; an original vizored baseinet of this time is in the Tower of London, and another at Goodrich Court (the only two known in England).\* In the Musec d'Artilleric, at Paris, two more are preserved; a fifth is said to be in the Hotel de Ville at Chartres. There is one in the Chatean d'Ambras in the Tyrol; and a vizor only, without the baseinet, in the collection at the Lowenburg, Hesse Cassel.

any, was made to the military costume of the close

In many effigies and illuminations of the reigns of Edward III. and Richard II., the enisses or thigh-pieces of the knights are covered with pourpointed work; and Chancer's Sir Thopas wore jambcaux or jambs of "cuir-bouly," a preparation of leather much used in the fourteenth century, not only for armour, but for effigies and various works of art. The shield, which was triangular throughout the reign of Edward III., began, about the

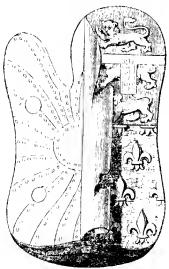

Sr. Grongs at Dijon.

bottom; and a niche was made in it on one side or at top, called the bouche, or mouth, which served as a rest for the lance.\* The shield of John of Gaunt, which was suspended over his tomb in old St. Paul's, and burnt at the conflagration of that building, is engraved in Dugdale's 'History' and Bolton's 'Elements of Armories.' It is of the form afterwards used in the reign of Henry IV., and the bouche is at the top. By the latter writer it is described thus:-" It is very convex towards the bearer, whether by warping through age or as made of purpose. It hath in dimension more than three quarters of a yard of length, and above half a yard in breadth; next to the body is a canvass glewed to a board, upon that board are broad thin axicles, slices or plates of horn nailed fast, and again over them twenty and six pieces of

<sup>•</sup> See an interesting specimen of the military costume of this reign in the carved figure of St. George at Dijon, an engraving from a heautiful cast of which is in the Arghaedogia, vol. xxx. The jupou is very peculiar, being full and platted, and buttoned at the wrists and in front.

the like, all meeting or centring about a round plate of the same in the navel of the shield; and over all is a leather closed fast to them with glue or other holding stuff, upon which his aimories

SHIELD OF JOHN OF GAUNT,

were painted, but now they, with the leather itself, have very lately and very lewdly been utterly speded." The engraving represents the leather as torn up and curling away from the shield, so as to show the nature of its fabrication.

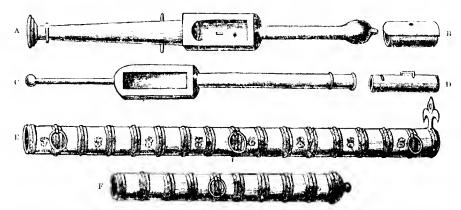

We have already had occasion to notice the probability that the use of fire-arms in war was introduced as early as the reign of Edward III.\* The lines in which the Scottish poet Barbour speaks of the "novelties" first seen by his countrymen in one of their encounters with the English, in 4327, are as follow:—

Twa noweltyes that day they saw, That forwib Scotland had been mine, Tynomeris (unibres, i.e. crests) for helmetys war the tane,‡ The toflyg crakys were of war.

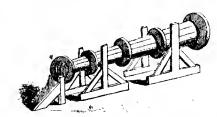

We have also mentioned the story told by the Italian writer Grovanin Villam, about the employment of cannons by Edward at the battle of Creek. In the fifth volume of the Archæologia is an engraving of an ancient cannon raised from the Goodwin Sands, and supposed, from a coat of arms on it, to have been made about 1370. If so, it is only necessary to compare it with the ancient English cannon preserved in the Tower, and said to have been used at Creey, to be assured of the falsity of the assertion respecting the latter. In a copy of Froissart of the fifteenth century, Bib. Reg. Plut. X. 11, 294, although nearly a hundred years later than the battle, we have a representation of the mode in which cannon were mounted previously to the invention of the modern guncarriage.

\* Sec ante, p 768

4 By this we also perceive that crests upon helmets were till then nukmown in Scotland, though worn for thirty or forty years previously in England.

A. An eart Cannon raised from the Godwin Sunds, and supposed, from a coat of arms which it hears, to have been made about the year 1370 See Archeologia, Vol. 5 — B. Chamber for leading — C. Spanish Cannon of the same date. — D. Chamber for leading — E. F. Farthest torms of English Cannon, from examples in the Tower to Uniform Society.

MOUNTING OF A CANNON From Prossant. Royal MS, Plut, X II, 294.

Social life in England during this period assumed, in some respects, a refinement and splendour to which it had been lutherto a stranger. Chivalry, which had been partially introduced into the country by the Norman myasion, and carried to a considerable height under the lion-hearted Richard, appears to have experienced a check during the troubled and disastrous reigns of John and Henry III. It is said, indeed, that the latter established a round table, in imitation of the fabulous King Arthur, the kinghts belonging to which exercised themselves in joustings, and direct at a circular board, on a footing of equality and good fellowship; and that the citizens of London, cumlating the kinghts and nobles, were wont to display their skill in horsemanship by running at the quintain, while a peacock was the reward of the victor. But it was under the energetic rule of Edward I., and more especially under that of Edward IH., that the chivalious spirit attained its highest exaltation, and the singular system of institutions and manners that arose out of it, its most complete and brilliant development. The reign of this last monarch, indeed, may be termed the noon of English chivalry, although it may be questioned whether it is most indebted for the strong light of knightly renown, in which it stands out from the ages before and after it, to Edward hunself, and his high-minded queen, and his gallant son,—the very mirror of knighthood, --or to the pen of Froissart, by which its gallant exploits and gargeons solemmtics have been so faithfully and so cloquently

chrouteled. Anudst the heroic daring which the chivalrous spirit cherished, and the generous deeds it occasionally inspired, our admiration is continually interrupted by the whimsical extravagances, and sometimes by the revolting atrocities, of which chivalry was the fruitful parent. The courage of the knight became frequently exaggerated into the most frantic daring; courtesy towards the female sex assumed the character of an idolatrous familicism, and liberality that of a reckless profusion that cared neither for the end nor the object of its largesses. The fantastic spirit of the system was introduced into the most serious affairs. Kinghts, even when engaged in a national contest, fought less upon public considerations than to uphold the renown of their mistresses; and it was the fashion among them to subject themselves to some absurd

penance, until a specified deed of arms was achieved. Thus, in one of Edward III.'s expeditions against France, the knights who joined the army, we are told by Froissait, wore a patch on one eye, under a yow that it should not be removed until they had performed exploits worthy of their mistresses. Of the mad heedlessness with which, on other occasions, the boasted knightly virtue of liberality was displayed, a single instance may serve for an illustration. When Alexander III. of Scotland, accompanied by a hundred knights, repaired to London, to attend the coronation of Edward I, he aml his knights, as soon as they alighted, let loose their richly-capatisoned steeds, to be scrambled for by the multitude; and five of the great English nobles, not to be outdone in generosity by the strangers, immediately followed the example.\* We are not to suppose that the sovereigns who

during this period were the most distinguished protectors and ornaments of chivaley, were wholly under the control of the spirit which they thus fortered. They were not, of course, exempted from the influence of the spirit of their age, and therefore they were most anxions to be accounted true knights, as well as wise rulers; but they had sagacity and dexterity to seize upon the ruling feeling, and turn it to the support of their schemes of policy and ambition. Such especially was the case with Edward III. He saw in chivalry the instrument most suited to the temper and circumstances of the age, and that, therefore, by which bis vastodesigns could be best accomplished. Every showy tournament he proclaimed mereased the number and spirit of his supporters, and added to lus real strength. His great oppouent, Philip of Valois, adopted the same course, and a rivalry in these splendid pageantries was the consequence. Edward estublished what was called a round table at Windsor, two hundred feet in diameter, which was maintained at the expense of a bundred pounds weekly; the French king, in reprisal, established ope similar at Paris, by the attractions of which he intercepted sundry German and Italian knights who were coming to England. Edward then justituted the since illustrious Order of the Garter; and Philip increased the number and splendom of his jousts and tournaments. It was thus that national and royal rivalry contributed to the extension and aggrandizement of the chivalne system; it was

. H. Knyghton.

KNIGHTS PREPARING TO COMPAT. Royal MS. 14 E di.

now the arbiter of kingdoms, and therefore all its forms, however puerile, became objects of the highest public importance.\*

The "passages of arms," as the sportive encounters of chivalry were termed, were of various descriptions. Sometimes a baron proclaimed a joust or tournament to be held before his castle, which was furnished with permanent lists for the purpose. Sometimes a certain number of knights leagued together to answer all comers; and sometimes a single knight, especially venturous and hardy, would enter the lists with a general challenge, and encounter every foe in succession, until he conquered all or was himself overcome. Frequently a simple joust was tried by two knights, who challenged each other to a trial of skill in all love and

\* M. Westmorster - Proiss ut.

KNIGHTS JOUSTING. Royal MS, 14 E. m.

given in the last Book of the nature and general forms of the tournament. The display, however, both of expense and of taste, was greater now than in the preceding period. The lists were now magnificently decorated; they were surrounded by gay paythons belonging to the knights who intended to take part in the combat, which were disting ished by the rich armour and honoured banners of their respective owners; and the scaffolds erected for the accommodation of the ladies and nobles were hing with tapestry, and embroidery of The spectacle regularly comgold and silver. menced with the jonsts, which were performed, on those occasions, with headless lances, and each

knight endeavoured, in his rapid career, to strike

conrtesy, with headless or sharpened lances; in this ease one, three, or more courses were run, till one party yielded, or was disabled. And sometunes, when surpassing skill was to be displayed, or when additional danger was sought to give a zest to the conflict, a place was selected for the combat where a career of the lance was the least part of the hazard,—a rough plot of ground, or a narrow bridge, with a river or fosse beneath, into which a false step would plunge the inwary combatant. A singular course of this nature was run on the bridge of London, during the reign of Richard II., between a Scottish and an English knight, io consequence of a formal challenge after the battle of Otterburne.\*

Little remains to be added to the description

his adversary full on the vizor or crest. This was a difficult mark to hit, but when accomplished, it seldom failed to unseat the firmest rider. To avoid such defeat, some knights adopted the practice of fastening the helmet to the cuirass by a single lace so that it might give way at the slightest touch of the spear; but this, Froissart states, was condemned by John of Gaunt as an unfair expe-To lose a stirrup in the shock of encounter was equal to a defeat; to be unhorsed, whether in joust or tournay, was an additional ignominy. In the furious melée of the general combat, those who threw their antagonists to the earth, or mastered their weapons, were also sometimes obliged to drag them to the extremity of the lists; and when this

was accomplished, the discomfited knights had to

many on one side were disabled or captured as to make further contention hopeless. As might be expected, these sports, even mother gentlest forms, were plentifully accompanied with wounds and bruists; a death-wound was sometimes unwardy dealt, and a dismounted knight was occasionally smothered in his armour; but when the excitement of conflict rose to its height, aggravated, too, as it was in many cases by party or national emmities, then the two-handed sword or heavy battle axe descended with the same fury as on the plains of France or Syria, and the lists assumed the character of a battle-field on which deadly enemics were contending. The king, or the person presiding, however, had always the power to still the confusion at the wildest. He threw down his warder, and cried "Ho!"—and in an instant the ficient strift was suspended; the mailed combatants stood as motionless as statues of bronze. Fronssart gives us the description of a tourna-

ment held at London, in 1389, during the reign of Richard H. Heralds were sent to every country to be fought; the lists were to be erected on in Europe where chivalry was honouned, to proclaim the time and the occasion; and brave kinghts were invited to splinter a lance, or wield a sword, m honour of their mistresses. Knights and nobles from far and near assembled at the inspiring summons; so that London was througed with warriors of every climate and language. Smithfield (at that time without the city walls), in which the lists were crected, was surrounded with temporary chambers and pavilions, constructed for the accommodation of the king and the princes, the queen and the maidens of her court: and when the solemnity was about to commence, sixty horses richly accounted were led to the lists by squires, accompanied by heralds and minstrels; after which sixty ladies followed on palfreys, each lady leading an armed knight by a chain of silver. The first day, the games commenced, as usual, with encounters of the lance; and at evening, when the trials had closed, the two combatants who had most highly signalized their skill, received, as prizes, a golden crown, and a rich girdle adorned with precious stones; after which, the night was spent in feasting and dancing. On the next morning, and for five successive days, the more serious competitions of the tournament followed; and still, as evening eame, the same joyous festivities succeeded—the actors thus realizing all that their pagan ancestors Ind hoped for from the fighting and feasting paradisc of Odin. But the appetites of the noble assembly for blows and beeves had not yet been satiated. The immense cavaleade now rose, and passed on to Windsor, where the same jousts, combats, and banquets were renewed for several days more; after which, the foreign knights departed to

their own homes.

ground sixty paces in length, and forty in breadth, hard, firm, and level, with one gate to the east, and another to the west, and the whole was to be inclosed by a palmg so high, that a horse could not, leap over it. The nature of these duels, as well as the spirit of the age, will be best illustrated by the account of a singular combat of this nature, which is detailed by Holmshed. A knight accused a squire of treason, which the latter demed, and craved the purgation of combat; and accordingly the trial was held in presence of the king, the Duke of Lancaster, and the nobles. The appellant first entered the field of battle, and wanted for the accused, who, after being thrice summoned by the herala-at-arms, entered the lists at the third call. The scaled indenture containing the kinght's charge was then opened, and read, and a demal formally returned; after which, nothing remained but an inmediate appeal to arms. The oaths of battle were therefore administered, and the accuser and accused solemnly swore that "they dealt with no witcheraft, nor art magic, whereby they might obtain the victory of their adversary; nor had aboutthem any herb, or stone, or other kind of experiment, with which magicians use to triumph over their enemies." The combatants then betook themselves to prayer, after which they rose, and joined battle at the given signal, first with spears, then with swords, and finally with daggers. After a long and cruel fight, the knight managed to beat down and disarm his enemy; but just when he was about to throw himself upon the body of the vanquished, to deprive him of life, the sweat within his barred belief flowed into his eyes, and so completely blinded him, that he fell wide of the The squere, finding what had happened, contrived to raise his battered limbs from the ground, and threw himself upon his enemy, when, at this perilous juncture, the king ordered the pair to be plucked asunder, which was mimediately done by the attendants of the lists. The knight, as soon as he got upon his legs, prayed carnestly to be replaced in his former position, with the squire above him; for "he thanked God he was well, and mistrusted not to obtain the victory;" but this request was refused by the king, although pleaded repeatedly, and with vehemence, and backed by the offer of goodly sums of money. the meantime, the squire, exhausted with wounds and toil, swooned away, and fell from his chair; his harness was speedily doffed, and means were used for his recovery; but as soon as he had opened his eyes, and began to breathe, the pertimacrous knight advanced, and, after calling him traitor and perjured, summoned him to commence the battle mew. But the squire's last combat had been fought. He was unable to answer, perhaps even to understand, the reproach of his antagonist; and he died the same night. No better proof could be required of his guilt by the most serupulous judges of that age; and thus was the affair terminated "to the great rejoicing of the common 'people," says the old chronicler, "and discouragement of

The ostentatious splendour and recklessness of expense which the chivalrous spirit tended to encourage, was not confined to mere courtly parades, and tournaments, and solemn festivals. On the contrary, it seems to have pervaded every department of domestic as well as public and out-door life. We still find in fashion during the present period the same unwickly retunies that cucumbered the march of Henry II, and his nobles; and if these trains of attendants were now somewhat superior in point of elegance and splen; dour to those of preceding ages, they were still productive of many evils. Each man strove to outdo his neighbour; and a writer of the time, the Monk of Malmsbury, bitterly complains of the imhappy rivalry in prodigality which such a spirit had produced, when he tells us that the squire endeavoured to outshine the knight, the knight the baron, the baron the earl, and the earl All this was nothing more than the natural result of such an excited and artificial state of life. Unfortunately, too, the semblance of an excuse was still afforded for large and wellarmed trains in the journeyings of the rich and powerful, from the fact that England was still traversed by strong bands of robbers, that plundered not only peaceful bishops and cardinals, but wellaccompanied earls, and even powerful princes.\* But still stronger motives for these throngs of followers were to be found in the restlessness and ambition of the nobility, constantly seeking to supplant each other when not engaged in a common contest with the crown. Such regiments and armies of retainers, of course, demanded plentiful supplies and an unbounded hospitality; and instances are furnished of the household expendi-

M. Paris,-H. Knyghton,-S. Walsingham.

ture of these periods that almost stagger belief. Richard II., we are told, entertained ten thousand persons daily at his tables. The rich and power ful Thomas Earl of Lancaster, grandson of Henry III., in the beginning of the fourteenth century, expended in one year about twenty-two thousand pounds of silver in this open style of housekeeping; of wine alone there were consumed, during the course of that year by his household, three hundred and seventy-one papes. In the article of meats and drinks, the common people seem to have still adhered to the plani

tashions of their ancestors: the old dishes, whatever they were, as yet sufficed them, with copious draughts of ale, eider, and mead; and quantity, not quality, was the main essential of a banquet. Very different, however, was the case with the The selemn feastings of cluvalry seem gradually to have crept into the every-day life of the great, so that the comparative abstinence for which their Norman ancestors were distinguished had given place to mordinate extravagance. Attempts to restrain this extravagance were repeatedly made in the reigns of Edward II, and III., by sumptuary laws; the very repetition of which, however, proves that they were generally disregarded. The records of some of the great feasts of this period exhibit astounding bills of fare. At the marriage banquet of Richard Earl of Cornwall, in 1243, thurty thousand dishes were served np;\* and in the following century, at the installation feast of the abbot of St. Augustine, no less than three thou and dishes honoured the promotion of the fortunate ecclesiastic. The meals were still nounnally only two a day; but this limitation matcered little, when the greater part of the day was devoted to these two meals. Intermeats also appear to have been introduced during this period. These were delicate and light dishes, served up at the mtervals of the meal, intended probably as provocatives to the more substantial courses that followed. Wines also, as they were technically called, formed a sort of connecting link between the two daily meads. These wines were light refections of fine cakes and different kinds of wine, that were taken at any hour of the day, or upon the arrival of a 'visitor, but more especially at bed-time. \ Cookery had now also increased into a most complicated and artificial system, though we are not sufficiently acquainted with the details to speak of them with certainty. Many dishes are now mentioned for the first time, composed of materials sufficiently heterogeneous according to the present taste, and so excessively seasoned that they were said to be "burning with wildfire;" while others, that were required to please the eye as well as the palate, were gaily painted, and turreted with paper. In seasoning these inflammable dainties, the cooks made abundant use of ginger, grein de Paris, cloves, and liquorice. We also find that jellies, tarts, and rich cakes, formed a copions accompa-M, Paris.

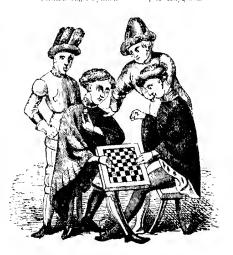

niment of every banquet. The wines used at this period were either compounded or pure: of the farmer were hippocras, pigment, and claret; the latter were chiefly the imported wines of France, Spain, Greece, and Syria.\*

A style of life such as this required vigorous digestion, and out-door sports, accordingly, were still eagerly followed by all classes. Fleet steeds, highsoaring bawks, good bounds, and bright armont, still occupied the cares of the great and wealthy; and as so many of the restrictions in hunting had been abolished, that seductive sport was also largely followed by the commons. The priesthood also continued to be so strongly attached to "veneric," that, in the reign of Richard II., every clergyman was prohibited from keeping a dog for hunting who had not a benefice of the annual amount of ten pounds; and, in the reign of Falward III., the Bishop of Ely actually excommunicated certain persons who had stolen one of his hawks during the period of divine service.

We find, from the illiminated manuscripts of this period, that even Jadies both hunted in company with gentlemen, and formed hunting parties of then own, in which they pinsued the deer, mounted astride on fleet horses, and brought down the game with their arrows. Sometimes, indeed, ladies went much further than this, riding, we are told, from eastle to castle, and from town to town, with poniards at their girdles and javelins in their hands, in quest of adventures. comy still continued to be the most cherished sport; and the prices at which hawks were purchased, as well as the penalties enacted against those who should steal them, show the estimation in which they were held. Edward III. hunself appears to have been an enthusiastic hawker. In one of his expeditions to France he carried with him thirty falconers; and, during the campaign,

Strutt's Angel Cymnan

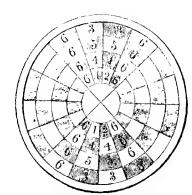

+ D Kuyghton.

Playing at Draughts. Iludeian MS, 4431.

he appears to have hawked and fought alternately with equal ardour. The wolf, it may be observed, was still to be found in England, as appears by various cyrdences.

When we pass from these active exercises to the in-door amusements of the nobility and gentry of this period, we find that most of the games of the former period were still in use; and some games are also mentioned of which we do not read in earlier times. That of cross and pile is said to have been introduced at court by Edward II.\* Persons playing at draughts are represented in some of the illuminations. We have already mentioned the game of chess as forming a common amusement among the higher classes. The game, as far as we can judge from the figures in the ancient paintings, appears to have been played nearly in the same manner as at present. Besides a square chess-board, however, like that commonly in use, we sometimes see one of a circular form. The chess-men were somewhat different in form, and also in name; the queen being called the fevee; the rook, or eastle, the rock; and the bishop, the alfin.

CIRCULAR CHESS-BOARD. Cotton MS, and Strutt.

The Figures show the places of the pieces: —1. The King.—2. The Queen, or Fevee - 3. The Castle, Rook, or Rock.—4. The Kinghl.—5. The Bishop, or Allin. -6. The Pawns.

The jester was now a regular appendage of a princely or noble household: his office was to divert the juded spirit of his lord by jests either intellectual or practical, and to keep the banquet in a roar by his wit, as well as by the jingling of his bells and the grotesque display of his cap and bauble. The castles also continued to be visited by crowds of jugglers, whose wonderful feats were still attributed, even by the wisest and most learned, to infernal agency,-by tumblers who exhibited their agility and skill,—by rope-dancers and buffoons,—and by mustrels and glee-singers. The inferior animals, as before, were pressed into the service of these strolling exhibitors; and the high-born spectators were still delighted with such exhibitions as horses dancing on tight-ropes, or HISTORY OF ENGLAND. [Book IV.

or historical incident. Theatrical amusements

were still frequented; but the age that produced

such a genins as Chancer could offer nothing better

to the stage than such miracles and mysteries as

have been noticed in a former Chapter. These

strange representations, as far as their fragments

have survived, are calculated to give us no favourable idea either of the taste or the picty of our

ancestors. Although founded upon scriptural or religious history, they yet appear to have been

oxen riding upon horses and holding trumpets to their mouths. Mummings also formed a particular amusement

of this period.\* These seem to have been a coarse and primitive kind of masquerade, where the actors, if we may judge from the old illuminations, more frequently applied themselves to munic certain of the brute creation, than to support fictitious human characters. At the intermeats between the courses of great public banonets we also find that pageants were sometimes introduced for the amusement of the guests. In these exhibitions ships were brought forward filled

. M. Paris, - Froissart, - Sainte Palaye.

Mummers Bodleian MS.

can only be likened to the sayings and doings of Punch and his associates. Dancing constituted are indispensable accomphishment of a gallant knight, and generally followed the banquet and the tour-

The great popular exercise of this period was that of archery, the cultivation of which, to the exclusion even of all other sports, was enjoined by various legislative enactments or royal ordinances. By a law of the thirteenth century, every person having an annual income of more than one hundred pence, was obliged to furnish himself with a serviceable bow and arrows. In the reign of Edward III. proclamation was made that all persons should practise archery on the holidays during the hours not occupied by divine service; and the games of quoits, hand-ball, foot-ball, stick-ball, cambuca, and cock-fighting, were at the same time strictly prohibited. The villages were furnished with pricks, butts, and rovers, for the competition of the people in archery; and at these trials of skill, in later times at least, as appears from a statute of Hemy VIII, no man was allowed to shoot at a mark less distant than eleven score feet.\* But it would seem, notwithstanding the surpassing dexterity of the English, bowmen, that they did not like to play with bows and arrows upon compulsion,-there was something too grave and formal in the sport of shooting according to the statute,—and, when it could be safely done,

\* Stat. 33 Hen. VIII. c. 9,

they escaped from the village butts, to more spontaneons and sturing amusements. As archery required such long practice, the young were furnished with bows according to their age and strength. Those of the yeomen for real service were required to be of the height of the bearer. The arrows were generally a yard in length, notched at the extremity to fit the string, and fleched with the feathers of the goose, the eagle, and sometimes the peacock. The cross-bow does not appear to have been much encouraged in England. The mummings and masqueradings, which were

in such high favour with the great, appear to have also been attractive to the common people. ward III., in the sixth year of his reign, is said to have issued an ordinance against vagrants who exhibited scandalous masquerades in low alehouses, and to have directed that such persons should be whipped out of London. But the Feast of Fools, which was enacted by the populace at large, and which was the most singular of all these exhibitions, requires a more particular notice. Its eclebration, which took place at Christmas, somewhat resembled the Saturnalia of Ancient Rome. It was a season of universal license among the commonalty, in which all orders and authorities were reversed; the churl became a pope, the buffoon a cardinal, and the lowest of the mob were converted into priests and right reverend abbots. In this wild merriment they took possession of the

charches, and paredied every part of the sacred service, singing masses composed of obscene songs, and preaching sermons full of all manner of lewdness and buffoonery. Such, especially upon the continent, was the manner in which this sacred festival was commemorated; while the church, in the pride of its power and security, felt no alarm whatever at these popular chullitions, and therefore seldom took steps to prevent them. In England the Festival of Fools does not appear to have been attended with such wild excesses as prevailed in the continental observance of it, and it was soon put down, either by the authority of the church or the good sense of the people. A part of it, however, long survived, under the designation of the Dance of Fools. This exhibition, which was also held at Christmas, consisted of a set of drolleries sufficiently profane, the actors who figured in the pageant being dressed, in all respects, like the courttool, a personage who, as he occupied the highest place of his order, become maturally the model to all the tools of England.

From this root also sprang the Abbots of Unreason and Lords of Misrule -- a class of personages that will fall to be mentioned under a later period, We shall, however, at present notice very buefly the institution of the Boy-Bishop, another of these fooleries, which appears to have been peculiar to England, and to have been known, at least, so early as the fourteenth century. In this indiculous farce, the boys belonging to the chous of the collegate churches, on the arrival of the teast of St Nicholas or of the Holy Innocents (and often on both occasions), drested themselves in full pontificals, and obtained possession of the sacred buildme, while one of then number for the time became then prelate, and was adorned with mitre and crozier. The mehris then proceeded to norme the devotional services of their clerical superiors: they prayed, chanted, and performed mass; and the Boy-Bishop, from the altor of the pulpit, debvered a sermon to the crowd that assembled to witness the sport, and received from them contributions of money at the conclusion of the service. After this profane parody, the whole choic sallied into the streets headed by their juvenile prelate, dancing and singing from house to house, scattering elerical, benedictions among the people, and receiving offermgs in then progress. So far, indeed, was this nummery encouraged by the heads of the church, that proper dresses for the pageant were kept in most of those churches where the ceremony was

performed; and it maintained its ground until it was suppressed by an edict of Henry VIII. Many, his daughter, endeavoured to resive the festival; but, after her death, it was entirely annihilated. Even in the present day, the curious eye, can trace certain modifications of these sports, in

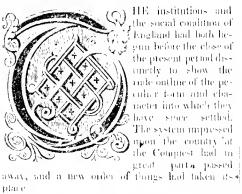

Box Risnor - Salisbony at three feet and a half

the Christmas iestivities of children; and Warton supposes, with come probability, that the *ad mantem* of the Eton scholars originated in the procession of the Boy-Bishop.

## CHAPTER AIL

## HISTORY OF THE CONDITION OF THE PEOPLE.

The government was now no longer that either, of the king alone, as it may be said to have been in the time of the Compueror and his sons, or of the king and the burnes menelly, as it afterwards came to be. In protession and design at least, it was, from the accession of Edward I, a government of kine, lords, and commons, as it still it.

Not the exact constitution, certainly, but yet

what we may call the principle of the constitution, of each hase of the legislature had also come to be nearly the same as it is nt present. The House of Lords now consisted of the greater barons only The custom of summound to that assembly all the immediate tenants of the crown, dat ever earsted, had certainly become obsolute before the end of the regular Henry III  $\Delta$  Mer, the complete c-tablishment of the House of Commons, the lesser barons were undoubtedly held to be commoners, as then representatives, the great body of the lauded gentry, are at this day. If it could be clearly shown that it ever was otherwise,—that at any time the entire body of the temasts of the crown sat as buds of perhament,—the remarkable concurrence of the date from which it is on all hands admitted that they dal so no longer with that usually assigned to the origin of the House of Commons, would go fat to make it probable that that house really did take its beginning at the period in question. In any case, it seems likely enough that the lower house of the Norman parliament may have been originally the house of the lesser barons, whether they sat in it at first personally or by representation. All that we know is, that from the time at least when all the freeholders in each county were associated in this matter with the namediate tenants of the crown, the House of Common was a representative body. From this

House of Lords consisted of the greater barons only. From the reign also of Hemy III, barons by temme ceased to be the only discription of barons. There is an instance on record of a barony being created by win,- that is, simply by the king's summons to parliament, in the year 1265, the 49th of that king, the same in which we have the first recorded writs to the sheriffs for the election of county and borough representatives. It is generally supposed, however, that this mode of creating baromes is of earlier introduction. Edward III. introduced another mode, namely, by creation ineparliament, or, as it has been called, by statute, although it has been doubted whether the consent of the lords and commons was actually in such cases either given or asked. Finally, the usual modern form of creation by letters patent was introduced by Richard II, the first in tance of a barony so combined having been in 1387, the tenth year of that king, when Su John di Beauchamp of Holt was made Baron Branchamp of Kaiderminster, All the existing ranks of the pecrage, also, with the exception of that of viscount, bal been now introduced. The first English duke was the Black Prince, who was created Dirke of Corawall, in 1337, the eleventh year of his father's reign; the last marquess was Robert de Vere Earl of Oxford, who was created Marquess of Dubbin for life, by Richard H. in 1386. The most remarkable feature by which the composition of the upper house of parliament at this period was distanguished from its composition in modern times was the immerical preponderance of the spiritual over the temporal peers, and that it retained in some degree till the abolition of the old religion in the sixteenth century.

time, also, as we have said, if not before, the

The constitution, on the whole, may now be shortly described as being an immature or imperfeetly established system of liberty. It was a tree constitution, to a great extent, in form and theory, but with much of the spirit and substance of the old despotism still remaining in its practice. To quote the words of a distinguished writer, -"Although the restraining hand of parliament was continually growing more effectual, and the notions of legal right acquiring more precision, from the time of Magna Charta to the civil wars under Henry VI., we may justly say that the general tone of administration was not a little arbitrary. The whole fabric of English liberty rose step by step, through much toil and many sacrifices, each generation adding some new security to the work,

and trusting that posterity would perfect the labor as well as enjoy the reward. A time, perhaps was even then foresecu in the visious of generous liope, by the brave knights of parliament, and by the sober sages of justice, when the proudest numesters of the crown would recoil from those harmers which were then daily pushed uside with imposity."

The state of the country during the present period, in regard to seenrity and order, still betokened considerable barbarism, both of manners and of institutions. The most distinct and indisputable testimony to the great prevalence of rapine and violence is that which is borne by some of the acts passed by the legislature with the view of remedying the evil. Of these one of the most remarkable has been shortly noticed in a former chapter, the Statute of Winchester, passed in 1285, the 43th of Edward L. The preamble of this statute begins by avening that, "from day to day, robberres, manders, barrings, and theft be more often used than they have been beretofore," a statenain) which may at least be taken as evidence that these crimes were very frequent at the time when the statute was emeeted. It goes on to neede that, owing to the partiality of priors, who would rather suffer strangers to be robbed their have the offenders pumshed when they were of the same county with themselves, great difficulty was found in obtaining the conviction of belons. In consequence, it is ordered, among other regulations, that the bundred shall be answerable for robbenes; that in all walled towns the gates shalf" "shut from simsetting until the sup-rising; that no man shall lodge during the might in the submibs of towns unless his host will answer for him; and that every stranger found in the streets from sunset to sum is e should initicalistely be apprehended by the wideli. This is the picture of a state of society in which the general prevalence of ermse destroyed at once all feeling of security and all freedom of movement. Every stranger who made his appearance up a town, we see, was treated as a suspected person; unless he could find an inhabitant to be his surety, he was to be at once cuther thrust forth or taken into custody. The next clause of the act is equally ithistrative of the insecurity of the rural districts, and especially of the public roads. It directs that every highway leading from one market town to another shall be cleared for two hundred feet on each side of every ditch, tree, or bush, in which a man may lurk to do hurt; and if a park be near a highway, it is ordered to be removed to the same distance, or at least to be carefully defended by a wall or otherwise, so that it may not serve as a harbour from which malefactors may issue forth to attack the traveller. Finally, it is commanded that every man shall provide himself with armour according to his station, the richest with a hanherk, a breastplate of iron, a word, a knife, and a horse, the poorest with bows and arrows at the least, that when offenders re \* Middle Ages, m. 218.

being arrested, all the town and the towns near may follow them with line and cry, "and so line and cry shall be made from town to town, antil that they be taken and dehyered to the sheriff." This last provision," as Mr. Hallam remarks, "noticates that the robbers plundered the country in formulable bands" The old Saxon law of trankpledge, it may be observed, was lopt up, in form at least, till a born date than this; there is a startife directing the mode of taking the view of frankpledge, which is goverably assigned to the seventeenth or eighteenth yenr of Edward II, ; but that ancient exstem had probably, burg ere now, been found imsonable to the changed encounstances of the country. Its spart, also, which left the maintransmee of order and the repression of crame in a great measure in the bands of the people themselves, was wholly opposed to the temper of the Norman institutions and government, which tended to concentrate all power and authority in the crown, and regarded any popular interterence in the admihistration of the law with extreme jealousy and aversion. The context of the two principles is to be discorred in various passages of the legislation of the present period on matters of police. It may be illustrated, for example, by the history of the county numerstrates called justice of the pence. These were originally called con-cryators of the prace, and were elected by the votes of the freeholders till the accession of Edward III.; when, in the midst of the revolution that placed the new knee men the thrope, a chase was introduced into ing net of parliament, beginned the right of applointing them to the crown. Then authority was afterwards gradually cubiged by significant statutes, fill at last, in 1360, they were invested with the power of trying telonics; and then, instead of conservators, wardens, or keepers of the peace, "they acquired," says Blackstone, "the more Immunitable appellation of justices " It appears, however, from the rolls of parliament, that, ever since then appointment had been a sumed by the crown, they had been the objects of popular offund, and every act or royal ordinance by which their powers were subsequently cularged, scenes to have exested much dissatisfaction and remonstrance. Meanwhile the state of the country did act auprove under the reasonstem. The premible of an order mance passed in 1375\$ gives us the following remarkable description of the lawlessness and violence which prevailabil. -- Ora soveregen load the king both perceived, ie well by many complannts made to him as by the perfect knowledge (that is, the notoriety) of the times, that as well divers of his hege people in similar parts of the realin, as also the people of Wales in the county of Hereford, and the people of the county of Chester, with the countries adjoining to Chestershire, some of them chaming to have right to divers bands, tenements, and other possessions, and some espying

women and damsels unmarried, and some desiring to make maintenance in their marches, do gather them together to a great number of men of arms and archers, to the manner of war, and confederate themselves by oath and other confederacy, not having consideration to God, nor to the laws of holy church, nor of the kind, nor of right, nor justice, but, refusing and setting apart all pricess. of the law, do ride in great routs in divers parts of England, and take possession and set them in divers manors, lands, and other posses ions of their own authority, and hold the same long with force, doing many manner apparelments of war, and in Soice places do ravish women and daniels, and bring them into stronge countries, where please them; and in some places lyor, in wait with such routs, do beat and mann, master and slay the people for to have their wives and their good, and the same women and goods retain to their ewa use. and some time take the king's hege prople in their houses, and bring and hold them as prisoners, and at the last put them to have and carefore, as a were in a land of war; and some time earse brose the justices in their sessions in such onese with great force, whereby the justices be alread and and hardy to do the law; and do many other riots and horrible offences, whereby the realm in divers parts is put in great fromble, to the great muschael and grievance of the people, and the hart of the king's majesty, and against the king's crown.' To repress these daring outrages power was now given to the magistrates, as soon as they were credibly certified of any such "assemblies, routs, or ridings of offenders, baratours, and other such maters," "to" assert them incontinent, without tarry of for indictinents, or other process of the law, by their hody, and especially the chieftains and leaders of such routs, and send them to the next gool, with the case of their ariest clearly and distinctly put in writing, there to abide in prison in cure keeping, till the coming of the justices into the country, without being delivered in the mean time by mainprise, bad, or in other manner." The remedy here would seem to have scarcely gone beyond the necessity of the case; but the dislike that was entertained to the functionaries entireled with the administration of the new law was too strong for even the sense of that necessity to overcome. Next year we find the Commons petitioning against it as "a horrible grievous ordinance, by which every freeman in the kingdom would be in bondage to these justices, contrary to the great charter, and to many statutes, which forbid any man to be taket without due course of law." "So sensitive," observes M1. Hallam, "was their jealousy of arbitrary imprisonment, that they preferred enduring riot and robbery to chastising them by any means that might afford a precedent to oppression, or weaken men's revi rence for Migna Charta.''\* The real feeling, however, probably was an aversion to the magistrates nominated by the crown. In con-

sequence of this petition of the Commons, the ordinaire was " afterly repealed and annulled."\*

As yet, it is to be remembered, the government and the law had been little known or felt in their proper character of the great protecting powers of society; the notion of them that was by far most familiar to men's minds was that of mighty exgines of oppression, which, indeed, they had principally Every attempt accordingly to aim them with additional force was naturally regarded with much appachen ion and jeal-iosy. It was not merely to the hands of the crown that the law was ed to purposes of tyranay and plunder. It is especially deserving of notice that at this time it was actually employed as one of their most common instruments by spidiaters and disturbers of all classes, as if such had been its proper use One of the ofeners against which statute after statute was passed, was that called nonutenance; which was really nothing else thing the confederiting to do wreng, not by the definite or evasion, but through the aid and under the direct authority, of the law " Conspirators," says an ordromice of the 33rd of Edward L. " be they that do conteder, or hand themselves, by oath, covenant, or other alliance, that every of them shall and and bear the other, falsely and malamonsly to indict or cause to indict, or talsely to move or maintain plea , and also such as cause children within age to appeal men of felians, whereby they are imprisoned and sore grieved; and such as retain form in the country with liveries or fees for to maintain their malicions enterplaces" \*7 at all these descriptions of conspiracy were pursued systematically and on a great scale, the language of other statutes sufficiently attests. Thus, in the 4 Edw. 111 c. 2, it athrmed, that "divers people of the realm, as well great men as other, have made alliances, confederacies, and conspiracies, to maintain parties, ideas, and quartels, whereby divers have been wrongfully disinferited, and some ransomed and destroyed, and some, for fear to be manned and beaten, durst not sue for their right nor complain, nor the jurors of inquests give their verdicts, to the great limt of the people, and slander of the law and common right." In many cases, these confederated ruffians twere openly protected by some powerful baron, whose livery they wore. "We be informed," says the 20 Edw. III. c 5, "that many beaters and maintainers of quarrels and parties in the country be maintained and borne by lords, whereby they be more encouraged to offend, and by procurement, covine (covenant), and maintenance of such bearers in the country, many people be dismberited, and some delayed and disturbed of their right, and some not guilty convict and condemned, or otherwise oppressed, in the undoing of their estate, and in the notorious destruction of our people." Some of the modes in which this system of confederation was carried on are more preeasely explained in the 1 Rich. II. c. 7, where if

wearing liveries, are a proof that the people of this

country were formerly much more irascible and

vindictive than they are at present; and that the

law-books also show that many crimes were then

land, rent, or other possessions, do make great manue of people, as well of esquires as of other, in many parts of the realm, giving to them hats and other liveries, of one suit by year, taking of them the value of the same livery, of percase the double value by such coverant and assurance, that every of them shall maintain other in all quarrels, be they reaconable or unreasonable, to the great unschief and oppression of the people;" and in c. 9,

which records the complaints made to the king, "that many people, as well great as small, having right and true tale, as well to lands, tenements, and tent, in other personal actions, be wrongfully delived of their right and actions, by means that the occupiers or defendants, to be maintained and sustained in their wrong, do commonly make extreand tenflments of their lands, and tenements whacle be in debate, and ad their other goods and chattels, to louds and other greatmen of the realm, aga ast whom the said parsuants, for great menace that is made to them, cannot not dair not make there pursuats; and that, on the other part, oftentimes many people do disserve other of their tenements, and anon, after the disseism done, they make diver-alienations and feofiments, sometimes to lords and great men of the realm to have numberance, and sometimes to many persons of whose names the dissusces can have no knowledge, to the intent to deter and delay by such frauds the said

disseisees, and the other demandants and then

bens, of then recovery, to the great hindrance and

oppression of the people." Bus, samy of these retainers of the great lords were accustomed to tollow still more daring com es. In 1349 (the 22 of Edward III ), the Rolls of Parlament record. the prayer of the commons, that, "whereas it is notorious how robbers and malefactors infest the country, the king would charge the great men of the land, that none such be maintained by them, privily or openly, but that they lend assistance to arrest and take such ill-deers," "Thighway robbery," observes Mr. Hallam, "was, from the carliest times, a sort of isitional crime. Capital pmushments, though very frequent, made little impression on a bold and licentious crew, who had, at least, the sympathy of those who had. nothing to lose on their side, and flattering prospects of impunity. We know how long the outlaws of Sherwood lived in tradition; --men, who, like some of their betters, have been permitted to redeem, by a few acts of generosity, the just ignorming of extensive crimes. These, indeed, were the heroes of vulgar applause; but when such a pidge as Sir John Fortescue could exult that more Englishmen were hanged for tobbery in one year than French in seven, and that 'if an Englishman be poor, and see another having riches, which may be taken from him by might, he will not spare to do so,' it may be perceived how thoroughly these sentiments had pervaded the public mind."\* M.d. Ages, id. 249. The passage from Fortescue is in his ' Difference between an Absolute and Lamited Monarchy,' p. 29

be more refined and polished, but consist of still more deserving members of society,"\* A great social revolution was gradually effected in England in the course of the present period by the general transformation of the villains into free-The subject is one, in some parts of it, of much obscurity, and the few facts upon which we have to proceed in considering it leave us to form most of our conclusions from theory and con-Mr. Hallam has advanced the opinion that there was really no difference between the conditions of the villam in gross and the villain regardant, and that the distinction between them was merely formal or technical, affecting only the mode of pleuding. He also adopts the notion that tenants in villenage have been maccurately conteemded with villains, and that these two classes were altogether distanct † We confess we strongly doubt the correctness of both the one and the other of these positions. We conceive the distinetian between the villan regardant and the villam in gross to have been of the most material character, and the temant in villenage to have been merely the villain regardant under a new name. Notwithstanding some expressions in the

The villam regardant appears to have been really a teragit of lus lord, though holding both by base and uncertain services; and his lord, whatever other rights be might have over him, had no power, we apprehend, to dispossess him of his tenure so long as he performed the services required of him. If he was A by the law to be a tenant at the will of his lo zpres ou, apparently, was conformable riginal theory or

his condition.

[Boot

out, had only to demand from him such services as he would rather resign his holding than render. But this purely arbitrary power, although it might remain unlimited in the legal expression, would soon come to be restrained in its actual exercise within certain well understood bounds; and in this, & in other respects, the will of the lord would, in point of fact, mean only his will exercised according to the custom of the manor. If it had ever been otherwise, the complete establishment of this understanding would be the first step taken in the improvement of the villain's condition. The next woull the the confinement of his services, not only within certain customary limits in regard to their general description or character, but yet more strictly to a clearly defined amount, which would have nearly all the precision of a money payment, and would soon come to be exacted with as little either of excess or of abatement as is usual in the case of a modern rent. The practice of entering the amount of service upon the roll of the courtbaron would naturally follow, which would at once give to temme by villenage all the stability and independence of any other kind of tenure. Meanwhile the condition of the tenant was improving in another way with the rise in the value of land; and this change in his circumstances would graduacky rance lam, in many instances, above the personal performance of whatever there was degrading in the services he owed to his lord; he would perform his services by a fured substitute; until at length it would be found for the interest of both parties that they should be commuted for a fixed money-rent. It is hardly necessary to observe, that the same progressive movement of society which brought about this change would also naturally and inevitably elevate the villain in other respects above whatever was base or servile in his original condition, - above the practical operation, more especially, of every old figurent of the law which made him in any sense the property of his lord, or gave the latter any rights over him incorrsistent with the new position to which he had advanced. This was a result which no mere law could resist. The villam having thus acquired the free disposal of his person and property, would be a y llain no longer in anything but musame; even Conworld be changed, and he would be called, not a villain, but a tenant in villenage. It does not appear that any other account can be given of The origin of tenure in villenage butgibes. It has Bear said that freemen might hold land by villain tenure; and we may be certain that after that

mode of tenure began to outgrow its original servile

character in the manner that has been explained,

persons who had not been born villains would not

be scared by its mere name from the acquisition of

increly that in the fernier, as it now exists, \$1500, the completion of the process of gradual? which, as we have shown, was in all pro? going on from the carliest stage in the hister the latter. A copyhold estate is now, for a? 'treal purposes, as much a property as a free " estate; but its legal incidents, though reduce mere formulaties or fictions, are still very expi sively significant of its time origin. The mode aherating a copyhold, for instance, still is for copyholder fast to make a surrender of his l into the bands of his lord, who thereupon adv the purchaser as his tenant; and the new terlike his predecessor, is still affirmed to hold land "at the will of the lord". The tenants villenage appear to have been making progress throwing off the original service organimally carious character of their tenure, at least from commencement of the present period, and in course of it they no doubt effected a considerat advance in substantial stability and independence but the decisions of the courts, as well as the letter of the Liw, probably continued to be advers to their pretensions down to its close. It is sai

to have been not fill the reign of Edward IV, the the pulges expressly declared the right of the copholder to bring his action of trespass against th lord for dispossersion. While the valuan regardant was thus rising int the edichold of Sprictor, the villam in gross we also undergoing a corresponding transfermation and becoming a free labourer. We have not much evidence of the manner in which this change was effected, but the most distinct infimations of its having to a large extent taken place in the course of the thirteenth, and more especially in that of the fourteenth century. Some of them were no doubt enumerpated by their masters; the liberation of their slaves is said to have been an act of picty to which persons on their death-bed used to ' strough arged by the clergy; but the majority of the villains in gross appear to have shaken off the fetters of their thraldom by their lown act, -- n other words, by effecting their escape from the power of those who held them in bondage. The law, as we have already had occasion to notice held a villam to be free after a residence in any walled town for a year and a day. This provision, there is reason to believe, was the means of enabling many villains to acquire their liberty. But many more seem to have merely fled to another part of the country, the distance of which placed them out of the reach of their masters. What is certain, at all events, is, that by the middle of the faurteenth century a large body of free

labourers had grown up in England. The most

distinct evidence to that fact is afforded by the

famous ordinance, commonly called the Statute of

Labourers, passed in 1349 (the 23rd of Edwal

III.), which proceeds upon the averment the

but part of the people, and especially and servants, had lately died of the nany seeing the necessity of masters, sty of servants, will not serve unless \* ve excessive wages, and some rather in idleness than by labour to get Those whom the statute binds to required at certain specified rates of ofterwards thus described: -- "Every anan of our realm of England, of what e be, free or bond, able in body, and age of three score years, not living andisc, nor exercising any craft, nor "I his own whereof he may live, nor id about whose tillage he may himself and not serving any other." From the ordinance and the statute by which showed up two years afterwards (the 25 I. st 2), it appears that this class of who were not bond-men included carters, a, drivers of the plough, shepherds, 's, deves, reapers, mowers, threshers, labourers in husbandry; carpenters, tilers, "and other workmen of houses; 1-, "and other workers of mud-walls;" aers and shoemakers, goldsmiths, sællers, alls, spinners, tapiers, carrers, tawers of tailors, and others. So that me every of industry, whether carried on in town unity, there would appear by this time to in minibers of working people who were state of Alberrage.

state passed in 1377 (the 1st Rich 41, c. 6) as some information as to the emissis taken cydlams in gras and village regardant or reat stroughe to effect their enumequation, in , they were now engaged. The act professes passed \*\* at the grievous complaint of the and commons of the realm, as well men dy church as other, made in the parlia-, of that that m many seigmones and parts of calm of Fargland, the villams and lands ts in villenage, who owe services and customr said lords, have now late withdrawn, and aly withdraw their services and customs due in said loads, by comfort and procurement of then counsellors, maintainers, and abettors ; country, which hath taken hire and profit of and villams and land-tenants, by colour of a exemplifications made out of the book of 'sday, and, by their evil interpretations of the , they aflirm them to be quite and utterly disged of all manner servage, due as well of their ; as of their said temures, and will not suffer any ress or other justice to be made upon them; but acnace the ministers of their lords of life and iber, and, which more is, gather themselves ther in great routs, and agree by such confeacy that every one shall and other to resist their de with strong hand; and much other harm

they do, &c." Here we have apparently the villains in gross and the villains regardant (for such we take to be the meaning of the expression, "the villains and land-tenants in villenage,") associating together to resist partly by an appeal to the law, partly by force, the claims of their lords to the services due "of their bodies" by the former and "of their tenures" by the latter. Differently situated as they were in some respects, they wisely fell that their cause for the present was the same.

The abolition of slavery was one of the demands made by the insurgents in the rebellion of 1381, which proves that the class of villains in gross was by no means then extinct. This great popular outbreak was probably little favourable in its immediate consequences to the condition of these nuhappy persons. As soon as it was suppressed the king is represented as addressing the villams of Essex in terms manifesting a sufficient determinuation that they should derive no benefit from their bailled attempt. "Rustics ye have been and are," he told them, according to Walsingham, "and in bondage shall ye remain, not such as ye have heretofore known, but in a condition incomparably more vile." Various severe laws affecting the peopler classes were also passed in the course of the following ten or twelve years. Among others, by the statute 12 Rich, 11, c. 3, it was ordained that "no servant nor laborner, be he man or woman, shall depart at the end of his terms one of the hundred where he is dwelling to serve or dwell elsewhere, or by colour to go from thence n pilgramage, unless he bring a letter patent con anang the cause of his going, and the time of his return, if be ought to return, under the king's seal;" and, by chep, 5, that all persons who had been employed in any labour or service of hasbandry till the age of twelve, should from thenceforth abide at the same labour, and be incapable of being put to any mystery or bandicraft. The commons a few years afterwards even went the length of petdioning (chough then demands were negatived by the king) that the old law which protected villains after a residence of a year and a day, m towns, should be repealed; and that, "for the honour of all the freemerem the kingdom," villants might not be allowed to put their children to schools in order to advance them by the church. But the anxious endeavours to keep down the people tes how greatly then fears had been excited; and salutary impression thus made upon them, of formulable character of the popular strength, contanot fail, ere long, to operate to the advantage of the portion of the community that had been hitherto so much despised and oppressed. From: this time little mention is made of villenage; no efforts appear to have been interposed by the law to retard its decay; and it seems to have stendily and somewhat rapidly moved on towards its entire extinction.
